MR. STANFORD will publish immediately a large wall map of the British Isles on a scale of 11½ miles to an inch, showing the new parliamentary divisions. The topography of the map has been subordinated to the new electoral conditions, and will show clearly, by means of colour, the parliamentary counties which now supersede the civil counties for the

* *Nibbuyhati* is not in Childers’ Dictionary (see *Therī Gāthā, v. 468*).

† Literally “with all his limbs.”

‡ Should it not be “such a one who has attained to offerings,” i.e., by his merits as a sage?

purposes of parliamentary representation, the boroughs, and in figures the number of representatives for each. Plans of all parliamentary boroughs returning more than two members to the new parliament are given on a uniform scale of one inch to one mile, excepting those within the limits of Metropolitan London, which are drawn on the half-inch scale. Mr. Stanford will also publish a smaller map on the scale of twenty-five miles to an inch, giving much of the same information, though necessarily with less distinctness.

MR. STANFORD also has in the press a *Manual of Geology*, for students and general readers, by Dr. James Geikie, Murchison Professor of Geology and Mineralogy at Edinburgh. Dr. Geikie’s idea in writing the book has been to produce a text book at once thoroughly accurate, and yet in such a form as to attract not only the student, but also the general reader. The work will be profusely illustrated.

THE Institution of Civil Engineers has issued a list of forty-two subjects on which original communications are invited. For papers read during the past session, the Watt medal was awarded to Prof. H. S. H. Shaw; the George Stephenson medal to Mr. W. Stroudley; Telford medals to Messrs. P. W. Willans and W. G. Brounger; besides twelve Telford premiums, and eight Miller prizes to students.

THE Gilchrist (Entrance) Engineering Scholarship is open for public competition at University College, London, on September 28, and following days. The scholarship is of the value of £35 per annum for two years, and candidates must be under nineteen years of age on October 1. The subjects are mathematics, mechanical drawing, use of tools, &c.

THE next session of University College, Bristol, will begin on October 6. In the chemical department lectures and classes are given in all branches of theoretical chemistry, and instruction in practical chemistry is given daily in the chemical laboratory. A special practical class for clothworkers and dyers is carried on by correspondence; and excursions to some of the mines, manufactories, and chemical works of the neighbourhood are occasionally made. The department of experimental physics includes courses of lectures arranged progressively, and practical instruction is given in the physical and electrical laboratory. The department of engineering and the constructive professions is designed to afford a thorough scientific education to students intending to become engineers, or to enter any of the allied professions, and to supplement the ordinary professional training by systematic technical teaching. Those who attend the mechanical engineering course enter engineering works during the six summer months; and, in accordance with this scheme, various manufacturing engineers in the neighbourhood have consented to receive students of the college into their offices and workshops as pupils. The engineering laboratory has recently been provided with a powerful testing machine, and instruction in the use of tools is given in the workshop. Special courses in surveying have been arranged, and excursions for field practice are frequently made. In the botanical department practical instruction is given by means of the botanical gardens, which contains upwards of 1,000 specimens.

AN almost perfect skeleton of Steller’s extinct “Sea cow” (*Rhytina gigas*), from the pleistocene peat-deposits of Bering’s Island, has recently been acquired by the British Museum, and is now exhibited in the Natural History Galleries in Cromwell Road. When the German naturalist, Steller, was cast away on Bering’s Island in 1741 he found the *Rhytina* living in great numbers, and wrote a description of the

creature's habits. Though measuring, when fully grown, as much as thirty-five feet in length, and weighing between three and four tons, it was a harmless creature, living in herds in the shallow waters around Kamchatka and Alaska, and browsing upon the thick beds of marine vegetation fringing the coast. It has since become totally extinct, and its remains are difficult to procure. The remarkable specimen now in our possession has been described by Dr. Henry Woodward in the September number of the *Geological Magazine* and also in the *Journal of the Geological Society*.

PHILOLOGY NOTES.

THE Clarendon Press is about to publish the first two of a series of *Anglo-Saxon Reading Primers*, under the editorship of Mr. Henry Sweet. They are intended to give extracts from the more important works of Old-English literature in a convenient form and moderate compass (not exceeding 100 pages). The texts are printed exactly as in the MSS., whose accents are carefully reproduced. Each has a glossary of such words and meanings as are not explained in the glossary to the *Anglo-Saxon Reader*. The first volume consists of *Selected Homilies of Ælfric*, the second of *Extracts from Alfred's Orosius*.

THE third fasciculus of the Phœnician section of the *Corpus Inscriptionum Semiticarum*, comprising the inscriptions of Gaul and Spain, and part of those of Carthage, is entirely printed so far as regards the letter-press, which extends to sixteen sheets. Eight of the plates are completed, and the remaining six are being proceeded with. M. Renan expects that the part will be submitted to the Académie des Inscriptions early in October. The first chapter of the Aramean section is in slips; the second chapter, containing the Aramean inscriptions from Assyria, is ready for press. The first fasciculus of the Himyaritic section will, it is hoped, very soon be ready for the printers.

UNDER the title of *Die Scheibaniade*, Prof. Vambéry has published an Uzbek epic, by Muhammad Salih, telling the story of Scheibani Khan, the great Turkoman conqueror of the sixteenth century. Beside the original text, printed from a unique MS. at Vienna, he has also given a German translation on the opposite side of the page, an introduction, and notes. The poem itself consists of 4,500 double verses, arranged in seventy-six cantos. The book, which is handsomely printed, with a facsimile illumination for frontispiece, is published for the author by Herr Kilian of Buda Pest, and can be obtained in this country from Messrs. Trübner.

IN the current number of the *Revue Celtique* (tome vi., no. 4), M. Gaidoz announces that he retires from the editorship of this magazine, which he founded in 1869. He is succeeded by M. d'Arbois de Jubainville, Professor of Celtic in the Collège de France.

THE new number of Kuhn's *Zeitschrift* contains the first of a series of essays by Bartholomæ on the Gáthas, and an explanation by Geldner of eight obscure words in the Avestā. Wackernagel and W. Meyer have some miscellanies on Greek and Latin grammar. Mr. Whitley Stokes has a paper on the neo-Celtic verb substantive, the forms of which he refers to no less than ten roots, and Prof. Thurneysen of Jena publishes his discovery of fem. *i*-stems in Old-Irish. His examples are: *Briqit* = Sanskrit *brhatī*, *adaig* ("night"), *caill* ("forest"), *cricc* in *fo-chricc* ("reward"), *taid-chricc* ("redemption"), *inis* ("island"), *mēit* ("quantum," "greatness"), and *sētig* ("wife"). To these may be added *airke* ("a pound"), *fēil* ("fes-

tival"), *fuil* ("blood"), *glais* ("stream"), *lia-thróit* (ball), *mōin* ("bog"), *raith* ("stronghold"), *rigain* ("queen") = Sanskrit *rājīni*, and *tāin* ("a driving"). He also finds in Irish (as he supposes for the first time) some remains of the fem. *u*-declension. But he has overlooked the fact that, as far back as 1870, Count Nigra published, in the *Revue Celtique*, i. 151, Mr. Stokes's explanation of *deug* or *deoch* ("a drink") as a fem. *u*-stem. Other such stems are *druth* ("harlot"), *luth* ("door"), *mucc* ("pig"), *much* ("mist"), and *orgun* ("smiting"), with its compounds *ess-orgun*, *frith-orgun*, *timn-orgun*, *tuargun*, and *turargun* ("robbery"). *Uall* ("pride"), quoted by Thurneysen as an *u*-stem, is really a feminine *ā*-stem; and the gen. sing. *uailbe*, which he cites from the Würzburg codex in support of his theory, is only a scribal error for *uaille*. Thurneysen also adds *síd* ("elfmound," and, in the plural, "elves") and *tír* ("land") to Ebel's list of Irish stems in *s*. But his identification of *síd* with Latin *sidus* ("constellation") is clearly wrong. *Sidus* seems to stand for **sigdus* (cf. *signum*) as *nūdus* for *nugdus* = Irish *nocht*. The Italic cognate of Irish *síd* seems the Sabine *noven-sides*, whence Latin *noven-siles*. Other Irish *s*-stems not mentioned by Ebel are *ag* ("cow," plural *aige*); *au* ("ear") = Latin *aus* in *ausculto*; *deas* ("god," plural *d-e*), cognate with Greek *θεσ* in *θεσφατος*; *glenn* ("valley"); *og* ("egg"); *onn* ("stone"), perhaps = Latin *pondus*; *sál* ("sea") = *σάλας*, and apparently *ad* = *ador*. The *gu* ("choice"), in *for-gu*, *ro-gu*, *to-gu*, *ucu* (= *ud-gu*) is = Latin *gur*, *gus*, in the Old-Latin *augur* ("presage": *Pro certo arbitrabor sortes, oracula, adytus, augura*, *Att. ap. Non.*, p. 488), and *augus-tus*.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. Raza, 118, Strand, near Waterloo-bridge.

The Gallery of Art of the Royal Institution, Liverpool. By William Martin Conway. (Seeley.)

To Londoners the Liverpool Gallery, which contains the collection of William Roscoe, is comparatively little known; but in the winter of 1880-81 they had an opportunity, at Burlington House, of making acquaintance of some of its most curious and interesting examples of early art, both Flemish and Italian. There were the two fragments of Giotto's fresco sawn from the walls of the burnt church of the Carmelites at Florence, representing "The Presentation of St. John the Baptist to Zacharias," and "The Daughter of Herodias receiving the Head of John the Baptist"; besides the interesting picture of "St. Bernardino Preaching," which was ascribed to Pesellino, and rashly said to contain a representation of the cathedral at Florence and portraits of several of the Medici. There were also the two strange and forcibly-painted panels ascribed to Michael Wohlgemuth, which have since been identified as the wings to a "Crucifixion" in the National Gallery (No. 1,049), ascribed in the catalogue of that collection to the Westphalian school of the sixteenth century; and last, and best, the undoubtedly genuine little Simone Martini, which represents with such a delightful, but reverent, *naïveté* the reception of the child Christ by His anxious parents after his absence "about His Father's business."

These pictures, however, by no means ex-

haust the treasures of the Liverpool collection, which contains some well-preserved and authentic examples of Byzantine art and of the early Florentine and Sienese schools, a strong Signorelli, an Ercole (di Antonio) Roberti Grandi, a fine Bonifazio, a probably genuine portrait by Lukas van Leyden, and, not to weary with too long a list, some vigorous examples of Tintoretto, including a magnificent sketch for the great "Paradise." Although a great many of the works in the gallery may be described as "school" pictures, and to many of the best it is difficult to assign a master's name with any certainty, the collection is of great interest to students, and well worth the attention which has been paid to it by Mr. Conway. It was, moreover, quite time that some more trustworthy account of it should be written than that contained in the present catalogue.

Although here and there I cannot entirely assent to an opinion of Mr. Conway's (as where he says that greater praise cannot be given to painters than that they hide their best work in corners), and once or twice his description of a picture seems a little too coloured with his own fancy (as when he asserts, with reference to the seated figure of the Virgin in the panel by Martini already referred to, that she has "failed from fatigue and must needs sit down"), he has executed a difficult task with ability. His grasp of the history of art and his acquaintance with recent scholarship is shown in every page; and he has resisted the temptation, so seductive to critics of the present time, to append an authoritative label to every doubtful work. Moreover, the essay is very readable, and is marked by original thought and genuine insight, as well as by knowledge and care. The work is in folio, and comprises but thirty-four pages of text, accompanied by twelve good photographs of some of the best pictures.

COSMO MONKHOUSE.

MARINUS VAN REYMERSWALE.

QUINTYN MASSYS is credited with the original conception of a picture, a half-length life-size painting of St. Jerome in his study, a skull before him, his volume of annotations beside him, and an open missal on the table with books, pen, ink-horn, and parchment MSS. These, with a half-burnt guttering candle in a brass candlestick on a shelf behind the olive-draped table, form the elaborately painted details. Among the thirteen known repetitions of this composition not one is signed by Quintyn Massys, while two at Madrid are signed by Marinus, of Reymerswale, with the respective dates, 1521 (41?) and 1535. A third such picture, signed and dated 1541, has lately been discovered at Louvain by the learned archivist of that city, Mr. E. van Even, in the possession of a private family, De Becker. M. De Becker bought it in May last, from the convent of the Colletine nuns in Lonvain; the nuns know only that it formerly belonged to St. Gertrude's Abbey, which foundation, doubly obnoxious to the French at the end of the last century for its piety and aristocracy, for it was a so-called "abbaye noble," was suppressed by the French Republic in 1797. The picture is in an excellent state of preservation; only in a few small spots the thin layer of paint has chipped off, probably in consequence of a blow, showing the panel beneath. The fineness of the execution, the multiplication of the details without crowding, the richness of the colouring undimmed by time, equal any other work I have seen of

Marinus, or Quintyn Massys. The figure of the saint, draped in noble folds of the red gown, with the cardinal's hat behind him, is painted and conceived with a striking realism. The thin aquiline nose, the bright brown eyes gleaming roundly from their sunken sockets, the long grey beard, the wrinkled skin drawn tightly over the fleshless and hairless cranium, give an impression of shrewd watchfulness for the sins of this world rather than devotion to a heavenly ideal; a moralist rather than a mystic this Jerome would seem to be. The long-pointed fingers displayed upon the table before him, reminded me of those of Marinus's "Money-changers," the pointedness and length exaggerated by the ascetic emaciation of the saint, the nails and the creases in the knuckles painted minutely. The signature is plainly to be seen on the back of a book upon which rests an open missal in the very centre of the picture. The full-page miniature displayed in the missal represents the Ascension of Christ, and in a narrow compartment below, the vanquishing of Evil in the form of a dragon, retiring confounded into the jaws of hell. The signature is the same which Dr. Waagen, on the Munich picture of "The Money-changers," misread "Maxing."

"Mazin'. me. fecit. 1541."

I have since seen an exact replica of this St. Jerome at the convent of the Black Sisters of Bethel, at Bruges. It is mentioned by Mr. Weale in his Guide as of the school of Quintyn Massys. As far as I could judge, without taking it down from the wall of the chapel, it seemed in every way equal to the one I had seen a few days before at Louvain. It lacks the signature, but if not by the hand of Marinus himself, it is by a very clever copyist. ANNIE R. EVANS.

CORRESPONDENCE.

ROCK EXCAVATIONS IN NORTH ARCOT DISTRICT, MADRAS.

Edinburgh: Sept. 15, 1885.

In the *Arcot District Manual* (pp. 203-4) Mr. Cox mentions some rock-caves within the bounds of Māmandūr village, five miles from Conjiveram, and supposed to be "of Jaina origin." But as the common people of that part of India have almost a habit of saying that any very old temple or other structure was made by the Jainas, or in the time of the Jainas, such a statement is of no historical value unless otherwise authenticated. My assistant, Mr. A. Rea, while in the neighbourhood last month, visited these caves. They are in a low hill which forms the east bank of the large tank or lake of Māmandūr, close to Narasapāiyam, and the two farthest north are near its base and face the east; the other two are considerably to the south, and higher up the hill.

Taking them in this order, No. 1 is a small oblong hall with two octagonal piers in front having bracket capitals and square blocks at the base and under the brackets, carved with a lotus flower on each face. In the back is a cell, the front of which projects a little into the hall and has a moulded base and cornice. In the cell is a Brahmanical altar or base for an image; and in the left end of the hall are the remains of an inscription in about nineteen lines, which formerly covered a space about 5 feet wide by 4 feet high, and is in a character that may be pretty safely asserted to be not later than the eighth century, and may be earlier. Unfortunately the greater part of it has peeled off, and only a few letters here and there are legible. Another inscription in one line is outside the front pillars, but I have not received the facsimile of it. The first, however, is probably coeval with the shrine, and relegates it to Pallava times.

The second cave has two rows of pillars similar to the first, but without ornament, and has three cells with figures carved in the spaces between their doors, similar to the Brahmanical figures in some of the caves at Mahābalipuram or Seven Pagodas. In this cave are two Tamil inscriptions, in characters similar to those of the Leiden and Tiruppvānam copper-plates. The first, in the left end of the hall, is in 13 lines about 4 feet long, and is 3 feet deep. It records that in the fifteenth year of Kopparakēsarivanma, two persons gave 45½ sheep to provide half the expense of a lamp to the god Vālisvaramudaiya Mahādeva. The second is in 19 lines, and covers a space about 4 feet square on the right wall, and, except a piece in the middle of the first five lines, is nearly entire. It records the gift, in the sixteenth year of Kōvirājarājakēsarivanma, of 46 sheep—also to pay half the expense of keeping a lamp burning. These inscriptions are evidently long subsequent to the date of the excavations.

Cave 3 is at the corner of a large rock of granitic gneiss midway up the hill, and is much larger than the others and with more cells; but it is quite unfinished, as is also No. 4, which has two piers in front and has been intended, like No. 2, to have three cells or shrines. It is thus evident that these caves of Narasapāiyam or Māmandūr are in no way connected with Jainism, but, like those at Mahābalipuram, are purely Brahmanical and probably of about the same age.

Mr. Rea has also recently visited Manimangalam and a number of other temples in the Chingleput district, with apsidal sikhāras, which were supposed to be of very early date. His report has not yet reached me; but from what I learn they may probably turn out to be of more recent date than was supposed. They seem to have been small Chola shrines, to which were added mandapas and courts in about the fifteenth century. JAS. BURGESS.

NOTES ON ART AND ARCHAEOLOGY.

MR. HUBERT HERKOMER'S School of Art at Bushey will open for its next session on October 5. Applicants must send examples of their work before September 25.

MR. A. BORGES, Director of the Fine Art Department of the Albert Palace, is organising an exhibition of pictures of Old London and its environs, and will be much obliged to any possessor of paintings, drawings, and engravings which fall within the scope of the proposed exhibition, who will communicate with him on the subject.

THE archaic statue of a bull, which was brought from Athens by Cockrell about sixty years ago, has been presented to the British Museum by Sir Charles Mills, of Hillingdon Court, near West Drayton, and is now on view in the Elgin room.

ONE of the masterpieces of Lucca della Robbia at Florence has been sacrificed to culpable carelessness. The cleaning of the magnificent church in the Via Nazionale was left to the assistant of a picture-dealer. This man set his ladder against the neck of one of the apostles; and the instant he began to ascend, the beautifully wrought terra-cotta head fell to the ground and split into fragments.

THE Conseil municipal of Paris has passed a resolution that all the statues in the squares and public gardens shall be furnished with inscriptions indicating the subject represented.

M. CROISY, the sculptor, has been appointed a chevalier of the Legion of Honour.

A SUBSCRIPTION is proposed for the erection of a monument to the memory of Jules Bastien-Lepage in one of the squares of Damvillers, his native town.

M. J. CAHEN, of Paris, will publish by subscription next month a collection of fifty plates, entitled *Costumes Militaires, 1789-1814*, drawn and lithographed by Charlet, with descriptive letterpress by Guillaumot fils.

PREPARATIONS are being made by the artist community of Düsseldorf for the celebration, on a handsome scale, of the seventieth birthday of Andreas Achenbach on September 29. There is to be an exhibition, consisting entirely of Achenbach's works, and a public banquet, which will be attended by a large number of artists from other places.

THE Historical Society of West Switzerland held its annual meeting at Freiburg on September 9. Prof. H. Carrard of Lausanne, gave an account of the newly-formed society, "Pro Aventico." The object, according to the rules which are now published, is systematic exploration of the remains of the great Roman city Aventicum, and the preservation of all "finds" as public property. The future excavations are to be conducted by members of the "Pro Aventico." A local society has been constituted at Avenches itself, the members of which engage to use all possible precaution to hinder any antiquities from being sold to private collectors until they have been first offered to the museum.

THE four hundredth anniversary of the birth of the painter Gaudenzio Ferrari was celebrated on August 22-25, in his native province of Valsesia. At Valduggia, where he was born, a school of art has been founded in his honour; and at Varallo, the chief town of the province, a statue has been erected to his memory, executed by Signori P. della Vedova and Giuseppe Antonini.

THE *Kunstchronik* of September 10 contains the first part of an article by Dr. J. P. Richter, pronouncing decisively against the correctness of the ascription to Leonardo of the "Ascension" discovered a year ago in the lumber-rooms of the Berlin Gemäldegalerie.

THE battle of the Venice Sketchbook is continued by M. Eugène Muntz in the current number of the *Gazette des Beaux Arts*. He takes, of course, the Raphael side, and argues with exemplary moderation, bringing up in good order all the evidence available, adding several new instances of the similarity between the drawings and the pictures by Raphael, and replying vigorously to some of Morelli's arguments. The paper, which will be concluded in the next number, is illustrated by facsimiles of drawings, and is an important contribution to the controversy. M. Georges Lafenestre's second article on the Haarlem Museum is illustrated with an etching by M. H. Toussaint, after the fine portrait of Van Berensteyn, by Franz Hals, recently acquired by the Louvre.

IN *L'Art* (Sept. 1), M. Leehoff has etched the second of Baron Alphonse de Rothschild's curious pictures of Pierrot by Decamps. This shows Pierrot disturbed in his repast by the apparition of a rabbit from a hole near his feet. Among other papers is one on the decorative designs of M. François Ehrmann illustrated by his fine composition of "Les Lettres, les Sciences, et les Arts de l'Antiquité," which is to be reproduced in Gobelin tapestry for the decoration of the Salle Mazarine at the Bibliothèque Nationale. We are glad to see that the merit of the *Magazine of Art* is warmly recognised in an article by the editor.

MUSIC.

HEREFORD MUSICAL FESTIVAL.

II.

Hereford: Sept. 12, 1885.

THE performance of the "Last Judgment" on the Wednesday evening of the festival was, perhaps, as perfect in effect as could be. Spohr's music is sometimes held to be inadequate to the dread solemnity of such themes as he sought twice or thrice to illustrate. It is certainly beautiful in form, harmonious, and sweet, giving the impression of great finish, which would but ill accord with the almost Calvinistic, incomplete theology of the theme of M. Gounod's latest work; but Spohr's theology here is kindlier, and his music does not stray into the mistaken path of descriptive spiritual terrorism. The duet for soprano and tenor, "Forsake me not in this dread hour," the solo "I saw a new heaven," proclaimed by Mdme. Albani, and the quartett "Blest are the departed," were especially fine features in a noteworthy production, to which the then admirably controlled choir and orchestra contributed their full due. The other principals were Mdme. Patey, Mr. Lloyd, and Mr. Santley. The effect of the oratorio's solemn beauty, and of the completeness of its performance, was surely added to by the sense of the age and the long continued religious uses of the surrounding cathedral, which the labour and thought of five generations had reared securely in remote unsettled times.

Bach's cantata, "A stronghold sure our God remains"—the second item on the same evening—needs no comment beyond this, that one of numerous church pieces written in a day when if the anthem exceeded fifteen minutes the clergy were not charged with Ritualistic offences against a Church Association, it presented its great composer in but sorry form, and disappointed many who, in the year of Bach's bi-centenary, would have welcomed his music. Nor, we fear, is this to be rectified by its inclusion in the Bristol programme next month. The attraction of Thursday morning was Herr Dvorak's "Stabat Mater," a recent work of original and rare talent, which has before been commented on; which also should be often performed till a large public appreciate the music's suitability to the spirit of the hymn, its sympathetic grasp and expression by the composer. This performance regrettably afforded an instance of the inartistic self-insistence which even the greatest singers sometimes fall into. It is unnecessary to say that when they thus forget the music and the composer's directions in lieu of forgetting themselves, they are no longer the greatest artists. Mdme. Albani, gifted with rarest vocal quality and dramatic expression, occasionally does herself an injustice in this regard.

Mr. C. H. Lloyd's "Song of Balder," for soprano solo (Miss Annie Williams) and chorus, was duly produced at the Thursday's concert. It is a clever little work, reflecting musically with success and some originality the emotions of the eternal round of day, night, and returning dawn; or, further symbolised, of the round of the recurrent seasons. The poem is by Mr. F. E. Weatherley, and its production here is to be commended, merits apart, from the local connexion. Besides the composer's intimate association with the three choirs, the author was formerly a student at the Hereford School, though, we believe, a native of Portishead, Somerset. An example is thus set to Bristol; where, however, the Committee not only announce no new work, nor recent work of first importance, but continue to avoid the local resources of orchestra, conductor, and cathedral churches; while the three choirs do their work admirably, under the control of their cathedral organists. One condemnatory word

must, however, be said of these festivals, that the church prayers at the close of each occasion are entirely out of place after music, the most lofty, impressive, and adequately performed. We wish the practice might be discontinued.

MUSIC NOTE.

MR. W. A. BARRETT, vicar choral of St. Paul's, will deliver a course of ten lectures on "The Historical Development of Glee and Part-Songs" at the City of London College, in connexion with the Society for the Extension of University Teaching. The introductory lecture will be given on October 1, at 8 p.m., and the others on each succeeding Friday. They will be illustrated by glees and part-songs, and, at the close of each lecture, work will be done in class.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

BICKERS & SON, the originators of the System of Cash Discounts, SUPPLY all NEW BOOKS in General Literature at a reduction of 3d. in the 1s., and Law and Medical at 2d. in the 1s., for cash.

A Choice Selection of Standard Works in calf and morocco binding, suitable for the Library or for Presentation, also for School and College Prizes, always on hand. Orders by post carefully and promptly executed. Catalogues post-free. 1, Leicester-square, W.C.

NEW NOVEL AT ALL LIBRARIES.

Just ready, crown 8vo., cloth, price 6s.

A LIMB OF THE LAW: a Novel. By EDWARD RAE. London: WYMAN & SONS, 74-76, Great Queen-street, W.C.

Just ready, in paper boards, 1s.

A RUINED SANCTUARY. By LOUISA BIGG, Author of "Clare Walsman."

"It is one of the most substantial shilling stories we have read for some time."—*Hereford Mercury*. London: WYMAN & SONS, 75, Great Queen-street, W.C.; and all Booksellers.

Crown 8vo., cloth boards, price 2s. 6d., post free.

EDWARD III. and Other Poems, Ballads, &c. By YORK WEST.

Crown 8vo., cloth boards, price 2s., post free.

MIND and BRAIN. By Edwin Dean, M.D., LL.D. Section I. The Physiological Argument. Section II. The Psychological Argument.

LONDON: ALEXANDER & SHEPHEARD, 21, CASTLE STREET, HOLBORN; and all Booksellers.

HURST & BLACKETT'S LIST.

THE REV. A. G. L'ESTRANGE'S NEW WORK.

Just ready, in 2 vols., with Illustrations, 21s.

THE PALACE and the HOSPITAL; OR, CHRONICLES OF GREENWICH.

By the Rev. A. G. L'ESTRANGE, Author of "The Village of Palaces," &c.

MR. J. C. JEFFERSON'S NEW WORKS.

Now ready, in 2 vols., 8vo., 30s.

THE REAL SHELLEY: NEW VIEWS OF THE POET'S LIFE.

By JOHN CORDY JEAFFERSON, Author of "The Real Lord Byron," &c.

"Mr. Jefferson shows strenuous study of his subject, and of all the materials which can be brought in aid of it; he grapples with everything that turns up, sees every point sharply and precisely, and expounds all with great energy and vigour from his own side of the question. . . . We should have liked to give some extracts from this important book, but, having been at pains to define and discuss its contents, we have no further space for the purpose."—*Athenaeum*.

THE NEW NOVELS.

DOROTHY DRAKE. By Frederick H. MOORE. 3 vols., crown 8vo.

WHAT'S HIS OFFENCE? By the AUTHOR of "THE TWO MISS FLEMINGS," &c. 3 vols.

"A love story with a sensational and well-constructed plot. There are several telling situations which are worked out in a manner that shows considerable knowledge of human nature."—*Morning Post*.

THE VERGE of NIGHT. By PERCY GREG, Author of "Ivy: Cousin and Bride," &c. 3 vols.

"Mr. Percy Greg has so intermingled the political and the domestic action in his clever novel, that they make a unity which enables the reader to follow the development of character and events with untiring interest."—*Scotsman*.

THE LAW FORBIDS. By Katharine KING, Author of "The Queen of the Regiment," &c. 3 vols.

"There is much interest in Miss King's new story."—*Athenaeum*. "We find in 'The Law Forbids' that wholesome, breezy freshness which forms the atmosphere of Miss King's preceding stories."—*Spectator*.

SNOW in HARVEST. By Ida ASHWORTH TAYLOR, Author of "Venus' Doves," &c. 3 vols.

"A graceful and well-written story. It is a distinct improvement upon 'Venus' Doves.' There is more variety of character and Miss Taylor's grasp of it is firmer, while her analysis of moods and motives is closer and better sustained."—*Academy*.

ENTANGLED. By Miss Fairfax BYRNNE, Author of "A Fair Country Maid." 3 vols.

A FAIRE DAMZELL. By Esme STUART. 3 vols. (Next week.)

UNIFORM SIX SHILLING EDITIONS.

DONOVAN: A Modern Englishman. By EDNA LYALL, Author of "We Two," &c.

WE TWO. By Edna Lyall, Author of "Donovan," &c.

BOOKS FOR THE COUNTRY AND SEASIDE.

Each Work complete in 1 vol., price 5s. (any of which can be had separately), bound, and illustrated by

THE CONFLICT of OLIGARCHY and DEMOCRACY. By J. ALLANSON PICTON, M.A., M.P.

CONTENTS: The Origin and Growth of the English
Oligarchy.—Causes and Hindrances of Reform.—The
Relation of Political Reform to Social Progress.—The
Land Monopoly.—The Distribution of Wealth.—Demo-
cratic Morals.

"The book deserves the widest possible circulation.
It may be read with advantage alike by the timid Con-
servative and by the eager Radical."—*Weekly Times.*

Third Edition, crown 8vo, cloth, price 1s. 6d., post free
**LESSONS from the RISE and FALL of
the ENGLISH COMMONWEALTH.** By J.
ALLANSON PICTON, M.A., M.P.

CONTENTS: Introductory.—Treason and Loyalty.—
The Limits of Moral Force.—The Limits of Physical
Force.—The Sources of Popular Enthusiasm.—"Re-
publicanism: Form and Substance."

The *Echo* says:—"There is no writer now living who
knows the Commonwealth period so well, or who is so
far qualified to draw lessons from it for our own times.
His little book is full of thought and noble teaching.
It may be commended as a work of solid value and
great political usefulness."

PEOPLE'S EDITION.—Price 6d., with PORTRAIT.
(Special terms for quantities.)

JOSEPH MAZZINI: a Memoir by E. A. V.,
with two Essays by MAZZINI: "THOUGHTS on
DEMOCRACY" and "THE DUTIES of MAN."

"We earnestly commend it, especially to young
readers, and trust it may have the large circulation it
deserves. The life of this good man and noble patriot
is stimulating and instructive, and his essays worthy of
earnest consideration."—*Nonconformist and Independent.*

Crown 8vo, cloth, price 2s., post free.

STUDIES in PHYSICAL SCIENCE. By
W. J. MILLAR, C.E., Secretary to the Institution
of Engineers and Shipbuilders in Scotland, Author
of "Principles of Mechanics," &c.

LONDON: ALEXANDER & SHEPHEARD,

21, CASTLE STREET, HOLBORN; and all Booksellers.

Adopted by the School Board for London.

Now ready, price 7s. 6d. the Set of Twelve Copies in a
Wrapper, size 23 by 33; Mounted on Twelve Boards,
7s. 6d. extra; or on Six Boards, both sides, 4s. 6d. extra.

Coloured Freehand Drawing Copies

FOR CLASS TEACHING.

These copies are ADAPTED from specimens of various
styles of ornament, and are specially suitable for class-
teaching. THE COLOUR makes the copy attractive to
children, enables them to distinguish the form more readily,
and induces a habit, so useful to draughtsmen, of looking
at and comparing masses or spaces instead of simply ob-
serving outlines. It is not intended that the colour should
be copied by the children, though, when possible, the
teacher will find it useful to allow this practice as a reward
for careful drawing.

LONDON:

ALEXANDER & SHEPHEARD, 27, Chancery-lane, W.C.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Italy and Her Invaders, 476-553. By Thomas Hodgkin. Vols. III. and IV. (Oxford: Clarendon Press.)

THERE is something that fascinates the imagination in inquiring into the *origines* of civilisation, and to Mr. Hodgkin it has been a labour of love to trace the changes by which Italy passed from the ancient into the modern world. The characters of the combatants, too, have all the interest of romance. Theodoric and Boethius in Italy, Justinian and Belisarius and Narses from the East, are names that still live. Nor can our author refrain from regretting the fall of the Ostrogothic kingdom, which condemned Italy to the loss of her unity for so many ages. Theodoric, whose career is traced with extreme care, made every effort to weld the Goths and Romans into one people, and was seconded by the most enlightened of his Roman ministers, such as Cassiodorus and Boethius. If Italy could but have been wholly dissevered from the wreck of the ruined empire!

Not many would now thoroughly join in Dante's praise of Justinian's policy—

"And to my Belisarius I commended

The arms, to which was Heaven's right hand so joined,

It was a signal that I should repose."

Belisarius himself has been admired in all ages, and the legend of "date obolum Belisario" has always been a favourite story. But his work was most disastrous. With a barbarous host of Huns and Herulians and Gepidae, that had little title to be called a Roman army, he overthrew the Vandal kingdom in Africa, and thus unconsciously removed a powerful barrier which might, in the next century, have arrested the progress of Mohammedanism. Then, on pretence of marrying Theodoric's daughter Amalasuntha, he overthrew the Gothic power in Italy, and took Rome, and then defended it against the desperate rally which the Goths made when Theodoric's unworthy successors had given way for the heroic Totila, the last of the Goths. But in doing so, Belisarius did but prepare the way for the Lombards and Franks; and in the siege of the city ancient Rome perished, and with her many of the treasures of Greek and Roman learning. "This is the last time that Rome in her glory will be seen by mortal man. The things which have befallen her up to this time have been only alight and transitory shocks." But, as a whole, Rome, the golden city, the city of consuls and emperors, the city of Cicero's orations, of Horace's idle perambulations, of Trajan's magnificent constructions, yet stood when the Gothic war began. In the squalid, battered, depopulated cluster of ruins, over which, twenty-eight years later, sounded the heralds' trumpets, proclaiming that the

Gothic war was ended, it would have been hard for Cicero, Horace, or Trajan to recognise his home. Classical Rome we are looking on for the last time. The two celebrated libraries of Greek and Latin authors in Trajan's forum perished.

"There was the Chaldean history of Berossus, there were the authentic Egyptian king-lists of Manetho, there was Livy's story of the last days of the Republic and the first days of the Empire, there was Tacitus's full history of the conquest of Britain, all that Ammianus could tell about the troubles of the third century and the conversion of Constantine, all that Cassiodorus had written about the royal Amals and the dim original of the Goths. It may be doubted whether for us the loss of the Bibliothecae Ulpiae is not even more to be regretted than that of the library of Alexandria."

And the old senate perished, the old Patriarchate, and with them the classical tradition itself and the ancient culture; and, in great measure, the ancient language.

And for what and for when was all this ruin wrought? To carry out Justinian's expensive and showy policy, which is as much condemned by Joannes Lydus, the civil-service clerk of Constantinople, in his treatise *De Magistratibus*, as by Procopius himself.

"With these high notions of prerogative in his mind, Justinian became one of the most ruinous governors to his empire that the world has ever seen. The reader need not be reminded of the dreary story of fiscal oppression which in Constantinople, in Africa, in Lydia, has already met his view. The eighteen new taxes, the stringently exercised rights of pre-emption, the cruel *angaria* which, like the French *corvées*, consumed the strength of the peasant in unremunerated labour: all these made the yoke of the Emperor terrible to his subjects. And yet, notwithstanding this extreme rigour in collecting the taxes, the reproductive expenditure of the empire was not attended to; the aqueducts were not kept up; the *cursum publicum*, or public post, the best legacy received from the flourishing days of the empire, was suffered to fall into irretrievable ruin. Everywhere the splendour of the reign of Justinian—and there was splendour and an appearance of prosperity about it—was obtained by living upon the capital of the country. Everywhere, by his fiscal oppression, as well as by his persecuting attempts to produce religious conformity, he was preparing the provinces of the East, pale, emaciated, and miserable, for the advent of the Moslem conquerors, who, within a century of his death, were to win the fairest of them, and were to hold them even to our own day."

This is Mr. Hodgkin's case against Justinian, and it is all true. And yet, how was it possible for a Roman emperor not to seize the chance of recovering the West, for the Roman people and clergy not to join him against the foreign king! They were driven on by the memories of their past history, and our regrets are fruitless. And is it certain that the degenerate Vandals in Africa, under such kings as Gelimer, would have kept off the the Moslem, or that kings like Theodahad or Witigis, in Italy, could have kept out the energetic Lombards and Franks?

As in the previous volumes, so in these, Mr. Hodgkin's translations are good and well chosen for illustration, and the literary sections on Cassiodorus and Boethius are among the best in the book. On the vexed question of Boethius's condemnation it is shown that probably Boethius advocated some right of

appeal from the senators to the emperor, which looked like treason to Theodoric.

In iv. 47, there are some valuable remarks on the recolonisation of South Eastern Italy by the Greeks in Byzantine times, after that country and Sicily seemed to have been thoroughly Latinised. Church affairs receive a good deal of attention incidentally when they illustrate the history; but we are not yet come to the Rome of the Middle Ages, the city of sacred shrines and relics and pilgrimages. The chapter on St. Benedict at Monte Cassino is especially interesting. In his preface Mr. Hodgkin expresses his hope that the reader may not be alarmed by finding that in two large volumes he has only traversed a period of seventy-six years, and promises a more rapid progress through the two next centuries. In truth, the historical material now becomes scanty. Procopius, the historian of Belisarius and the Ostrogoths, is the last of the great line of historians of the West, beginning with Caesar, who were soldiers and statesmen, and upheld the idea of the state. With Gregory of Tours, the historian of the Franks, we begin the line of mediaeval writers whose views of history are based on St. Augustine's *City of God*, and who disregard the old civilisation and the world which is soon to vanish away.

Mr. Hodgkin, of course, recognises his great obligations to Dahn's admirable works on *The Kings of the Germans*, as well as to many special books, such as Binding on the Burgundians, and for personal information to Mr. Bryce, who is preparing to write the history of Justinian. He has added much to the vividness of his descriptions by his visits to Italy, as, for instance, in his account of the march of Belisarius's men across Italy to Rimini, or of the siege of Osimo. We cannot deny that our author's zeal for his subject has made his book somewhat diffuse; but no reader will take it up without profit.

CHARLES W. BOASE.

The English and Scottish Popular Ballads.

Edited by Francis James Child. Part III.

(Boston: Houghton, Mifflin, & Co.;

London: H. Stevens & Son.)

It seems sad, at first sight, that Englishmen should leave literary work which specially belongs to them to be done by Germans and Americans. Our only Early-English lexicons have been compiled by Germans: one, complete, by the late Dr. F. H. Stratmann; the other, fuller, but as yet incomplete, by Dr. E. Mätzner. The only Shakspeare lexicon worthy of the name is by a German, too, Dr. Alex. Schmidt. The only journals devoted to the English language are published in Germany and edited by Germans. The new Variorum Shakspeare is by an American, Dr. Horace H. Furness. And now we have the only fit edition of our best English and Scotch ballads by an American too, the well-known Chaucer scholar, Prof. F. J. Child, of Harvard. The neglect of books like these by English writers and publishers is doubtless due to the small and slow pay they bring in, and to the non-teaching of the history of our language in English schools when the present generation of writers and publishers was in its teens. Possibly the next generation may reach the present standard of the Hennigers

and Prof. Vollmöller in Germany, and turn out their Elizabethan plays, &c., in Elizabethan spelling, and not in Victorian or Edwardian. But for the happy inconsistency of the English nature, there would have been before now a league to secure the acting of "Hamlet" in three-button coats and top-hats.

But English neglect of large portions of our work has had this advantage—that it has enabled Americans and Germans to come forward and assert their co-ownership with us in our language and in our great writers of the past. And it is with no common pleasure that a Chaucer student stretches out his hands right and left to Ten Brink in Strassburg, and Child in Harvard; a Shaksperian student to Schmidt in Königsberg, and Furness in Philadelphia; while the ballad lover confesses gladly that no one else has done such admirable work at our old popular ballads as Prof. Child is doing and has done. In my belief there is no other man living who is yet capable of doing it.

In his two previous parts, Prof. Child has given 53 ballads. In the present part he gives 29; and among them are several of the best—"Sir Patrick Spens," "Child Waters," "Clerk Saunders," "Lord Lovel," "Little Musgrave," &c., besides "King Estmere," "Sir Cawline," "Sir Aldingar," &c., from the Percy Folio. Of each ballad, Prof. Child gives every known version, many of them unearthed by himself for the first time. Thus of "Sir Patrick Spens" he has 18 versions, of "Child Waters" 10, of "Little Musgrave" 14. To each ballad, also, he gives an Introduction, which is a model of closely packed information, and in which he sketches the story, summarises the differences of the versions, discusses the source of the ballad, gives parallels in the different languages of Europe, and then enumerates the translations. As a sample of work, which I feel it almost an impertinence to praise, so thorough and good is it, I point to the introduction to "Sir Aldingar" in the present part, pp. 33-44. After mention of where the two main English and Scotch versions are printed, the story of each is sketched, and the English shown to be the original one. Then an account is given of the Scandinavian cousin-ballad, "Ravengaard og Memering," of which there are eleven versions (eight Danish), besides a Norwegian copy, two Färöe ones, and an Icelandic version. The story of the old Danish version is then outlined, and the differences of the later ones from it stated. Then follow accounts of the Norwegian, Icelandic, and Färöe ballads, and a comparison of the names of the hero. Next comes the historic source, the story of Gunhild, the daughter of Cnut the Great, and William of Malmesbury's telling of it, compared with the ballad. Matthew Paris's account follows. The history is discussed, and set beside those of Richarda, wife of the Emperor Charles III., A.D. 887, and of Gundeberg, wife of the Lombard King Ariold, about 630. These stories are then told, and shown to link on to that of Olivia or Sibilla in the Charlemagne cycle. Her story is excellently narrated, and its Färöe variants given. Then the Spanish, French, Dutch, and German versions of this story are shortly stated. Next, the early English romances of *Sir Triamour* and the *Earl of*

Toulouse are shown to be a form of the story of Sibilla, and are cleverly summarised. To show how closely Prof. Child packs his information, I copy his paragraph after his account of the *Earl of Toulouse* (p. 42, col. i.):

"Of this story, the following are repetitions, with variations: (1) *Miracle de la Marquise de Gaudine*, MS. of about 1400, Paris et Robert, *Miracles de Notre Dame*, ii., 121 ff; (2) the German *Volksbuch*, *Eine schöne und liebliche History vom edlen und theuren Ritter Galmien*, printed 1539 or earlier, upon which Hans Sachs founded his play, *Der Ritter Galmi mit der Hertzogin aus Britanien*, Keller, VIII., 261; (3) the Danish poem, *Den kydske Dronning*, by Jeppe Jensen, 1483, Brandt, *Romantisk Digtning*, II., 99 ff; (4) a tale of *Bandello*, Second Part, No. 44, *Amore di Don Giovanni di Mendoza e della Duchessa di Savoia*, printed 1554; (5) the French prose romance, *L'Histoire de Palanus, Comte de Lyon*, ed. A. Terrebasse, 1833, put before 1539. In (1) a dwarf is made to conceal himself in the lady's chamber; in (2) a scullion to boast that he is the object of her passion; in (3) a servitor is the instrument of treachery; in (4) a young gentleman; in (5) this machinery is dropped, and a slanderous letter does the mischief. In none of these is the lady a German empress; in (5) she is an English queen; in (2) of British birth. In all there is a reciprocal predilection on the part of the lady and her champion."

Then follow the stories of the Spanish ballad and the Provençal chronicles, with Prof. Child's brief summing up, and a list of the translations of the ballad. Its three versions, and notes on the text follow. This is a fair sample of the thorough way in which the whole book is done.

To anyone who has not tried his hand at this kind of work, my unstinted praise of Prof. Child's editing may seem an exaggeration; but, having tried it myself, I can only say that I have never seen more conscientious and better work in my life than Prof. Child's. The book is an honour to its editor and America. It ought to find its way into every real English library, and it will prove a mine of sterling ore to every student who digs into it. F. J. FURNIVALL.

The Berkeley Manuscripts. A Description of the Hundred of Berkeley and of its Inhabitants. By John Smyth, of Nibley. Vol. III. Edited by Sir John Maclean for the Bristol and Gloucestershire Archaeological Society. (Gloucester: Bellows.)

THIS third volume of the Berkeley MSS., which contains Smyth's account of the several parishes in the Hundred of Berkeley will probably be found more interesting by the generality of readers than the *Memoirs of the Lords of Berkeley Castle*, which formed the subject of his two preceding volumes. Gloucestershire is one of the few counties in England which can boast of several historians, but none of them can be compared with Smyth, so far as he goes; for the fullness and accuracy of his parochial history establish his superiority as a local historian over Sir Robert Atkins, and every other author who has written about the antiquities of Gloucestershire. At the same time, Smyth's labours were confined to a single Hundred, and he ceased to write in the reign of James I.; and a book with these

drawbacks must be reckoned among the materials of local history to be consulted only for occasional reference. Such books will engage few readers except professed antiquaries, although they abound with curious information not to be found elsewhere; and, therefore, as they cannot be expected to command a sale proportionate to their merit, they are precisely the class of books which are reproduced with advantage at the cost of the local archaeological society. Few societies in our time can claim credit for a better investment of their funds than the Bristol and Gloucestershire have made in undertaking the publication of Smyth's Berkeley MSS.

Among the information for which we should look in vain in a modern county history of more pretension is the collection of local proverbs and of the peculiarities of the local dialect. This is the more valuable because in Smyth's time every English county had its own phrases and grammar, which made it easy to distinguish from what part of England a man came as soon as he opened his mouth. It seems that a native of Berkeley Hundred commonly inserted the letter *y* between words ending and beginning with consonants; so that if he was asked where he was born, he answered, "Where shu'd *y* bee *y* bore, but at Berkeley hurns, and there begis, each was *y* bore." The use of "each for I" was specially puzzling to foreigners, as everyone was called who was not a hundredor. The proverbs are, for the most part, commonplace enough, and the most remarkable among them are too coarsely worded to be quoted in the ACADEMY.

The parishes are treated alphabetically, beginning with Alkington and ending with Wortley; and Smyth takes occasion in his account of the first to discourse on husbandry in general, and to explain the best method of preparing the soil for crops by marling and manuring. He was an enthusiastic admirer of agriculture, which

"I account the best and most harmlesse of all bodily exercises, despised of none save foolles; ever by the wisest sort held the most noble, as sustayninge the life of all men: which hath drawne mee alonge from the title of Marle used in Alkington to digress."

We read, also, that before the civil wars of York and Lancaster husbandry was conducted by villeins or bond-servants, who worked under the oversight of the manor-reeve, and were bought and sold by deeds of grant. The latest deed of manumission among the Berkeley muniments bears date in the beginning of the reign of Henry VII.; and Smyth does not hesitate to justify villeinage and to express his conviction that it has never been legally abolished, and might be revived with advantage.

"I conceive (which also a learned writer hath lately published) that the lawes concerninge Villenage are still in force, of which the latest are the sharpest; But nowe, saith hee, and that most truly in mine opinion, since slaves were made free which were of great use and service, there are growne up a rabble of Rogues, cutpurses, and the like mischievous men, slaves in nature though not in lawe: And if any thinke this kind of dominion not to bee lawfull, yet surely it is naturall."

It is characteristic of Smyth's description of a parish that he never forgets to tell us the name

of the tutelary saint to whom the church was dedicated, and the day on which the church feast was kept. The old custom of keeping as a feast in each parish the day of the tutelary saint still survived from Catholic times, and Smyth had no sympathy with the Puritanical spirit which attempted to suppress these sociable gatherings. He takes occasion to say in describing the hills surrounding Cowley—

"Where to behold younge men and maids ascendinge and discentinge and boies tumberinge downe, especially on Comunion daies in the afternoones what times the resort is greatest, bringeth noe small delight to many of the elder sort also delightinge therein."

His dislike to the new fashion of strict Sabbatical observance is quaintly expressed in his account of Stinchcombe, where the second Sunday after the feast of Pentecost was known as Blu-meade Sunday. The name was derived from a meadow called Blu-meade,

"where the younger sort of both sexes accustomed in the afternoon of that day to meete from the Townships adjoininge to dance, leape, wrastle, and disport themselves till eveninge; of late yeares by some severe and rigid Catoes exclaiminge against such recreations, quite discontinued . . . For myself I subscribe to the Kinge's declaration; and like well, in this my decrepit age, to walke in somer-time, on Sundaeis after Eveninge Prayers, with my wife to Hodleys Green betweene our two houses, and there to behold my neighbour's children and servants, with yours and mine owne, to runne at Barley-breakes, dance in a ringe, and such like sports as they like best; A laudable recreation, which hath no oppugners save wayward dispositions, and men of too sterne a judgment, as though the text of Solomon were Apocriphall, That,—There is a time for all things."

Smyth's account of the River Severn, and of the fish which is caught in it, is one of the most entertaining chapters in the book. Berkeley Hundred is traversed by this noble river for eighteen miles, "not accomptinge crookes, turnings, or meanders"; and we are assured that, to Smyth's own knowledge, fifty-three different sorts of sea fish had been caught in the river. The fishing was free to the hundredors, who might take for themselves whatever fish they could catch, except those called royal and galeable fishes. The royal fishes were the sturgeon, seal, and porpoise, which were exclusively reserved to the Lord of Berkeley. Galeable fishes were the salmon, shad, and lamprey, which were subject to the custom of what was termed the gale. The fishermen set his own price on the fish caught, and took them to the lord, who had the option of taking the fish at half price or refusing the fish and taking half the value from the fisherman. The lord's dues were farmed usually by a "galeor" in each manor; but the tax was practically modified by the local custom, that if the fisherman could get his fish to land and put grass into its mouth before the galeor called to him, such fish were freed from payment of gale. Severn salmon was always famous, and it was a saying among epicures that salmon and venison were never eaten together in perfection, "for the goodness of the Salmon goes out when the Bucke comes in; And comes in when the Bucke goes out." But the rarest and most precious of Severn fish was the lamprey, which comes up the

river about Christmas, and remains there five months. This was, in the twelfth century, the most prized of royal dainties; and every schoolboy knows that King Henry I. died from a surfeit of lampreys. King John and his successor were equally fond of this fish, and a fine of forty marks was imposed on the county of Gloucester in 1199 for the king's pardon for default in supplying him with lampreys. The demand for this delicacy encouraged speculators to forestall the market; and the sheriff was commanded, in 1226, to proclaim that no one would be allowed to buy lampreys taken in the Severn to sell them again, lest the price should be raised by regrators. The public records abound with entries showing that Henry III. and his queen were inordinately fond of Severn lampreys. The sheriff of Gloucestershire received, year after year, royal writs to procure them for the king's table, and to take care that they arrived in good condition. He was directed, on March 4, 1237, to send by his cook, baked, all the lampreys he could get while the king was at Canterbury; but when the court came nearer Severn, he was to send them unbaked, so long as they could arrive sweet to eat. The same sheriff is directed (February 27, 1241) not to suffer anyone else to buy lampreys during Lent, but to send all he could get to the king wherever he might be. The supply in Lent, 1243, was 188 lampreys, which cost the king £12 7s. 3d. This, however, was a low price compared with the next century, for Lord Berkeley sent to King Edward III., in December, 1368, six lampreys, which cost him £6 7s. 2d. They got cheaper as the season advanced, for when the Abbot of Glastonbury sent six lampreys in the following April, the cost was only £1 11s. 6d.

It is clear from Smyth's remarks about the best part of the salmon, that he was a bit of an epicure and liked good living; and many readers will find it one of the redeeming features of this book that we are constantly catching between the lines a pleasant glimpse of the author himself. To those who care to study his writings, he stands confessed a cheery old Tory, who was a lover of ancient customs, and disliked changes of all kinds, who delighted in good living and merry-making, and (what is more rare) took pleasure in his old age in seeing young people enjoy themselves in their own way.

My notice of these three volumes would be incomplete without some recognition of the skill and taste with which the printer has accomplished his task. The paper and type employed are singularly choice and appropriate, and it is highly creditable to the English provincial press that it has proved itself capable of producing work of a quality which could not be excelled in any capital in Europe.

EDMOND CHESTER WATERS.

Analogous Proverbs in Ten Languages. By Mrs. E. B. Mawr. (Elliot Stock.)

A COMPLETE comparative dictionary of European proverbs would obviously be a work of immense value and interest; but it is likely long to remain among desiderata. The range of accurate linguistic knowledge which the preparation of such a book would require has,

perhaps, never been possessed by any single individual; and even a scholar who was fully qualified in this respect might well find a lifetime too short for the amount of research which would be necessary for the satisfactory accomplishment of the task. If a book of this kind is ever written, it will be due to the combined exertions of many different labourers. In the absence of any complete work on this subject, all who are interested in "Völkerpsychologie" ought to give a cordial and indulgent welcome to any partial attempts to throw light upon it. Mrs. Mawr's little volume is very far from being a perfectly satisfactory performance even within its own limits; but, in spite of its faults, it is a real contribution to the science which, "in all human probability," some learned German or other has already named Comparative Paroemiology.

The plan adopted by the author is to arrange a number of English proverbs in alphabetical order, and to place under each of them the proverbs corresponding to it (if they can be found) in nine other languages—Roumanian, French, German, Italian, Spanish, Dutch, Danish, Portuguese, and Latin. In general, only one proverb in each language has been given under each heading, although it would in many cases have been easy, and would have added to the interest of the work, to quote two or three analogues in one foreign language for the same English phrase. It is a pity that Mrs. Mawr has unnecessarily restricted the circulation of her book by the omission to furnish literal English translations of the foreign proverbs. If this had been done, the volume would have been rendered interesting to a tolerably wide circle of readers. In its present form it is quite useless to persons who know no language but their own; and it can be studied as a whole only by the very few people who can manage to spell their way through a collection of sentences in nine foreign tongues. It is difficult to understand the reason of this strange defect in a book which bears so much evidence of industry in its preparation. What is still more curious is that Mrs. Mawr has gone out of her way to inform the reader that the proverb, "Stuff a cold and starve a fever," has its parallel in the Chinese "N go cha pao teou," but has not thought it necessary to explain how nearly these mysterious words agree in meaning with the somewhat questionable maxim of English folk-medicine.

The comparative study of European proverbs suggests many interesting questions, which perhaps cannot be fully answered until the whole body of materials has been collected. The fact that the several nations of Europe possess many analogous proverbs is no doubt in itself worth noting, but it is a fact which only excites curiosity instead of satisfying it. We want to know how the resemblance is to be accounted for in each particular case. Many of the proverbs, indeed, which Mrs. Mawr has quoted as parallel have really nothing in common, and others simply express universal human sentiments in perfectly obvious language. Others, again, are mere quotations from the Bible, or from other books which have had an extensive circulation in many languages. Aesop's fables, of course, have supplied many of the common proverbs of Europe, and it is possible that not a few

might be traced to Dionysius Cato and other similar writers, who were often quoted by mediaeval preachers. There remain, however, many instances in which proverbs of purely popular origin have either been borrowed by one European nation from another, or else have been inherited by the different peoples from a common primeval source. An example of the proverbs which have descended from prehistoric antiquity is perhaps to be found in the saying, "Speak of the devil and he is sure to appear," the devil having, in the Teutonic (not in the Neo-Latin) versions, taken the place of the wolf as the personage whom it is thought dangerous to mention. In Holland (according to Mrs. Mawr) and in Yorkshire we find the saying, "Little fishes taste sweet" (meaning that small gains are acceptable), a survival, most likely, from the days before the Angle settlement in Britain. The borrowing of proverbs by one nation from another has probably been chiefly owing to the influence of translations of popular books. *Don Quixote*, for instance, has caused many Spanish proverbs to be naturalised all over Europe. Still, it is possible that the spread of proverbial sayings may, in a larger degree than we should readily suppose, be due to oral intercommunication between different nations. A phenomenon which has never been fully explained is the rapidity with which, in ages when there was little reading and when travelling was difficult and infrequent, newly coined words and idioms spread themselves from one extremity of a large country to the other. We seem to meet with something analogous to this in the diffusion of proverbs over many different countries. Among the common proverbs whose wide prevalence seems most inexplicable are "As poor as a church-mouse" and "He that is born to be hanged need not fear being drowned," which are found in equivalent words in nearly every Teutonic and Romance language. The latter is quoted by Mrs. Mawr in Danish with a humorous addition, "unless the water goes over the gallows." It would be curious to know by what channel we get our English saying, "There's many a slip 'twixt cup and lip"—an almost literal rendering of a Greek line ascribed by Heraclides to a certain Ancaeus, King of Samos:

πολλὰ μετὰ πῆλιν κύλικος καὶ χεῖλεος ἄκρον.

Several foreign proverbs expressing the same thought are quoted in this book, but the English form is the only one which preserves the original wording.

Mrs. Mawr dates her preface from Bucharest, and the Roumanian proverbs she quotes are the most novel feature of her book. They are, however, not quite so interesting as might have been expected, as most of them are to be found in nearly the same form in some of the other languages. "Money is the devil's eye," however, is a decidedly original expression of a common sentiment. Other good proverbs are, "Under the fairest stone a scorpion lies hid," and "One's neighbour's hen is always fatter than one's own." It seems the Roumanians have the saying "Diamond cuts diamond," which, so far as we can learn from Mrs. Mawr, is not proverbially used by any other nation except ourselves.

As Mrs. Mawr speaks of having issued some interleaved copies of her book, it is to be presumed that she looks forward to publishing another edition. Among the faults which require correction, in addition to the absence of translations above referred to, I may mention that many of the proverbs are placed under entirely wrong headings, and that there is an extraordinary number of misprints—due, it is charitable to suppose, to the author's having been unable to correct her proofs. It would be an improvement if, instead of retaining the dry dictionary arrangement, Mrs. Mawr would work up her material into a more readable form, tracing, as far as possible, the origin and history of the proverbs she quotes, and showing what light they throw on the national character of the peoples by whom they are used.

HENRY BRADLEY.

O'Shea's Guide to Spain and Portugal.
Edited by John Lomas. Seventh Edition.
(Edinburgh: Black.)

WE welcome heartily a new edition of this useful guide to Spain. In plan it differs from most guide-books. Instead of giving a description of places in their geographical order, the names are arranged alphabetically. This method has its advantages and disadvantages. It renders easy the finding of a given place; but it must be irksome on a journey to have to turn to widely sundered pages because the name of one town begins with B and its neighbour with V or Z.

As far as we can judge without personal trial, the present edition has been carefully revised with regard to routes, railways, conveyances, hotels, &c. A few more of the last-named might have been indicated in Madrid. The new routes and railways in the north-west seem to be accurately given. Mr. Lomas cuts the ground from under our feet when he laments that more space could not be afforded to the cities of the north-west.

Any adverse remarks that we have to make on this work fall rather under the head of general information than on particular routes and descriptions. Though not to the extent of some other guide-books, this still sins a little in respect to notices of modern Spain. The editor might, we think, have been a little more severe in the excision of antiquated matter, and somewhat more daring in the introduction of new. In the following disjointed remarks, we consider ourselves to be simply following out the request for further information with which the preface concludes.

P. xxi. Very useful and cheap maps of separate provinces, which are generally to be had in the chief towns, have been published of late years. They are generally based on Coelho's maps, or on official surveys, and often supersede those of Madoz's Dictionary here recommended. In geology, we consider M. Verneuil's maps as out of date. Far better are those of the Comision de la Mapa geologica, and in many instances those published by local and provincial geologists. In the chapter on Mines, pp. xxv.-xxvii., much should now be cut out; although the short-

comings are sometimes corrected by the information given subsequently under particular places, yet not every reader may know where to look for such. The table of production in 1860 is absurdly wrong, and worse than useless. It may have been official, but the official character of statistics in Spain, especially of past years, is no guarantee of their exactness. Not nearly enough is said of the recent development of the coal mines of the Asturias, and those of Palencia are quite unnoticed.

But it is in the lists of references to books and authorities that we think a change is most needed. We do not expect a guide-book to be either a history of literature or a dictionary of bibliography, but the notices given should be really useful to the traveller. Following a tradition that may have had some reason fifty years ago, references are almost always given to rare and early works. Then such things might have been found cheap in Spain. Now almost every secondhand bookseller possesses Quaritch's catalogues and marks his prices thereby. Such works can be bought no cheaper in Spain than in London. An account of the best modern editions and reprints, and some information about recent literature, would be more useful to the reader. The collections of Ribadeneyra and of Baudry are mentioned; but the one is in quarto and the other in octavo, the well-printed cheaper duodecimos of Dubrull at Madrid, and of Brockhaus at Leipzig, are unmentioned, still less the tiny volumes of the Biblioteca Universal at five-pence each. At Barcelona some of the rarest works have been reprinted in almost too cheap editions. The Biblioteca Científico-Literaria of Seville is another good collection, and contains a duodecimo edition of Abu Zaccaria's *Libro de Agricultura*, far more suitable to ordinary purses than the one in two folios noticed p. xliv. Under Catalonia or Barcelona something should have been said of the notable literary revival of Catalan, and of the fine illustrated works published at Barcelona. Spaniards feel somewhat keenly the undue contempt of the English for their recent literature and art, and such a paragraph as that on p. 262, col. 2, should, we think, be no longer allowed to stand. Many a tourist would gladly exchange some of the descriptions of well-known pictures for more information on recent, and living, and rising artists.

In the chapter on the Basque Provinces are several excusable misprints in Basque. The native name for the language is "Eskuar," not "Eskara"; the Basque stick is "Makila," not "Makilia"; the name of the moon may be "Light of the dead," but Harghi is only *light*, the full name is Illhargia; so with cemetery, "Herria" is the country only, Illherria is "the land of the dead." It is useless to refer to Chahos's "good Dictionnaire Basque, Français, Espagnol, et Latin." It is very rarely to be met with, and but a fragment was ever printed.

Strictures of this kind do not affect the general value of a guide-book. All who have worked on such manuals know that absolute accuracy is impossible. No one will regret taking this present work as his guide on a tour in Spain.

WENTWORTH WEBSTER.

GERMAN TRANSLATIONS OF THE BIBLE BEFORE LUTHER.

Die deutsche Bibelübersetzung der mittelalterlichen Waldenser in dem Codex Teplensis nachgewiesen. Von Dr. Herman Haupt. (Würzburg: Verlag der Stahel'schen Universitäts-Buchhandlung.)

THE critic who wishes to take as his sole standard of merit in a historical work the partial and scholarly investigation of a mind trained to research may well despair as he reads the mass of current English and German literature on mediæval matters. In England, it is true, there seems no reason why anything but rubbish should be written. In our universities no training is offered in mediæval thought, and its language, mediæval Latin, is dubbed a barbarism unworthy of scientific study. Matters mediæval are left to the antiquary, in general a worthy dilettante, who spends his days in his office, and his evenings in reading papers before a local society, papers replete with every variety of surprising philological and historical suggestion. Sometimes the antiquary edits a mediæval text (occasionally German!) and accompanies it by a preface which would be a disgrace to English mediæval scholarship, if we pretended to have any. As there is no opportunity for training—shortly, no mediæval school—so there is no disgrace in our paucity of mediæval scholars; of those we have, almost all owe their training to German teachers. In Germany, on the other hand, there is no want of schools or scholars; but, unfortunately, a great need of unbiased researchers—men whose sole object is to ascertain the truth of history, regardless of any religious or political opinions. Scholars in Germany are essentially Protestant or Catholic, and so much is this recognised that some booksellers mark the one class of writers or the other with an asterisk, so that their customers may easily separate the sheep from the goats. It is almost impossible to find a German mediævalist (I would except such men as Maurenbrecher, Geffcken, Kamp-schulte, and one or two others practically of the past) who does not prostitute his scholarship to a pre-conceived religious opinion, and so remain blind to all but one side of a question.

These remarks are not suggested so much by the treatment as by the subject of Dr. Haupt's book—namely, the pre-Lutheran Bible translations. We expect to find nonsense written and talked about these translations in England, for the reasons we have stated above; and our expectations are more than fulfilled. In Germany—where the whole history of them might long ago have been thrashed out had a little of the spirit of Grimm been left—men are only painfully arriving at the truth by a long process of balancing Catholic against Protestant. The whole history of the subject is sadly characteristic of the blindness produced by religious controversy when it enters the field of scholarship. At one time not only the German Protestants believed, but leading Protestant historians stated as a fact, that Luther had translated the Bible for the first time. Then, when the existence of eighteen previous editions could no longer be disguised, it was broadly asserted that they never reached the people, that they were

based only on the Vulgate, that “die Sprache ist unbeholfen schwerfällig und weder genau im Sinn noch treffend im Ausdruck” (so Goedeke!). This was met by the proof that their language was a perfect mine of folk expression, homely and true; nay, further, it was shown that Luther, so far from translating from the original Greek, had, in the New Testament, to a great extent merely modernised the old German Vulgate. The September Bible was only a natural growth out of the version of the *Codex Teplensis* of the fourteenth century. For a moment the Catholics appeared to have check-mated the Protestant scholars; then a great flash of inspiration struck Herr L. Keller; and now Dr. Haupt, seizing the torch of truth from that *Gelehrte*, has rushed with it headlong forwards. The version of the *Codex Teplensis*, the version of the eighteenth pre-Lutheran German bibles, is not the work of some laborious Catholic monk, not to such a source does the great Luther owe any assistance: it is the work of heretics, shortly of Protestants—namely of the German Waldenses. The so-called German Vulgate is not Catholic, it is intimately related to the Romaunt version of these Piémont heretics!

Such is the statement which Dr. Haupt calls upon us to accept. Is it true? We must confess that with the material at present before us it is impossible to judge. Of one fact, however, we are certain—that Dr. Haupt's pamphlet has by no means convinced us. The statement *may* be true, but he has not, in our judgment, proved it. We do not believe that any definite opinion can be formed on the relation of the four or five apparently independent German translations which exist in MSS. either among themselves, to the Vulgate, or to other translations, till German scholars fulfil the very necessary task of editing these four or five MS. translations, together with the printed pre-Lutheran version and its variants in parallel columns. How much longer shall we have to wait before German scholars become conscious of their duty in this respect?

We may briefly note the method of Dr. Haupt's proof. Attached to the *Codex Teplensis* are seven Articles of Faith. These certainly bear a general resemblance, at least in the three articles quoted, to the parallel articles in a creed of the Waldenses. But there are even here very considerable variations, and there seems nothing to hinder both having had a perfectly orthodox Latin original. An attempt is then made to show that the *Sieben Heiligkeit der Kirchen* which follow these Seven Articles in the *Codex Teplensis* are also Waldensian in character. They do not, however, agree either in order or contents with the Waldensian *Sept Sacrament* recently published from a Geneva MS. by M. Montet. When we come to the main question of how far the *Codex Teplensis* follows the Romaunt version of the New Testament in preference to the Vulgate, we find ourselves in some difficulty, because Dr. Haupt does not state whether he supposes the German translator to have translated from the Romaunt version or only to have modified the Vulgate to suit Waldensian dogma. The comparison between the Dublin and Tepl Codices merely shows that they agree occasionally together when differing from the Vulgate as quoted by Dr. Haupt. This does

not prove that both may not have been translated from MS. versions of the Vulgate differing somewhat from that of later printed versions. Thus, for example, the Romaunt version has *filh de la vergena* and the German *sun der maid* where the Vulgate has *filius hominis*. Another instance is the Vulgate *gehenna* translated by the German *Angst* and the Romaunt *pena*. One cannot call such evidence conclusive, and we fancy that something very similar to it might be used to demonstrate that Wyclif's version was also related to the Romaunt! Dr. Haupt, having determined that the pre-Lutheran printed Bibles were all produced under Waldensian influence, thinks it necessary to show that the Catholic Church was entirely opposed to their publication. Evidence of this he finds in the fact that the earliest editions were without mention of place, printer, or year, and that none of them were printed in a town belonging to a prince-bishop. In the first remark he exhibits considerable ignorance of the history of early printing; in the second he seems to have forgotten Quentel's two editions of the Bible published at Cöln. On the whole, we prefer to suspend our judgment and wait for further and more satisfactory treatment of this very interesting point.

We cannot refrain from concluding this notice by quoting a deliciously naïve remark which fitly exemplifies what we have said above as to German scholarship:

“Wir hoffen, dass durch unseren Nachweis des waldensischen Ursprungs der vorlutherischen gedruckten deutschen Bibel eine unbefangene Würdigung des inneren Werthes derselben angebahnt werden wird.”

On the part of German Protestants or German Catholics does Dr. Haupt mean?

KARL PEARSON.

P.S.—Since writing the above review a pamphlet, by Dr. F. Jostes, entitled *Die Waldenser und die vorlutherische deutsche Bibelübersetzung* (Münster), has reached our hands. The writer subjects the Keller-Haupt hypothesis to a fairly searching criticism, which will do much to assuage that sectarian enthusiasm which has swept through the Protestant press of Germany. It reached its culminating point in the *Prager Zeitung*, which asserted with the utmost gravity that this “great discovery” would render necessary the re-writing of large portions of ecclesiastical history. We shall note with some curiosity whether the remarkable interest recently manifested by Lutheran theologians for the pre-Lutheran German Vulgate will now begin to subside.

NEW NOVELS.

Dorothy Draks. By Frederick H. Moore. In 2 vols. (Hurst & Blackett.)

For Lilies. By Rosa Nouchette Carey. In 3 vols. (Bentley.)

In a London Suburb. By W. Hartley. In 3 vols. (White.)

In a Grass Country. By Mrs. H. Lovett Cameron. In 3 vols. (White.)

A Social Experiment. By A. E. P. Searing. (Putnams.)

The Peri. By Clara Dressell. (Siegle.)

Mem Sahib. By Mrs. Frank T. Platts. (Hamilton, Adams, & Co.)

The Strange Story of Eugenia, &c. By Helen H. Coode. (Griffith, Farran, & Co.)

MR. FREDERICK H. MOORE is as distinctly a realist as his namesake the author of *A Mummer's Wife*. But Mr. Mudie's constituents will find that realism in *Dorothy Drake* means an attempt to depict middle and sub-middle class life as it appears on the surface, not to penetrate to the squalid tragedy beneath. Plot apart, it is a series of sketches of Byeford, "a downright, respectable, sleepy" country town of the class that political disfranchisement and railway enterprise have robbed of genuine vitality and importance. The gossip of such a town, its "families," its municipal disputes and jealousies, its music and its science, its High Church and Low Church and Nonconformity—all these Mr. Moore reproduces with evident gusto, and no inconsiderable success. He has given a portrait of nearly everybody that is to be found figuring in such society as that of Byeford—the clergy of all denominations, the romantic bookseller, the schoolmistress with an ambition beyond spinsterdom, the young man with a soul and an education above business, but not above love or cigars, the pretty girl, the angel from the metropolis who occasionally stirs the pool of local musical talent in the shape of "a stout *prima donna* in a low pink dress," the maiden lady who, with the best intentions in the world, writes mischief-making letters to parents and guardians. Mr. Moore's portrait gallery is very nearly complete. It would probably have been quite complete had he included in it a good sketch of an Inspector of Schools who, as one of the residential notabilities of a provincial town, and also as the commercial traveller of culture in the region of which it is the centre, has unaccountably not yet had justice done him in fiction of the Trollopian type. Mr. Moore to a certain extent challenges comparison with Mrs. Oliphant and to a less extent with Mrs. Norris. But, as he is apparently a beginner, it would be hardly fair to him to accept this challenge, at least just yet. He is not, perhaps, a great, but he is certainly an original and painstaking artist. His sketches are drawn from the life, not from the models of other novelists. There is true humour in his portraits of Shakespeare Tarver, the bookseller, who is more successful in his municipal than in his musical or his amatory ambitions, and of Philemon Grant, the curator of the Byeford Museum. The letters, too, which pass between Miss Priscilla Trimsdyk and her friend Mrs. Pamela Bigstaff, the mother of Mr. Moore's hero, are very amusing, in virtue of the simplicity of the one correspondent and of the worldly anxiety of the other. Roger Bigstaff is a sufficiently manly fellow; indeed, Mr. Moore rather spoils one of his chapters by allowing his readers to imagine that it did, for a moment, enter into Roger's head to play the unmanly part of deceiver towards pretty Dorothy Drake, the fascinating (supposed) niece of the curator. In Dorothy, too, we have a delightful picture of a pretty girl, who has enough of the flirt in her composition to ensure her being a woman of the world after marriage. Mr. Moore improves Dorothy's

English rather too rapidly, however, in order to suit his plot. That plot is of the slightest, indeed, so slight, that Mr. Moore might have done without it altogether. Dorothy Drake suddenly turns out to be the cousin of her better-class lover, and the niece and heiress of the great Sir James Collpyper—*voilà tout*. Mr. Moore has an undoubted gift of wholesome and not unkindly satire, and it is to be hoped he will always use it to such good purpose as he has done in *Dorothy Drake*.

For Lilies is, like *Dorothy Drake*, to a large extent a study of country town life. It is carefully written; and it is unnecessary to say that its tone is not only healthy, but high. Yet the general impression created by reading it is that it is essentially much ado about very little. One girl has been substituted for another—this is the essence of the plot, and it is the oldest of all devices in fiction. But why should it take three volumes crammed with narrative and dialogue to make Lilies die of disease of the heart, and put the foundling Marjorie in her place? Capel Frere, too, Marjorie's elderly lover, is more than a bit of a bore. It is bad enough to write heavy magazine articles, but it is still worse to declaim them on the rug, as Capel Frere does, to his women folk, interlarding them with such poor humorous "gag" as

"The nineteenth century is a reforming age. We are reforming prisons, lunatic asylums, workhouses, and the dwellings of the poor. Perhaps there is a little too much dynamite, but I hope we may put a stop to that. Well, there is still an abuse that I should like to reform. I consider that mothers-in-law have been hardly used."

But the author of *For Lilies* has now a public of her own, who are no doubt very grateful to her for creating so many really good people, that spend the bulk of their time in saying "loving words" and telegraphing "loving glances" to each other. Such readers will be more than satisfied with the folks that figure in *For Lilies*, and whose paradise is obviously an eternity of afternoon tea. Lilies, herself the sport of caprice, circumstances, and weak action of the heart, is unquestionably well drawn.

If Mr. W. Hartley has not formally joined the Skeleton Army of English Realism, his *In a London Suburb* would seem to prove that he is in a fair way towards doing so. His London suburb, Wittington by name, is in reality in the purlieus of Bohemia. Mr. Havilland or Mr. George Moore might envy Mr. Hartley some of his characters. Take, for example, Mrs. Deakin *alias* Mrs. Bax, *alias* Nancy Broome, an ex-ballet girl, an adulteress, with at least two husbands alive, the one an odious drunkard, the other a swindler on a colossal scale. Or take her daughter Laura, whom a "gentleman friend" describes calmly as a curious mixture of "gaiety and melancholy, ingenuousness and *finesse*, delicacy and immorality." She has a habit of kissing and throwing her arms round the necks of her male favourites; and in the end goes in evening dress to the house of "Jem" Scarlett, the hero of the story, and implores him to allow her to go with him to America as his mistress—an offer which

Scarlett virtuously declines, because he prefers to elope with Mrs. Bracelin, the wife of an unmitigated brute given over to infamous pleasures. These specimens of Mr. Hartley's gallery may suffice. He has beyond doubt a capacity for drawing character in a somewhat rough style; but he lays on the paint very thickly. Triscott, the barber and scandal-monger, and Mr. and Miss Biffen, who supply the element of middle-class respectability in Wittington society, are fairly sketched; and the loves of Mrs. Cowdy and the Rev. Lucian Gow are told with a humour which, if not free from coarseness, is genuine. Mr. Hartley's well-wishers will hope that he may some day migrate from the slums of fiction.

Mrs. H. Lovett Cameron has admittedly been studying the late Mr. Whyte Melville; horsiness differentiates her new novel from its predecessors. There is a good deal of vigour in *In a Grass Country*, both of plot and of character-portraiture. Dick Gaskell, who falls in love with every pretty face he sees, scarcely indeed deserves the good fortune which finally waits him. Constance Harlowe, however, and Frederick Halford are good examples of the woman with too little will and of the man with too much. The "sporting" tragedy of "little Tom" Latimer is told with vigour, and here and there Mrs. Cameron does remind one of her new exemplar. She might, perhaps, have spared her readers what music-hall managers term "the risky business," contributed to *In a Grass Country* by Mrs. Lucy Clitheroe. This lady deposits her "fluffy head" on the shoulder of Mr. Gerald Latimer, who in turn, although he weakly kisses her, is honestly enamoured of her governess, Miss Lamb. As Mrs. Clitheroe repents, however, and devotes herself to good Samaritanism, Mrs. Cameron may be forgiven for creating her.

A Social Experiment is a short and painful American story, skilfully told. Mrs. Chauncey, an essentially heartless woman of fashion, takes Lizzie Wright, a pretty, country girl, out of her plain surroundings, to New York, educates her, develops the latent refinement of her nature, and treats her essentially as an equal. Lizzie, or Bertha, as she is rechristened, falls in love, with art and, unfortunately, also with an artist—unfortunately, because, before going away with Miss Chauncey, she has been secretly married to Hiram Snyder, a rustic admirer, with, however, a stout heart and a strong head. Poor Lizzie is tossed aside like a discarded toy by Mrs. Chauncey, and returns to her old friends to pine for lack of sympathy with them, and finally to die with happiness in sight.

The Peri, which is translated from the German, and not into quite unimpeachable English, is but a commonplace novel. Its plot is in reality a game of cross purposes, in which an artist and an artist's daughter, a count and a countess, a melancholy father, and a malicious step-mother, play their various parts more or less effectively. The final pairing off—the artist with the countess, and the count with the melancholy father's daughter—is well managed. The Countess "Andy," or Anita, is a decidedly spirited sketch.

There hardly appears to be an adequate excuse for publishing *Mem Sahib*, which has for its alternative title the suggestive question, "Should she have told him?" A girl, with a father in undeserved disgrace, does not tell her husband before her marriage of the story of this parent. She gets into slight difficulties in consequence, when she proceeds to India as Mrs. Leslie. Such as it is, however, this novelette, which would appear to be intended for children, is written in a simple, straightforward style. It also contains some photographs, happily not "touched up," of life in India.

There is power of the ghastly and ghostly sort in the collection of tales of which "The Strange Story of Eugenia" is not the best. Eugenia von Oberthal avenges the death of her father by shooting his murderer. As portion of the punishment she has to undergo, she is compelled to wear an executioner's rope round her neck publicly once a year on the day that her homicidal passion was gratified. This is the "strange story" that coolly and impenitently she tells to an admirer. But, though strange, it is too repulsive, and has not the relieving element of weirdness which plays an important part in "The Necromancer's Hand," by far the best of the three legends which compose this shilling dreadful. There is an artistic completeness about the punishment meted out by Miss Coode to the brutal Jacques Lasserre, which justifies a belief that she might rival the author of *The House on the Marsh* herself in her chosen field of picturesque criminality.

WILLIAM WALLACE.

CURRENT LITERATURE.

Forensic Facts and Fallacies: a popular Consideration of some Legal Points and Principles. By Sydney E. Williams. (Macmillan.) Mr. Williams has really no claim to the three F's which a love of alliteration has made him place on his title-page. His subject is not the forum, but law. He has something to say about advocacy; but his main purpose is to state for plain people some plain ideas about such matters as the land laws, libel and slander, trusts, and evidence. And probably no greater public service could be rendered at the present time than to clear the air of the many misconceptions of law which turn political agitation into wrong channels. This is Mr. Williams's purpose. He does not repeat the vain efforts of those who try to make every man his own lawyer—a thing as impossible as to make every man his own dentist. He seeks merely to put into popular language some broad and useful principles, and to correct some popular errors. That the law constantly restricts freedom of contract, that land is not unsaleable, that railway companies cannot enforce any by-law they may choose to make, that a Chancery suit does not always last a lifetime, that the making of a will is often a difficult and a delicate matter, and that the law is not altogether pedantic and unreasonable in laying down strict rules of evidence—these are simple truths that cannot be too often put forward. Mr. Williams occasionally goes a little too far in his corrections. There must have been a little confusion in his own mind when he wrote that because the tenant for life can by statute sell a settled estate, "there is therefore practically less restriction on the sale of land than there is on the sale of goods and chattels, a fact which ought to cause some surprise to the

general public." It would be a most proper feeling for the general public to entertain; but we think they had better not believe that even Lord Cairns could effect so mighty a revolution as the remark suggests. But the word "practically" is so good that we fancy Mr. Williams is poking legal fun at his readers. On the whole, however, he writes good law in a very sober and literal manner. His moralising is much less to our mind. We quite agree that the more one knows of English law the more one respects it. But we have an uncomfortable sensation of Blackstone served up cold when we read "that the policy of the law is wise and beneficent, that its principles are founded on sound considerations of justice and morality, and that law itself is but custom founded on common sense, or in other words is nothing but reason." It is this exaggerated commonplace which leads incredulous laymen to speak profanely of a system whose true greatness they do not appreciate. Mr. Williams's book would have been more useful, and would have been more widely read, if he had confined himself to the clear illustration of legal principles.

History of the Corporation of Birmingham. By John Thackray Bunce. Vol. II. (Cornish Brothers: Birmingham.) The first volume of Mr. Bunce's work appeared as long ago as 1878. He had then brought down the history of Birmingham to the year 1851, "the date at which," he says, "by the Improvement Act then passed, the several local governing bodies exercising authority over portions of the Borough were abolished, and their functions were transferred to the Town Council, upon which extended powers were at the same time conferred." The present volume contains an elaborate account of the last thirty-three years. Mr. Bunce, who, it will be remembered, wrote the article on Municipal Boroughs and Urban Districts for the Cobden Club volume on *Local Government*, is an enthusiast in his subject, and has spared no pains to make his history a worthy record of the really great work which Birmingham has done. He takes up in turn each department of municipal affairs—finance, public works, public health, drainage, free libraries, justice and police, gas and water, street improvements, &c.—and describes not only the changes which have taken place, but also the manner in which they have been carried out and the opposition which had to be overcome. He has much to say that is of no general interest. There are many personal details, many incidents of local jealousies and factionousness, which nobody but a Birmingham man can be expected to care for; in many respects, indeed, the book would have gained if important matters had been more carefully separated from such as are insignificant. But to a reader willing to skip judiciously the book is of value as presenting in a concrete manner the vast complication of local government. On the whole, it is a most encouraging record. It gives convincing evidence that, as the power and the responsibility of local bodies increase, able men are more and more readily found to undertake the hard and often thankless duties of local government. If the system of decentralisation is in the future to be carried still further, if Parliament is to be relieved of much of its parochial work, the example of Birmingham and other towns is good warrant for believing that self-government will not break down through any lack of public spirit.

Manual of International Law, for the Use of Navies, Colonies, and Consulates. By Jan Helenus Ferguson. In 2 vols. (Whittingham.) "Social life is the natural consequence of the human organism, and, as such, necessarily develops itself in conformity with the universal Law of Nature." This law may, for various vague reasons, be hypothetically represented by

the term *Spirit of Creation*. It has developed by a process of evolution through six stages—from the first, in which matter or consolidated force forms itself into compound substance, up to the sixth and present stage, marked by the ascendancy of the moral law. And so on through many pages of diligent philosophising. This is how Mr. Ferguson, the Minister of the Netherlands in China, begins a practical manual for the use of admirals, colonial governors, and consuls. We can hardly imagine that they will like this sort of thing; indeed, we fear that it will lead them to speak of Mr. Herbert Spencer in language appropriate to some stage of evolution lower than the sixth. This would, in itself, be matter of regret; but we should be still more sorry if it led them to condemn unread the rest of Mr. Ferguson's treatise. For, once he has got law created, he writes like a man of business, widely read in his subject, and perfectly able to distinguish between what is of practical importance and what is not. His chapters on Private International Law, comprising such titles as insurance, average, and bankruptcy, are really excellent examples of full and concise statement. Moreover, he exhibits an admirable reserve, rare among jurists, whenever he touches on unsettled questions. His aim has been not to force international law and usage into some more or less logical system, but to state concisely and, as often as possible, in the form of definite rules, what the accepted law or usage is. When doubt exists, as on the many troubled questions of neutrality, he prefers to quote freely from the works of other writers, who are of acknowledged authority. It is, indeed, a pity that a useful digest of international law, written in so unusual a spirit of modesty, should have been defaced by an imprudent attempt to get at the bottom of things.

The Parliamentary Election Acts for England and Wales. With Notes, History, and Summary. By J. M. Lely and W. D. I. Foulkes. (Clowes.) It appears from the Preface that there are at present no less than 149 enactments in force concerned more or less directly with the election of Parliaments. This formidable body of law has been classified in the work before us under six heads: Electors, Registration, Electoral Areas, Candidates, Election, and Election Petition. The editors have added a historical summary, copious notes, a full index, and those useful tables of statutes and cases cited which form a redeeming feature in the manufacture of legal text-books. Messrs. Lely and Foulkes are known by work of a similar kind before undertaken by them in common. It is unnecessary to point out the value of their present volume at this crisis.

The Candidates' and Voters' Manual. Edited by Charles G. Payne. (Fisher Unwin.) This is a book of a different order. Its price is only a shilling; and it professes to give a manual of election law, a warning against corrupt and illegal practices, and a brief summary of some of the arguments used by the several parties. As regards politics, it is strictly neutral.

MESSRS. BUTTERWORTHS have sent us a new edition of Mr. Stephen Dowell's *Acts relating to the Income Tax*, of which the first edition appeared in 1873. The Introduction, containing a brief history of the tax, is of general interest.

MR. EDWARD STANFORD has published two "Parliamentary Maps of the British Isles" (would not "the United Kingdom" be a more accurate phrase?), showing the electoral divisions under the Redistribution Act. The principle of colouring is the same on both. The counties are surrounded with a broad red line, the new divisions with a thinner red line; the names of the counties are printed in black, the names of the divisions in red; and each division of a county is separately tinted. The boroughs also

are distinguished in such a way as to show the number of members they return, and the grouped boroughs are very ingeniously connected. One is a large map, on the scale of 1½ miles to an inch, and is divided into four sheets, measuring altogether 50 by 58 inches. Advantage has been taken of the vacant spaces of sea necessarily included to give no less than sixteen inset maps of all the boroughs that have been divided. These inset maps are on the uniform scale of a mile to an inch, with the exception of London, which is on the smaller scale of two miles to an inch. But it must be remembered that the same publisher has already issued a parliamentary map of the metropolis on the scale of half a mile to an inch (not "two miles to an inch," as erroneously stated in the prospectus before us). The small map is on the scale of 25 miles to an inch, and measures 22 by 28 inches. It costs only four shillings, and with it most would be satisfied, though the larger map is well worth the price asked. It is unnecessary to praise the work that comes from Mr. Stanford's geographical establishment at Charing Cross. We will content ourselves with recording our pleasure at finding such old-world names as Eskdale, Howdenshire, Lindsey, and St. Augustine once more upon an English map. Emphatically, they do not manage these things better in France.

NOTES AND NEWS.

WE are glad to hear that Mr. Browning is at work on a new poem. He is walking five or six hours a day in the most beautiful country in the Val d'Aosta, which is quite clear of visitors, and he is in excellent health.

PROF. MOMMSEN is at present in London, working daily among the MSS. in the British Museum. He has also paid visits to Oxford and Cheltenham.

THE October number of *Merry England* will contain special records of Cardinal Newman, commemorative of his reception into the Church of Rome, which took place exactly forty years ago, on October 9, 1845. Among other contents will be a collection of his letters, addressed to newspapers or to private friends, and published by his sanction, during the last forty years. The letter recently written to Frank Power's sister about Gen. Gordon's copy of the *Dream of Gerontius* is given in facsimile. The illustrations of the number include portraits of his eminence when he was vicar of St. Mary the Virgin at Oxford, also when he joined the Roman Church, and as he is now. There is, besides, a curious Newman family group belonging to a date earlier than that of any of these.

THE first volume of Capt. Burton's translation of *The Thousand Nights and One Night* is ready for issue to subscribers, the second volume is all in type, and the third is now passing through the press. Capt. Burton hopes to be able to maintain the rate of publication of one volume a month.

MR. HENRY COTTON's book on *New India*, already announced in the ACADEMY, is dedicated to the Marquis of Ripon. It will be published immediately by Messrs. Kegan Paul, Trench & Co., who will also issue at the same time Mr. Wilfrid Scawen Blunt's articles on India reprinted from the *Fortnightly Review*. Mr. Blunt's book will be dedicated to Lord Randolph Churchill.

MR. F. T. ELWORTHY, of the Philological Society's Council, has nearly ready for the printer his *Glossary of the Somerset Dialect*, for which he has been collecting material for the last twenty years. He will give for every word the raciest phrase in which he has heard

it—how good these are the laughter which greeted some of them at the Philological Society testify—and its pronunciation in Mr. A. J. Ellis's *Glossic*. The *Glossary* will be published by the English Dialect Society, and will form its most important work.

MR. HENRY SHARPE, of Hampstead, has been studying Shakspeare's use of prose in his plays, and, from his practice, has been able to deduce his rules for this use. Mr. Sharpe will lay his results before the December meeting of the New Shakspeare Society.

MR. P. A. DANIEL's edition of the facsimiles of the first two quartos of *Lear* in Dr. Furnivall's series was issued last week. Mr. Daniel is preparing the three *Romeo and Juliet* facsimiles. Mr. Arthur Symonds has undertaken the 1600 and 1608 quartos of *Henry V*.

AN edition of Kingsley's *Water Babies*, with 100 illustrations by Mr. Linley Sambourne, will be published by Messrs. Macmillan in the course of next month.

NEXT year being the centenary of the publication of Burns's *Poems chiefly in the Scottish Dialect*, Mr. Elliot Stock will shortly issue a facsimile of this work.

THE fifth and last volume of Mr. J. M. Gibbs's edition of Goldsmith's Works for Messrs. George Bell & Sons is finished, but the printing of the full index to the book will delay its appearance for two or three weeks.

MR. H. COURTHOPE BOWEN will publish early in October a volume of poems entitled *Blossoms from an Orchard*. Mr. Bowen is also engaged in writing a series of lectures on "The History of the Various Methods of Teaching School Subjects," which he will shortly deliver before the College of Preceptors.

THE next volume in the "Golden Treasury" series will be Tennyson's *In Memoriam*.

MESSRS. SAMPSON LOW have nearly ready for publication *The Journal of Mary Frampton, 1799 to 1846*, edited by her niece. The book will contain many curious letters and anecdotes.

THE same publishers have in the press an account of Mr. Howard Vincent's recent tour through the British Empire and the United States. It is written by his wife, and will be abundantly illustrated.

A CONTRIBUTION to the criticism of the New Testament is promised by Messrs. George Bell and Sons, in the shape of *A Guide to the Textual Criticism of the New Testament*, by the Rev. Edward Miller, author of "Irvingism," and "The Church in Relation to the State"; and known some twenty years ago as having written two Latin Grammars and a Greek Syntax. Sacred textual criticism is fast rising into prominence; and if this treatise prove to contain a fair statement of the arguments which lead many scholars to refuse adherence to the views ably advocated by Drs. Westcott and Hort, and others, it will be welcomed by such as take the opposite line, as well as by those who agree with the views therein advocated.

MESSRS. MACMILLAN will publish immediately a new novel by Miss Yonge, entitled *Nuttie's Father*.

THE Rev. S. A. Swaine is writing a *Life of Gen. Gordon*, which will appear shortly as one of the volumes of "The World's Workers' Series," published by Messrs. Cassell & Co.

MR. SYDNEY BUXTON will publish immediately, with Messrs. Swan Sonnenschein, & Co., a little book on *Over-pressure and Elementary Education*, enlarged from an article on the same subject which he contributed a few months ago to the *Nineteenth Century*.

A MEMOIR of the Rev. Dr. David King, formerly a Presbyterian minister in London and Scotland, and well known in connexion with the Evangelical Alliance, will be issued in a few days by Messrs. James MacLehose & Sons, of Glasgow.

A VOLUME of poems, by Mr. Andrew James Symington, is to be issued at an early date by Mr. Alex. Gardner, of Paisley. Many of the pieces relate to the island of Arran.

MR. WILLIAM TIREBUCK is to edit the poems of Goldsmith for the "Canterbury Poets."

A POEM of some length, entitled *Kartoum*, will be published by Messrs. Heywood & Sons, Manchester, and Mr. Vickers, 317 Strand, in the beginning of October. The work is of a somewhat ambitious type, and the stanza employed is that of Spenser, with occasional slight variations. The author is an undergraduate of Cambridge.

THE October number of the *Expositor* will contain a long and trenchant criticism on the work of the Palestine Exploration Fund, by Prof. A. Socin, of Tübingen, the well-known Arabic scholar, and author of *Baedeker's Guide to Palestine*, besides articles by Lord Moncrieff, Canon Driver, and others.

"A CHAPTER ON BOOKBINDING," by Mr. Bernard Quaritch, will appear in the October number of *Walford's Antiquarian*; which will also contain a paper by Mr. G. A. Aitken, on "Steele, and some English Grammars of his Time."

MR. CHARLES MARVIN will contribute to the next number of the *Army and Navy Magazine* an article on "The Value of Port Hamilton." In this the writer discusses the whole question of English military and naval operations against Russia in the Baltic, Black Sea, and Asia, and draws attention to the importance of Port Hamilton as a concentrating point for an attack upon Vladivostock, Russia's most vulnerable possession.

DR. GEORGE MACDONALD's many friends may like to know that some exceptionally good portraits were taken of him, during his recent stay in Edinburgh, by Mr. Shaw.

WE understand that Madame Novikoff's book, *Skobeloff and the Slavonic Cause*, is now out of print. A new edition would be very desirable at the present crisis.

THE inaugural address at the forthcoming session of the Birkbeck Institution will be delivered by Lord Justice Fry. We understand that the Queen, and the Prince and Princess of Wales have recently consented to become patrons of the Institution, which is now in occupation of its new building.

FROM the prospectus of the Ladies' Lectures at Kensington, in connection with King's College, we learn that the net proceeds of the performances of the "Tale of Troy" brought £652 19s. 6d. to the fund for purchasing a house in Kensington Square, which ranks as a department of the college. Among the lecturers is Mr. S. R. Gardiner, now "emeritus" professor.

THE Carlyle Society will resume its meetings on Thursday next, October 1. The president of the society is Dr. Eugene Oswald; the hon. secretary is Mr. C. O. Gridley, 9 Duke Street, London Bridge.

HEINE has a good defence of Shakspeare against Grabbe's charge that he neglects the Unities: those of Time and Place he can forgive him, but that of Interest he cannot. "The cleverest critics make strange mistakes. Not only the last-named unity, but unities of Time and Place, are by no means wanting in the great Poet; only, his conceptions are somewhat

more elastic than ours. This world forms the stage of his plays; and that is his unity of Place. Eternity is the period during which his plays come to pass; and that is his unity of Time. And the hero of his plays, the bright central figure, representing the unity of Interest. . . . is Mankind, a hero who is always dying and rising again, always loving and always hating, yet in whom love is stronger than hate, now crawling like a worm, now soaring like an eagle, now deserving a foolscap, now a laurel-wreath, or still oftener both of these at one and the same time; the great dwarf, the small giant, the homoeopathically-prepared divinity, in whom the divine elements may have become diluted, but which exist nevertheless. Ah! let us not over-rate the heroism of this hero, for the sake of modesty, and very shame!"

We quote Miss Ida Benecke's Englishing of the passage, and we hope soon to see the whole of her translation of Heine's Shakspeare criticism in print.

THE Société française des Amis de Rabelais, which was founded at Tours some months ago, intends to hold a yearly congress for the discussion of questions relating to the life and works of the great humourist. Among the chief objects contemplated by the society is the preparation of a complete edition of the works of Rabelais.

A CORRESPONDENT sends us the following specimens of the Pope's Latin verses:

"Justitiam colui; certamina longa, labores,
Ludibria, insidias, aspera quaeque tuli;
At Fidei vindex non flectar: pro grege Christi
Dulce pati; ipsoque in carcere dulce mori."

"Occidit—inclamant. solio dejectus, in ipso
Carcere, in aerumnis occidit ecce Leo.
Spes insana: Leo alter adest qui sacra violentes
Jura dat in populos, imperiumque tenet."

We have received an appeal from the Spanish folklorists, addressed to their colleagues of all nations, for subscriptions to build a cruiser or privateer, to be called the *Iberia*, to war against Bismarck, "as a means of procuring love and fraternity among all races and all peoples"!

We are requested to state that the London publishers of *Aulnay Tower*, an American novel reviewed in the ACADEMY of last week, are Messrs. F. Warne & Co.

MESSRS. KEGAN PAUL, TRENCH, & CO.'S ANNOUNCEMENTS.

MESSRS. KEGAN PAUL, TRENCH, & Co.'s announcements for the coming season include—among books of travel, the *Kilimanjaro Expedition in Eastern Equatorial Africa*, by H. H. Johnston, with maps and eighty illustrations by the author; *Two Years in the Jungle*, by W. T. Hornaday, hunter and naturalist, whose adventures were chiefly in India, Ceylon, the Malay Peninsula, and Borneo; *Sunshine and Sea*, being a country doctor's account of a visit to the Channel Islands and coast of Brittany, with illustrations.

In biography they announce *Memorials of the Life and Letters of Major-General Sir Herbert B. Edwards, K.C.B., K.C.S.I.*, by his wife, in two volumes, with portrait and illustrations; *The Life of Father Tom Burke*, by W. J. Fitz-Patrick, in two volumes, with portrait; *The Life and Letters of Henry W. Longfellow*, by his brother, the Rev. S. Longfellow, in two volumes, with illustrations; *Sea Life Sixty Years Ago*, by Captain George Bayly; *A Facsimile of "General Gordon's Last Journal,"* reproduced by photo-lithography; *Last Days of Marie Antoinette*, a historical sketch, by Lord Ronald Gower, with portrait and facsimiles; and *Biographical Lectures*, by the late George Dawson.

Among historical books we have the fourth volume of Prof. Mahaffy's edition of Duruy's

History of Rome and the Roman People, with numerous illustrations; the second volume of Prof. Woltmann and Woermann's *History of Painting*, with 290 illustrations; *The History of Catholic Emancipation*, by W. J. Amherst, S.J.; and Mr. T. P. O'Connor's *Account of the Parnell Movement*. Besides these, a collection of antiquarian lore, by the late J. W. Warter, entitled *An Old Shropshire Oak*, in two volumes; while the woodlands afford Mr. F. G. Heath, under the title of *Sylvan Winter*, subject matter for another of his illustrated books.

The additions to the "Parchment Library" during the present season will be Mr. Stanley Lane-Poole's edition of *Swift's Journals and Letters*, and *Milton's Poetical Works* in two volumes. In the larger series Mr. George Saintsbury will give *Specimens of English Prose Style*, with an introductory essay; while outside the smaller series, but in a similar typographic form, we are promised Mr. Austin Dobson's *At the Sign of the Lyre*, and Mr. Edmund Gosse's *Firdausi in Exile*.

The next additions to the "International Scientific Series" will be Prof. Hartmann's work on *Anthropoid Apes*; Prof. Oscar Schmidt on *The Mammalia in their relation to Primeval Times*; Prof. Milne on *Earthquakes and other Earth Movements*; and Dr. H. Macaulay Posnett on *Comparative Literature*.

In theology, the announcements of the same publishers include the completed volume of *Early Christian Symbolism*, by the late William Palmer, with numerous compositions from fresco-paintings, glasses, and sculptured sarcophagi; a fourth volume of *Thirty Thousand Thoughts*; Sermons by the Bishop of Derry and by the late Lord O'Neil; also a volume of *Lectures and Addresses* by the latter author; while "The Pulpit Commentary" will be increased by a volume on *II. Corinthians and Galatians*, and one on *Ephesians, Philippians, and Colossians*.

The miscellaneous announcements include two books on India, the one entitled *New India*; or, *India in Transition*, by Mr. H. J. S. Cotton, and the other entitled *Ideas about India*, by W. Wilfrid Scawen Blunt; also *Scientific Meliorism and the Evolution of Happiness*, by Miss J. H. Clapperton; *The Social Problem*, by Mr. William Graham; *Springs of Conduct: an Essay in Evolution*, by Mr. C. Lloyd Morgan; *Circulating Capital: an Enquiry into the Fundamental Laws of Money*, by an East India Merchant; *Some Thoughts on Moderation*, by Mr. Gustafson; and *The Life of a Prig*, by One.

The new volumes of poetry announced include *The Romance of Denuell*, by Mr. J. R. Mozley; *Ballads of the Western Highlands and Islands of Scotland*, by Evin Mak Cloud; *A Modern Ideal*, by Mr. Sidney R. Lysaght; *Bertha, and other Poems*, by Mr. C. Sayle; *The Poet in May*, by Mr. Evelyn Pyne; *Antonius: a Dramatic Poem*, by Mr. J. C. Heywood; *Uriel Acosta*, from the German of Gutschow, by Mr. Henry Spicer; also a revised edition of Viscount Sherbrooke's *Poems of a Life*.

MESSRS. CROSBY, LOCKWOOD, & CO.'S ANNOUNCEMENTS.

MESSRS. CROSBY, LOCKWOOD, & Co.'s announcements include: *Electro-Deposition: a Practical Treatise on the electrolysis of gold, silver, copper, nickel, cobalt, iron, and all other metals and alloys, including brass, bronze, German silver, &c.*, with full instructions in electrotyping, description of voltaic batteries, magneto- and dynamo-electric machines and thermopiles, and the various apparatus, materials, and appliances used in every department of the art, and a chapter on electro-metallurgy, by Alexander Watt, with upwards of 150 illustrations; *The Prospector's Hand Book: a guide for the pros-*

pector and traveller in search of metal-bearing or other valuable minerals, by J. W. Anderson, with numerous illustrations; *The Engineman's Companion: a practical educator for engine-men, boiler attendants, and mechanics*, by Michael Reynolds, with many illustrations; *The Combined Number and Weight Calculator*, showing at a glance on any one page—(1) any number of articles consecutively from 1 to 470, (2) any number of cwt., qrs., and lbs., from 1 cwt. to 470 cwt., (3) any number of tons, cwt., qrs., and lbs., from 1 to 23½ tons, at 421 different rates ranging from ¼th of a penny each to 20s. each or per cwt., and £20 per ton, containing over 250,000 direct calculation, which will produce, by making only one single addition to each, without having to put down any separate figures, a combination of no less than 25 millions of calculations, by W. Chadwick; *Our Temperaments*, their study and their teaching, a popular outline, with illustrations, by F.R.C.S.E.; *Book-keeping for Farmers and Estate Owners*, being a practical treatise on farm accounts, divided under three plans, with a view to include all classes of farms, by J. M. Woodman; *Woodman's Yearly Farm Account Book*, showing the income and expenditure under each department of crops, live stock, dairy, &c., &c., with profit and loss account, and balance sheet at the end of the year, with an appendix of Forms for entering a complete record of the farming operations; *Amateur Farming*, or, the Lessons of my Farm, being an introduction to farm practice in the culture of crops, the feeding of cattle, management of the dairy, poultry and pigs, and the keeping of farm-work records, by R. Scott Burn; *The Artist's Tables of Pigments*, showing their composition, conditions of permanency and non-permanency, adulterations, and effects in combination with other pigments and vehicles, and giving the most reliable tests for purity, by H. C. Standage; a new and cheaper edition of *Mediaeval Alphabets and Initials for Illuminators*, by F. G. Delamotte, with an introduction by J. Willis Brooks, containing twenty-one plates and illuminated title, printed in gold and colours; *The Practical Brick and Tile Book*, comprising, I. A Rudimentary Treatise on Brick and Tile Making, by Edward Dobson; II. The Rudiments of Practical Brick-laying, by Adam Hammond; III. Brickwork, a practical treatise on bricklaying, cutting, and setting, by F. Walker, with over 270 illustrations; a new and revised edition of *Land and Marine Surveying*, in reference to the preparation of plans for roads and railways, canals, rivers, towns' water supplies, docks and harbours, with description and use of surveying instruments, by W. Davis Haskoll; *New Elementary French Grammar*, for the use of junior classes and students, adapted with additions and modifications from the latest edition of M. de Fivas's *Grammar of French Grammars*, with numerous exercises on every rule, to which is added a French Reader, or selections in prose and verse from standard authors, with explanatory notes and a French-English vocabulary; *The Civil Service Chronology of History, Art, Literature, and Progress, from the Creation of the World to the Present Time*, new edition, with continuation, by W. Douglas Hamilton; "The Sunbeam Stories," by Mrs. Mackarness, a new uniform edition in ten volumes, tastefully bound, with illustrations, viz.:—*A Trap to Catch a Sunbeam*, and a *Merry Christmas, Married and Settled*, *Amy's Kitchen*, *Old Jolliffe and Sequel*, *The House on the Rock*, *Only*, *The Cloud with the Silver Lining*, *Coming Home*, *The Star in the Desert*, *The Dream Chintz*.

A new series of "Handy-books on Handy-crafts," by Paul N. Hasluck, is in preparation, each comprising about 144 pages, with about 100 illustrations; *The Metal Turner's*

Handbook: a practical Manual for Workers at the Foot Lathe, second edition, revised; *The Wood Turner's Handbook*; *The Watch Jobber's Handbook*; *The Model Engineer's Handbook*; *The Clock Jobber's Handbook*; *The Mechanic's Workshop Handbook*; *The Cabinet Worker's Handbook*; *The Fret Worker's Handbook*.

Also the following new volumes and new editions in "Weale's Rudimentary Scientific Series": *Practical House Decoration*, by J. W. Facey, being a Sequel to the same author's "Elementary Decoration"; *A Treatise on Marine Engines and Steam Vessels*, originally written by Robt. Murray, entirely new edition, re-written and enlarged, by Geo. Carlisle; *Locomotive Engine-Driving: a Practical Manual for Engineers in charge of Locomotive Engines*, by Michael Reynolds, seventh edition, comprising a key to the locomotive engine, with numerous illustrations; *Stationary Engine Driving: a Practical Manual for Engineers in charge of Stationary Engines*, by Michael Reynolds, third edition; *The Rudiments of Mineralogy: a Concise View of the General Properties of Minerals*, by Alex. Ramsay, third edition; *Rudimentary Treatise on Coal and Coal Mining*, by Warington W. Smyth; *Theory of Compound Interest and Annuities*, with a series of Logarithmic Tables, by Fédor Thoman, new edition, revised and corrected, by J. Heron Duncan; *Brickwork: a Practical Treatise, embodying the general and higher principles of bricklaying, cutting, and setting*, by F. Walker, second edition.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. W. H. ALLEN AND CO. have the following books in the press: A new edition of *Thornton's Gazetteer of India*, corrected up to date, in one volume of about 1,000 pages; *The Life of General Francis Rawdon Chesney*, by his Wife and Daughter, edited by Stanley Lane-Poole; *An American in Norway*, by J. F. Vicary; *A History of Toryism*, from the accession of Pitt to power in 1783 to the death of Lord Beaconsfield in 1881, by T. E. Kebbel; two new volumes in the "Eminent Women" Series—*Rachel*, by M. Kennard, and *Madame Roland*, by Mathilde Blind; *Reminiscences of Sport in India*, by Gen. E. F. Burton, of the Madras Staff Corps; *Reform and Progress in India*; a few Thoughts on Administrative and other Questions connected with the Country and the People, by an Optimist; a second edition of *The Poetical Works of Milton*, with explanatory and philological notes, by Dr. John Bradshaw; a second edition of *Tashil-ul-Kalam*; or, *Hindustani made easy*, by Col. Holroyd, Director of Public Instruction in the Punjab; *Longitude by Lunar Distances*, by Major H. Wilberforce Clarke; and *A Dictionary of Islam*; being a Cyclopaedia of the Doctrines, Rites, Ceremonies, and Customs, together with the Technical and Theological Terms, of the Muhammadan Religion, by the Rev. T. P. Hughes, of Peshawar.

MESSRS. WILSON AND McCORMICK, of Glasgow, announce the following new books: *Law Lyrics: Diabolus Amans*, a Dramatic Poem; *Walt Whitman*, by Dr. Bucke; *English Critics on Walt Whitman*, edited by Prof. Edward Dowden; an English edition of *Specimen Days and Collect*, Walt Whitman; a new edition of *Thoughts in the Cloister and the Crowd*, by Sir Arthur Helps; *Geology and the Deluge*, by the Duke of Argyll; *The Story of Jewad*, from the Turkish, by E. J. W. Gibb; *Wayside Songs*, with other verse; *The North Wall*, by John Davidson; *Martha Spreull*, by Zachary Fleming; *Iberian Sketches*, by Jane Leck; and *Inchbracken*, by Robert Cleland.

MESSRS. MASTERS & Co. will publish during the coming season a new tale, by Lady Dun-

boyne, entitled *Letty's Mission*, illustrated; *At Granny's: a Tale for Children*, by a new author, with illustrations; a new edition of *The Incumbent of Axhill*, by the author of "The Chorister Brothers"; and a revised edition of *The Sermons of S. Leo the Great on the Incarnation*, translated by the Rev. Canon Bright.

MESSRS. PARTRIDGE & Co's announcements for the coming season include *Nan's Story*; or, the Life and Work of a City Arab, by L. Sharp; *Master Lionel, that Tiresome Child*, by E. M. Waterworth; *Wait till it Blooms*, by Jennie Chappell; *Pretty Pictures for Tiny Pets*, with stories and verses; *The Young Folk's Picture Book*, with descriptive stories, by James Weston; *Issy: a Story of Trust and Triumph*, by Laura McL. Backler; *Christ and the Bible*, by Prof. Stanley Leathes; *Her Saddest Blessing*, a tale, by Jennie Chappell; *Kenneth McAlpine*, a Tale of Mountain, Moorland, and Sea, by Dr. Gordon Stables; *The Fortunes of Riverside*, by S. Hocking; *Running from Home*, by M. A. Paull; and *Alice Webster's Blessings*, by Ruth Lamb.

ORIGINAL VERSE.

A CRONE'S TALE, A.D. 1545.

SHE came from a land across the sea,
With the sad-faced priest with the hair of gold,
She told not her name nor her mother's kin,
But ever they talked of the days of old;
Of heathen men's ways, of popes and of kings,
Of the sunlight yellow and cornflowers red,
Of men forgotten, of by-past things,
Of the sorrow of living, the rest of the dead.

A palmer brought him a letter one day,
In the words they write far over the sea,
He kiss'd her lips so lily pale,
And sped him away to that far country.

Then ever she watched at the door by day,
And oft she stray'd in the cold moonlight;
Wan, wan she grew when the autumn came,
And she died on All Souls' night.

We sent to the chantry for Ralph the priest—
The broad-chested man with the rosy brow,
She smiled when he came—a faint, cold smile,
"A priest! I shall never need one now."

So strangely she spake, and when he said,
The words that sometime we all must hear,
She folded her thin hands over her breast—
"What need we for torches, the daylight's near."

"The saved pass not thus," said the chantry priest,
As he went his way, the prayers half said;
But we could not deem that her soul was lost,
So we lighted the ghost-candles round her bed.

CORRESPONDENCE.

CURIOSITIES OF OFFICIAL SCHOLARSHIP.*

London: Sept. 11, 1885.

A recent correction by Prof. Atkinson† of two blunders in the translation of the so-called Brehon Laws, printed under the direction of the Commissioners for publishing the Ancient Laws and Institutes of Ireland, has led me to look at the text of the last volume of that publication. I possess a photograph of several pages of the original MS. (H. 3. 18, in the library of Trinity College, Dublin), from which the treatise called "Crith Gablach" has been printed in that volume, pp. 288 *et seq.* With this photograph I have carefully compared the corresponding portion of the printed text. I am sorry to say that the latter teems with errors. Words are often bisected, and sometimes trisected. Common compendia, such as *dí* (*di-tiu*), *dá* (*dano*), and *ní* (*ni anse*), are always wrongly expanded; and, in the case of other contractions, no means, such as the employment of italics, have been taken to enable the student to distinguish between the letters that really stand in the codex and those that are due to the fancy of the uninstructed transcriber who prepared the text for press. None of the numerous *variae lectiones* have been given; and, lastly, the misprints, or mistranscriptions, are so many as to render the text almost useless for philological, juristic, or, indeed, any other purpose.†

In the present state of our knowledge of early Irish it would be cruel and rash to criticise the translation severely; but one cannot help seeing that it is full of unintelligent guesswork. The following instances will justify these assertions:

P. 298, l. 24, *amail ar in cain fenecus*, trans-

* See ACADEMY, September 20, October 4, and October 25, 1884.

† *Irish Lexicography*, p. 30. He points out that, in the Laws ii. 286 *frecurthur cell* (is cultivated) is misrendered "is responded to," and that in the Laws iv. 98 *frecor caille in talmun* (cultivation of the land) is misrendered "that the land should receive for the injury done to it!"

‡ Thus: *colpdach*, p. 312, l. 16, read *colpdach*; *ditmaire*, p. 314, l. 14, read *dichmaire*; a *daire*, p. 314, l. 17, read a *daire*; *tassunn*, p. 324, ll. 14, 25 read *tassunn*; *corcaille*, p. 326, read *cercaili*; *atior rathaid*, p. 326, read *atiorathaid*, &c.

lated "as the 'cainfeuchus' law says." Here the verbal form *arincaín* is trisected, and the third element of it is mistaken for the noun *cáin* "law." The meaning is "as the common-law declares." Compare *arcain Fenechus*, p. 316. In *ar-in-cain* the *in* is the infixed relative, coming regularly after *amail*.

P. 300, l. 17, *ar idfeit illuga*, translated "because his oath takes precedence." Here we have a verbal form bisected and a prepositional prefix mistaken for a conjunction. Read *arid-feit il-luga*, "who precedes him in swearing."

P. 304, l. 19, *o suidhiuga*, translated "from the base." This is a fair specimen of editorial gibberish. Read *o suidhuigudh*.

P. 306, l. 26, *cennos .r.* The compendium is left unexpanded, and is ignored in the translation. Read *cennos ridiri*, "a rider's bridle."

P. 308, l. 24, in *tsaimbiad ocus gaimbiad*, translated "in summer food and in winter food." Here, again, the text is gibberish. Read *tír saimbiad ocus gaimbiad*, "both for summer-food and winter-food," and compare p. 312, l. 5, *tír gaimmbiadh ocus saimbiadh*.

P. 310, l. 7, *co cách in chruth a thighe*. More bisection, and, consequently, more gibberish. Read *co cách inchruth a thighe*, "with every furniture of his house." The word *inchruth* or *inchrud* is extremely common.

P. 316, l. 7. *Ocht seot illogh a enech. Ni ur mrugfer riam intan dín diablas feib mboairech is and is airi desa*, translated "It is not among 'brughaidh'-men he is counted, when he doubles the property of a 'bo-aire,' it is then he is an 'aire-desa.'" Here the transcriber has misread the contraction *li* as *dín*, and the translator has supposed that *brughaidh* (host) is the same word as *mrugfer* (markman), and has, apparently, taken the adverb *riam* to be some hitherto unknown part of the verb *rimim* "I count." Read, with H. 3, 18, p. 255, *Ocht seóit il-log enech mad rob mrugfer riam. Intan didin diablas feib mboairech is ann is aire desa*, "Eight sets in honour-price if he has been a *mrugfer*, 'markman,' previously. When, then, he doubles," &c.

P. 318, l. 7. *Cesc, cuin di tuitt a gell? Dia mtes*, translated "When does his pledge become forfeit? After a month." Here *dia* (=Welsh *dyw*) is, not a hitherto unknown preposition meaning "after," but a somewhat rare form of the feminine numeral two, and the last two words should be rendered, "In two months."

P. 322, l. 18. *A did ngialla cen ní. Ascria no astlia a airechus*. Here the first word has been trisected and the sentence has been bisected. Also *ce*, the contraction for *cech* (every) has been misread *cen* (without). Read *Adidngialla cech ní ascria no astlia a airechus*, "every thing serves him which he may purchase or his *aire*-ship may . . . (I do not know the meaning of *astlia*)."

These instances will, I hope, induce the Commissioners: first, to cause the text of the four volumes of Laws hitherto published to be collated with the MSS. by some competent scholar, and to publish the results of his collation; secondly, in the forthcoming volumes to adopt for the Irish text the Roman type, using italics to represent extensions of compendia, and, in the separation of words, following the practice of the MSS.; thirdly, to publish as soon as possible the oldest Brehon Law texts (the two tractates, "Caratnia's Wrong Decisions" and "The Five Paths of Judgment, in Rawlinson, B. 502, a MS. of the twelfth century, have not yet appeared); fourthly, when there are more MSS. than one of any text chosen for publication, to give all the important various readings; fifthly, to publish the collection of glosses made by O'Donovan and O'Curry to aid themselves in the translation of these difficult documents; sixthly, to publish photographic facsimiles of reasonably large portions of the texts printed

in their first, fourth, and all subsequent volumes; and, lastly, to cause an index of all the rarer words found in their printed texts to be compiled and published. Then, but not till then, will philologists, jurists, and students of the origin and history of Indo-European institutions, be able to attack the ancient Gaelic laws with some reasonable hope of solving the linguistic, legal, and social problems which those laws present in extraordinary abundance. At present, the four volumes, comprising 2,134 pages and produced at a vast expenditure of money and labour, which the Commissioners have hitherto published are, for philological purposes, almost worthless. And, though most of the general conclusions drawn by Sir Henry Maine from the translations, and some of those drawn from the same muddy source by Prof. Hearn and the late Mr. McLennan, will probably be unshaken by future investigation, it cannot be denied that all current juristic theories as to the Brehon law, and the light which it throws on other legal systems, rest on a very unsatisfactory basis.

WHITLEY STOKES.

"THE MOST BEAUTIFIED OPHELIA."

London: Sept. 21, 1885.

Mr. W. J. Birch is of opinion that Shakspeare, in using the word "beautified" of Ophelia, alludes to the employment of the same word by Greene in his *Groatsworth of Wit*, when he speaks of Shakspeare as "an upstart crow beautified by our feathers." Mr. Birch thinks that, notwithstanding Shakspeare's "natural good humour," he had the word in question "rankling in his memory," and that the audience would readily see that he was alluding to Greene's sarcastic description. To me, at least, such an explanation seems very far from "natural." I should think it incredible, even if the *Groatsworth of Wit* had been a recent publication, and its author had been a living rival of Shakspeare's. But placing, as we may reasonably do, the production of *Hamlet* in or about the year 1602, there must have been an interval of some ten years since the death of Greene and the publication of his pamphlet by Chettle. But in "beautified by our feathers" we have at least an example of the word "beautified" being employed in Elizabethan times to describe mere external adornment in contrast with the supposed true nature beneath.

If Mr. C. A. Ward's opinion with regard to Shakspeare's literary merit is that "half his successes are secured out of the felicitous barbarity with which he uses words," he is, of course, at liberty to hold this opinion; and the question with regard to the general state of the language in Shakspeare's days is one far wider than I can now discuss. With regard to this matter and to the way in which "Locke has be-pestered the human mind," &c., I must leave Mr. Ward to the "accidental light" of that "unassisted reason" concerning which he speaks. Though reasoning and logic may "unseat reason," I must still endeavour to be reasonable. Mr. Ward is not quite correct in saying that, in my explanation of the word "beautified" as applied to Ophelia, Hamlet is represented as "deliberately meditating on catacombs and her mortal dissolution." Such a view would be, indeed, quite suitable to certain passages in the play, especially to what, with Yorick's skull in his hand, Hamlet says to Horatio, "Now get you to my lady's chamber, and tell her, let her paint an inch thick, to this favour she must come. Make her laugh at that" (Act v., sc. 1, l. 181, *seq.*). My interpretation—which, as seems to me, is "forced upon us" by many things in the play—is, that Hamlet is thinking of Ophelia as being (like the rest of mankind) a mass of living moral carrion. The dog, in which the sun, by

"kissing," breeds maggots, is dead, but Polonius's daughter, who is not to walk in the sun, is alive.

To speak of Hamlet's conduct as "unmanly and unmannerly" is altogether beside the mark. He is feigning madness, and a madman cannot be expected to observe all the proprieties of life. If the use of the word "beautified" is unmannerly, much more so are his language and conduct in the great scene with Ophelia which follows the "To be or not to be" soliloquy (Act. iii., sc. 1); and a similar remark may be made with regard to his behaviour in the interview with Ophelia when she was sewing in her chamber (Act ii., sc. 1, l. 77, *seq.*), when, as it has long seemed to me, he treats her as a person suffering from a desperate and offensive malady, feeling her pulse (*cf.* first Quarto), and then "going to the length of all his arm." To her his conduct would not appear "unmannerly." It is the conduct of a madman; and she does not (as her father does) see that there is at least some method in his madness (Act ii., sc. 2, l. 205). To her he seems simply a madman, bereft of his reason, that "noble and most sovereign" endowment o'er-thrown, "quite, quite down," and "blasted with ecstasy." She would not at all regard the word "beautified" as "unmannerly" in the ordinary sense.

THOMAS TYLER.

"THE TOWER OF GLASS."

London: Sept. 21, 1885.

May I offer a suggestion that the events recorded in connexion with the so-called "Tower of Glass" represent the folk-lore survival of adventures with that arctic phenomena known as an iceberg?

Anyone unfamiliar with the substance called ice might term it glass for want of a better name, and the various catastrophes involved may arise from the crushing or swamping and foundering of colliding vessels, and the subsequent numbing chill communicated to the sailors by such a mass of frozen matter; while any supposed inhabitants may stand for seals, penguins, morse, or other arctic animals, journeying with the "Tower of Ice."

A. HALL.

APPOINTMENTS FOR NEXT WEEK.

SCIENCE.

THE MSS. OF THE "IBIS."

De Ibis Ovidianus Codicibus. Scripsit Albertus Maag. (Bern.)

THIS pamphlet of sixty-three pages, by Albert Maag, a pupil of Prof. Hagen, of Bern, is a university dissertation on some points suggested by a very careful study of my own edition of the *Ibis*. The pamphlet comprises two parts: the first concerned with the MSS of the poem; the second with the Scholia.

One of the main points on which M. Maag is at variance with me is the value of the Gale MS. This is the earliest MS. of the *Ibis* that, after long examination, I was able to discover. It is of the twelfth century, and

* Here, again, we may obtain an illustration from *Troilus and Cressida* as to Shakspeare's view of the desperate and loathsome disease of mankind: "Agamemnon, how if he had boils, full, all over generally—And those boils did run, say so, did not the general run, were not that a botchy core" (Act. ii., sc. 1). The word "core" is to be noticed as pointing to thoroughly pervading and internal disease. It may be worth while also to compare Isaiah, chap. i., vv. 5, 6.

is exhibited in my edition for the first time. To show its value I selected fifty-eight readings, which are found in it alone, or in only one other MS. In making this statement I, of course, spoke simply of the MSS. collated by myself or specially employed in my edition; not of the numerous other MSS. whose readings I could not know, or could only know through Merkel's edition of 1837, i.e., at second-hand, as Merkel made no profession of having himself seen most of the MSS. of the *Ibis* whose variants are given, as reported by others, in his edition. M. Maag must be somewhat new to classical criticism at the present time if he supposes that collations, made more than a century ago, too often without the precautions which modern exactness adopts for preventing the confusion of one MS. with another, can fairly be ranked with an autoptic examination, such as is now-a-days considered necessary.

This brings me to one of the more valuable parts of M. Maag's dissertation, his comparison of the readings of Gale with the other three primary MSS.—Tours (T), Philipps (P), Paris (X). The conclusion he arrives at, namely, that T is the best, and then G, may be right; but it is a conclusion not proved by his arbitrary selection of a few readings. My judgment was based on a study of the two MSS. throughout the poems; and I claim for it the consideration due to a mature and prolonged, as opposed to a comparatively partial and less detailed, study. In particular, the excellence of G is greatly connected with its preservation of the true spelling of the various names with which the *Ibis* is crowded.

The discussion on the Vienna codex (V), which till 1881 held the first place among the *Ibis* codices, results in a confirmation of my view, that it is now reduced to a position of secondary importance. Those who wish to see its best readings may find a list of them on pp. 20-23.

But to M. Maag's charge that in speaking of Conrad de Mure's *Repertorium* I have exaggerated the value of its readings from neglecting other MSS., I must repeat my former reply, viz.—that I speak, throughout my book, only of such MSS. as I have a personal knowledge of, not of those whose readings are quoted by Merkel second-hand. Until these MSS. are collated, dated, and classified, more exactly than they have yet been, it is not possible to judge of their critical value.

Space forbids me to say much about M. Maag's second part—the discussion on the Scholia. But I fear that I can ascribe little weight to the MS. commentary, written by Petrus Marsus in 1472, agreeing as it does closely with many similar fifteenth-century commentaries on the *Ibis* to be found scattered through Italian libraries.

R. ELLIS.

Persian for Travellers. By Alexander Finn. (Trübner.)

FOR *Persian for Travellers* we should in this case read "An English-Persian Vocabulary," for of such Mr. Finn's little work mainly consists. There are, indeed, prefixed some few rules of Persian grammar which the

traveller thirsting for Persian lore will do well to commit to memory, but they are of the briefest description, and form but a very small portion of the work.

As a contribution from Persia itself to our word-books the vocabulary will be welcomed by all scholars who are anxious for any addition to the materials now existing for the compilation of a dictionary of the living language of Iran, and who differ, in this respect, from Mr. Finn as to the transcendent merits of Richardson's dictionary. But, as regards the traveller, we must confess to feeling some slight degree of compassion for that confiding being when we view the utter want of method displayed in the transliteration of the Persian words. Mr. Finn, in his preface, says:

"No learned attempt has here been made to phoneticise the words, or always to represent the same Persian by the same English letters; each word has been written down as seems to be necessary for any Englishman to be able to pronounce it intelligibly to Persian ears at first sight and without hesitation."

If Mr. Finn has achieved this object—*fabihā*! But, taking a few words at random, one would scarcely expect it to be so. The ordinary English pronunciation of *būland* (tall), for example, would undoubtedly be *bēwōlmd*, which would not be intelligible to a Persia. In the compound *gardan-bund* (necklace), the same sound, i.e., that of the final *a* in America, is represented in the first portion by *a* and in the second by *u* without any apparent reason for the discrepancy. In fine, the objections to the absence of some regular method of transliteration, whether scientific or not, in a language so exceptionally irregular in its orthography as English, are too obvious to need to be here enlarged upon.

Another fault—common, unfortunately, to most vocabularies—is the want of definition or phrase to fix the meanings of many words which are otherwise ambiguous. In the absence of this, we have often a word and no word, which is perhaps more troublesome and inconvenient than the actual omission of the word.

No fault can be found with the choice of words in Mr. Finn's vocabulary, which embraces in 232 pages a selection of between four and five thousand words, accurately rendered, as far as we have tested them, into the every-day equivalents of Iran. The volume is printed in a small, but clear, type, and is convenient and compact in form.

—CHARLES EDWARD WILSON.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. VII, No. 4. (Baltimore, published under the auspices of the Johns Hopkins University.) This part opens with a paper (thirty-four pages) by Mr. A. Buchheim, entitled "A Memoir on Biquaternions." The author is doing good work in a direction first opened up by Clifford. The "preliminary sketch of biquaternions" (communicated to the Mathematical Society), and two or three fragments (in the "Mathematical Papers") furnish an analytical treatment of the theory of screws. In a paper on "The Theory of Screws in Elliptic Space" (London Mathematical Society's *Proceedings*, vol. xv.), Mr. Buchheim proves most of Clifford's theorems by Grassmann's methods; in the present paper he

gives what appears to him to be "a tolerably complete development of Clifford's calculus, in the hope that it may have some interest as a commentary on the preliminary sketch." Mr. J. Hammond continues his investigations on the lines of Sylvester's recent work in a paper on "The Syzygies of the Binary Sextic and their Relations." Prof. W. Woolsey Johnson contributes three papers: "Reduction of Alternating Functions to Alternants" (two pages); "A Formula of Reduction for Alternants of the Third Order" (six pages); and "The Calculation of the Co-factors of Alternants of the Fourth Order" (nine pages). Dr. Story writes on the form of "The Addition-Theorem for Elliptic Functions," attributed by Clebsch (*Géométrie* i., p. 605) to Hermite; and Dr. Franklin has two notes on "The Theorem $e^{ix} = \cos x + i \sin x$," and "Proof of a Theorem of Tchebycheff's on Definite Integrals." A very useful "Bibliography of Linear Differential Equations," by Messrs. Nixon & Fields, completes the present part and volume.

Elementary Algebra for Schools. By H. S. Hall, and S. R. Knight. (Macmillan.) We will not say that this is the best elementary algebra for school use that we have come across, but we can say that we do not remember to have seen a better. Where no text-book is already in use we confidently recommend this, and where our old friends still hold sway we would suggest to mathematical masters an examination of the work before us. It is the outcome of a long experience of school teaching, and so is a thoroughly practical book. All others that we have in our eye are the works of men who have had considerable experience with senior and junior students at the universities, but have had little, if any, acquaintance with the poor creatures who are just stumbling over the threshold of algebra. These latter writers have not the faintest idea of the lame dogs the mathematical master has to help over the stile. Feeling confident that we have lighted upon a good "tip" for algebraical pupils at schools, we act upon the Horatian motto and impart at once our discovery to our brothers in arms. Buy or borrow the book for yourselves and judge, or write a better. There are "3,500" exercises of all kinds, with answers. A higher text book is on its way. This occupies sufficient ground for the generality of boys.

Notes on Algebra. By H. Candler. (Uppingham: Hawthorn; London: Hamilton, Adams & Co.) Some of our readers will doubtless remember a good little work, on similar lines, by the same author, on arithmetic, which was published many years ago. Mr. Candler's work is sure to be worth reading; at any rate the present little book, though written in homely language, does not form an exception to this remark. His object is

"to present in a compendious form examples of sums worked out in a clear, uniform, and logical manner; and to give explanations of difficulties, which an experience gained by many years' teaching has proved to stand in the way of the progress of the pupil."

It would occupy too much space to go through the "Notes" in detail. It must suffice to say that it will prove a useful work for freshening up a pupil's knowledge of the book-work of elementary algebra; for with this only is it concerned, i.e., it does not travel further than the binomial theorem. But why, Mr. Candler, is there such a list of acknowledged errata? Where this is the case we fear there may be many more which have escaped detection. Our fears, however, may play us false; but a junior student will want to have the work carefully gone through by his master before he can use it without hesitation. For instance, opening at random on p. 78, we light on the

untabulated error, "reticulation" in Dr. Johnson's definition of net-work.

Algebra: a Specific Subject of Instruction in Public Elementary Schools. (Blackie's Elementary Text Books.) This is another of the compilations which just now are covering our table. It consists of three parts: the Elementary Rules, Simple Equations (with Problems), and Simultaneous, Simple, and Quadratic Equations. There is a large and good collection of exercises, several worked out for illustration, numerous test papers and answers. The book is neatly got up, and the compiler has made a judicious selection of book work.

Key to the Elements of Euclid. By J. S. Mackay. (Chambers.) This is a work of just the same get-up and nearly of uniform size with the excellent edition of the "Elements" by the same editor and publishers, which we some short time ago commended in these columns. The present is a very valuable addition to our list of school books. It will be remembered that the collection of exercises was an exceedingly extensive and varied one, and here we have a full and clear solution of each exercise, the only possible drawback being that there are but few figures. This loss causes a pecuniary gain to the student, and we agree with the dictum quoted by Mr. Mackay from De Morgan, that the careful student will gain in the end by the extra pains he takes in mastering the drawing of the figure. Messrs. Chambers have done mathematical students a great service by the publication of such a carefully edited collection of "riders" and problems, and we trust they "will have their reward."

"SCIENTIFIC ROMANCES." No. II. *The Persian King; or, the Law of the Valley.* By C. H. Hinton. (Sonnenschein.) This second romance is divided into two parts, the pagination being carried on from No. I. The first part, which contains the story, occupies pp. 33 to 101; the second part closes with p. 128. After studying the romance, which is well sustained, though, perhaps, some will consider it to be too fanciful, the reader finds that it is not all a tale, but has to do with things very closely connected with ourselves. The author recapitulates:

"We have supposed two different worlds—one of sensation in the first part, one of motion in the second part. And these have been treated as distinct from one another. And especially in the first part, by this avoidance of questions of movement, an appearance of artificiality was produced, and occasionally inconsistencies, for sometimes sensations were treated as independent of actions, sometimes as connected with them. But it remains to be decided if these inconsistencies are in themselves permanent, or whether, when we remove the artificial separation, and let the world of sensation and the world of motion coalesce, the inconsistencies will not disappear, thereby showing that their origin was merely in the treatment, not in the fact; that they came from the particular plan adopted of writing about the subject, and are not inherent in the arguments themselves."

The second part has seven short chapters headed "Our World," from divergent lines of thought worked out in "Permission," "Causation," "Conservation of Energy," and "Level." In this last "Heat" is more particularly discussed, and "an ultimate medium"; then a chapter on "infinite series" (for 4 read \angle); and the "Recapitulation." It will be seen that the romance is a philosophico-mathematical one, which appears to us to be clearly reasoned out. It appeals to the same audience as the first romance did.

MR. T. N. ANDREWS, the headmaster of the Science and Art School, Plymouth, has published, through Allman & Son, a clear, business-like little book, *Practical Geometry for Second Grade Art Pupils and Private Schools.* It em-

bodies the lessons he has given for many years to his classes, and cannot fail to prove useful to young science and art students.

CORRESPONDENCE.

THE "SI-YU-KI."

Wark: Sept. 22, 1885.

I read with much interest the remarks of Mr. Rhys Davids on my translation of the *Si-yu-ki* (ACADEMY, No. 697). There are one or two points which I should like to notice in justice to myself.

I am quite alive to the importance of the "earlier authorities," i.e., the Pāli books, to which Mr. Davids refers. But there are very few points of contact between the Chinese versions of the Buddhist Scriptures, as they were known in Northern India and the neighbouring districts, and the books of the southern school. As I have constantly affirmed so I repeat, that it is evident from the nature of the Chinese translations that they were not made, as a rule, from Pāli or Sanscrit, but from the various dialects and vernaculars of India, and the lands bordering on India, where Buddhism had been received. To put the matter in a strong way, there is no reason to doubt the probability of some of the MSS., which were taken to China and there translated, having been written in the Paisāchi dialect, or even in Aramaic, or possibly in Greek. Whatever may be said, I am prepared to show that there was a strong interfusion of Persian and Syriac legendary teaching introduced at an early period into what we call Northern Buddhism, but which I have chosen to call the "Buddhism of the Indus" (*vide* vol. xix. "Sacred Books of the East," Introduction). I do not think, then, that much gain can be had by a laborious comparison of northern books with the school which adopted Pāli as the language of their sacred books.

With reference to Mr. Davids's special points, in which he thinks he detects mistakes on my part, and ignorance of obscure expressions, may I add a few words. The expression, "four years," is so in the original. The reference to "chief minister" I cannot verify; but the phrase, "two dragons," is quite correct. *Prabhāpāla* is the recognised restoration of *U-ming*; the southern school adopted *Jyotish* instead of *Prābha*; but the latter is accepted in the north. *Māha* is the right translation of *ta* (great) given in the text; possibly this may be a mistake of the Chinese translator, but it is so in my text. My doubt about *Anuruddha* or *Aniruddha* was how to accommodate the definition of the name given by Asvaghosha, with the restoration proposed by Mr. Davids; moreover the Chinese symbols are plainly in favour of *Aniruddha*. Mr. Davids objects to my translation of *San-ming*, which I render the "three enlightenments." I state, however, in a parenthesis that *ming* corresponds to *vidyā*, and in the index will be found several references to the expression *trividyas*. The phrase, "cleaving to Nirvāna," is no doubt obscure; but to anyone knowing the original characters, it is simple; "to cleave to Nirvāna" is to aim at Nirvāna "with remains," in other words to be not free from fetters or longings; and it was on this account and their account that Kāsyapa convoked the council of the five hundred; that the ill-instructed might be enlightened, and the Arhats without knowledge of the true Nirvāna might be better informed. Lastly, "to turn round religiously" is a simple translation of the text; its meaning every one who has looked into a Buddhist book, or even into a Scotch tale, would perfectly understand.

There is one other remark, however, about S'āriputra which I beg permission to add. Mr. Davids will see on p. 197, of Vol. xix., of the

"Sacred Books of the East," that I quite understood the point of S'āriputra's admission into the community. But I must be excused for saying that Mr. Davids is wrong if he supposes that he (S'āriputra) and his brother-student Mandgalyāyana, were *ipso facto* ordained because they were changed externally into the habit of Bhikshus. On the contrary, they were received by Buddha as Bhikshus without the previous examination as to age, health, &c., but their ordination was in consequence of their taking on them the necessary precepts; and this is expressly declared in my text, so that I do not think I have at all missed the point of the narrative.

I feel I ought to ask pardon for so long a letter; but the subject is of some importance, and will help to show that the two schools of Buddhism are sufficiently distinct, so that the one cannot be interpreted by any criticism derived from the other. S. BEAL.

THE ETYMOLOGY OF "PAVECCHATI" AND "ANUPPAVECCHATI."

Wood Green, N.: Sept. 10, 1885.

The words *pavecchati* and *anuppavecchati* present many difficulties to Pāli scholars, and no satisfactory explanation has, as yet, been given of them.

Dr. Trenckner has pointed out (*Pāli Miscellanies*, p. 61) that

"*pavecchati*, 'to give,' is traditionally explained by *paveseti* (as if causal), or by *deti*, and 'looks like a derivative from *avikshat*; but neither *vic* nor *vish* makes good sense. In meaning it agrees with Sanskrit *prayacchati*, but the identification presents some phonetical difficulties."

Though *pavecchati* means "to give," the syntactical use of *deti* is not quite the same; the latter takes an accusative and dative, the former an accusative and locative. Childers is altogether silent about this construction; but, compare the use of *pavecchati* in the following passages:

"*Adeyyesu dadam dānam deyyesu na pavecchati.*" (*Jāt. III.* p. 12; see also p. 172.)

"*Kālena tamhi havyam pavecchati.*"

(*Sutta Nipāta*, vv. 463-4, 490.)

"*Appasmim ye paveccchanti eesa dhammo sanantato.*" (*Samyutta Nikāya*, I. iv. 2.)

This employment of an accusative and locative seems to indicate that the original meaning of *pavecchati* was probably not "to give," but "to pour down (on)," and hence to "bestow," "give."

Instead of referring it to the root *vic* or *vish*, it might well be derived from the root *vrish* ("varsh"), "to rain," "to induce to rain" (causal). Cf. *Pāli acchati*, from the root *ās*, through the aorist *acchi*.

It is worth noting that, traditionally, the meaning of "give" is assigned to *vrish* by the Sanskrit lexicographers. But the Sanskrit *pra-vrish* is represented in Pāli by the verb *pavassati*, used impersonally, or with "deva" or "megha" as subject. Cf. "*pavassa deva*" (*Sutta Nipāta*, vv. 18, 19, 20); "*mahāmegho pavassi*" (*Jāt. I.* p. 503); see also *Samyutta Nikāya*, III. 3, 4, where *abhivassati* occurs, and again in viii. 7.

No examples, however, of such phrases as "*devo pavecchati*," "*megho pavecchati*," have as yet appeared; but *anuppavecchati* does occur with *deva* as its subject in an indited portion of the *Anguttara Nikāya*, III. iv. 4: "*devo ca sammādhāram anuppaveccheyya.*"

"*Pana ca param brāhmana etarahi manussā adhammarāgarattā . . . tesaṃ adhammarāgarattānam . . . devo na sammādhāram anuppavecchati, tena dubbhikkham hoti*" (*Ib.* III. vi. 6).

* The Burmese MSS. read *pavacchati* and *anup-pavacchati*.

There is no very great change of meaning between "to cause to rain," "to pour down," &c., and "to give." Even in our own language we are not altogether unfamiliar with such phrases (used devotionally) as "to shower down," "to pour down," and "to shed," in the sense of "to give," "bestow," &c. There is a somewhat difficult passage in the *Sutta Nipāta* (vv. 208, 209), where *anuppaveccati** occurs in the sense of *deti*, but where the original meaning, perhaps, is implied in the metaphor employed in v. 209:

- "(208) Yo jataṃ ucchijja na ropayeyya
jāyantam assa *anuppavecche*
tam āhu ekam muninam carantam
adakkhi so santipadam mabesi.
(209) Saṅkhāya vatthuni paṃāya bijam
Sineham assa *anuppavecche*."

Prof. Fausbøll translates the foregoing verses as follows:

"Whoever after cutting down the [sin that has] arisen does not let [it again] take root, and does not give way to it while springing up towards him, him, the solitary wandering, they call a Muni: such a great Iai has seen the state of peace.

"(209) Having considered the causes [of sin and] killed the seed let him not give way to desire for it."

Anuppaveccati cannot mean "to give way to," nor does *assa* (v. 208) mean *towards him*; the dative must be here used to express "to" or "for" (the sake of) as in v. 209 and in the second quotation from the *Ariguttara Nikāya*.

There is a great difficulty in the reading *jāyantam* (in v. 208), the present participle of *jāyati*; what we require, as seen in v. 209, is a noun of some kind in the accusative. At first sight one is tempted to read *yāpanam* "sustenance," or *pānyam* "water," corresponding to *sineham* in v. 209; but, bearing in mind the use of *deti* in the sense of "allow," "permit," we might, without much violence to the original reading, substitute the infinitive of *jāyati*, that is to say, put a verbal noun instead of the present participle, and then we should get the following grammatical rendering:

"Whoever, after having uprooted the [sin that has] arisen would not replant it, and would not allow it to grow up [again], him, the solitary wandering," &c.

The next verse (209) reads very awkwardly in its English dress, and there seems a want of balance in the first part of it, "having considered . . . having killed"; but this could easily be got rid of by taking *paṃāya* as equivalent to *paminitvā*, signifying "having discerned," cf. "Yo c'idha kammam kurute *paṃāya*," &c. (*Jāt.* iii., p. 114.)

The meaning of the foregoing passage might be expressed in the following terms:

"Having considered the causes [of sin, i.e., having got at the root of sin], having discerned the seed [i.e., having found out the germs of sin], let him not allow any desire for it [to arise again, whereby the sin shall be enabled to grow up and come to maturity]."

Sineha (*sneha*) does not only mean "desire," but, in regard to seed, signifies (fructifying) moisture, as in the following passage from the *Samyutta Nikāya*, V. 9:

"Yathā aññātaram bijam khetto vuttam virūhati pathavirasañ cāgama *sinehañ* ca tad ubhayam evam khandhā ca dhātuyo cha ca āyatanā ime hetum paṭicca sambhūtā hetubhaṅgā nirujjhare."

"As some seed cast into a field grows up by reason of the earth's sap and the [life-giving] moisture [in the earth] [and] by both of these, so the elements of being, the senses and the objects of sense, spring up by reason of a cause, and by the destruction of a cause are annihilated."

* Childers, in the Addenda to his Pāli Dictionary, explains *anuppaveccati* by "to enter," from *√vic*; but this gives no sense.

If, however, we are to take *paṃāya* in the sense of "having killed," for it can be so translated, then *saṅkhāya* must be referred not to the Sanskrit *saṅkhyā*, but to the causal of *saṅksi*, and may be rendered "having destroyed," i.e., "the sage having once destroyed the root, and having killed the germ of human passion by leading a solitary life, is not to revive it by going back to his former association with the world and worldly pursuits." This interpretation fits in well with v. 207, the commencement of the *Muniutta*:

"From intimacy [with the world] arises fear, from household life arises defilement; the homeless state, freedom from association [with the world]—this is, indeed, the view of a Muni."

R. MORRIS.

SCIENCE NOTES.

At the recent meeting of the British Association at Aberdeen, Prof. Edward Hull, Director of the Geological Survey of Ireland, read three papers: (1) before Section C, "Notice of an Outline Geological Map of Lower Egypt, Arabia Petraea, and Palestine," indicating the several formations from the ancient plutonic rocks to the sandhills and alluvial deposits, together with the main lines of fault and dip of the strata. He announced that a topographical and geological map of the Arabah Valley, on a scale of six inches to the mile, was now in the press for the Palestine Exploration Fund, as the result of the expedition of 1883-84. The topographical survey had been made by Major Kitchener and Mr. John Armstrong; the geological details had been inserted by Prof. Hull, who had also written the geological report. (2) Before Section D, on "The Cause of the Extreme Dissimilarity between the Faunas of the Red Sea and the Mediterranean, notwithstanding their recent connexion." Prof. Hull was of opinion that both faunas probably date back to Eocene times; that they became differentiated during the Miocene period; and that the connexion again established during the Pliocene period was insufficient to destroy these differences. (3) Also before Section D, on "The Origin of the Fishes of the Sea of Galilee." More than one half of the species of fishes are confined to the lake and its tributaries, while the molluscan forms are no less peculiar. Prof. Hull argued that the fishes now inhabiting the Sea of Galilee are the descendants of those which lived in the Eocene Ocean, modified in form, colour, and habit throughout the Miocene and Pliocene periods.

THE question of Tertiary Man, which is just now being warmly discussed in France, has been the subject of a paper by Prof. De Quatrefages in a recent number of the *Matériaux pour l'Histoire de l'Homme*. The purpose of this article, "L'Homme tertiaire et sa Survivance," is to oppose the stock argument that man cannot have lived on from the Miocene period, because no other species of mammal has survived. Prof. De Quatrefages insists on the enormous advantage which the human intellect must always have conferred upon man in the struggle for existence, enabling him to survive while other species succumbed. In most discussions on Tertiary Man, the intellectual element, according to the professor, is almost wholly ignored.

MESSRS. MACMILLAN have in the press a second edition of the lectures on *Spectrum Analysis* delivered by Sir Henry Roscoe in 1868 before the Society of Apothecaries, revised and considerably enlarged by the author and Prof. Schuster, of Owens College.

PHILOLOGY NOTES.

THE second volume of Schrader's *Ouneiform Inscriptions of the Old Testament*, translated by the Rev. O. C. Whitehouse, is now being printed. It will contain a brief sketch of the main outlines of Assyrian Grammar exhibited in transcribed form. This will enable the student to verify for himself, by aid of the appended glossary, the renderings of numerous passages of Babylonian-Assyrian cited throughout the work, and also to gain some insight into the value of the language to the Hebrew philologist.

THE Cambridge University Press will publish immediately *Kinship and Marriage in Early Arabia*, by Prof. Robertson Smith, which is an enlarged and revised form of the lecture which has given rise to so much controversy.

The Cambridge Press also announce *Oedipus Coloneus*, by Prof. Jebb, being the second volume of his edition of Sophocles; vol. iii. of Prof. J. B. Mayor's *De Natura Deorum* of Cicero, with a new collation of several of the English MSS., by Mr. J. H. Swainson; and vol. iii. of Dr. J. S. Reid's *De Finibus* of Cicero, containing the translation.

AT the meeting of the Académie des Inscriptions on August 28, M. Bréal propounded some interesting suggestions on Latin etymology. The first *u* in *mortuus* (for which we should have expected **mortus*) he accounted for as due to the influence of the analogy of *vivus*. He pointed out that in all languages it is common for two words of antithetical meaning to be assimilated in form. The French adjective *méridional*, substituted for *méridial* owing to the analogy of *septentrional*, was quoted as a case in point. M. Bréal derived *suppedito* from *pedes*, foot-soldier, and suggested that the primitive sense related to the assistance given to a horseman by his attendant on foot. This explanation seems (when proposed) so obvious that it is difficult to believe it has not been anticipated. Equally ingenious, but by no means equally commanding assent, is M. Bréal's conjecture that *quo* is a popular derivative of the adverb *quē*. Another question discussed was the etymology of *assignae*, an old Latin word which appears with the gloss *apēa mēpē-Cueva*. M. Bréal considered it a loan-word from Oscan, in which language it would be a participial formation (cf. *plenus, dignus*) from the root of *secare*. The initial *a* he believed to be the Oscan preposition *an*, cognate with the Latin *in*. The word would thus correspond in its etymological elements, though not quite in form, with the genuine Latin *insiciae*. M. Bréal further proposed to identify the Latin *rego* etymologically with *ῥεγω*, as *rapio* corresponds with *ῥαπίω*.

In the new number of the *Revue Celtique*, p. 515, M. Gaidoz writes thus of the *Cath Finntraga*, recently edited by Dr. Kuno Meyer, in the "Anecdota Oxoniensia":

"L'Université d'Oxford fait chose très utile en publiant des œuvres inédites des manuscrits de ses bibliothèques, et M. Meyer s'est acquitté de sa tâche d'éditeur de ce texte ingrat avec érudition et critique. C'est le cas de citer le mot du poète latin: *materiali superabat opus*."

THE current number of the *Revue d'Assyriologie et d'Archéologie Orientale* (Paris: Leroux) contains the following articles: "The Aramaean Inscriptions of Teima," by M. E. Renan; "The Language of the Elamites," and "The Inscription of Saros," by M. J. Oppert; "New Researches in the Epigraphy of Yemen," by MM. J. and H. Derenbourg; and "Some Inscriptions from Palmyra," by M. Ledrain.

FINE ART.

SOME MINOR EGYPTOLOGICAL LITERATURE.

Aegypten und Aegyptisches Leben in Altertum. Von Dr. Adolf Erman. (Tübingen: Laupp.)

Egyptian Religion. By J. Lieblein. (Leipzig: Hinrichs.)

Gammelaegyptisk Religion. Af J. Lieblein. In 3 vols. (Kristiania: Aschehoug.)

Ueber Altägyptische Religion. Von J. Lieblein. (Leiden: Brill.)

Ueber Pithon, Hero, Klyema nach Naville. Von A. Dillmann. (Königl. Akademie der Wissenschaften, Berlin.)

Gedächtnissrede auf Karl Richard Lepsius. Von A. Dillmann. (Königl. Akademie der Wissenschaften, Berlin.)

Richard Lepsius: ein Lebensbild. Von G. Ebers. (Leipzig: Engelmann.)

Antichità Sarde e loro Provenienza. Di G. Ebers. (Roma: Salviucci.)

THE minor literature of Egyptology (minor as to brevity, but frequently major as to value) increases and multiplies with a rapidity which well-nigh baffles the well-intentioned reviewer. Little books on great subjects, reports, transactions, translations, treatises in all kinds of languages, pile up week by week, till they become a tower as high and as full of tongues as that of Babel. Yet it is necessary, somehow, to compass their contents; for, as Shelley is said to have once twisted up a £50 bank post bill to make a paper boat, so learned masters are wont to entrust messages "of great pith and moment" to the frailest pamphlet-craft that drift with the stream of science. Hard as it is to keep abreast of these, it is harder still to keep record of them. One can but note them briefly; and such notes must be accepted as sign-posts rather than as criticisms.

Under the title of *Aegypten und Aegyptisches Leben in Altertum*, Dr. Erman is producing a serial work as attractive as if it were shallow, and as reliable as if it were dull. In the few parts already issued, the author enters rapidly upon his subject, giving a graphic sketch of the Nile valley, its animal and vegetable life, and the ethnical characteristics of its ancient people. Then follows a generalised outline of Egyptian history up to the close of the Roman occupation, succeeded by some chapters on royalty, court life, ceremonial observances, the structure of the state, the machinery of government, the arts, trades, and domestic life of Egypt under the ancient monarchy and the Pharaohs of the new empire. The work is well printed, in good type and on fine paper, and almost every page is enriched with useful footnote references to stelae, papyri, and Egyptological authorities. The illustrations are abundant, but somewhat unequal; the best being reductions from Lepsius's *Denkmäler* and reproductions from the first volume of MM. Perrot and Chipiez. To a work of such merit as the *Aegypten und Aegyptisches Leben* of Dr. Erman it would be unreasonable to grudge any good thing that modern art has to give; but it is grievously obvious that the delightful illustrations to *L'Histoire de l'Art dans l'Antiquité* bid fair to become ere long as hackneyed as the time-

honoured woodcuts to Wilkinson's *Ancient Egyptians*.

Prof. Lieblein's pamphlet entitled *Egyptian Religion* is a courteous but outspoken protest against certain views enunciated by Mr. Le Page Renouf when, as Hibbert lecturer for the year 1879, he selected for his subject "The Origin and Growth of Religion as illustrated by the Religion of Ancient Egypt." Prof. Lieblein does full justice to the "deep and extensive scientific culture" of Mr. Le Page Renouf; but he finds in the course of these lectures some statements which he conceives to be misleading to general readers, and others which are at variance with long accepted facts. Mr. Le Page Renouf, for instance, in stating that "the earliest monuments which have been discovered present to us the very same fully developed civilisation and the same religion as the later monuments," and in furthermore adding that "the gods whose names appear in the oldest tombs were worshipped down to the Christian times," appears to say that the religion of the Egyptians continued from first to last unchanged and invariable as the pyramids; whereupon Prof. Lieblein remarks that these words are correct if taken literally, but that they are incorrect in so far as they fail to recognise how strongly that religion was affected by external influences. Now henotheistic, now pantheistic, now monotheistic, now polytheistic, the national faith passed through many phases of development and many phases of retrogression. Old gods were invested with new attributes; foreign gods were naturalised; and the very conception of divinity was modified and re-modified from age to age. Mr. Le Page Renouf, it is true, takes note of these variations in divers parts of his lectures, and no specialist would be likely to misunderstand him. The Hibbert lectures are, however, addressed to highly educated, but miscellaneous, auditors, and therefore it is that Prof. Lieblein pronounces Mr. Le Page Renouf's language to be dangerous, inasmuch as "it not only leads to misunderstanding Egyptian history, but also to the denial of the life-principle in every history, to wit, development and progress, without which life has no value" (p. 36). Upon Mr. Le Page Renouf's assertion that "neither Hebrews nor Greeks borrowed any of their ideas from the Egyptians," and upon Prof. Lieblein's firm and conclusive reply to that part of his argument (which certainly surprised no one more than it surprised myself when I read the published lectures) I have no space to dwell. All this part of Prof. Lieblein's pamphlet may, however, be advantageously collated with Mr. R. S. Poole's masterly concluding chapter in *Cities of Egypt*. At the risk of repeating an oft-told tale I may, nevertheless, venture once more to point out that the Egyptians were astronomers, mathematicians, architects, artists, and physicians for long ages before the Greeks emerged from barbarism, and that the Greeks themselves have again and again recorded their indebtedness to Egyptian teaching. Their most eminent philosophers, historians, and men of science travelled to Egypt that they might acquire "the wisdom of the Egyptians"; and Pythagoras is said to have brought from Egypt that knowledge of the movement of the earth and

the planets with which the Egyptians (according to a text of the Pyramid period translated by the late F. Chabas) are shown to have been acquainted some four thousand years before Christ. This discovery has more recently been corroborated by Prof. Lieblein himself from evidence contained in the "Great Harris Papyrus." As with science, so was it also with the arts; and the exploration of Naukratis has just revealed to our eyes the earliest essays of Greek students in the ateliers of Egyptian sculptors, metallurgists, and potters. As regards the Hebrews, we have the direct evidence of the Mosaic narrative to show how profoundly the people had been influenced by five hundred years of sojourn in the land of the Pharaohs. That they should not be so influenced was impossible. When they relapsed into idolatry, nothing was more natural than that they should worship an image of one or other of the sacred bulls whose temples at Heliopolis and Memphis were within so short a distance from their own colony in the Land of Goshen; and when they needed a portable shrine, it is no wonder that they made their ark in the fashion of an Egyptian "bari." How they borrowed religious ceremonies and priestly adornments from their oppressors is well pointed out by Padre Ancessi in *L'Egypte et Moïse*; and the Abbé Vigouroux, in a fairly candid review of the whole of this question, says of the Hebrew craftsmen who fashioned the golden calf, the ark, the tabernacle, and the sacred vessels, that their skill in these matters is "a proof that the Israelites had been trained in the school of the Egyptian artists" (*La Bible et les Découvertes Modernes*, vol. ii., p. 510).

In his *Gammelaegyptisk Religion*, Prof. Lieblein, still treating of the same theme, addresses his own countrymen in their Scandinavian mother-tongue. The work is avowedly a popular treatise, and it may therefore be assumed that there is a Swedish public already interested in the theology and archaeology of ancient nations. Prof. Lieblein appears to have given his subject a thoroughly systematic form. He first classifies the Egyptian religion under various heads, as the Religion of Nature, Henotheism, Polytheism, Monotheism, Pantheism, and Animal-worship. He next divides and localises the Egyptian pantheon, treating of the gods in district groups, as gods of Heliopolis, gods of Memphis, of Thebes, Abydos, and the like. Even minor towns are not omitted, and foreign gods imported from abroad receive due mention. King-worship, animal-worship, and the worship of ancestors, the temple, the priestly hierarchy, the whole method of religious observance, and the order of religious ceremonial are described in turn. Lastly comes the lore of the tomb and the underworld; the pilgrimage and purification of the soul in Hades; the Book of the Dead, and the doctrine of immortality. Such is the scheme of the work; and Prof. Lieblein's name is a sufficient guarantee that his Swedish readers will find in it a luminous, complete, and accurate account of one of the most interesting chapters in the history of human thought. It is to be hoped that he will ere long give us a translation in some language more accessible to the generality of students. The essay entitled, "Ueber Altägyptische Re-

ligion," and "Les Quatre Races dans le Deva Egyptien," by which it is followed, are reprints of Prof. Lieblein's valuable contributions to the African Section of the Sixth Orientalist Congress at Leyden.

Dr. Dillmann's pamphlet "Über Pithom, Hero, Klyasma nach Naville," from the *Proceedings* of the Royal Prussian Academy of Sciences, bearing date July 30 in the present year, is a review of M. Naville's memoir, *The Store City of Pithom*, recently published by the Egypt Exploration Fund. After noticing Lepsius's article in the *Zeitschrift*, entitled "Über die Lage von Pithom (Sukkoth) und Raëmsis (Heroonopolis)," and remarking that the learned author of that paper had not the whole of Naville's evidence before him at the time when he wrote it, Dr. Dillmann (referring to Pithom, which Lepsius to the last maintained to be Raëmses) concludes that the identification of the discoverer is "better grounded" than that of his critic. The identification of Pihahiroth with "Pike-rehet," or "Pikeheret," he thinks possible. The determination of the site of Heroöpolis he welcomes as a weighty addition to geographical science. He then passes to the subject of the Arabian Gulf, which he thinks was extended, not naturally, but by means of a canal, in the time of Herodotus. As regards the distance from Hero to Clysma, which, on the Roman milestone discovered by M. Naville, is indicated as nine miles, he considers this estimate to be quite at variance with the site of Clysma, the Kulzum of the Arabs, near Suez. If the milestone had not been anciently removed from its proper site, and if it is rightly read, then he thinks there must have been two Clysmas. Upon this important point, Dr. Dillmann adds a footnote mentioning a brilliant hypothesis contributed by Mommsen, to the effect that the inscription may mean that this was the ninth milestone on the road from Hero to Clysma, and not, as hitherto conjectured, a stone nine miles from Clysma. The contested identification of Succoth with Thuku-t, Dr. Dillmann does not accept. Neither does he admit that the stations of the Exodus were "districts," or "regions." Dr. Dillmann supports this view by a reference to the Biblical term, "Land of Rameses," and is of opinion that where a district, and not a city, was in question, the term "land" was employed.* This is but a summary of Dr. Dillmann's conclusions—a summary without comment and without criticism. Enough that the distinguished author accepts nearly the whole of M. Naville's identifications, and that the main point of divergence between Dr. Dillmann and M. Naville has already been fully treated in these columns by Prof. Ebers.

One after the other, German Orientalists continue to offer their tribute of mourning and homage to their illustrious elder brother, Karl Richard Lepsius. Dr. Dillmann's memorial discourse and Prof. Ebers's *Lebensbild* are among the latest of these touching literary farewells. The *Lebensbild*, a charming little volume of nearly 400 pages, contains a

valuable bibliographical index to the published works of Lepsius, as well as an autotype reproduction from an original crayon portrait of the great Egyptologist, who, like Goethe, was in old age almost as handsome as in his prime.

Although it reached my hands so long ago as Christmas day, 1884, and was, according to the title-page, published in 1883, I have purposely kept back Prof. Ebers's *Antichità Sarde e loro Provenienza* till I could re-read it by the light of Mr. Petrie's newly discovered facts. Mr. Petrie's facts, meanwhile, as reported weekly to the committee of the Egypt Exploration Fund, continued to become more numerous and more important; and now, on re-reading Prof. Ebers's pamphlet, I find it of even deeper interest than at first.

The so-called Egyptian antiquities found in the island of Sardinia have long engaged the attention of Egyptologists. They are of various kinds, including stelae, scarabaei, sacred eyes, funerary statuettes, or "ushabtî," terra-cottas, bronzes, and little images, mostly for pendants, fashioned in the likeness of certain popular Egyptian deities. At first sight, these relics look like the products of Egyptian craftsmen; but a nearer inspection reveals something unaccustomed in the treatment and in the workmanship. The details are inaccurate, the forms are ungainly, the hieroglyphs are mis-shapen and generally meaningless in their arrangement. The costumes, again, are not quite right; and although gems and scarabs incised with representations of sphinxes and sacred emblems are found in abundance, the emblems lack proportion, and the sphinxes, unlike the calm, couchant sphinxes of old Egypt, are winged and walking, and evidently of a fiercer and more restless breed. Side by side with these semi-Egyptian types we find others which are distinctly Phoenician, Assyrian, and archaic Greek. These objects and their peculiarities have been repeatedly discussed, and have given rise to much learned speculation. By some it has been supposed that they found their way to Sardinia during the reign of Tiberius, when, according to Tacitus, 4,000 Egyptians and Jews, the descendants of enfranchised slaves, were transported thither in the nineteenth year of our era. By others (including the late F. Chabas) the island is believed to have been in part colonised by Egyptian settlers, who there continued to practise the arts of their mother country. Mariette was of opinion that, whatever their manner of introduction into Sardinia, the objects were of genuine Egyptian work; and Prof. Lieblein (*Notice sur les Monuments Egyptiens trouvés en Sardaigne*, 1879) considers that they must be divided into two groups, namely, true Egyptian and mock Egyptian. The former he conceives to have been brought to Egypt by the Sardinian mercenaries who, from the time of Rameses II., formed part of the Egyptian army, while the latter can only be copies executed in Sardinia "par ceux qui avaient subi l'influence Egyptienne, avaient appris à les apprécier, ou à leur attribuer une signification religieuse." Last in the field appears Prof. Ebers, writing his pamphlet "in very choice Italian," publishing it in Rome, and arriving at some conclusions which read like a prophetic commentary on

Mr. Petrie's report, "The Discovery of Naukratis."

Both Prof. Ebers's and Prof. Lieblein's pamphlets are illustrated; but where Prof. Lieblein gives coarsely-executed woodcuts, Prof. Ebers gives etched plates and autotype facsimiles. One by one he subjects scarabs, gems, statuettes, &c., to a searching examination, and in most he finds some departure from the traditional Egyptian type. Of the Sardinian intagli he says that even when markedly Egyptian in style, some non-Egyptian trait constantly shows that they are not of genuine Egyptian make, and that, notwithstanding their display of Egyptian conceits—"i concetti Egiziani"—and despite the scarab form in which they are mainly cut, there is almost always a something in their appearance which the connoisseur instinctively recognises as foreign to the Egyptian school. All these traits and peculiarities Prof. Ebers attributes to Phoenician manipulation. He agrees with Berger that the Phoenicians had no art of their own. He even finds it difficult to admit that they are entitled to be ranked as a nation. They were, he says, the citizens of two cities, a certain number of whom laboured in a narrow strip of seaboard as agriculturists and fishermen, while the rest were artisans and traders. As traders they navigated the whole circuit of the Mediterranean basin, and as traders they everywhere found a ready market for Egyptian articles. Thus they not only trafficked in genuine Egyptian products, but in counterfeits of those products, which were manufactured for commercial purposes in the workshops of Tyre and Sidon. To sum up, Prof. Ebers thinks that the genuine Egyptian antiquities of Sardinia were carried thither by traders, travellers and the like; that the counterfeits came from Phoenicia; and that no Egyptian colony was ever established on Sardinian soil.

"Si può ammettere con certezza che i monumenti egittizzanti ed assirizzanti rappresentati alla maniera fenicia non siano stati eseguiti dopo il quarto secolo av. C.; alcuni però debbono essere senza meno molto più antichi. Ci manca però fino ad ora ogni punto di appoggio per una più esatta determinazione cronologica . . . peraltro non solo è possibile ma anche probabile che molti degli oggetti, dei quali abbiamo ragionato, siano molto più antichi del dominio di Cartagine sulla Sardegna."

These are Prof. Ebers's concluding words, and we now know how far-seeing they are. Many of these same objects are most likely as old as the time of Amasis (XXVth Dynasty), and who shall say how many of them may not have come from Naukratian factories? If we turn to Prof. Ebers's large folding sheet of illustrations, we find in figure 28 a golden ornament in repoussé work, the pattern of which is almost identical with the Grecised lotus-pattern (commonly known as the honey-suckle pattern), which Mr. Petrie has found on what he believes to be a local manufacture of painted pottery. Figures 33 and 34, on this same folding plate, show some terra-cotta statuettes of Carthaginian type, each holding between both hands an object which Prof. Ebers takes for a tambourine. Mr. Petrie has found at Naukratis two sitting figures holding a similar object in the same way, and he calls this object a drum. Prof.

* On this objection of Dr. Dillmann's Mr. R. Stuart Poole remarks that in Hebrew the word "land" is often omitted; the "Land" of Gilead, for instance, being frequently referred to as "Gilead" only.

Ebers, in Plate G., No. 56 (autotypes of Sardinian gems), has a winged andro-sphinx, seated, with up-curved tail. Lieblein (p. 8, fig. 11) has a winged andro-sphinx walking, with uplifted tail, in front of a crowded background representing a shrine and supporters. Plate F., No. 9, of Ebers, has the same in autotype. Now Mr. Petrie has found, in the house of a Naukratian scarab-maker, among hundreds of scarabs, scarab moulds, &c., a scarab representing a winged andro-sphinx walking, with precisely the same up-curved tail, and differing only from the foregoing by having an Egyptian false beard, which was an attribute of kings and deities. Not to go on multiplying instances, I will only add that Mr. Petrie's Naukratian scarabs have yielded many examples of a lion walking, with the disk of the sun in the upper part of the field. Turning to Prof. Ebers's pamphlet under the head of *Tipi Greci non privi di influenza Orientali*, and thence referring to Pl. H., No. 64, I find a lion walking with the sun-disk overhead; the only difference being that in the Sardinian example the orb is winged, representing the Egyptian "Houd," whereas in Mr. Petrie's scarab it is not winged.

These resemblances—and probably there are many more—can scarcely be mere coincidences; and I hope I am not rash in venturing to surmise that some, if not all, of the mock-Egyptian trinkets attributed to Tyre and Sidon were made by Greeks of Naukratist. If Mr. Petrie can determine the date of his scarab-factor's business career, it may be that we shall at last have found that "punto di appoggio" which Prof. Ebers has been seeking; and perchance, if Mr. Petrie were to visit the museum at Cagliari en route to Egypt in November next, he might recognise some of the very scarabs made in the very moulds now on view at Oxford Mansion.

AMELIA B. EDWARDS.

CORRESPONDENCE.

DISCOVERY OF A SAXON CHAPEL AT DEERHURST.

Cheltenham: Sept. 22, 1885.

The Saxon building which has just been discovered at Deerhurst, near Tewkesbury, is not a house, as has been reported, but a very complete little chapel, with nave 25 ft. 6 in. by 16 ft., and chancel 14 ft. by 11 ft.

The chancel arch is a fine example of the Saxon style, with plain semicircular arch and well-moulded impost. Part of the north door still exists, and one very perfect round-headed window, with double splay and part of its original oak casement built into its head; its sill is 10 ft. 6 in. above the ground. The plain walling of the chapel much resembles Roman work, being built of long, thin pieces of blue lias, with mortar joints from one to two inches thick. This was all covered with stucco inside and out, the quoins and other dressed stones being set with a projection of about half an inch to receive the plastering. In the sixteenth century a fine half-timbered house was built so as to enclose and conceal the Saxon chapel; and it was only the removal of some of this later work last month that brought to view the Saxon masonry, the presence of which had not been suspected.

Perhaps the chief feature of interest about this place is the existence of an inscribed slab,

which, with the missing part supplied, would probably read thus:

[IN]·HONO	"In honorem Sancti
[RE]·S·PETRI	Petri Apostoli hoc
[APL]·HOC	Altare dedicatum
[ALTA]RE·DE	est."
DICATV·E·	

This chapel, with an adjoining house, is known to have been granted to the abbey of Westminster by Edward the Confessor; and, in fact, it continued in their possession till quite recent years, when it was taken over by the Ecclesiastical Commissioners, together with the rest of the abbey estates. The form of the letters on this slab resembles those of another inscription relating to the building of the priory church of Deerhurst, which is now among the Arundel Marbles at Oxford. This latter inscription is dated 1056, which is probably about the same date as the one relating to the altar of this chapel. An early canon required an inscription to be set near every altar, recording to what saint it was consecrated; but, in later times, this rule fell into disuse, and the slab appears to have been used for the head of an early English window, the arch of which was cut out of it, thus causing the destruction of the first part of some of the lines. The completion of the missing part of the inscription is due to Mr. J. T. Micklethwaite.

I may mention that I am preparing a paper on this chapel, with illustrative drawings, which I hope to lay before the Society of Antiquaries next session.

J. HENRY MIDDLETON.

THE PROPOSED EXPLORATION OF CAERLEON AND CAERWENT.

Liverpool: Sept. 18, 1885.

In the ACADEMY for September 12 (p. 174) there is a paragraph on the above subject, in which, after stating that these Roman fortresses were not destroyed by the Saxons, it is said:

"We may therefore expect to find evidences in them of a long continued existence after the departure of the Romans from the island, and this expectation is confirmed by the discovery on both sites, not only of coins of Honorius, but also of minims coined after the withdrawal of the Roman legions."

From the occurrence of these minims in several hoards of coins of the Tetrici and others of the "Thirty Tyrants," which must have been hidden not later than A.D. 270, it is evident that these small coins were issued before that date, and during the Roman occupation. Mr. C. Roach Smith, in the *Numismatic Chronicle*, vol. i. (3rd series), p. 30, says that he has gradually been brought to the conclusion that the minims belonged to the Tetrici, and that in this he is confirmed by M. Eugene Hucher, who found about 200 of them in a hoard of coins discovered at Jublains in France, the latest of which were of the Tetrici and Aurelian.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. SAMPSON Low will publish shortly, in a handsome volume bound in linen, *Needlework as an Art*, by Lady Marian Alford, with nearly 100 illustrations, including several facsimile reproductions by photogravure of ancient needlework. The book is dedicated to the Queen.

MESSRS. SEELEY have in the press a book on *Reynolds and Gainsborough*, by Mr. W. Martin Conway.

MR. J. H. MIDDLETON's handbook, entitled *Ancient Rome in 1885*, will be published next month by Messrs. A. & C. Black, of Edinburgh.

THE forthcoming volumes in Cassell's series of "The Fine Art Library" will be *Tapestry*, by M. Eugène Müntz; *Engraving*, by the Vicomte Henri Delaborde; and *Greek Archaeology*, by M. Maxime Collignon.

IN the presence of the King and Queen of Saxony, a Museum of the Italian Art of Painting was opened a few days ago on the Brühlische Terrasse, in Dresden, by Herr Adolf Gutbier, art publisher to the court. This great undertaking, purporting to exhibit the development of the classical art of Italy, consists of more than 2,000 photographs, mostly taken for the purpose from the original pictures in Italy, England, France, Spain, and Germany. Cimabue, Giotto, Gaddi, Orcagna open the series. The schools of Siena and Florence are represented by 557 numbers, the Umbrian School by more than 200; Perugino, by 31; Fra Angelico, by 72; Benozzo Gozzoli and Domenico Ghirlandajo, by 37; Botticelli by 73. Of Lionardo, Michel Angelo, and Raphael all the works are exhibited. The catalogue, compiled by Dr. P. Schuman, and giving biographical and artistic details on each several work, is of special literary merit. Mr. Gutbier intends to exhibit his museum in its present form in some of the principal towns of Germany, and then to send it over to London and Paris. A subscription for the whole collection is also in preparation.

A TOMB has been discovered at Tanagra, with its walls covered with encaustic paintings of great technical skill, supposed to be as early as the third century B.C. They represent domestic utensils, a loom, a horse, a landscape with houses, &c.

THE new galleries for the Luxembourg pictures are nearly ready, and the collection will be removed from the palace shortly. The empty rooms will be occupied by the bureaux of the Senate. The entrance to the new museum will be from the Rue de Vaugirard.

THE fresco of the "Eternal," from the Villa Magliana, supposed to have been executed by Spagna from the design of Raphael, and purchased by the French Government in 1873, is about to be moved from its present position in the Louvre to the gallery of the Italian school; and it is proposed to assemble in its neighbourhood all the frescoes now scattered in different parts of the museum.

A NUMBER of inscriptions have recently been discovered at Aire-sur-l'Adour (the ancient Atura), several of which contain the name of Mars Lelunnus, a local Gaulish deity hitherto unknown.

M. PALIARD, in the *Chronique* of last week, attributes to M. Descemet the discovery that the figures of the "Hours of the Day and Night," attributed to Raphael, and known by the French engravings of 1803 and 1806, formerly occupied certain positions in the Sala Borgia in the Vatican. This, however, is no such recent discovery. The engraving by Montagnani, which represents the frescoes in their original position, is known to others—to Messrs. Crowe and Cavalcaselle, for instance, who tell us all about it in their second volume of *Raphael* recently reviewed in the ACADEMY.

IN the last number of the *Zeitschrift für bildende Kunst* the "Wiener Brunnenreliefs aus Palazzo Grimani" are the subject of a paper by Theodor Schreiber, illustrated by a heliogravure of a beautiful Hellenistic relief of a ewe and her lamb; and Johann von der Leyten and Ludwig Juppe, two Marburg artists of the end of the Middle Ages, are treated by the learned pen of Carl Justi. An admirable woodcut of an altarpiece in the Church of St. Elizabeth at Marburg, illustrating the life of St. John the

Baptist, accompanies the latter article. The etching by M. Mercier of Prudhon's portrait of Mme. Copia has, if we mistake not, already done duty in the *Gazette des Beaux Arts*. In "*Kunstgewerbeblatt*" Franz Ewerbeck concludes his study of the history of the early Renaissance in the Netherlands. The present section has some illustrations of the beautiful carved choir stalls at Dordrecht, and the editor has a first paper on the International Exhibition at Nuremberg.

THE completion of the cathedral at Cologne, commenced in 1840, has cost 21,000,000 marks, or over £1,000,000 sterling. From recent researches it seems that the old story of its unknown architect is without foundation. There appear to have been two: one named Gérard de Prile, who died in 1330, and designed the choir; and another who, towards the middle of the fourteenth century, planned the nave and the façade as they now exist. The original building dates from Roman times; and the part used as the choir having been destroyed by fire was replaced by Gérard de Prile, who, according to the *Chronique* from which we gather this account, took the cathedral at Amiens for his model. The later architect owed less to French inspiration.

Correction.—In Miss Evans's article on "Marinus van Reymerwale," in the ACADEMY of last week, the signature on the picture should have been printed "Marin^{us} me fecit," not "Mazin'."

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

Coloured Freehand Drawing Copies

FOR CLASS TEACHING.

1. FROM EGYPTIAN ORNAMENT.
2. FROM JAPANESE ORNAMENT.
3. FROM GREEK ORNAMENT.
4. FROM PERSIAN ORNAMENT.
5. FROM RENAISSANCE ORNAMENT.
6. BUTTERFLY.
7. BUTTERFLY.
8. FROM JAPANESE ORNAMENT.
9. FROM CELTIC ORNAMENT.
10. FROM ITALIAN ORNAMENT.
11. FROM CHINESE ORNAMENT.
12. FROM MEDIAEVAL ORNAMENT.

These copies are ADAPTED from specimens of various styles of ornament, and are specially suitable for class-teaching. THE COLOUR makes the copy attractive to children, enables them to distinguish the form more readily, and induces a habit, so useful to draughtsmen, of looking at and comparing masses or spaces instead of simply observing outlines. It is not intended that the colour should be copied by the children, though, when possible, the teacher will find it useful to allow this practice as a reward for careful drawing.

LITERATURE.

The Municipal Records of Bath, 1189 to 1604.

By Austin J. King and B. H. Watts.
(Elliot Stock.)

It is much to be desired that the civic authorities of Bath should follow the good example of the Corporation of Nottingham by publishing the full text of their charters and local records. Every such work is sure to cast some fresh light upon the perplexed subject of the growth, decay, and revival of the civil liberties of Englishmen, and to aid in solving some of the difficult problems which beset the subject of local self-government. Everyone who is concerned with the study of mediæval society, and of its influence upon our existing institutions, will rejoice at the appearance of an exact documentary history of the ancient city of Bath. But, for the present, we must be content with the careful abstract of its documents which has lately been published with the approval of the town council. It is difficult, however, to accept with equanimity the absence of an index from a book which is intended as a work of reference. An explanation is offered, indeed, in the announcement that a continuation of the work is already in preparation, and that an index dealing with the complete work will be more generally useful. But the purchasers of the present edition will still have some cause of complaint, even though the authors have taken some pains to keep to the chronological sequence of events.

The work as a whole may be favourably regarded as a very full collection of historical details connected with Bath and its ancient corporation. The reader must seek elsewhere for the story of the Gaulish town, where "Sul the Fire-goddess" and her attendant sylphs were honoured in a splendid temple beside the boiling springs. Other writers have dealt with the "august remains of the Roman grandeur," the inscriptions, and sculptures, and statues long imbedded in the city walls, and the wonderful hot baths which have recently been explored and opened out at the expense of the corporation. It is too late to hope for any fresh discovery to illustrate the dark period that followed the Roman retreat, when the local kings kept up at least a semblance of discipline and civilisation. They struggled against the English advance until the Welsh armies of the King of Bath and his allies from the Valley of the Severn were routed at the Battle of Dereham. The cities of Bath, Gloucester and Cirencester fell into the hands of the great captain whose exploits are celebrated or deplored by the Welsh bards; and we can still read the mournful poems in which they described the destruction of Uriconium, and lamented over the ruined towers, "the broken shields and

blood upon the fallows, and the churches burning beside the red clover-fields."

The authors of the work before us find their starting-point in the later days of the Heptarchy:

"On the *débris* which had choked up and quite hidden the remains of stately Roman baths, luxurious villas and ornate temples, but through which the hot healing waters still welled up, the Saxons built their rude huts under the shadows of the convent founded by Osric. The population would have been a small one, consisting partly of freemen, partly of that half-free class which formed so important a factor in the social life of the English. There was a popular assembly, a *tun moot*, and over it presided a grieve. In some open space, readily accessible, would have stood a great oak or elm, with a rough-sounding bell hanging from a branch. As the harsh notes of this bell were heard clanging out over the valley, each freeman, throwing down his axe, or leaving the serfs to guide the plough, would seize his sword and hasten to the *rendez-vous*. There, gathered round the tree, and sheltered beneath its spreading branches, the freemen held their *mote*. . . . This was the unit of legislative liberty, which survived as the hundred court for so many centuries. When the system began we know not. The Saxon Chronicle casually mentions that in A.D. 907 died Alfred, grieve of Bath. Of this Alfred . . . the present mayor is the lineal descendant. The succession is probably unbroken for a single year. Of the *tun moot* the town council of to-day are the representatives."

The authors arrive at the conclusion that Bath has, for a thousand years, had a municipal government of its own; and they infer, fairly enough, from what may be called a "communalist" point of view, that all the essential elements of municipal government existed long before the Norman Conquest, and are left to us now as a survival of the "old free state of merry England." One consequence of this view is a feeling of resentment against the state of society which allowed the old parochial rights to be restored in the form of franchises derived from the crown: "Our joy in the possession is embittered, our glory tinged with shame, because we hold it as the gift of the central authority, which it ought to have been our boast to exclude." These statements, amid some exaggerations, contain the elements of a truth which is too often neglected. The oldest form of the parish-meeting may be said to have contained the germ of our present system of government. It would hardly be in accordance with the authorities to hold that each village had a court of justice to itself; but the Bath hundred-court was certainly the representative of an ancient judicial assembly. Notwithstanding the theories of the feudal lawyers, it was settled by the revolution which exiled the Stuarts that our corporate towns held their privileges by a title independent of charters. If we regard the port-reeve of Bath as an officer mainly concerned with the collection of the royal revenue, just as the bailiff in later times was the direct representative of the bishop as lord of the city, we may still acknowledge that these offices were continually tending to become popular; and the mayor of the thirteenth century, in one sense, represented the more ancient reeve, though the actual origin of his power was the revolt of the French *communes* which had been imitated by the citizens of

London. The office of the bishop's bailiff was probably purchased by the citizens with all the odds and ends of property which passed in such cases as part of the bailiwick. It may be that this theory will account for the possession by the corporation of some parts of the Hot Baths Estate, which were long supposed to have been included in a grant made by Edward VI. in favour of the Free Grammar School and another local charity.

The authors make a somewhat curious suggestion with respect to the hypothetical tree which served the villagers as a belfry. A certain street in Bath was formerly known as Bell Tree Lane: "On the site of the United Hospital stood Bell Tree House, and, within the present century, a large and very old tree"; and it is asked whether this could have been the tree, or the site of the tree, "whereon hung the mote bell." Wood derived the name from Belenus, the Celtic Apollo, and there is, of course, a great temptation to bring in the familiar "bel-tree" and the rites connected with the "beltain-fires." But the evidence is of the slightest; and the whole theory must seem far-fetched when we remember the lapse of time and the thousand accidents of nomenclature. How many have been deceived by the name of the Holmen Clavil Inn in the neighbourhood of Taunton, which would always have been connected with the tradition of a hollywood mantelpiece if it had not been found by ancient records that it represented the hamlet of Homen belonging to the Norman family of Clavyl.

Another interesting point of the same kind arises out of the description of Bath in the Hundred Rolls. The jury found that the Bishop of Bath held two "the" in Hampton and Claverton, which "the" were accustomed to do suit at the hundred-court, and had been withdrawn therefrom. Several suggestions have been offered in explanation of the meaning of the word, the favourite theory being that of Dr. R. Schmid, who translated it as "seignories" or "manors." A reference, however, to other entries in the same Roll, will show that the word was written as a contraction for "theinga," or "thethynga," meaning a tithing, or subdivision of the hundred.

The same records contain a number of entries about the old city walls, or "burwalls," as they were sometimes called, which seem to have been used as a quarry by the Prior of Bath, and a host of inferior trespassers. Leland and many later antiquaries have described the statues, apparently of Roman workmanship, which were built into the masonry of the gateways of the city. These were figures of Mars and Hercules, the sun's face in glory, a girl with snakes in her hand, a boy in the ancient British dress, and others, of which the meaning is unknown. The presence of these antiquities may afford some ground for conjecturing the date at which the city was fortified. It does not seem likely that the walls would be built until nearly the end of the Roman dominion in Britain. They were probably erected under the stress of invasion from Wales and Ireland, and must have been maintained by the independent kings. The circumstance of the statues being built into the gateways in

later times may explain a difficult passage in the Lamentations of Gildas, in which the querulous historian speaks of the grim-faced idols on the mouldering city-wall. After the defeat of Conmail and his allies by the English in 577, the fortifications were, doubtless, destroyed, and the city left in ruins; and it is quite possible that Prof. Earle is right in connecting the destruction of the City of Waters with that fine poem in the Exeter Book, which describes the parapet lying in the shadow of the purple arch, and that "bright burgh of a broad realm" which had so often withstood the English warriors, and "chieftain after chieftain rising in storm." When the site of the Thermae was occupied in later times as a royal mansion, the walls would, of course, be re-built and patched up with the scattered remains of the Roman city.

The commercial history of Bath is traced from the first incorporation of the merchant-guild under Richard I. to the final extension of the civic liberties by Elizabeth. Among other things it is shown that the city was a considerable centre of the West of England woollen trade. "A weaver's shuttle, forming part of the arms of the priory, denoted the importance attached by the monks to the manufacture"; and we are told that the Church of St. Michael, outside its walls, possessed "large brass pots used for dyeing cloth, which the churchwardens used to lend out on hire." The ecclesiastical history is rather dreary reading. When the monasteries were suppressed, the Disendowment Commissioners offered to sell the abbey to the city. The offer was declined, but the citizens took an opportunity of plundering the fabric; "they stripped away the glass, iron, and lead, the latter amounting to 480 tons, and shipped these and the bells to Spain; the evilly acquired stores were lost in transit." After passing through various private ownerships, the ruined building was vested in the corporation to be used as the parish church; and the advowsons of the existing parishes, with other ecclesiastical property, were given to the same body by way of endowment for a new and consolidated benefice. In 1583 all the churches were vacant, and several chapels besides were standing in ruins. The tower of St. Mary's Church by the North-gate had been turned into a prison, and the nave was used as a grammar school. One chapel was let as a shop, and another was used as an alehouse. The Church of St. Mary de Stalles is said to have been removed at a later date, "and the site appropriated by the chamber." All the churches seem to have been "kept in hand" for a considerable period, the chamberlain receiving the burial-fees and providing one preacher to serve all the five livings for very moderate "wages." The following extract describes generally the fate which befell the abbey and the ecclesiastical buildings in its neighbourhood:

"Before the gift of the church by Matthew Colthurst, material had been carted from it in vast quantities to mend the roads. Before the order of consolidation, and therefore before there was any pretence for the contention that the other churches were to be desecrated, the lead was stripped from the roofs to make pipes for the waterworks, and the rood-lofts and other materials in the churches were sold."

The appetite for plunder, once aroused, seems to have expended itself generally on the property of the free school and of various almshouses and hospitals. Of one charity we are told that, though some part of the income was expended on repairing the church, "there was still enough left of the patrimony of the poor to be frittered away in payments to players for bear-baiting and in presents to magnate visitors." Of another it is said to be uncertain "when the entire withdrawal from the poor of the funds of this charity commenced"; but it appeared later that the revenues had "for very many years been misappropriated for private purposes." It is said that the same dismal story might be told of almost every town which has been possessed of charitable endowments; and the reports of Lord Brougham's Commission certainly bears out this allegation to a very considerable extent.

But we must now take leave of what must always be an interesting subject. The reader will be sorry to pause at the dullest part of the story, and will be ready, when the next instalment appears, to be delighted with the "gaiety, good-humour, and diversion" of the new world of Bath when the city begins to be a dissipated combination of Baden-Baden and Monaco.

"The eye is continually entertained with the splendour of dress and equipage, and the ear with the sound of coaches, chaises, chairs, and other carriages; and the merry bells ring round from morn till night."

CHARLES ELTON.

Translations of Ancient Arabian Poetry, chiefly Pre-Islamic. By Charles J. Lyall. (Williams & Norgate.)*

"THE present volume is not intended for specialists," notes Mr. Lyall, who is not, as many suppose, the Lieut.-Governor of the Panjab, but a Bengal Civilian of younger date, well known to Arabists by his previous studies of Arabic. This sentence shows the normal misapprehension of his work by the workman, whose thoroughly scholastic and esoteric tone makes these translations contrast with sundry very readable Persian and Arabic books lately printed, "for English readers," by writers almost innocent of Persian and Arabic. But scholarship has in our days its own especial pains and penalties; and a learned translator too often forgets that, as it is the prime duty of woman to look pretty, so it is that of a translation to be readable and enjoyable. He is also overapt to ignore the fact that he is one of a *servum peius*, and, as a rule, to overlay the original with his own masterful individuality.

This volume (not intended for specialists) offers specimens of pre-Islamic Arabian poetry, now our sole authorities for the purest Arabic. Mr. Lane thus lays down the precedence. First and highest ranks the Jâhili (ignoramus) of The Ignorance, the *Ἀπαθίας ἀπειρον ἀνθος*, who wrote hemistichs, couplets

* Pp. xiii. (Preface and Contents) lii. (Introduction) and 142 of matter, including Appendix and two excellent indices—A of proper names, and B of subjects—for which students will return thanks. Shape of volume too broad for beauty, but necessary to keep the lines unbroken; broad margins, good type, and altogether a most creditable specimen of typography.

or distichs, Kits' or pieces, and, lastly, Kassid (odes or elegies), varying from fifteen to a hundred lines. The second class consisted of the Mukhadram (*alias* Muhadrim, the spurious, half Pagan, half Moslem, &c.), who flourished partly before and partly after Al-Islam. The Islâmi or full-blooded Moslem at the end of the first century A.H. (= A.D. 720) began the corruption of language; and, lastly, he was followed by the Muwallad of the second century, with whom purity ended.

This much premised, we may observe that Mr. Lyall's translations fall into three distinct sections. The first and longest (forty-four of fifty pieces, pp. 1-80) is from the Hamâsah ("being valiant"), the far-famed anthology, composed about A.H. 220 by the poet Abû Tammâm. Part ii. (pp. 81-89) excerpted from the Mufazzaliyât, contains two specimens of an excellent selection, numbering thirty odes. The third, which ends the book (pp. 90-122) is composed of fragments of the Mu'allakât, the "Suspended," hung up, they say, in the Ka'abah, of which seven are well known, and forty less so. Here we have the "prize poems" of Imr al-Kays and Zuhayr, with extracts from the Diwans of Lebid and Al-Nâbighah; the latter, in some editions of the immortal Suru, supplanting Amrû and Hâris. But why has Mr. Lyall chosen to omit his own excellent version of Lebid's splendid opening lines, quoted in Mr. Clouston's useful *Arabian Poetry* (p. 385)? Again, why write "Imra-al-Kays" and similar terms with a double hyphen when the article has no connexion with the first word? But the "leader of the poets to hell" has been sorely maltreated as to name—*s.g.*, Amriolkais (Sir W. Jones), 'Amru'lkaie (Arnold), Imra ul Kays, Imru ul Kays, and Imru'l-Kays (Lane), to notice no others; while the popular form is Imr al-Kays. And even the meaning of his name is blundered over. Older writers translated it the Man of Adversity, while it signifies the Man (or worshipper) of Al-Kays (the idol).

Mr. Lyall's Preface adds another description to the many which deal with Arabian articulation; but it adds nothing of accuracy to those that preceded it. One regrets that in the diphthongs he has not preserved *ai* (as in *aisle*) opposed to *ay* (as in *hay*). The unmarked *d* is not pronounced "further forward on the teeth" than the English *d*: it is simply a pure dental, while ours is a semi-palatal. The difficult sounds *Sâ* (thâ), *Zâl*, and *Zâ*, as shown in the phrase *Al-thaub allazî 'azîm* (the shirt which is great), follow in due order: *Sâ* touches with the tongue the two frontal incisors (as in our *theme*, not in *the*); the *Zâl* causes the tongue-tip to part the upper teeth from the lower; and the *Zâ* protrudes it beyond the teeth-line. For the *Zâd* or *Dhâd* the tongue-tip must touch one of the upper canines, generally the sinistral. Mr. Lyall (p. x.) is correct as to the broadening letters which grammarians term *Al-Munt-abakât* (the flattened); but he has neglected to warn his readers that Arabic consonants, one and all, are pronounced with much more distinctness and emphasis than in European tongues. For instance, the many who write *Hassan* (P. N.) for *Hasan* are not aware that an Arab would articulate it as "has-son."

The Introduction ends with discussing, in eight pages, the metres of Arabian poetry; and

the account is perfectly inadequate, or, rather, it contains too much and too little. Too much for a scholar, as he wants only the names, Rajaz and Kámil, Wáfir and Hajaz, Tawil, Basit, and Madid; far too little for the tyro who is not initiated into the mysteries of that wearisome and endless Arabic prosody, Bahr and Bayt, Wazn and Arkán, Salab, Watad and Fásilah. He is even left ignorant of the memorial words, Fā-ülün, &c., without which the normal memory cannot carry the burden. And here begins the capital error of judgment laconically related as "an attempt to imitate the metres of the original Arabic" (p. xlv.), that is, to imitate the inimitable. Arabic contains about one short syllable to three long, hence its gravity, dignity, and stateliness; but where are our longs, our spondee, in English? The late Prof. Palmer, of Cambridge, whose gifts of language far excelled those of Mr. Lyall, attempted this *tour de force*, dancing in *sabots* instead of pumps, and notably, confessedly, failed. With the sole exception of the Tawil metre, with which Mr. Lyall compares (p. xlix.) Abt Vogler's, "Ye know why the forms are fair, ye hear how the tale is told,"

the measures transferred to English become mere prose bewitched, *e.g.*,

"Is that whereof, when they hear, men say, yea,
that is the Truth;"

and

"A grace it is from the Lord that we hate you, ye
us"—

a truly hideous spondee.

The fact is that there are two, and only two, ways of translating Arabian verse into English. One is to represent it by sound English poetry, as did Sir William Jones; the other to express it, like the French, by measured poetical prose. Mr. Lyall has done neither one nor the other, and he renders his reader truly grateful when he does not imitate the metre (p. 31). He owns that he lacks the knack of rhyming, and he makes us feel its absence keenly enough, especially when the consonance suggests itself. Take, for instance, the last four lines of No. xli. What would be easier than to write,

"Ah, sweet and soft wí thee her ways: bethink
thee well—the day shall be
when some one favoured as thyself shall find
her fair and fain and free;
And, if she swear that parting ne'er shall break
her pact of constancy,
when did rose-tinted finger-tip wí troths and
pledges e'er agree?"

And in the next piece why not write,

"My greeting of joy in reply should spring, or
upon her cry
An owl, ill-bird that shrieks in the gloom
where the gravestones lie?"

But throughout his work the translator has neglected to convey the peculiar *cachet* of the original. This old world Oriental poetry is spirit-stirring as a trumpet-sound, albeit the words be thin. It is heady as the golden wine of Libanus, which tastes like water and is potent as brandy—the clear contrary of our nineteenth-century style. It can be represented only by the verse of the old English ballad, or by the prose of the Book of Job.

In minor matters Mr. Lyall was hardly careful enough. Arabs do not "hide their faces in their handkerchiefs" (p. 40), which has a suggestion of the ludicrous. "Shirk"

must not be rendered polytheism without a note (p. 41). Our author, like Mr. Chenery in Al-Hariri, burks the reason which justified Al-Khansá's refusal of amorous old Durayd, "a stallion not to be smitten on the nose" (p. 43). "Allah curse thee! Thou hast guarded thy women both alive and dead!" (p. 57) is a blessing which required a note upon "inverted speech," such a favourite with North Americans and Australians. Wine is produced on the fertile hills, not the valleys, of Al-Yaman; I have drunk generous and genuine grape-juice from the mountains about Sana'a. "Khusrau Parváz" is an ugly Indianism; a Persian always pronounces the latter "Parviz," and ignores the Yá-i-Majhúl or *e*-sound. Mr. Lyall should have consulted the Allámah (doctissimus) Sayce before he opined that Al-Lát was "probably the Moon" (p. 86); for the Harrahs, or volcanic tracts (p. 55), he should have noticed Mr. Doughty's map; also, he might have condescended to honour my *Pilgrimage* with a glance before he described the Gharkad-cemetery of El-Medinah as "a hill-side" (p. 52). But here he is excusable compared with Mr. Redhouse, who, in his marvellous volume entitled the *Maenevi* (p. 60) tells the unfortunate reader that "Arafat is the mount where the victims are slaughtered by the pilgrims." Too bad!

The English language, we are told by statisticians, will, about A.D. 2000, be spoken by a thousand millions of men, to about half that amount in round numbers for all other European tongues. This is but one of many reasons why it should be the pride of English writers to conserve its purity, and to avoid the slipshod Anglo-Indian and the vulgar American perversions now so popular. We feel a shock when reading

"How sweet the breezes that blow to us-ward"

for us-wards (p. 69); and we ask, Who stole the subjunctive, when afflicted with "If the day falls to thee" (etc., p. 46) and "If a bright star lifts thy soul" (etc., p. 72). The author seems to recognise no difference between "If he find" (uncertain) and "If he finds" (most probable); and in both cases he had and lost an opportunity of abolishing that ugly sibilant which made English suggest to certain foreigners the whistling of birds.

Incidentally I may remark that Mr. Lyall's scholarly work fails to picture for English readers Arab life in the good and glad old Pagan days, before Al-Islam, like the creed which it abolished, overcast the minds of men with its dull grey pall. They combined to form a marvellous picture—those contrasts of splendour and squalor among the sons of the sand. Under air pure as aether, golden and ultramarine above, and melting over the horizon into a diaphanous green, which suggested the emerald mountain (Kaf), the so-called Desert changed face twice a year—now green as Hope, beautified with infinite verdure and sheets of water, then brown and dry as summer dust. The vernal and autumnal shiftings of camp, disruptions of homesteads, and partings of kith and kin, friends and lovers, made the life, many-sided as it was, vigorous and noble, the outcome of hardy bodies, strong minds, and spirits breathing the very essence of liberty and independence. The day began with the dawn-drink,

"generous wine bought with shining ore," poured from the leather bottle into the crystal cup. The day was spent in the practice of weapons; in the favourite gambling game with arrows, called Al-Maysar, which had the merit of feeding the poor; in racing, for which the Badawin had a mania, and in the chase the foray and the fray, which formed the serious business of life. And how picturesque the hunting scenes—the greyhound, like the mare, of purest blood; the eagle swooping upon the coney, the gazelle standing at gaze, the desert ass scudding over the ground-waves, the wild cows or bovine antelopes browsing with their calves, and the ostrich chickens flocking around the parent bird! The pleasures of existence were music, poetry, and love-making, especially with the damsels of hostile or rival tribes. The Musámirah or night-talk round the camp fire was enlivened by the lute-girl and the bard, whom the austere Prophet described as "roving distraught in every vale," and whose motto, in Horatian vein, was, "To-day we shall drink, to-morrow be sober; wine this day, that day work." Regularly once a year, during the three peaceful months when war and even blood-revenge were held sacrilegious, the tribes met at Ukádh (Ocaz) and other fair-places, where they held high festival; and the inspired ones contended in verse and prided themselves upon showing honour to women and to their successful warriors. Brief, the object of Arab life was to *be*—to be free, to be brave, to be wise; while the endeavour of other nations was and is to *have*—to have wealth, to have knowledge, to have power.* Lastly, his end was honourable as his life was stirring; few Badawin had the crowning misfortune of dying "the straw-death. . . ."

From an Arabist of Mr. Lyall's calibre we shall hope and expect to see something more serious than these fragmentary translations, and more consequent than mere "chips from an English workshop." R. F. BURTON.

Norwegian Pictures drawn with Pen and Pencil.
By Richard Lovett. (Religious Tract Society.)

THE latest volume of the "Pen and Pencil" Series fully maintains the high standard of excellence of the former numbers; and it appears also at a singularly opportune time,

* The remark is by my friend Prof. Aloys Sprenger in that fine fragment, vol. i. of *Al-Mas'udi*, printed by the Oriental Translation Fund in 1841, and left unfinished because England cannot afford to print the rest. The Asiatic Society of Paris, I need hardly observe, published in eight volumes, octavo, the text and translation by MM. Meynard and Courteille. It was the same with Ibn Batutah; English readers must rest contented with Lee's poor abridgement, while the French have the fine edition and translation, in four volumes, octavo, by MM. Défrémery and Sanguinetti. But under her modern rule of *bourgeoisie* and manufacturers, England is content to rank, in such matters as encouragement of Orientalism, endowment of research, &c., with the basest of kingdoms. Compare our unhappy half-starved societies, compelled to vegetate on the alms of members, with the well-lodged and richly-endowed corresponding bodies in Paris, Vienna, or even in Rome. And, worse still, there is no prospect of improvement; on the contrary, the classes fast coming into power threaten to make bad worse.

general attention having been recently drawn to the North of Europe by the Scandinavian travels of the Prince of Wales and Mr. Gladstone. It is beyond the scope of this series to enter very deeply into the physical, social, or historical aspects of the various countries described, and it will be readily understood that no attempt is made in this volume "to be serviceable to those who visit Norway to scale her highest peaks, to explore her most remote regions, to fish in her rivers and lakes, or to hunt the reindeer." The end aimed at has been to put before the general reader a series of word pictures, and of engravings, illustrating as fully as possible the broad features of Scandinavian scenery, from the North Cape to Christiania, and from Bergen to Stockholm; and to produce a book that may afford "something of the pleasure, stimulus, and information that a journey through Norway's scenes of loveliness imparts."

It may be said at once that this object has been fully realised, more fully, indeed, than in many books of a more pretentious character. The descriptions are bright and interesting, and have all the freshness and reality of sketches from nature, while the author evidently possesses a power of observation which enables him to take a comprehensive view of whatever comes under his notice. He sums up his impressions of the country in a paragraph which is worth quoting, and which will be appreciated by all who have had the opportunity of judging for themselves:—

"Norway . . . is unique among continental countries in two respects. In the first place, it seems to possess a curious home atmosphere—that is, it does not appear to be a foreign land. True, the landscapes are unlike anything to be seen in England, the language is different, the sights and sounds are unfamiliar, and yet the wholly foreign feeling experienced when in France or Austria is wanting. In a way distinctly sensible, though difficult to describe, the English traveller feels himself to be in a kindred land. This impression may, of course, be purely subjective, or it may be due, in some subtle way, to the blood-relationship, which is much stronger than is generally supposed, between the two races. And, in the second place, Norway is unique in the character and variety of its natural features. In the south the country is a network of lovely lakes, encircled by gently swelling hills, richly timbered, and abundant in flowers. In the west are found awful gorges like the Romsdal and the Naerödal, the Sogne and the Geiranger Fjords. The north exhibits the bold and conspicuous mountain scenery of the Lofoten Islands and the Arctic Circle; and in the interior the adventurous pedestrian finds peaks well worth climbing, and passes, snowfields, and glaciers that can test endurance and delight the strong quite as fully as any alpine region. Wherever the traveller turns his steps he finds natural beauties that refresh the mind, enchant the eye, and implant themselves for ever in the memory, ranging from scenes of savage and awesome sternness to views like that pictured on the opposite page, which, for its extent and beauty, is known as pre-eminently the King's View. The fact, too, that it is impossible to rush rapidly through the country lengthens out the enjoyment of the true lover of nature, and in some cases tends to create a love not before felt." (P. 24.)

The second chapter contains an admirable sketch of Norwegian history up to the time of Olaf the Saint; the pages devoted to the

other great Norse hero, the brilliant and chivalrous Olaf Tryggvesson, whose noble presence brightens the sagas wherever it appears, are singularly picturesque and vivid. Chap. iii. is devoted to the west and north coasts of Norway, and touches upon the principal places of interest visited by the coasting steamers. It also contains an account of the Lapps, mainly derived from Dr. Tromholt's recent work. And after duly admiring the midnight sun from the top of the North Cape, frightening the sea-birds at the great loomery of Svarholtklub, and taking a peep at the beautiful Varanger Fjord, the author takes us back to Hammerfest and Tromsø, and so, past the great glacier-bearing range of Fondalen, the Hestmandö and the Seven Sisters, the wonderful natural tunnel through Torghatten, and the tremendous breakers off the Frø Islands, where the North Atlantic strikes home on several hundred square miles of dangerous rocks, we return once more to Trondhjem, and are introduced, in chap. iv., to the exquisite inland scenery between Christiania and the Romsdal. The fjords, mountains, waterfalls, ancient churches, farm-houses, and peasants of Southern Norway, with a sketch of their leading characteristics and customs, occupy the next three chapters, and the eighth and last chapter gives a very interesting peep at that part of Sweden which lies between Gothenburg and Stockholm.

From this indication of its contents, it will be seen that Mr. Lovett's book, in spite of its strictly limited size, covers so much ground that it would be surprising if there were no errors to correct. The number of these is, however, comparatively small; and in almost all cases they may be clearly traced to want of knowledge of the Scandinavian languages. In chap. ii., for instance, frequent mention is made of "the bonders," which shows that the author is not aware that "bönder" is the plural of "bonde," a peasant. Again, his well-meant hints to travellers (p. 102) are about as misleading as they possibly could be. The "hest strax," which means "horse immediately," not "soon," of inexperienced English tourists, has long since been a standing joke in Norway, and forms the subject of a well-known caricature in the "Allehaande" series. The phrase, "vær saa god," not "gud," is, like many other phrases, admirable at the right time and place, but, as a general rule, it should be used as a prefix to a request, not as an afterthought. A reference to Murray's or Bennett's vocabularies would also have shown that the letter ö in the Norwegian alphabet is by no means the same thing as the English o, and by this simple means a number of misspellings would have been avoided throughout the book. Apart from this, most of the names are spelt correctly. But "Lendogarde" (p. 57) should be "Landegode," and the sugar-loaf peak on East Vaagö, the highest of the Lofoten proper, is named Vaage-kallen, not "kellen," and attains an elevation of 3,300 English feet, which is 210 feet more than the height assigned to it by Mr. Lovett's informant. Such philological mistakes as "the Tyven" and "the Svarholtklubben" (p. 77), which are, of course, pleonasm, are of minor importance in a work which makes no pretension to scientific accuracy; but the statement that magpies are "protected by

the superstitious fear of the people" (p. 17) is altogether incorrect. They are protected by the innate kindness of the Norwegians to all living things, and because the pert confidence and cheerful companionship of these lively birds is very pleasant during the long, dark, monotonous months of a northern winter. In Finmarken, where the magpies build under the very eaves of the houses, it is not an uncommon practice to keep them down when required by substituting a couple of hen's eggs for the legitimate contents of the nest, the chickens, when hatched, being transferred to one of the broods in the farm-yard.

The illustrations naturally form a very important part of a work of this kind, and they are worthy of such well-known names as E. Whymper, R. and E. Taylor, Pearson, and Prof. T. G. Bonney, who placed one of his sketch-books at the author's disposal. A map and an index complete one of the most charming books on Norway that has appeared for a long time. It is thoroughly creditable to all concerned in its production, and well deserves to be one of the successes of the coming season.

GEORGE T. TEMPLE.

History of the Bengal European Regiment. By Lieut.-Col. P. R. Innes. (W. H. Allen.)

REGIMENTAL *esprit de corps* had been an extraordinary factor in British prowess for more than a hundred years when the modern army reformers threw away that cheap defence of nations. How powerful the feeling was can only be realised by civilians when they read such a book as Col. Innes's history of his old corps. The First Bengal European Regiment, known by various names, and now represented by the First Battalion Royal Munster Fusiliers, possesses one of the most unique and romantic records of any regiment in the army, and Col. Innes has done a good work in rescuing it from oblivion. Originally formed in a somewhat irregular manner by Clive in 1757, it continued its existence as a "Company's regiment" for exactly one hundred years; and during that century not only, as its historian claims, "helped to win India," but displayed its signal valour and discipline in defence of British interests in almost every campaign of importance, as the following brief analysis of its services will show.

After the recapture of Calcutta, the young regiment went on under Clive to the battle-field of Plassey, thence to the "Northern Circars," where they served under the gallant Forde in the expulsion of the French; beat the invading Dutch under the same commander at Biderra—classified by Col. Malleon among "the decisive battles of India"; bore a part in the long campaigns against the Muslim in Behar and in Rohil-khand; fought under Coote in the campaign against Haidar Ali in 1781; took part in Lake's great campaign of Hindustan and the first siege of Bhurtpore (1803-5); took part in expeditions to Celebes and Java, in the Nipal war and that against the Pindaris; were prominent in the storm of Bhurtpore, which concluded the second siege in 1825-26; served in the first Afghan war (1839-40), for which they were honoured by being made "Light Infantry"; fought the first Punjab campaign, and subsequently shared in the Burmese war, where they were

present at the capture of Pegu; took part in all the great actions of the Sepoy War, including the storm of Delhi, where they formed part of Nicholson's column in the fatal lane; operated in Mawat, and then marched down to Lucknow, where they shared in the assault (March, 1858), and formed part of Hope Grant's flying brigade by which Oudh was pacified.

During these labours they produced some of the most brilliant officers who have distinguished the Company's service. In their ranks were cradled Sir Herbert Edwardes, Major Hodson, W. Broadfoot (the victim of Cabul), and Hazlewood (the hero of Ghazni), Sir T. Seaton, Sir Louis Cavagnari, Butler (who swam the Gumti in face of the whole force of the enemy), and Delafosse (one of the four survivors of Wheeler's entrenchment at Cawnpur). At the siege of Lucknow no less than five Victoria Crosses were won by this regiment.

One of the most singular careers of modern warfare was that of Joseph Orchard, who entered the regiment about the end of Lake's campaign, and died of injuries received on parade when commanding it in 1847, thus carrying the traditions of the founding of the empire of the Company to within little more than ten years from its end. Such a career as this would be impossible under present military arrangements; yet there can be little doubt but that the continuity and solidarity of a body of soldiers which it serves to illustrate must have gone far to cause the glorious history set forth in this most careful and interesting record. The officers and men of the "old Dirty Shirts," as they were, with affectionate familiarity, designated in India, went to the country young, and devoted their lives to it, each man handing on the traditions of valour and duty. In the enthusiastic words of the author:

"They entered upon their military duties far from their native land; and on arrival in India found themselves embodied in the service of the Company without the prestige, patronage, or support of their parental government; their career embracing as varied records of military adventure, daring, and victory as can be found in Greek or Roman history. . . . In the early part of their story they had scarce a better or safer base of operations than Cortes or Pizarro."

Col. Innes has related with studious research and soldierly spirit these adventures—in which he himself bore no undistinguished part. It only remains to express our sympathy with the prayer of his dedication, that the "Royal Munster Fusiliers" may ever bear in mind that they are the inheritors and guardians of "the honour, fame, and decorations" of this old and glorious corps, and of the scarcely less distinguished "Second Europeans," originally raised out of the bosom of the First. Why the new regiment could not have been named from the land of their past renown is best known to the mind of our modern reformers. Bengal is, at the least, as loyal and important a province of the empire as Munster. But we must take things as we find them. The colours of the "Dirty Shirts," shot-riddled and stained with the blood of the gallant boys who carried them over the "yellow hell" of Southern Asia, hang in Winchester Cathedral; and there can be few better lessons for a young soldier than

what might be read to him by Col. Innes under their tattered folds.

It only remains to notice a few more prosaic details. The volume is clearly printed, with a certain amateur elegance not inconsistent with a soldier's book; but there are a good many printers' errors. The rendering of native words is so very unsystematic that a reader new to the subject will hardly know how to pronounce them. The plans are clear and well executed; and, lastly, the book has an excellent index. The general history is well and sufficiently stated, though a few errors of a minor kind remain to be dealt with in a future edition. Thus, for example, Sháh Alam was not a rebel against his father when he invaded Bengal in 1759, but rather a fugitive from his father's oppressors. Nor was Asafuddaula ever "King" of Oudh; the title was only assumed in 1819 by Ghazi-ud-din Haidar, the grandfather of the present ex-king.

H. G. KEENE.

The Logic of Definition. By William L. Davidson. (Longmans.)

THIS is one of that useful class of works which apply the principles of formal logic to interesting and important examples. The discipline of the parade is directed to the requirements of actual service. The opening chapters contain a useful re-statement of the theory of definition. On the question whether definitions of natural kinds are by type, the writer expresses an unqualified negative. "It [the type] is simply a synonym for class character or class mark, and adducing its constituent elements is tantamount to defining." Here, as elsewhere in these pages, we seem to miss the philosophic *perhaps*. If the mean dimensions of a species determined upon the same principles as the so-called "homme moyen" constitute a type, do the measurements of the type belong to the individuals in the same sense as the attributes of a general term?

The tests of a good definition are applied with no little severity by our author. Thus he regards as "abusive" *nature* put for the quality or essence of a thing, e.g., the nature of justice, the mathematical use of the term *function*, and Mr. Matthew Arnold's "brilliant literary attempt" to define a word which "is meaningless unless it denotes a person," as "the Eternal, not ourselves, that makes for righteousness." Lexical defining affords a wide scope for the application of the critical apparatus. It is not difficult to show that "grave remediable errors and defects are still rampant, and a dictionary on strict logical principles is as much a desideratum to-day as ever." For example, *Help* is described as "aid, assist, relieve." "We next turn to *Aid*, and the definition is 'help, relieve, assist.' *Assist*, in like manner, is 'aid, relieve, help'; and *Relieve* is 'help, assist, aid.'" School-book definition stands equally in need of reform. The author, however, is not ignorant that complete explication is a logical ideal which can never be reached. He is prepared to assist the poverty of language by illustrative engravings. Some of his suggestions are perhaps more calculated to show than to overcome the difficulty of defining.

"It is sometimes useful to take advantage of an apt and striking phrase. . . . In this way Exacerbate may be represented as 'adding fuel to the flame.' 'Man of parts' is a very good substitute for a Wit. 'Silent as the grave' well expresses what is meant by Taciturn. We exactly hit the idea of Consequentiousness in the familiar expression, 'large as life.' To Dwindle is to 'grow small by degrees and beautifully less.'"

There are some ingenious devices for representing correlated meanings; for instance, a sort of scale of intensity: "See, look, gaze, stare;" "Grief, anguish, agony."

The latter part of the book, devoted to philosophical and scientific definitions, involves severer investigations. To fix the definition of a word there is often needed a full enquiry into the nature of things. The process is more important than the result. The knowledge of the country obtained in the course of this chase is more valuable than the quarry. Mr. Davidson does not ignore the inductive element in definition. But the law of his work—the science of definition in general rather than the definitions of a particular science—deters him from following up the questions which he raises. There is imposed a brevity which cannot avoid the appearance of [dogmatism. For example, the Hedonist may object to the definition of Pleasure "as never itself anything more than pleasure of sense, personal and egoistic, self-contained and exclusive." Altogether we miss, but perhaps we have no right to look for, the Platonic spirit in which Mr. Sidgwick has sought the definitions of "Value," "Wealth," or "Money." Speaking of Political Economy, may we suggest that Mr. Davidson should add this to the list of sciences amenable to his tests. To file and polish the definitions of economical terms would be a task appropriate to his acumen and industry.

F. Y. EDGEWORTH.

SOME RECENT SPANISH NOVELS.

Nona. Novela póstuma de José Selgas. (Madrid.)

Pascual Lopez; Un Viaje de Novios; La Tribuna; El Cien de Vilamorta. Por Doña Emilia Pardo Bazán. (Madrid.)

Don Gonzalo González de la Gonzalera; Sotileza. Por D. José M. Pereda. (Madrid.)

THE posthumous novel of Don José Selgas, as well as the volume of poems which accompanied it, shows a marked superiority over everything that the author had previously written. Selgas had long been known as the writer of elegant trifles in verse, in which the polish of the form far exceeded the intrinsic value of the matter; but the fragments left behind him prove that real thought and passion were being added to his former superficial graces, while even the very form was becoming more perfect. So it is with his novels. *Deuda del Corazon* and *El Angel de la Guarda* are very pleasant reading; but, excepting in the character of Col. Montero, they leave little impression on the mind, and they fail always in the stronger situations. *Nona* is, however, very different. No one who has once read it will forget the picture it draws of the country life of the gentry of Southern Spain, or the character of Aurora, the wilful child of wondrous beauty, whose

character the whole household conspires to spoil, till she becomes impervious to every emotion of duty, and whose conscience only the shock of her lover's death by her father's hand could arouse. The story would probably have proved as good in plot as it is in character had the author lived to complete it; but the conclusion is by another hand, and we feel by no means sure that all the threads of the narrative have been rightly gathered up and disentangled. The tragedy of the story is lightened by a fair amount of humour. The subordinate characters are well drawn; they are all flesh and blood. There is no padding. The description of the candidate's visit, of the wolf-hunt, of the effect on the villagers of the robbery of the Virgin's jewels, are very good. Nothing is introduced which does not aid the action of the plot; the dark as well as the bright sides of Spanish country life are fully indicated. Altogether *Nona* is one of the best of modern Spanish novels, and, but for the author's untimely death, might have taken rank among the very first.

Doña Emilia Pardo Bazán aims at being to the present what Fernán Caballero was to the last generation of novel-readers in Spain, but with a difference. She is as thoroughly northern and Galician as Caballero was southern and Andalusian. She wholly repudiates the idealistic treatment of the peasantry; the omission or keeping in strict shadow all their bad points, and concentrating the light only on the good traits of their character. Belonging to a more thoughtful and intellectual generation, with greater self-consciousness of artistic intent, she aims at making her works something more than the amusement of an idle hour. Like George Eliot, she preluded her writings in fiction by severer studies. She has written critical essays on the works of the Benedictine, Feijó; studies on Darwinism; and volumes on the Christian epic poets, Dante, Tasso, and Milton; and on St. Francis of Assisi. A writer like this demands more serious attention than we should give to the host of female novelists who are novelists and nothing more. Here is one from whom we may gain knowledge as well as amusement.

Pascual López, the first of her novels, is the story of the university life of a student at Compostella, and of his love for Pastora, the niece of one of the canons. Pastora is a character of rare beauty. We feel that she loves with a love utterly beyond what the sordid nature of Pascual can conceive, and when at length her eyes are opened to the true character of her lover by his rage and disappointment at the loss of prospective wealth, we feel that she does right to remain for ever in her convent.

The second, *Un Viaje de Novios*, a honeymoon trip, tells how at a roadside station, a middle-aged *roué* accidentally lets the train bear away from him the sleeping girlish bride who has that day given him her hand in obedience to her father's wishes. On awakening, the bride finds herself alone in the carriage with a stranger; the guard is demanding her ticket or money, neither of which she possesses, and has only a vague idea where she was actually going, and she is saved from arrest as an adventuress only through the interposition of the stranger. He is younger than her husband, altogether more attractive, and in

spite of themselves, left as they are alone for three days, with her utter dependence on him, love awakens in the hearts of both. The struggle between duty and passion is finely shown. The man, an Agnostic, is supported by his sense of honour and feeling as a gentleman; the woman by true religious feeling. At last, after many episodes, in which the husband shows his utter indifference to his lovely bride, under extreme temptation the man breaks down and presses an elopement. The woman's religious faith stands firm. She refuses; but the husband meets her as she has given a last farewell. His jealousy is aroused, he gladly throws her off, and she returns alone and in sadness to her father's house. The subsidiary characters are well drawn—a brother and sister, a delightful Jesuit priest, and a Basque manservant. The fault is in the character of the lover, who is Byronic and unreal; and in the descriptions of scenery, the note of which is forced with a determination to find beauty in scenes where in reality there is but little.

La Tribuna is an advance on the former novels. As a historical study of the state of Spain between 1868 and the fall of Amadeo, it is of highest interest. The heroine, *La Tribuna*, is a handsome factory girl in the cigar manufactory of her native town. With just so much education as to enable her to read the revolutionary journals, she is aroused herself, and rouses her companions to frenzied enthusiasm to redress the wrongs of her class, and for the advent of the federative republic, which is to make all equal. In natural gifts, in beauty, in courage, in eloquence, she knows that she is more than the equal of any of the upper *bourgeoisie* of her native town. She has the thirst of a born artist for beauty and refinement; and so, in spite of a proud self-respect, she allows herself to be seduced, under sworn promise of marriage, by an officer of the town, believing firmly that when the republic comes the promise will be fulfilled. She has just given birth to a child when the proclamation of the republic arrives, and the volume ends. This is the blot of the whole. One can never now recal the wonderful pictures of the life of the factory girls, and of the confused aspirations of the class to which they belong, without remembering at the same time the fatal ending. It is in vain that Señora Bazán pleads that the details of the birth struggle are as much a fact in human life as the details of the death struggle, and that these last are described by all. Putting aside the question of taste, such an end concludes nothing. We are expecting throughout to learn what part *La Tribuna* will play when the great struggle comes on. Whether by her fall she will have lost all her influence over her companions; if she is to be turned thereby into a fury of the guillotine, or sink into obscurity. Of this we know nothing, and the novel breaks off just where the highest interest should begin.

Except in artistic skill, and in the drawing of the male characters, we think *El Cienso de Vilamorta* inferior to its predecessor. It is an almost photographic transcript of northern Spanish village life; but there is no character in it in which we can take any but the most languid interest. Segundo, the son of a village notary, is a poetaster who accepts the

love and pecuniary sacrifices of the plain and middle-aged village schoolmistress, who first mortgages, then sells all her property to enable him to visit the wife of the deputy, with whose charms he has been smitten, and also to publish his poems. But her love is too abject and hound-like, and when she sacrifices her deformed son for her lover it excites in us only disgust. So the amour between Segundo and Nieves lacks somehow the ring of true passion; there is nothing redeeming about it on either side; and so when at last a promise is given of perhaps hearing more about the hero, it arouses no desire. He is altogether too poor a creature, and we do not care in the least what becomes of him.

In reading these novels we can never forget the author. She is with us on every page. It is impossible also to avoid thinking of George Eliot. There is the same varied learning, the same earnestness, and a still higher eagerness after right and moral purity; but there is the same danger of the faults which make *Daniel Deronda* inferior to *Adam Bede* and to the *Mill on the Floss*. Interesting as the prefaces are, revealing the aims and methods of her work, we are not sure that they are not a mistake. It is only when the scaffolding is entirely removed that we can see the full beauty of a building. Above the average as these novels are, far beyond those of Caballero, their value consists in the promise held out that the gifted author may yet give us something far better than she has yet written.

Pereda is an older and more voluminous writer than those whom we have just treated of. His works smack distinctly of the soil. He is a Montañés, and knows by heart the populations of the city and province of Santander. As we said that Señora Bazán reminds us of George Eliot, so does Pereda remind us of Dickens. There is the same fondness for characters in humble life, the same quick eye for external characteristics, the same seizing on the type which his peculiar trade or profession stamps upon a man; only the overflowing humour is somewhat wanting. His earlier sketches were crude, the lights and shadows were always in high relief, there were no half tones; but the later volumes have shown great improvement. The amateur has become an artist. His two last works *Pedro Sanchez* and *Sotileza*, by general consent, are by far his best. One reason of the superiority of *Sotileza* is that politics do not enter into it. For Pereda is a bigot in politics. Every Liberal in his works is either a fool or a rogue; all his Conservatives are good. His satiric sketches of electioneering agents and candidates degenerate into caricatures; and thus fail of their intended impression. But *Sotileza* has none of this; it is a marvellous picture of the life of the seafaring population of Santander in the first half of the century. The description of the place is so clear that we could almost draw a topographical map of it. We know the people as if we had lived among them. Of plot there is little or none. The fault of the book, perhaps, is that the action is always turning round and round the house of Sotileza, and the streets and port of Santander, and never gets beyond. The influence of Zola is seen in the too detailed descriptions of the filth among which the fishermen live; but the

moral tone of the book is excellent. The heroine, Sotileza, stands out from all her surroundings by the virtues of physical and moral cleanliness, and this is said to proceed, not from any unwonted religious ideal, or fervent piety, but from natural temperament. Among the dirty she is clean, among the wholly uncontrolled she is always self-controlled. Only when at sea is she exuberant in joy and free in her expression of it. Her deepest feeling is gratitude to those who saved her as an orphan. Her vanity is to bring even the most repulsive under her cleanly sway. The main plot is the history of the nascent love of Andrés, the son of one of the chief captains, and partner in one of the shipping firms of the port. She has been saved by him as a child from hideous brutality, has been his playmate during girlhood, and it is only when ripening into womanhood, and when she is the acknowledged beauty of the quarter, that the difficulty of the situation begins to be felt. The struggle in Andrés' mind between honour and passion, in that of Sotileza between gratitude and self-respect, is very finely drawn. Though fighting hard against his lower self, he would have fallen but for her clear insight into their true position; and this saves them when the malice of their neighbours would have compromised them. These are the chief, but the subordinate characters are excellent also. We may not like the subject, but the painting is such as we have rarely met with. All is drawn by a master's hand. If it is not a Raphael, it has, at least, the qualities which have made Paul Potter's bull of world-renown.

Of the novels here reviewed the first is by far the easiest Spanish, even for Spaniards Pereda has found it necessary to annex a glossary to *Sotileza*.

WENTWORTH WEBSTER.

RECENT THEOLOGY.

Lectures on Ecclesiastes delivered in Westminster Abbey. By the Very Rev. G. G. Bradley. (Oxford: Clarendon Press.) A tractate, humble in form, but full of special learning, which the reader will find noticed below, supplies an unlooked-for contradiction to one sentence of Dean Bradley's charming book. "I have nowhere," says the latter, "found any suggestion that the whole text, composed originally in a more ancient form of the Hebrew tongue, bears traces of having been recast and modernised" (p. 22). Dr. Sinai Schiffer has the unenviable distinction of having made this bold assertion. Very modest is Dean Bradley in his disclaimer of any right to speak with authority on the critical question of date and authorship. But no one who has passed through the classical schools of Oxford could decide otherwise than he has done. Dean Bradley does not attempt to exhibit the historical and, it may be, theological inferences which follow from this result. His aim in these few (133) pages is to show how exegesis can be made serviceable for edification—such edification as thinking men and women, tired of the threshed out straw of sermons, ask for too often in vain. He has opened the door into the chamber of Hebrew philosophy: it is for others to follow with brighter lanterns. But we are most thankful for the sanction which the dean has given to a sympathetic, literary treatment of the Hebrew Scriptures in the pulpit. He has made good use of the recent works of critical commentators, and in a style of sweet and serious dignity brought forth lessons "common alike to the experience of Hebrew, Greek, and Englishman."

The World as the Subject of Redemption. Bampton Lectures, 1883. By the Hon. and Rev. W. H. Fremantle. (Rivingtons.) The title of Mr. Fremantle's lectures might as well have been "the World as the Church." His aim is to develop the idea that in God's intention the Church is to embrace the whole of mankind and every human relationship—a position by no means novel; only in this instance it is coloured by considerable distrust of the institution for religious worship which imagines itself working for this result, and a corresponding insistence on the importance of all other agencies. It is not, however, for any novelty in his general proposition, and certainly not for his hair-erecting philosophy, that these lectures are worth reading. Their interest, which is very considerable, lies partly in the historical chapters, which are careful sketches of the Jewish polity and the mediæval and reformed Churches; and partly in the short homilies and practical hints interspersed here and there, such as the passages on the unity of goodness (p. 23), the one ideal (43), the use of the Old Testament (92), changes in the moral ideal (152), national reproaches (282), and the fantastic, but still suggestive, lecture on the Christian basis of human societies.

St. Paul's Epistle to the Philippians. By the Very Rev. C. J. Vaughan. (Macmillan.) This commentary, although intended primarily for English readers, follows very much the lines of Dean Vaughan's commentary upon the Romans. Its scholarship is, of course, beyond suspicion. But it starts from the entirely false assumption that English readers require little remarks to be made upon every verse, simple or difficult, and so it soon wearies. An English translation is furnished which has the merit of originality, and this will, we suspect, be the most useful part of the volume.

The Greek Origin of the Apostles' Creed. Illustrated by Ancient Documents and Recent Research. By the Rev. John Baron. (Parker.) This brief treatise, whose author has deceased since its publication, is intended to combat the popular view that the Apostles' Creed contrasts with the Nicene in being a Western formulæ alone, and to claim for it, contrariwise, a Greek origin. Of course, the debate centres around the creed of Marcellus of Ancyra. The prevalent theory was that when he was impeached of heresy, he adopted, as the easiest way of clearing himself, the then current baptismal Creed of the Roman Church, translated it, with slight deviations, into Greek, and tendered it to Pope Julius I. as the traditional form which he had derived from an earlier generation. But this has been disputed in the present day by Caspari and Hahn, who see in it the original baptismal symbol of both East and West, amplified and developed into the Nicene rule of faith, a document originally intended for theological and controversial purposes only, and not for the liturgical uses to which it was subsequently applied. The fact that the two Creeds contain the same number of articles, arranged in the same order, is the chief argument in favour of the briefer Creed having been the original out of which the longer form was derived. Dr. Baron devotes much of his short tractate to questions of Greek pronunciation, Anglo-Saxon palæography, and cognate matters, interesting in themselves, and illustrated by plates from King Athelstan's Psalter (Brit. Mus. MS. Galba A. xviii.), and from the Utrecht Psalter, but not properly relevant to the thesis he undertakes to prove, simply because documents of the tenth century are no evidence as to the source of a document of the third or fourth. Dr. Baron, who has a good deal to say (as just noted) on pronunciation, carefully marks, more than once, the name Ancyra with the penult short—a somewhat curious error. For we know from Pausanias and Stephanus of

Byzantium that the city was supposed to derive its title from the common noun *ἄγκυρα*, an anchor; and so the pronunciation must have been the same. But though the Latin *ancōra* is short in the penult, the Greek *ἄγκυρα* is long, and the long vowel still survives in the local pronunciation, which is *Angoura* or *Angōra*, not *Angōra*. As a piece of argumentative reasoning, the treatise is not strong, even for those who are in agreement with its conclusions; but it brings together several details which are convenient to find grouped, and thus will not be without utility.

A NEW and revised edition of the *History of the Christian Church*, by Phillip Schaff (Edinburgh: T. & T. Clark), is in course of publication, and two volumes have been issued. Dr. Schaff, rightly thinking that works dealing with the ecclesiastical annals of the earlier centuries are too numerous already, has not added to the pile, but begins from the pontificate of Gregory the Great in 590, and takes that of Gregory VII. as the close of an era during which the mediæval Latin Church was welded into an international whole. The present instalment, however, does not touch this latter point, but reaches the schism of East and West under Leo IX. Dr. Schaff, who seems to have followed Neander chiefly as regards both the structure and tone of his work, does not bring much original power of thought or vividness of style to his subject, but is a diligent, faithful, fairly-read compiler, who has produced a convenient text-book for students. The bibliographical portions are fuller than usual, and of real utility; while some sections of the work (as that on Mohammedanism) are more helpful than the corresponding ones in some other recent works of the same class. Dr. Schaff is as impartial, too, as is compatible with his standpoint; and his defence of St. Boniface of Mentz, against the hostile animus of Ebrard, who views him as the mere bigoted destroyer of an earlier and purer type of Christianity in Germany than that of which he was the official head, is a case in point. The two volumes are consecutively paged, probably to lighten the labour of compiling the index, but inconvenient in the event of binding, as the total of nearly eight hundred pages makes the bulk somewhat too great for a single volume of its form.

"THE TALMUD OF JERUSALEM." Translated for the First Time by Dr. Moses Schwab. Vol. I.—*Berakhoth*. (Williams & Norgate.) We do not know who is responsible for the English translation of M. Schwab's French version of *Berakhoth*, nor have we any clue to the authorship of the short preface of two pages which precedes the present volume. Those who are interested in the subject are aware that in 1871 there issued from the *Imprimerie Nationale* the first part of a projected French translation of both Talmuds, which was rather severely handled by various eminent Talmudic scholars (see *ACADEMY*, July 15, 1872, p. 279). In the introduction to that work, the strangely inaccurate statement occurred:

"En dehors de la Mischnâ, part minime et très facile, on n'a traduit en latin que quelques traités fort courts de jurisprudence, et la docteur Pinner a fait une traduction allemande . . . du premier volume de la série du Talmud de Babylone."

In the short English preface now before us, the still broader assertion is made that

"the very great linguistic difficulties, and the vast size of the work, have up to the present time prevented the effecting of more than the translation of the Mishna only into Latin, and, later, in German."

It is hardly credible that the latter passage has been passed for press by M. Schwab, and we should have been better pleased had the name of his collaborator been given to the public. It is not very satisfactory to be told "We

wish to take every opportunity of improving this work." The question is, What improvements have been introduced into the French version which forms the substance of the present volume? That the English translator has now and then mistranslated his French original is clear. Thus, at p. 9, we read, "They later on attach themselves by rust"; the French of 1871 has, "Il s'y attache plus tard de la rouille." At p. 24, "R. Jeremiah says that it is not right to do as some do"; the French of 1871, "B. Jérémie dit, On ne doit pas se tenir comme le crapaud." At p. 111, "If a man's lips move alone"; the French of 1871, "Si les lèvres de l'homme se remuent toutes seules." We have spoken of an English translator, but we can hardly believe that an English pen wrote "Toby" for "Tobias" (p. 49), "Maimonide" for "Maimonides" (p. 1), "plurale majestatis" (p. 130), or "to reconcile" (p. 82). See also a curiously rendered anecdote, p. 154. Whoever may be responsible, however, for the English, let us cheerfully admit the numerous corrections introduced into this edition, though we cannot undertake to say how many of them are in addition to those already made in the "additions et rectifications" appended to the second part of the French edition of the two *Berakhoth* treatises. We do not wish to call in question the utility of translations like the present. Whether a complete translation of both Talmuds is either possible or desirable may indeed be questioned. But it is good for those who are not themselves Talmudic scholars to be enabled to judge to some extent for themselves of the character and value of this wonderful stratum of post-Biblical literature. We say "to some extent" designedly, for, as the best Talmudic scholars believe, it is only by a series of special investigations that the manifold wealth of this inexhaustible mine of curious lore can be brought to the light of day.

Das Buch Kohelet: nach der Auffassung der Weisen des Talmud und Midrasch und der jüdischen Erklärer des Mittelalters. Theil I. Von der Mischna bis zum Abschluss des babyl. Talmud. Nebst zahlreichen kritischen Noten und einer grösseren Abhandlung. Von Rabbiner Dr. Sinai Schiffer. (Leipzig: Schulze.) Dr. Schiffer thinks that a collection of the Talmudic and Midrashic explanations of Biblical passages, arranged chronologically, would be of much use to philological expositors of the Old Testament. His work is analogous to Salfeld's book on the treatment of the Song of Songs by the Jewish interpreters of the Middle Ages, except that Dr. Schiffer confines himself to a period earlier than that of the great systematic commentators. The canonicity of Ecclesiastes is not the only subject materially advanced, as our author thinks, by the study of Talmud and Midrashim. It is here mentioned, without, however, much discussion, that not only the assignment of a date in the Herodian period (Grätz), but also the theory of the origin of the book in the Persian age, can be disproved by Talmudistic arguments. Dr. Schiffer, therefore, feels bound to return with Pusey, H. A. Hahn, and Mr. Johnston, to the view sanctioned by his venerated Jewish masters that Koheleth is no other than the wise king Solomon.

Parables of the Lake. By J. R. Macduff. (Nisbet.) It is a pity that Dr. Macduff should have labelled his volume "a Sunday book for young readers," because it will be found quite able to hold its own on week days with much more ambitious volumes. It explains in the most vivid and interesting manner the seven parables which follow one another in the thirteenth chapter of St. Matthew's Gospel. The introduction, on teaching by parables, is a model of what a lesson to children should be

—neither childish nor dull. Dr. Macduff is, perhaps, a little too idyllic in his descriptions of Galilean life in Christ's time; but for young readers this is a fault on the right side. He is never careless, and makes the different meanings of the "Kingdom of Heaven" as clear and distinct as he does the enemy sowing the tares. His vivid explanation of this incident will be new to many who are not "young readers"; and, indeed, only specialists will fail to be instructed as well as pleased by Dr. Macduff's minute and varied knowledge. The illustrations are pretty and modest.

Messrs. Macmillan have issued a convenient "School Edition" of the Greek text of the New Testament, as revised by Drs. Westcott and Hort. As is well known, this text was that substantially adopted by the Revisers; but hitherto it has been accessible only in the comparatively expensive edition published in two volumes in 1881. At the end of the book are some half-dozen Appendices, explaining briefly the principles of textual criticism and of orthography adopted by the editors, and also giving lists of suspected and rejected readings, &c. We can imagine few volumes more instructive to put into the hands of a sixth-form boy. The typography reflects great credit upon the Cambridge University Press.

We have also received: *Healing by Faith*; or, Primitive Mind-Cure, Elementary Lessons in Christian Philosophy and Transcendental Medicine, by W. F. Evans (Reeves & Turner); *The Only Passport to Heaven*, by One who has it (Kegan Paul, Trench, & Co.); *Prof. Drummond and Miracles: a Critique of "Natural Law in the Spiritual World,"* by a Layman (Alexander Gardner); *Biological Religion: an Essay in criticism of "Natural Law in the Spiritual World,"* by T. Campbell Finlayson (Manchester: Brook & Chrystal); *Unbelief: an Essay addressed to Young Men of every Christian Denomination*, by Maurice C. Hime (Simpkin, Marshall, & Co.); *The New Creature: its Birth or Origin, Nature, Conflicts, and Destiny*, by the Rev. C. J. Hamilton (Bagster); *Discourse on the Shedding of Blood and the Laws of War*, by the late Robert Monteith (Kegan Paul, Trench, & Co.); *Non-Attainments of the Revised Versions of 1885 of the Bible*, by F. Parker (Collingridge); *What is left after the Questionings of our Time: a Sermon*, by Brooke Herford (British and Foreign Unitarian Association); *Certitude, Providence, and Prayer*, by Dr. James McCosh (Edinburgh: T. & T. Clark); *My Man and I*; or, The Modern Nehemiah: a Book for Churchmen, by F. A. Adams (Sonnenschein); *The Case for "Establishment" Stated*, by Thomas Moore (S.P.C.K.); *Revision Reasons: a Manual for General Readers and Students of the Revised Version of the Old Testament*, accounting for every change, by the Rev. C. G. K. Gillespie, I.—The Pentateuch (John Heywood); "Present Day Tracts"—*The Christ of the Gospels*, by Henri Meyer; *Ferdinand Christian Baur*, by Dr. A. B. Bruce; *Man Physiologically Considered*, by Dr. Alexander Macalister (Religious Tract Society); &c., &c.

NOTES AND NEWS.

PROF. MAX MÜLLER is still staying at Maloja, in the Upper Engadine, where the delightful climate and the rest have done much to restore his health. Now that the weather is breaking up he will probably cross into Italy and spend the winter there. Apart from the article on "Jupiter" in the current number of the *Nineteenth Century*, and another one to follow on "Solar Myths," he has been chiefly occupied with a philosophical work, of which about two volumes are already written.

MR. BROWNING has left his home in the Italian hills, where he was 4,495 feet above the sea-level, and gone to Venice, where his artist son has taken a studio and means to paint. Seven hours walk had he and his sister down the valley to Port Saint Martin, to avoid mule-back joltings.

WE hear that Mr. F. T. Palgrave will probably offer himself as a candidate for the professorship at Oxford, now vacant by the death of Principal Shairp.

MR. S. R. GARDINER will deliver a short course of lectures at Oxford during the coming term, in connexion with the Oxford school of history.

Messrs. Trübner will issue, immediately, the first five volumes of the new edition of Mr. W. W. Hunter's *Imperial Gazetteer of India*, stopping before the article "India." The whole work has been carefully revised, so as to include the latest statistics; and large portions of it have been entirely rewritten. Though the total number of volumes will be increased from 9 to 12, yet the price to subscribers has been reduced.

THE next volume in the "English Men of Letters" series will be *Keats*, by Prof. Sidney Colvin.

The new series of "English Statesmen," also published by Messrs. Macmillan, will be opened by Prof. E. A. Freeman with *William the Conqueror*.

THE facsimile of the original MS. of *Alice in Wonderland* is not the only book of Lewis Carroll that we are to have this Christmas. We are also promised a new volume by him, called *A Tangled Tale*.

WE are glad to hear that the Rev. Alfred Ainger intends to add to his series of Lamb's works a volume containing "Mrs. Leicester's School," "The Adventures of Ulysses," and other essays.

Messrs. Hurst & Blackett will publish this month a new work entitled *The Brontë Family*, with special reference to Patrick Branwell Brontë. The author, Mr. Francis A. Leyland, will point out serious errors of fact made by former biographers. His view is that these misconceptions and the special purposes for which the biographers wrote led them to do injustice to Branwell, and so to place his sisters, to some extent, in a false light, for the brother was a great factor in their lives. Mr. Leyland makes no attempt to relieve Branwell from faults that really were his, but only to show his true character.

THE same publishers will also issue, towards the end of the month, a new novel, in three volumes, entitled *Thro' Love and War*, by Violet Fane.

Messrs. George Bell & Sons will publish immediately a uniform edition of the works of the late C. S. Calverley, in four volumes. The first volume, containing the literary remains, will have a portrait and a memoir by Mr. W. J. Sendall, incorporating contributions from Dean Butler, Mr. Walter Besant, Prof. Seeley, and other contemporaries.

THE same publishers announce a cheap edition of Adelaide Procter's Poems, in two volumes, at one shilling each.

MAJOR WALFORD, of the Royal Engineers, has written a book on *Parliamentary Generals of the Great Civil War*, which will be published by Messrs. Chapman & Hall.

WE understand that Lady John Manners has a new work in the press entitled *A Sequel to Rich Men's Duellings*, which will be published by Messrs. William Blackwood & Sons.

UNDER the title of *Flying Leaves from East and West*, Mrs. Emily Pfeiffer's notes of American travel appear to-day from the Lead-enhall Press.

MESSRS. SAMPSON LOW announce a collection of Maginn's *Miscellanies*: Prose and Verse, in two volumes, edited by Mr. R. W. Montagu.

Charcombe Wells is the title of a new two volume novel by Miss Merry, announced by Mr. Elliot Stock.

THE author of *The North Wall*, a story which has had a large sale during the last three months, has in preparation a new work to be published by Messrs. Wilson & McCormick, of Glasgow.

WE learn that translations of Prof. Vambéry's work, *The Coming Struggle for India*, which was recently published by Cassell & Co., are about to appear in France, Germany, and Sweden.

MR. WILLIAM McDOWALL, author of "The History of Dumfries," one of the best of Scotch local histories, and of "The Man of the Woods and other Poems," has almost ready for the press *Chronicles of Lincluden*, the abbey whose picturesque ruins still remain on the bank of the Nith in the neighbourhood of Dumfries. Mr. McDowall has, by careful research, been able to obtain fresh material regarding the abbey, which played an important part in old Border story.

LADY JOHN MANNERS will contribute to Mr. William Andrews's *Hull Christmas Annual* a paper entitled "An Afternoon at Southwell Minster and Newark." It will embrace many points of general interest. It was at Newark that her husband, Lord John Manners, and Mr. Gladstone, were elected members of Parliament as Conservatives, and were carried round the market-place in triumph.

MR. R. G. MOULTON, one of the Cambridge University Extension lecturers, has put forth a most stimulating and original Syllabus of a course of twelve lectures—at Leicester, Northampton, and Coventry—on "Masterpieces Old and New": (1) the Ballad of "Sir Cawline" (a Masterpiece of Primitive Fiction); (2) the Story of Faust, old version, by Marlowe; (3-5) new version, by Goethe; (6) the Fairy in Scott's "Monastery" (a Masterpiece of Modern Fiction); (7) the Story of the Rise of the Ancient Drama; (8) the "Agamemnon" (or Ancient Tragedy of the Old School); (9) "The Clouds" (or Socrates in Burlesque); (10) the "Alcestis" (or Ancient Tragedy of the New School); (11) Shakspeare's "Tempest" (as a Masterpiece in Fairy Fiction); (12) Conclusion: On the Study of Literature. Mr. Moulton issues, as an accompaniment to his Syllabus, a sixpenny "Book of Illustrations," eighty-two pages of close print, containing able analysis or "interpretative condensations" of "Faust," the "Agamemnon," the "Alcestis," and the "Clouds," passages from Marlowe's "Dr. Faustus" and Percy's re-hash of the famous old ballad of "Sir Cawline." These "Illustrations" will be of extreme value to hearers of the lectures; but they need a supplement of the genuine "Sir Cawline," to enable students to see how Bishop Percy sentimentalised and pathetised the old ballad, wrongfully killing its hero and its heroine, and winding up with

"Then, fainting in a deadly swoon,
And with a deep-fetched sigh
That burst her gentle heart in twain,
Fair Christabel did die!"

whereas the healthy old ballad-writer really ended his tale of the knight and his love with "Then he did marry this King's daughter with gold and silver bright,
& 15 sonnes this Lady beere to Sir Cawline the Knight!

Surely a more sensible and satisfactory conclusion.

THE following appointments have been made at the Owens College, Manchester: to the Professorship of Greek, Mr. John Strachan, of Pembroke College, Cambridge; to the Professorship of Mathematics, Mr. Horace Lamb, late Fellow of Trinity College, Cambridge, and Professor of Mathematics in the University of Adelaide; to the Professorship of Anatomy, Mr. Alfred H. Young; to the Professorship of Obstetrics, Mr. C. J. Cullingworth; to the Lectureship in French, Mr. Victor Kistner, late Professor of French in Queen's College, Cambridge.

THE new publishing firm of Messrs. Ticknor, of Boston, have in the press *Songs and Ballads of the Old Plantations*, by Uncle Remus (Mr. Joel Chandler Harris).

THE latest additions to the Tauchnitz collection of British authors are Mrs. Forrester's *Corisande*, Mrs. Jackson's *Ramona*, and the Letters of the Princess Alice.

M. PÉLICIER, archivist of Châlons-sur-Marne, is just completing a work on the Revocation of the Edict of Nantes, and the effect of that measure in Champagne. M. Soulié, librarian at Pau, is preparing a similar work relating to Béarn.

THE two last numbers of the *Revue Politique et Littéraire* contain a long article by M. Gaidoz, on "British India," inspired by Prof. Seeley's *Expansion of England*, and Sir A. Lyall's volume of essays, both of which have recently been translated into French. In discussing the problems of the future, M. Gaidoz quotes largely from Mr. J. S. Cotton's work on *India* in the "English Citizen" series; but he does not seem inclined to adopt the conclusions there adumbrated.

THE Berlin weekly *Echo* offers a prize for the best translation into German of Lord Tennyson's recent epithalamium.

Corrections.—In the review of Hodgkin's *Italy and her Invaders*, in the ACADEMY of last week, p. 195, col. 1, line 23 from bottom, for "marrying" read "avenging." In the specimens of the Pope's Latin verses, p. 203, col. 1, for "ludibriae" read "ludibria," and for "violentes" read "volentes."

MESSRS. SONNENSCHN & CO.'S ANNOUNCEMENTS.

IN science: *A Treatise on Animal Biology*, by Prof. Adam Sedgwick, illustrated; *Practical Botany*, by Prof. Hillhouse, based upon the work of Prof. Strasburger, largely illustrated; a translation of Profs. Naegeli and Schwendener's *The Microscope in Theory and Practice*, with several hundred woodcuts; an *Alpine Flora*: a Pocket Handbook for Botanists and Travellers, by Mr. A. W. Bennett; an illustrated *Handbook of Mosses*, by Mr. J. E. Bagnall; a *Star Atlas*, by the Rev. T. H. Espin; further parts of Mr. Howard Hinton's *Scientific Romances*; a partly re-written edition of Profs. Prantl and Vines' *Textbook of Botany*.

IN art: *A History of English Caricaturists and Graphic Humourists of the Nineteenth Century*, by Mr. Graham Everitt, illustrated by a large number of reproductions on wood of scarce caricatures, broadsides, book-illustrations, &c.; *A Short History of Art*, by Mr. Francis C. Turner, illustrated by copies of some of the most famous paintings and sculptures; a second and cheaper edition of Kaulbach's *Reynard the Fox*.

IN fiction: A new novel by Mr. T. P. O'Connor; *The Silver Dial*, by Miss Mary C. Rowell; *Glamour*, by Wanderer; *Weaver Stephen*, by Dr. Joseph Parker; *Jobson's Enemies*, by Mr. Edward Jenkins; *Cradle and*

Spade, by Mr. Wm. Sims; *Merevale*, by Mrs. John Bradshaw; *Measure for Measure*, by Mr. John Douglas; *The Coastguard's Secret*, by Mr. Robert S. Hichens; *The Leaven of Malice*, by Mrs. Hamilton Cleave; *History of a Walking Stick, in Ten Notches*, by a new writer; a one-volume edition of *Royal Favour*, the second novel of Miss Opzoomer (Miss Wallis); a fourth edition of *In Troubled Times*; *An Unsocial Socialist*, by Mr. G. Bernard Shaw.

IN travel: *Wild Life in Canara*, by Mr. Gordon S. Forbes; *Indian and Afghan Sport and Adventure*, in four volumes, by Col. Julius Barras; *From Paris to Peking over Siberian Snows*, an account of the Asiatic wanderings of M. Meignan, by Mr. William Conn; a third edition of Mr. Charles Marvin's *Reconnoitring Central Asia*.

IN religious literature: *Nature, Man and God*, a contribution to current scientific teaching, by the Rev. J. M. Wilson; *Christ for To-day*, a collection of twenty sermons by preachers of the Anglican and American Episcopal Church; *My Man and I*: or, the Modern Nehemiah, by the Rev. F. A. Adams; *Pulpit Sparks*, being sermons by Fuller, hitherto unpublished, edited by the Rev. J. M. Fuller; *The Saints of the Prayer Book*, by Miss C. A. Jones, with a preface by the Rev. Dr. Little-dale; a new devotional book, by the Rev. T. Birkett Dover; *The Ministry of Flowers*, by the Rev. Hilderic Friend; *Voiceless Teachers*, a companion volume to the above, by Miss Katherine Keene; *A Reply to Drummond*, by Dr. Samuel Cockburn; a popular edition of the Rev. J. Inchee Hillocks' *Hard Battles for Life and Usefulness*; a new edition, with notes, of Wilberforce's *Practical View of Christianity*; *Thoughts on Life, from Modern Writers*, by Miss Sarah S. Copeman.

FORTHCOMING volumes of the "Imperial Parliament Series": *England and Russia in the East*, by W. E. Baxter; *Women Suffrage*, by Mr. W. Woodall and Mrs. Ashton Dilke; *Local Option*, by Messrs. W. S. Caine, W. Hoyle, and the Rev. Dr. Dawson Burns; *Leasehold Emfranchisement*, by Messrs. H. Broadhurst and R. T. Reid; *Disestablishment*, by Messrs. H. Richard and J. Carvell Williams; *Reform in the House of Lords*, by Mr. James Bryce; *Reform of London Government*, and of *City Guilds*, by Mr. G. F. B. Firth.

IN philology: *A History of the German Language*, by Profs. Strong and Kuno Meyer; *The Wanderings of Plants and Animals*, an adaptation from the German work of Prof. Victor Hehn, by Mr. James Stallybrass, tracing (chiefly by means of etymology) the history and the migration of European plants and animals from their home in Asia; a new Latin Grammar, by Prof. E. A. Sonnenschein.

IN mythology and folklore: *Moon Lore*, by the Rev. T. Harley, a volume dealing with the moon in its mythological and traditional aspects; *Indian Fables*, translated by Mr. P. V. Ramaswami Raju; a third edition of the Rev. Hilderic Friend's *Flower-Lore*; fourth edition of *Asgard and the Gods*, and a third edition of *Epics and Romances of the Middle Ages*, both by Dr. Wagner and Mr. Anson; a second edition of Mr. McCall Theall's *Kaffir Folklore*.

IN miscellaneous literature: *The Best Books*: a classified bibliography of the best current literature, giving prices, sizes, publishers' names, and dates of first and current editions; *The Percy Reliques*, 3 vols., edited by Mr. H. B. Wheatley; *Horticultural Buildings*: an illustrated Handbook, by Mr. F. A. Fawkes; *Mountain Monarchs*, a poem, by Miss Cornelia Wallace; *A Short History of Russia*, by the Rev. W. H. Little.

IN educational literature: *Over-Pressure and Elementary Education*, by Mr. Sidney Buxton; *The First Three Years of Childhood*, by Bernard Perez, with an introduction by Mr. James

Sully; *History of the Reign of George II.*, by the author of "History of the Reign of George III."; several of Shakspeare's Plays, annotated and analysed; *The Royal Relief Atlas*, by Mr. G. Phillips Bevan, new edition; *The Elements of Plane Geometry*, Part II., completing the first six books of Euclid, prepared by the association for the improvement of geometrical teaching; *A Manual of Plain Needlework and Knitting*, by Miss W. H. Rooper; Pooley and Carnie's *Common-Sense French*, Parts III. and following, and wall sheets to Part I.; Sonnenschein's *Special Merit Readers*, Standards I.-IV.

In the young collector's series: *Seaweeds, Shells, and Fossils*, by Mr. Peter Gray and Mr. B. B. Woodward; *British Butterflies, Moths, and Beetles*, by Mr. W. F. Kirby; *Mosses, Lichens, and Fungi*, by Mr. Peter Gray and Mr. E. M. Holmes; *English Coins and Tokens*, by Mr. Llewellyn Jewitt, with a chapter on Greek coins by Mr. Barclay V. Head.

In gift and juvenile books: *Twelve Old Friends*, a new version of Aesop, by Mrs. Georgiana M. Craik, with illustrations by Gustave Doré; *Girlhood of Remarkable Women*, by Mr. W. H. Davenport Adams; *Battle Stories from English and European History*, by the same; *A Book of Heroes*, by Mr. H. G. Hewlett; *Wild Flowers of the Month*, by Mr. Leigh Page; *Nanette's Diary: a Story of Puritan Times*, by Miss Anna J. Buckland; *Suzan de l'Orme: a Tale of France in Huguenot Times*; *The Domestic Circle*, by the Rev. Dr. John Thompson.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. TRÜBNER's literary announcements include: *A History of Music*, in three volumes, by Mr. J. F. Rowbotham; *Milton and Vondel*, by the Rev. George Edmundson, the object of which is to show that Milton was largely indebted, in the composition of "Paradise Lost," "Paradise Regained," and "Samson Agonistes," to the several poems on corresponding subjects of his Dutch contemporary, Joost van den Vondel; *Humanities*, by Mr. Thomas Sinclair, being a miscellaneous collection of essays dealing for the most part with Latin language and literature; an English copyright edition of *Where the Battle was Fought*, by the Tennessee lady who writes under the name of Charles Egbert Craddock; *Master Thaddeus*; or, *The Last Foray in Lithuania*, translated from the Polish poet Adam Mickiewicz by Maude A. Biggs; *By Solent and Danube: Poems and Ballads*, by W. Wilsey Martin; *Phantasms of the Living*, in two volumes, by Messrs. E. Gurney, F. W. H. Myers, and F. Podmore; *Christianity before Christ*; or, *Prototypes of our Faith and Culture*, by Mr. Charles J. Stone; *General Principles of the Structure of Language*, by the Very Rev. James Byrne; *The Races of Britain*, by Dr. John Beddoe; and a new edition of Mr. Thomas Wright's *The Celt, the Roman, and the Saxon*.

MESSRS. SAMPSON LOW's forthcoming books of travel include *North Borneo*, by the late Frank Hatton, with a biographical sketch by his father, and a preface by Sir Walter Medhurst, illustrated from photographs and original drawings; *New Guinea: an account of the establishment of the British Protectorate*, by Mr. Charles Lyne, of the *Sydney Morning Herald*; *The Purple Land that England Lost: Travels and Adventures in the Banda Oriental*, by Mr. W. H. Hudson; *Eight Months on the Gran Chaco of the Argentine Republic*; *The Highlands of Cantabria*, or, *Three Days from England*, by Mars Ross and H. S. Cooper; and a second edition of Mr. H. O. Forbes's *Naturalist's Wanderings in the Eastern Archipelago*.

MESSRS. MACMILLAN's theological announcements include a collection of addresses by the

Archbishop of Canterbury; a volume of sermons by the Dean of St. Paul's, entitled *The Discipline of the Christian Character*; and Archdeacon Farrar's Bampton Lectures for this year on "The History of Interpretation."

FROM Mr. T. Fisher Unwin's list of forthcoming new books and new editions we make the following selection: Among new books—*Representative British Orations*, with introduction and explanatory notes, by Mr. C. K. Adams, published in three volumes uniform with *Representative American Orations*. The arrangement is in the main historical, the first volume including names from Sir John Eliot to Burke, the second from Pitt to Erskine, the third from Canning to Gladstone. *The Three Reforms of Parliament, 1830 to 1885*, by Mr. W. Heaton; *Introductory Studies in Greek Art*, delivered in the British Museum by Miss Jane E. Harrison, with a map and ten illustrations; *Poets in the Garden*, by Miss May Crommelin, with eight chromolithographs, being an attempt to bring together, in an alphabetical arrangement, the best known passages in which English poets have discoursed of flowers; *The Last Meeting*, a story by the American author, Mr. Brander Matthews; *When I was a Child*; or, *Left Behind*, a book for children, by Mdme. Villari; *How to be Happy though Married*; *A Roll of Golden Thoughts for the Year*; or, *Permanent Diary of Wise Sayings from the Best Writers of All Times and Climes*, to be issued both as an oblong placard and in book form. Among new editions—a boy's edition of Vambéry's *Life and Adventures*, with portrait and seventeen illustrations, and a new introductory chapter dedicated to the boys of England; a cheap edition of Vernon Lee's *Euphorion*, in one volume; popular editions of Miss Helen Zimmern's *Heroic Tales from Firdusi*, and of Mdme. Kroeker's *Fairy Tales from Brentano*; a second edition of *The New Godiva*.

MESSRS. BEMROSE AND SONS have the following works in preparation: *The Art of the old English Potter*, by L. M. Solon, Second Edition, revised, with an appendix on foreign imitations of English earthenware, and new illustrations by the author; *The Successful Merchant*, author's uniform edition, by William Arthur; *The Looking Glass: a True History of the Early Years of an Artist*, by Theophilus Marcliffe, a facsimile reprint of the original edition, with an appendix, by F. G. Stephens; *Entertainments for Bazaars, Fancy Fairs, and Home Circles: how to prepare and arrange them at small cost*, by Charles Harrison, with numerous illustrations; *The Life and Works of Joseph Wright, A.R.A.*, commonly called "Wright of Derby," by William Bemrose, illustrated with two etchings by F. Seymour Haden, and four photo-intaglio plates and woodcuts; *Agnosticism and Mr. Herbert Spencer*; being the second part of "Religion without God and God without Religion," by William Arthur; *The Official Report of the Church Congress, 1885*, edited by the Rev. C. Dunkley; *Bemrose's New Code Drawing Charts: a Series of Twelve Charts*, a substitute for the blackboard; *Bemrose's New Code Drawing Cards*, expressly arranged for class subjects, forming a complete course of elementary drawing for Standards I., II., and III.; and *Everyday Work in the Household*, new edition, by Catherine Moss. Also the annual volumes of the following magazines: *The Ladies' Treasury*, *The Net Cast in many Waters*, *Christian Progress*, and *The Church Evangelist*.

OBITUARY.

CORNELIUS WALFORD.

A VERY wide circle of friends will regret the death, at Belsize Park Gardens, South Hampstead, on September 28, of Mr. Cornelius

Walford, a man of unwearied activity, chiefly shown in the patient accumulation of vast masses of statistics. He was the eldest son of Mr. Cornelius Walford, of Witham, in Essex; and in that little town his early years were passed in the routine of a solicitor's office, where his energies were displayed in the management of many local estates and in the formation of many local societies. After serving a more lengthened apprenticeship in this way than is ordinarily adopted he was called to the bar of the Middle Temple in Michaelmas term 1860, and, so long as his health remained unimpaired, was largely employed as legal adviser on insurance questions. Insurance was the subject which he made his own, and with which his name will long be intimately connected both in this country and across the Atlantic. The *Insurance Cyclopaedia*, of which a fragment only is finished, but still a fragment beyond the size of most completed works, is one of those undertakings which it is given to few men to commence, and to fewer still to carry to a successful issue. Enormous quantities of information are embodied in its pages; and many fragments, such as the history of fairs or famines, formed the substance of separate publications. Statistics and statistic collecting were Mr. Walford's daily delights, his constant companions. He was the member of a large number of societies, and among them were the Statistical Society, where he constantly attended, and the Library Association, before which body he read several papers. One of these set out the details of his plan for compiling a history of all the periodicals published in the United Kingdom. For many months a literary student was engaged at the British Museum, under Mr. Walford's guidance, in collecting notes on this almost inexhaustible branch of literature, and considerable information must have been brought together; but owing to the absence of the guiding spirit which directed the scheme all the accumulated facts will probably perish, and another entry will be added to the long list of promising undertakings which have been left unfinished through the death of the projector. Mr. Walford has left many friends, and his presence will long be missed at the literary societies which he attended. His massive frame seemed to promise him a long life, but a year or two ago his acquaintances heard with regret that his health had given way, and the end has now come.

ORIGINAL VERSE.

KENTHURCH BIRDS.

TYPES here in many a bird the scholar sees
Of moods and fancies. Thus the martin sips
From Monnow's stream, and so he briefly dips
Within some books. Like yellow-banded bees
The finches flutter round their fav'rite trees—
Some books he reads in oft-recurring trips—
Hark! 'tis the hickwall's laugh! With scorn-
ful lips,
Turned critic now, he flatly disagrees.
E'en more do other birds enthral the hearts
Of poet-lovers; where the river parts
The dreamy herons on large pinions come;
The night-jar drones; flame-like the halcyon
darts;
Then cushats murmur 'neath their leafy dome
Lure vagrant fancy back to peace and home.

CORRESPONDENCE.

"THE ARABIAN NIGHTS' ENTERTAINMENTS."

Am Hof, Davos Platz, Switzerland:
Sept. 27, 1885.

There is an outcry in some quarters against Captain Burton's translation of the *Arabian Nights*. Only one volume of that work has reached me, and I have not as yet read the whole of it. Of the translator's notes I will not speak, the present sample being clearly insufficient to judge by; but I wish to record a protest against the hypocrisy which condemns his text. When we invite our youth to read an unexpurgated Bible (in Hebrew and Greek, or in the authorised version), an unexpurgated Aristophanes, an unexpurgated Juvenal, an unexpurgated Boccaccio, an unexpurgated Rabelais, an unexpurgated collection of Elizabethan dramatists, including Shakspeare, and an unexpurgated Plato (in Greek or in Prof. Jowett's English version), it is surely inconsistent to exclude the unexpurgated *Arabian Nights*, whether in the original or in any English version, from the studies of a nation who rule India and administer Egypt.

The qualities of Capt. Burton's translation are similar to those of his previous literary works, and the defects of those qualities are also similar. Commanding a vast and miscellaneous vocabulary, he takes such pleasure in the use of it that sometimes he transgresses the unwritten laws of artistic harmony. From the point of view of language, I hold that he is too eager to seize the *mot propre* of his author, and to render that by any equivalent which comes to hand from field or fallow, waste or warren, hill or hedgerow, in our vernacular. Therefore, as I think, we find some coarse passages of the *Arabian Nights* rendered with unnecessary crudity, and some poetic passages marred by archaisms or provincialisms. But I am at a loss to perceive how Burton's method of translation should be less applicable to the *Arabian Nights* than to the *Lusiad*. So far as I can judge, it is better suited to the naïveté combined with stylistic subtlety of the former than to the smooth humanistic elegances of the latter.

This, however, is a minor point. The real question is whether a word-for-word version of the *Arabian Nights*, executed with peculiar literary vigour, exact scholarship, and rare insight into Oriental modes of thought and feeling, can under any shadow of pretence be classed with "the garbage of the brothels." In the lack of lucidity, which is supposed to distinguish English folk, our middle-class *censores morum* strain at the gnat of a privately circulated translation of an Arabic classic, while they daily swallow the camel of higher education based upon minute study of Greek and Latin literature. When English versions of Theocritus and Ovid, of Plato's *Phaedrus* and the *Ecclesiastice*, now within the reach of every schoolboy, have been suppressed, then and not till then can a "plain and literal" rendering of the *Arabian Nights* be denied with any colour of consistency to adult readers. I am far from saying that there are not valid reasons for thus dealing with Hellenic and Graeco-Roman and Oriental literature in its totality. But let folk reckon what Anglo-Saxon Puritanism logically involves. If they desire an Anglo-Saxon Index Librorum Prohibitorum, let them equitably and consistently apply their principles of inquisitorial scrutiny to every branch of human culture.

JOHN ADDINGTON SYMONDS.

CLOVESHO.

London: Sept. 23, 1885.

The mention in the *ACADEMY* of last week of the "Discovery of a Saxon Church at Deerhurst" recalls my attention to the ancient site called "Clovesho," which is still unidentified. I do not propose to go into this intricate subject at any length, but just to summarise the chief points. The chief complication arises from the mention of "Westminster." Why are two Hundreds of Gloucestershire called by this name? There appear to have been councils held at Clovesho in 742, 747, 803, 804, 824, 825; all in connection with Mercia. This latter intrusive monarchy included many of the surviving Celtic dynasties who clung to the pre-Augustine forms of Christianity, and the contemporary Archbishops of Canterbury suffered from their aggression. Feeling resistance to be hopeless, they sought to conciliate; hence these councils. The name varies, as Cloueshoo, Clouesho, Cloueshoas, Cloueshos, Cloueshoum, Cloueshoh, Clouesham; the earliest form of 742 is simply "apud Clouesho," but ever after the identification is "in a cloud"; it becomes "loco qui dicitur Cloueshoas," "loco celeberrimo qui nuncupatur Cloueshoas," "locum qui nominatur Clouesho," "loco celebri qui vocatur Cloueshoas," "in celebri loco qui vocatur Cloueshoas," "on there meran stowe the mon hateth Cloueshoas," "quae nominatur aet Cloueshoum." No scribe is able to fix it exactly, all follow some preceding formula.

The subject opens, in 673, with the statement of Bede (*Ecc. Hist.*, Book IV., chap. v.), that, at Archbishop Theodore's synod, held on September 24 of that year, at Hertford, the seventh clause agreed to appointed an annual synod to be held henceforth at the place called *Cloueshoch*; but we have no account of any actual meeting there till 742, as above. The Anglo-Saxon Chronicle, anno 742, records, "This year a great synod was held at Cloueshou, and there was Ethelbald, King of the Mercians, and Archbishop Cuthbert," &c. Then we have sundry cartularies, and opinion varies as to the real locality; one distinguished authority writes "Clovesho, a now forgotten place in the Mercian Kingdom, probably near London!" Mr. Kemble writes, "Clovesho is not fully defined as to locality"; elsewhere he suggests, "perhaps near Tewkesbury in the Hundred of Westminster, co. Gloucester." Others propose

"near Abingdon," probably thinking of Sinodun Hill or Wittenham Clump; others refer to Cliff at Hoo, near Rochester, in Kent. One enthusiastic writer, in a paper called "London Episodes," and printed in the *Antiquary* (I have no name or reference), seeks to identify Clovesho with the city of Westminster itself.

Among topographical names that crop up in the documents printed by Kemble we find Beccanforða, Celtanhomme, Deerhurst, as above (I modernise the spellings), Todenham, Coaley, Bromsgrove, Feckenham, Worcester, Gloucester, Stoke, Berkeley, Westbury, Bishopstoke, "43 manentium at Westmynster." These are for the most part Gloucestershire names; but the difficulty is, when and why were two Hundreds of this county named Westminster? Was there any local cathedral so named?

Deerhurst, where this late Saxon chapel crops up, is partly in Tewkesbury Hundred, partly in Lower Westminster Hundred. Taken therewith, the mention of Cheltenham leads me to identify the seat of the Clovesho councils at Bishops Cleeve, the Stoke being Stoke-Orchard in that parish.

The first mention of Clovesho is in 673, and the only foundation I can trace so early is Lichfield, in 656, but Repton should be earlier; the present dedication is to St. Wistan; can his name, later on, have led to the manufacture of a Westminster? I feel certain that the site of Clovesho was in Gloucestershire, for the Mercians were masters of the situation, and any conciliatory attempts must consult their convenience; so I propose to identify Clovesho with Bishops Cleeve, which is a hundred and a parish in itself, intermediary between the two divided Westminster hundreds. Cleeve or Cliff is Clove, Clou, by general consent; and the terminal *ho* or *how* is a hill. Here the site helps us, for is not Cleeve Cloud a towering height, with an old Saxon camp on its summit? The Mercian monarch would be safe in his earthworks, the bishops finding ample accommodation in the numerous hamlets of Bishops Cleeve parish. The difficulty as to Westminster awaits solution.

A. HALL.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

The Warden's House, St. Bartholomew's Hospital:
Sept. 29, 1885.

It may be doubted whether any *editio princeps* of a text can be found which is free from errors; and anyone who has examined the original MSS. from which the transcript of the ancient laws of Ireland was made, must, I think, feel that the printed text and translation are a labour deserving admiration and gratitude, which, in spite of faults, will yet be of material assistance to the scholars who may prepare later editions.

That a new edition of the volumes already published is needed is demonstrated by the examples given by Mr. Stokes. The proportion of mistakes is perhaps less in the earlier part of the work, but it is easy to find them even there. In the second line of the text (i. 2) the preposition *i* is omitted before *samradh*, which is of importance to the sense. The MS. reads "*Locc don laide Teamuir ocus loc do seanchus hi i samradh ocus i fogmur*," "The place of this poem Tara, and the place of the Seanchus it (i.e., Tara) in summer and in autumn." In the same line the next noun is erroneously transcribed, and in l. 6 the possessive pronoun *a* before *tesaidecht*, which the context leads one to expect, is omitted in the printed text, but present in the MS. In l. 105 of the large print (p. 10) the printed text reads as a verse,

"*Cach mac ina cinaid*,"

and translates *mac* "man"; but in the MS. there is only

"*Cach ina cinaid*."

The *a* of *ina* is rather near the *c* of *cinaid*, so

that on a hasty glance it looks like *mac*; hence, no doubt, the error.

It was in 1783 that Burke first suggested the publication of a text and translation of these ancient laws, and an interval of eighty-two years elapsed before the first volume of the present text appeared. It is in the hope of helping to prevent so long a delay before the publication of an edition in accordance with the requirements of modern scholarship, such as that now proposed by Mr. Stokes, that I have ventured to add anything to the conclusive proofs he has given in his letter of the need for such a new edition. NORMAN MOORE.

GERMAN TRANSLATIONS OF THE BIBLE BEFORE LUTHER.

Glasgow: Sept. 23, 1885.

In Prof. Pearson's article on the above subject there are two or three *obiter dicta* regarding matters of fact which I think open to remark. He says:

"'Die Sprache [of the pre-Lutheran versions] ist unbeholfen schwerfällig und weder genau im Sinn noch treffend im Ausdruck' (so Goedeke!). This was met by the proof that their language was a perfect mine of folk-expression, homely and true; nay, further, it was shown that Luther, so far from translating from the original Greek, had, in the New Testament, to a great extent merely modernised the old German Vulgate. The September Bible [New Testament?] was only a natural growth out of the version of the Codex Teplensis of the fourteenth century."

Respectable German Protestant theologians are not satisfied with the proof referred to by Prof. Pearson of the excellence of the current pre-Lutheran German version; nor are the statements contained in Prof. Pearson's sentences which follow the quotation from Goedeke held by German Protestant theologians to have been proved. Dr. Riehm, for example, a theological professor at Halle, and a member of the committee that has just revised Luther's version, in a pamphlet issued last year, virtually repeats Goedeke's statement, and he supports his opinion by examples. He admits, however, that the version of the Codex Teplensis is, in particular points, superior to Luther's; moreover, that it is quite as good as the translations into German of the other classical authors made at the same time, although, in his opinion, that is clearly not saying much. If, therefore, Luther had done no more than modernise the version of the Codex Teplensis into the vernacular of his own day, he would surely have merited the praise of having done a piece of good and laborious work. But was "the September New Testament" only a natural growth out of the version of the Codex Teplensis? It is certain that Luther's contemporary opponents did not think so. They thought Luther's version a new book, and it was charged against him that he had abandoned the approved old text of the Christian Church." Emser claimed to have discovered in Luther's translation no fewer than 1,400 "heretical errors and lies," besides 1,000 places in which Luther had erred in his renderings of the tenses (Herzog's *Encyclopädie*, new edition, article "Emser"). Then, why should Luther not have translated from the Greek? He undoubtedly knew that language. He seems to have been late in giving it serious attention, and probably he did not do so till after he took the doctorate in theology in 1512. Still, his translation of the New Testament was not begun till nine years after that date; and, whatever text he employed in lecturing to his students on the New Testament at Wittenberg previous to the year 1516, he had that year put at his disposal Erasmus's (the first published) edition of the Greek New Testament, and even in 1519 the much improved text of

Erasmus's second edition. No doubt he would also utilise the Vulgate in the work of translation; but the majority of Emser's "errors and lies," while deviations from the Vulgate, are known to be correct translations of the original text (Riehm, *Luther als Bibelübersetzer*, p. 9). Riehm, therefore, and the writer of the very elaborate article "Deutsche Bibelübersetzungen" in Herzog's *Encyclopädie*, seem to have good ground for their statements that Luther translated from the original Greek.

Further, Luther left Wartburg for Wittenberg on March 7, 1522, with his translation finished. It was not published till the end of September in the same year; and in the interval between March and September it is a well-known fact that Luther and Melancthon went over the work together critically. Melancthon was the professor of Greek at Wittenberg, and, in the opinion of Reuchlin, the best Grecian of his time next to Erasmus, so that there is great probability that the results of the very best Greek scholarship of the day were to be found in Luther's New Testament. As to "the great Luther not owing any assistance to the work of some laborious German monk," it is well known that Luther was glad of assistance from any quarter—from friend or foe—that would enable him to improve his translation, and it is also a fact that in his later editions he accepted some of the suggested corrections of his critic and opponent Emser. Further, Prof. Riehm admits the Codex Teplensis to be the work of Matthias (Martin?) von Beheim, a monk of Halle; so that whatever assistance in his work Luther can be shown to have derived from the version of this Codex, Prof. Riehm will be quite willing to allow he has derived from the work of a "laborious German monk."

JOHN HUTCHISON.

"THE TOWER OF GLASS."

London, Sept. 23, 1885.

The mythology of the Tower of Glass is, no doubt, a shadowy subject. But is not the ice, which Mr. Hall offers us as a substitute for the original material of the tower, somewhat less solid and more readily dissolved? His view cannot, I think, be accepted, for this reason. The adventurous voyagers who first came into contact with icebergs must have been inhabitants of a climate sufficiently northern to have made them perfectly familiar with ice, and therefore incapable of mistaking it for any other substance.

Mr. Hall's expressions—"chill communicated to the sailors" and others—seem to show that he relies on certain details of the poem to support his theory; but these, I need hardly observe, do not belong to the legend except in its most recent form.

ORMOND HOBAN.

MACKLIN'S "LOVE À LA MODE."

Felsted: Sept. 22, 1885.

Mr. Gosse, in a note to his edition of *Gray* (vol. iii., p. 28), says that Macklin's farce of "Love à la Mode," acted in 1760, was never printed. Has anyone pointed out that this farce was published by subscription in 1793, together with "The Man of the World"? The play is well worth reprinting.

J. SARGEAUNT.

SCIENCE.

Geology of the Comstock Lode and the Washoe District. By George F. Becker. (Washington: Government Printing Office.)

ALTHOUGH the Comstock lode and the surrounding country have frequently been studied by mining engineers, and even by geological explorers, it has been reserved for Mr. Becker,

as an officer of the Geological Survey of the United States, to describe the rocks of this region with that fulness of detail which is exacted by the requirements of modern science. When Baron Ferdinand von Richthofen, some twenty years ago, drew up his famous Report on the Comstock Lode, the workings were comparatively shallow, and the facilities of observation consequently far inferior to those offered at the present day. Now, indeed, the workings on this lode may be reckoned among the very deepest in the world; but in those days they had hardly reached to one-sixth of their present depth. Moreover, the movement of geology has been swift during these last twenty years, so that much that was written in 1865, especially on points of petrology, needs by this time more or less modification. It is in the minute description of the rocks associated with the Comstock ore-deposits that Mr. Becker so markedly outruns his predecessors.

The petrological researches of Mr. Becker and his colleagues seem to have been conducted on a scale worthy of the great survey of the United States, under whose authority the present volume is published. Between two and three thousand specimens of rock were collected; appliances for cutting and grinding these specimens were carried into the field; sections were cut day after day, and altogether about five hundred microscopic slides were prepared and examined. As a consequence of this searching study, the petrological portion of Mr. Becker's monograph is peculiarly important. It occupies indeed considerably more than one-fourth of the entire volume. In his descriptions of the rocks, microscopic notes are, of course, rained down upon the reader thick and fast, and these notes are illustrated by plates of singular fidelity and beauty. As the petrologist studies these chromolithographs, he is almost cheated into the belief that he has got the actual sections between crossed Nicols, and is apt to find himself unconsciously rotating the book, expecting every moment that some change of tint will sweep across the field.

Some of the most valuable microscopic work of Mr. Becker has been directed to the study of that troublesome rock called "propylite." Richthofen, who was responsible for introducing the term, regarded the rock as a volcanic product of tertiary age, closely resembling certain dioritic rocks of far higher antiquity. Great importance was claimed for propylite, on the ground that it enclosed some of the largest and most productive silver lodes in the world. In Nevada, in Mexico, in the Carpathians, and elsewhere, the occurrence of propylite seemed in some way connected with the birth of the richest silver ores. From time to time, however, doubt has been cast upon its right to rank as an independent species; and now Mr. Becker, after an elaborate study of the subject, gives an unqualified denial to its individuality—so far, at least, as the propylite of Nevada is concerned. He shows that the name has been there applied to a diversity of eruptive rocks, having but little in common except a greenish colour, due to decomposition and consequent formation of chloritic minerals. But, when a familiar rock suffers such a change as this, it hardly needs a new name.

It is by no means necessary to re-christen a man because his hair has turned grey. The term "propylite" is therefore doomed to die out in America; nor has it much chance of survival in Europe, for certain continental petrologists, after studying the European types, have lately called attention to the very insecure base on which the species rests. If it had a chance of living anywhere, it was in the Washoe district; but now that Mr. Becker's report has been issued, we believe the death-knell of propylite has been sounded.

One of the most curious circumstances connected with mining on the Comstock lode is the unusually elevated temperature which prevails in the deep workings. A few years ago Prof. Church, of Ohio, startled geologists by boldly suggesting that this heat is due to the decomposition of felspar in the neighbouring rocks. These rocks are rich in felspar, which according to this authority, degenerates into kaolin or china-clay, and the process of "kaolinisation" is assumed to be a sufficient source of heat. But no sooner had these views been enunciated by Prof. Church than they were controverted in this country by Mr. J. A. Phillips, who showed the utter inadequacy of chemical action—be it the oxidation of pyrites or the kaolinisation of felspar—to account for the thermal phenomena in question. In order to examine the subject with quantitative exactitude, Dr. Barus, the physicist attached to the U.S. Geological Survey, has carried out an elaborate series of experiments on the alteration of felspar, the details of which are published in this report. These experiments have led Mr. Becker to reject the kaolin hypothesis; and, striking in with the views of Mr. Phillips, he regards the thermal waters as representing a legacy of former volcanicity—the lingering relics of solfataric action.

Another physical investigation entrusted to Dr. Barus related to the electric phenomena of the Comstock lode. Experiments made many years ago in this country by Mr. R. W. Fox and Mr. Robert Hunt, and subsequently in Germany by Reich and Von Strombeck, led to some interesting results, which deserved to be followed up. It was well, therefore, that Dr. Barus should undertake an electrical survey of some of the ore-bearing ground in Nevada. But he appears to have laboured under serious disadvantages; and, though electrical currents were detected, the results were not of such a character as to add largely to our knowledge of the subject. It has been supposed that, by the careful study of the electric activity of ore-deposits, the prospector might obtain a new guide to their discovery in unknown districts; but we fancy from Dr. Barus's researches that we are not likely just yet to invent anything like an electric divining rod.

In discussing how the gold and silver got into the Comstock lode, Mr. Becker inclines towards Prof. Sandberger's views, according to which the metallic minerals of such veins are derived from the surrounding rocks. It has been shown that mica, augite, and other common rock-forming silicates, contain minute quantities of the heavy metals, and hence Mr. Becker was led to search for gold and silver in the rocks of the Comstock country. These rocks are mainly diabase and diorite, and by careful analysis the precious metals were

detected in both, but notably in the diabase. Further investigation showed that, although both the augite and the plagioclase of the diabase contained these metals, the former was richer than the latter. After a careful survey of the subject, Mr. Becker is led to the conclusion that the silver, and probably the gold, of the Comstock lode must have been mainly derived by chemical agencies operating for untold ages upon the augite of the older diabase. The yield of the Comstock lode has been so vast that the money markets of the world have been seriously disturbed. And yet this mass of bullion has probably been derived from the common bisilicates in the neighbouring rocks! Verily it needs a firm faith in the value of accumulated trifles to believe that a mineral like augite, popularly called "non-metallic," and reputed to have little or no economic value, may nevertheless represent a potential mine of gold and silver.

F. W. RUDLER.

PHILOLOGICAL BOOKS.

A Simplified Grammar of the Pāli Language. By E. Müller. (Trübner.) Dr. Eduard Müller's Pāli Grammar is the first attempt of the kind in the English language, and preserves a useful record of what has been written on the subject in various learned journals since the publication of Kuhn's *Beiträge zur Pāli Grammatik*. As it appears as one of a series of "Simplified Grammars," one would suppose it would have either been especially adapted for the use of beginners in the study of Pāli, or be a thoroughly digested and newly thought-out arrangement of the already known material. This is not the case. Nearly half the little book is occupied with an elaborate and interesting discussion of the etymology of Pāli words, much more suitable for a philological journal, or for a large and complete treatise, than for a small simplified grammar. And when the paradigms of nominal and verbal inflexion are reached, they are given without any attempt to re-arrange well-known facts according to a scientific system. There are, however, added to the old lists of forms a number of useful notes on rare or exceptional formations. The work is, indeed, based throughout on careful *collectanea*, extending over the whole matter contained in our printed texts. It is a pity that the proofs have been so negligently corrected. It is especially important in a grammar, where words appear isolated from their contexts, and where so much turns on single letters, that spelling mistakes should be avoided. It is also a pity that syntax, so rich in Pāli, is not dealt with. To make up for this as far as possible, a *Jātaka* is given at the end of the book, with a translation and grammatical analysis for the help of students. Oddly enough, there are several errors in the syntactical interpretation of this easy story (besides a couple of misprints). On the whole, the little work is scarcely worthy of Dr. Müller's real knowledge of the subject and accurate scientific training; but it is, nevertheless, the best book on Pāli Grammar now obtainable in any European language. In a second edition the proofs should be carefully revised, the etymological introduction and appended *Jātaka* story should be replaced by a detailed examination of Pāli syntax, and the inflexions (especially the verbal ones) should be properly arranged.

Prātimoksha Sutra, ou le Traité d'Emancipation selon la Version Tibétaine, avec notes et extraits du Dukka (Vinaya). Translated by W. Woodville Rockhill. (Paris: Leroux.) The learned author has already proved his sound knowledge of Tibetan and Buddhist phraseo-

logy by his valuable translation of the Udānavarga from the huge collection the *Bkaḥ-hgyur*, a copy of which, as well as one of the *Betan-hgyur*, exists in the valuable library of the India Office. In his Introduction Mr. Rockhill insists upon the importance for Buddhist researches, not only of the many texts contained in the Tibetan collections, but also of the numerous commentaries giving considerable information on the questions of discipline and theology which cannot be found in the Sanskrit or in the Pāli books.

"These commentaries by the fathers of the Buddhist Church—Aśvaghoṣa, Vasubandhu, Nāgajūna, &c.—cannot be found elsewhere than in the Tibetan *Betan-hgyur*; when their remarks have been studied, it will be possible to conceive Buddhism as its own doctors have understood it, and great surprise will be caused by the deep discrepancies existing between their views and the speculations (more or less justified) of our European scholars" (p. 8).

THE second part of Dr. J. W. Redhouse's *Turkish-English Lexicon* (of which Part I. was reviewed in the ACADEMY for March 21) has now been issued, and is distinguished by the same fullness and accuracy which we described as characterising the former portion. It brings the work down to the end of *Sā*, the fifth letter of the Turkish alphabet. Among the entries that appear for the first time in this dictionary will be found many nautical terms, borrowed for the most part from the Italian, and several titles and dignities belonging to the old Ottoman Court of the days ere the reforming hand of Sultan Mahmūd II. had remodelled every institution in the empire. In the article referred to above, we drew attention to the inconvenience occasioned by the absence of any dictionary devoted to the modern Turkish of the newspapers and the living authors. This want has now been supplied. An Ottoman scholar, Sāmī Bey, author of a French-Turkish dictionary for the use of Turks, has just published a Turkish-French lexicon expressly designed to assist Europeans in acquiring a knowledge of the Ottoman language of the present day. Although the Bey's work professes to be complete, we have noticed a few rather serious omissions, such as that of the very common expression *beyān etmek*, "to tell," or "explain." The modern use of *itibāren*, in the sense of "starting from," "beginning at," should not have been left out. It is given in no dictionary, and is apt to puzzle the student who has not a teacher. Notwithstanding one or two trifling shortcomings, Sāmī Bey's carefully prepared volume is of great value, and, being the only work of the kind in existence, is indispensable to all who desire to become acquainted with the Turkish language as at present spoken and written. It is gratifying to learn that, in recognition of the services rendered to his country by his lexicographic labours, the accomplished and industrious author has been decorated by the Sultan.

Notes on Aryan and Dravidian Philology. By M. Seshagiri Sastri, M.A., Superintendent of Vernacular Studies, Presidency College, Madras. Vol. I. Here is a book written by a native scholar, whose knowledge is most extensive. He knows Mahārāṭhi, Hindustani, Bengali and Uriya; Tamil, Telugu, Kanarese, and Malayalam. He has studied Greek and Latin, is evidently a very fair Sanskrit scholar, and writes English extremely well. What excellent work might be done by a man so well qualified! and yet, from want of proper guidance, the book which he has produced is useless—ought, in fact, never to have been published. A scholar who can tell us that *sāna* in Sanskrit means the sun, and is the same word as the Latin *luna*, the moon, and who discovers similar transitions of *s* into *l*, in *svar* = *Olympus*, *svaira* = *liber*, *simha* = *leo*, is

judged, whatever else he may write. Comparative philology is a dangerous subject even at home, where it has been tamed by phonetic laws, and has to show a certain respect for historical facts. What it can become if allowed to run wild may be seen in Mr. Seshagiri Sastri's book. However, there is no reason why this young native student might not in time produce some excellent work. He has amassed a large stock in trade. He must now learn how to use it.

CORRESPONDENCE.

THE GALATIAN "IMBRECTION."

London: Sept. 15, 1885.

The five Galatian words handed down to us by Hesychius have all, save one, been explained. They are:

βαρβοί· δοῖδοι παρὰ Γαλάταις.
κάρνον· τὴν σάλπιγγα. Γαλάταις.
λειούσματα ἢ λεγούσματα· εἶδος καταφράκτου. Γαλάταις.
λεύγη· μέτρον τι γάλακτος (leg. Γαλάταις).
ἐντριτον· τὸ διονίου ἐμβρέμα, ὃ Γαλάταις ἐμβρεκτόν φασιν.

Here Moriz Schmidt has explained ἐντριτον as the Latin *intritum* (something crumbled or broken into a liquid). But he has not attempted the corrupt διονίου or the Galatian ἐμβρεκτόν. Prof. Windisch, of Leipzig, corrects διονίου into δι' οἶνου, and connects ἐμβρεκτόν (better *imbrecton*, from *in-breg-to-n*) with the Greek ἐμβρέχω, βρέχω, with which Curtius (G. C., No. 166^b) placed the Latin (*v*)rigare, Gothic (*v*)rign ("rain"). *Imbrecton* would thus mean "a wine-sop," "a bit of bread soaked in wine." If we merely regard the consonants, it might be as properly referred to the root *bhrag*, whence Latin *fra-n-go*, or the root *bhric*, whence Latin *frico*; but I know of no instances in which Gaulish *e* corresponds with Latin *a* or *i*.

St. Paul's omission (so culpable from the philological point of view) to have his epistle to the Galatians translated into their mother-tongue gives these linguistic λείψανα an interest and value which they would not otherwise possess.

Another word in Hesychius has been recognised by Prof. Fick, of Göttingen, as almost certainly Celtic. It occurs in the gloss ἄδες· πόδες· ἐνιοι δε ἀήδες. Here ἄδες betrays its Celticity by the loss of the initial *p*.

WHITLEY STOKES.

MESSRS. TRÜBNER'S ORIENTAL ANNOUNCEMENTS.

THE following volumes are in preparation for Trübner's "Oriental Series":—Vol. III. of *A Comprehensive Commentary to the Qurân*, by the Rev. E. M. Wherry; two volumes of Miscellaneous Essays on Subjects connected with the Malay Peninsula and the Indian Archipelago, reprinted from *Dalrymple's Oriental Repertory*, *Asiatick Researches*, and the *Journal of the Asiatic Society of Bengal*, edited by Dr. Rost; *The Mânava-Dharma-Castra*, or Code of Manu; the Sanskrit Text, with Critical Notes, edited by Prof. Jolly, of Würzburg; *The Satakas of Bhartrihari*, translated from the Sanskrit by the Rev. B. Hale Wortham; *The Târkhû-l Hind of Abû Rihân al Bêrunî*, translated from the Arabic by Prof. Saebau, of Berlin; Essays on the Intercourse of the Chinese with Western Countries in the Middle Ages, by Dr. E. Breitschneider; *The Life of Hiuen Tsiang*, by the Shamans Hwui Li and Yen-Tsung, with a Preface containing an account of the Works of I-tsing, by Prof. Beal; *The Niti Literature of Burma*, by Mr. James Gray.

The next volume in the series of "International Numismata Orientalia" will be *The Coins of Southern India*, by Sir Walter Elliot, the publication of which has been delayed by the partial blindness of the author.

We are also promised the first volume of the *Report of the Archaeological Survey of Southern India*, dealing with the Amaravati and Jagayapeta Buddhist Stupas, and containing numerous callotype illustrations, facsimiles of inscriptions, &c. The descriptive and explanatory text has been written by Dr. James Burgess; while Prof. Bühler, of Vienna, has supplied transcriptions, translations, and elucidations of the Dhauli and Jaugada inscriptions of Asoka.

The other Oriental announcements of Messrs. Trübner include *The Centenary Review of the Asiatic Society of Bengal, from 1784 to 1883*, in three parts. The first part, tracing the history of the Society, is written by Raja Rajendralala Mitra; the second, treating of archaeology, history, and literature, by Dr. A. F. R. Hoernle; and the third, treating of natural science, by Babu P. N. Bose; *Ancient India as described by Ptolemy*, with introduction, commentary, map of India according to Ptolemy, and a copious index, by Mr. J. W. McCrindle; *The Roots, Verb-Forms, and Primary Derivations of the Sanskrit Language*, by Prof. W. D. Whitney, being a supplement to the author's Sanskrit Grammar; *Behar Peasant Life*, being a discursive catalogue of the surroundings of the people of that province, by Mr. G. A. Grierson, with many illustrations from photographs taken by the author; *The Kural of Tiruvallavar*, by the Rev. Dr. G. U. Pope, consisting of text, translation, introduction, notes, lexicon, and concordance; *The Buried Cities of Ceylon*; a Guide-book to Anuradhapura and Pollonnaruwa, by Mr. S. M. Burrows; a reprint of Father Sangermano's *Description of the Burmese Empire*, chiefly from native documents, which was compiled at the end of the last century and first published in 1833; an *Essay on the Sources and Development of Burmese Law*, from the first introduction of Indian law to the British occupation of Pegu, by Dr. E. Forchhammer.

In this connexion we may also mention *The Literature of Egypt and the Sudan*, in two volumes, by Prince Ibrahim Hilmy; Volume III. of Mr. Fornander's *Account of the Polynesian Race*, containing a comparative vocabulary of the Polynesian and Indo-European languages; a Dictionary of the Kongo Language, in two parts, English-Kongo and Kongo-English, by the Rev. W. Holman Bentley, with an Introduction by Mr. R. N. Cust; and a Grammar of the Kongo Language, with an appendix of proverbs, tales, &c., by the same author.

SCIENCE NOTES.

FIVE courses of six lectures each, in connexion with the Gilchrist fund, will be delivered, during the months of October and November, in five towns of Lancashire and five towns of Scotland. The lecturers are Prof. R. S. Ball, the Rev. W. H. Dallinger, Prof. W. C. Williamson, Dr. Andrew Wilson, and Mr. W. Lant Carpenter. The lectures, which will be abundantly illustrated with the oxyhydrogen light, are intended for working men, and the price of admission is one penny.

THERE has lately issued from the University Press at Cambridge a valuable series of reports on geological classification and nomenclature. The reports have been drawn up under the editorship of Prof. T. McK. Hughes, for the International Geological Congress, which has been meeting during the past week in Berlin. The reports on each of the larger groups of stratified rocks have been intrusted to specialists; and thus authentic information is assured, while the latest opinions are presented, and in some cases original suggestions are made. Mr. H. B. Woodward, for instance, proposes to unite the deposits of the Neolithic, Bronze, and Iron ages in one group, to be

called the Mesanthropic group; while the underlying Pleistocene beds would then be termed Palaeanthropic, and the recent deposits Caenanthropic.

MESSRS. TRÜBNER & Co. will publish immediately *The History of Cholera in India*, from 1862 to 1881, by Dr. Bellew, now sanitary commissioner of the Punjab, who is well known for his works on Afghanistan and Kashmir. The aim of the book is to give a descriptive and statistical account of the disease, derived from official reports, so as to illustrate the relation between cholera activity and climatic conditions, together with some original observations on the causes and nature of cholera. It will consist of 840 pages, with maps, diagrams, &c.

THE same publishers also announce *Flowering Plants and Ferns of the Riviera*, drawn and described by C. Bicknell, with 82 full-page chromo-lithograph plates, containing illustrations of more than 350 specimens.

AMONG Messrs. Macmillan's forthcoming publications will be a translation of M. Guillemin's illustrated work on *Electricity and Magnetism*, edited by Prof. Sylvanus Thompson; the fourth volume of Sir H. E. Roscoe and Prof. Schorlemmer's *Treatise on Chemistry*; *The Elements of Thermal Chemistry*, by Mr. M. M. Pattison Muir; the second part of Prof. Ziegler's *Text-book of Pathological Anatomy*, translated by Dr. Donald Macalister; and a revised edition of Dr. Flower's *Introduction to the Osteology of the Mammalia*.

MESSRS. J. S. VIRTUE & Co. will publish immediately an English translation of M. Elisée Reclus's *The Earth: a Descriptive History of the Physical Phenomena of the Life of our Globe*. The volume is edited by Prof. A. H. Keane, and illustrated with 24 coloured maps and nearly 250 engravings. It will shortly be followed by a translation of the same author's *The Ocean and the Atmosphere*.

MESSRS. D. C. HEATH & Co., of Boston, have in preparation the following works: *The Elements of Chemistry: Descriptive and Qualitative*, by James H. Shepard; *Outlines of Geology*, by Prof. Nathaniel S. Shaler; and four volumes of a series entitled "Guides for Science Teaching," by Prof. Alpheus Hyatt, viz., *Insects—Grasshopper*; *Fishes and Frogs—Yellow Perch, Common Frog, and Toad*; *Reptiles and Birds—Alligators and Turtles, and Pigeons*; and *Mammals—Domestic Rat*.

PHILOLOGY NOTES.

THE task of bringing out a new edition of the late H. A. J. Munro's *Lucretius* has been entrusted to Mr. James Duff, one of the younger fellows of Trinity College, Cambridge.

PROF. S. BEAL will lecture at University College, London, on Tuesday and Thursday, October 6 and 8, at 3 o'clock p.m., on "The Origins of Northern Buddhism, and the Jâtakas."

ON a cup recently found at Orvieto are the outlines of the sun and moon, and beside them the words *erus* and *luxnei*. In these words Prof. Sophus Bugge, of Christiania, recognises the Etruscan names for the two most important heavenly bodies. *Luxnei* is for *Luxsnei*, cognate with Latin *luna*, *losna*, from **louxna* = Zend *raokhsna*, Old High German *liehsen* (lucid). *Erus* corresponds, he thinks, with the Italic stem *aius*, *esu*, "god" (whence Umbrian *esonu*—"sacer," "divinus," Volscian *esarietrom*), and denotes the sun-god as the god *kar' êxhêr*. Cognate words in Etruscan itself are *alcol* (where the ending is Grecised), "gods"; *alrap*, "god"; *cisne* and *esuri*, "priests"; and *Aiceras* (gen.), the name of a goddess. But why have we *r* in *erus* and the cognate

Umbrian *ereclum* (a small altar), and *s* in *alool*, *esono*? Because, thinks Prof. Bugge, the languages of Italy, like Greek and Sanskrit, had once a shifting accentuation. Intervocalic *s* is preserved after an accented vowel; but where, owing to a shift of accent, the preceding vowel is toneless, the *s* becomes *z* and later *r*. Thus, in Latin *nāsus* represents a prehistoric *nāsos*, but *nāres* a prehistoric *nāsēis*. So *quæso* points to a prehistoric *quāiso*, but *quaerere* to a prehistoric *quaisēe*, accented like the Sanskrit infinitives *dohāse*, *gobhāse*. (The *r* in *-ere* from *-ēse* may be due to the analogy of other infinitives in which the root is accented, as in Sanskrit *bhārase*.) The difference between the German *hase* and the English *hare*, between *kiesen* and *er-koren*, may be explained in like manner. The Etruscan *erus* accordingly represents a *primaeval aīsūs*, with which the Gaulish *Ēsus* is phonetically identical.

At a recent meeting of the Académie des Inscriptions a letter was read from M. Aymonier, dated Quinhon, July 21. Despite the disturbances in Annam, M. Aymonier has been able to visit several provinces and bring back a number of new inscriptions. Some of these are Sanskrit, including one that is Buddhist. The others belong to the Chams, a race that preceded the Annamites on the eastern coast of the Indo-Chinese peninsula.

ONE of the forthcoming volumes in "Bohn's Library" will be a new translation of Seneca's *De Beneficiis*, by Mr. A. Stewart.

A REVISED and augmented edition of Mr. Whitley Stokes's essay on "Celtic Declension," which has recently been printed by the London Philological Society, will appear in the next number of Prof. Bezzenberger's *Beiträge zur Kunde der indogermanischen Sprachen*.

MESSRS. GINN & Co., of Boston, announce a *Sanskrit Primer*, with Exercises and Vocabulary, by Dr. E. D. Perry, of Columbia College, New York. It is based upon the *Leitfaden für den Elementarcursus des Sanskrit* of Prof. Bühler (Vienna, 1882), modified in accordance with the grammatical system of Prof. Whitney.

Corrigenda.—In the ACADEMY for September 26, 1885, p. 204, col. 3, note 3, l. 4, for *corcaille* read *corcailli*; p. 205, col. 1, l. 15, for *suidhugadh* read *suidhughadh*; l. 37, for *li* read *dī*.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 118, Strand, near Waterloo-bridge.

Raphael Morghen's Engraved Works. By Fred. R. Halsey. (New York: Putnam's.)

THE production of pure line engravings, such as those of Raphael Morghen, is now almost wholly a thing of the past. Though a number of highly trained engravers are still constantly employed to engrave on copper in the old methods at the Calcografia Regia in Rome, yet this is done with the help of a large Government subsidy, and the art is thus kept alive in a purely artificial way. The truth is, that the liking for this once popular style of engraving has passed away, and not altogether without reason. The engravings, even of such a master of the burin as Raphael Morghen, are usually dull and lifeless. They give us nothing but the dry bones of the picture: there is absolutely no indication of colour, little or no rendering of texture, and not the slightest attempt even to suggest the special handling of each master.

A painting by Murillo in his *vaporoso* manner, and one by Guercino with his hard touch and gaudy colour, appear of similar style in one of these line engravings. And this is not owing to any failure on the part of the engraver, but because he aimed at nothing more than to give a correct outline, and to some extent the light and shade of a picture; all other qualities were carefully abstracted, and the engraver worked, not from the picture itself, but from some laborious drawing, in which all suggestion of colour was rigidly omitted. In most cases this transcript of the picture was not made by the engraver himself, and thus a double source of error arose; and the engraving, even in its mere outline, had much less spirit and vigour than it would have had if the contact between the engraver and the painting he was seeking to reproduce had been closer. In the engravings of Marc Antonio Raimondi—the father of the Italian school of pure line work—there is the same absence of colour, but no lack of spirit. He appears in almost all cases to have worked, not from a painting of Raphael's, but from a small-scale design in ink or chalk set before him by Raphael himself, long before the oil painting was begun. In some cases Raphael never carried his design further than the sketch from which Marc Antonio worked. Two of his noblest compositions, the "Massacre of the Innocents" and the "Judgment of Paris," are known to us only by Marc Antonio's plates. These were usually engraved under Raphael's own supervision, and their outline altered or corrected by the master himself. In this way the traditional practice of the Italian school of engravers was to avoid all suggestion of colour, so that each copper plate is a reproduction, not of the painting itself, but merely of the design of the picture. This forms one of the chief distinctions between the early engravings of Italy and those of Germany. Far more than mere light and shade was gained. The most vivid indications of colour and texture are given in the elaborate plates of Albert Dürer, Lucas Cranach, and other Germans; and it was partly, no doubt, their possession of this special quality that caused Marc Antonio and Agostino Veneziano to buy and copy the far more technically skilful engravings of German masters.

Another cause of the scholastic dullness of the works of Raphael Morghen and his school is the rigidly conventional way in which gradations of light and shade are represented—lines to represent shadow were strictly equidistant, and cross hatchings had to be at definite angles, forming geometrically correct series of triangles, trapezia, and other figures. The rigid manner in which the burin is held is apparent in almost every line, very unlike the free touch of the etching needle or even the dry point. It is true that the whole outline of each plate was usually sketched in with etched lines, but these were only lightly bitten, and were afterward recut and deepened by the burin. The result of this mechanical treatment is that this style of engraving is a far more successful reproduction of the works of some painters than of others. Pictures by Guido, Domenichino, the Caracci, Guercino, and other painters of that school, whose works were so much admired during Raphael Morghen's lifetime, often gain by the very

omissions of the engraving: their hard touch and harsh colouring disappear in the copper-plate, while their chief merit, that of their design, is faithfully given. Thus Morghen's engraving of Guido's "Aurora" on the ceiling of the Rospigliosi Casino is far more pleasant to look at than the original fresco. In other cases, such as the Madonna del Gran Duca, or the portrait of Bindo Altoviti, both painted by Raphael, but little of their exquisite sentiment or refined delicacy of treatment appears in Morghen's plates.

The work mentioned at the heading of this article contains a short account of Raphael Morghen's uneventful life and a very complete catalogue of his plates, with a record of the different states of which impressions still exist. The author is naturally enthusiastic about his subject, and is occasionally too laudatory. It may be questioned whether Raphael Morghen really deserves his reputation as the best engraver of his school, either for *technique* or for faithfulness of reproduction. For the latter quality he trusted to other hands than his own, and in some cases to very inefficient ones. This was not the case with the engraved work of the Cavaliere Toschi, whose life was spent at Parma cutting the superb plates of Correggio's paintings, which are, on the whole, the finest and most faithful line-engravings of modern times. Toschi, who was a generation younger than Morghen, made his own drawings before beginning on the copper, and continually, during the progress of each plate, compared his work with the original, and thus gained an amount of spirit and accuracy of touch far superior in result to the more mechanical method with which Morghen was content. In some cases in Morghen's plates the beauty of a head is almost a conception of his own, and differs much in expression from the original.

Raphael Morghen was born, in 1761, at Portici, near Naples, but came of a Florentine family, and spent most of his own life at Florence and Rome. While quite a boy he studied painting, for which he appears to have had but little gift or original power. The few plates which in later life he engraved from his own designs are of the weakest, both in drawing and composition. At the age of seventeen he was apprenticed by his father to the chief engraver of the time, the Roman Giovanni Volpato, who had been a pupil of Bartolozzi; and in 1781 Morghen married Volpato's daughter, Domenica. In the same year he produced two of his earliest plates, namely, those of the "Poetry" and "Theology" of Raphael in the Vatican Stanze. His next work from the "Mass of Bolsena," produced in 1782, is one of his finest plates, and shows very distinctly how soon Morghen arrived at the somewhat narrow limits of his art.

His most celebrated and laborious plates are those of Da Vinci's "Cenacolo" and Raphael's "Transfiguration," both of which were unfortunately engraved from unsatisfactory drawings. The latter plate was cut twice over by Morghen, who was dissatisfied with the first drawing made by Dell'Era. Unhappily the second one, made by Tofanelli, was but little better; and there are clear signs of the weariness which Morghen must have felt

in his dreary task of doing his slow work all over again. A large portion of his life was spent on these two plates of the "Transfiguration." The first was begun in 1796, and given up in an incomplete state in the following year. It was eventually finished by his brother Antonio, and impressions of it bear the joint signature of both brothers. The second plate, begun in 1801, was not completed till 1811. It is a very laborious and highly-finished work; and one cannot but regret that Morghen was content to take it, as it were, at second hand, trusting wholly to Tofanelli's rather feeble drawing.

The other chief of Morghen's plates, the "Cenacolo" of Da Vinci, was engraved at Florence in 1800 from a drawing made by Teodoro Matteini. It is a carefully executed engraving; but, like the "Transfiguration," was done from a rather poor drawing. In this case, however, there is more excuse for the shortcomings of the plate, as the original oil painting on the refectory wall at Milan is a mere shadow of what the picture once was. The truth is that the copy on canvas by Da Vinci's pupil, Marco d'Oggiono, preserved in London in the seldom visited attics of the Royal Academy, is of more real value than the ruined and repainted original; and an engraving from it would more closely reproduce the glories of the original than any that could be made at Milan. This much to be wished for engraving is now being made by the skilful hand of M. Ferdinand Gaillard, and will be the work of many years to come.

Raphael Morghen was married three times, and had a large family. He died in 1833, and received the honour of interment among the illustrious dead in the Florentine Santa Croce, where his remains are covered by a large and pretentious monument in the worst possible taste.

The list of plates given by Mr. Halsey is an astonishingly long one, and shows that Morghen must have worked with the most unflagging industry. The chief collections referred to in Mr. Halsey's catalogue are those in the British Museum, in the Brera at Milan, and that which belongs to Sir Thomas Brassey. The last of these was formed by Raphael Morghen himself. It has been well catalogued by Mr. Alfred Maskell. Mr. Halsey wisely warns the collector that some care is needed in buying Morghen's engravings, as a number of the plates, utterly worn out and coarsely re-cut, are in the possession of the Roman Calcografia Camerale (now Regia), and are issued by them in large quantities at a low price, thus doing an inexcusable injury to Raphael Morghen's fame. The same is done with the grand etchings of Piranesi, in many of which scarce one original line exists; and all are utterly weak and colourless when compared with the vigour and brilliance of a genuine impression.

A few corrections should be made in Mr. Halsey's catalogue. The so-called "Fornarina of the Tribune" is now known not to have been painted by Raphael; and "the 'Beatrice Cenci,' by Guido," is wrongly named both as to its subject and its painter. By a curious blunder, Mr. Halsey speaks of the "bread" instead of the corporal as having been blood-stained by the Host in the miracle of Bolsena. On the whole, however, and in essential details, the book is well and care-

fully compiled, and may, perhaps, do something to revive the waning interest in the almost extinct art of pure line engraving.

J. HENRY MIDDLETON.

EGYPT EXPLORATION FUND.

THE NAUKRATIS EXHIBITION.

THE last few years have been peculiarly rich in discoveries that have thrown light upon the early history of Greek art; but hitherto the chief fields for excavation and research have been such that the information gained thereby has led to somewhat one-sided conclusions. On the mainland and many of the islands of Greece, and also in her western colonies, numerous discoveries have been made; but it is natural to look to these rather for illustrations of the internal and independent growth of Greek art than of the exercise of foreign influences. Where, on the other hand, the Greeks have clearly been working under such predominating influences, these seemed in almost every case to have been directly or indirectly derived from Assyria, though, if the Phoenicians were their instructors, Greek craftsmen could not help sometimes meeting types whose origin must be sought elsewhere. But, whether they were merely copying foreign models, or developing the borrowed types with an originality and imagination that far surpassed the original inventors, the Greeks did not always look to Asia for their masters. Tradition and history combine to indicate Egypt as the source of much that was afterwards Hellenised to a higher perfection; and, though of late years a not unnatural reaction has turned aside from Egypt the direction and, therefore, the results of archaeological research, the recent discoveries at Naukratis will necessitate at least a reconsideration of the theories now current as to the origin of the types prevalent in many branches of Hellenic art.

It is a matter for no small gratification that a discovery so important has been due to an English organisation—the Egypt Exploration Fund—and, above all, to an English excavator, Mr. W. M. Flinders Petrie, whose ingenious and patient tracking out of the site will take its due place among the most brilliant exploits of archaeological pioneers. We have thus a proof, and not an altogether superfluous one, that England still keeps pace in such enterprises with the other great European nations.

Some two months ago there appeared in the *Times* of August 5 an account of the season's work, and especially of some few specimens of its proceeds, which were then exhibited in the British Museum. Announcement was also made of a more complete exhibition to be held in the rooms of the Royal Archaeological Institute at Oxford Mansion. That exhibition has now for some time been open to the public; and, though it was of course impossible to find room for all the objects that have been brought to England in the limited space available, yet enough has been arranged and laid out to give at a glance some notion of the nature of the various discoveries that have been made, while all that was of artistic or scientific interest is adequately represented by the specimens on the tables or in the cases that fill the rooms.

On the wall are plans of the mound of Nebireli, giving a detailed representation of the sacred enclosures and the streets of the town of Naukratis so far as yet excavated, which afford yet further evidence of Mr. Petrie's patience and ingenuity in discovery, and exquisite and detailed care in execution. From obscure traces of street refuse, with here and there the help of a remaining bit of house-wall, a map has been produced which could hardly have been made clearer and more accurate had every brick and stone remained, where the

builder first placed it. A glance at this will show that beside the great temenos of Ptolemaic times only two of the ancient temple-enclosures have as yet been discovered—those of Apollo and of the Dioskuri. Thus there still remain, even among those mentioned by Herodotus, the temples of the Aeginetan Zeus and of the Samian Hera, as well as the great Panhellenium, unless, indeed, the latter be superseded by the later great foundation. Again, inscriptions have been found belonging to the service of Aphrodite. Thus it is clear that the next season is likely to prove, at least, not less fruitful than the last.

But it is time to turn from prospects to actual attainment, and the first things to claim our attention are the numerous fragments of pottery, all painted and many inscribed, which cover the first two tables. It is at once evident that we have here a series of no ordinary importance. And not only are these fragments in themselves interesting; but a fortunate combination of circumstances enables us to attain a degree of certainty as to their date and origin which has never before been rivalled. In the first place, the soil was so stratified that it was possible in almost all cases to estimate the age of each successive deposit; then the numerous inscriptions, while in themselves an invaluable contribution to the history of the Greek alphabet, also afford a certain criterion for the date of the potsherds on which they are found; and, lastly, the designs of those potsherds themselves not only afford new and remarkable information as to the origin and development of the Greek potter's art, but also supply an unbroken chain of chronological evidence. Where these three are combined, a certainty is attained such as for each alone is impossible. Indeed, from this time forward every treatise on the Greek alphabet and every discussion of types of pottery will have to give an early and most important position to these discoveries at Naukratis.

One table is entirely occupied by the yield of the temenos of Apollo. This consists of vases broken, with one or two notable exceptions, into small fragments. In most cases an inscription has been scratched upon them with a sharp point, recording their dedication to Apollo. Almost all the objects upon this table, as well as many others, are certainly anterior to the fifth century B.C.; and when it is stated that nearly four hundred inscriptions, or fragments of inscriptions, have been found upon them, it becomes clear that the gain to the science of epigraphy is such as to mark an epoch in its development. The alphabet and dialect used are in most cases Ionic, as might be expected from votaries of the Milesian Apollo; but exceptions are found. To Rhodians we shall have to recur; and certain Melians are indicated, not only by a peculiar ware, but by the peculiar forms of their alphabet, the open *o* and closed *o*, as "making a claim where no claim is theirs." The whole number, however, by the forms of their letters and the nature of the pottery, may be grouped with tolerable certainty of classification into an uninterrupted series; and as soon as this is done, results follow the importance of which can hardly be over-estimated. It is well known that the inscriptions scratched by the Greek mercenaries of Psammetichus upon the legs of the colossi at Abu Simbel have long been regarded as a cardinal point for the decision of questions as to the early spread and development of the Greek alphabet, but that epigraphists have not as yet been able to come to a final decision as to their date, that is to say, as to whether the Psammetichus mentioned is the first or second king of that name. Now at Naukratis there has been found a Rhodian pinax with a dedication to Apollo almost exactly corresponding in the characteristic forms of letters with the

Abu Simbel inscriptions, themselves assigned by Kirchhoff to Rhodian writers; like them, it lacks a special symbol for ω , and uses the σ with three, not four strokes. If we assign this pinax to its due place in the Naukratis series, we shall find it by no means the earliest; many of the inscriptions, by their rude and tentative forms, seem clearly to indicate a far less developed state of writing. Since, however, Naukratis was in all probability founded by Psammetichus I., a king known to have favoured foreign enterprise, the reign of Psammetichus II. some fifty years later, or about 590 B.C., will admirably suit both our pinax and the inscriptions of Abu Simbel. Thus a most important monument, the date of which has hitherto been fluctuating, now falls into position in a continuous series, and so gains a final resting-place. Passing on in our series for some forty years more, we are enabled to fix another point even more confidently; for there can hardly be a doubt as to the approximate date of the bowl dedicated by the Phanes, whose treachery aided the Persian invasion. This most interesting comment on the text of Herodotus thus gains a double value, for it cannot be separated from other vases, which thus gain a certain date, not only for the alphabet of their inscriptions, but for the designs with which they are painted. These indications, which might be indefinitely multiplied, will suffice to show how great is the advantage gained from Naukratis by the science of epigraphy. Such a series, in itself continuous, and at intervals giving fixed indications of date, is the one thing necessary to combine isolated specimens into a connected and intelligible whole.

When we come next to consider the various fabrics and types of ornament that meet us in the pottery of Naukratis, a far more complicated question is before us, and for that very reason the triple indication of period we here possess is all the more valuable. As to the localities of production, we have no such certain criteria; but some facts appear at once to become clear. A considerable class of earlier specimens is at first sight recognisable as identical with the pottery found at Kamirus in Rhodes. Here, however, inscriptions will not help us much: though the pinax above mentioned gave a true indication, many other vases, including the largest and most splendid example of this style, bear dedications purely Ionic both in dialect and alphabet. For these the dedicator, not the potter, is responsible. But the designs are unmistakable—the same yellow ground with light-red or brown bands of ornament, the same scale-patterns in brown and white, the same zones of animals, swans and spotted goats or stags, interspersed with rosettes and other ornaments. The question may arise in which direction the export took place; but the fact that these patterns are the rule at Kamirus, rather the exception at Naukratis, may indicate the true answer. Another early class of pottery, that with designs of animals, and even men, in dark brown and purple on a yellow or drab-white ground, with or without the addition of incised lines, is so universally found wherever the Greeks took up their abode that one can hardly gather much from its presence here. But there are many specimens of a style almost, if not quite, unknown before, and these can hardly be the product of other than local factories. Some of these are of very thin and fine fabric; outside they have the ground painted white, and on it are designs either geometrical or representing animals or men, in early times of excessively lank proportions. Inside they are often brown or black, with ornamentation in purple and white, generally presenting the lotus pattern with alternation of bud and open flower. In the British Museum is a specimen of this ware found at Kamirus, doubtless in this case an

importation. Though much later, one can hardly help regarding as a later development of this class the beautiful fragments of white-faced pottery, with designs exquisitely drawn on both sides in brown outline, with a grace worthy of an Attic lekythus. In coarse pottery also we find examples of a similar nature, distinguished by the whitish face given to the ground, and the internal ornamentation in combinations, often extremely rich in colour, of red and white. Here again the lotus pattern is frequent; indeed, it must be regarded as the characteristic design on most of the classes of local pottery. Here then, at Naukratis, we find Greek colonists, and colonists whose wares were largely exported, directly copying in Egypt an Egyptian design, and one destined to play a most important part in Greek decorative forms. It is singular that MM. Perrot and Chipiez attribute to Assyria the perfection even of the lotus pattern: the same form is found in these earliest Naukratis designs, and surely they were directly derived from Egyptian models. Indeed, the Greek so-called honey-suckle pattern seems in its essential forms to recall the same origin, though doubtless there, as often is the case in developments of type, the influence of another pattern, the Assyrian palmetto, cannot be denied. But anyone who sees the numerous and varied applications of the lotus at Naukratis, cannot fail to recognise in it the origin of many forms familiar in Greek art. In the remains of the early temple of Apollo at Naukratis the pure lotus design is used even for architectural purposes. But these are questions of great difficulty, which still await the answers to which the excavations at Naukratis will greatly contribute. Before we leave the pottery, one bowl calls for notice by its remarkable designs, the whole of its inner surface, except a narrow border, being treated as one upright field, in which many human figures, with wings on their shoulders and sometimes on their feet, are pursuing one another. In form they resemble the archaic type of Nike. The outside of this vase has a design much resembling the so-called palmetto of Nikosthenes.

But the fragmentary pottery, though the most important part, is by no means the whole of the yield of the season's work. Numerous objects in iron, bronze, and terra-cotta, coins, jewellery, and other treasures, find their place in the exhibition. The most interesting and unique foundation deposit of miniature instruments of work or ceremonial, and many other important discoveries, have already been brought into notice, and attracted a lively attention to the work still continuing under the auspices of the Egypt Exploration Fund. If the results of the next season's work but fulfil the rich promise of the present exhibition, the colony of Naukratis will not be least among the sites that have yielded us knowledge of the early life and art of Greece.

ERNEST A. GARDNER.

CORRESPONDENCE.

MINIMI.

Bromley, Kent: Sept. 30, 1885.

Referring to Mr. Thompson Watkin's letter in the last number of the ACADEMY, I may say that a find (locality unknown) of about thirty minimi in my possession show every stage from legible inscriptions of Tetricus down to the most degraded work, but always distinctly pre-Constantine in origin. These at least prove that such things were made and circulated in the third century.

W. M. FLINDERS PETRIE.

ANOTHER Correspondent writes:

"Mr. Thompson Watkin is mistaken in supposing that the minimi found at Caerleon and Caerwent,

and referred to by the ACADEMY, are the well-known ones of the Tetrici. They are the equally well-known minimi which are modelled on coins of Constantine, and consequently indicate, as the ACADEMY has stated, a later period than that of Honorius."

PUBLISHERS' ANNOUNCEMENTS.

THE Rev. C. W. King has prepared an enlarged edition of his work on *Engraved Gems*. Among the new illustrations is one of the Napoleonic talisman, which, having been worn by the first consul and the late emperor, passed into the hands of the Prince Imperial, on whose death it was lost. Mr. King has hopes that the publication of the engraving may lead to the recovery of what is an interesting historical relic.

FAIRHOLT'S *Costume in England* has lately been undergoing revision by the Hon. H. A. Dillon. The new edition, in which much new matter and many fresh illustrations have been introduced, will be issued shortly in a cheap form as part of "Bohn's Artists' Library."

THE editor of *The Magazine of Art* has issued a programme of the new volume commencing with the part published on October 26. The monthly frontispiece will present a succession of pictures, showing the several processes employed in their production, such as photo-gravure, colour printing, wood engraving, chromo-lithography, photo-lithography, &c. Contributions will appear on "Art in Egypt, Assyria, Persia, Greece, Phoenicia, and Byzantium," by William Holmeden; "The History of the Royal Academy," by Harry V. Barnett; "The Medway, the Tiber, the Seine, the St. John's River, and other Streams remarkable for their Picturesque Beauty"; "Furniture in England," by J. Hungerford Pollen. The following authors have promised contributions by pen or pencil: R. L. Stevenson, Austin Dobson, Randolph Caldecott, Cosmo Monkhouse, Andrew Lang, Frederick Wedmore, Jane E. Harrison, A. Mary F. Robinson, J. W. Waterhouse, Yeend King, Julia Cartwright, Richard Heath, Basil Champneys, C. O. Murray, W. J. Loftie, Anthony Warton Henley, Eustace Balfour, R. A. M. Stevenson, J. Arthur Blaikie, Harry Furness, Sidney Colvin, George Saintsbury, &c.

MESSRS. VIRTUE & Co.'s announcements include the bound volume of the *Art Journal* for 1885, being the first of the new series. The volume contains twelve full-page etchings and line engravings, and more than 400 woodcuts in the text. Among the former are etchings by Messrs. Fred Slocumbe, C. O. Murray, Dr. Mordaunt, &c.; and engravings of Mr. Orchardson's "Napoleon on board the *Bellerophon*," Mr. Poynter's "Visit to Aesculapius," and Mr. Leader's "Evening Hour."

THE *Art Annual* for 1885, being the Christmas number of the *Art Journal*, will be devoted to the life and work of Sir J. E. Millais, as that of last year was to Sir F. Leighton. It will contain three steel engravings or etchings, including a full-page reproduction of the famous "Chill October." The other pictures of Sir J. E. Millais chosen for illustration comprise "Effie Deans," "The Huguenot," "The Bride of Lammermoor," "Hearts are Trumps," "New Laid Eggs," "The Duchess of Westminster," &c., &c.

THE same publishers have also made arrangements for issuing in this country M. Paul Lacroix's illustrated works on the Middle Ages, edited and revised by Mr. Walter Armstrong. The series will be begun by *The Arts in the Middle Ages*, illustrated with twelve chromo-lithographs and more than 400 woodcuts.

THE other illustrated books include *The Riviera*, by Dr. Hugh Macmillan; *Italy: its Rivers, its Lakes, its Cities, and its Art*; and *Art as Applied to Dress*, with special reference to harmonious colouring, by Miss L. Higgin, late of the School of Art and Needlework, South Kensington.

AMONG forthcoming illustrated works is a *Life of Our Lord from the Early Italian Masters*, which has been long in course of preparation by the National Society. It includes coloured reproductions, pictures by Angelico, Perugino, Luini, and other masters, together with some by Gaudenzio Ferrari which have not previously been introduced into England. The editor, Mr. F. T. Palgrave, contributes a series of notes upon the pictures, together with a prefatory essay on the growth, aims, and development of religious art in Italy.

NOTES ON ART AND ARCHAEOLOGY.

THE season for exhibitions, which lasts throughout the entire year, with the exception of the two autumn months, is now again beginning. Next Tuesday, October 3, three exhibitions will open to the public, the private view of all being to-day. These are the annual exhibition of the Photographic Society of Great Britain, in the rooms of the Royal Society of Painters in Watercolours; a special exhibition of sketches and studies in watercolour and pastel at the Dudley Gallery; and the winter exhibition of Messrs. Hollender and Cremetti in the Hanover Gallery, New Bond Street.

THE Royal Academy of the Lincei at Rome has undertaken, with the assistance of a special grant from the king, to publish the *Codice Atlantico* of Leonardo da Vinci. It is estimated that the work will take eight years, and will cost no less than 96,000 lire (£3,840).

M. THÉODORE BALLU, the architect of the new Hotel de Ville, at Paris, is to be honoured by a bust placed in the great Galerie des Fêtes of that building. The commission for the bust has been given to M. Barrias.

THE church of St. Etienne du Mont, at Paris, commenced in 1229, reconstructed by Francis I., and added to by Henri IV., is about to be restored. Pascal, Perrault, Rollin, and other famous men are buried there.

A BYZANTINE Museum is to be formed at Ravenna, and systematic excavations are to be undertaken in the Regio Classense.

KARL STICHLER describes in the *Berner Intelligenzblatt* the ancient baptistery of Riva San Vitale, in the canton of Ticino, which he asserts to be the oldest ecclesiastical building in Switzerland, and possibly in northern Italy. It stands close to the parish church, and is octagonal in shape. In the centre is an ancient font, "a veritable bath, such as the early Christians used," in excellent preservation. He observes that the handbooks for tourists contain no notice whatever of this remarkable monument of Christian antiquity. An account of it, however, may be found in Lavizzari's *Escursion nel Cantone Ticino* (Lugano, 1859, p. 117), and also by Prof. J. R. Rahne in the volume of the *Anzeiger für Schweizerische Alterthumskunde* for 1882.

MUSIC.

MUSIC NOTES.

AT the Congrès Musical International, held last month at Antwerp, a paper was read by the secretary, M. J. Ed. Croegaert, on "Uniformity of Pitch." The French Commission which met

in 1858, by order of the Emperor Napoleon III., fixed the vibrations of A at 435 (870), the lowest of all the specimens submitted to its notice. The Commission appointed last year in Italy adopted the A of 432 (864). M. Croegaert is strongly in favour of the latter, for, according to him, it is in conformity with the theories of the mathematician and philosopher Hoene Wronski, who, fifty years ago, claimed to have discovered the real essence of the absolute, and thereby to have made all sciences rest on a sure and solid basis. Whatever the value of Wronski's doctrines, certain is it that the A of 432 (864) vibrations has found favour with many specialists. M. Croegaert pleads for uniformity of pitch, not to be agreed upon as a matter of convenience, but as the outcome of scientific investigation.

MESSRS. SAMPSON LOW have in preparation a *History of Music*, from the earliest times to the present day, by Mr. W. S. Rockstro, the author of the *Life of Handel*, and other works. It will consist of six sections: (1) Early Music, with special reference to the musical system of the ancient Greeks; (2) Music in the Middle Ages; (3) Music in the Seventeenth Century, describing the decline of the school of Palestrina and the rise of that of Monteverde, &c.; (4) Music in the Eighteenth Century; (5) Modern Music, with special chapters on the opera of different countries; (6) Future Prospects, dealing with the principles of Wagner and their probable influence upon the progress of the art. The work will be in one volume of about 450 pages.

A NEW work, entitled *Hints to Violin Players*, by a Professional Player, Author of "The Violin: How to Master It," will be published immediately.

LITERATURE.

THE NEW VOLUME OF MOMMSEN'S HISTORY OF ROME.

Römische Geschichte. Von Theodor Mommsen. Fünfter Band: "Die Provinzen von Caesar bis Diocletian." (Berlin: Weidmann.)

(First Notice.)

THE most important phenomenon in history is the decline of the Roman empire and the Graeco-Roman civilisation. It is a solitary example of the loss of the precious gifts of civilisation when fully within the grasp of mankind. A sense of pity and of waste, a sense of personal loss, and a feeling of dread for the future, make us unable to think without emotion of the old world. The ideas of the Greeks, the law and order of the Romans, had built up a civilisation more admirable in many respects than our own, and quite capable of evolving from itself those moral and other improvements on which we pride ourselves. The Mediterranean countries were wrought up to great economical perfection. Peaceful co-operation and exchange had taken the place of war. Material appliances were abundant. Life was highly organised, comfortable, and elegant. With less knowledge than he now has, man had yet subdued the earth, in the time of M. Aurelius at least, as thoroughly as ever he did before the first sod was turned for a railway. Man had taught himself *δουρνώμενος ὄργας* to an extent undreamed of by Sophocles. Then, all the ground gained was lost, and the task had to be begun afresh. For people, indeed, who look at the world with our eyes, there has never been but one civilisation. There were possibilities in Egypt and possibilities in Peru; but the degree of positive attainment was low, and, whatever it was worth, we are out of sympathy with it. We cannot take it in or enter into its ideas. But to the cultivation of Hellas and of Hellenised Rome every European nation seems to be susceptible. Whether we now inherit such a capacity from forefathers who have more or less entered into the spirit of the Humanities since the time of the Renaissance, or whether some of us—Kelts, Germans, Spaniards, or Italians—may inherit from ancestors yet further back whose lives were shaped for them by Rome, I dare not say; but, at any rate, the society into which we are born is filled with and enlightened by the thoughts and expression, the life and the art, of Greece and Rome. Yet we are living only on the fragments of their legacy to the world. Their literature has come down to us incomplete, their art shattered; their buildings and their personal memorials have suffered every species of outrage from Christian and Mohammedan, from superstition and theft. Papal Rome only ceased to decorate her churches and palaces

with stolen marbles when there were none left to steal. The peasants of Northumberland have only just learned not to break up inscribed stones, and have not yet learned to refrain from pillaging finds of Roman coin. The taste and intelligence of the Greek and the strong arm of his Roman protector ceased to sway the world. What this entailed is plain enough—a thousand years of degeneracy, of groping in the dark, of rude efforts at improvement and revival; a thousand years of injury to MSS., to statues, to inscriptions. But the causes are not plain. It is only generalising the facts to say that the decay of the old world was two-fold—a decay of mental power within, and a decay of military power to face the German barbarians and Mohammedan fanatics without. Civilisation failed to protect itself. But why?

To this crowning question no clear answer can be obtained from Dr. Mommsen, or at least from his present volume. No one can be better aware than he is of the sadness of the story which he has to tell. His pictures of what Asia Minor or Syria or Egypt used to be are most depressing in comparison with what these countries are now. For many lands, he says, of both East and West, the Roman empire is the highwater-mark of their well-being. "If" (to venture on translating his words),

"If an angel of the Lord had to decide whether the regions subject to Severus Antoninus were governed in his time or in ours with greater wisdom and humanity, whether manners and well-being have progressed or receded, it is very doubtful whether the decision would be in favour of the present day."

The materials given by Dr. Mommsen himself may make a more fallible critic morally sure that the decision would be against the present day. But, at all events, Dr. Mommsen's answer to our original question is not here given. It is not unlikely to be found in his unpublished fourth volume, for his account of the imperial period must somewhere contain a general view of the principles that guided its administration and its foreign policy; and at present such an account is wanting. We can only refer those who seek one (as, perhaps, Dr. Mommsen's preface is meant to refer them) to those volumes of the *Handbuch* in which Dr. Mommsen has treated of the *Staatsrecht* and Marquardt of the *Staatsverwaltung*.

But even there the outline of the empire is not all drawn. The imperial government is a Dyarchy, says Dr. Mommsen; but he has not yet published his volume on the senate, the second member of the Dyarchy. There is nothing about which many people are more curious than to see how he will justify the name "Dyarchy," and on this point the volume before us is very naturally silent. Its subject is "The Countries and the Peoples," from Caesar to Diocletian, and vol. iv. is hereafter to give the outline of the Principate (I had nearly said "Monarchy") set up over those countries and peoples. That Dr. Mommsen distrusts the ordinary portraits of the emperors; that Tiberius was the most capable ruler the empire ever had; that Nero's earlier ministers were men of remarkable insight and energy; that Domitian was a very painstaking administrator—this is pretty well all that we learn at present of

the Roman government at Rome. But even thus much will not be useless to readers who have got their ideas of Tiberius from Suetonius, of Seneca and Burrhus from Tacitus, of Domitian from Juvenal.

The task of vol. v., then, is to give an account (helped out by ten maps) of all the provinces of the empire. Italy is, of course, excluded, though some foretaste of what there is to be said about it is afforded by the remark that "the Quirites of this age, the nominal heirs of the conquering legionary, looked upon their heritage as only a profitable claim, an endowment for idle paupers." This, however, we could read elsewhere; but nowhere else could we have found such an account of the condition and history of each province. For that reason, Dr. Mommsen thinks, the empire has often been wrongly judged. A reader will now find the provinces grouped naturally, and see their constitutional and military arrangements, their history, their commerce and trade-routes, their literature, the degree to which they were Romanised or Hellenised, their mode of life and tone of character, set forth in carefully balanced surveys. If any fault can be found with the plan of the work it must be that the military history takes up a great deal of room. But, after all, the empire did perish by the sword.

Devoid as the *Römische Geschichte* yet is, then, of a general conspectus of the administrative, provincial, and military organisation of the early empire, we can still to a great extent gather from the single chapters before us what Dr. Mommsen wishes to put forward as the main features in that organisation. We see how the armies were kept for frontier work; how, within the frontiers, Hellenism was supported and pushed forward in the East, in continuation of the work of Alexander and the Diadochi; how the western provinces and those of North Africa were arranged upon Italian lines; but how in either case, wherever, or as soon as, a population was fit for it, that population was organised in, or in dependence on, towns—cantonal and tribal arrangements being set aside. We can see, again, that from Augustus onward the Roman government was unwilling to advance the frontiers. This policy was, of course, flexible. Client-princes might have to be abolished, and their kingdoms incorporated under direct government. Different frontiers might require different treatment. Different reigns and ministers had different views, just as Augustus himself let drop the Dictator's plans of conquest. The management of Armenia varied a good deal. Now and then an emperor might carry the eagles a long way forward. Claudius sent them into Britain; Trajan revived the old spirit of conquest, and added Mesopotamia to the empire; but Domitian held Agricola back, and Hadrian gave up the conquests of his predecessor. New annexations might sometimes even be necessary to protect old ones. Mauretania Tingitana, a poor and expensive province, was no doubt held in order to prevent invasions of Spain from Africa, though this object was not very fully attained, since we have many records of African inroads on Spain centuries before the time of Count Julian. The frontier policy might, too, be determined by commercial considerations, as when Augustus endeavoured by conquering Arabia to get rid of commercial rivals to Egypt and

Syria. But with all this variety in detail, healthy and inevitable as it was, there was a general understanding that the frontiers must not be pushed far forward, and that a Romanising process should, at any rate, precede (as in Africa) a Roman annexation.

In this connexion it may be asked whether what is now called a forward policy would not, if adopted by the Flavian dynasty and followed out steadily, have proved a good thing for the world. It is easy to see why it was not adopted. Depopulation and want of funds are the reasons. Yet the depopulation existed perhaps in Italy and Greece only; troops could be raised, and of good quality, too, in the western provinces; and, as to the want of money, a successful Parthian war or a renewed invasion of Arabia, *plenas Arabum domos*, might have done more than feed itself. The famous golden throne of the Parthian king, which Trajan took, and which even the pacific Antoninus Pius declined to give up, cannot have been the only bullion of the Eastern world. Of course, the advantages of pushing forward are plainest in Britain. If Domitian's jealousy would have allowed it, Agricola would probably, by conquering Ireland and North Scotland, have enabled the Romans to reduce their garrison and lower their expenses. But one cannot help wishing that the forward policy had been tried even in Germany. Very heavy would have been the financial burdens thereby imposed on the empire; but, when M. Aurelius was busy about his new provinces of Marcomannia and Sarmatia, he had nearly gained, on the one hand, a frontier line across Europe much shorter, and therefore much cheaper, than that afforded by the Danube, the *agri decumates*, and the Rhine, and, on the other hand, a new and dense population not insensible to cultivation and fit to bear arms for Rome. The Huns would have been shut out; the Saxons would have fought on the right side. It seems to me only a question of time. If the barbarians could thus have been held longer in check, civilisation within the empire might, probably would, have ceased to droop. Every modern European country has had its days of depression, of sterility, or of degeneracy, but most of them have recovered. Yet, on questions of this kind, it becomes us to speak with hesitation. All the better emperors were economical, not to say parsimonious; and though Dr. Mommsen, if we understand him rightly, approves of a policy of advance in the East, on the Rhine, and in Africa, it is at least possible that the Roman generals and statesmen measured their circumstances more justly than we can measure them. We see what was at stake more clearly than they did. We shall have reason to regret for ever an issue which they could not foresee; but perhaps they knew best what was possible.

Instead of advance, then, we find client-states, or "buffer-states," tried (not very successfully) in many parts of the world. We find in other parts the frontiers fortified, lines of great camps and small *castella*. The system of camps, of mile-castles, and smaller watch-houses in Northumberland gives us some idea of such a mode of defence; but in Northumberland we have in addition the great wall, so that the works offer an impassable barrier as well as a series of strong

positions. Fortified on both fronts, this line of works defied the open attacks of Caledonians or Picts from the North, and surprises from the Brigantes to the South. Dr. Mommsen is justly complimentary to Dr. Bruce and others who have so thoroughly explored and mapped our Roman wall, and regrets that the German *limes* has not been worked out with equal care. Enough, however, is known of its course to enable him to say that it was not a wall of defence, like the British one, meant to prevent hostile inroads. The swamps behind it, the positions which command it, and the impossibility in many places of getting a view forward from it, preclude that idea. It was a customs-line, intended, where it ran across country between forts and between recognised lines of road and places of entry, to hamper the passage of smugglers with loaded carts and beasts of burden. It was doubtless strengthened by an *abattis* of felled trees.

The order of Dr. Mommsen's earlier chapters is such as rather to break the unity of subject and increase the difficulty of getting a conspectus of what was going on. He begins with the frontiers north of Italy; chap. ii. deals with Spain; chap. iii. with Gaul; chap. iv. with Germany proper; chap. v. with Britain; chap. vi. with the Danubian provinces. It would surely be better to take chaps. i., iv., and vi. together, not only because we should thus get at once the whole of the great question of the European frontier, but because all these chapters have to do with the German race. Of course, there are also Kelts, Illyrians, and the great Thracian stock; but the Germans have to be faced all along the line, and were the most formidable race. Tiberius seems to have seen this, and history justified his view of the Marcomanni, though not his German policy. Well may Dr. Mommsen say—

"The defeat of Varus is a riddle, not of the military but of the political kind. . . . It is hard to understand how the destruction of an army of only 20,000 men, without any further direct military consequences, can have given a decisive turn, as it did, to the policy of an intelligently administered empire."

That Augustus, at his age, and with his engrained maxims of policy, shrank from a new and terrible piece of work is perhaps natural; but why Tiberius, who had been practically the conqueror of Germany, should leave his own work undone and his own fame incomplete—should leave the Germans, as he said, to their own feuds, really leaving them at liberty to learn how to beat Romans—this is to me incomprehensible.

The chapter on Roman Britain (pp. 155-177) is the least satisfactory. It is as thin and poor as Dr. Mommsen's work ever can be. It is curious that a continental author seems always able to write more correctly about another continental state than about this country, and Dr. Mommsen makes the strange mistake of supposing that Welsh is spoken in Cumberland. The account of the conquest of the island, and of the subsequent risings is told as well as the scanty materials admit. Little can now be added to these materials except by conjecture. The conjecture is bold, though perhaps acceptable, which infers a surprise of the camp at Eboracum and destruction of the Ninth Legion by the

Brigantes, in the time of Hadrian, from two references in Fronto and the *Historia Augusta* to troubles in Britain, Juvenal's phrase about the *Castella Brigantum*, and the sudden "disappearance" of the Ninth Legion, the sixth appearing in its stead, soon after A.D. 108. For this Dr. Mommsen refers us to *C. I. L.* vii. 241; but after all, when we separate hypothesis from facts, we do not know more than that the inscriptions of the Ninth Legion suddenly end. When we pass from the military to the internal survey of the province, we find that the materials might have furnished a fuller account. Neither the text (which bestows eight lines on the subject) nor Kiepert's accompanying map gives any idea of the system of the Roman roads in Britain; yet they are at least as well known as those which are filled in to the map of Asia Minor. Little is said of the religion of the country; its local gods (as, for instance, the recently discovered Dea Coventina) are almost passed over in silence. The mining is but just mentioned; the other occupations of the country, as the pottery-works, are not named. Indeed, the material wellbeing of the country is indicated chiefly through a circumstance which is perhaps doubtful or exaggerated. Dr. Mommsen repeats the old assertion of the great fertility of our island in corn, and says, "The Rhine legions often got their corn from Britain;" but is there really any authority for all this beyond some vague declamation (without facts), and one fact in Ammianus about corn carried from Britain to Gaul by (I think) Julian? Is it true, again, that no Roman villas have been found north of Aldborough, in Yorkshire? Was not one found beside the Roman market-place in Chesters Park about ten years ago?

F. T. RICHARDS.

Selections from Steele. Edited, with Introduction and Notes, by Austin Dobson. (Oxford: Clarendon Press.)

THIS is an educational work, and as such it necessarily imposes certain arbitrary limits upon its editor. It appears in the form of a companion volume to a similar selection from Addison previously issued in the same series, consists mainly of papers from Steele's contributions to the *Tatler*, *Spectator*, and *Guardian*, prefaced by an introductory account of Steele's life and writings, and supplemented by notes and an index, and apparently aims at securing for Steele his proper place beside his more illustrious coadjutor. It would be invidious to institute comparisons between the performance of the two editors; but one may be allowed to suggest that the two volumes might have presented a greater unity of purpose. In one respect their subject is the same; but, as it is, they are two separate and independent volumes. Thus there comes to be repetition, there is want of homogeneity, there is even cross-working (evidently quite unintentional), for the paper that describes the Spectator Club is printed in both volumes, though of course it rightly belongs only to Steele.

But, taking the present volume as it stands, we have reason to be grateful. Mr. Dobson's notes, to tell the truth, are frequently somewhat "high" for an educational work; but they are always fresh and stimulating, rich

in illustration, amply informed, yet never burdensome, and conspicuously free from scholastic pedantry. It would have been better if the index had been one to the text than one to the notes, better still if it had referred to both. The introduction leaves little to be desired. Without entering into controversy or harking back on the statements of predecessors, the editor has narrated simply and clearly the facts of Steele's life and work. He has reversed much previous criticism, but he has done so without obtrusive advocacy. He does not plead. He prefers to turn the hostility of his author's assailants by an illuminative side-light of sympathetic criticism; and it is very agreeable to listen to these quiet and lucid remarks after one has had to endure the supercilious airs of Thackeray and the hammer-and-tongs rhetoric of Macaulay. Mr. Dobson has been very gentle with Steele. He has wished to tell what he knew to be the truth about the man, and he has done so with that tenderness of touch familiar to us in the author of *Old World Idylls*.

Apart from the educational purpose which the present volume is intended to serve, some such issue was almost due to Steele, were it only in justice to his memory. "Steele's claims have been somewhat underrated," the editor remarks in his introduction. Indeed, he might have put it more strongly than this, for Steele has suffered as much from undue neglect as from unfair disparagement. He has found ardent advocates, but neither in popular estimation nor in popular criticism has he received justice; and the amateur intelligence, in its appreciation of the true Steele, is usually but a reflex of Macaulay's flippant and skin-deep epigram. Though this is, in the first instance, only an educational work, and is therefore limited to educational ends, it will help to popularise Steele, and to secure for him the justice he deserves. It is painfully unfair that the lustre of Steele's quick mind and the beauty of his impulsive Irish heart should remain clouded over by the shadow of the friend whom he helped to raise to eminence and, with generous self-repression, was always proud to honour. If we are to choose between the two, Steele is the man we must love, not Addison; nay, we can scarce hesitate, even in the matter of respect, between him who went into the world to fight his own battle single-handed, and him who went through the world like a man led, never striking out a line for himself, and prudent mainly because he had not sufficient force of character to be otherwise. But Mr. Dobson has drawn attention to qualities of Steele's genius that entitle him to a higher place than he commonly receives. "In nearly every case the new departure, the fresh extension, comes from him. . . . Steele seems to have been the originating and Addison the elaborating intellect." But why "seems to," when we know that it was he who not only first struck out the idea of these periodicals, but drew the first rough draft of almost everything concrete in them? In the matter of their style, too, there is needed a more mature verdict than the *fanfare* which proclaims that "one paper of Addison's is worth all Steele's put together." Addison's "are faultless in their art," says Mr. Dobson, "and in this way achieve an excellence which was beyond the range of Steele's quicker and

more impulsive nature. But for words which the heart finds while the head is seeking, for phrases glowing with the white heat of a generous emotion, for sentences which throb and tingle with manly pity or courageous indignation, we must go to the essays of Steele."

Yes, and in this respect Steele was more of a human being than Addison was.

Mr. Dobson might have illustrated this point by a reference to the humour of the two writers. He draws ample attention to "the kind and steadfast heart which beats out undaunted to the end," and he might have shown how this kindness and truth of heart lend to Steele's humour a quality and tone not to be found in Addison's. Steele's humour is that of a full and impulsive nature, careless and frank, and too warm-hearted to be very satirical. It comes with the extemporaneous freshness of the man's character. It seems even sincerer from its want of polish; and though the writer touches off human weaknesses, he never forgets that he is only human himself. Addison's humour wants this hearty and unmistakable good nature. He has no strong passions, can feel neither great joys nor great sorrows, and hence when he is satirical, he throws into his satire only a half-hearted humanity. He has neither the "savage wrath" of Swift, nor the full-blooded mirth of Steele, but has a spice of that ill-nature which frequently belongs to persons who are the reverse of impulsive.

It is perhaps to be regretted that Mr. Dobson did not see his way to dwell a little on the historical aspect of these papers, and to indicate their historic significance. Mr. Arnold, in his introduction to the *Addison*, has said something on this head—somewhat clumsily and incoherently it seems to me—but a brief comment on the point would have naturally taken its place in a notice of him who was the pioneer of the movement and the originative mind of the two. He might have shown, in a word or two, that the purpose of the papers was not only to amuse, but also to educate, that they represented an attempt to harmonise English life after the rupture brought about by Puritanism. The effect of Puritanism had been to sever the lighter and the more serious sides of life. The result of this severance at the time of the Restoration was that both sides had become degenerate, that those who represented English seriousness had sunk into fanaticism, and those who represented English mirth had sunk into riot, that gravity had become bigoted and wit impure. After the first flush of the reaction had passed away, this antagonism began to tone down, and by the close of the seventeenth century we find gentlemen like Sir William Temple testifying that courtly manners were beginning to be reconciled with honourable behaviour and a pure life. Temple is the stepping-stone to Addison and Steele, the beginning of the reconciliation between the light and the serious. Formerly, too, literature had been addressed to the court, and reflected court life, or that fashionable life in town which inherited the Stuart traditions. Now literature was beginning to extend to the country, and to appeal to a wider audience, and the numbers of the *Tatler* and *Spectator* were scattered over all the counties of England. Thus widening their audience, the writers found the alteration in

tone more easy, and could announce without danger of condemning their venture at the outset that their intention was "to enliven morality with wit, and to temper wit with morality." Hence the large number of papers directed to a distinctly moral end, and hence the fact that Steele and Addison are moralists as well as wits. Moralising, like the "Visions of Mirza," was in the air at the time, and permeated such diverse work as the sentimental comedy of Steele, the *Essay on Man*, and even *Robinson Crusoe*, and was to be continued in Johnson, "the great moralist," and in the novelists of the next generation.

This, however, is a smaller matter when we consider the deep service the present editor has performed for Steele. The volume is one that deserves the hearty support of those associated with the interests of the higher literary education. JOHN G. DOW.

The Lives of Robert and Mary Moffat. By John S. Moffat. (Fisher Unwin.)

THOUGH South Africa is a "grave of reputations" for statesmen and generals, a goodly train have won distinction there in the peaceful fields of exploration and missionary enterprise. Speke and Grant, Livingstone, Stanley, Mackenzie are household words. To this list we may add the name of Robert Moffat, the story of whose life, together with that of Mary his wife, is told by their son John in this volume. It is the life of a man born in humble station and favoured with scanty advantages of education, but possessed of a single purpose to which he subordinated his whole being, body and soul. Moffat was a man of action, not of thought. From the gardener's apprentice to the "Father of Missionaries," who meets the prime minister of England and is the hero of Mansion House banquets, is a wide advance—an advance achieved by that power, which seems specially bred in a Scotchman, of seizing all possible means of increasing his knowledge and capacity.

The story is told with simple dignity. Robert Moffat left England on October 18, 1816, when he was not yet twenty-one years of age, bound, with four others, for missionary work in South Africa. Landed at Cape Town, he was delayed for some time by the refusal of the governor to allow missionaries to cross the border, and employed himself in learning Dutch and in preaching where he could. In 1817 permission was granted, and the missionaries proceeded on their way to the interior. One scene at a farm takes us back to the days when "Dogs and Hottentots not admitted" was written over church doors in South Africa.

"Supper ended, a clearance was made, the big Bible and the Psalm-books were brought out, and the family seated. 'But where are the servants?' asked Moffat. 'Servants! what do you mean?' 'I mean the Hottentots, of whom I see so many on your farm.' 'Hottentots! Do you mean that, then? Let me go to the mountain and call the baboons, if you want a congregation of that sort. Or, stop, I have it: my sons, call the dogs that lie in front of the door—they will do.'"

But the old farmer was so affected by the preacher's words on the text, "Even the dogs eat of the crumbs . . ." that he afterwards relented and called the Hottentots in. "My

friend," he said, "you took a hard hammer and you have broken a hard head."

Moffat's first missionary labours were in Namaqualand, on the west coast, and the result was seen in the conversion of the outlaw chief, Afrikaner, and his visit to Cape Town. A hundred pounds had been put upon his head, a sum which was now employed by the government in giving presents to him. In 1819 Moffat returned to Cape Town, where he welcomed his affianced bride, Mary Smith. She was the daughter of his employer at Manchester, a young lady whom he had so fired with missionary zeal that she promised to accompany him in his labours. He had longed eagerly for this union, and at length her parents had allowed her to join him. "A missionary," he says in a letter to his father, "in this country without a wife is like a boat with one oar." After the marriage they started for Kuruman, then called Lattakoo, in Bechuanaland, the place with which his name is chiefly associated, and where a mission had been founded in 1816 by Hamilton and Read. The government again put difficulties in his way; and during the consequent delay Mary, afterwards Mary Livingstone, was born at Griqua Town. In the year 1821 Moffat's permanent connexion with the Kuruman Mission began, a spot whose surroundings are thus sketched in a description applicable to the most part of that Bechuanaland which has lately exercised the British mind.

"As soon as we ascend the low banks on either side and leave the river [Kuruman] we find the surrounding country barren in the extreme. For many miles nothing is seen but stony hills and sandy plains covered with long grass, which for the greater part of the year is not green, but a light straw-colour. The continuity of the grassy expanse is broken by scattered bushes a few feet high, and of a dull grey hue, and dotted here and there with a few dark-green camel-thorn trees. Westward lies the Kalahari Desert and desolation. Eastward the country improves in fertility."

The people were as unprepossessing as their country—thieves to a man—and their chief too weak to control them. Contrast this with the final scene of peace and plenty, when the "missionary fathers" of the hamlet met at sunset on an eminence overlooking the church and mission houses and schools, with the native villages around; and the fruit of a long period of incessant toil is plain. In dealing with the native chiefs, Moffat based his action upon the principle of "implicit mutual confidence." He obtained a complete ascendancy over the Batlapings, even as St. Paul over his heathens, by the works he did. He brought them religion and civilisation. When the Mantatees, displaced by the forces of Mosilikatse, threatened to drive the Bechuana tribes into the Kalahari, he obtained timely warning of their advance, and by the aid of the Griquas repelled the invasion. The fame of the white man of Kuruman reached this same Mosilikatse, chief of the Matebele and a revolted lieutenant of the Zulu tyrant Chaka, and he sent two headmen to request a visit. Ultimately Moffat proceeded to the Matebele country, and made a friend of the warrior, a circumstance of great subsequent advantage to the cause of civilisation. It produced the beginnings of a Sechwana literature. He

paid a two months' visit to the Barolongs, where he heard nothing but Sechwana spoken, and lived in the filth of a "kraal," and thus by an act of severe self-denial gained a complete mastery of the language. He then translated and printed the Bible, Bunyan's *Pilgrim's Progress*, and other books, into that language. The New Testament was printed in England during his visit from 1838 to 1843 (when he also wrote his *Labours and Scenes*); but the rest of the work was accomplished at his own press at Kuruman. In all his work he was assisted by his wife Mary, fit wife for such a man, and endowed with a martyr spirit. In great part their letters tell the story of their life; nor is the narrative wanting in dramatic scenes. Such is the account of the last utterance of "Moshete" (Moffat) before the assembled court of the old tyrant Mosilikatse, when the sable warriors were ranged in semi-circle, and the women crept up close to hear, and all listened in breathless silence—a scene almost Homeric in its simple power.

Perhaps the main value of the book will be found in the light it throws upon the relations of the Boer emigrants with the native tribes up to 1870. Of course, there was no love lost between the missionaries, whose aim was to civilise the various tribes, and the Boers, who deemed themselves a chosen people destined "to slay and spare not." The author displays great moderation in his narrative, but it is impossible to escape the impression that a brutal disregard of human life and of all law was shown by these "pioneers of civilisation." The effect of the various "trekings" from 1837 onwards was to displace the tribes from the districts now known as Natal, the Orange Free State, and the Transvaal. Mosilikatse was driven north-east to the Zambesi, and the American mission station destroyed. The missionary work of Livingstone was brought to a full-stop—a fact to which we owe his subsequent explorations; and the Bechuana missions and Kuruman itself threatened. The explanation of the phenomenon of an English government repeatedly conniving at large numbers of its disaffected subjects leaving the country to stir up the natives is thus explained:

"To those in power, who had no permanent stake or interest in the country, and to whom it was a sufficient object to get quietly through their own term of office, it was an advantage rather than otherwise to be rid of a few thousands of disaffected spirits."

There is a passage in a letter of Robert the son (then a government official), dated 1849, which has been verified lately to the cost of the English taxpayer, and the contempt of the English name in South Africa. "If government should not be more decisive, this land will yet have to deal with a *white semi-barbarous herd* who, with a still prouder obstinacy, will resist all coercive measures." After the treaty recognising the independence of the Boers north of the Vaal River, Moffat writes (November 1852), "Every act of rapine and bloodshed is carried on with the excuse that the country is theirs by authority of the Queen of England." Under these circumstances we are not surprised that "it was inconvenient to the Boers that there should be men near who should be able to give testimony to the civilised world of what

was going on in those remote regions—men who could neither be cajoled nor intimidated into silence."

The book will be read with eagerness by people who are interested in South Africa or in missionary enterprise. Outside these two classes the inherent dullness of biography will prevent it from penetrating far. To attract a general public a biography must be rich in anecdote and warm human interest, if possible to the subject's detriment. This is not a "spicy" book.

W. BASIL WORSFOLD.

A SYMPOSIUM ON IMMORTALITY.

Immortality: a Clerical Symposium on, What are the Foundations of the Belief in the Immortality of Man. (Nisbet.)

THE eleven papers in this volume were originally contributed to the *Homiletic Magazine*, whose editor explains in a preface that each contributor was selected "because he had made a special study of the subject, had published something upon it, or had become a representative of a certain phase of thought or section of the Church." The selection has been admirable, and, allowing for inevitable defects, the Symposium could scarcely be better. These defects, however, must be noted: each writer is limited to thirty pages at most, so that unless he confines himself strictly to some special point, his essay is necessarily fragmentary; and the effort to cover all the ground, and escape this unscientific fragmentariness by the use of sections and sub-sections, makes some of the articles read like abstracts of larger works, from which the eloquence and literary grace have been necessarily omitted. We will charitably assume also that this want of space is the reason of an occasional dogmatism, which becomes loudest where the argument seems weakest.

The Rev. Prebendary Row opens the Symposium, and the papers follow lines of thought suggested by him, till Prof. Stokes brings up the question of Conditional Immortality, to which Principal Cairns and Mr. Edward White entirely confine themselves. Mr. Row's paper has a unity of design which his fellow writers do not usually attain to, but to many readers it will be disappointing. His aim is to prove the insufficiency and uncertainty of all foundations for the belief in immortality except the New Testament revelation. In his anxiety to gain his point he even cites the Old Testament as an instance of the "inability of reason alone to place the belief in a future state on a sure foundation." As a consequence, Mr. Page Hopps and Mr. R. Gregory make the inquiry what Mr. Row means by the inspiration of the Old Testament, and Rabbi Hermann Adler devotes his whole paper to a proof of the "strong foundations of the belief in a future life to be found in the Hebrew Scriptures." None of the articles are pleasanter than Dr. Adler's convincing and scholarly argument. Mr. Row finds even less comfort in Plato and Homer than in the Jewish Scriptures; he complains that the arguments of the *Phædo* are weak, and quotes Achilles's words respecting the underworld. Mr. Garrett Horder opposes this part of his paper by setting the

universality of the belief in immortality against its alleged vagueness; but all such argument tends to degenerate into mere lists of instances, and ignores a most important consideration. The strength of Plato's arguments for his belief is one thing, and the strength of his belief another; his arguments seem to us weak, but this rather serves to render the strength of his belief more obvious. The essential charm of his writings consists in the reality and vividness for him of the unseen world and immortality. To many minds such an intensity of conviction will seem more valuable than any arguments; and it is surely such an intensity of conviction rather than arguments that we find in the New Testament. Mr. Hopps's expression of what we owe to Christ in this matter will bear quoting:

"We cannot help feeling that He lived in two worlds; He never felt Himself really alone; He did not so much talk of heaven as live in it; and when he referred to His Father, it was as one who almost heard His voice and saw His face; His was not an argument, but an insight; not a speculation, but an inspiration; not a hope, but a recognition."

Mr. Row only shows that Plato's and Daniel's belief in immortality was independent of reason; he does not show that it was unreasonable. A point which many of the writers disagree upon is where Plato's belief comes from. Mr. Row would apparently trace it to "reason alone"; the Bishop of Amycla would refer it to "tradition" originating in a primitive revelation; Canon Knox Little explains it by St. Paul's works concerning "the Light that lighteth every man that cometh into the world." Plato's conviction of immortality was thus "the result of the action of the Eternal Word," Christ speaking in Plato's heart. Canon Little's paper is consequently an eloquent analysis of the feelings which constitute a conviction of immortality rather than a *résumé* of the arguments of philosophers. His essay is a sermon on Mr. Hopps's fine saying, "A great thought is itself a great argument in some cases." The metaphysical side of the question is avoided by most of the writers. Prof. Stokes, having "never seen an argument of this class for immortality which to his own mind had the slightest weight," declines to be metaphysical; but the Bishop of Amycla makes up for such unkindness by an interesting exposition, towards the end of his paper, of the theories of the schoolmen, which will be found clear even by those who agree with Prof. Stokes as to its value. The dullest papers, in spite of their ability, are those of Principal Cairns and Mr. White on "Conditional Immortality." We feel that the scattered threads of the discussion should be gathered up at the end of the volume, and are irritated when a new subject is started. One very obvious "foundation" is nowhere in the book quite clearly stated: all the arguments which may be summed up by the question, Shall not the judge of all the earth do right? rest upon the foundation of a belief in God; and those who believe very strongly in a God will always find discussions as to the conditions of immortality tiresome.

It will be seen from what we have said that the volume cannot claim to be exhaustive

or scientific; but it is suggestive in the highest sense, and interesting as a summary of men's views on a great subject. It is also a proof that a "clerical" symposium can be conducted by men of widely different views with perfect candour and courtesy. One serious omission we must notice. Perhaps it could not be expected that the Symposium should consider the value of Dr. Tylor's and Sir John Lubbock's researches into the condition of primitive man, though of course the theory of a primitive revelation must face their discoveries; but something should have been said, if not on the question of the origin of the belief in immortality from dreams, at least on the point whether the acceptance of such an origin involves the rejection of immortality. The question is a wide one. We too often assume that to explain a thing is to explain it away. There are theologians who hold both immortality and its origin as explained by the anthropologists, and a Symposium on Immortality should have examined their position carefully. RONALD BAYNE.

NEW NOVELS.

Maruja. By Bret Harte. (Chatto & Windus.)

Thomas à Becket, the Saint. A Novel. By Conrad F. Meyer. Translated by M. v. Wendheim. (Leipzig: Haessel.)

Faithful. By Annette Lyster. (S. P. C. K.)

Andromeda. By George Fleming. In 2 vols. (Bentley.)

The Luck of the Darrells. By James Payn. In 3 vols. (Longmans.)

That very Mab. (Longmans.)

As it was Written. By Sidney Luska. (Cassell.)

Maruja will add little to the reputation of its author. Already we have begun by an involuntary compliment, for any one of its chapters—nay, pages—would be an apotheosis for the mournful band of mediocrities we must pass in review to-day. Hitherto our protest has been not against him, but against his British admirers. It was well that he should record, once for all, in his telling sketches the fleeting phenomena of Californian semi-barbarism: it was not well that they should misunderstand and misadmire "this brutal pathos, whiskey-fed," as a revelation of ethical perfection, instead of a record of ethical facts. We may have objected to some of his farfetched words and overstrained metaphors—have thought him often too intense about trifles, and too careless sometimes of greater matters—but never for a moment did we forget the immeasurable distance between the man of genius and the emmet-swarm of popular scribblers. Nor do we forget it now while we venture to point out what is essentially unsatisfactory in *Maruja*. It goes either too far or not far enough. In length and elaboration it is hardly more than a sketch; in plan it is a novel. The plot is ambitious and intricate—the characters numerous, highly varied, and some of them most complicated—the interest mainly attaches to two or three parallel trains of psychological process, slowly working in minds of no ordinary type, and which require most minute and lucid analysis. In short,

we have the framework of a lengthy and well-filled novel. The result is disappointing and even irritating. And the more so that much of the limited space, especially in the earlier chapters, is wasted on the European guests at La Mision Perdida—their talks, their loves, their junketings—none of which help or please us much. The main picture—that of the antique, effete, Spanish patriarchal life in its last struggles with the Californian renaissance—is revealed, as it were, in fitful and wayward glimpses, vivid and dramatic enough, but which we Cis-Atlantics can hardly understand without a key. *Maruja*, the central figure, we scarcely comprehend now. The process is faintly traced, but never explained, by which this proud beauty, who rejects millionaires and calmly waits the advent of some suitor of the old Castilian blood, is suddenly magnetised by the hang-dog gaze of a Yankee tramp, and at last prepares to elope before she finds out that he has expectations. This was no Prince Charming in disguise. The man had never been in a much different position. Perhaps it is all natural, but it needs explanation. Again, *Maruja*'s mother, a stately, jovial, Spanish dame, is sprung upon us in a mysterious character, and her relations to Dr. West are somewhat obscure. West's interview with his suddenly found son is admirably done; but how much more might have been made of both characters and of their mutual relations! It is the same throughout. The cream of the book is the episodic scenes and sketches in the author's old manner; but these are dwarfed and dulled by the elaborate plot, which is rather indicated than worked out. The shallow inference would be that Mr. Bret Harte cannot write a great novel. We infer nothing more than that he has not yet tried. We cordially wish he would. As everyone will read, or has read, *Maruja*, we need give no detailed account of its contents, which are rich in interest and a certain wild fascination belonging both to the author and his subject.

The rubricated, well-bound, well-translated little novel of Herr Meyer reads very much like a Waverley story. Nor is it much more misleading. We ought to know as much about St. Thomas as about any other great Englishman—the materials are ample; but how hopeless it is! Precisely what he was we cannot say, but certainly he was not all he is here portrayed. His marriage to the caliph's daughter at Cordova, and other wonders as startling, are perhaps allowable in the admirable setting of the story—it is told to a canon of Zurich in 1191 by a traveller; but the legendary, unhistorical character of the book should have been more clearly set forth.

Faithful affords little room for remark, and none for blame. The pious reflections are few and conventional, the general tone being favourable to the doctrine of freewill and practical exertion. All S. P. C. K. heroines on leaving the forcing pits of a pious home are transplanted to some cold, worldly, bad soil or other (in this case to the den of a Methodist grocer), where we always get some amusing lifelike and striking pictures. Daisy pursues a useful and honourable probation as a maidservant, leading very properly

to a prosperous marriage. Modest as it is, *Faithful* becomes a work of original genius and ripe philosophy when contrasted with the seven volumes of printed nothingness which remain for us to notice.

Of these, *Andromeda* is not the worst, miserable as it is. There is an entire absence of impropriety and bad taste, and there is a regular plot and regular characters. It belongs to the subdued, depressed, sentimental school. The heroine, Clare, is the ordinary vacant, monosyllabic mule, for ever being talked to, and talked at, but replying only by a grin, a meaningless "Y—e—s," or an abstracted repetition of the question. This Cheshire kitten has an elder sister of the same breed, "with the smile of a saint—enskied," but older and more talkative. Clare has divers lovers, among them a poetical Italian marquis—a whining little Byron, moralised and disinfected, very beautiful, but afflicted with a slight disparity in the height of his two shoulders. By a dexterous arrangement of the candle the author manages, whenever she wants to make a fuss, to throw upon the wall a hideous, hunchbacked shadow in all its "pitiful grotesqueness," "visible ironical negation of his life," &c., &c., whereat Clare shudders and shivers and quivers, and goes through her full performance in dumb show. With another lover she was overtaken by night and rain in the Alps. Quite an adventure. At last a peasant was to drive her home in his cart by moonlight. Before starting, the lover secretly gathered a besom of rhododendron and wild thyme (such rarities, too!), and laid them, dripping wet, on the seat. This delicate and comfortable attention is highly appreciated in her limp condition, and gives rise to much lovely sentiment. One character, however, a retired governess, is well described.

No morbid sentiment will be found in Mr. Payn's new novel, nor any sentiment at all. Nor, indeed, nonsense of any kind. It is quite plain, sensible, healthy, and honest. But if ever there was a piece of dreary, mechanical, scamped work, utterly commonplace and dull in design, and poor in execution, if ever a book exemplified day-work as opposed to piece-work, it is this *Luck of the Darrells*. True, the workmanship manages just to keep up to the level which will pass the foreman; but no! never does it rise above it. Whether this is incompetency or merely business shrewdness one cannot say. But certainly, few books have ever impressed us so much by the utter absence of any—even the faintest—glimmer of a spark of genius. Is there somewhere a volume, like the *Sermon Hints*, of skeleton novels? If so, Mr. Payn has taken one, and instead of filling it up, has just dispersed it through three volumes, padding it out with his usual perfectly sensible, perfectly commonplace reflections, and second-hand facetiae. The second volume is simply a deadlock. The third mainly consists of the catastrophe by which all the awkward people are killed off and the heroine inherits their estates and lover. This steam-boat accident drags through nine chapters. None of the characters are sufficiently marked to call for notice. Mechanical as the whole thing is, and supremely dull, we repeat that it is nothing worse! Its cool, straightforward,

businesslike pages can do no harm, and may even serve to purge some weak minds from the sentimental taint they have caught from the last fashionable romance.

That very Mab simply beggars description. How such monstrous twaddle came to be enshrined in so dainty a volume is a social problem. It belongs to the lowest type of the social-political-literary and everything-else satire or burlesque. It might be the work of a Balliol undergraduate who has not yet found his level. Without cutting a page one can sufficiently estimate its value. Idiotic as it is, and instinct with a vain fatuity which may prove incurable, it undoubtedly displays much command of language and promise of literary elegance.

Not much less absurd, but infinitely better fun, is the astounding musical romance, *As it was Written*. It should be "As it was Played," for most of the sentiments are expressed in musical terms, and once even in musical notation. Failing to paint Veronika in words, the hero decides to describe her by "this heavenly melody from Chopin's Impromptu in C-sharp minor," and then prints half a page of music. The book is by far the worst of the imitations of *Called Back*, and certainly the most amusing. It exaggerates the cold, abrupt style and morbid ravings. The hero is an extreme specimen of the musical *crétin* not seldom met in society, in whom the tone-faculty had dried up the well-springs of intellect. The Veronika is, of course, bloodily murdered by somebody or other, and the musical prodigy raves and maunders in a sufficiently amusing way. Yet there is no doubt this stuff is printed *au grand sérieux*, and not as a burlesque. To show the wealth of its nonsense extracts would have to be more copious than we can venture on, so we reluctantly leave this rich mine of fun.

E. PURCELL.

CLASSICAL SCHOOL-BOOKS.

Andocides de Mysteriis. Edited, with Notes, by W. J. Hickie. (Macmillan's Classical Series.) There can be no doubt that Andocides was a liar; but, fortunately for himself, he lied in the purest Attic Greek, and therefore his speeches may still be read with advantage. Mr. Hickie does well to recall Andocides to the memory of a scholastic world whose curriculum tends to become ever narrower. His text is based on that of Blass, with some changes of Mr. Hickie's own. The notes are excellent from the linguistic point of view, though it may be suspected that Mr. Hickie's minute attention to Attic usage in orthography and other niceties will put the book rather above the heads of the small boys for whom it is designed "as soon as the *Delectus* has been laid aside." But as to the interpretation of one or two passages (not more) we find ourselves at issue with him. In § 41, where Leogoras coming out of his house meets the informer Diokleides, and says "Ἀπὸ γὰρ σὲ οὐδὲ περιμένονσι; χρή μὲντοι μὴ ἀπαθεῖσθαι τοιούτους φίλους, we doubt whether the last words mean "Friends such as you are not to be alighted," as Mr. Hickie takes it after Dobree. The remark thus taken seems to have no point. But, if we suppose he meant "You had better not alight such friends as they might be to you" (cf. the clause ἐὰν δὲ κ.τ.λ.), we should have an appropriate hint given to Diokleides as he goes in to an interview with those who would be either his victims or his accomplices.

In § 110, ἐν τῇ 'Ελευσίῳ surely means a religious site or building in Athens (as in Pausanias 1.14.3), not "the temple at Eleusis." The temple there seems to be called τὰ ἱερά in § 132; while § 111 shows that the incidents ἐν τῇ 'Ελευσίῳ happened away from Eleusis. Ἀνθρωπίνως in § 57 can hardly be translated "in a humane manner," it is rather "as men." But, we repeat, the notes—as expegetical and linguistic—are generally very good. We should, however, sometimes be glad of a little more information on the matter of the speech. Thus, in § 71, Κηφίσιος γὰρ οὐτοῦσι ἐνέδειξε μὲν με κατὰ τὸν νόμον τὸν κείμενον, τὴν δὲ κατηγορίαν ποιεῖται κατὰ ψήφισμα πρότερον γεγόμενον, we miss first a statement of the difference between a νόμος and a ψήφισμα, very necessary for young boys; and, secondly, information as to what the law in question was. Mr. Hickie's tone in speaking of his brother scholars is not so urbane as we could wish. There is no occasion to quote the passages in which he patronises Mr. Shilleto or attacks the Dean of Christchurch. His readers will notice for themselves what is said, and regret it.

The Oedipus Tyrannus. By R. C. Jebb. (Cambridge: Pitt Press Series.) Prof. Jebb has here abridged his large edition of the *Oedipus Tyrannus*, so as to adapt it to school use. The book is purely an abridgment, and has no interest for professed scholars. The editor has altered his views in hardly any point; even the false quantity which Dr. Kennedy pointed out in the note on v. 1031 (*stud. Sophoclea*, ii. 79) still appears. But, as a school-book, the volume is worthy to take its stand beside its editor's *Ajax* and *Electra*. There is the same felicity of explanation and happy illustration of which Prof. Jebb is a master; and, though the scholar may regret the retention of various opinions, the schoolmaster will welcome the book as better (so far as we know) than any of the existing school editions of the *Oedipus Tyrannus*. To one point only we must take exception—the metrical analysis (pp. xix.-xxxvi.). These are taken from Dr. J. H. Schmidt; but Schmidt's results, as everyone except Prof. Jebb knows, are exceedingly uncertain, and are generally rejected, for example, by Westphal, M. Schmidt, Gleditsch, Christ, and Zambaldi. It would have been absurd to put such pages into a school-book, were it not certain that no schoolboy will read them. There is a scarcity of critical notes on the MSS. and text, which stands in marked contrast with the practice of many recent school editions.

Euripides, Iphigenia in Tauris. By C. S. Jerram. (Oxford: Clarendon Press Series.) Mr. Jerram is a practised hand, and whatever he writes deserves the attention of schoolmasters. The little book before us is intended to be a companion volume to his editions of the *Alcestis* and *Helena*, and it seems worthy to rank with them. Personally the present writer finds the notes a little too full. They take up ninety pages, and are followed by a critical appendix (how many boys will read it?) of fifteen more. We do not see, for example, the use of stating that "the process of taking the cuttle-fish is described at length by Aelian de N. A. 7.34" (l. 263), or "Ovid tells the story of the slaying of the Python, *Met.* 1.441" (l. 1245). There are also one or two errors. But these are counterbalanced by the real merits of the work, which we think will be found very useful. Schoolmasters will now be able to choose between Mr. Paley and Mr. Jerram when reading this often-read play in schools.

The Andromache of Euripides. By F. A. Paley. (Bell.) We need do little more than call attention to the publication, in Bell's "Cambridge Texts with Notes" series, of this new play, with notes by Mr. Paley. It has all

the merits and demerits (such as they are) of its predecessors. We hope Mr. Paley will soon render all Euripides accessible to schools in this very convenient shape.

THE beautiful edition of the *Bacchae* of Euripides by Mr. J. E. Sandys, the Cambridge public orator, has just been re-issued from the Cambridge Press, with some not unimportant additions and corrections. The chief additions consist in six fresh representations: three from painted vases, three from sculptured reliefs of the death of Pentheus, and in some supplemental notes; but there are many slight alterations throughout the commentary which show how carefully public and private criticisms have been weighed, and how diligently the work has been kept up to the level of the latest researches. It is no slight advantage that Mr. Sandys has given the results of an accurate re-collation of the Florence MS. The gain is not great directly, but we can now be sure that there is not a significant touch in the MS. which is unknown to those who busy themselves with the criticism of the play. In scholarship and artistic finish, the volume is in every way worthy of Cambridge, where the archaeological school seems likely to bear good fruit. The binding and print are excellent. There is, however, just one point which we should be glad to see revised in a third edition—the *Conspectus of Metres* (pp. 239-51). It is a little puzzling to refer a student to Linwood's *Tragic Metres* or White's translation of J. H. Schmidt's Introduction, and then to add a list of the principal works, without one word as to the agreement or disagreement of the authors referred to. We gather that Mr. Sandys in details follows Wecklein, a very good authority, but quite at variance with some of the writers whom "the student" is bidden consult.

Cornelii Taciti Annalium, Libri I.-IV. Edited, with Introduction and Notes for the Use of Schools and Junior Students, by H. Furneaux. (Oxford: Clarendon Press.) The first volume of Mr. Furneaux's large edition of Tacitus (reviewed in the ACADEMY of June 28, 1884) comprised the first six books of the *Annals*, which form the portion usually read by candidates for honours at Oxford. It was inevitable that so successful a work should shortly appear in an abridged form "for the use of schools and junior students," who have hitherto had but little help in English for the study of Tacitus beyond Messrs. Church & Brodribb's familiar translations. But we hope that Mr. Furneaux has not turned aside from the project that was implied on the title-page of his first volume—of editing not only the remainder of the *Annals*, but also the other works of an author who is but too frequently broken up into fragments.

Easy Latin Prose Exercises. By H. R. Heatley. (Rivingtons.) This may be defined as an elementary treatise calculated to test the teacher as well as to instruct the pupil. It is without rules, but carefully graduated in difficulty: the earlier exercises are detached sentences, skilfully divided into clauses for *viva voce* practice, and longer sentences, *in pari materia*, to be rendered in writing. We believe this to be, if not the best method (Mr. Heatley modestly and wisely disclaims the idea of a "royal road" to Latin prose), at any rate a very good one: a preliminary *viva voce* canter, with hints from the teacher as to the particular difficulties of the coming course, is stimulating and helpful to boys; the vigilant look-out for hints, judiciously measured and not too broad, as to future pitfalls, is a faculty of great value for scholarship. The "Recapitulatory" exercises are extremely useful, but perhaps a little too frequent. We do not greatly believe in mere warnings, such as that on p. 132, "The vocabulary is not intended to be used in doing

prose." Boys will use what they have in their book: for our own part, we should advocate that this very moderate amount of vocabulary should be learnt by heart, a page or two at a time. The difficulty which boys, and even undergraduates, find in writing in a language which they have studied for years arises from their lack of materials for the task. They know more grammatical rules than words of the language; they have moulds for their bricks but no straw. In details, we should say that Exercise 149 (p. 126) was somewhat too hard; Exercises 65-8, on the forms *miseret*, *poenitet*, &c., *opus*, *uauis*, *interest*, &c., are particularly timely and profitable. The whole book is visibly compiled by a teacher who understands his functions; it is helpful, especially in its method, to less practised instructors.

Easy English Pieces for Translation into Latin Prose. By A. C. Champneys and G. W. Rundall. (Rivingtons.) Two colleagues at Marlborough have combined to produce this little book for the benefit of "middle forms." They think that the many existing books are too hard, and demand, at too early an age, acquaintance with Latin idiom as well as Latin grammar; and having striven, in their own forms, to adapt pieces to the capacity of the boys, they give the result to the public. This is practical, at all events; and we have reason to think the authors well qualified for the task. Some of the pieces are judiciously interesting, being descriptions of Abou Klea and Burnaby's death. For our own part, we prefer the plan of a collected vocabulary to that here followed of adding words at the end of each piece. Otherwise, it is a useful little manual. We wonder how many young boys are really, as well as formally, the wiser for such a phrase as "virtual oratio obliqua"?

Tripartita: a Course of Easy Latin Exercises arranged to suit the Threefold Division of the Year. By Frederick T. Holden. (Rivingtons.) Among so many similar books, how does *Tripartita* justify its existence? By its title and a certain apparent novelty in its plan. It attempts to supply matter for teaching young boys fifteen Latin constructions by twenty-five exercises partly recapitulatory and arranged for three terms (see Pref. iv., v.), the sentences varying for each term, but containing the same principles. It discards vocabulary, and (like W. W. Bradley's book) gives all the words necessary over against the exercise, with all information as to them. It seems therefore like W. W. Bradley's book, cut up into three lengths. It is simple, clearly printed, and correct, but is marked by nothing really original or peculiar.

We have also received: *Caesar, De Bello Gallico*, Book I., with two translations, one phrase by phrase and literal, the other free, by John Hugh Hawley (Relfe Bros.), &c., &c.

NOTES AND NEWS.

We learn that Mr. Robert Browning will contribute a poem to the new work which Messrs. Cassell & Co. are about to publish, entitled *Why I am a Liberal*.

We are glad to hear that Prince L.-L. Bonaparte is recovering from a slight attack of paralysis; but he will not be able to undertake any new work for some time.

In addition to Mr. Palgrave, we understand that Canon Dixon is a candidate for the vacant professorship of poetry at Oxford.

MR. AND MRS. JOSEPH PENNELL, the authors of that very pleasant *Canterbury Pilgrimage* on a tricycle, have lately returned from a long journey of two thousand miles on their Humber tandem, through France and Switzerland to North Italy and back, which they will, in due

course, describe and illustrate in *The Century Magazine*. Though their tandem tires are in ribbons, and its little wheel tied up with red string, the riders themselves are in excellent condition, and Mr. Pennell has months of illustrating work in hand. They happily just missed killing an Italian child; but what became of the flock of sheep into which they charged at over twenty miles an hour at a curve in an eight-mile hill, they did not stop to inquire. The Humber lived through it, and that was the only important point.

PROF. TERRIEN DE LACOUPERIE will deliver this term, at University College, his first course of lectures, which have been postponed on account of illness from over-work. The subject of the course is "The Science of Language as illustrated in South-eastern Asia." The inaugural lecture, which is free to the public without payment or ticket, will be delivered on Tuesday, October 20, at 4 p.m. It will treat of the misnamed monosyllabic languages and the various kinds of monosyllabism, the so-called musical tones and hybridism in language. The other lectures of the course will give a comparative survey of the languages and races of Further India or Indo-China. The fee for the entire course is one guinea.

ACCORDING to the *New York Critic*, Mr. W. D. Howells intends to spend the coming winter in Italy and Switzerland.

MESSRS. LONGMANS will publish in the course of the present month *Life in the English Church, 1660 to 1714*, by the Rev. J. H. Overton, rector of Epworth, one of the joint authors of "The English Church in the Eighteenth Century."

THE same publishers also announce a handsome illustrated edition of Miss Jean Ingelow's poem, "The High Tide on the Coast of Lincolnshire, 1571."

A SUBSCRIPTION reissue of Mr. Hall Caine's *Sonnets of Three Centuries* is announced by Mr. Elliot Stock.

MR. HUNTER BLAIR is reading the proof sheets of the *Charters of Croisraguel Abbey*, which will shortly be published by Mr. David Douglas, of Edinburgh, under the auspices of the Ayrshire and Galloway Archaeological Association. The collection comprises over one hundred and thirty original documents, and will be enriched by several plates illustrative of the abbey, facsimiles of the charters, royal autographs, and seals.

A NOVEL by Mr. Wilkie Collins, entitled *The Evil Genius*, will shortly appear as a serial in newspapers at home and abroad, through the agency of Messrs. Tiltotson & Son, of Bolton. The same firm have just commenced the serial publication of a story entitled *Lady Brunkemere*, by the author of "Phyllis," "Molly Bawn," &c.

MESSRS. F. V. WHITE & Co. will publish immediately a new volume by Mrs. George Linnaeus Banks, entitled *In His Own Hand*. It is founded on the life of William Hutton, the Birmingham historian and antiquary, and contains interesting pictures of Birmingham in the last century.

MESSRS. CASSELL & COMPANY have arranged to publish Thackeray's "Yellow Plush Papers," "Major Gahagan" and "Fatal Boots," as a volume of their "Red Library."

A History of Philosophy, by Mr. E. Belfort Bax, is in the press, as one of the volumes of "Bohn's Philosophical Library." It will comprise a summary of the history of speculation from the earliest times to the British neo-Hegelian School.

A NEW edition of Mr. Clement Scott's *Lays of a Londoner* will shortly be issued by Messrs. Carson & Comerford. The book will contain

several poems suitable for recitation which have hitherto been unpublished.

Good Words promises to break new ground in its Christmas issue, the whole number being filled by a Shetland romance, entitled "Britta." The author is understood to be a gentleman who, by long official residence in these remote islands, has gained an intimate knowledge of the interesting life which he depicts.

MISS SARAH DOUDNEY will write the special Christmas story for the *Sunday Magazine* this year. The title will be "Where Two Ways Meet."

READERS of the interesting reminiscences of her mother, which Mary Howitt is now contributing to *Good Words*, will be glad to learn that she is to continue them in next year's volume of the same magazine.

A POPULAR handbook on memory, under the title of *All About Mnemonics*, will be issued immediately by Messrs. Simpkin, Marshall & Co. The author is Mr. A. E. Middleton, of Whitehaven.

MESSRS. CASSELL & Co. have ready a boys' book by Mr. J. Frederick Hodgetts, entitled *The Champion of Odin*. The story is founded on Scandinavian legends and sagas, and the scene placed in Sweden and England. The illustrations are by Mr. Gordon Browne.

Strathearn Chimes is the title of a forthcoming Scottish Christmas Annual, to be edited by Mr. Alexander B. Bell of the *Crief Journal*.

THE forthcoming number of *The Scottish Review* will, in addition to Principal Tulloch's paper—"The Church of Scotland and the General Elections"—contain articles on "Scottish Catholics under Mary and James," "The Scottish Parliaments," "Scotland's New Departure in Philosophy," "The York Mystery Plays," "Records of Argyll," and "The Philosophy of Stupidity."

THE *Record's* Memoir of Lord Shaftesbury, published simultaneously as a newspaper supplement and as a pamphlet, was written by Mr. W. Morris Colles. Its production was a triumph of rapid printing. Lord Shaftesbury died at Folkestone at 1.45 p.m. on Thursday, October 1; Messrs. Spottiswoode & Co. received the last instalment of MS. and began to "set up" the pamphlet (150 pages) the same evening. By 5 p.m. on Friday it was on sale in London and on its way to every large town in England.

Good Goods, described as a "sarcastic topical" journal, has been purchased by Miss Florence Marryat, whose new serial, "The Hotel Musselburgh," begins in this week's issue.

THE New Shakspeare Society will open its thirteenth session on Friday, October 23—its hundred and ninth meeting—with a paper by a Cambridge man, Mr. Gerard B. Finch, on "The play of *Hamlet* from a Theosophic Point of View."

THE copyright of Heine's works will expire with the present year. Several cheap editions are already announced.

MR. ROWLAND STRONG's reprint of Otway's *Venice Preserved*, from the original quarto of 1682, appears to us to be exactly what such reprints should be. The text is carefully edited and unexcised; the old spelling and type (including the capital letters) is rigidly copied, and it is printed on fine hand-made paper, with a large margin. An excellent analysis of the plot is added, and the whole is published for eighteenpence. The printer is Mr. William Pollard, of Exeter. If it has the success it deserves, the series of Mr. Strong's reprints should be a long one.

MESSRS. RIVINGTON'S ANNOUNCEMENTS.

MESSRS. RIVINGTON have arranged for the publication of the following works: a volume of poems by Canon Bright, entitled *Iona, and other Verses*; a *Commentary on St. Paul's Epistle to the Romans*, consisting of the Authorised Version arranged in paragraphs and in dialogues, with notes, &c., by Principal Chase; *The Life and Times of John Leslie*, Bishop of the Isles, and of Raphoe and Clogher, by the Rev. R. J. Leslie; two new volumes by the Dean of Norwich, *Thoughts upon the Liturgical Gospels for the Saints' Days*, and *Holy Week in Norwich Cathedral*, being seven lectures on the several members of the most sacred body of our Lord Jesus Christ; *The Doctrine of the Church of England on the Holy Communion*, by Canon Meyrick, with a preface by the Bishop of Winchester; *Life of St. Francis of Assisi*, by Mrs. H. L. Sidney Lear; *De Vita Pastoralis*, the office and work of a priest in the Church of God, by the Bishop of Lichfield; *Modern Doubt and Unbelief: its Extent, Causes, and Tendencies*, by the Rev. E. Bickersteth Ottery; a revised edition of the late Sir W. Palmer's *Treatise on the Church of Christ*; a new edition of the works of the late Bishop Kaye, of Lincoln, in eight volumes; four new volumes of the series of "Stories of Countries," for children, dealing with the countries of Spain, Denmark, Holland, and Iceland; *A Sketch of Liberalism during the last Fifty Years*, by Mr. W. T. Arnold; *A History of English Literature*, in three volumes, by Prof. J. Nichol; *A History of the French Revolution*, in three volumes, by Mr. H. Morse Stephens; *Builders' Work and the Building Trades*, with illustrations, by Col. H. C. Seddon.

The following are educational: *Plane Trigonometry*, for the use of students preparing for examinations, with answers, by the Rev. A. Dawson Clarke; *A First Course of Physical Laboratory Practice*, with illustrations, by Mr. A. M. Worthington; *A Text-book of Electricity*, with illustrations, by Mr. L. Cumming; also, a work on *Heat*, by the same author; *A Course of Elementary Experimental Chemistry*, by Mr. W. A. Shenstone; the second volume of the *History of England*, by Mr. F. York Powell and Prof. J. M. Mackay, comprising the period from the death of Henry VII. to the present time; a new volume of the series entitled "Highways of History," edited by Mrs. M. Creighton, *The Social History of England*; *A First History of Rome*, by Mr. W. S. Robinson; *A History of Greece*, for the use of middle forms of schools, by Mr. C. W. C. Oman; a fourth volume of the Rev. Dr. J. Franck Bright's *History of England*, bringing the history down to about the year 1874; *A History of England*, for middle forms of schools, by Prof. Cyril Ransome; *A History of Hellas*, from the earliest times to the death of Alexander, by Dr. Evelyn Abbott; *History of the Romans* to the establishment of Imperialism, by Dr. J. S. Reid; a complete edition of *Bacon's Essays*, with introduction, notes, &c., by Messrs. F. Storr and C. H. Gibson, forming a new volume of "English School Classics"; an edition of Scott's *Marmion*, by Mr. F. S. Arnold, forming a new volume of "English School Classics"; an edition of Shakspeare's *Julius Caesar*, by the Rev. H. C. Beeching; *Animal Biology*, by Prof. C. Lloyd Morgan; *Lectures on Greek Prose*, by Mr. Arthur Sidgwick; *Greek Passages for Unseen Translation*, by the Rev. F. D. Morice; an edition of the *Pro Cluentio* of Cicero, by the Rev. W. Yorke Fausset; *A German Grammar*, by Mr. G. P. R. Glüncke, containing a new scheme of declensions, illustrated by stories by Mr. J. S. Phillpotts, of Bedford; *German Poetry for Schools*, by Messrs. C. W. Parry and G. Gidley Robinson; *German Passages for Practice in Unseen Translation*, by Mr. A. R. Lechner; two German books by Mr. H. S. Beresford-

Webb, viz., *A Practical German Grammar and A Manual of German Composition*; *A German Exercise Book*, by Mr. W. G. Guillemard; *Easy German Stories*: a first German Reading Book, by Mr. B. Townson; an edition of Schiller's *Wallenstein*, by Mr. R. A. Ploetz; an edition of Schiller's *Wilhelm Tell*, by Mr. J. L. Bevir; an edition of Freytag's *Aus dem Staate Friedrich des Grossen*, by Dr. Herman Hager; *Elementary French Exercises*, by Mr. A. A. Somerville; *French Prose Composition*, for advanced classes, by Mr. H. C. Steel; *A French Grammar*, for schools, by Mr. R. T. Carter; *French Grammar Papers*, by Mr. J. W. J. Vecqueray; *An Elementary French Grammar and Exercise Book*, by Mr. V. J. T. Spiers; two French books by Mr. W. E. Russell, *An easy French Reading Book* of interesting stories, and a volume of *Easy French Passages for Unseen Translation*; an edition of the Duc de Fezensac's *Souvenirs Militaires: the Russian Campaign in 1812*, by Mr. Granville Sharp; an edition of Molière's *L'Avare*, by Mr. A. H. Gosset; *Easy Selections from Plato*, forming a Greek reading book for the use of middle forms of schools, by Mr. Arthur Sidgwick.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. RICHARD BENTLEY & SON will publish during the autumn season a new work by Lady Jackson, entitled *The Court of France in the Sixteenth Century*, in two volumes, with portraits; *Madame Mohl and her Friends*, a sketch of Parisian society under Louis Philippe, by Grace Ramsay, with a portrait engraved by Stodart; *Old "Miscellany" Days*, being a collection of stories reprinted from "Bentley's Miscellany" of fifty years ago, with thirty-three illustrations by Cruikshank, from the original plates; *The Coaching Age*, by Stanley Harris, with fifteen full-page illustrations on stone by John Sturgess; *A Drive through England*; or, a Thousand Miles of Road Travel, by J. T. Hissey, with twenty illustrations of landscape by the author, engraved by G. Pearson; *The Chersonese with the Gilding off*, an account of a residence in the Malay native States, by Emily Innes; *Across the Jordan*, by C. Schumacher, with an Introduction by Laurence Oliphant; *Pastime Papers*, by F. Saunders; a cheap edition of Mr. Edmund Yates's Autobiography, with the story of his recent experiences in "Northern Latitudes"; a shilling edition of *The Ingoldsby Legends*, with forty illustrations; *Three Hungarian Stories* of Karl Edler, translated by Ottilie Mühlmann, and edited by Lord Lytton; and new editions of Capt. Conder's *Heth and Moab*, and of Lady Herbert's *Wives and Mothers in the Olden Time*.

MESSRS. HODDER & STOUGHTON's announcements include the following:—*The Sermon on the Mount*, beautifully illustrated, with introduction by the Bishop of Ripon; *The Pentateuch: its Origin and Structure*, an examination of recent theories by Prof. Bissell; *From the Tan Yard to the White House*, a companion volume to "From Log Cabin to White House," by W. M. Thayer; *Jacob Böhme: His Life and Teaching*; or, *Studies on Theosophy*, by the late Bishop Martensen; *Golden Legends of the Olden Time*, by the Rev. John Stoughton; *Our Collects, Epistles, and Gospels*, by Dean Howson; *The Will Power; its Range in Action*, by Dr. J. Milner Fothergill; *The Rule of Faith and the Doctrine of Inspiration*, by Prof. Watts; *Faithful Service: Sketches of Christian Women*, a companion volume to "Consecrated Women," by Mary P. Hack; *A Rabbinical Commentary on Genesis*, by Dr. Paul J. Hershen; *Forewarned—Forearmed*, by the Rev. Dr. J. Thain Davidson; *The Throne of Eloquence*, by the late Paxton Hood; *Memorials of Dr. Harold Schofield*, by Dr. A. T. Schofield; *In the Footsteps of*

Heroes, and Other Sermons, by the late Enoch Mellor; *The Parables of Our Lord*, recorded by St. Luke, by the Rev. Dr. Marcus Dods; *Classified Gems of Thought from the Great Writers of all Ages*, by T. B. Proctor; *Songs of Earth and Heaven*, by Newman Hall; *The True Woman: Elements of Character*, by W. M. Thayer; *Thrown on the World: a Story*, by Edwin Hodder; *Fritz and Eric*; the Brothers Crusoes, by J. C. Hutcheson; *Stirring Stories of Peace and War, by Land and Sea*, by Dr. James Macaulay; *The Good Fight*; or, *More than Conquerors: Stories of Christian Martyrs and Heroes*; *The Angel of Love*, a companion volume to "Autocrat of the Nursery," by L. T. Meade; *Ministers' Wives*, by Mrs. Martin; *The Daily Renewal*, by Dean Vaughan; *Peaceful Thoughts: a Daily Text Book*, beautifully illustrated; *The Anglican Pulpit of To-day*, containing forty short biographies and forty sermons; *Poor Boys who became Famous*, by Sarah K. Bolton; *The Children of Africa*; *Prudence Winterburn*, by Sarah Doudney; *The Penant Family*, by Annie Beale; *Dot: the Story of a City Waif*, by Annie Lucas; *The Book of Joshua: a Commentary*, by the Rev. J. Lloyd; *Bible Anecdotes from Every Land*; *A Little Silver Trumpet*, by L. T. Meade, with pictures by T. Pym; *From Pole to Pole: a Tale of the Sea*, by Dr. Gordon Stables; *The Owners of Broadlands*, by Mrs. H. B. Paull; *For James or George: a Schoolboy's Tale of 1745*, by the Rev. H. C. Adams; *In the Depths of the Sea*, by the author of "Launching Away"; *Nigel Lennox of Glen Irvine*, by L. N. Hyder; *Bible Flowers and Bible Lore*; *Platform Aids*, a new volume of "the Clerical Library"; *Sunday Readings for a Year*, by the late James Large; *A Christian Mother: Memorials*, by Mrs. Thornley Smith; *Doctrine and Doubt*; or, *Christ the Centre of Christianity*, by the Rev. S. MacNaughton; *Friendship's Diary: a Record for Every Day in the Year*; and a second series of *Songs of Rest*, edited by the Rev. Robertson Nicoll.

MESSRS. JOHN F. SHAW & Co.'s announcements for the coming season include *A Child of the Morning*, by the Author of "English Hearts"; *Songs of the Pilgrim Land*, by Mrs. Pennefather; *Every-day Life*, by the Rev. C. H. Waller; *Faith and Unfaith*, by Dr. H. Sinclair Paterson; *The Revealer Revealed*, by the Rev. W. H. M. H. Aitken. For Young People: *Five Little Partridges*, by Brenda; *A Tangled Web*, by Emily S. Holt; *Oldham*; or, *Sow beside all Waters*, by L. E. Guernsey; *Her Husband's Home*, by E. Everett Green; *On the Cliff*, by Catherine Shaw; *The River Waif*; or, *The Luck of Godfrey's Wharf*, by Constance Cross; *Afloat*, by Mrs. Stanley Leathes; *Sent to Coventry*, by M. L. Ridley; *Five Minutes Too Late*, by Emily Brodie; *Worth the Winning*, by E. Hornbrook; *Margaret Casson's Resolve*, by E. C. Kenyon; *David Elliott*, by C. E. Irvine; *Us Three*, by A. B. C. For the Little Ones, a new packet of the series "Something for Sunday," entitled *Messages from Heaven*. A new painting book bearing the title of *Mother's and Mine*, and the *Annual Our Darlings*. Of Smaller Books for Sunday-schools: *The Secret of the Forest*, *That Boy Tom*, *East and West*, *Oughts and Crosses*, and *Lost Maggie*, by M. E. Winchester; together with three new stories in their "Home Series."

MAGAZINES AND REVIEWS.

THE *Gentleman's Magazine* of this month contains two very interesting articles: one by Mr. Sidney L. Lee, of the New Shakspeare Society, on "As You Like It and the Forest of Arden," showing how much of Stratford's neighbourhood and folk may be traced in this and other plays of Shakspeare; the other by Mr. Ernest Rhys, "A Little Academe," describing

a visit to Coleridge's early home at Nether Stowey, and Wordsworth's at Alfoxden.

To the October number of the *Antiquary* Mr. Round contributes a short, but instructive paper on "The Open Field System in Herefordshire." Every fragment of knowledge which can be gathered out of our old systems of cultivation and land tenure is of extreme interest. No history of the English people can be satisfactory which does not deal with these subjects in detail, and at present the greater part of the evidence on which we have to work is locked up in MS. We can say little in praise of Mr. David Fitzgerald's strange paper on "Robin Hood and Robin Crusoe." It shows that the writer has read much, but the learning with which he is possessed has not taken upon itself a form which we can appreciate. Mr. G. Laurence Gomme has written an excellent article on "Labour Songs and Cries." They form, or rather contain, some of the earliest relics of human speech, and are therefore most useful to those who desire to uplift even a corner of the veil which shrouds the origin of all speech. Mr. J. T. Foster contributes an account of York House, the birthplace of Francis Bacon, and Mr. Brooks a paper on the battle of Brunanburgh. We do not think the latter adds much to our knowledge unless further evidence should be discovered—an accident which is most unlikely to happen. It is not probable that the place where this great conflict occurred will ever be identified. That it did not take place at Brumly in Lindsey, as has so frequently been affirmed, is about all that can be safely said on the matter. In the correspondence we find a letter from Mr. J. H. Round entitled "Mr. Freeman's Accuracy." Into the merits of the question we will not enter. The spirit on which Mr. Round writes is not one that is best fitted for literary controversy.

WE are glad to observe that the editor of the *Scottish Church* devotes a considerable amount of space to literature. In the October number there appears the third of a series of careful papers on "Scotch Literature since the Restoration." Mrs. Oliphant contributed to a recent number a story belonging to her delightful supernatural series of "The Little Pilgrim in the Seen and the Unseen"; and we are inclined to think that the serial fiction which is running its course under the title of "A Story of a Young Life," is hers also, although it threatens in the October part to become somewhat flat. Among other papers which are noteworthy is a critical, though somewhat unequal, article on Victor Hugo, which was published in September. The ecclesiastical articles are, in point of style, perhaps the liveliest in the magazine, but it is to be hoped that after the general election is over they will be fewer in number.

ORIGINAL VERSE.

EVE.

"... dasz ich genossen des Wissens Frucht,
Das kannst du nicht mehr sendern."—H. Heine.

THE serpent tempted thee to shame,
Mother Eve.

GOD'S direct vengeance on thee came,
Mother Eve.

AND never may we hope to win
That golden garden close hedged in
From toil and tempest, strife and sin,
Mother Eve.

BEFORE thy wondering, wakened eyes,
Mother Eve.

CLASHED shut the gates of Paradise,
Mother Eve.

THY wandering feet, thy hands were torn,
By briar, wayside weed, and thorn,
Thy babes in anguish great were born,
Mother Eve.

And yet God's vengeance knew no stay,
Mother Eve.
Thy first-born did his brother slay,
Mother Eve.
Died not thy heart for woe and dread,
When Abel in thine arms lay dead,
And Cain red-handed turned and fled,
Mother Eve?
Methinks I hear thee murmur "Nay,"
Mother Eve.
"Evil and bitter was my day,"
Mother Eve.
"Evil and full of pain, but still
I am Thy judge—work all Thy will—
I judge Thee, knowing good from ill,"
Mother Eve.
"I stretched mine hand unto Thy tree—"
Mother Eve.
"Not as the sightless beasts are we—"
Mother Eve.
"Thy curse has fallen—let it bide—
I and my children open-eyed
Know Thee, and judge, whate'er betide,"
Mother Eve.
MABEL PEACOCK.

CORRESPONDENCE.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

London: October 5, 1885.

Anything like an exhaustive criticism of the system originally devised for the publication of the Brehon Laws, which system has hitherto been adhered to, would make an undue demand upon the ACADEMY's space. Here no more can be attempted than to add a few brief remarks to what has already been said upon the subject by Mr. Whitley Stokes and Dr. Norman Moore.

1. It is to be supposed that the Irish type was adopted on sentimental grounds. But sentiment, so admirable a thing in its way, ought never to have been admitted into the dry domain of the Brehon Laws, where its intrusion has been disastrous to this extent—that of the 865 pages (more or less) of Irish text comprised in the four volumes already published, not one vocable can be safely quoted without previous collation with the original MS. Woe to the rash philologist who shall found grammatical theories of his own, or impugn those of his neighbours, while fondly trusting to the accuracy of these handsome books! Let him first read again the story of Aiken Drum's Lang Ladle. In the process of transcribing from the vellum, O'Donovan and O'Curry expanded the numerous contractions, and resolved the combinations of words, so that their transcripts are but a counterpart of the printed text, and therefore useless for collation. These transcripts amount to 5,397 quarto pages. What did they cost?

2. A note at the end of the short statement which follows the preface to vol. i. informs us that "these transcripts are referred to throughout this volume by the page only, with the initials O'D. and C. respectively." This means that here and there, sometimes at long intervals, and sometimes crowded together, there appear such marginalia as these, which are given in the order in which they occur in vol. i.—O'D. 78, O'D. 78, O'D. 80, C. 798, C. 798. References ought clearly to have been made by folio column and line to the original MSS., and not to the transcripts. These latter are repositied in Dublin, and are, as we have seen, quite useless for collation, while the MSS. are scattered in London, Dublin, and Oxford; and this absence of all clue to the source of any particular section or passage of the text makes the task of collation practically impossible, so great would be the attendant labour and expense.

3. The text and the translation should have been in separate volumes. This arrangement would have produced books of a size suitable for interleaving, and would have kept apart two entirely distinct classes of footnotes. That is to say, had the text been accompanied by critical, and the translation by historical and illustrative notes, they would not have interfered with one another, as they are apt to do when text and version are interpagated. But, alas! no notes of the kind are forthcoming. Notes of a sort there are indeed, but very few, very far between, and very, even touchingly, infantine. Of these, as well as of some textual matters which must stand over just now, it is safe to assume that they are not the offspring of O'Donovan or O'Curry. But the main advantage of text and version in separate volumes is that various readings, or different recensions in their entirety, can be printed in

parallel columns. Those who wish to see how this can be done are referred to the Anglo-Saxon Chronicle published by the Master of the Rolls.

4. The aforesaid 865 pages of Irish text are furnished forth with 507 pages (more or less) of prefaces and introductions, of which each of the four volumes has its share. This must be deemed a very fair allowance, especially when we remember that the gentlemen to whom we are indebted for it all were, however able in other respects, entirely innocent of any knowledge whatever of Irish. To such knowledge they do not, it is true, anywhere actually lay claim; but it may reasonably be asked whether they have taken all desirable precaution against going down to posterity disguised in the garb of first-class Celtic pundits. Granting that every line of this prefatory matter is in the highest degree erudite, quite irrefragable, and altogether precious, yet cavillers may possibly be found to inquire whether it be not matter in the wrong place, and to suggest that a more natural order would have been first to print the corpus of these laws, and then to write disquisitions upon them. The enormous space absorbed by these academic essays might very profitably have been devoted to indices verborum and some other items of the first importance; but, if it was absolutely necessary for some wise purpose that these prefaces should be printed at this stage of the undertaking, they had been better printed in a separate volume. This would have enabled those who wanted Brehon Laws to buy Brehon Laws; while those who only wished to know what a few learned gentlemen thought about Brehon Laws, would not have been burthened with superfluities in the shape of the laws themselves.

STANDISH H. O'GRADY.

GERMAN TRANSLATIONS OF THE BIBLE BEFORE LUTHER.

London: Oct. 3, 1885.

I wish Mr. J. Hutchison had been less modest, and, instead of quoting Lutheran theologians, had given us his own opinion on the relation between the pre-Lutheran and Lutheran translations, based on an examination of those works themselves. I am perfectly ready to consider whatever arguments may be raised from the original texts; but, as I remarked in my review, I cannot hold German theologians as in any way authorities to whom scholars can appeal. So far from regarding Dr. Riehm as an authority because he sat on the revision committee, I hold the work of that committee—as exhibited in the *Probibibel*—typical of present Lutheran scholarship, that is to say, of men who are first theologians, and then scholars. We have had quite enough of appeal to authority in such matters: let us go to the originals themselves if we want to get even an approximation to the truth.

I am not in a position to place the pre-Lutheran versions in their accurate relationship—I believe nobody will be till they are all printed; but this much must be laid down, that no one who has examined them would admit, as Dr. Riehm and Mr. Hutchison do, that "the Codex Teplensis is the work of Matthias (Martin?) von Beheim, a monk of Halle." This shows exactly the type of slovenly scholarship we have to deal with. The Codex Teplensis is a translation of the entire New Testament: the Leipzig Codex contains only the four gospels. The Leipzig Codex states in a colophon that the translation was made for Matthias von Beheim, recluse of Halle, in 1343 (*Diese dutunge des latines in daz deutsche ist gemacht Mathie von beheim dem clusenere zu halle*). Why the monk, who had one version of the gospels made for him, should be the translator of another version of the whole New

Testament, would puzzle, I think, Dr. Riehm and Mr. Hutchison to explain. But there is a great deal more yet to be investigated. That the Leipzig Codex contains an original translation would seem probable from the above colophon, and by the words which occur on p. 224* (*Uz der byblien ist dise ubirtrugunge in daz mittellateutsch mit einuuldigen slechtin worten uz gedruokit*). Yet, perhaps, we must understand the colophon to mean: This Bible translation was written for Matthias—i.e., a copy made for him—though that seems to me rather forced. The difficulty is this, that the Codex Teplensis, which does not contain, so far of course as the gospels are concerned, the same version as the Leipzig MS., is yet in certain parts related to it, notably in John. In many parts the translations are quite independent, and the Leipzig Gospels approach nearer the version of the little regarded Egerton MS. 855 of the British Museum. This sort of relationship, when two MSS. are of the same date, points rather to a common ancestry than to a copying of one by the other, yet it is difficult to reconcile this with the Leipzig colophon. To show how far the versions differ, and the complete absurdity of Dr. Riehm's statement, I quote a few verses of Mathew iii.:

LEIPZIG CODEX.

"In den tagin dô quam
 Jôhannes toufere predi-
 gende in der wüste-
 nunge Judêe, Spre-
 chinde: 'Tût penitencie,
 wan iz nâhit daz rîche
 der himele. Wan dirre
 ist von dem gesprochin
 ist durch Isaiam dem
 prophêten sprechinde:
 Ein stimme des rûf-
 enden in der wûstenunge:
 bereitet den wec des
 herrn, machit gerecht
 sine stige.' Und her
 Jôhannes hatte ein cleit
 von den hâren der ka-
 melle und eine vellinc
 snur umme sine lenden,
 und sin ezzin was heus-
 schreckin und walt-
 honic."

These Dr. Riehm, and presumably Mr. Hutchison, admit to be the same translation! I wonder what they will say of the following two—the one taken from the Codex Teplensis, and the other from the September Bibel (I fear I must call it so, as it has been called so by all German writers for years, notwithstanding Mr. Hutchison's bracketted queries):

TEPL CODEX.

"Ein welp von Samaria
 kom ze schepfen wazzet
 Ihesus sprach zu ir:
 gib mir ze trinken. Wan
 sein junger waren hin-
 gegangen in di stat daz
 si kauften di ezzen.
 Dorum das welp Sama-
 ritanin sprach zu im.
 In welher weiz aischest
 du zu trinken von mir,
 so du bist ein Jud, di
 ich bin ein weip Sama-
 ritanin? wan die Juden
 gemeinsament nit mit
 den Samaritanern."

SEPTEMBER BIBEL.

"Da kompt eyn weyb
 von Samaria, wasser zu
 schepffen, Ihesus spricht
 zu yhr, gib myr trinc-
 ken, denn seyne iunger
 waren hyn gangen ynn
 die stat, das sie speys
 keufften, spricht nu das
 Samaritisch weyb zu
 yhm, wie bittestu von myr
 trincken, so du eyn Jude
 bist, vnd ich eyn Samari-
 tisch weyb? Denn die
 Juden haben keyne ge-
 meynschaft mit den
 Samaritanern."

I could have made the differences still less by quoting the 1483 Bible, but I think I have cited sufficient to show the relationship of Luther to his forerunners. Let the reader note that there are upwards of one hundred and eighty years between the left and right-hand versions. Where Luther's version does differ from the German Vulgate is very often in those passages in which his strong sense of the righteousness of his own dogma has led him

to pervert the text. Against Emser's 2,400 "heretical errors, lies, and wrong tense-renderings," I may cite Bunsen's 3,000 inaccuracies, and leave the theologians to settle the exact number between them.

Mr. Hutchison tells us that Luther probably began Greek in 1512. We happen to know that he began it in August 1518. Let me cite what was written two years ago, and remind the reader that to revise, not translate, cost our thorough Greek scholars ten years of work (1870-80):

"On the 25th of August, 1518, Melancthon arrived in Wittenberg; then for the first time Luther, attending the lectures of Melancthon, began to study Greek. This is not only shown by Luther's letters; but Melancthon, in a speech to the students recommending the study of Greek, points out to them Luther's example—Luther himself, who, already advanced in years (*quamvis jam senex*), has learnt the Greek tongue. In June, 1519, we have the famous Leipzig disputation with Eck, and in April, 1521, Luther arrives in Worms. August, 1519, to April, 1521, is perhaps the busiest period of Luther's life: he is in bitter and prolonged controversy with Eck and Emser, he is writing book after book against the Pope and his bull, and he is contesting the condemnations of the leading universities of Christendom. In 1520 alone he publishes three epoch-making works (*An den Christlichen Adel deutscher Nation, De Captivitate Babylonica, and De libertate Christiana*), and yet he must find time to study Greek. On December 16th, 1521, Luther wrote to Lange of his determination to translate the New Testament, and within a less period than *three months* the work is completed. Returning on March 1 from the Wartburg to Wittenberg, he managed to revise the translation with Melancthon, notwithstanding the Carlsstadt difficulties, and on the 21st of September the New Testament issued completed from the press. To translate, revise, and print occupied less than nine months, and this notwithstanding Luther's three most broken years of Greek study. Does not such external evidence fully confirm internal coincidences, and point to Luther's dependence on his predecessors?"

I ask Mr. Hutchison not to consult Herzog or Köstlin, but simply to open the September Bibel side by side with the Ninth German Bible, or even with the Codex Teplensis, and then judge for himself how far the old translation is *unbeholfen, schwerfällig, weder genau im Sinn noch treffend im Ausdruck*, when compared with Luther's. I have passed some considerable time among the German peasantry, and I have been delighted to find them still using words and phrases which occur in the old pre-Lutheran translations. I believe that anyone with a like experience would hold with me that these translations are a "perfect mine of folk-expression, homely and true," and what is more, still not dead.

KARL PEARSON.

P.S.—I have already made this letter too long, yet I really ought to have asked Mr. Hutchison whether he would be surprised to hear that in 1519 Luther used the Vulgate, and not the Greek, for his college lectures on the New Testament?

CLOVESHO.

Bristol: Oct. 5, 1885.

In his letter in the ACADEMY of October 3, Mr. A. Hall appears to accept the assumption that the names of the places which are the subjects of the surviving records of the councils of Clovesho indicate the part of England wherein those councils assembled. This is not the case. The frequency of Worcestershire and Gloucestershire names arises from those that refer to the transactions of this supreme or primatial court with the church of Worcester being a conspicuous but isolated survival among them.

"Westminster," among the names quoted by Mr. Hall, has no concern with the hundred of Westminster. The present Bishop of Chester

has noted that "the hundred of Westminster, owes its name, given at a much later period, to the fact that the abbey of Westminster in Middlesex possessed a great portion of the land contained in it" (*Councils, &c.*, Haddan and Stubbs, vol. iii., p. 549). The place meant is Westbury-upon-Trym, earlier called "West-burh," but, after the foundation of the monastery there, sometimes called "Westmynstre." In one charter of A.D. 824 (Birch, *Cartularium Saxon.*, No. 379), both names are used for Westbury.

Again, as to "Stoke" in the charters. Two places of this name often turn up in the Worcester series, but neither of them is Stoke-Orchard, as Mr. Hall suggests. One is Stoke-Prior in Worcestershire, with its salt-works still redolent at a railway junction; the other is Stoke-Bishop in the southern extremity of Gloucestershire, out of which last have been carved the lands now the parishes of Westbury, Henbury, Kings- and Laurence-Weston, and much more. This is a district with an important early history not yet developed. Dr. Guest and his followers have clouded the truth by unwarrantably including it in the Deorham conquest of A.D. 577.

In an essay which I contributed to a local society, "Vestiges of the Supremacy of Mercia" (Bristol and Glouc. Arch. soc., vol. iii., pp. 128-167), I attempted to determine the true locality of Clovesho, reviewing with some detail the various guesses that have been proposed. That it was distant from Gloucestershire receives some confirmation from the above cited Act of the Council, A.D. 824. It is therein provided that, after thirty nights, it shall receive the assent, on oath, before the Bishop (Heaberht of Worcester?) of the priests and monks in possession of Westbury. Accordingly, after thirty-four signatures of those who sat at the council, follows another list of the fifty-six Mass-Priests of Westbury who took the oath. The interval of thirty days, and the delegated authority, evidently imply a considerable distance of the jurates from the council.

THOMAS KERSLAKE.

City Library, Bristol: Oct. 6, 1885.

If your correspondent, Mr. A. Hall, will refer to Dr. Thomas's *Survey of Worcester Cathedral* (1736), p. 23 ("Account of the Bishops"), he will find it quoted that, A.D. 804, at a council held at Clovesho, "Æthelric, the son of Æthelmond, produced his deeds, and proved his title to lands at Westminster." Dr. Thomas is unquestionably correct in explaining "Westminster to be another name for Westbury." It happens, however, that Westbury, so far as Church historians show knowledge of the place, is as completely blotted out of the county maps as Clovesho itself. They do not attempt to give its situation, except, perhaps, Archdeacon Churton, who places it near Evesham. It is, however, identical with the present Westbury-on-Trym, two miles north from Bristol. The early English Church of the parish, together with some fifteenth-century towers and walls, are the existing remains of a Benedictine establishment that was founded here as early as the days of King Offa. In the later form of the monastery it was a college for a dean and canons, and among those who filled the stalls of the church were John Trevisa and John Wycliff. I need not here go into the history of this interesting foundation, inasmuch as it has been told already in *The Saturday Review*, April 5, 1879, in an article entitled "Westbury Monastery." I may remark, however, that Westminster or Westbury, meaning Westbury upon Trym—as it is described in Offa's charter, *Westbury prope flumen qui dicitur Aven*—was the cradle of the English Benedictine system, which radiated from this spot until it has covered the religious face of England. JOHN TAYLOR.

"ANCIENT ARABIAN POETRY."

London: October 5, 1885.

Capt. Burton, in his review of *Ancient Arabian Poetry*, published in the ACADEMY of October 3, says: "Our author, like Mr. Chenery in *Al-Hariri*, burks the reason which justified Al-Khansâ's refusal of amorous old Durayd, 'a stallion not to be smitten on the nose' (p. 43)."

The story to which Capt. Burton refers is, doubtless, that contained in Caussin de Perceval's *Essai sur l'histoire des Arabes avant l'islamisme*, vol. ii., p. 549-550. The original will be found in the *Aghânî*, vol. ix., p. 11, where, it will be seen, it is given on the authority of Ibn al-Kalbî. The traditions regarding Duraid which I have rendered on pp. 41-47 of my book are those only for which Abû 'Ubaidah is responsible. The story of Duraid's rejection by al-Khansâ on p. 43 is a literal translation of Abû 'Ubaidah's narrative on the same page of the *Aghânî*. It is quite incoincident with Ibn al-Kalbî's account of the transaction; and, as I had to choose between them, I naturally followed that authority with which I had begun. Ibn al-Kalbî's version is of a piece with other anecdotes told by him of Duraid, which the author of the *Aghânî* criticises thus (*Agh.* ix. p. 19):

"All these traditions which I have related on the authority of Ibn al-Kalbî are fabricated, and the marks of late origin in them and in the verses which he gives are manifest. . . . They are only Ibn al-Kalbî's lies, and I have recorded them merely in order that this book might include all that men have handed down and passed from one to another."

In preferring Abû 'Ubaidah's account I had thus at least the sanction of an author who had better means than we possess of judging between differing traditionists, and who certainly does not show himself squeamish in what he admits to his collection.

Capt. Burton will find a note (very brief, it is true) on the "inverted speech" exemplified in phrases like "God curse thee!" (p. 57) to express admiration, on page 58. What "polytheism" (*shirk*) meant in Duraid's time is explained on p. xxix. of the introduction. The correct translation of the name Imra-al-Kais is given on p. 106; it is nowhere in my book otherwise interpreted. Khusrâ Parvîz (instead of Parvîz) is not an Indianism; the Indians did not invent for Persian words the sounds *ê* and *ô*, called *majhâl* (i.e., "not known in Arabic") by the Arabs, but received them at a time when these sounds were universally used in Persia. The substitution by Persians of *ê* and *ô* for *ê* and *ô* is quite modern, and to admit it in an ancient name, when writing of ancient times, would, I venture to think, be an anachronism. Finally, I would call Capt. Burton's attention to Psalm xl. 6 (Prayer-book version), "Like as be also thy thoughts which are to us-ward." C. J. LYALL.

London: Oct. 5, 1885.

It is my turn to cry *peccavi*, and in common reason I willingly do so. Capt. Burton, in his remarks on Mr. Lyall's translations of ancient Arabian poetry, given in the ACADEMY of October 3, p. 215, col. 2, l. 27, justly criticises the error fallen from my pen, through inadvertency, in a note, p. 60 of the "Acts of the Adepts," prefatory to my metrical translation of the first book of the *Mesnevi* of Jelâlu-'d-Dîn, Er-Rûmî. In this note I have described 'Arafât as "The mount where the victims are slaughtered by the pilgrims" who perform the visit to the holy places in and near Mekka, obligatory, once in a lifetime, on every Muslim and Muslimess, under conditions. The ceremonies of that visit are so well described in vol. iii. of the *Pilgrimage to El-Medina and Meccah*, chaps. xxviii.-xxxii., that I ought not to have made

the blunder, as I had read the book, but did not refer to it at the time. Capt. Burton's descriptions are the fruits of personal experience, as well as of study.

J. W. REDHOUSE.

O'SHEA'S "GUIDE TO SPAIN."

Sare, St. Jean de Luz: Sept. 29, 1885.

With reference to the concluding remarks of my review of *O'Shea's Guide to Spain* (ACADEMY, September 26), Prince L.-L. Bonaparte kindly points out to me that "Eskara" is equally correct with "Eskuara" as a native name for the Basque language. It is preferred by Capt. Duvoisin; and both "Eskara" and "Eskuara" are given as Labourdin, and "Euskara" as a Guipuzcoan form in Aizquibel's Dictionary, together with "Euskera" and "Euski-era," and also by Van Eys. This I ought to have known. To these forms Prince Bonaparte adds, "üska, souletin; heskuara, bas navarraix occidental et oriental; eskuera, sous-dialecte guipuzcoan de Cegama; uskara, sous-dialecte bas navarraix oriental de la vallée de Salazar [in Spain]." "Makilia," also, is possible in Basque in the sense of the stick. The other corrections are probably of mere misprints, I being mistaken for H.

WENTWORTH WEBSTER.

APPOINTMENTS FOR NEXT WEEK.

WEDNESDAY, Oct. 14, 8 p.m. Microscopical: "The Feeding of Insects with Bacilli," by Dr. Maddox; "The Gizzard of the Larvæ of *Corethra plumicornis*," by Mr. T. B. Rosseter.

SCIENCE.

Works of Thomas Hill Green. Edited by R. Nettleship. Vol. I. Philosophical Works. (Longmans.)

The profound impression created by the late Prof. Green's *Prolegomena to Ethics* will have made readers of philosophy anxious for the rest of his writings. The volume before us is the first of the edition of his works which has been undertaken by Mr. Nettleship. With the exception of a single piece, of which we shall speak later, it contains nothing that has not already been published, and claims attention, therefore, rather as the forerunner of the volumes which are to follow, and for the convenience of bringing together scattered writings. The greater part of the volume is occupied with the two Introductions to Hume, the two masterly pieces of criticism which marked, we suppose, one stage in the direct reaction from the current philosophy. Upon them follow the articles upon Mr. Spencer and Mr. Lewes which were published in the *Contemporary Review*; and to these is added a fourth upon "Mr. Lewes's account of the Social Medium," which, though written at the same time as the others, was not published on account of Mr. Lewes's death. Prof. Green's answer to the strictures which Mr. Hodgson made upon him on behalf of Mr. Spencer concludes the volume.

All these critical writings are animated by one purpose—to show the impossibility of deriving our knowledge from mere experience in the sense of feeling. Under one form or another the burden of what Prof. Green was continually insisting upon is that experience itself is intelligible only on the presupposition of something which is itself subject to no change. This he calls sometimes self-consciousness, sometimes simply consciousness; while in the

Prolegomena it has developed into a "self-seeking and self-distinguishing consciousness" which is put in relation to a divine self-consciousness of which it is the reproduction. It is only by the relations which this consciousness institutes between feelings that the latter are able to supply experience at all. They themselves are transient states of the feeling organism; and, so far from being "states of consciousness," they do not enter into consciousness at all in any sense in which that consciousness can be described as the material of experience. It is because feelings are already credited with that organisation, which they receive only from the consciousness which is neither feeling nor made up of feelings, that they seem to account for knowledge. In reality a feeling as such leaves no mark upon the intelligent course of life, it can do so only in virtue of a certain quality which it receives by its relation to the self. Thus, for example, the idea of change or the idea of time cannot be attributed to the succession of states of consciousness, for to do so is to suppose that the feelings are felt as different from one another, or as succeeding each other in a series; but then they are no longer mere feelings, but facts about feelings; and such facts are not events in an order of time, but elements in an order of knowledge. To know or speak of a thing as "nasty" is quite different from any number of mere feelings of disgust which may have resulted, by a reflex, in the motion of putting out the hand to repel the object, or even, if we are not going too far in saying so, in a succession of movements of the mouth represented by the interjection "ugh!"

It was because of the neglect of these considerations which he discovered in English philosophy that Prof. Green believed it to be working upon wrong lines. And it was because the question of philosophy was put by Kant in a way which gave a place to these neglected elements that he sought to direct the course of thought along the lines laid down by Kant. Accordingly, in his works on Hume, his object was to show that the assumptions with which Locke began, when worked out logically, found their outcome in Hume's doctrine, where they were convicted of failure, because the solutions they offered of ordinary difficulties of thought, involved the very ideas they pretended to supersede. The possibility of the "fictions" of "cause" and "identity" presupposed the reality of these conceptions. It is late in the day to be speaking of writings so well known as these Introductions to Locke and Hume. Their value lies not only in the careful exposition and minute criticism of the two philosophers (and, with so "intangible" a writer as Bagehot rightly declares Hume to be, this was a task of no ordinary difficulty), but still more in their proof that Hume's doctrine sprang logically out of Locke's, and that his break-down compelled the restatement of the problem of philosophy in another form. Of the two ideas of reality, as that which is given in feeling, and that which is constructed or invented by the mind, between which Locke, from the very force of his good sense, vacillated, Hume chose the former. It is easy to say that in doing so, he was depriving Locke of the benefit of his other assertions, and attempts have been made to show

that Locke really anticipated many later discoveries. But it was his very assumption of an external real which is known in feeling that allowed Locke to attribute to the mind a power of construction. Hume was therefore right in choosing the alternative which he did choose; and his inability to account for the fiction of an intelligible world, except by a process which assumed it, is proof that the explanation of knowledge must be sought otherwise than in feeling alone.

The fundamental error of the classical school of English philosophy Prof. Green held to be repeated in the writings of the modern doctrine of experience "with evolution"; and he brought against it the further charge, that in seeking to complete Hume's doctrine by the theory of hereditary accumulation of experience into axioms or principles it really misunderstood the essence of Hume's doctrine. Hume endeavoured to explain away "the world of intelligible relations." The modern theory takes "the reality of such a world for granted," while, at the same time, it holds "a theory of reality which excludes it" (p. 382).

This position, that the evolution-psychology in its explanation of knowledge assumes from the beginning of the process "the reality of an objective order as well as an elementary consciousness of it" Prof. Green makes good against Mr. Spencer and Mr. Lewes. The criticism, which is identical in principle with that of Locke and Hume, he repeated, because he felt that "each generation requires the questions of philosophy to be put to it in its own language; and, unless they are so put, will not be at pains to understand them" (p. 372). It is impossible to enter here into the details of the criticism; that can only be done by carefully comparing it with the passages on which it is based. It is conclusively shown that in the case of both philosophers the elements, whether in the shape of "neural units" or "states of consciousness," out of which experience is held to grow, are already qualified by relation to the consciousness which is maintained to be their outcome; or, in other words, so far as these psychologies attempt to account for an objective order, they all along slip into the old sin, dressed in a more scientifically-cut suit, of assuming such objective order without inquiring into the grounds of its possibility. They do but trace the growth of experience in the individual mind; and the experiences they appeal to are, strictly interpreted, not experiences of any mind at all.

The new chapter on Mr. Lewes's "Account of the Social Medium" appears to be unfinished, for it contains little bearing on the social medium, but is rather a continuation of the preceding chapter. Besides criticism of Mr. Lewes there is a long passage at the beginning (pp. 473—483) which is important as a more direct statement of Prof. Green's own positive doctrine than is usually to be found in his critical writings. The question raised is whether "thinking the world" (in virtue of the social medium) can be evolved from "feeling the world" (in virtue of the psychological medium). The answer is that it is so only so far as feeling is regarded as different from mere neural processes or groupings of them. Inquiry into the latter is useless for our purpose, which is to discover what our consciousness is, in order that there

should be for it what we call facts, and these connected in a single world. It is useless, because "physiological processes are not continued into consciousness as chemical processes are into life." Nor are they helpful as being antecedents of consciousness, for as sensible events they do not enter into consciousness at all. True, "the consciousness of every man has a history," we do "pass through a succession of states of consciousness," each determined by the one preceding it, but this is simply the order of our arrival at that consciousness of objects in which alone they exist, and is "not to be converted into a relation of succession between the object as in consciousness"; or, in other words, the state of consciousness considered as an event is different from what it is as consciousness.

This passage, taken in connection with the rest of Prof. Green's critical writings, suggests some questions and difficulties. In the first place what is the shape to be assigned to psychology? To this science, which in distinction from physiology, he defines (p. 483) as the "theory of consciousness," he makes the vastly important—though, of course, not original—contribution, that all its facts are coloured by the presence of a consciousness which is "eternal and thinks." Some idea of how great a change this consideration must import into current doctrines may be formed from Mr. Bradley's treatment of the theory of association in his *Principles of Logic*. In reading this volume one cannot help feeling a desire to see the true principles on which it proceeds, not merely proved polemically, but used to explain psychological facts. For it certainly does seem possible to have a history of the process by which the individual mind attains to a concrete knowledge of itself by logical advance from the simplest and most abstract condition of feeling.

Very great difficulty seems to us to be presented by Prof. Green's view of sensation or feeling. Except as "taken up" into consciousness, and converted into perception of a fact, it appears to be identified with a nervous process, for it is said that the "physiologist can tell us of it, not only much, but all that we know" (p. 477). But the physiological process, which is often said, without much illumination of the subject, to be the "other side" of the feeling of heat, is different from that feeling, and the feeling of warmth is again different from the perception that the fire is hot. Prof. Green would deny that "I feel warm" can rightly be described as consciousness, as it certainly is described in popular language. "To feel warm," he says on p. 413, "is not the same as to perceive that I am warm, or that my body is so," and what we have called the feeling of warmth, he calls perception. But it is questionable whether we ever do *perceive* that we are warm, and the clause added seems to indicate a sense of this difficulty. Now it is quite true I perceive my body is warm, just as I can perceive by touching you or seeing you blush that your body is warm, but I go further and infer that you *feel* warm. This consideration will serve to explain why some psychologists regard feeling and sensation as the primary psychical fact. It still remains true that feeling, in man at any rate, is always qualified by its presence in a subject; but while it is rightly distinguished from a

nervous process, it claims to be regarded, under the name of feeling, as the first stage of consciousness, distinguished from the later stage of perception. From what follows the passage quoted from p. 413 Prof. Green would seem to hold that the difference is simply in the objects perceived—in the one case an inward, in the other an outward object. But if this is so the perceptions are made so different by the character of the object as to justify the popular language which calls the one a feeling and the other a perception. The former is knowledge of the subject which is as yet undifferentiated from its object; the latter is knowledge of the subject which is distinguished from its object, and refers its feeling to an "object." To regard the former as equivalent to perception is to use the word knowledge in the sense of reflective knowledge, for it is only as reflected upon that I can be "perceived" to be the subject of feelings; but it is not in the sense of reflective knowledge that we regard perception as giving us knowledge of objects. This criticism, offered with hesitation, will only affect Prof. Green's psychology, it will certainly not weaken the force of his metaphysical argument.

The distinction which is drawn between the order of objects in consciousness and the order in time at which we arrive at consciousness of objects is one which is developed in the *Prolegomena*. It shows the necessity of assuming a self greater than the individual self which the former in some way makes the medium of its communication. The difficulties which lie at the basis of this noble conception are fundamental difficulties of philosophy, and will not bear discussion here. But that the same consciousness which is above all change should have a history seems to indicate that, considered as the condition of knowledge, it deserves a title which should distinguish it from the individual subject of knowledge. According to this view consciousness and self-consciousness would be ascending categories which would have their logical and psychological history, and both would derive from a higher conception still.

In this chapter on Mr. Lewes's "Account of Experience" there is an interesting section (p. 460) which gives Prof. Green's view of the imperfections of Kant's theory. We believe that a fuller account of his attitude to Kant is contained among his papers, and we hope that it may find a place in the later volumes, the appearance of which will be attended with not more impatience by Prof. Green's pupils than by all students of philosophy.

S. ALEXANDER.

BABYLONIAN AND OLD CHINESE MEASURES.

THE records of the Chinese are somewhat vague regarding their ancient weights and measures. Any light on the subject must come rather from experimental researches than from statements in the ancient books. Not that such statements are worthless, but, taken alone, they are insufficient. The weights and measures varied as they do now, according to the material to which they apply, the discrepancies arising from an effort to equalise an apparent price at the expense of the quantity given. But such cases happen everywhere.

So far as China is concerned, we might expect

some valuable indications from the study of the coinage, as the oldest statements about weight refer to the currency. In 1032 B.C. (?) certain rules of currency were established by the central government of the Tchou Dynasty. The ruling king was then Tch'eng, and his chief adviser in this matter was Kiang, otherwise Tai Kung Wang of Tai, a sage from the Eastern Barbarians on the coast of the modern Kiang-su and Shantung provinces. The nationality of the adviser is suggestive of a foreign influence through sea-trade, as we shall see below. It was enacted that gold should be used as currency in small cubes of an inch (*ts'un*) weighing a *kin*; and that metal should be weighed by *tchus*.

Acting on the first of these statements, the late Ed. Biot (*Journal Asiatique*, Mai, 1837, p. 430) endeavoured to ascertain the exact weight of the *kin*. He took as his basis the length of the *tch'ih*, or cubit of the Tchou Dynasty, as given by P. Amiot in his paper on the subject. This length was 205 millimetres (or 8.07085 inches), making the tenth part of it, or a *ts'un*, 20.5 millimetres (or .807085 inch). Then he made the cube of the latter measure and multiplied it by 19.3, specific gravity of the melted gold. The result was that the *kin* of the Tchou was equivalent to 166 grammes or 2,562 grains. I may remark that this is practically equivalent to 2,600 grains, which is the third part of the light Assyro-Babylonian mina.

A *tchu* was the unit of weight for the metal implements used for currency. We are told that it was equivalent to 100 grains of millet. I have myself made several experiments of weighing 100 grains of millet, and have found an average weight, nearly without variation, of 16½ grains, which corresponds to the 24th part of the above mina, divided by 20. These two divisions are represented by as many Chinese units, the *liang*, or ounce, and the *liet*, sometimes the same as the *hwan*, or ring-weight. The *liang* was the equivalent of 24 *tchus*, and, consequently, equals 390 grains.

In the collections of Chinese coins in the British Museum, there are several specimens of an old currency, issued about the fifth century B.C., which bear indications of weight, and, so far, could be called weight money. I have just revised for press the sheet of my *Catalogue of Chinese Coins* which refers to them, and, consequently, had the occasion of again verifying their weights. I find their average to be 393 grains, which is the same weight as the *liang*, quoted above. Now, the legend on these specimens says that 20 of them are equivalent to a *liet*, a proportion already known by statements in literature, where it is also recorded that the *liet* and the *hwan* have the same weight. We find that $393 \times 20 = 7,860$ grains, which gives for the *liet* or *hwan* the same weight as the light Assyro-Babylonian mina.

As shown by these several concurrent proofs, the standard weight was that mina, the knowledge of which seems to have been carried to China through the sea trade. The names preserved in Chinese may, perhaps, throw new light on the matter. *Hwan* means a "ring"; we have seen it to be a unit of currency. In the code of punishments enacted about 912 B.C., the offenders and criminals could redeem themselves by the payment of a certain number of *hwans*. This ring-weight used as currency reminds one of the large metal-rings on some old Egyptian paintings. Beside this similarity, there is another hint in the same direction, in the other name of the Chinese unit. *Liuet* or *Lut* is, singularly enough, much like that of *Lotu* or *Rotu*, the very name of the Egyptians. On the other hand, it is not unlikely that in the old name of Lang-ga (Lang-ya), on the sea-coast of the south of Shantung, compared with that of Lanka (Ceylon), we have another trace of the same sea-trade with the West.

The sea-trade with the East from Southern Arabia began much earlier than the time of Solomon. Perhaps traces of it may be found in Egypt as early as the IVth Dynasty. My friend, Prof. Sayce, brought back from Egypt last year a mother-of-pearl shell, bearing the cartouche of Usertasen. This sends us back to the XIIth Dynasty, about 3000 B.C., according to Mariette; and this mother-of-pearl is recognised by an authority—Prof. Moseley—to be originally from Ceylon. Lankā or Tamrápani was for long the ultimate point reached eastwards by the ships of the Sabaeans and Dedans, and from thence goods were transferred on other ships to the Indian Archipelago and China. It would be a natural result of this intercourse that the standard weight of this trade, viz., the light Assyro-Babylonian mina, should have reached in the eleventh century B.C. the shores of Shantung and Kiangsu in ancient China.

On the currency of the towns of Yü, An-yh, &c., the weight is indicated as a unit of 2 *kin*. Now the average weight of the specimens I have verified is 330 grains, let us say about 325 grains, which is just the twenty-fourth part of the same standard, viz., the light Assyro-Babylonian mina.

Another evidence, also derived from the mintage, confirms the length of 8·07 inches for the cubit, as mentioned above from P. Amiot, and derived by him from other sources. The genuine specimens of the knife-money at the British Museum, the type of which was in use from the seventh to the third century B.C., are 7 or 8 inches in length, i.e., one *tch'ih* or $\frac{1}{2}$ of a *tch'ih*. The *Pu*-money, current during the same period, was cast on a basis of 1·62 inches, i.e., of two *ts'un* of the same standard as that of the Tchou Dynasty. Some of this knife-money and *Pu*-money was issued by associations in different towns; and the places mentioned in the legends show the existence of trade routes, and of stations on these routes between the seashore of Shantung peninsula and the provinces of Shansi and Honan, which were then the centre of the Chinese population. The unit of length for human stature was on a different scale, apparently of 7 inches only, though also denominated *tch'ih*. Several references in literature of the Tchou Dynasty show an average of 9·7 *tch'ih* for men of a high stature. According to anthropologists the height of Chinamen varies from a minimum of 5·0 to a maximum of 5·9 feet, while reckoned at a supposed standard of 7 inches per *tch'ih*, 9·7 *tch'ih* would give 5·8 feet for the height of these tall men of former times.

As to the oldest measures of the Chinese, information is very scanty. Tradition says that the *tch'ih*, or cubit of the Tchou was one-fifth shorter than that of Hwang-ti, and in his paper above quoted P. Amiot gives 255 millimetres as the length of the latter. Acting on this slender basis, and taking 25·5 millimetres for the length of the *ts'un*, or one-tenth, we can make the same sort of calculation as Ed. Biot. Should we take 256 and 25·6 instead of 255 and 25·5, we find 5,200 grains for the standard—viz., one-third of the heavy Assyro-Babylonian mina. The result is not surprising, considering the great number of the elements of civilisation from South-West Asia which were in the possession of the leaders of the Bak tribes or pre-Chinese when they moved eastward to civilise China.

TERRIEN DE LACOUPERIE.

CORRESPONDENCE.

THE ETRUSCAN WORDS ON THE ORVIETO CUP.

Combe Vicarage, near Woodstock: Oct. 3, 1885.

Having seen Etruscan sepulchres and Etruscan antiquities in museums, and having long studied writings on the Etruscan language, I

have read with great interest the paragraph in this day's ACADEMY (p. 226) about the two words inscribed, in combination with outlines of the sun and the moon, on a cup recently found at Orvieto.

I think that *Erus* may be no other than the word used by Catullus (lxviii. 76) when he speaks of the gods as *coelestes eros*: I would compare *Baal* (the Lord) as the Sun-God. In combination with another representation of the sun and the moon, there have been found the words *Aplu* (a form of the word *Apollo*, which was used in Thessaly also) and *Lala* (i.e., *Lara*, Δεσπονα, Lady).

I would observe that while *Lusxnei*, as well as *Losna* (inscribed on an Etruscan mirror), is to be identified with Latin *Luna* (in which, as well as in Latin *lumen*, the *c* we have in *lucere* is not found), I would, in regard to the termination *-ei*, compare the feminines *Sefetnei* and *Fuisinei* in inscriptions on sepulchral urns found not far from Siena, and mentioned by Mrs. Hamilton Gray (*Sepulchres of Etruria*, 1840, pp. 473, 481, 482).

J. HOSKYNs-ABRAHALL.

PALI GRAMMARS AND HANDBOOKS.

London: Oct. 5, 1885.

In the notice of Müller's *Pali Grammar* in the ACADEMY of last week (p. 225) it is stated that "this is the first attempt of the kind in the English language." This is a mistake. We published in 1883 a *Pali Handbook*, being an elementary grammar, a chrestomathy, and a glossary, by Dr. Otto Frankfurter, at present at Bangkok, which, we believe, was noticed in the ACADEMY at the time.

WILLIAMS & NORGATE.

SCIENCE NOTES.

THE last number of the *Proceedings* of the Royal Society contains a suggestive paper by Prof. Prestwich on the obscure subject of Metamorphism. He proposes to apply the term "Regional Metamorphism," hitherto used as almost synonymous with "Normal Metamorphism," to those changes which seem to have been effected by elevation of temperature produced locally through the transformation into heat of the mechanical work of compressing and crushing parts of the earth's crust. Attention was called to this agency by the late Mr. Mallet, but he greatly exaggerated its importance. Prof. Prestwich sees in it, not a means of fusing volcanic rocks, but a *vera causa* for producing sufficient heat to account for cases of metamorphism in greatly disturbed mountain districts. It is interesting to note that he records the recent discovery of fossils in the metamorphic chistolite slate of Skiddaw.

FINE ART.

ART BOOKS.

The English School of Painting. By Ernest Chesneau. Translated by L. N. Etherington, with a Preface by Prof. Ruskin. (Cassell.) The work of M. Chesneau is already well-known in its original form to most students of English art, and it is to be regretted that it should appear in English with its merits obscured by a poor translation and its numerous errors uncorrected. We have too few critics like M. Chesneau, and the best we have would find it difficult to take such an unprejudiced and comprehensive view of the history of art in England. We may, on the whole, congratulate ourselves on the result of his study of our painters; for, though we can scarcely agree with Mr. Ruskin in thinking it "mostly praise," he recognises that we have much that is good and much that is original,

and acknowledges with warmth the merits of our greatest portrait painters and our school of landscape. Almost the only charge that we can bring against this sincere and accomplished critic is that he assumes a knowledge which he does not possess, and borrows opinions and descriptions from English writers without acknowledgment. In doing so, he sometimes punishes himself by repeating as his own the errors of others. It is true that the authors he trusts should have known better, but this is scarcely a sufficient excuse for reprinting erroneous descriptions of Hogarth's plates as if they were the result of personal observation. The prints are easy of access, and should have been referred to (as anyone who reads his book will think they have been) by M. Chesneau himself. We are glad that Mr. Ruskin has commissioned M. Chesneau to write a life of Turner, for he has shown himself admirably adapted for the task of analysing the genius of that artist; but we hope that he will be more careful about his facts than he shows himself in this book. Sometimes, indeed, he is not entirely responsible for his mistakes, but in many places he shows a lamentable tendency to looseness of statement. He tells us, for instance, in one place that from 1805 to 1819, Claude Lorraine entirely guided Turner's style, and, in another, that he soon threw off the yoke of Claude's influence. In 1819 Turner was forty-five years of age. Near the beginning of his book, he says (correctly) that Hogarth was born in 1697, near the end he states that the artist was forty years old in 1733. In other places he puzzles us by statements which, if not conflicting, require more explanation to render them easily reconcilable. Sir Frederick Leighton is named as the worthiest representative of the "grand style"; but M. Chesneau thinks his greatest success has, perhaps, been in the field of purely decorative art, and that greater commendation in this respect is due to Mr. William Bell Scott; and a little further on, he tells us that Mr. Watts is the only Englishman who has an appreciation of the nude in art combined with the ability to portray it. This seems to whittle down to small dimensions the merit of the President as the "worthiest representative of the grand style." But with regard to Sir Frederick Leighton and Mr. W. B. Scott, as with regard to several other artists, omissions or additions have been made to the English text, and we are not told who is responsible for them. The importance assigned to the President is less, and the praise given to Mr. Scott much higher, in the French version. Again, Mr. Prinsep's "Berenice" is the subject of an eulogium in French, the warmth of which has been greatly reduced in English. What makes these changes more unsatisfactory is that they seem to be sometimes due to the translator. For instance, M. Chesneau wrote that Mr. Prinsep "a tourné au réalisme et se contente de donner de style à de simples figures de 'Blanchisseuses' et de 'Glaneuses.'" In the English we read that the artist "of late has become more realistic, and is satisfied to portray such simple figures as 'Linen Gatherers' and 'Gleaners.'" It would seem that both author and artist have reason to complain of such a translation, and the reader also, for, judging of it together with other similar discrepancies, he may well doubt how far what he is reading represents the meaning of the author. But if we were to attempt to pick all the holes we might find in this book, in the work of author, translator, editor, and introducer (for Mr. Ruskin adds his quota to the confusion both in notes and preface), we should never have done, and should have no space to render such praise as is due to this in many respects creditable survey of British art. It is not in particulars, neither particulars of fact nor particulars of criticism, that its merit lies, but in the general soundness of the principles of

its criticism. Such sound principles have never yet been brought to bear upon English art as a whole, and our regret that they, for the first time, have been so applied by a foreign critic should not prevent our recognition of the fact frankly and fully. The very nobleness of Mr. Ruskin's ideal, which requires of the artist the spirit of an evangelist, and his conception of art as a means of expressing the inner essence of the construction of things rather than the effect of their appearance to our eyes, make him too much of a partisan, too much of a moralist, for the calm and tolerant attitude which should, before all things, distinguish a judge; and it is not the least remarkable point in this notable volume to find how two such self-confident intellects as those of M. Chesneau and Mr. Ruskin, while differing on essential points, can approach each other with admiration, and join in praising and in sympathizing with the same works of art. It is true that Mr. Ruskin is very careful to hedge his agreements with M. Chesneau by all sorts of strong reservations, and that M. Chesneau expresses views in direct opposition to those of our English professor; but the fact remains that Mr. Ruskin thinks it a privilege to introduce M. Chesneau's work to the reader, and that the latter shows the strongest sympathy with the nobility of the aims of the English pre-Raphaelites. Despite all its faults, much good may be hoped from M. Chesneau's book. It should help English artists and the English public to a clearer view of the proper functions of painting and of the shortcomings of our own attempts, and should teach the French how much there is to admire and even to imitate in our insular art.

Donatello. By Eugène Müntz. (Paris: Rouam.) The "Great Artist" series, recently published in England, may perhaps have given the idea of the French series of which M. Müntz's *Donatello* forms one. At all events it had the priority; but if we may judge from the present specimen and the names of the authors who have been commissioned to write other volumes, the series of "Les Artistes Célèbres" will far excel its forerunner. It was indeed a pity that the opportunity was lost in England of producing a series which should have feared no foreign rival. It might perhaps have been more difficult for the English than for the French projector to have found a sufficient number of writers properly qualified to carry his scheme into effect; but there was no excuse for consigning the biographies of some of the greatest artists to authors without either literary or critical ability. In justice to some of the best qualified, it must be added that they should not be held entirely responsible for the defects of their books. Donatello, for instance, was entrusted to a lady who, under less discouraging conditions as to space, might have produced a work much more worthy of her subject; but this noble artist, perhaps the greatest of all Florentine sculptors, was not allowed even a small volume to himself. What can be done with such a subject in a contracted space has now been shown by M. Müntz, but he would have found it impossible to treat it worthily without a little more room than was accorded to "Leader Scott." The French series is of a better size, large enough to admit, without folding, illustrations of real value to the student, and not too big to be cumbersome. The page is a handsome one, with good print and a fair margin; and, what is less usual in French unbound books, the wrapper is serviceable, the ordinary paper being covered with an outer case of parchment, strong and flexible. The illustrations have, as a matter of course, with perhaps one or two exceptions, done duty in *L'Art* or elsewhere, but they are good and useful, preserving much of the style and character of the original works.

The number of them is forty-eight; and they include such comparatively little known works as the full length youthful figure of St. John the Baptist, in the Martelli Palace at Florence, and the tomb of Cardinal Brancacci, at Naples. Considering the necessary limits of such a work, the illustrations may be said to fairly represent the extraordinary scope of the artist. If we miss a well-known work like the relief of Herod on the font at Siena, we find another of similar spirit in the "Martyrdom of St. Sebastian," belonging to M. Edouard André; and the absence of the famous singing gallery at Florence is made up by the dancing children of the pulpit at Prato. If we turn from the manner in which the book has been produced to the style in which it is written, we find even more reason for satisfaction. M. Müntz is a master of his subject, and has a perfect appreciation of the genius of Donatello. This book may fairly be taken as a model of what such a work should be, learned and accurate according to the latest knowledge, yet bright and readable from beginning to end, adding not perhaps much to our knowledge, but arranging it with such method, and treating it with such literary skill, that the best-informed student of the Renaissance could scarcely read it without thankfulness as well as pleasure.

Pottery Paintings; Glass Paintings; Wood Carving. By Fred Miller. (Wyman.) One is apt to be distrustful when the same author proceeds to instruct us at the same moment in several different arts. It is not in nature to be credulous of admirable Crichtons, and the popular sentiment is well given in the phrase of a jack of all trades and master of none. Nevertheless we hold to Mr. Fred Miller, for his illustrations show us that he can draw and has a due sense of the characteristics of wood engraving; and his writings are evidently the result of his own thought and experience. Whether or not he be a practical master of all the crafts he teaches (he tells us that he has practical experience as a glass painter), he has certainly studied their principles and knows how to expound them. In one art, however, he would appear to be somewhat deficient, and that is the art of producing books at proper intervals. His fecundity knows no restraint. Three books at a birth may be nothing to him, but it is too much for the ordinary reviewer. One or the other must suffer for it, and it is only justice that the penalty should be paid by the disturber of natural order. We shall therefore confine ourselves to saying that these treatises are sound in principle and well-written—trustworthy guides in a word and pleasant to read—and that the illustrations are numerous and good. We wish we could give the same praise to the typography. There is very little art about that.

Dürer's Apokalyptische Reiter. By Dr. A. von Oechelhaeuser. (Berlin: Hertz.) This little pamphlet of thirty-six pages contains a careful discussion of one of the woodcuts of Dürer's "Apocalypse"—that, namely, representing the "Four Riders." The author traces the origin of the design to a cut printed first of all in Quentel's Köln Bible (1497), and afterwards in an edition of the same book published by Dürer's godfather, Anton Koburger, at Nürnberg in 1483. Of this woodcut a poor reproduction is given. The reproduction of Dürer's cut is better. Dr. Oechelhaeuser then examines the effect produced by Dürer's work upon other artists. He gives reproductions of cuts by Anton Woensam of Worms (1525), by an anonymous woodcutter (the cut is printed in Luther's Bible of 1534), by Hans Burgkmair (1523), Tobias Stimmer (1576), Lucas Cranach (1522), Holbein (1522), Virgil Solis (1560), Jost Amman (1564), and Hans Sebald Beham (1533); also of a bas-relief of 1543, sculptured by Maître

Jacques of Angoulême, and forming part of Bishop Jean de Langhaec's tomb at Limoges. All of these representations of the "Four Riders" follow Dürer's woodcut more or less closely. The author refers to the tapestry, made in 1525 for the church of St. Lambert of Liège, one of the set now at Madrid, which, with its fellows, is founded upon Dürer's woodcuts. These tapestries have been well photographed by Laurent at Madrid, and are probably the best series of Apocalypse pictures made after Dürer. It is unfortunate that Dr. Oechelhaeuser was not able to give a copy of the portion of tapestry with which he is concerned. What he has to say is said at wearisome length, but his work is thorough, and no Dürer-student can afford to pass it by unnoticed. He leaves it uncertain whether his Fig. 3 is a reproduction of a cut in Lufft's New Testament of 1530, or of one in his first edition of Luther's whole Bible published four years later.

THE PHOTOGRAPHIC SOCIETY'S EXHIBITION.

IN one respect, and in one only, this year's exhibition is hardly equal to some of its predecessors. There are fewer successful attempts to solve the problem of producing photographic genre pictures. If, indeed, we were to judge from some of the examples, we should be disposed to pronounce the attempt to be hopeless. In many of them the composition is awkward, the attitudes are constrained, and the models are too obviously posing. Old people with stony faces and young children are well represented; but, in other cases, it would seem that natural expression is impossible in front of a camera. There are, however, two or three pictures in this class of no small artistic merit. The most ambitious of these is Mr. H. P. Robinson's "Dawn and Sunset," which is skilful alike in composition and in management of light; and, considering the difficulties of the process by which it has been produced, is probably the most marked success of the year. The attitude of the child on its mother's knee, and of the old man sitting over the fire, are exceedingly good. Another most pleasing picture is to be found on one of the screens, Mr. W. N. Malby's "Strengthening the Understanding," which in point of humour equals Erskine Nicholl's best works, and is, moreover, characterised by very delicate gradations of tone. Mr. Henry Stevens's study of "A Rustic" is another picture which should not be overlooked.

In other respects the exhibition is full of good work. Many of the landscapes are of the highest excellence. Mr. Seymour Conway has, we think, in his series of views in the Tyrol, surpassed anything which even he has produced in former years. It is, indeed, difficult to suppose that finer results can be obtained in this branch of the art than in some of these photographs. Look, for instance, at the exquisite little view of the mountain village, with the white-robed priests and kneeling figures in the street; there is hardly a face among them the features of which are not clearly defined. Was ever the effect of hot sunshine so well given in a photograph? Mr. Conway has able competitors in Mr. William Muller, who sends several admirable views in the Engadine, and Mr. F. Beasley, jun., who has been at work in the same region. Mr. Wilson Noble also exhibits some very effective views in the Engadine Valley, enlarged from the negative. Several of the landscape photographs contributed by the School of Military Engineering deserve notice.

Among the portraits there are good heads of Lord Tennyson and Mr. Watts, R.A., by Mr. H. H. H. Cameron; and Mr. H. S. Mendelssohn sends a charming group of "Mrs. J. H. Blyth's Children." There is a very astonishing

portrait of Mr. Ruskin, stated to be an untouched enlargement from a negative by Barraud. It is, we are sorry to say, some four or five years since we last saw the author of *Modern Painters*; but surely this Israelitish nose and shaggy aspect must have received some exaggeration in the process of enlargement from the negative?

Among the general subjects Mr. Henry Stevens's "Group of Orchids and Ferns" and "Group of Hot-house Flowers" deserve special mention for delicacy of tone and excellence of definition.

CORRESPONDENCE.

THE DISCOVERY OF A SAXON CHAPEL AT DEERHURST.

Ferryhill Lodge, Aberdeen: Oct. 5, 1885.

John Mitchell Kemble, the distinguished Anglo-Saxon scholar and archaeologist, was of opinion that the church of Deerhurst is mostly Saxon work. The lance-shaped inner window in the tower, especially, led him to form this judgment; the two upright slabs at the upper part, meeting in a point, being a mode of building in use before the turning of the arch was known. At the time of a visit of the Archaeological Society to Cheltenham, my sister and I had the privilege of accompanying Mr. Kemble, and of hearing his opinion. Deerhurst he considered very Saxon land. I am, therefore, very much interested in the discovery of the Saxon chapel, and in the remarks of Mr. Middleton thereon, as to its concealment by the farmhouse being built to enclose it. The church at Deerhurst, at the time I mention, was disfigured internally by whitewash and plaster, which I picked off in places, for examination of probable capitals. If I remember rightly, a rude fresco had been discovered on the wall at the right hand of the altar. FRANCES ANNE BAIN.

GREEK INSCRIPTION FROM EGYPT.

Bodleian Library, Oxford: Oct. 6, 1885.

After looking at the few names in Pape's *Eigennamen* which will suit the metre, I strongly suspect that the name, of which only the first two letters EP are decipherable, is *Ἐρυθρίος*.

Unless there was more than one Byzantine statesman of this name, *Erythrios* was an Egyptian (Suidas, under *Ἐρυθρίος*, at end), who was *præfectus praetoris* (minister of justice and finance) at Constantinople in 469, 473, 474, and 510 (Tillemont, *Hist. des Emp.* vi., 402, 473, 577), and who resigned office under Zénon (emperor from 474 to 491) because his singularly kind nature would not allow him to levy extra taxation (Suidas, under *Ἐρυθρίος*). He had a daughter, Hypatia, on whom the poet Panolbios (Suidas, under *Πανόλβιος*) wrote an epitaph.

The father-in-law, Theodôros, who, according to the epigram, was made "guardian of younger Rome," i.e., *præfectus urbis* at Constantinople, may possibly be the person of that name who was deposed from another splendid office, that of *Comes Orientis*, in 490 (De Muralt, *Chronographie byzantine*, 108). Or he might conceivably be the Theodôros who was *præfect* of Alexandria when Proklos was a young student there (Marinus, *Proklos IX.*), say about 426. E. B. NICHOLSON.

NOTES ON ART AND ARCHAEOLOGY.

THERE is a pleasant little exhibition, at the Egyptian Hall, Piccadilly, of sketches and studies by members of the Dudley Gallery Art Society. Mr. A. de Breanski contributes a striking study of "Great Marlow Lock—an August Evening"; and Mr. J. M. Donne sends several clever Swiss sketches. Among these

the "Gorge of the Visp, near Stalden," is truthful and pleasant in colour. In his sketch entitled "In the Val Bedretto, near Airolo," he has treated an extremely difficult subject with great ability. It is long since we have seen a more successful work of the kind. There is also a charming little study of a girl selling flowers, by Mr. J. J. Johnstone, called "Spring Flowers." Mr. Couldery's pastel drawing of a cat, styled "The Poacher," deserves special notice, as do also the landscape sketches by Mr. R. Goff and Mr. Alfred East. Mr. Walter Severn, the President, sends several sketches, of which, probably, the best is "Freshwater"; though why he should have used seawater in painting it, and why he should further have announced the fact in the catalogue, we are at a loss to imagine.

NEXT Monday has been appointed for the reception of works of art intended for the Autumn Exhibition of the Nineteenth Century Art Society.

THE *Art Journal* contains a capital etching by M. E. Dulque, after "A Public Letter-writer at Seville"; but Señor Jimenez y Aranda, the author of this spirited figure, will be surprised to find his name given as J. Aranda on the plate. "Leader Scott" on the new Tapestry Museum at Florence, Mr. Thielton Dyer on the open-air theatricals in the grounds of Coombe House (beautifully illustrated by woodcuts after Mr. W. Hatherell's drawings), and Mr. J. M. O'Fallon on "Glass Engraving as an Art," are all worth reading. Altogether it is a very good number.

IN the *Magazine of Art* the musical weird verses of "Below the Sea," by Miss May Kendall, are well matched with a strange and spirited design by Mr. W. H. Overend. The most notable articles are those by the editor, upon De Neuville, and Mr. R. A. M. Stevenson on "The American Salon"; but the number is, as usual, full of good and various matter well illustrated. The selection of portraits of Lady Hamilton, by Romney, is well made and very interesting. They are admirably engraved on wood by Jonnard and Klinkicht.

BESIDES continuations of articles to which the attention of our readers has already been drawn, *The Portfolio* contains an interesting account of St. Augustine's Abbey, Canterbury, by Miss Julia Cartwright. Prof. A. H. Church's second paper on "Old English Fruit Trenchers" completes the most perfect study which has yet been written on these interesting relics of an Elizabethan custom.

IT would seem as though "processes" were going to supersede hand engraving entirely for magazine illustration. The *Zeitschrift für Bildende Kunst* (September) contains no etching and scarcely a wood engraving. The heliogravures are, however, beautiful. One is from a fine Greek relief of a lioness and cubs at Vienna, and illustrates Th. Schreiber's concluding article on the reliefs from the Palazzo Grimani. Richard Graul's third article on Paris Exhibitions, and a notice of the late H. S. Bendel, the historical painter and illustrator of Hebel and Pestalozzi, make up (with a few short reviews) the concluding part of the twentieth volume. The same cover contains the final pages of the first volume of *Kunstgewerbeblatt*, a publication which has been well begun by its editor, Arthur Pabst. The progress of decorative art in the United States is the subject of a paper admirably illustrated with a stained glass window by La Farge, a panel of Bacchus by Gaudens, and the library and dining-room of Mr. Tiffany. A silver shield, designed by A. Offerding, is represented by the heliogravure process of F. Handstangl, of Munich, with wonderful brilliance and delicacy.

THE new Luxembourg Museum is expected to be opened in February next. M. Arago, the

keeper, proposes to add to the institution a collection of drawings by modern artists. Each painter of whom a picture is purchased by the State will in future be requested to send to the Luxembourg the sketches and drawings used in its preparation.

Two new rooms in the Louvre have been devoted to recent additions to the Egyptian Museum.

M. EUGÈNE MUNTZ is about to republish the following studies which have appeared in magazines: "Les Palais Pontifical de Sorgues (1319-93)"; "Les Peintres d'Avignon pendant le règne de Clément VI."; "Les peintures de Simone Martini à Avignon," and the "Statue d'Urban V." at the Avignon Museum.

THE Greek journals are sounding the praises of Lord Bute, who contributed to the July number of *The Scottish Review* an article on "Some Christian Monuments of Athens." In the course of its remarks one of these says:

"Besides being of value for other reasons, this article preserves an account of those ruins which are being now even forgotten; all will, however, be gradually forgotten, unless some zealous mind be seized with the idea of preserving them. This has already happened in the case of the church of the *Μεγάλη Εκκλησία* in the old market place, which has been destroyed by fire. Fortunately M. Guilleron has successfully copied the wall-paintings from the burnt buildings. Would that the example set by the noble and philhellenic Scot, whose article we are noticing, and who has left to Athens a splendid collection of bronzes as a memento of his visit last year, could awaken among us a more general and practical interest in these monuments! The union of the Historical and Ethnological Societies of Greece seems to justify such a hope."

MUSIC.

THE thirtieth series of the Crystal Palace concerts will commence on October 17. There will be twenty concerts—ten before and ten after Christmas. Mr. A. Manns will, as usual, be the conductor. Four of the Birmingham novelties are announced: Mr. E. Prout's Symphony in F at the first concert; Mr. F. H. Cowen's cantata, "The Sleeping Beauty," on December 19; Antonin Dvorák's "The Spectre's Bride," on February 13, 1886; and Gounod's trilogy, "Mors et Vita," on a Saturday in Lent. On December 5 the first part of the programme will be devoted to Mozart, in memory of his death. Among the novelties we notice a concerto for harp, by Handel, with accompaniment for two flutes and strings; a concerto by Bach for two flutes, violin, and orchestra; a Capriccio Italien by Tchaikowski; and a symphonic poem "Liebe und Leben, Kampf und Sieg," by Mr. F. Praeger. Miss Fanny Davies will make her first appearance on October 17, playing Beethoven's Concerto in G, with cadenzas by Mme. Schumann.

THE four concerts of the Borough of Hackney Choral Association, will be held on the following dates: November 2, December 21, 1885; February 22, and April 12, 1886. The following works are announced: Schubert's Mass in F, Mr. Prout's "Alfred," Mackenzie's "Rose of Sharon," "Elijah," the "Dettingen Te Deum," and Beethoven's Choral Symphony. Mr. E. Prout will, of course, be the conductor. The prospectus, giving an account of what has been accomplished during eight seasons, contains a list of no less than sixteen works performed for the first time in London.

MR. DANNREUTHER's translation of Wagner's *Ueber das Dirigiren* is in the press. The work is a treatise on style in the execution of classical music, copiously illustrated with quotations in musical type from the works of Beethoven, Mozart, Weber, &c. Mr. W. Reeves is the publisher.

SATURDAY, OCTOBER 17, 1885.

No. 702, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Movements of Religious Thought in Britain during the Nineteenth Century. By Principal Tulloch. (Longmans.)

THERE is a certain fitness in the dedication of the fifth series of the St. Giles's lectures to Mrs. Oliphant. Principal Tulloch's latest contribution to the history of English theology has some of the merits of Mrs. Oliphant's contribution to the history of English literature. There is the same endeavour to survey an extensive, though not unlimited, area from an adequate elevation; there is the same effort to approve or disapprove, as well as to understand, which helps the effort to understand in about the same measure; and both writers are kept from going far wrong by the conscientiousness which sometimes seems as if it hindered them from being accurately right. If not impartial, they are always temperate.

The book might have been called a History of the Movements of Religious Thought from Coleridge to Jowett, or, better still, from the appearance of *Aids to Reflection* to that of *Essays and Reviews*, and even then something is omitted. We learn, for instance, a good deal of what the late Mr. Keble thought of heretics, but nothing of the influence of *The Christian Year*; something of what Mr. Maurice and Mr. Mill thought of Dean Mansel's Bampton Lectures, but nothing of their effect on opinion in general, nothing of their relation to Whately on the one hand and Coleridge on the other. The doctrine of regulative truth is exactly what might have been expected to come of Coleridge's method of stating theological problems in terms of anthropology, when it passed into the hands of a thinker who preferred to keep his emotions and his dialectics apart, and so was able to ride his dialectics to a standstill. Probably Principal Tulloch approves too much of Mr. Mill's famous protest against worshipping a Being whose ways are not as our ways, even when our ways are right, to recognise Dean Mansel as a legitimate descendant of Coleridge; but he does Coleridge justice, which is refreshing nowadays. If his self-control had been equal to his other gifts, he might, perhaps, have written something as monumental as the *Analogy* or the *Novum Organum*, or he might have written the book he always fancied he was writing—something too like the book which poor Mr. Green wrote for him. He might have been more famous. Would he have been more influential? After all, he leavened the thought of England as much and as long as Schelling leavened the thought of Germany. Schelling had diligence and self-control and fame; and where are his volumes and his systems—for he had several—now? (May we not soon ask where are Hegel's?) On the shelf beside Malebranche and Berkeley, and dustier already.

One of the best parts of the book is the description of the liberal movements of 1820 to 1830, which for the time were completely overgrown by Tractarianism. We all know enough of Coleridge to disguise our ignorance, but most have completely forgotten the days when Whately was a theologian and Milman almost a heresiarch, because he called Abraham, who to be sure had no tribesmen, an Arab Scheikh; and Erskine, of Linlathen, is remembered rather as the Nestor of a coterie than as a popular author, widely read and vehemently attacked as he was between 1820 and 1830. It is a pity that we are told nothing of the anonymous work against Erastianism, which Whately never disavowed, and which made Froude and Newman's blood boil; especially as we are told a good deal in proportion of Dr. Hampden, whose "persecution" even after all this time almost makes Dr. Tulloch feel he would do well to be angry. The most tangible grievance is that Dr. Hampden was not attacked till he was placed in a position to be specially dangerous, though one doubts if his friends would have been better pleased if the measure they dealt to *Tract 90* and the *Ideal of a Christian Church* had been dealt to his Bampton Lectures. If it can be shown that Dr. Hampden really believed in and valued the Anglican formularies, it is odd that Dr. Tulloch gives us no better evidence of it than that Bishop Wilberforce came to think Newman's indictment unfair. Probably Newman did not quite realise how ready Hampden was to rebuild in biblical theology what he destroyed in dogmatic theology; but an indictment is not expected to be like a summing-up. Would Dr. Tulloch speak of Burke's "persecution" of Warren Hastings?

It is hard to be fair. Arnold was as insolent to Christianity after Cyprian as Froude was to Christianity after Luther—neither waited to be eminent before he was contemptuous—and Dr. Tulloch deals unequally with the two offenders, if they did offend. It would be unreasonable to ask him to deal equally—fairness ought to be demanded of those who cannot be useful. If a man is in good faith, and can be useful, he must take his chance whether the statements he makes which are open to correction will help or hinder his cause on the whole. The probability is that they will help it. Has there ever been a religious teacher who did what Dr. Tulloch would call justice to the world where he made converts? To respect your enemy may save you from defeat—it is not the way to conquest. De Maistre moved Europe by the same qualities and the same defects by which Froude stirred Oriel. In his days Oxford was a microcosm whose denizens measured one another accurately. Some of the heroes of the microcosm were fit to be heroes of the macrocosm too; others, it may be, were not, yet in the microcosm they were heroes; and Froude would have got as much credit for his austerities as Thoreau if he could have thought that great sacrifices gave him a dispensation for small indulgences.

After all, a man's friends know him best; and for this reason one ought not to complain that Dr. Tulloch overrates his friends, the series of devout thinkers, from Erskine to Bishop Ewing, who saved one generation of ardent youth from scepticism. It is well to be

reminded that Robertson and Kingsley, and even Maurice, were once more widely read than Newman, and that their readers and admirers were, on the average, quite as intelligent as his. The difference, even then, was that nobody seriously admired Maurice or Kingsley or Robertson without agreeing with him, while those who disagree with Newman most do not esteem him least. However, Dr. Tulloch shows a good deal of discrimination in comparing his favourite theologians with one another, though he does not notice that Robertson took peculiar pains to put his new wine into old bottles, and to speak the language of Protestant scholasticism, while the fiery darts of the *Record* were ranking in his heart. Kingsley and Maurice were more apt, especially Kingsley, to take credit for upholding primitive and Catholic truth when they differed from the popular orthodoxy. All three had a habit, which was not precisely admirable, of bringing up popular orthodoxy, or their version of it, for condemnation at the bar of the natural man. This, they hoped, would secure them a favourable hearing when they pleaded for their own view in the higher court of the spirit; but they might have understood that the orthodox could not be expected to like it, and made their account to take cold looks and hard words rather more quietly.

The lecture on Carlyle as a religious teacher was of course indispensable, and, upon the whole, discreet to boot. Perhaps it contains one observation that has not been made before—that he would have been happier and more respectable if he could have lived all his time at Hoddam Hill without marrying a gentlewoman. Of course the lecturer is shocked that upon his first visit to London he should have seen so pitilessly through "the day's distinguished names," though they did play rather pitifully "at being names still more distinguished"!

Mr. Mill fares worse than we should have expected. Instead of making the most of the admissions of the posthumous *Essays on Religion*, Dr. Tulloch prefers to accentuate their inconsistencies and shortcomings, and waxes contemptuous over the theory of "Two Principles," which both the elder and the younger Mill thought more credible than Theism. The theory can always appeal to the logic of common sense so effectively that it is surprising the appeal is not renewed more often. Of course, from the point of view of transcendental dialectics the hypothesis is untenable; but then there are not many men in a generation who can handle transcendental dialectics effectively, and they do not succeed in moulding the opinion of the great public. Dr. Tulloch is in his element in comparing Mill with the Grotes, who belonged to a straiter sect of Benthamite orthodoxy, and watched his divagations with jealous interest. One hardly knows why he says nothing of the open secret that Grote drew up the antitheist manifesto of the school which was reprinted in 1866, under the title of an *Analysis of the Influence of Natural Religion*, by Philip Beauchamp, Esq. It is true that it fell dead, but this cannot be said of the once famous *Vestiges of Creation*, which one would have thought had as good a right to figure in "the movement of religious thought in Scotland" as Combe's *Constitution of Man*. In the same

way one might have expected to find some mention of Buckle's *History of Civilisation*, which told upon religious opinion quite as much as the brilliant early works of G. H. Lewes, and more than the works of Hennell and Bray, though the two last are only mentioned because of their influence, which Dr. Tulloch perhaps exaggerates, upon the mental evolution of George Eliot. It is to be hoped that the forthcoming new edition of her *Life* may throw light upon the question, which deserves to be settled while the materials are still at hand.

G. A. SIMCOX.

The Ingenious Gentleman Don Quixote of la Mancha. By Miguel de Cervantes Saavedra. A Translation by John Ormsby. Vol. IV. (Smith, Elder & Co.)

MR. ORMSBY in this volume completes his translation of *Don Quixote*, and we are able to judge his work as a whole. For the English reader who wishes to make acquaintance with the story of the renowned knight of la Mancha, we have no hesitation in saying that it is superior to that of Mr. Duffield, or to any other English translation with which we are acquainted. The only portion in which Duffield's version compares favourably with this is in the poetical translations. Mr. Ormsby usually keeps closer to the form of the originals, and attempts to preserve the exact measures of the Spanish; but his versions are somewhat stiff and laboured, and have not the ease and flow of Mr. Gibson's. They are felt to be translations, while Mr. Gibson often gives us a real English poem. The difference, however, is not so great that another critic might not decide in favour of Mr. Ormsby's versions. We should like to have the opinion of the prize editor of the *Journal of Education*, the only English authority on poetical translation, on this point.

There is, perhaps, almost too great a scrupulosity in following the reading of the earlier texts, and rejecting the emendations of later editors; but this, if a failing, certainly leans to virtue's side. In the notes there is very little to choose between the editions. Duffield's notes are much the more infrequent towards the end of the last volume. In his note (p. 60) Mr. Ormsby remarks: "The straits of the starving Hidalgo were a favourite theme of the novelists and dramatists of the time." The theme has never ceased in Spain: even now both Pereda and Pardo Bazan describe in their novels the actual hardships and necessities of some of the nobility and gentry in northern Spain of long descent, but far poorer than the peasants around them, and who do not seem to have even Don Quixote's Saturday dish of "duelos y quebrantos" ("skin and grief," as a Buckinghamshire labourer would say). The students of Compostella, too, according to Señor Bazan, are almost as badly off now as were those of Salamanca and Alcalá in Cervantes' time.

The present volume is enriched with three valuable appendices: the first, on the Proverbs of Don Quixote, quite sufficient for the present purpose. We may, however, remark for those who may wish to pursue this subject further, that, while Mr. Ormsby makes full use of the older books on Spanish proverbs, he does not seem to be aware of the recent works of D. Joaquín Costa and of Dr. Haller's

Altspanische Sprichwörter (Regensburg, 1883). The second appendix on the Spanish romances of chivalry, and the third on the bibliography of *Don Quixote*, are admirably done. The former will not entirely supersede the catalogue of Señor Gayangos in Duffield's edition, but it completes and supplements it. Mr. Ormsby has been more than once successful in hunting out earlier editions than those mentioned by Mr. Duffield. He also gives in Spanish the titles of the books described instead of translating them into English, which is a work of supererogation, for no one could trace such works by an English title, or read them without a knowledge of Spanish. Mr. Ormsby's remarks on the books themselves are the fuller and more interesting; on the other hand, Mr. Duffield mentions later editions, and carries his researches lower down than Mr. Ormsby does. Neither editor seems aware of the extent to which debased and curtailed copies of some of these romances are still hawked about in the fairs and markets of Southern France and Spain, and how large a part they still form of the reading of those peasants who can read at all. Cervantes gave a death-blow to these romances for the literary classes, but certainly not for the illiterate.

To conclude, Mr. Ormsby's translation is one which enables the English reader to form some true idea of what Cervantes' great work really is. It can be read with pleasure, and carries the reader smoothly along with it. It does not irritate him by affectations of phraseology, nor dilute the original with vague wordiness, nor disguise it with patches of cheap and tawdry wit. If we have a reserve to make, it is that, like his predecessor, and like too many students of Spanish in other departments, he relies too exclusively on the older, and neglects the admirable work of living critics of Spain, who yield in nothing to those of earlier days. So far as we have observed, excepting Gayangos, the latest name quoted is Hartzenbusch. But we should be sorry to close with censure our remarks on a work of genuine labour, which has given us much pleasure, and which, for the general reader, should certainly supersede all former versions of *Don Quixote* into English.

WENTWORTH WEBSTER.

Ambushes and Surprises. By Col. G. B. Malleon. (W. H. Allen.)

THIS volume is open to much criticism, and yet we have read it with real interest. Col. Malleon holds a distinguished place among the military writers of our day; and it would be superfluous to dwell on the undoubted merits of his *Battle-fields of Germany*, and *Battles in India*, not to speak of his other excellent works. His aim in this book has been to describe a peculiar class of operations in war, for the most part dramatic and striking, and often attended with immense results; and his narrative of some remarkable instances of surprises, and their effects in history, if not free from faults, should be carefully studied. His treatment of his subject, viewed as a whole, is not equally good in its different parts; for example, his sketches of "Fort Duquesne," and "Maxen," are more animated than that of "Inkerman," which might have been very much better done. His chapter on "St. Gothard," though

a good *résumé* of passages in the campaign of 1799, is out of place, for that was not a surprise; and his account of Hannibal's march into Italy, of which "Trasimenus" was a mere episode, though not unworthy of the noble theme, follows too slavishly the work of Hennébert, especially as to local details. The volume, besides, is too diffuse. Long historical dissertations usually precede the incidents which form the matter in hand; and we wander through a dense maze of pages before we arrive at the passage of arms which really is the author's subject. In spite, however, of drawbacks like these, the work is of undoubted value, and we commend it to the student of war. Col. Malleon possesses, in a high degree, the intelligence that perceives the merits of different illustrations of the military art, and the discernment that can judge them rightly; he is singularly impartial and fair in his views; and he can express the results of well-digested knowledge in perspicuous, if not eloquent, language. Notwithstanding, for instance, the defect we have named, his estimate of Hannibal's wonderful powers, and his account of the Alpine march upon Rome—a prodigy of genius, daring, and skill—are excellent, both in description and thought; and we may say the same, though with less praise, of his chapter on the surprise of the "Teutoburg," a great chapter in the history of the world, for it saved the German races from the yoke of Rome. In two respects Col. Malleon differs, we are happy to say, from a school of critics who, in our day, have written on war: he appreciates real military skill, however imperfect may be the instruments with which it may be compelled to work; he sees that Napoleon is greater than Moltke, spite of the new inventions of the present age; and he constantly points out that superior leading is the paramount force that decides campaigns, not mechanism and war office arrangements; that military organisation is an excellent thing, but that a really great commander is even more excellent.

We have no space to describe the instances of surprises in war contained in this volume. "Trasimenus" and "Maxen" well illustrate the difference between true military genius and powers only of a second-rate order. On both occasions the plan was well laid, on both success was complete and decisive; but Hannibal destroyed his foes to a man, Daun allowed part of Finke's troops to escape; and Hannibal made his victory tell with marked effect on his whole campaign, while Daun's triumph remained wholly fruitless. "Fort Duquesne" shows that the British soldier, unrivalled, perhaps, in dogged constancy, may, nevertheless, be stricken by panic and discomfited by a contemptible enemy, sprung suddenly on him in a position in which his power of resistance is checked and hampered; and the same may be said of the defeat at "Arah," both skirmishes, too, being good examples of the miserable results of bad generalship. The age of Braddock, however, was that in which our military system was at its worst: it was that of Prestonpans, Fontenoy, and Lauffeldt. It gave us one general only, Wolfe; and the army which, fifty years before, had won under Marlborough deathless renown, and, fifty years afterwards, triumphed with Wellington, seemed in a state of all but

decrepitude. Col. Malleon does no more than justice to the great qualities shown by Lord Mark Kerr in baffling the Sepoys at "Azamgarh"; and it may be said that this is the only instance "in which an army surprised by an enemy in ambush succeeded in inflicting a crushing defeat upon that enemy"; but he has been influenced here by personal friendship, and he has laid too much stress on this passage of arms. As we have said, he should have done "Inkerman" better. The moving scenes of that tremendous conflict—perhaps the most wonderful of defensive battles—ought to have been sketched with more power and effect. But he has done justice to the astonishing efforts of the British infantry on that terrible day; and, while he has fairly described how much was due to the conduct and skill of some of our officers, he has truly remarked that a great commander on the Russian side must have gained a victory. We pass over "Kerkoporta" and "Innsbruck" as not being conspicuous instances of military genius in operations of this kind; and we shall say nothing of "Roncesvalles" and "St. Gothard," except that Roland, if we can believe the legend, showed that irritable jealousy of comrades-in-arms so often displayed by French generals; and that as Lécourbe, in his Alpine campaign, was not, properly speaking, surprised by Suwarrow, this part of the work is beside the subject. "Teutoburg," however, was a genuine surprise of the most terrible and decisive sort; and the barbarian who planned it, and utterly destroyed the flower of the dreaded army of Rome, had some of the finest qualities of a great warrior.

How different have been the ultimate results of the operations at which we have glanced! "Trasimenus" was followed by the rout of Cannae, and Rome seemed on the verge of extinction. But Zama was in due time to come; and the Republic crushed her illustrious enemy. On the other hand, though, compared to Hannibal, Arminius was a mere able savage, the defeat of Varus, avenged as it was, preserved their rude freedom for the tribes of Germany, and laid the foundations of the modern world that has risen out of the decay of the empire. "Roncesvalles" was a mere passing disaster; but "Kerkoporta," though only an incident in itself, without remarkable features, made the Crescent supreme far beyond the Bosphorus, brought the Osmanli into the heart of Europe, and changed for centuries the march of history. "Innsbruck," too, was of no great importance, considered as a military event; but it directly led to the Peace of Passau, and indirectly to the Thirty Years' War, with its far-reaching and still-enduring consequences. Then, again, Canada has been lost to France, notwithstanding her triumph at "Fort Duquesne," though Col. Malleon is probably right in ascribing to the failure of Braddock the confidence afterwards felt by Washington in the revolted colonists' power of resistance; and if Frederick met a reverse at "Maxen," humiliating in a military sense, he emerged victorious from the Seven Years' War, and his descendant governs a German empire in which there is no place for the Austrian monarchy. How different must have been the course of events had the handful of men who held the ridge of "Inkerman" on that

5th of November been overpowered by the weight of their foes, and had the allied armies, as might well have happened, been driven into the sea by the overwhelming force of masses six- and seven-fold in numbers! In that event England might have lost India; the throne of Napoleon III. must have fallen; the Czar would have been the lord of an overawed continent; a united Italy and a united Germany would still have been mere dreams of the future; there would have been no Solferino, Sadowa, or Sedan; and the cause of reaction would still prevail through Europe. On the other hand, events like "Arah" and "Azamgarh" were not momentous in any respect; the issues at stake in the Indian Mutiny were fought out at Delhi and Lucknow; and Col. Malleon, from obvious motives, has dwelt too much on these episodes in the great drama of the outbreak against our rule in the East.

WILLIAM O'CONNOR MORRIS.

A Trigonometrical Survey of the Island of Cyprus. Executed and published by command of Sir R. Biddulph, under the direction of Capt. H. H. Kitchener. Scale of one inch to a mile. On fifteen sheets, with a general map on a reduced scale. (Stanford.)

THE Island of Cyprus was assigned to Great Britain by the Ottoman Porte under a convention of defensive alliance between the two powers, dated June 4, 1878. In entering on this engagement, it was felt that England could not lend herself to the support of the objectionable features of Turkish administration. Therefore the Sultan promised England to introduce necessary reforms in Asia Minor for the protection of his Christian and other subjects. Unhappily, the promise has not been performed. Even the preliminary investigations—made by British commissioners in Asia Minor, Armenia, and other parts of Asiatic Turkey, with a view to the promised reforms—have been smothered in the pigeon holes of Downing Street. Thus it has happened that, during the seven years of the British occupation of Cyprus, instead of the English reforms in that island running hand-in-hand with Turkish reforms, the rapid growth and prosperity in Cyprus stands out in vivid contrast—not only with the ruinous and exhausted condition of the island when it came under English administration, after centuries employed by the Turks in extracting as much as possible, without permitting any local expenditure for the public good—but it also continues to find a similar contrast in the actual state of affairs in the adjacent continental territories of the Porte.

The results of English administration in Cyprus quickly began to appear. An official account of the island was compiled in the intelligence branch of the Horse Guards by Capt. A. R. Savile, which forms an instructive summary of every branch of information relating to the island. Life and property became secure. Law is administered by qualified judges with strict impartiality, and without the suspicion of corruption. Material prosperity rapidly set in. The revenue has steadily increased, last year's surplus reaching the large sum of £82,366. The island has been completely surveyed; and besides the

excellent map quoted at the head of this article—on the scale of a mile to an inch—the government possesses drawings of the whole island on twice that scale, besides many parts on much larger scales. Land-registration is established, enabling transfers to be made without conveyancing, and at a nominal cost. Roads, bridges, piers, and other public works are completed or in progress. Every year has brought with it a succession of blue-books presenting to the British Parliament and the public reports on various subjects, including a census of the population. In the midst of this solid progress, a downward step was taken in obedience to a doctrinaire fancy of the late English ministry. Elective bodies have been created to control local administration before a new generation has grown up. The present men of influence have not forgotten their Turkish training. The consequences are fatal to the work of the energetic and laborious English officials, who have brought about the newly-begotten prosperity. Public works are opposed by these elective bodies. Reforms in the land laws for the benefit of the community at large are prevented by the native clergy, lawyers, and usurers. These influential classes over-ride the constituencies, who are driven from participation in the elections. An instance of this occurred lately at Kyrenia, where three candidates came forward to fill a Christian vacancy in the Legislative Council. Out of 1,103 Christian electors only 123 voted. The present untrustworthy character of natives in office has recently been exposed in several cases, in which they have been detected, tried, and condemned to various terms of punishment, for the abuse of public funds. Strict English supervision and certain punishment for offences are the only immediate checks. Social sentiment probably sympathises with the convicts. English education, example, and influence will perhaps improve future generations.

The survey of Cyprus was determined upon soon after the occupation by England; and Capt. (now Col.) Kitchener, who had a short time before successfully completed the survey of Northern Palestine for the Exploration Fund, commenced the work upon the same lines. This did not at first meet with the approval of the authorities, and an officer from India was ordered to survey the island on the Indian Revenue system. His operations, however, proved to be unsuitable, and were soon discontinued. Capt. Kitchener was again called upon; and early in 1880 he recommenced the survey on the scale of two inches to a mile, the result of which is the map now under consideration, on the scale of one inch to a mile. The intense interest taken in the work by Capt. Kitchener, and his desire to make a complete and rapid survey of the whole island, induced him to rise habitually at daybreak and to spend all the daylight hours in the field for nearly eighteen months. Afterwards, when the field work was completed, Capt. Kitchener laboured, both night and day, collecting, collating, transliterating and translating Greek and Turkish names for insertion on the map. What has become of these name lists is not known to the present writer. But it is hoped, when Capt. Kitchener is able to turn his attention once more to Cyprus, that he will take steps to have his lists

expanded into a gazetteer. In addition to his official work, the indefatigable surveyor took advantage of his opportunities to preserve the antiquities that fell in his way. So he brought about the establishment of the present Public Museum in the government buildings at Famagusta, not only by collections of ancient art, but also by persuading the native gentry to contribute a large sum of money for the purpose.

The first drawn sheets with the details of the triangulation reached the engraver early in 1882. The co-ordinates for latitude and longitude were supplied by Col. Clarke, and the trigonometry points were laid down on a projection made therefrom. The latitudes and longitudes engraved on the sheets depend upon the Admiralty determination of Famagusta flag-staff, 35° 6' 36" N., 33° 57' E. Early in 1883, much to the regret of the Cypriotes of all classes, whose respect he had secured, Capt. Kitchener was ordered to Egypt, but the proofs of the engraved sheets continued to be revised by him until he was despatched to Dongola. Mr. Norton Grant, who had been assistant-director of the survey, now took entire charge, and the last sheets of the map were finally passed by him. The hill features were all drawn by Mr. Grant. In little more than five years since the commencement of the survey it has been completed and published. The publication reflects great credit on the government, on the surveyors, and on Mr. Stanford, who undertook the cost of publication to the great relief of the Cyprus exchequer.

With the geographical foundation supplied by Capt. Kitchener's survey it is now desirable that the geology of the island should be re-investigated and adapted to it. No such foundation existed when the notable geological investigation of M. Gaudry was made in 1853-54.

TRELAWNEY SAUNDERS.

TWO BOOKS FOR ELECTORS.

The Radical Programme: reprinted from the "Fortnightly Review." (Chapman & Hall.)

The Parliamentary History of England from 1832. By John Raven. (Elliot Stock.)

THE eve of a general election is a very opportune moment at which to bring out two such books as these. A host of candidates, and a yet greater army of friends and supporters of candidates, are addressing, in public halls or on village greens, meetings of electors, whose appetite for political food, if undiscriminating, is at any rate keen. To some—to most, let us hope—of this great array of speakers it is interesting to know the facts of the matter they have in hand; to all, beyond question, on which ever side they stand, it is important to have seized the points in the programme of their own party and, still more so, of their opponents; for in politics antipathy is perhaps your best motive force.

It must be owned that the first of these wants, that of knowledge, is not very well supplied by Mr. Raven's book. If it is intended to be elementary, then it is too dull; if it was to be a comprehensive thesaurus of parliamentary matters, then it is meagre. The book is a little too obviously a made book. The scheme

of briefly summarising the *Annual Register*, session by session, is not likely to make the book very entertaining reading. If the candidate was to find within its covers everything necessary to confute a caviller or to justify a panegyric on his own party, then it ought neither to have been brief nor a summary. Most people by this time are aware that Sir Robert Peel repealed the Corn Laws, and that the Irish Church fell by the hand of Mr. Gladstone; those to whom this class of fact is still new are persons, who will find Mr. Raven's book hardly so enthralling in style as to detain them to the end of it. But this is, after all, the class of fact with which he is most concerned. On the other hand, he is silent upon so interesting, though minor, a point in the history of national education as the Radical opposition to the proposals of 1843; he makes no mention of the act of 1860 to amend the law of land-tenure in Ireland; and, throughout, his notices of foreign affairs are more cursory than even the scope of a parliamentary history warrants. Still the merits of the book, if few, are real. Though his sympathies are perceptibly Liberal, Mr. Raven has done his work with very sufficient impartiality. His book is handy in size and arrangement, and being equipped with a tolerable index, will no doubt be often very useful; it is only to be regretted that he did not, by expending a little more labour upon it, make it more comprehensive. It cannot be said to supersede the existing authorities; and the style, or the want of it, must disappoint "the earnest wish of the writer" expressed in the preface, "that it may prove a useful and acceptable addition to the literature of the day."

The other of the two works before us is a much more important contribution to political literature. So far the new "leap in the dark" of the last Reform Acts seems to have had a very bewildering effect upon those who took it; and having landed safely on the other side, they have not yet pulled themselves together to go on. The Radical party, moreover, find themselves at the very crisis of their destiny. Hitherto their office has been that of criticism and of protest, of agitation and of occasional secession. An old party, yet, until recently, a small one, they have never found themselves in much danger of being called upon to carry on the government of the Queen. Secure of defeat, they could propose abstract resolutions smacking of paradox, or deal doughty blows at any part of our existing system, without much fear of being compelled by any inopportune success to administer according to their resolutions, or to construct a better edifice than the one they have pulled down. Their successes, though conspicuous, have been isolated, won by resolutely throwing their whole force upon one point of attack; but they have not been under the responsibility of harmonising the results of their victory with the rest of a system, which was no part of their creation. They have been daring, enthusiastic, devoted; but they have been irresponsible, and their programme has been a negative one.

Their success has now turned the tables upon them, and they find themselves certain gainers by the new Reform Acts. Their days of "freedom and irresponsibility" are at an end. Whether or no the Liberals

return to power, the Radical portion of the party will henceforth have a far more influential position than ever they have had before. And bravely and with a good courage are they going about to win the day, for they at least know their own minds; good or bad they have a programme to offer; they are confident that "the world'll go right if they holler out 'gee.'" The old Radical programme, which was negative and dissolvent merely, has been mainly carried out; little remains to be destroyed without some attendant reconstruction; and the new Radical programme is reconstructive with a vengeance.

It was formulated some time ago in the *Fortnightly Review*, and is now republished with a preface by Mr. Chamberlain. In the preface he says:

"Without pledging myself to all the proposals contained in the following articles, I welcome their appearance, and commend them to the careful and impartial judgment of my fellow Radicals."

But, indeed, it is the Radicalism of Mr. Chamberlain throughout; it is fortified by quotations from his early speeches, and might be confirmed by others from his most recent ones; and almost the only passage to which Mr. Chamberlain could not very well pledge his public approval is the statement (p. 159) that

"the Cabinet of 1880 contained a Presbyterian, a Quaker, and a Unitarian, and there are some who think we may even live to see the Unitarian nominating the Archbishop of Canterbury."

Even this Mr. Chamberlain might "commend to the careful and impartial judgment of his fellow Radicals," especially as the conclusion which is drawn from it is that thereby the "theory of a State Church" has been reduced to "a gross farce, an unseemly mockery, and a truly repulsive scandal."

Old as Radicalism is, it is still in the early youth of its responsibility; and this programme has all the qualities of youth—militancy, arrogant intolerance of opposition, a fervent impatience of present evils, and a complete self-confidence without fear of evils to come. And the sum of it all is "the rich have had the power and the poor are poor still; but now the poor have got the power, and they are going to look to themselves; woe to the rich if they are found to be in the way." It starts with a proposition rather astounding in the mouth of a democratic prophet:

"There is little ground for the belief that the new electorate will of its own motion take the initiative in demanding the changes now enumerated. The English masses are nearly impervious to political ideas. . . . It is for the people's leaders to indicate to them the precise methods and instruments by which their wishes may be realised" (p. 41).

As for the constitution, that is lightly dealt with. Manhood suffrage we must have, for then, "once this step is taken, we shall at least have the satisfaction of knowing that we have got to the rock" (p. 28). Payment of members we must have; for a class of professional politicians, as of professional doctors, is just what we want (p. 38). The Conservatives "may periodically return to office, but they will have place, and not

power" (p. 22). And, for the House of Lords,

"The last thing which any Radical would desire or would dream of doing is to reform that chamber in any way (p. 56). . . . Under any circumstances it is needless to include the abolition of the House of Lords in the Radical programme. Supposing that it exhibits in the future the same qualities that, on the whole, it has exhibited in the past, Radicals need not trouble themselves about it. Supposing, on the other hand, it insists upon asserting itself, it will of its own accord, and by its own act be reformed out of existence" (p. 61).

And, "the Throne has nothing to fear from Radicalism. Radicals have something else to do than to break butterflies on wheels." This is considerate: it is the magnanimity of conscious power.

But these things are trifles. Radicalism is girding up its loins to a more serious task. "The era of purely political legislation is at an end for a time (p. 75). . . . The path of legislative progress in England has been for years, and must continue to be distinctly socialistic" (p. 73). The Radical measures

"sound the death-knell of the *laissez-faire* system; and if the agricultural labourer is not strong enough to look after himself, to take the initiative in the social reforms prompted by a rational estimate of private interest, there is an organised body of politicians in this country [led (p. 18) by 'competent and resolute chiefs'] who will at least do this much for him. If it be said that this is communism, the answer is that it is not" (p. 16).

This last sentence is a masterpiece of argument; but the whole movement is too powerful for its resistless march to be delayed by logic. All the phrases about "insurance by the better-class against disease, and by the rich against revolution" and the "responsibilities of trusteeship" of property appear. Land-law reform is to aim at the "multiplication of owners." House property is to be compulsorily repaired at the owners' cost. As it is for the good of the community that poor children are educated, the community must pay all the expenses; but for this purpose the community seems not to include the poor. In fine, the poor dislike school-fees, and, "after all," a penny or two on the income-tax would make up for them, especially as they are very troublesome to collect. "Whether the cost were transferred to the imperial exchequer or to the local rate, the rich would pay more, the poor less" (p. 223), and this, in itself, would be a financial gain. Finally, for taxation Radicalism is fully prepared. It does not propose to lessen the expenditure, but "indirect taxation . . . bears with unequal incidence against the poor, who are taxed to protect property which does not belong to them" (p. 226). Accordingly,

"It will be the business of the Radical party to extend the range of view on this subject; to introduce a higher ideal; to reform the methods of taxation, correct its incidence, simplify its collection and enlarge its application. By these means a public opinion may be created in which taxes ought to be considered as an investment for the general good, and should be cheerfully and, in the main, easily borne" (p. 258)—

"redeunt Saturnia regna

Jam nova progenies caelo demittitur alto."

The programme is so very nearly infinite in

its enterprise that the limitations of time and space preclude much examination of its consistency here and now. Its author is totally unable to comprehend the conception of "the Church," and misapprehends Mr. Arnold's argument in defence of it. He boldly says that to follow the precedent of the disendowment of the Church of Ireland would be a "sovereign triumph of injustice" (p. 194), as restoring to the Church too much of her own, and has a covert and sinister suggestion that the shortest way is to secularise all Church property. In spite of some inconsistency (pp. 151 and 281) he appears to hanker after the wretched statesmanship of disregarding a prescriptive title to the occupancy of enclosures, and is mighty stern and minatory to all landlords, at least, all large ones. He advocates free schools on the grounds that a decentralised system of school boards introduces great diversities in the principles on which fees are levied, and that, as it is often inconvenient for the poor man to pay twopence, and the circumstances of the poor are too infinitely various for any system to fit them all exactly, he had better not pay at all. Yet on another page he advocates a no less diverse system of rural local authorities, who will buy land and let it to labourers at "fair rents"—rents presumably somehow adapted fairly to the diverse lot of poverty. Either the latter system will groan under the same evils as that of school boards and school fees; or presently, when the system is well afoot, there will be a little more reform, and for fair rent will be read *gratis*.

But these defects are, many of them, the ebullitions of boyish Radicalism. A little experience in harness, in passing the many sensible and less controversial measures in the programme, will age and sober the party. Perhaps, while the General Election is still in the future, a less triumphant tone would have been more discreet. But no doubt Radicalism has a great future before it; and when once it has learnt that the poor cannot have everything at other people's expense, then, by its innate vigour and earnestness, it will work out its own salvation.

J. A. HAMILTON.

NEW NOVELS.

Babylon. By Grant Allen (Cecil Power). In 3 vols. (Chatto & Windus.)

In Sight of Land. By Lady Duffus Hardy. In 3 vols. (Ward & Downey.)

A Faire Damsell. By Esmè Stuart. In 3 vols. (Hurst & Blackett.)

Paul Sterne. By Cicely Powell. (Maxwell.)
Cairnsforth and Sons. By Helen Shipton. (S. P. C. K.)

At What Cost? By Hugh Conway. (Maxwell.)

Lightly Lost. By Hawley Smart. (White.)

"CECIL POWER," the author of that vigorous and interesting novel *Philistia*, which will be fresh in the memory of many readers, has at last revealed himself as the versatile Mr. Grant Allen, whose volume of *Strange Stories* proved him to be as much at home in the work of imaginative creation as in that of scientific exposition. Such reputation as the

author has already won in his new field of achievement will, without doubt, be established by this new novel; for, though *Babylon* is by no means uniformly strong, the interest never declines, and we always feel that the writer has passed his 'prentice stage, and that his work is that of a master of the craft, though—to use the language of pictorial classification—he may be a "little master" rather than a great one. Perhaps a majority of the best readers, that is, of those readers who can enjoy while they judge and judge while they enjoy, will be a little disappointed by the progress of the story, for the first volume has a certain affluence of freshness and creative energy which is hardly sustained in the second and third. In the former we seem to be in touch with unsophisticated human nature; in the latter we come into a more conventional world which, too, one cannot help feeling, is painted in a less arresting manner. The story deals with the fortunes of two lads of genius, Hiram Winthrop, the son and farm drudge of Deacon Winthrop, of Muddy Creek, Geauga County, New York, U.S.A., and Colin Churchill the son, but by no means the drudge—the pride rather—of Sam Churchill, gardener, of Wootton Mandeville, Dorsetshire. In the region of art the proverb that all roads lead to Rome is still true; and the currents of the two lives, that of Hiram, the born painter, and of Colin, the born sculptor, meet when they both find their way to the Eternal City, to learn there whether the early bent of each has been an inspiration or merely that very different thing, an aspiration. The Roman chapters are full of life and interest, though we cannot feel that the unique atmosphere of the place is rendered for us as it is rendered in *Transformation*, or even in one or two other less-known stories. Still I think most readers will agree that there is nothing in the after part of the book quite so "fetching" (if I may use a piece of slang which has no literary equivalent) as the opening chapters—"Rural America" and "Rural England," and, indeed, the whole story of the boyhood of Hiram Winthrop, who has the lion's share of the first volume. In reviewing a book like *Babylon*, which has throughout the enjoyable quality which belongs to interesting imaginative material and capable literary workmanship, one does not care to crowd one's narrow space with criticism of that fault-finding order which is so easy and so profitless; but I yield unwillingly to the temptation to indicate what seem to me two or three weak points in Mr. Grant Allen's admirable novel. Such as they are, they all reveal themselves in the delineation of character. In the first place, the combined ignorance and snobbishness of Colonel Howard Russell are, in a man of his presumable education and breeding, so improbable as to be inartistic. In the second place, it is impossible to feel that the man Hiram, with his obvious lack of grit and backbone, is the same person as the boy Hiram, who seems to have had such assured possession of these valuable gifts; and if this feeling be just, there must be some want of imaginative continuity in the writer's perception of him. In the third place, the representation of Audouin seems deficient in homogeneity. He is a really noble character, with a few surface affectations, but we never see him in the

round, as it were. At one time the affectation eclipses the nobility, at another time the nobility hides the affectation; so that really Audouin is like two simple characters instead of being one complex one. Here, however, my complaints end; and even in the domain of character Mr. Grant Allen has achieved one supreme success. With the self-made man we are all familiar, but Minna Wroe, the self-made girl, is a new creation; and she is what the self-made man sometimes is not—thoroughly delightful. I have been, like Iago, critical; but after every criticism has been set down, one cannot escape the thought that if all novels were as good as *Babylon* the life of the reviewer would be better worth living.

This week is a happy one, for the second and third novels on my list are also good ones; though against them, too, there is something to be said. *In Sight of Land* is a title with melancholy suggestions, and these suggestions are not belied by Lady Duffus Hardy's clever and powerful, but gratuitously painful story. The casuistry of art has many moot points upon which we shall never be all agreed, but there are surely some things which no one can believe that a novelist has any right to do. One of these things is to win our affection for a beautiful, noble-natured, and sorely-afflicted girl, and then to harrow up our feelings by making this girl, in a state of somnambulism, shoot the man who has been to her more than a father, and finally, just at the moment when her life's happiness might have been secured to her, die of a broken heart because she has learned what she has done. The story is full of pathos, but it is pathos which leaves no imaginative satisfaction behind it; we are simply made miserable, and that is all. Holding, as I do, very strongly the conviction that to make readers miserable without any ethical or other compensation for their misery is the very thing that a novelist ought to avoid, I find it difficult to forgive Lady Hardy for her treatment of Clarice Lemaire; and perhaps the task of forgiveness is all the harder because she has clearly enough of imaginative fertility to save her story from the horror of its close. Until the last few chapters are reached *In Sight of Land* is a thoroughly pleasant book, and not merely a pleasant book, but a very able book, well-constructed, full of fine vigorous characterisation and admirable description. Clarice is, in the primary sense of the word, fascinating; Hugh Spencer is a capital specimen of the healthy-minded and loyal-hearted young Englishman; and there is real skill in the development of character in his sister Miriam, whose love for Jack Swayne works such wonders in sweetening and broadening a nature which seemed given over to sourness and narrowness.

Seeing that the heroine of *A Faire Damsell* is an ordinary nineteenth-century young lady with no suggestions of mediaevalism, the affected archaism of the title jars upon a cultivated reader's sense of congruity, and he prepares for the worst. The opening chapters will in one respect reassure him, for he will find that the handling of character has a quiet decisiveness and an utter freedom from either unreality or extravagance, while the literary style is easy, graceful and correct. His satis-

faction will not, however, be by any means complete, for, in spite of all these virtues, this portion of the novel has the fatal vice of dullness. The story has no movement or life; and the three characters who fill the whole foreground of the canvas—the girl whose emotional possibilities are all unrevealed, the utterly commonplace father, and the narrow-natured, selfish mother—are for the time so utterly wanting in interest that if steady plodding-on had not been a duty which could not be evaded, one reader at least would have given the book up in despair. The change of scene from England to Brittany seems likely to be only a variation of dullness, when all at once, at the advent of Count Lézan de Mélizard, the story suddenly brightens, and one is reminded of the awakening of the sleeping palace at the coming of the fairy prince. From this point onward—that is, from the middle of the first volume—*A Faire Damsell* becomes a really pleasant novel, which can be read for enjoyment alone, without any pressure of the goad of duty. M. le Comte, when first introduced to us, is, perhaps, unduly sentimental, for his long-drawn life of lamentation over his desertion by a girl who was quite unworthy of him is the reverse of heroic, but he develops into a strong and manly lover. The portrait of his rival, Mr. Thorne, whose pinchbeck character is such a capital imitation of the genuine metal, is painted with remarkable subtlety; and the story of the contest between the worldly-minded mother and the loyal-hearted daughter is one in which the interest never flags, though one would be more satisfied if the final victory over pinchbeck and its ally had been achieved otherwise than by a happy accident. Séline, one of the subsidiary characters, is a beautiful and pathetic creation; and the reader who resolutely struggles through those uninspiring early chapters will be rewarded for his toil, for he will find that *A Faire Damsell* is a really good story.

So far the novels on my list, with all their merits and all their faults, have at any rate been healthy. *Paul Sterne*, on the other hand, is as unwholesome a book as I have read for many a day, and, as from a literary point of view it is all but worthless, perhaps the less said about it the better. It is the story of the passion of a married man of forty for a schoolgirl of sixteen, on whom he lavishes voluptuous embraces, to which she is not slow to respond. He does not absolutely seduce her, though with unpleasant precocity she invites him by the remark that had she been Jane Eyre she would never have left Rochester; but at the critical moment his rather inert conscience begins to stir, and he relapses into a moral sentimentalising which is just as sickening as the immoral sentimentalising which has preceded it. Happily the author has done her best to make her story unreadable by jerking it out in brief spasmodic paragraphs, which weary the eye and dislocate the mind.

Those who have read Miss Shipton's stories know that they are always interesting, always well-planned and well-written, and always high-toned without being in the least goody-goody. In these respects *Cairnforth* and *Son* resembles its predecessors, so it need not be added that it is a thoroughly good book.

It deals with life in a manufacturing district much in the manner of Miss Jessie Fothergill, and as the similarity is not imitative, this, too, is high praise. The hero, Lancelot Cairnforth, is perhaps what is called "a woman's man"; but as no feminine English novelist, with the solitary exception of George Eliot, ever drew a man's man, this is no very grave disparagement. The outlines of the portrait are at any rate firm and consistent, and the heroine is equally satisfactory, though her coldness at a time when she has given herself unreservedly to her lover and has no reason to doubt his fidelity strikes me as being a little unnatural in a girl of her stability of character. Miss Dunbar, a philanthropist with a heart for the individual as well as for "the masses," is an admirable sketch, and the younger Cairnforth family make a very realisable group.

At what Cost? is the title of the first of three short stories which will not add to their author's reputation, though they testify to that versatility which was proved by *A Family Affair* to be one of "Hugh Conway's" most noteworthy endowments. There are some good passages in the "Story of a Sculptor"; but the little volume, as a whole, does not rise above the average level of the cheap magazines.

Mr. Hawley Smart had better stick to horses and three volumes. As a shilling pot-boiler *Lightly Lost* may be all very well, but the shilling pot-boiler has "had its day," and may, I hope, soon "cease to be." The story is more entertaining than many of its kind, but the kind is a poor one. Still, during this season of long speeches, it is, for railway reading, an improvement upon the newspaper. JAMES ASHCROFT NOBLE.

RECENT VERSE.

Bits of Brazil. By John Cameron Grant. (Longmans.) The more interesting poems of this volume are those that describe Brazil and Brazilian life. They are similar in character to the "Prairie Pictures" of the author's earlier volume. The first of the series, entitled "Down the River," is easy and fluent in movement, but suffers from the defects of colloquialism. "Sunset Still" is certainly not open to the same objection, having no little swing of rhythm. Perhaps the best piece of pictorial writing is entitled "Palms and Parting Day":

"The Plantains spread beside them, the broad
Banana sheaves,
The elder fronds in ribbons, the younger like
shields of green,
And the Yucca's sombre spear-points, where the
wild Vanilla leaves
The higher branch above them to steal their
leaves between.

"But now with the deepened silence comes change
in the wondrous light,
And the Bamboo tracery closes, and the Palms
have grown more grey,
For the altar fires are fading, and the God has
sunk from sight
In a dim blue haze that dies in the dusk of
parting day."

The author of a volume of poetry is obviously none the less adequately equipped for having very definite views on political subjects. But Mr. Grant's Conservatism is perhaps a little too aggressive. At least the persistence with which he asserts the happiness of Brazilian slaves in their slavery, and the misery of English paupers

in their freedom, is as distasteful in a Highlander as it is illogical in a poet.

A Vision of Souls, with other Ballads and Poems. By W. J. Dawson. (Elliot Stock.) Among volumes of minor verse this is a book of remarkable quality. It is dramatic, eminently human, and full of thought. Forty years ago poetic work so good as this must have gone far to establish its author's name; and if it fails even yet to lift Mr. Dawson above the crowd of lesser poets, the failure of justice will be, perhaps, as humiliating as in any recent case of neglected talent. "Vanderdecken" is a picturesque rendering of the old legend, though it lacks the vivifying element of human interest. "The Deluge" is almost powerful in its gloomy imaginative effects, and "The Ballad of Carew" is strikingly dramatic. The dialogue poem, "In a Sick-room," is less to our taste than the City Idylls, such as "A London Singer" and "London Violets." "A Sermon by Oliver Cromwell" is good in form and substance; but perhaps the poems that contain the deepest feeling and strongest diction are those which tell the story of the birth of a child and death of its mother. The following passage is, in our judgment, very remarkable in imagination and force of phrase:

"DELIVERANCE.

"In that sore hour around thy bed there stood
A silent guard of shadows, each equipped
With dart or arrow aimed against thy life.
Thy breath came slowly all that awful night,
Outside I heard the wind and earth at strife,
And on the window's ledge incessant dripped
The pitiless rain. At last I left thy room,
And passing out, upon its threshold's edge
Who should I meet but Death! A wan clear
light
Fell from his fathomless eyes, his brow was
gloom,
His rustling raiment seemed to sigh like sedge
When the salt marsh-winds wall and beat
thereon.
He paused, he turned; and while I stood and
wept
Behold a crimson signal waved and shone
On the door's lintel, even such an one
As he obeyed in Egypt, and I knew
Death heard some higher summons and with-
drew:
When I returned, like a tired child you slept."

In Cornwall and across the Sea. By Douglas B. W. Sladen. (Griffith, Farran, & Co.) Mr. Sladen is undoubtedly making progress in his art. His poetic vocabulary is larger and more under command than it was two years ago. He has more to say and knows better how to say it. Some of his sonnets are fluent yet condensed, unlaboured yet not without substance. His patriotic poems show fervour and force, the poems on Gordon being more than usually distinguished by strong feeling. The lyric "Advance, Australia," written on the occasion of the unfederated colonies of Australia sending troops to the Sudan is a somewhat impassioned piece of writing. Having said so much in praise of Mr. Sladen's new volume, we might in fairness complain that it contains too many occasional descriptive pieces. The guiding principle of Mr. Sladen's poetic career seems to require that his muse should be constantly on the wing. Wherever he goes he must needs describe what he sees, and the accumulated material has often the appearance and the value of a lady's journal of travel. We certainly fail to realise what more binding necessity rests upon a poet to describe the Rock of Gibraltar or of Land's End than upon the novelist to reproduce the incidents of a police court trial or a street brawl. Surely a selective instinct ought always to be at work in the artistic nature, in order that unity of design and some show of purpose may appear in every work. The only binding together that frag-

mentary passages of description obtain is that which is given to them by the bookbinder.

Moods and Memories. By William Maccall. (W. Stewart.) Pitched in a minor key, yet nevertheless exhibiting some elevation both of thought and sentiment, Mr. Maccall's mature verses have an interest far in excess of much of the boyish rhapsody which comes in the shape of minor poetry. A lyric entitled "The Erring Brother," treating of a reckless, but generous, nature that has to bear the fruits of wickedness, has the ring of genuine pathos, and seems to come straight from the heart of the writer. The following lines, in another vein, are no less excellent:

"STUPIDITY.

The Talmud praises God most fervently
For crowning not with horns the ass's brow;
With horns the brute would gore his enemy,
And toss him, while he only kicks him now,
Nor would the donkey spare his brother ass,
But beast most crass would fight with beast most
crass.
Doubtless the ass's horns would dreadful be;
Yet far more dreadful is the ass's bray;
No horns the donkey needs when he can, free,
With hideous discords startle night and day.
If blockheads dumb would be, we well could bear
The worst that they with hoofs and horns could
dare."

Airs from Arcady and Elsewhere. By H. C. Bunner. (Charles Hutt.) This is one of the cleverest and happiest volumes of verse that America has sent us for many years. In its brightness, its humour, its pathos, and its general hold of reality it is often truly delightful. Its *vers de société* is no less winsome and charming than its serious pieces are strong and touching. So much mere metrical cleverness rarely accompanies such honest power. There is not a poem in the collection that has not its own peculiar merit. Some echoes of other poets are inevitable where the notes of passion are so various. Sometimes, as in "Candor," the dramatic force of Mr. Browning is imitated; and sometimes, as in the poem written for the first page of an album, it is Rossetti's lyric purity and vivid picturesqueness that is laid under contribution. But whether Mr. Browning or Rossetti, Mr. Austin Dobson or Mr. Locker, is the touchstone of inspiration, the product is always fresh and sufficiently original. "Betrothed" is a poem containing some of the pathetic realism by which "Jenny" is distinguished; and although the touch is lighter and the sentiment is not so deep, the fidelity to fact is no less manifest. "A Draft Sonnet" is clever and humorous. The variations on "Home, sweet Home," treated in the different styles of Mr. Swinburne, Mr. Bret Harte, Mr. Austin Dobson, Oliver Goldsmith, and Walt Whitman exhibit a real grasp of language as well as genuine humour. But better, as poetry, than any of the lighter poems is the series included under the head of "Ultima Thule." The following is by no means richer in feeling than some of its companion pieces:

"TRIUMPH.

"The dawn came in through the bars of the
blind—
And the winter's dawn is gray—
And said, However you cheat your mind,
The hours are flying away.
"A ghost of a dawn, and pale and weak—
Has the sun a heart, I said,
To throw a morning flush on the cheek
Whence a fairer flush has fled?
"As a gray rose-leaf that is fading white
Was the cheek where I set my kiss;
And on that side of the bed all night
Death had watched, and I on this.
"I kissed her lips, they were half apart,
Yet they made no answering sign;
Death's hand was on her failing heart,
And his eyes said 'She is mine.'"

"I set my lips on the blue-veined lid,
Half-veiled by her death-damp hair;
And oh, for the violet depths it hid,
And the light I longed for there!

"Faint day and the fainter light awoke,
And the night was overpast;
And I said, 'Though never in life you spoke,
Oh, speak with a look at last!'"

"For the space of a heart-beat fluttered her
breath,
As a bird's wing spread to flee;
She turned her weary arms to Death,
And the light of her eyes to me."

Pictures in Song. By Clinton Scollard. (New York: Putnam's.) These poetic cameos are designed after the manner of that youngest school of poetry in England that finds the flattery of imitation in Boston. Perfume and silk, amber and gold, brocade and embroidery, roses and mignonette are the constituents of this luxurious poetry. Abundant in its classicism, deeply influenced by the mediaevalism that was imported into English poetry forty years ago, it is also touched by the French romanticism of recent years. This volume contains a good deal that is pretty, if not beautiful. The following lines from "An Autumn Scene" are distinctly felicitous:

"The dead leaves fall like noiseless rain,
The air is calm and warm and sweet;
Upon the woodland and the plain
The ghost of summer rests her feet."

A sonnet entitled "A Vision of Pain" deals with a subject which Mr. Eric Robertson has already ennobled with a strong poetic image.

Under-current and After-glow: an Elegy of England. By Maurice Arden. (Clifton: J. Baker & Son.) Messrs. Baker & Son, of Clifton, have, it seems, discovered a nest of singing birds in their neighbourhood—or several nests, for the voices are not all of the same quality. The last songster is Maurice Arden, and the song an Elegy of England. England has not been fruitless of great men; but they have all died. And so taking occasion by this fact Mr. Arden sheds some melodious tears over their ashes. The heroes selected are such as Wyclif, Tyndale, Shakspeare, Milton, Butler, and others more modern—the list ending with Gordon. The metre of Mr. Arden's Elegy is that of the Elegy "wrote in a country churchyard." Butler, the author of the sentence which so attracts Mr. Matthew Arnold, "Things are what they are," does not at first sound a promising subject for song. But listen:

"Impregnated with fruitful and foretold plan
That touched not aspiration's period,
Till nature's hierarchy, capped with man,
From imperfection clambered up to God.

"This universal economic scheme,
Encompassing unquiet ignorance,
For him unbosomed a remedial gleam,
The cloud of incompleteness could o'erglance."

and so conscience was

"From dumb consideration's sinecure
Within the ordered polity of soul,
By right of royal primogeniture
Promoted to imperious control."

What Mr. Arden says about Shakspeare the bold reader must discover for himself. It will repay perusal.

Early Flight, and other Poems. By George Herbert Kersley. (Bickers.) From an amusingly outspoken preface to this volume we learn that Mr. Kersley is nineteen and a half years old; that his poetry has been composed within a year; that he is indebted to his "noted friend, Mr. Oscar Wilde," for the idea of writing "short descriptions of things that have fleeting charms for the poet"; that there are sombre times when "a faintness cometh over every soul," when religion is "an awful empty form" and daily life a daily penance, when poetry such as Wordsworth's "Exour-

sion" cannot be read with sympathy, and when the poets who would desire acceptance must "mirror" the "plaintive yearning" of the time. Amid such a bewildering gloom art, it seems, must "smile on our land," and teach us that in the worship of beauty lies the salvation of the race. Now if anyone should remind Mr. Kersley that he is too young to tell the world anything that it does not know already, he answers that he *must* and *will* give vent to his feelings, because God did not endow him with the power of seeing beauty that he might keep it "secretly locked" in his "selfish soul." We might, perhaps, remind our youthful poet that both "eyes" and "feelings" are common possessions, and that the selfishness of withholding from the public a description of the beauty of a female bather, frightened by a timid deer, is not of a kind that the world is wont to visit with serious condemnation.

Saint Isidora, and other Poems. By Jeanie Morison. (Edinburgh: Bell & Bradfute.) There is one poem in this volume of considerable interest. It is entitled "The Witches of Birtley," and embodies a peculiar Northumbrian legend. The treatment is simple and strong, and the dialogue it contains is well managed. An ode on the burial of Carlyle is at least sufficiently encomiastic, but it lacks picturesqueness. The brief passage in Mr. Froude's Memoir, which tells us how the coffin containing the remains of Carlyle stood in the station yard, amid a heavy snowstorm, waiting for the waggon that should carry it to Ecclefechan, is at once an eloquent ode and vivid and pathetic description.

Whisperings. (Sampson Low.) This anonymous volume shows some powers of forcible poetic expression, some subtilty of poetic vision, some enthusiasm, some love of nature, and a capacity for thought that is at least worthy of attention.

Crumbs of Verse. By T. Uph. (Nisbet.) A good deal of tenderness, sincere religious feeling, but not very much literary vigour or poetic vision is to be found in this little book. The dramatic sketch entitled "The Murderer" touches a world of imagination in which it has not been given the author to walk. The same criticism applies to the poem entitled "Fallen," which has an obvious subject. But in homelier ranges of feeling the writer shows more command.

Echoes of Memory. By Atherton Furlong. (Field & Tuer.) These poems deal with the very humblest and homeliest subjects. The memories of childhood, rustic associations, and domestic affections are the themes on which many lines are written that have sympathy if they lack strength, and sincerity if they want distinction.

Edward III., and other Poems, Ballads, &c. By York West. (Alexander & Shephard.) Though not intended for public representation, some of the scenes in this play are vigorously rendered, and certain of the dramatic sketches that follow are no less strenuous. The sketch entitled "Wycliffe" contains many strong and impressive lines. The miscellaneous poems in the volume are chiefly devotional in character, but the best of them is entitled "To My Firstborn."

Glimpses "Beyond the Veil." By Laura A. Whitworth. (H. Beer.) This little book deals chiefly with problems pertaining to the mysteries of life, and the place of man in the universe. It is not, however, distinctly abstract in its treatment of abstract themes. The best of the poems it contains are eminently concrete. The writer is clearly a follower of Longfellow, imitating sometimes his didacticism, and often echoing his cadences.

Nell, the Kitchen Angel, and other Poems. By Leslie Thain. (Thomas & Edmunds.) Nearly, if not quite, every poem in this collection bears a poetic motto; hence the book has somewhat the appearance of an anthology on subjects selected at random—now from Scott, now Byron, now Tennyson, now Shakspeare, Moore, Shelley, Hemans, Thomson, and Hood. The poems thus introduced are usually picturesque, thoughtful, and, in a measure, dramatic.

NOTES AND NEWS.

WE understand that a new quarterly magazine, devoted wholly to Asiatic subjects, and especially to India, Central Asia and the Far East, will appear at the beginning of the new year. The editor is Mr. D. C. Boulger; and many writers of authority on Asiatic topics have promised contributions.

MR. QUARITCH, whose trade-sale dinner last Friday (October 9) was graced by the presence of Capt. Burton, explains the difference between himself and his publishing *confreres*, who are beginning to drop the old custom, as consisting in the circumstance that he concedes exceptional terms only on these trade-sale occasions, while the other houses act in one manner all the year round towards their customers, and therefore find it unnecessary to continue the antiquated practice of summoning all the London trade together on any one day. Mr. Quaritch is, moreover, distinct in his mode of invitation, which is not limited to the metropolis, but is extended to the provinces and the continent as well; while the books he offers are, to a large extent, the productions of authors who have prepared small impressions at their own expense, and appointed him their agent. Capt. Burton made an important statement about his new *Arabian Nights*, showing that it has the value of a critical text such as has never yet been printed. His translation, literal and idiomatic, is derived from a laborious collation of the existing printed texts (all faulty) and several MSS.

MESSRS. TRÜBNER announce a collected edition of Mr. Edwin Arnold's poetical works, in six volumes.

THE forthcoming new edition of Thornton's *Gazetteer of India*, revised by Sir Roper Lethbridge and Mr. A. N. Wollaston, will omit much of the historical detail of the original work, and give only such leading facts and figures as suffice for ordinary purposes of reference. In this way, though many hundreds of new names are included, the work will be compressed into a single volume of about one thousand pages.

WE understand that Mr. R. L. Stevenson's romance, *Prince Otto*, which has now nearly reached its end in *Longman's Magazine*, will be published forthwith in a single volume, and at a cheap price.

AMONG the important books of last season which are now announced for reissue in a cheaper form are the *Lives of George Eliot* and F. D. Maurice, and Gordon's *Khartum Journals*.

THE forthcoming *Life of Sir Robert Christison* will consist of two volumes, one of which is autobiographical.

MESSRS. MACMILLAN will shortly publish an historical and descriptive account of Madagascar, in two volumes, by Capt. S. Pasfield Oliver.

MR. T. FISHER UNWIN will publish next week a two-volume novel by Miss Jane Spettigue. It is descriptive of both English and South African country life and scenery, the plot, however, being chiefly laid in England.

MR. UNWIN will also publish a new book for children, by Madame Linda Villari, entitled

When I was a Child; or, Left Behind. It forms a quaint bit of child autobiography, detailing the troubles and trials of a little girl "left behind" in England by her parents, who have gone to China.

A new book, entitled *English Political History, 1880-1885*, by Mr. Wm. Pimblet, of the *Bolton Guardian*, is announced by Mr. Elliot Stock.

MESSRS. EYRE & SPOTTISWOODE will publish, in November, two artistic reproductions: Whittier's *Maud Müller*, with twenty-one full-page illustrations by Mr. George F. Carline; and another of "The Ingoldsby Legends," *The Knight and the Lady*, with designs by Mr. Ernest M. Jessop, in a similar style to *Ye Jackdaw of Rheims* and *The Lay of St. Aloys* of previous years.

AN English translation of Flaubert's *Salammbô*, by Mr. M. French Seldon, will shortly be published by Messrs. Saxon & Co. It will have a sketch of the author, written by Mr. Edward King, and will be dedicated to Mr. H. M. Stanley.

MESSRS. LONGMANS announce a translation of Zeller's *Outlines of Greek Philosophy*, by Messrs. S. Francis Alleyne and Evelyn Abbott.

MR. CHARLES MARVIN has written a popular pamphlet entitled *Russia's Power of attacking India*, which will be issued by Messrs. W. H. Allen & Co. next week. The author has himself prepared four maps for the work—one showing the new frontier, another the proposals of the Russian military party for partitioning Afghanistan, a third the great camping ground of Herat, and a fourth the Russian railways that are being built in the direction of India. A fund has been opened to circulate the pamphlet gratuitously among the masses.

THE "Little Folks' Annual" will this year be published under the title of *Winter Blossoms*. It will contain a new entertainment especially written for performances by children, in addition to a number of Christmas stories and seasonable papers. It will be illustrated with nearly fifty pictures contributed by Harry Furniss, Alice Havers, W. Hatherell, &c.

MR. THOMAS GREENWOOD, of 20 Lordship Park, Stoke Newington, is engaged upon a book on *Free Libraries; their Organisation, Uses, and Management*. He will be glad to receive information on the subject.

NOT only Principal Tulloch, but Dr. Hutton, of Paisley, the leader of the United Presbyterian Church of Scotland, will contribute articles on the Disestablishment Question to the forthcoming number of the *Scottish Review*.

TWO more candidates are announced for the vacant chair of poetry at Oxford—Mr. W. J. Courthope and the Rev. Alex. J. D. D'Orsey. Mr. Lewis Morris will not offer himself.

THE following are some of the lectures in the historical school to be delivered at Cambridge during the Michaelmas term: Prof. Seeley, "Political Philosophy (Bluntschli and Freeman)"; Prof. Creighton, "English Church History, 1604 to 1640"; Mr. Mullinger, "English History, 1714 to 1788"; Mr. Browning, "Treaties, 1783 to 1815"; Mr. Prothero, "English Constitutional History to 1760"; Prof. Sidgwick, "Principles of Constitutional Law and Constitutional Morality."

A NEW series of lectures, specially designed for general audiences, will be commenced this session at King's College, London. The subjects will be treated without reference to any examination, and solely with a view to assisting independent study. The time (5 P.M.) has been chosen as convenient for the attendance of persons engaged in business. There will be altogether five courses, each to consist of eight lectures, to be given on the same afternoon in

consecutive weeks. The inaugural lecture of each course will be open to the public. The following are the several lecturers, with their subjects, and the dates of the inaugural lecture: Prof. G. C. Warr, "Historical Introduction to Homer," beginning on Monday, October 26; Prof. N. Perini, "The Divina Commedia," Tuesday, October 27; Prof. H. G. Seeley, "The Nature and Origin of the Larger Features of English Scenery," beginning on Wednesday, October 28; Prof. C. A. Buchheim, "Goethe's 'Faust,'" beginning on Thursday, October 29; Prof. J. K. Laughton, "The History of the Eighteenth Century, from the Peace of Utrecht to the Outbreak of the French Revolution," beginning on Friday, October 30.

THE second annual meeting of the University Association of Women Teachers was held on Friday, October 9, at the Somerville Club, Oxford Street. In the absence of the president, Miss Clough, the chair was taken by Miss Woods, late of Girton, head mistress of the Bedford Park School. The secretary, Miss Julia Sharp, reported on the work of the association during the past year, and the usual statement of accounts was made, which showed the financial condition to be satisfactory; the number of members was stated to be 111. Some discussion followed on the best methods of carrying out the objects of the association. These are mainly—(1) to raise the standard of teaching, not only in schools, but also in private families, and (2) to find employment for women who have just left Oxford or Cambridge, and intend to make teaching their profession. It was hoped that, as all the members of the association have enjoyed the benefit of a University education, it might soon become an established custom for all who wish for efficient teaching to apply to the secretary of the association. During the past year some additional work had been undertaken, viz., the examining and inspection of schools, managed by a sub-committee, the members of which are resident at Cambridge.

A SENIOR wrangler, who is also a lecturer in law, is not often heard on "Hamlet," yet in the person of Mr. Gerald Finch he will be so heard, on Friday, October 23, at the opening meeting of the session of the New Shakspeare Society.

MR. J. MEADOWS COWPER, of Canterbury, has just issued his second little volume of the overseers' and churchwardens' accounts of his parish, Holy Cross, Westgate. It is full of quaint and interesting matter. The churchwardens' spelling is choice. In 1727 they pay 5s. a time "for Ringing for King geore in ter session" and "one King george Crowne Aysone"—that is to say, George II.'s accession and coronation. Mr. Cowper gives three full indexes of names, and adds the churchwardens' accounts, and registers from 1560, of St. Peter's.

M. EDOUARD HERVÉ, editor of the *Soleil* recently deputy for Paris and the highest on the Conservative list at the recent ballot, has announced his candidature for the *fauteuil* in the Académie française, vacant by the death of the Duc de Noailles.

PUBLISHERS' ANNOUNCEMENTS.

MESSRS. WARD AND DOWNEY's announcements include the following: *Folk and Fairy Tales*, by Mrs. Burton Harrison, with twenty-four illustrations by Walter Crane; *Christmas Angel*, a Christmas story, by B. L. Farjeon, with illustrations by Gordon Brown; *Robertson of Brighton*, by the Rev. F. Arnold; *Gladstone's House of Commons*, by T. P. O'Connor; *The Letters of George Sand*, with a memoir by Ledos de Beaufort; *Eight Months of Peril and Privation*,

by John Augustus O'Shea; *Japanese Life, Love, and Legend: a Visit to the Empire of the Rising Sun*, from the French of Maurice Dubard, by William Conn; a new edition, in one volume, of Stepniak's *Russia under the Tsars*; a new story for boys, entitled *The New River*, by the author of "The Hovellers of Deal; *A Tale of the Days of Hugh Myddleton*; a Christmas book by George Manville Fenn, entitled *Eve at the Wheel: a story of Three Hundred Virgins*; a new and enlarged edition of *The Dark House*, by the same author; a new edition of *The Old Bohemian's Philosophy on the Kitchen*; a new edition of *An Apology for the Life of Mr. Gladstone*, bringing the work down to the fall of the late administration.

Among new novels—*At the Red Glove*, by Mrs. Macquoid; *Mind, Body, and Estate*, by Mr. F. E. M. Notley; *Where Tempests Blow*, by the author of "Miss Elvestor's Girls"; *Dulcie Carlyon*, by James Grant; *Lord Vanecourt's Daughter*, by Mabel Collins; *That Villain, Romeo*, by J. Fitzgerald Molloy; *Coward and Coquette*, by the author of "The Parish of Hilby."

Also new editions of the following: *A Maiden all Forlorn*, by the author of "Phyllis"; *Vira*, by Mrs. Forrester; *The Prettiest Woman in Warsaw*, by Mabel Collins; *Lil Lorimer*, by Theo Gift.

MESSRS. FREDERICK WARNE & Co.'s list of new books comprises *The Rabbi's Spell: a Russo-Jewish Romance*, a mystic work from the pen of Mr. Stuart C. Cumberland, a gentleman well known in connection with thought-reading, to be printed in blue ink on green paper, in accordance with the recommendation of a German *savant*; a new edition of *Sport with Gun and Rod in American Woods and Waters*, edited by M. A. Mayer, with ten full-page plates and six hundred engravings; *Aulnay Tower*, a novel by Miss Howard; a new edition of *Masterman Ready*, with upwards of fifty illustrations by E. J. Wheeler; *Sylvia's Daughters*, by Florence Scannell, illustrated in tints by Edith Scannell, engraved and printed on fine paper by Edmund Evans; the annual volume of *St. Nicholas*; *Every Christian's Everyday Book*; or, *Selections for Daily Reading from the Best Christian Authors of all Ages on the Duties and Doctrines of Christianity*, by the Rev. T. H. L. Leary; *Heavenly Echoes and Holy Messengers*, two illuminated text books, with a text and hymn for each day of the month, produced in the best style of lithographic colour printing.

Among books for boys and girls—*On Honour's Roll: Tales of Heroism in the Nineteenth Century*, by L. Valentine; *Conjuror Dick*, by Angelo K. Lewis (Prof. Hoffman), with frontispiece and vignette; *New Honours and Lena Graham*, by Mrs. C. Selby Lowndes; *Peril and Adventure on Land and Sea, and Valour and Enterprise*, by L. Valentine; two new books by Silas K. Hocking, namely, *Cricket: a tale of humble life*, and *Our Joe*, both with illustrations; *Tinker Dick*, by Mrs. Henry Keary, a new volume in the "Round and Globe" series.

Nursery literature is represented by *Aunt Louisa's Nursery Book*, with thirty-two full-page coloured illustrations; two little picture-books, printed in gold and colours, from designs by G. Lambert, entitled *Our Dog Laddie* and *The Three Kittens*, and four new volumes of *Aunt Louisa's London Toy Books*.

AMERICAN JOTTINGS.

MR. HOWELLS is writing for the *Century* a new novel, in which some of the characters of *Silas Lapham* will reappear. But it is said that the hero will be "a simple-souled, pure-hearted, country youth, who comes to Boston with a trashy poem he has written, and no other visible means of support."

MR. HOWELLS has also written a story for the Christmas number of *St. Nicholas*, which will be illustrated by his daughter, the "Little Girl among the Old Masters" of last year.

MR. CABLE has written a story for the *Century*, the scene of which is laid among the Acadians of Louisiana. He will also contribute to the same magazine a series of papers on "Slave Songs and Dances," dealing incidentally with the rites of negro serpent-worship.

SOME of Walt Whitman's admirers in America subscribed last month to present him with a horse and buggy. Among the subscribers were Mr. Whittier, Dr. Oliver Wendell Holmes, Mark Twain, Mr. Edwin Booth, Mr. Lawrence Barrett, Mr. G. H. Boker, and Dr. R. M. Buck. The horse is described as "a sorrel Canadian roadster, docile enough for a child to drive."

MR. EUGENE SCHUYLER, late American minister at Athens, but better known in this country as newspaper correspondent and author, is going to deliver a course of lectures at Cornell University upon "Diplomacy and Commerce."

THE forthcoming volume (being vol. vi.) of Dr. Brinton's "Library of Aboriginal American Literature" will be the annals of the Cackchi-quels, a tribe found by the Spaniards in Guatemala. The MS. was written about 1560, and has never yet been printed.

THE American announcements, so far as we have noticed, contain little of interest for English readers, excepting, of course, those books which will also be published in this country, and concerning which it is difficult to say whether they ought to be called American or English. The illustration of poems on an expensive scale seems to be still the fashion. We observe an edition of *Lalla Rookh*, with drawings by American artists, reproduced by "photo-etching"; Dr. Oliver Wendell Holmes's *The Last Leaf*, consisting of a facsimile of the author's MS., with notes and full-page designs, reproduced by the phototype process; also illustrated editions of Keats's *Eve of St. Agnes*, Poe's *Lenore*, and Whittier's "Poems of Nature." Among original books are Mr. E. C. Stedman's *Poets of America*, and a posthumous volume of *Studies in Shakespeare*, by Richard Grant White.

THE latest addition to the "Aldine Series," published by Messrs. Houghton, Mifflin, & Co., is the first and second series of *The Biglow Papers*.

THE *Book Buyer*, a monthly, published by Messrs. Charles Scribner's Sons, has begun to issue, by way of supplement, a series of portraits of American literary men. The first is R. H. Stoddard, and is a fine specimen of engraving.

THE September number of *Harper's Monthly* prints two letters of Carlyle, written in 1846 and 1850. They are addressed to a Southern professor, and deal with the question of slavery. Here is a characteristic passage:

"The cry about emancipation, so well pleased with itself on Humanity platforms, is but the keynote of that huge anarchic roar now rising from all nations—for good reasons too—which tends to abolish all mastership and obedience whatsoever in this world, and to render Society impossible among the sons of Adam."

MR. W. J. ROLFE's new volume in his pretty "Students' Series of Standard Poetry" is Scott's *Marmion*. He says that the text of the poem has hitherto never been printed correctly, even by Scott himself, while Lockhart and other editors have not corrected all Scott's slips, and have introduced fresh blunders of their own into the text. Mr. Rolfe adds over a hundred pages of useful notes (including Scott's and Lockhart's) to the 226 pages of text and engravings.

ORIGINAL VERSE.

PRINCIPAL SHARP.

(Died at Oronsay, September 1885.)

LET Jura wail, the loud Atlantic sweep,
To Argyle's inland solitudes, forlorn,
By sound and firth let sobbing seas be borne
From that dark shore where song is laid asleep;
For never gentler heart did climb the steep
Unwavering, never holier oath was sworn
Than his, who in his pure exalted morn
Gave Nature's soul his innocence to keep.
Oh! lost to human presences, not gone
From those who felt thine heart in thy right
hand,
And knew it beat in time to all things true;
Though sad the vales of Wordsworth's Cum-
berland,
And droar St. Andrew's ruin stands in view,
Though Isis weeps, thine angel lamp burns on.

H. D. RAWNSLEY.

MAGAZINES AND REVIEWS.

THE October *Expositor* deserves a wide circulation, if only for the severely impartial criticisms upon the work of the Palestine Exploration Fund, contributed by Prof. Socin, of Tübingen. Some of them have been offered before by English writers, but, very naturally, have passed unheard amid the applause of a public always greedy of results, especially of such as support—we must not say the orthodox, but the prevailing opinions on Old Testament criticism and interpretation. English Palestine research ignores, Prof. Socin tells us, the historical problems which occupy special Old Testament scholars, and catch up sensational theories which are still absolutely unproven. The identifications of places are often in the highest degree uncertain; the etymologies often, not merely uncertain, but incorrect. The memoir on the fauna and flora of Palestine is meagre and not sufficiently original, and ill replaces a comprehensive treatise on the physical geography entirely by professional scholars. Still, though there is much in the seven volumes of memoirs which requires revision and correction, the work will, for a long time to come, be the standard one, and the accompanying map is "beyond question the most important of the works hitherto published." The general tone of the article is that of censure, but the writer warns us that this is partly the result of the scanty space at his disposal. He is himself a member of the society, and recognises its great achievements, which, however, he would regard as in some respects only a starting-point for something greater and more durable. A word of praise is given to the admirable "Introduction" of Mr. Trelawney Saunders. Among the other articles we may mention the third part of the general estimate of the Revised Version of the Old Testament, by Messrs. Jennings and Lowe. In spite of many telling criticisms, one cannot but observe how totally the authors' idea of the work to be done differs from that of the initiators of the scheme, and how much the style and colouring of the Old Testament would have lost by an unreserved adoption of principles like those of the reviewers. Prof. Warfield gives a very interesting paper on the "Messianic Psalms of the New Testament," and Prof. Driver concludes his explanatory comments on the Revised Version of the Pentateuch and Joshua.

Mind is justifying its claim to be a scientific journal in the rigorous sense. The editor has now set apart a section for original research, and in the last two numbers new and remarkable contributions have been made to experimental psychology. These come from the other side of the Atlantic—the psycho-physical laboratory in the Johns Hopkins University. The contributors, Dr. Donaldson and Prof. Stanley

Hall, here give good proof that they have thoroughly mastered the methods of psycho-physical research which have been elaborated by Weber, Fechner, and a number of other workers in Germany, and which have already resulted in a valuable mass of facts as well as in some important inductions. The first of these papers gives the results of a series of investigations into the temperature-sense. The question has been much discussed whether sensations of touch and of temperature are excited by means of the same nerve-elements, and one or two inquirers have sought to determine the point by experimenting with different portions of the skin. Dr. Donaldson has worked out an independent series of experiments on the subject. He finds not only that the thermal sensibility does not correspond with the tactile in its local variations over the surface of the body, but, what is more remarkable, that the sensibility to cold differs from the sensibility to heat in this respect. He attempts to map out the surface, or, rather, certain portions of it, into heat-spots and cold-spots. The former are sensitive exclusively to the stimulus of heat, the latter to that of cold. Among other surprising results of his inquiries we are told that there are portions of the skin which are insensitive to pain. According to his observations, there must be many tiny areas of the skin which answer to the blind spot of the retina, viz., portions where sensibility is wanting, though under ordinary circumstances we are not aware of the fact, but are able in a manner to make good the deficiency by means of the sensations of the adjacent parts. The other paper describes some experiments on the motor sensations of the skin. These researches have as their object to determine how far we can judge of the rate and the direction of the movement of a point or small surface over the skin when the limb is kept still, and, consequently, the muscular sensations attending bodily movement can render no assistance. Here, too, the results are very curious. It is found, for example, that we are apt, when in doubt, to judge the direction of a movement to be up or towards the head rather than down or away from it. It appears, further, that we are aware of a movement over the skin an appreciable interval before we recognise its direction. These researches are full of promise in relation to the whole problem of the sense of motion, the nature of which is still very obscure. The longer articles of the present number are a somewhat elaborate study of comparison by Mr. Sully, in which he seeks to give greater definiteness to the process of comparing under its different forms, and to assign its main conditions; a final article on space and touch by Dr. Montgomery, in which he further elucidates his peculiar theory of the tactile space-consciousness, and defines what he regards as the real function of the muscular sense in the development of the same; and, lastly, a bright and suggestive dialogue by Mr. Shadworth Hodgson on the question of freewill and compulsory determinism. The critical and shorter notices continue to give the reader a good idea of recent philosophical work at home and abroad.

In an article entitled "Dios" in the *Revista Contemporanea* for September Gonzalez Ianer puts forth a plea for a more spiritual conception of God, and a warning against the materialising effect of images in worship. Becerro de Bengoa describes some interesting excursions in the neighbourhood of Vitoria, dwelling especially on the megalithic remains of what appears to have been the border land of Basque and Celt, and on the picturesque valley and salt works of Salinas de Añana. R. A. Espino writes pleasantly on Petrarch as a poet, classicist, and patriotic politician. Alvarez Sereix strongly combats the sale of the

government woods and forests; he has also a eulogistic notice of Miss Ormerod's *Guide to Methods of Insect Life*. Vilanova concludes his essay on Luxury with a suggestion for heavily taxing jewellery, plate, and rarities, in the production of which art does not enter. Miguel Gutierrez in his "Ode" treats of Spanish military lyrics.

CORRESPONDENCE.

CAERN-BURLAL.

London: Oct. 8, 1885.

Servius (ed. Thilo, vol. i., p. 1) says that the first distich made by Vergil was the following epitaph on the robber Ballista:

"Monte sub hoc lapidum tegitur Ballista sepultus: nocte die tutum carpe viator iter."

As Ballista was, doubtless, a Cisalpine Gaul, this epitaph furnishes a good parallel to the oldest monument of Celtic speech, the bilingual of Todi, of which the Gaulish parts run thus:

"Ategnati Drutieni carnitu artvass Coisis Drutienos."

"Ategnati Drutieni carnitu logan Coisis Drutienos."

and have been thus translated:

"Ategnati Druti filii lapides (sepulcrales) con-gessit Coisis Druti filius."

"Ategnati Druti filii tumulum con-gessit Coisis Druti filius."

Similar Celtic sepulchral records are the barbarous inscription at Penmachno—"Carausius hic iacit in hoc congeries lapidum" (Hübner, *Inscript. Brit. Christianae*, No. 136)—and the following extracts from Nennius, the Book of Armagh, and Adamnán's Life of Columba:

"Arthur postea congregavit congestum lapidum sub lapide in quo erat vestigium canis sui, et vocatur Carn Cabal" (Nennius, § 73).

"Et sepeliuit illum aurigam Totum Caluum, id est Totmáel, et congregavit lapides erga sepulcrum" (Book of Armagh, fol. 13 a. 2).

"Post expleta baptismationis ministeria . . . eodem in loco consequenter obijt, ibidemque socii, congesto lapidum acervo, sepeliunt" (Adamnán's *Vita Columbae*, ed. Reeves, p. 63).

I have not met with anything in Celtic literature showing that the Celts practised cremation. But the number of sepulchral urns which have been found in France, Britain, and Ireland, proves that they, like the Greeks, either burnt or buried the human body. They had biers, but I cannot find that they used coffins. Their *carni* or cairns (cognate with *npavds*?) seem to have been invariably composed of stones, and

thus differed from the Greek *τάφοι*, Latin *tumuli*, which might be made either of stones or earth.

WHITLEY STOKES.

KNIVES ATTACHED TO ANCIENT TITLE-DEEDS.

Durham: Oct. 5, 1885.

In the ACADEMY of September 12, 1885, in connection with a grant of Hatfield Broad Oak, there is a reference to a deed to which a knife is appended as being among the records of the see of Durham. In place of "see" must be read "Dean and Chapter," among whose muniments are still preserved two documents which have attached to them the knife handle of one of the parties to the transaction.

One (3rd 1st Spec. No. 72) is an agreement between the monks of the Lindisfarnensian Church (Holy Island) and Sir Stephen de Bulemer, Cecilia his wife, and Thomas their heir, concerning the tithes of Lowick. The deed is of about the year 1155. To this is appended, on the part of Bulmer, the remains of a knife, of which about a third of the blade remains, with the handle of ox-horn, upon one side of which is cut the following, *Signum de capella de Lowic*, and upon the other side, *de Capella de Lowic et de decimis de Lowic totius curie et totius ville*, forming, in fact, a kind of abstract of the deed. The deed and knife are engraved in Raine's *North Durham* (Appendix, p. 135).

The other (4th 3rd Ebor. No. 4) is an agreement, dated 1148, between Roger Prior and the monks of Saint Cuthbert of the Church of Durham, and Robert de Sancto Martino, by which the latter gives up to Durham all right he has in the Church of Bliburc (Bliburgh) and in the lands belonging to it, granting also six ox-gangs of land. To this is appended, on the part of Robert, the ox-horn handle of a knife of which but a very small portion of the blade remains.

I may mention that the see of Durham possesses none of its ancient muniments. They have been lost for a long time past, and it is to be feared have been destroyed.

W. GREENWELL.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

London: Oct. 12, 1885.

An ounce of example being better than a pound of precept, I venture to give a short but typical instance of what may occur when editorially expanded contractions are not distinguished from the *scriptiones plenae* of the original MS.

In vol. iv. of the Brehon Laws, p. 306, we read this:

"Aithech ar athreba; a deich deichde a bhuarside .i. deich mbailais, x. muca .x. cairig cethraime arathair .i. dam, ocus sco, ocus brod, ocus cennos .r. Tech fichet traiged lais. . . ."

which is rendered thus:—

"As to a tenant resident; ten of tens are his cattle, i.e., he has ten cows, ten pigs, ten sheep; a fourth part of ploughing apparatus, i.e., an ox, and a ploughshare, and a goad, and a bridle. He has a house of twenty feet. . . ."

Now, a *deich deichde* is not Irish at all, it is grammatically impossible. Is the would-be English equivalent "ten of tens" much better from the idiomatic point of view? With the best will in the world it can be made to bear but one meaning, i.e., "ten times ten," and that will not serve here. The old Irish knew how to count, and would not have used "ten times ten" to indicate thirty domestic animals. Again, what means "A fourth part of ploughing apparatus" here? Nothing, surely.

A certain amount of familiarity with the idioms of the language, together with the light

afforded by the context, make a conjectural emendation of this passage easy enough; but conjecture blossoms into certainty upon collation with the original MS., or such a perfect photographic reproduction as Mr. Whitley Stokes possesses of this portion of H. 3, 18.

The *Crith Gablach* is, broadly speaking, a treatise upon certain social grades, their status, property qualifications, and so forth. At p. 305 it is asked

"Why is an *Ogair* so named . . . ? What is his property? He has a property of seven (*folad sechtia lais*). Seven cows, seven pigs, seven sheep. He has the fourth part of ploughing apparatus. . . . Our passage is more concise, and stands thus in the MS.:

"Aithech ar athreba adeich deichde a buarsidhe .i. dech mbail lais .x. muca .x. cairig, cetharde arathair .i. dam ocus soc ocus brod ocus cennos .r. tech fichet traiged lais. . . ."

Rendering as literally as is possible in English, we have

"A tenant resident ten. Ten-fold his cattle, i.e., he has ten cows, ten pigs, ten sheep. A quaternion of ploughing, i.e., ox and ploughshare, goad and halter. He has a house of twenty feet. . . ."

This is uncouth, no doubt, but intelligible. We must supply the query "What is his property?" The answer is "He has a property of ten. His cattle go by tens, &c. His ploughing requisites are four, i.e., ox, ploughshare, goad, halter [*not bridle*]." The "r." I do not understand at present. The contractions in this little bit are not numerous, as will be seen by the italics which represent the syllables supplied; but in these lie the key to the whole meaning.

It is to be regretted that some later editors, who have the advantage of Roman type, should not think it needful to distinguish their own Irish from that of the scribes. Thus in "The Battle of Ventry Harbour," recently edited for the *Anecdota Oxoniensia*, line 35 contains "tarb di maclannaih," which is meaningless. The original text is already sufficiently incorrect, and the reader ought to be informed that this belongs to the editor. The correct reading is "tard-rumcladaib" = over the ridges [of the waves].

Again, at p. 70, l. 422, we are confronted by "da bh-faidsoghuiheacht." Is there such a word in the language? If there be, what does it signify here? The MS. has "da bhfaidsgeáuidheacht," which is an excellent word and quite in its right place. Neither are editors always quite successful in resolving what they take for arbitrary and senseless agglutinations of words, cf. p. 2, l. 30, "isín oirear ara bhadhar a longa." This is grammatically impossible. The MS. has "arabhadhar" = a rabhadar, i.e., "[in] which were." P. 56, l. 1020, for "traigh is theas" the MS. rightly has "traighis," i.e., a verb, which the printed text splits into a substantive and a conjunction that make no sense. But this is a wide subject.

STANDISH H. O'GRADY.

A GALLOWAY NURSERY TALE.

London: Oct. 12, 1885.

The Galloway *Märchen* which follows is curious. It is the Hesione myth, or part of it, localised in Dalry. The hero, who leaps into the monster and slays him, is familiar to most mythologies from North America to South Africa. Doubtless he is the sun, leaping armed into the dark night, typified here by a white serpent. The vampire-like tastes of the monster are notable. The night naturally dwells with the dead. When we are told that for three days Ken ran red with blood, the floods (which usually last three months) are doubtless indicated. Or the smith may be the storm-wind, assailed by the storm-cloud, which, as we know, always goes against the wind. The

white serpent will thus refer to the lightning, as in Schwartz's theory. Turning from science to mere local detail, it must be observed that the prehistoric tumulus at Dalry is of great size. One can easily fancy a monstrous snake coiled round it, with his head on the churchyard, where some martyrs of the Covenant are buried. The Ken flows at the foot of the kirk-yard. In Galloway a localised form of *Whupity Stoor* (*Rumpelstiltskin*) survives at Balmacleanan. Here follows the snake story:

"Once upon a time, very long ago, in a clachan of the kingdom of Galloway, called Dalry, there lived a huge and terrible snake. It lived at the foot of the village, near a bend of the river, and coiled its hideous length three times round a large green mound or barrow. In colour it was snow white, and the thickest part of its body was as thick as three bags of meal. This creature was a terror to all the neighbourhood, as it not only destroyed cattle and men, but had an ugly habit of going at night to the neighbouring churchyard, digging up coffins with its claws, and devouring the newly-dead. So fierce was the creature, and so watchful, that no one dared to attack it, especially as its skin was known to be so thick that no sword could pierce it. In their distress the people sent to entreat the Lord of Galloway to help them, who at once promised a large reward to any of his knights who would rid the country of such a plague. One of the noblest and bravest at once declared himself ready for the undertaking. But in spite of his courage and wariness the serpent saw him approach, opened its cruel jaws, made one spring at its enemy, and swallowed up horse, knight, and armour in one mouthful. When the news of this overthrow reached the court of the King of Galloway another brave knight at once volunteered to kill the snake; but three times did his horse rear up and throw him off, which was considered a bad omen, and as soon as he was fairly seated in the saddle his nose began to bleed, which was considered equally unlucky. In the meantime in Dalry a smith had been for some time preparing a suit of armour for himself in which to attack the snake. The armour was covered all over with long sharp spikes, so devised that they could be drawn in or pushed out at the will of the wearer. Scarcely was his armour completed when the smith's young and beautiful wife died, and was buried in the churchyard. The night after the funeral the poor smith was sitting alone over his solitary fire when a child came running in to tell him that the snake was in the churchyard, engaged in scraping the earth out of the newly-made grave. In a moment the smith was on his feet, got as quickly as possible into his spiked armour, seized a sword and rushed out to the churchyard. The snake, hearing the sound of armed steps, stopped its occupation, turned upon the new foe, and, with open mouth and terrific cries, rushed upon the smith and swallowed him whole. The latter, however, retained his presence of mind, and, as the snake was in the act of swallowing him alive, suddenly shot out all his spikes, and rolled violently about in the inside of the monster. Thick as was the snake's skin, it could not withstand the nicely-tempered spikes in the smith's suit of mail, and, after strenuous efforts, the latter forced his way through the tough carcase of his enemy. There lay the snake quite dead, and for three days following the river then ran red with blood."

Here the story should properly end; but a later and more romantic fancy has added the fact that at the very moment of victory the second knight arrived on the spot, and, in a fury of disappointed ambition, attacked the smith, who of course was as victorious in the second fight as he had been in the first.

A. LANG.

GERMAN TRANSLATIONS OF THE BIBLE BEFORE LUTHER.

Glasgow: Oct. 13, 1885.

My sole and modest aim in drawing attention Prof. Pearson's article was to caution the readers of the *ACADEMY* against accepting as proved a number of assertions regarding

Luther's version of the New Testament. With this view I adduced some respectable German theologians, who held a totally different view from that of Prof. Pearson; and one of these, I showed, knew the merits of the version of the Codex Teplensis. I have now to caution the readers of the *ACADEMY* against accepting "what was written two years ago" as any valid proof of Prof. Pearson's assertions. His whole theory rests on the one assumption that Luther knew no Greek till Melancthon came to Wittenberg in August, 1518; although, even if this were allowed him, the conclusions he draws could still be shown to be unwarranted. He bases his assumption on Luther's letters, which he does not quote, and to which he gives us no references. To help him much the passages from the Letters would require to be a good deal more to the point than his quotation (*quamvis jam senex*) from Melancthon. The word *senex* proves nothing; it would apply equally well to 1518 and to 1512. What Melancthon meant was—what everybody allows—that Luther was well on in years before he began to learn Greek. Prof. Pearson, moreover, has mistranslated his own authority. The "Declamatio," from which the words are taken, was delivered in 1549, three years after Luther was dead.

Now, if it can be shown that Luther knew Greek before August, 1518, Prof. Pearson's whole theory collapses, and all that he has asserted about the authorship and value of the Codex Teplensis is for our present purpose quite irrelevant. I shall first give one or two authorities—this time, great Church historians. Schröckh, in his monumental work (vol. xxxvi., p. 112), after noticing Luther's taking the doctorate in theology in 1512, says:

"Luther hatte überhaupt zu Wittenberg angefangen, das hebräische und griechische Sprachstudium, zur Erleichterung des biblischen, mit grösserem Fleisse zu betreiben. . . ."

And Baur (vol. iv., p. 28), says:

"Das Bedeutungsvollste war für Luther dabei die besondere Verpflichtung, die er durch seinen Eid als Doctor der h. Schrift übernahm. In der nun folgenden Zeit, in welcher er hauptsächlich über den Römerbrief und die Psalmen Vorlesungen hielt, sich mit Sprachstudien beschäftigte. . . ."

If Church historians are objected to as authorities, the same thing will be found stated in the perfectly unpolemical but authoritative work of Karl von Raumer (*Geschichte der Pädagogik*, vol. i., p. 105). Further, Melancthon in his *Life of Luther*, which is arranged chronologically, at the end of chap. vii., after noticing the effect on all classes of Luther's lectures, says:

"Ipse etiam Lutherus Graecae et Ebraicae studiis se dedere coepit ut, cognita sermonis proprietate et phrasi et hausta ex fontibus doctrina, dexterius judicare posset."

And then he proceeds in chap. viii. to give an account of Tetzel in the year 1516. But there is stronger evidence than this still. We find Luther himself arguing about the meaning of Greek words, at least as early as the summer of 1518, before Melancthon came to Wittenberg at all. Thus, we find him (works xviii., p. 209, Halle, 1743) discussing *μεταοείρε*, and showing that it should most accurately be rendered by *transmentamini*. This is proved by Schröckh to have been written in the summer of 1518. Then, here is a short passage from Schröckh (vol. 36, p. 297) of which Prof. Pearson should take special note:

"Luther übersetzte aus der griechischen Urschrift, und grösstentheils nach der zweyten Erasmischen Ausgabe derselben vom Jahr 1519. Doch folgte er auch an mehreren Stellen der Vulgata. . . . Für die kurze Zeit, die er auf eine so schwere Arbeit gewandt hat; für seine swar nicht schlechte, aber doch nicht grosse

Kenntniss des griechischen und hebräischen; . . . hat er immer ein Werk zu Stande gebracht, das Unpartheyische von jeder Religionsgesellschaft bewundert haben. . . ."

Then follows a long estimate of Luther's translation. Baur, on this point, says (vol. iv., p. 63):

"There were certainly before Luther several old German translations, but they can so little come into comparison with his vigorous and spirited work that he is rightly regarded as the first German translator of the Bible."

I have thus established: (1) Luther knew Greek for nearly nine years before he began his translation of the New Testament; (2) he used the best existing Greek text as the basis of his translation; his translation was an original work, and in no sense a mere "natural outgrowth" of a previously existing version.

I refrain from any further criticism of "what was written two years ago" out of consideration for your space. This is my last word on the subject.

J. HUTCHISON.

"THE ARABIAN NIGHTS."

Botolphsford Manor, Brigg: Oct. 3, 1885.

I have read every word of the first volume of Capt. Burton's *Arabian Nights*, and, as I am not an Arabic scholar, am very grateful to him for having given us an English version which has not been adapted for the use of school children.

The people who make an outcry against the *Arabian Nights* rendered without expurgation are for the most part quite incapable of appreciating the arguments used by Mr. Symonds. Anything like a logical sequence of ideas is not to be hoped for from them. If they were consistent they would refuse to have their sons taught Greek and Latin, and compel their daughters to remain ignorant of the tongues in which Rabelais and Boccaccio expressed themselves. Means, however, should be taken to force on their attention the fact that there are not a few serious students who have no taste whatever for foul words or foul ideas who are yet anxious to enter into the modes of thought of Oriental peoples, and who take a deep interest in many questions of anthropology and folklore which are not commonly talked of in nurseries or drawing-rooms. To these, most of whom cannot read Arabic, Capt. Burton's version of the great fable-book of Islam will be invaluable. The wants of such people are surely as well worthy of consideration as those of some of our great army of novel readers. I do not admit Captain Burton's *Arabian Nights* to be in any sense corrupting for the class of readers for which it is alone meant. I am sure that for any class whatever it is far less harmful than certain novels I could name, which have been lavishly praised by reviewers, and are to be found in every circulating library.

EDWARD PEACOCK.

APPOINTMENTS FOR NEXT WEEK.

FRIDAY, Oct. 23, 8 p.m. New Shakespeare: "The Play of 'Hamlet' from a Theosophic Point of View," by Mr. Gerard B. Finch.

SCIENCE.

The Epistles of Horace. Edited, with Notes, by Augustus S. Wilkins. (Macmillan.)

This careful and scholarly book is a worthy supplement to Prof. Palmer's edition of Horace's *Satires*. A school edition, and written with the honest endeavour of grappling with every serious difficulty, it is, at the same time, an important contribution to Latin scholarship.

Judging the book from this point of view,

we may fairly enter upon a short discussion of some of the more difficult questions of criticism and interpretation which it suggests. To take the text first. Prof. Wilkins, like so many other scholars, disagrees with Keller's estimate of the oldest Blandinian MS. He agrees, further, with Prof. Palmer that it is "an interpolated descendant of a better archetype than that from which the Horatian MSS. are descended." And in other places (e.g., on pp. 150, 296, 303) he speaks of it as having been subjected to arbitrary correction, and as representing a "recension" independent of the other MSS. This conclusion seems hardly justified by the evidence, though some of the peculiar readings of the old Blandinian are puzzling—e.g., *donis opimis* for *honestis* (2 Ep. 2, 32), which may well be right. They seem to point no further than to the fact that this MS. is a superior representative of the same copy from which all the rest are derived. Keller, if we remember right, speaks with some contempt of the idea that this archetype may, like the fourth and fifth century MSS. of Vergil, have swarmed with variants and corrections. Yet what is more likely? The history of the texts of the classical Latin poets, Vergil and Horace, must have been very similar. Both authors were from an early period much read in schools. On 1 Ep. 8, 12, Prof. Wilkins regards *venturus* of the Blandinian as a correction for *ventosus*; but it may be a mere mistake. In 2 Ep. 2, 80, *cantata* and *contracta* (*vestigia vatum*) look like different corruptions of a word now lost. Many of the variants in question are, no doubt, due to glosses, many to mere error in copying, many again to an attempt to assimilate a faulty reading to the rest of the sentence. Thus, in 1 Ep. 15, 16—*puteos perennis Iugis aquae*—it seems not unlikely that the *dulcis* of the Blandinian may be right, *iugis* having crept in as a gloss on *perennis*. The latter word was not so familiar as it looks; at any rate, it is explained both in the Cruquian *scholia* and in old glossaries. In 1 Ep. 18, 89 foll. (*Oderunt hilarem tristes tristemque iocosi . . . Potores bibuli media de nocte Falerni Oderunt porrecta negantem pocula*) if, as can hardly be doubted, the words *bibuli . . . Falerni* are spurious, what is more natural to suppose than that *oderunt* was a gloss written over *potores* to explain the construction? The whole passage should then run, *Oderunt hilarem tristes tristemque iocosi Potores porrecta negantem pocula*.

It should be noted that in two places (1 Ep. 10, 9, and 1, 20, 21) there is a discrepancy between Prof. Wilkins's commentary and his text.

As the text of Vergil was "emended" by Apronianus at the end of the fourth century A.D., so that of Horace was "emended" by Mavortius in the sixth century. Like previous editors, Prof. Wilkins speaks too vaguely about this "recension," which, in reality, so far as the constitution of the text is concerned, is no more than a fifth wheel to the coach. The present writer has argued elsewhere that there is no proof of these ancient "recensions" containing anything like conjectural correction from the hand of the *emendator*, who probably did no more than check the copy before him with the aid of another, with its *scholia* and variants. So that, just as in the

case of Vergil, no distinctive character can be attached to Apronianus's "recension" as represented by the Medicean MS., so in the case of Horace nothing worth considering can be made of the Mavortian edition.

Before leaving the question of the text, we may notice that Bentley's *Homereum* (for *honoratum*) *Achillem* (A.P. 120) is supported by the interpretation of the scholiasts. Prof. Wilkins says that the use of *honoratus* for "illustrious" is "rare": surely it is unheard of. It derives no support either from 1 Ep. 1 107 (*liber honoratus pulcher*) nor from any of the passages adduced by Keller.

The following suggestions are offered on other points: 1, 13, 4, *ne pecces*. "*Ne sis patruus mihi* shows that this may be taken as a negative imperative." Is not *ne sis* a standing exception to the general rule that *ne*, with the second person present subjunctive, is not used in an imperative sense? 1, 14, 14. It may be observed that *mediastinus* is a well-attested form of the word usually printed *mediastinus*. It has the support of the Harleian MS. of Nonius, and of the glossary bearing the name of Philoxenus. If genuine, it points to a lost word *mediaster*. 2, 1, 47. It is not strictly correct to say that *aceruus* = *συνεπής*. *Aceruus* = *συνός*, and *συνεπής* = *acervalis argumentatio*. 2, 1, 59. The *gravitas* of Caecilius (compare "*Stesichori graves Camenae*") may have consisted, not in his fondness for sententious maxims, but in his mastery of situations which stirred the stronger passions; as Varro says (ap. Charis. p. 241 Keil): "*πάθῃ* vero Trabea, Atilius, Caecilius facile moverunt." A.P. 128. Does *communis* = *volgaris* in rhetoric? Surely the rhetorical writers are fond of distinguishing the two words; Cicero *De Inventione*, 1 § 26, "*volgare est quod in plures causas potest accommodari, ut convenire videatur*. Commune, quod nihilo minus in hanc quam in contrariam partem causae potest convenire." And so Quintilian and the later rhetoricians. A.P. 172. *Avidus futuri*, "anxious about the morrow," may be illustrated by Seneca, *Epist.* 32, 4, "*O quando illud videbis tempus quo scies tempus ad te non pertinere! quo tranquillus placidusque eris et crastini neglegens et in summa tui satietate! Vis scire quid sit quod faciat homines avidos futuri? Nemo sibi contigit.*" H. NETTLESHIP.

BOOKS ON PHYSICS.

Practical Physics. By R. T. Glazebrook and W. N. Shaw. (Longmans.)—*Lessons in Elementary Practical Physics*. By Balfour Stewart and W. W. Haldane Gee. Vol. I. "General Physical Processes." (Macmillan.) It is difficult to make a comparison of the merits of these two text-books on practical physics, for the reason that while one of them, the Cambridge book, covers the whole range of subjects forming the ordinary course in a physical laboratory, the other is only an instalment of a work which will be completed in three volumes. What they have in common is comprehended under the sub-title of the Manchester Book, "General Physical Processes," and includes the measurement of mass, volume, and time, and the mechanics of solids, liquids and gases. The work of Messrs. Glazebrook and Shaw does not aim at being a complete treatise, nor at giving an account of all the operations which can be carried on in a laboratory. It is rather an educational work

adapted to the use of students who desire to obtain a general knowledge of physical processes. The authors have been embarrassed by the bulk of their material, and the necessity under which they lay of confining their work to a single volume. They have, therefore, selected certain typical experiments in each subject, and their aim has been "to enable the student to make use of his practical work to obtain a clearer and more real insight into the principles of the subject." The earlier portions of the volume are very satisfactory, especially the chapters on the balance, and on hygrometry. In the optical portion, the optical bench is described in detail and the adjustments necessary for investigating interference bands by means of the biprisms. Electricity occupies about one-fifth of the volume. In consequence of the fact that in this and other portions of the volume a good deal of space is taken up (much of it unnecessarily) with definitions and explanations that are to be found in any text-book, many simple and typical operations have had to be omitted. We confess too, with a little disappointment, that a work on practical physics, issuing from the Cavendish Laboratory, gives us little or no account of those more advanced and important operations which have been carried on in that laboratory in recent years. But the authors are not to blame for this. They have set before themselves a different aim; and the work which they have produced, though in point of arrangement it leaves something to be desired, will prove of important service to students of physics.

The writers of the Owens College text-book have done wisely in splitting up their work into three volumes. The volume before us is so good that we cannot but wish the delay in the publication of the second and third volumes to be as brief as possible. If they prove to be as complete and thorough as the first, students and teachers of physics will be in possession of a really valuable addition to their equipment. The work of Messrs. Stewart and Gee is an advanced book, in the sense that it will provide a very efficient training for those who would pursue physical investigations beyond the point at which they ordinarily cease in laboratories. Some notion of the comprehensiveness of the work may be given by a statement of the contents of the first chapter on length-measurement. In this we are taught how to use scales, including the diagonal scale, the vernier, spherometer, and wire gauge. The dividing engine and the mode of manufacturing scales are described in considerable detail; also the method of copying scales, of great value and importance in a laboratory; the cathetometer and its adjustments, the micrometer microscope for measuring small lengths with great accuracy, the ordinary microscope and glass micrometer for measuring (say) the diameter of a capillary tube broken at the place where the measurement is required, the cathetometer microscope of Quincke, &c. In the subsequent chapters follow angular measurements (including the optical lever, the balance, &c.), elasticity and capillarity (at considerable length), the barometer, gravitation, moments of inertia, &c. Atwood's machine is not alluded to. In the Appendix are some useful hints on the selection and conduct of operations, and practical rules.

On Light as a Means of Investigation. The Burnett Lectures. By Prof. G. G. Stokes. (Macmillan.) This small volume contains the second course of lectures on light delivered by Prof. Stokes at Aberdeen at the request of the Burnett trustees. The first course, delivered in 1883, dealt with the nature of light, and the grounds on which we accept the undulatory theory rather than the emission theory, com-

petent though the latter is to explain many of the phenomena of light. The third course, which will terminate the series, will be concerned with light considered in relation to its beneficial effects. One of the merits of these lectures is the clear and simple style in which they are written. They will prove of interest not only to the scientific man, but also to the ordinary reader who has no special knowledge of the subject. The subject is full of difficulties; but, within the limits to which he was confined, Prof. Stokes has been eminently successful in rendering hard things easy. In the first lecture the author refers to the various modes of absorption of light by substances as affording the means of discriminating between them, and is thus led to the phenomena of phosphorescence and fluorescence, to our knowledge of which he has himself so largely contributed. The fact of the rotation of the plane of polarisation of polarised light by various substances finds many applications. Among others, the author mentions its use in estimating the strength of malt liquor by separating the influence of the sugar from that of the alcohol in modifying the specific gravity. In the third and fourth lectures the solar spectrum is dealt with, and the inferences to be drawn from a study of the dark lines. Here, also, are discussed the spectra of the stars and nebulae, a new theory of comets, evidence of the motions of approach and recess of the stars relatively to the earth, and the means of discriminating between the dark lines of solar and terrestrial origin in the solar spectrum. We have only to regret that this portion of the lectures has not covered an even wider ground.

Properties of Matter. By Prof. P. G. Tait. (Edinburgh: Black.) This is an elementary work intended for the average student, who is supposed to have a sound knowledge of ordinary geometry and a moderate acquaintance with the elements of algebra and trigonometry. He should further have, if he is to read with profit several chapters of the book, some knowledge of the principles of kinematics and kinetics. One of the most important parts of the work is that which is devoted to the discussion of the elasticity and compressibility of solids, liquids, and gases, a good deal of which is not to be found in any other English text-book. With regard to the compressibility of gases, a very interesting account is given of Boyle's experiments, largely in his own words; and this is followed by a statement of the results of later experiments made with a view of verifying Boyle's law. The most recent are those of Amagat (1880-84), who has shown that all gases are more or less compressible than is consistent with Boyle's law, according to the pressure to which they are subjected. Atmospheric air, for instance, is more compressible than it should be for pressures up to 152 atmospheres, and less compressible for higher pressures. Thus, for a pressure of 152 atmospheres (about one ton weight per square inch) atmospheric air exactly obeys Boyle's law. In the chapter on time and space some of the properties of the hodograph are introduced, and the question of contour lines, indicator diagrams, and graphical representation in general, is dealt with. The chapter on gravitation gives sufficiently complete accounts of Cavendish's experiment and its repetition by Baily, Cornu, &c., together with the Schehallion and Harton colliery experiments. The remaining portions of the book are occupied by capillarity and surface tension, the simple phenomena of which are very clearly explained—diffusion, osmose, &c. The author's jealousy for the credit of British men of science is exemplified in one of the appendices, in which a quotation is given from Newton's *Principia* of a passage which has not hitherto been adequately noticed. From this, it is hardly doubtful that Newton

regarded Mariotte (to whom is generally assigned, by continental writers, the credit of Boyle's law) as a plagiarist.

The Mathematical Theory of Electricity and Magnetism. By H. W. Watson and S. H. Burbury. Vol. I. "Electrostatics." (Oxford: Clarendon Press.) This work is based on the exhaustive treatise of the late Prof. Clerk Maxwell, and is intended for students of the mathematical theory as an introduction to, or commentary upon, Maxwell's book. Other works, such as Mascart and Joubert's *Electricity and Magnetism*, have also been made use of. The two-fluid theory is assumed simply as a hypothesis, and is developed into its mathematical consequences. The authors are of opinion that these results, being stated in more general terms, may serve to suggest a sounder hypothesis, such, for instance, as Maxwell's displacement theory. The present volume is not confined to electrostatics, but contains chapters on voltaic and thermo-electric currents. In chap. xi. the physical properties of a field of polarised particles are considered at considerable length in connexion with Faraday's hypothesis of a composite dielectric, consisting of a number of conducting particles in absolutely non-conducting space. The theory, among other results, leads to an interesting relation between the specific inductive capacity of a dielectric and the relative volume of the conducting particles in the dielectric, which, again, is directly connected with the relative forces exercised upon a conductor and a dielectric body in an electric field. In chap. xii., on thermo-electric currents, the main points of the theory are neatly and didactically (if somewhat briefly) arranged. On p. 241 the authors attribute the discovery of the reversal of a thermo-current, when the mean temperature of the circuit passes the neutral value, to Seebeck. This is a slip; the discovery was made by Cumming. Undoubtedly this work supplies a want, and will be welcomed by many students who find a difficulty in reading Maxwell. We look forward to the second volume and to the authors' treatment of the theory of electro-magnetics.

SCIENCE NOTES.

British Zoophytes: an Introduction to the Hydroida, Actinozoa, and Polyzoa found in Great Britain, Ireland, and the Channel Islands, is the title of Mr. Arthur S. Pennington's manual, announced by Messrs. L. Reeve & Co., who will also publish immediately a work by the Rev. G. C. Green, entitled *Collections and Recollections of Natural History and Sport*, illustrated with numerous wood-engravings from sketches by the author.

MR. G. MASSEE will deliver a course of ten lectures on "Biology" at the South Place Institute, Finsbury, beginning on Tuesday next, October 20, at 8 p.m. Admission to the whole course may be obtained by working men and women on the payment of one shilling. The Sunday-afternoon lectures will be resumed on October 18.

THE last number of the *Mineralogical Magazine* contains, among other papers, several interesting communications on the recent discovery of Connellite. This is a native sulphato-chloride of lead, of deep-blue colour, hitherto exceedingly rare, but lately found at two localities in Cornwall—one in the Camborne district, the other in Marke Valley. At a time when the production of copper from the Cornish mines is gradually declining, any fresh discovery of minerals is of much interest. Mr. W. Semmons, whose knowledge of the copper minerals of Cornwall is singularly extensive, describes the conditions under which the new Connellite occurs; while the crystallographic

characters of the mineral are set forth by Mr. H. A. Miers, of the British Museum, and by Dr. Trechmann, of Hartlepool. The results of these observers confirm the determinations made some years ago on the old specimens by Prof. Maskelyne.

GEOGRAPHICAL NOTES.

IN addition to the parliamentary map already noticed in the ACADEMY, Mr. Edward Stanford has in preparation a Parliamentary County Atlas and Handbook of England and Wales, containing no less than eighty-nine maps. Twenty-three of these will deal with the physical geography, meteorology, and general statistics of the country; the others will show the parliamentary divisions of the counties and of all towns returning more than two members. The letter-press will supply lists of parishes, petty sessional divisions, and unions, population tables, and statistics of local administration.

MESSRS. GEORGE PHILIP & SON announce for immediate publication a new edition of their Atlas of the Counties of England, showing the new parliamentary divisions.

AT the meeting of the Swiss Alpenklub held at Bern, on October 8, the president, Herr Hans Körber, introduced the subject of the new way up the Jungfrau, which was discovered by five guides on the last "Bettag," September 20. Hitherto there have been only two routes—the old and the so-called "Dübweg." The latter was fully described by Dr. Dübi, of Bern, its pioneer, in the *Jahrbuch* of the club; but it fell into ill repute through the deaths of Bischof and two of his companions, when attempting to repeat Dr. Dübi's experiment. It is now claimed by Von Altmen that the third, or "new way," must become the regular route of the future. He reached the summit in seven hours from the Roththalhütte. The Bern section of the Alpenklub proposes to enlarge the Roththalhütte, and blast away some hindrances, so as to render the new way still more practicable.

THE current number of Petermann's *Mitteilungen* (31, Band ix.) opens with a short article on the centenary of the geographical publishing house of Justus Perthes, of Gotha. It was founded on September 11, 1785, by Justus Perthes, and was raised to its present position by Wilhelm Perthes, who was head of the firm from 1816 to 1853. The present representative bears the original name of Justus. The first edition of Stieler's *Hand Atlas* appeared so long ago as 1817, and has ever since maintained its reputation. Dr. Petermann, who died in 1878, commenced the *Mitteilungen* in 1855. To commemorate the centenary, a special map of Africa is to be published, on the scale of 1 to 4,000,000. The mode of publication is in five parts, each containing two sections of the map, at the price of three marks a part.

PHILOLOGY NOTES.

WE learn that Dr. E. Hübner, of Berlin, will set to work on a new edition, with extensive supplements, of the *Inscriptiones Hispaniae Latinae* (vol. ii. of the "Corpus"), as soon as he has finished his volume on Palaeography.

THE Rev. W. G. Lawes, who lately lived for seven years among the Motu tribe in New Guinea, has just put forth his grammar and vocabulary of the Motu language. This is the first attempt to classify and reduce to a written form this grammar and vocabulary. The Rev. G. Pratt writes a short introduction on the phonology of the language, and on the customs and superstitions of the Motu tribe. Any student or library wishing for a copy of the book should apply to the Rev. W. G. Lawes, New Guinea, *via* Cooktown, Queensland. The

four Gospels are also in print in the Motu language, and can be had at the Bible Society's House.

THE following lectures on philological subjects (other than Latin and Greek texts) are announced to be delivered at Cambridge during the Michaelmas term: Dr. Peile, a general course of philology, treating of law in language, word- and sentence-accent, form-association, &c., with special reference to the Greek, Latin, and Teutonic languages; Mr. Roberts, "Greek Dialects"; Prof. Skeat, "Beowulf," besides two other courses; Mr. Postgate, "Comparative Grammar of the Romance Languages"; Prof. Wright, "Comparative Grammar of Arabic, Hebrew, and Syriac"; Prof. Robertson Smith, "Mufassal"; Prof. Cowell, the Rig Veda, Kullûka's Commentary on Manu II., the Pali Jâtakas, the Shâhnâmah, and the Târikh-i Badâûni; Mr. Neil, "Sanskrit Grammar and Nala"; Mr. Bensley, "The Book of Ecclesiastes in the Syro-Hexaplaric Version"; and Dr. Schiller-Szinessy, Zohar, Maimonides, Pirke Aboth, Elementary Talmud, and Targum.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HEN, 118, Strand, near Waterloo-bridge.

A History of Money in Ancient Countries. By A. Del Mar. (Bell.)

It falls to the lot of many persons, from the schoolboy at examination time to the writer of leading articles, to be compelled against their inclination to discourse on subjects about which they know nothing. For such unfortunates we have nothing but pity. But there exists also a smaller class who discourse on subjects about which they know nothing, of their own free will, and with an air of authority. For them we must confess that our feelings are of a different character. Mr. Del Mar belongs to this class, and his book has afforded us several hours of hearty amusement.

On receiving the substantial and solid volume we were prepared to find what the theme demanded, an inquiry into the original sources of our information as to the currency of Ancient Greece, Rome, and the East. Ere long it began to dawn upon us that Mr. Del Mar knew neither Greek nor Latin, a somewhat unfortunate fact, as considerably more than half his pages are devoted to a diffuse commentary on the texts of those classical authors who speak of money. The suspicion grew upon us after meeting such abnormal forms as "Lex Papirius," "the political indicæ of the times," "Dionysius of Halicarnassensis," "the Emperors Hæraclius and Nicephore Phocæ," or "the battle of Platæ." Suspicion was converted into certainty when we discovered in Mr. Del Mar's list of authorities consulted "Herodotus, Bohn's edition," and "Pliny, Bohn's edition." We recommend this last phrase to schoolboys detected in the employment of "cribs." Who will have the heart to punish them if they plead that they have merely consulted "Mr. Bohn's edition" of the "Hecuba" or the "Pro Milone"?

As knowing nothing at first-hand about the classical authors, Mr. Del Mar has naturally no conception of the relative value of the authorities which he cites. Hence he is able to dismiss Herodotus with contempt, and to fall back on Athenæus as a better ground-

work for history. One whole paragraph is built up on the cock-and-bull story told by the latter,

"that such gold and silver metal as the Spartans happened to capture in war they deposited with the Arcadians for safe keeping; but the Arcadians entrusted with the treasure picked a quarrel with the Lacedæmonians with the view of being able to seize it legally as spoil of war."

Similarly, the whole chapter on Carthage is founded on a story told in one of the pseudo-Socratic dialogues, to the effect that the Carthaginians used as money a piece of unknown substance wrapped up and sealed in a small leather bag. Mr. Del Mar will have it, on this authority, that the whole currency of Carthage, down to the period of her Spanish conquests, was composed of these clumsy tokens. But it is stranger still to find him adding that

"cupidity usurped the place of reason when the Carthaginians abandoned the system which had served them so well, and adopted in its stead a coinage of those glittering, but delusive, metals whose pursuit was to lure them to national extinction."

We have heard the decay of the Punic empire ascribed to many causes before, but never to one so strange as its adoption of the practice of issuing a metallic coinage.

Not to dwell too long on Mr. Del Mar's account of Greek monetary matters, we may sum up his chapters by saying that they consist of clippings from second-rate "classical dictionaries," appended to doubtful stories from Pollux, Athenæus, or Plutarch. We have only space for two of his gems: one is the statement that coins were in use in Greece long before the age of Lycurgus, whose invention of "iron money" was intended to substitute a token currency for the ordinary, but pernicious, system used in other states. The second is the following definition of Ionia:

"Ionia was a Greek democratic republic, comprising, among its other possessions, the cities of Miletus, Myus, Priene, Ephesus, &c., situated on the islands of the same names."

But, after all, Mr. Del Mar is comparatively lucid when he treats of Hellenic times. He has never heard the much-versed word "stater," or realised that there were several standards, Attic, Æginetan, and so forth, in Greece, so he avoids many a pitfall into which a deeper enquiry must have led him. But when he comes to Rome our author undertakes to explain elaborately the genesis of the monetary standards of Italy, and here he is at his wildest. "*Dinara* is a name long used in India for a coin. From India it made its way to Persia and Arabia as the *dinar*, and to Rome as the *denarius*." Such is our first introduction to the subject of Roman numismatics, and from it the rest may be not unfairly gauged. Romulus, "leader of the Alba Longa, a powerful tribe of aborigines," conquered the Tuscan town of Pallantium, and took over the Etruscan system of money, consisting, "as eminent numismatists have opined," of wooden tallies, clay tablets, and stamped discs of leather. This system was broken down by the extensive coining of counterfeits by the subject Etruscan population in the reign of Numa, and after a period of commercial anarchy credit was restored by Servius Tullius, who coined the large bronze

pieces with the head of Janus and the prow, which are to this day not uncommon. This short account of Mr. Del Mar's two first Roman chapters will be enough to show any one who has the slightest acquaintance with ancient numismatics that our author is not only fifty years behind the level of modern research, but that he increases his darkness by clouds of his own raising. This being so, we were somewhat startled to find Mr. Del Mar suddenly looking down from the height of his superior knowledge to censure the numismatic writers of the present generation for their limited views and ignorance of their own subject-matter. They should remember that they are not merely "collectors of toys," but hold the key to the history of civilisation.

"This higher function has not yet been so fully recognised by them as the interests of historical research and progress seem to demand. They have stuck too closely to Budelius and the narrow views of a school whose foundation was laid in the gross materialism of the Dark Ages."

This may be so; but we venture to say that if Mr. Del Mar had deigned to read any five paragraphs of Mommsen's *Römische Münzwesen*, or any one of the scores of articles on Greek coins which have appeared in the *Numismatic Chronicle* since 1865, he would have found in them more solid information than is contained in the whole of the 350 pages of his book.

We have no space to go further into the errors of this extraordinary volume. The annexed samples of chapters, which we cannot dissect at length, must suffice to show their general character.

"Before the advent of the Portuguese to India neither gold nor silver was in common use in any part of that vast country as money, if we except the two centuries of the rule of the Greco-Bactrian kings." "In the second century B.C. the Roman republican denarius circulated at several times its metal value." "As the emission of copper sesterces went on in the reign of Augustus, it was inevitable that gold and silver money would rise to a premium and disappear from circulation, and this is what really happened. By the reign of Tiberius it is probable that neither gold nor silver were in use except for foreign commerce and the pay of the army." "The name or effigy of Caligula did not appear on his copper coinage." "The great panic of 1797 in London and the run on the Bank of England were due to the drain of gold to India."

As far as we can trace any purpose in this book, it is intended to strengthen the hands of the party in the United States who cling to a paper currency. But the travesty of history which forms its argument is so barefaced that we cannot imagine that it would deceive even the most ignorant of readers. C. OMAN.

THE TERRA-COTTAS OF NAUKRATIS.

(First Notice.)

THE first chapter in the history of Mr. Petrie's discovery ends with the close of the Naukratis exhibition at Oxford Mansion. All this treasure-trove, which for so many centuries has lain embedded in the rubbish mounds of Nebeireh; all these inscribed libation-vases and fragments of painted wares, so well described by Mr. Ernest Gardner in a recent number of the ACADEMY; all these bronzes, implements, trinkets, amulets, and Graeco-Egyptian gods; all these shattered relics of temples and public edifices, long since destroyed for building

material, or burned for lime, will now be distributed among various museums, and, scattered far and wide, will carry on the tradition of Naukratis to future generations. Never again will they be gathered together within the walls of one room. Never again will it be possible to compare them one with another, except in photographs or engravings. While, therefore, the collection as a whole is yet fresh in the public memory, it may be well to take some note of the small miscellaneous objects, chiefly in terra-cotta, which nearly covered one large table, and which—notwithstanding their profusion, their attractiveness, and their high archaeological interest—have hitherto received but slight mention.

These objects may be roughly classed as follows: (1.) Statuettes, fragments of statuettes, and small bas-relief subjects, in terra-cotta, alabaster, marble, and limestone. (2.) Vases in the form of statuettes (terra-cotta). (3.) Detached heads, masks, heads of animals and grotesques (terra-cotta). (4.) Moulds, cake-stamps, toys, lamps, models, &c. (terra-cotta).

Beginning with those found at the lowest level, and ending with those nearest the surface, the above antiquities were exhibited in strict order of stratification—stratification, according to the well-defined periods of the Naukratian mounds, representing not only historical sequence, but even, within certain limits, chronological position. Following this order, I will now endeavour very briefly to indicate some of the most noteworthy among these minor objects.

Archaic Art.—The earliest examples from Naukratis belong to the rudest stage of plastic effort; *vide*, a terra-cotta head with tapering neck, designed apparently to drop into a hole on the shoulders of a statuette. Neither ears, mouth, hair, nor headdress are indicated; some rough resemblance to a human face having been obtained by scooping out the clay, so leaving the brow and nose prominent. (*Cf.* an archaic Cypriote terra-cotta from Larnaca, figured by Heuzey, showing a precisely similar face produced by the same means. See *Les Figurines de Terre Cuite du Musée du Louvre*, fig. 1, pl. 9.)

Torso of a small female figure pressing both hands to her breasts (terra-cotta). This may possibly be a local reproduction of the popular Babylonian Venus, of which Cypriote versions have been found in large numbers, and which is especially dwelt upon by M. Heuzey as an instance of what he designates as "*l'action en retour de l'archaïsme Grec*" (*cf.* *Figurines de Terre Cuite*, pls. 2, 9, and 19). See also an ivory statuette of Phoenician work in the Louvre, engraved after a drawing by St. Elme Gautier in MM. Perrot and Chipiez's *Histoire de l'Art dans l'Antiquité*, vol. iii., p. 409). The traditional attitude is of course the same, but the details of this Phoenician example—as the modelling of the long straight fingers and turned-back thumbs—curiously resemble those of the Naukratis fragment. Of the actual introduction of this type into the Naukratian colony we have, curiously enough, a record in Athenæus, who tells of a certain Greek trader of Naukratis named Herostratus who, in the course of one of his voyages, touched at the island of Cyprus, made a pilgrimage to Paphos, and thence brought home with him a small image of the Paphian Aphrodite, about as high as a man's hand. This Paphian Aphrodite, which was none other than the Cyprian version of the Phoenician, Babylonian, and Chaldaean Venus aforesaid, he dedicated as a miracle-working image in the temple of Aphrodite at Naukratis. Athenæus ascribes the voyage of Herostratus to a period corresponding with 688 to 685 B.C. (i.e., the XXIIIrd Olympiad); but this date, as M. Heuzey points out, is earlier than the foundation of Naukratis, and is pro-

bably a clerical error for the LIIIrd Olympiad (568-565 B.C.), which would coincide with the reign of Psammetichus I., and accord with the epigraphic testimony of the inscribed libation vessels discovered by Mr. Petrie.

A female head—limestone; upper part of a male statuette—alabaster. These two examples, together with three or four small alabaster heads of the same type, are so distinctly Cypriote in style and execution that they must be regarded, I think, as importations. The female head measures about two and a half inches from chin to crown. The modelling is large, the expression serene and noble; the corners of the eyes and mouth being very slightly inclined upwards, and the hair conventionally represented as parted down the middle of the head and bound by a fillet. This is a fine example of the best archaic period in Cypriote art. The male figure is of delicate execution, and originally measured about nine inches in height. The features are regular, placid, and of a soft, semi-Semitic cast. The face is beardless. The head is covered by a small round helmet, very slightly conical in form, with a knob on the top and two small volute-shaped (or possibly asp-shaped) ornaments just above the ears. The hair falls behind in a long square mass of rigid curls, to a little above the point of the shoulder-blade; the arms are straight to the sides, and are each encircled by an armlet fashioned like a snake. This elegant little fragment betrays both Egyptian and Greek influences. The attitude is evidently that of the so-called "hieratic" pose; the long straight curls are Ionian; and the helmet, modified from the more ancient Cypriote shape, is not unlike the casques of the Sardinian mercenaries as depicted in the bas-reliefs of Medinet-Haboo and the frescoes of Abou-Simbel.

Beardless head wearing the Egyptian "kluft" (terra-cotta). Though a rough and feeble piece of modelling, this little head is of interest, not only because it represents the national headdress of the Egyptians among whom the Greek settlers lived and traded, but because it most closely and curiously resembles a small terra-cotta head of about the same size and colour discovered at Tyre by M. Renan, and figured on pl. 6 of Heuzey's *Figurines de Terre Cuite*. In both examples—namely, that of Naukratis and that of Tyre—the features are soft, Asiatic, and insignificant, and the "kluft" cumbrous and ill-defined.

AMELIA B. EDWARDS.

THE ANTIQUITIES OF THE ISLE OF MAN.

AT the request of the Lieutenant-Governor, Prof. Boyd Dawkins paid a visit to the Isle of Man during the past summer, and has drawn up the following report upon the antiquities still remaining in the island and the best means of preserving them. A bill has already been drafted for accomplishing some of the objects referred to; and it is hoped that the others will likewise be attained through the co-operation of private persons:

"The ancient kingdom of Mann has long been known to contain large and varied series of remains which are worthy of being preserved and recorded, not merely for the sake of their great local interest, but on account also of the light which they throw on early Christian art, and on the complicated and little known relation of the Northmen to the Celtic population of the British Isles. This may, in my opinion, be done at a very small expense, and to the great and lasting advantage of the Manx people, and of the students of the ancient history of North-Western Europe.

"The principal objects to be aimed at are—(a) the existing remains; (b) the record of those which now exist, and of those which either have dis-

appeared, or are now disappearing, by the action of the weather, by the progress of cultivation, and by wanton mischief; (c) and lastly, the record of the old Manx place-names.

"The runic crosses which are exposed to the weather are more or less rapidly being destroyed, and should, as far as can be, be removed from unsuitable places into the parish churches, and pieced together where it is necessary. If some steps be not taken to protect them from the action of the weather, and from wanton mischief, an important portion of the materials for working out the ancient history of the Isle of Mann will be destroyed; one at Jurby, for example, has been converted into a gatepost, and one at Braddan is used as a stile, others have been carried out of the island by visitors, others have been used as building materials in the modern churches. One disappeared as late as the building of Bride Church, within the last ten or twelve years. They should not be removed from the parish churches, church yards, and village greens, into one central museum, because they form a part of the history of each parish. Those which are in private hands and cannot be restored to their proper churches, should be collected together in a museum, and preserved in the island. It may be noted that these crosses throw a flood of light on the early Christianity in the island, and form part of a group of monuments widely scattered over north-western Europe.

"There is a large and important group of remains in the island, which in the main stand apart from written history, but which reveal the unwritten history of the island in very remote times. They consist of habitations, camps, places of assembly, and tombs. They lie scattered over the surface of the country, generally in relation to the streams and the coast, and in no relation to the existing roads. They are for the most part unrecorded, and, in some cases, incorrectly represented in the ordnance maps. Hitherto they have been protected by the current superstitions; but these are rapidly vanishing away, leaving them without protection. They are at present being destroyed needlessly, and in some cases merely for the sake of destroying them. The alignments, for instance, in the wood behind the new church at Braddan, have recently been injured by some of the upright stones having been thrown down, and thus an interesting national Manx monument has been seriously damaged.

"Some of the prehistoric and non-historic remains in the island should be carefully preserved from destruction; such, for example, as the Braddan alignments. This might be done in the island, as it has already been done in England, Scotland, and Ireland, by the selection of the most important of them by a competent authority, and by their periodic inspection under some such Act of the Manx Legislature as 'The Ancient Monuments' Act' of 1882. The island in which the prehistoric remains are more numerous than in any other equal area of the British Isles is the only portion left unprotected.

"It is very desirable that no time be lost in accurately recording everything that can be gathered concerning the antiquities of the island, and more especially those which have hitherto escaped notice, and which are rapidly being swept away; such, for example, as: Hut circles and other habitations; ancient camps and ramparts; stone circles, standing stones; burial places, tumuli, cairns, cists.

"The more prominent antiquities, such as the Ecclesiastical buildings and the runic crosses, should also be looked to, although the need for a record in their case is not so pressing. Isolated finds, too, of implements and weapons should also be noted and collected in a museum.

"The localities of all these things should be accurately marked on the twenty-five inch ordnance map. As an illustration of the kind of work which may be done, the result of a survey of one of the slopes of Snaefell is appended to this memorandum. None of the remains there represented are to be found on the twenty-five inch ordnance maps. A survey of this kind carried out throughout the island would show the ancient centres of population, and reveal a good deal of what may be termed the prehistoric history of the Manx people. Such a survey might be carried out by the voluntary effort of those competent to undertake it, at the trifling cost of the maps, and of the small sums of

money paid to shepherds, &c., for discovering localities and collecting information generally. The maps should be deposited in the Government office, or in the museum.

"The record of the old Manx names for fields, bits of fields, rivers, &c., which has been begun by the Isle of Man Natural History and Antiquarian Society, should be carried on without delay, because the memory of these things is fast dying away. With the death of every old Manx inhabitant some local knowledge of the island is lost to the world. The Ordnance maps give no information as to the names, although the old fields are both numbered and marked. To obtain this information the twenty-five inch maps should be distributed throughout the island, and the information collected in each parish by voluntary effort. The resultant maps should be placed among the Government records, and would be valuable not only from the historical, but also from the legal, point of view. The cost of doing this would be little more than the cost of the maps.

"In close connection with the place-names is the folklore, which is rapidly disappearing. It is well worthy of being collected, before it disappears as completely as it has disappeared from Wales.

"The publication of the record of the prehistoric and non-historic antiquities (which need not be very costly) would be very creditable to the Manx Government, which by so doing would be the first in Europe to follow the admirable example of the United States. The Manx Society, which has already done so much for Manx history, and the contributors to *The Manx Note Book*, a young and valuable publication, will doubtless carry on their work on the historic antiquities and the documents. If this scheme be carried out, the whole of the history of an island, which is of singular and fascinating interest, will be covered from the earliest times, and the Manx people will have in their hands a more complete record of their own country than that of any other country in Europe.

NOTES ON ART AND ARCHAEOLOGY.

THE forthcoming winter exhibition at the Grosvenor Gallery will consist of a collection of the works of Sir J. E. Millais. The total number of pictures exhibited will be about 140; and they have all been selected by the painter himself. The exhibition will probably be opened at evening, illuminated by the electric light.

BOUSSOD, VALADON, & Co., the successors of Goupil, intend to hold an exhibition, in the gallery in New Bond Street, of the works of Mr. Carl Haag, of the Royal Water-colour Society, to be opened in November. The Queen has promised to lend seven large pictures—four from Osborne and three from Buckingham Palace; and it is hoped that the Prince of Wales will lend his also. As there are many pictures by Mr. Haag of whose whereabouts the painter is himself ignorant, any information on the subject will be welcomed by Mr. D. C. Thomson, who is forming the collection.

THE eighth annual exhibition of the Scottish Society of Painters in Water-colours will be opened in Glasgow on Saturday next, October 24. For the first time the exhibition will not be confined to members and associates, but will be free to all painters in water-colour; and the whole of the galleries of the Glasgow Institute of the Fine Arts have been taken for the purpose.

THE German newspapers report considerable discoveries of Roman remains at Eining, in Lower Bavaria. The masonry of several buildings is partially preserved, and there have been finds of arms (including a pilum), rings and gems, surgical instruments, and the like. The coins (many rare ones) form a perfect series from Nero to Valentinian II. The local museum bids fair to become as good as those at Mainz or Bonn or Regensburg.

THE interesting extracts from the *Memoirs* of Tourgueneff, which, under the title of "Assez," have been appearing for some time in *L'Art*, will be brought to a close in the next number. An etching by W. Rohr, after a picture of "Cardplayers," by Adrian Brauer, at Munich, appears in the current number, which, besides the continuation of Oscar Berggruen's study of the work of Rubens in Austria, contains a paper on the Fornarina, by Léon Hugonet, and another on Cauvet, a decorative artist of the eighteenth century.

In the *Gazette des Beaux Arts* M. Eugène Müntz concludes his articles on the early sketches of Raphael, summing up strongly in favour of attributing to him the drawings in the Venice Sketch-book, and also the sketches for Pinturicchio's frescoes in the library of the Cathedral at Siena. The Duc de Rivoli contributes a first paper on the rare edition of "Meditations on the Passion," based on the work of St. Bonaventura, which was published at Venice by Matheo da Parma and Bernardino Bonali about 1491. Good facsimiles of the fine woodcuts are given, as well as others from other books of the same period which seem to be the work of the same artist. Another of the "amateurs," M^{me}. de Chamillart, is the subject of a paper by M. E. Quentin-Bauchart; M. Eugène Dutuit's grand catalogue of Rembrandt, of another by M. Louis Gonze; and other articles on the Albert Goupil collection (*L'Art Oriental*), the Nuremberg Exhibition, the Antwerp Exhibition, Tacca's bust of John of Bologna at the Louvre, and the facsimiles of the drawings of Albrecht Dürer at the museum at Berlin, are contributed by MM. Henri Lavoix, Alfred Darcel, Louis Gonze, Louis Courajod, and Charles Ephrussi respectively.

WE have received a paper by Mr. Henri Hymans, the well-known Belgian art-critic, reprinted from the *Bulletin* of the Académie d'Archéologie de Belgique, in which he claims Jacques Blondeau, the engraver of the seventeenth century, as a native of Antwerp. Blondeau was not a great engraver, and his subjects are not of much interest, consisting principally of portraits of Italian cardinals, and pictures by Pietro da Cortona, C. Ferri, and other inferior artists, but it is just that such honour as is due to the country of his birth should be rightly placed. Moreover, the paper is interesting as showing how easily the nationality of an artist who expatriates himself may be forgotten. All the biographies give his birthplace as Langres in France, notwithstanding that he describes himself as *Antverpianus* on some of his engravings. Blondeau seems to have passed the greater part of his life in Italy, and his prints were published at Rome and Florence.

Erratum.—In Mr. Nicholson's letter on a "Greek Inscription from Egypt," in the ACADEMY of last week, for *praefectus praetoris*, read "*praefectus praetorio*."

MUSIC.

MR. PRATT'S CONCERT AT THE CRYSTAL PALACE.

THE first of the usual series of Crystal Palace concerts commences only to-day; but last Saturday there was a "special grand" concert of compositions by the American composer, Mr. S. G. Pratt—an overture, a symphony, selections from an opera, and an elegy. Here was novelty in abundance; but as there was no standard classical work in the programme to compensate anyone venturing from London to Sydenham on a cold damp day in case the American music should prove unpalatable, there was only a small audience. We do not believe that novelties frighten away the public,

if by experience or by report something good may be expected; a new symphony by Brahms, or the production of some newly-discovered work by Schubert or Berlioz, would assuredly fill the Sydenham concert hall.

The programme commenced with a Centennial Anniversary Overture; but, in spite of its solid strains of the Old Hundredth Psalm, its Alpha and Omega of the piece, and its audible and inaudible combinations with a martial theme, this produced but little effect. It was written for a special occasion, when the intentions of the composer to typify the religious qualities and martial spirit of the late General Grant were possibly better understood and appreciated.

After this came Mr. Pratt's second symphony in A (op. 33), bearing the strange superscription "The Prodigal Son." The first movement represents the younger son journeying into a far country and wasting his substance with riotous living. The description of the youth given in the programme-book might be applied to the composer himself. "He starts out in life," says the analyst, "full of independence, self-confidence, and audacity." That is exactly what Mr. Pratt does: he has musical substance, but wastes it with riotous writing. He lacks training: he is full of ideas—sometimes very good ones—yet cannot expound them clearly or develop them logically. It is, indeed, a pity to see so much natural ability thrown, as it were, away; but Mr. Pratt is young, and, though lost at present in the luxuriance of his imagination, may yet be found. In the adagio, the best written movement of the symphony, the second theme is really charming. Here the programme is to a certain extent better capable of musical treatment than that of the preceding allegro. The youth, "ruminating in misery and shivering in rags," dreams of home and his mother's voice. In the finale we have the return of the prodigal. It contains elaborate workmanship, which testifies to the industry of the composer; but the effect produced is by no means in proportion to the labour bestowed. As with the music, so is it with the orchestration. There is no method; there is plenty of colouring, but the colours are not well mixed. The symphony was conducted by Mr. Manns, and the performance showed how carefully and patiently he must have rehearsed with the band, for the score is full of fidgety and uncomfortable passages for the performers. The selections from the lyric opera "Zenobia" were given under the composer's direction. The vocalists were Miss Griswold, Miss Lena Little, and Messrs. Grove and Orlando Harlow. A Miss Hastreiter made her *début* at this concert. She has studied in Italy, and is, we believe, on her way to America. She has a fine voice, powerful in tone and pleasing in quality. She sang a showy song from Gomez' "Il Guarany," and well deserved the enthusiastic reception awarded to her. Later in the programme she was announced to sing a song of Mr. Pratt's, entitled "Auf Wiedersehen."

J. S. SHEDLOCK.

MUSIC NOTE.

THE executive council of the Inventions Exhibition have at last sanctioned the preparation of a catalogue of the musical loan collection, in case a sufficient number of subscribers at the price of one guinea per copy be obtained. The catalogue will be illustrated, and promises to be more worthy of this unique collection than the meagre list of objects previously published. Dr. Stainer is to be the editor; and introductions to the different subjects will be written by Mr. A. J. Hipkins, Dr. Stone, and other specialists.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186 Strand.

Copies of the ACADEMY can also be obtained
every Saturday morning in EDINBURGH of
Mr. MENZIES; in DUBLIN of Messrs. W. H.
SMITH AND SONS; in MANCHESTER of Mr.
J. HEYWOOD. Ten days after date of publi-
cation, in NEW YORK, of Messrs. G. P.
PUTNAM'S SONS.

This day, 8vo, cloth, with Fifty-five Illustrations, 7s.

HANDBOOK of TECHNICAL GAS

ANALYSIS.
Containing Concise Instructions for carrying out Gas-Analytical Methods
of Proved Utility.

By CLEMENS WINKLER, Ph.D., &c.

Translated, with Additions, by GEORGE LUNGE, Ph.D., &c.,
Author of "Distillation of Coal Tar," &c., &c.

London: JOHN VAN VOORST, 1, Paternoster-row.

NEW EDITION, REVISED AND ENLARGED.

Royal 8vo, 244 pp., cloth, 10s. 6d.

DAY'S TREATISE ON HARMONY.

Revised throughout, with an Appendix, by Sir G. A. MACFARREN.
London: HARRISON & SONS, 59, Pall-mall, S.W.

Crown 8vo, cloth boards, price 2s., post free.

THE CONFLICT of OLIGARCHY and DEMOCRACY. By J. ALLANSON PICTON, M.A., M.P.

CONTENTS: The Origin and Growth of the English Oligarchy.—Causes and Hindrances of Reform.—The Relation of Political Reform to Social Progress.—The Land Monopoly.—The Distribution of Wealth.—Democratic Morals.

"The book deserves the widest possible circulation. It may be read with advantage alike by the timid Conservative and by the eager Radical."—*Weekly Times*.

Third Edition, crown 8vo, cloth, price 1s. 6d., post free.

LESSONS from the RISE and FALL of the ENGLISH COMMONWEALTH. By J. ALLANSON PICTON, M.A., M.P.

CONTENTS: Introductory.—Treason and Loyalty.—The Limits of Moral Force.—The Limits of Physical Force.—The Sources of Popular Enthusiasm.—"Republicanism: Form and Substance."

The Echo says:—"There is no writer now living who knows the Commonwealth period so well, or who is so far qualified to draw lessons from it for our own times. His little book is full of thought and noble teaching. It may be commended as a work of solid value and great political usefulness."

PEOPLE'S EDITION.—Price 6d., with PORTRAIT
(Special terms for quantities.)

JOSEPH MAZZINI: a Memoir by E. A. V., with two Essays by MAZZINI: "THOUGHTS on DEMOCRACY" and "THE DUTIES of MAN."

"We earnestly commend it, especially to young readers, and trust it may have the large circulation it deserves. The life of this good man and noble patriot is stimulating and instructive, and his essays worthy of earnest consideration."—*Nonconformist and Independent*.

LONDON: ALEXANDER & SHEPHEARD,
21, CASTLE STREET, HOLBORN; and all Booksellers.

CLARENDON PRESS
NEW BOOKS.

Just ready, demy 8vo, cloth, 18s.

THE LANGUAGES of MELANESIA. By R. H. CODRINGTON, D.D., of the Melanesian Mission, Fellow of Wadham College, Oxford.

Just ready, fcap. 8vo, cloth, 2s.

SAINTE-BEUVE.—CAUSERIES du LUNDI. Selections. Edited and Arranged by G. SAINTSBURY, M.A., Author of "A Short History of French Literature."

Just ready, fcap. 8vo, cloth, 3s.

TERENCE.—ANDRIA. Edited, with Introduction and Notes, by C. E. FREEMAN, M.A., and A. SLOMAN, M.A., Masters in Westminster School, Editors of "Plautus Trinummus."

And at all Libraries, Bookstalls, Booksellers, &c.

F. V. WHITE & CO'S
LIST.

The Popular Novels at all Libraries.

IN HIS OWN HAND.

3 vols.
By Mrs. G. LINNEUS BANKS,
Author of "God's Providence House," "The Manchester Man,"
"Forbidden to Marry," &c.

IN a GRASS COUNTRY: a Story

of Love and Sport. 3 vols. By Mrs. LOVETT CAMERON, Author of "Deceivers Ever," "A North Country Maid," "A Dead Past," &c.

"There is a grand deal of vigour in this novel, both of plot and of character portraits."—*Academy*.

"Mrs. Lovett Cameron is one of the best story-tellers of the day. The tone of her books is invariably wholesome, and her pages are so full of life and movement that not one of them is willingly missed. She has the rare faculty of making her readers rejoice or mourn, as the occasion demands, with the fictitious joys and woes of her personages. This is eminently the case in her new novel of Love and Sport. The picture of the far-away nook on the Devonshire coast, which heads the first chapter of her book, is a specimen of the author's delicate touch in word-painting. . . . Eve Latimer is a charming creation of the novelist's fancy. Her brightness, which has known no cloud until love for 'Dick' Gaskell steals into her heart, and the busy, rattling life she leads in the midst of her large subjects, form a sunny picture that is specially taking. Graphic, humorous, and pathetic by turns, Mrs. Cameron has told the tale of 'Little Tom's' death in so touching a fashion that few will be able to read without emotion her account of the dying boy's last moments. The attention is irresistibly drawn towards the group formed by Eve Latimer and her brothers, but the author's gift of delineation of character is more visible in her sketch of Dick Gaskell, well meaning but 'unstable as water,' and in the strongly marked traits of the portrait of Lord Harlowe. . . . Mrs. Cameron's capital pictures of the hunting-field, as seen 'in the jolly shires of our native land,' add much to the merit of her clever and exciting novel."—*Morning Post*.

IN a LONDON SUBURB. 3 vols.

By W. HARTLEY.
"There are flashes of genuine fun, which make us laugh almost in spite of ourselves."—*John Bull*.

"Showing an intimate knowledge of the petty miseries of suburban life, as well as familiarity with the world of London. 'In a London Suburb' is a really clever novel. The author's characters are strikingly lifelike. No better specimen of feminine spite can be imagined than that contained in the waspish repartees of Miss Biffan, which strike her friends' weak points with unerring accuracy. She and the widow, Mrs. Cowdy, are sketches full of mirth-provoking humour. . . . Quite in keeping with the taste of the day, which inclines to photographic fidelity of detail, the 'intimate modernism' of this story is in itself a recommendation, especially when it does not transgress the bounds of good taste."—*Morning Post*.

"There is excuse for many a hearty laugh contained within the covers of Mr. Hartley's book, which we can thoroughly recommend to everyone as one of the most finished pieces of humour that has been produced during the last few years."—*Whitchurch Review*.

HEARTS or DIAMONDS? 2 vols.

By IZA DUFFUS HARDY, Author of "The Love that He Passed By," "Not Easily Jealous," "Love, Honour, and Obedience," &c.

"Miss Hardy's workmanship is perfect. . . . It is in the Californian portion of the story that she shows the author's most winning and captivating work. There are some love scenes, the grace and tenderness and truthfulness of which we have never seen surpassed. . . . In the wonderful skill with which the writer differentiates, she manifests a penetrative subtlety of insight which rises to genius. . . . She rises to a great opportunity, and her touch has such mastery that no one who reads the chapter of the Tragedy, and those which succeed it, is likely soon to forget them. . . . The novel is one which, in itself, suffices to brighten the dull season in the publishing world; for it has freshness of conception, strong grasp of character, triumphant handling of strong or delicate situation, and unflinching fidelity of literary workmanship."—*Academy*.

THE HEIR PRESUMPTIVE.

3 vols. By FLORENCE MARRYAT, Author of "My Sister the Actress," "Facing the Footlights," "The Heart of Jane Warner," &c.

"The story is earnest and vigorous throughout, with distinctly limned characters, and bright, sometimes sparkling dialogue."—*Daily Telegraph*.

THE ILL-TEMPERED COUSIN.

3 vols. By Mrs. FRANCES ELLIOT, Author of "The Red Cardinal," "The Diary of an Idle Woman in Spain," &c.

A RICH MAN'S RELATIVES.

3 vols. By R. CLELAND, Author of "Inchbracken," &c.

IN the OLD PALAZZO. 3 vols.

By GERTRUDE FORD.

At all Booksellers and Bookstalls.

"SELECT" NOVELS.—1 vol., cloth, 3s. 6d. each.

A DEAD PAST. By Mrs. Lovett Cameron.

KEITH'S WIFE. By Lady Violet Greville, Author of "Zoe: a Girl of Genius," &c.

KATE VALLIANT. By Annie Thomas (Mrs. FENDER CUDLIFF).

"POPULAR" NOVELS.—Picture boards, 2s. each.

ONLY a VILLAGE MAIDEN. By Lady

CONSTANCE HOWARD, Author of "Sweetheart and Wife," "Mollie Darling," &c.

LOVE, HONOUR, and OBEY. By Iza

DUFFUS HARDY, Author of "Not Easily Jealous," &c.

LITERATURE.

Milton and Vondel: a Curiosity of Literature.
By George Edmundson. (Trübner.)

THIS curious and learned little volume is an amusing example of a kind of critical literature which is likely to become more common as the study of the past becomes more and more minutely subdivided. A person of scholarly mind, trained perhaps in other sciences than that of aesthetics, becomes by some accident acutely interested in a single point of literature, one shining nodule broken off the rocky side of some great poet's personality. He broods on this, he applies his glass to it and magnifies it, he puts it in his crucible and melts it, and at last he produces a monograph in which it is treated as he has seen it under the microscope, exaggerated and foreshortened, with all its commonplaces described as novel phenomena, and all its generic conditions neatly recorded as if they were specific. What are we to do with such a study, so conscientious, so thorough, so ingeniously supported, and yet so fallacious from its want of proportion and relation? I confess, for my own part, that this excess of eager ambition outvaults itself, and that I, who have hitherto so specially maintained that Milton was cognizant of the *Lucifer* of Vondel, lay down Mr. Edmundson's book with a doubt whether Milton ever heard of Vondel at all.

Mr. Edmundson proves too much. He has got astride of his hobby-horse, and he spurs and lashes it till it gets wings and carries him into Cloud-Cuckoo-Land. He is completely possessed and bewitched by Vondel, and Milton sinks to a mere plagiary of the universal Dutchman. Mr. Edmundson, as is the habit of this kind of critic, isolates his two figures from their age and from the rest of literary history. Facing one another like statues in the desert, the two poets stand there for him alone in the desolate seventeenth century; and all in Milton that is in any degree like Vondel must thereupon have been copied from Vondel. He carries this so far, that even what is *non hobby-horsical per se*, as Sterne would say, is treated hobby-horsically by this critic in the intensity of his conviction; and all the finest arts of casuistry are summoned to support the argument. This enthusiasm is contagious, is bewildering; but is it founded upon fact?

Mr. Edmundson is very severe on all who have preceded him in this examination. He cannot away with Mr. Masson, who rejects Vondel altogether; but he is even more indignant with the late Mr. Mark Pattison and with myself for acknowledging him in a lukewarm fashion. It may be well, perhaps, to recall to the reader what has been done up to the present time. No examination of the

claims vaguely put forth for Vondel's influence on Milton was made until I took it in hand some nine years ago. I printed an essay—not "based on second-hand and unsifted evidence," if Mr. Edmundson will forgive me for saying so—but which he is more just in describing as "a good instance in point" (it remains, by the way, until now the only instance in English) of the very mode of considering the relation of Vondel to Milton which Mr. Edmundson contemptuously repudiates. Literary controversy nowadays is carried on, as a rule, so good-humouredly that I was at a loss, at first, to understand why I, and poor Mr. Mark Pattison for agreeing with me, were treated with so much petulance. As I read on I understood: my offence is that I have been riding the same hobby-horse as Mr. Edmundson, but in a much more humdrum style, and with another kind of saddle. All that I contested in my modest essay on the subject was that the Dutch poem of *Lucifer* in its general style and treatment was too much like some parts of *Paradise Lost* for the resemblance to be quite accidental; and I went into the matter tentatively, translating certain passages of Vondel's poem as I went along, but anxious to keep on the sane and safe side, and particularly solicitous not by any reduction of Vondel to our now familiar Miltonic verse or diction to suggest a likeness where it did not exist. This fidelity to my Dutch original is just what Mr. Edmundson objects to. He should be sorry, he admits, to say that my versions travesty Vondel; but he calls them burlesques, which is much the same thing. In making this criticism, he shows me his hand, and gives me an opportunity of saying a few words on the general question at issue.

The originality of Milton in his two religious epics consists to the highest degree in an originality of style. England, which has produced so many splendid poets, has given birth to none so supreme as Milton in the workmanship and artifice of poetic style—none who, out of the material of language, has raised for himself so majestic and various a building, so harmonious in all its parts, so peculiar to its inventor in the order of its architecture. A poet may be almost in the very highest rank, and yet prefer to live, like a soldier-crab, in the house of someone else, or, like a caddis-worm, in a home built up of fragments. Vergil did the first of these, and Keats the second. But Milton's palace is not only totally unlike any that preceded it, it has been found impossible ever since to live as he lived in any English house that is not like his. The originality of Milton's style, then, being granted as his main peculiarity, the conventional character of much of the material he worked into it must none the less be admitted. His epics were compendiums of what had been said and thought before him, certain images and fancies having become a kind of canon with the religious world, and most of all with the Protestant world. Various commonplaces, in illustration of Scripture, had by the middle of the seventeenth century become general to devout minds, commonplaces in which something of the sensuous colour of the Renaissance was fused into the uninspired side of Biblical belief. The early Flemish and Tuscan artists had so often painted the archangels with

Tyrian mail and azure wings, had so often spangled the train of cherubim with rainbows and starry eyes, that all this rich and florid imagery hung, to the popular mind, like a familiar embroidery round the bare history of Scripture. All this was common property, and not individual to any one religious poet, to Du Bartas or Giles Fletcher, to Vondel or Quarles. Milton came at last, and gathered it all up into his stately compendium of Protestant imagination.

This being admitted, it must be seen to be particularly desirable for anyone who comes forward with a claim on Milton for images and ideas from any single predecessor to show that what he charges Milton with stealing could not have been brought to him legitimately from elsewhere. When the comparison is made with an earlier English poet there can be no chance of deception, if we know enough of English poetry to distinguish between common property and an individual possession. But when the claimant is a writer using a foreign and unfamiliar tongue, it is particularly important, so it seems to me, to make the translation repeat the effect and style of the original. This was what I held up before myself in attempting to give English readers passages of Vondel to compare with passages of Milton. I reflected that Vondel wrote in rhymed alexandrines, in a style of great volubility and irregularity, now gorgeous, now homely, dragging the language of common life into his ethereal disquisitions, and, in fact, writing very much as one of the rococo religious poets who preceded Milton in England would have written if they had possessed Vondel's force and volume. In attempting to translate him, for purposes of comparison, I felt obliged to retain his form and, as well as I could, his manner.

Mr. Edmundson has not thought it necessary to do this, and he has stripped Vondel of two main characteristics of his form—the rhymes and the long six-foot line. To make his parallelisms as parallel as he could he has translated them into blank verse, as Miltonic as possible, and into language that resembles that of *Paradise Lost* as closely as a general adherence to the meaning will admit. In order to show how fallacious is the evidence prepared upon this system, it is necessary to give at least one example. That I may not be unjust to Mr. Edmundson, I will not choose for my purpose any of the comparative selections which he gives tentatively, but will argue with him on grounds the most favourable to himself, that is to say, on a passage which he himself emphasises as containing proof positive of Vondel's influence on Milton. He gives the passage from Vondel thus:

"The lake where Lucifer lay weltering,
Sunk to his neck, gapes wide with yawning
mouth
Set open. Here a host might freely pass
With horse and chariots in loose array,
O'er stony ground at first, and then through
brake."

He says that the language of this passage gives us "almost conclusive proof that Milton must have borrowed it directly" in the citation from *Paradise Lost* which I am about to give. "It is impossible," says Mr. Edmundson, "that such striking coincidences could be the result of chance, or even of un-

conscious reminiscence." Here are Milton's words :

"The gates wide open stood,
That, with extended wings, a bann'd host,
Under spread ensigns marching, might pass
through,
With horse and chariots ranked in loose array;
So wide they stood and like a furnace-mouth."

These be parallelisms with a vengeance; and the English reader, without referring to the Dutch, will be forced to agree with Mr. Edmundson that it is almost incredible that such identity of language can be accidental. But I glance to the Dutch original, in the *Joannes Boetgeant*, and I find, in the first place, that the breathless Vondel is in one of his most careless and most prosaic moods. Secondly, I find that what he says, besides being said with more Miltonic dignity by Mr. Edmundson, is said quite otherwise. The four lines of the Dutch run thus :

"The pool, where Lucifer up to his neck lay
smothered,
Gapes wide, and yawns its mouth wide open to
the ears;
One drives in easily, with horses and a coach,
First over flinty stones, then through a hedged
approach."

This (save that instead of "ears" I ought to have found some rhyme to "smothered") gives not only the exact and limited meaning, even to the careless repetition of the word "wide" in the second line, but also, I think, the impression which the verses would give to a Dutch ear. Let us see what Mr. Edmundson has done. He has introduced the words "here a host might freely pass," which have no equivalent whatever in Vondel's poem. He has mistranslated the prosaic words *paarden en karos*, which merely mean "a coach and pair," as "horse and chariots"; and *ruimschoots*, which is nothing in the world but "easily," "allowing plenty of room," by the phrase "in loose array"—borrowed directly from the English poem which he is presently asking us to suppose had borrowed this same phrase from the Dutch. Where is the parallelism gone to when we have to deduct from it the form, the statement and the simile as well? Milton's sublime idea of the vast portals of hell, which would receive a marching army without impeding its loose array, is stolen, forsooth, from the notion of an entrance which would positively admit a coach and pair of horses! This is to ride a hobby-horse to one's own destruction.

The reader will have observed that the passage spoken of above is extracted from Vondel's epic of *Joannes Boetgeant*, which was not written until 1662. Mr. Edmundson has soon dismissed the *Lucifer*, and expends the rest of his ingenuity in trying to prove that not the drama only, which was published in 1654, but the epic also, were laid under contribution by Milton. From this he passes to prove that the English poet borrowed not less copiously from Vondel's didactic poem, the *Beespiegelingen van God en Godsdiens*, published in 1661, from the tragedy of *Adam in Ballingschap* in 1664, and from the *Samson* of 1660. Of the curious similarity of Vondel and Milton in habit of mind a great deal may be justly said, and much credit is due to Mr. Edmundson for the pains he has taken in showing it; but to seek to persuade us that Milton, as late as 1664, in his helpless blind condition, could still be

borrowing from obscure Dutch poetry passages to insert in the *Paradise Lost*, which he had already completed—this is preposterous indeed. Some few of my readers may possibly recollect that in lecturing on *Paradise Lost* from my Clark chair last spring I gave an analysis of, and some translations from, *Adam in Ballingschap*, not for a moment pretending that they were reproduced by Milton, or known to him, but to prove how closely allied the genius of Milton was to the lower, but still very fertile, original and splendid genius of Vondel. It is useless to dispute whether it is, or is not, possible to conceive that Milton in 1664 could be in a position to copy newly published writings by Vondel. I am personally convinced that he was not. Most of the parallelisms which Mr. Edmundson points out, when stripped of the Miltonic language of his blank verse, are nothing but what may be found in other religious poets of that age. For instance, the florid description which he quotes on p. 97 is equalled, down to the very sky-coloured plumes and golden garments, by a passage in Sylvester's *Bethulia's Rescue*. His remarks on the *Samson* show that Mr. Edmundson has never examined Quarles's *History of Samson*, 1631. Would it not be interesting for him to consider whether Vondel did not really steal from Quarles and Sylvester?

There is one little omission in Mr. Edmundson's book. Among all the works of Vondel which Milton obviously copied in writing *Paradise Lost*, there is one which has not attracted the attention of his latest critic. Why has Mr. Edmundson not brought forward some of those striking passages in the tragedy of *Noah* which Milton must have had in mind in writing—or rather, as we now ought to say, in compiling—his epic? Mr. Edmundson, whose knowledge of his author is manifestly very wide, does not quote so much as the name of this fine, and particularly Miltonic, poem. The reason is not far to seek. The *Noah* was not published till late in 1667. Even a hobby-horse must be pulled up somewhere.

EDMUND GOSSE.

Life and Times of General Sir Edward Cecil, Viscount Wimbledon. By Charles Dalton. (Sampson Low.)

To tell the story of Lord Wimbledon's life in two portly octavo volumes is a task which no writer could accomplish satisfactorily. Even to tell it on a more limited scale in such a way as to interest the reader is hardly practicable. The subject of a biography, if the author's work is to be attractive, must be the centre of the world in which he moves. Unfortunately for Mr. Dalton, Edward Cecil was never the centre of anything. He was a good, honest soldier of considerable military abilities and undoubted courage; but, except on the unlucky Cadiz expedition, he never commanded in chief, and there is no reason to suppose that he would have raised his fame if an army had been placed under his orders. He showed skill and bravery in a subordinate post in the Dutch war, and he showed the same qualities in a higher degree at the head of the English contingent at the siege of Juliers. But though Mr. Dalton conclusively proves that others were chiefly to blame for the disasters of the Cadiz voyage, he fails to

prove that Cecil possessed that masterfulness of temper, that power of accomplishing much, even with unpromising materials, which is one of the distinguishing marks of a great commander. The consequence is that much even of the biographical part of the book is dreary reading. Details of campaigns in the Netherlands at the end of the sixteenth and the beginning of the seventeenth century hang very loosely on Cecil, and are out of place anywhere except in a history of the Netherlands or in a biography of Maurice, whose skill they illustrate.

It is the greater pity that this should be so, because Mr. Dalton—so far as his study of his immediate subject goes—leaves a most favourable impression. He is a diligent and truth-loving investigator—his account of the Cadiz voyage is by far the best that has been written—and he is free from the *lues biographica*, to say which is to give him no small praise. Unluckily, he has attempted not merely to write the life, but also the times, of Sir Edward Cecil. Whether Mr. Dalton might be a historian if he gave time enough to acquire the necessary knowledge, it would be difficult to affirm or deny. That his knowledge is inadequate is beyond question. He blames James I. because, when he died,

"The people were suffering from the large subsidies they had been called on to furnish during the late king's reign. Trade was crippled and unfairly handicapped by the granting of monopolies. The decrees of the Court of the Star Chamber had rendered justice a thing of the past."

In the fifteen years previous to the king's death there had been two subsidies, or £140,000, voted in 1621, and three subsidies and six fifteenths, or about £300,000, voted in 1624. The last sum was deliberately voted by the House of Commons without much regard for James's feelings. Even if this be added in, if Mr. Dalton thinks £440,000 in fifteen years, or about £29,000 a year, to be a crushing burden, he will probably stand alone in his opinion. As to the monopolies, most of them had been abolished in 1621, and Mr. Dalton's expression would be exaggerated even if they had all existed in 1625. His language about the Star Chamber merely shows that he has never studied the history of that court. If there is evidence that it was unpopular in 1625, it is evidence only known to Mr. Dalton himself. Other statements, such as the one which affirms that Wimbledon sat at the council board with Lucius Cary, or that the first Marquis of Newcastle was a good cavalry officer, are equally wrong.

Insufficient as is Mr. Dalton's knowledge of English history, his knowledge of German history is even at a lower level. At vol. i., p. 286, he gives an account of the origin of the Thirty Years' War which is full of blunders. He appears to be ignorant of the German language, as we find in his text such names of places as Schenkenshaus, and Gemersheim, and Gulich, while he quotes Schiller in the French language, though it is true that the title of Solt's *Religionskrieg* is properly given. Mr. Dalton thinks that it was possible that Matthias, or anybody else, could have been Emperor of Germany; and he has much to say, on the authority of Mr. Naylor, on the election of Ferdinand to the

Bohemian throne, an election which all readers of Gindely—the great master of Bohemian lore—know never to have taken place. In one place the *Majestätsbrief* of the King of Bohemia is called an Imperial letter. On the intricate constitutional questions involved in the Bohemian quarrel, Mr. Dalton is completely at sea. On the German quarrel instruction is not to be had from a writer who appears never to have heard of Christian of Anhalt and his revolutionary schemes.

These are hard things to say, but they are only said because Mr. Dalton is, in his own sphere, deserving of high praise. His account of the early history of Felton, for instance, shows him in the light of an investigator who has succeeded where so many have failed. Let him choose next time a subject befitting a biography; and let him either leave history alone altogether, or give some ten or fifteen years to the study of the period about which he wishes to write, and he may do not merely good work, but work which will be appreciated by others than students.

SAMUEL R. GARDINER.

Memoirs of Adam Black. Edited by Alex. Nicolson. (Edinburgh: A. & C. Black.)

MR. ADAM BLACK, who for nearly ten years—between 1856 and 1855—represented Edinburgh in succession to Macaulay, and who founded the publishing firm which has made the *Encyclopædia Britannica* an international institution, deserved a good biography. He has obtained his deserts in the shape of this memoir, “edited” by Sheriff Nicolson, of Kirkcudbright, who is favourably known to the Scotch public by his occasional—far too occasional—and always graceful contributions to literature, both in prose and verse. Only two faults can be found with Mr. Nicolson’s part in the production of this book. He is too modest, not to say timid, both for his own sake and for Mr. Black’s. In his aesthetic dislike to the modern studies in the moral nude which are termed Lives, he seem to have kept back a number of those little domestic and other details which lighten up memoirs. Mr. Black was, by his own confession, singularly happy in his married life. Why should we not have a few more glimpses of that happiness? When an octogenarian and a member of Parliament, he visited the Alhambra music-hall, and “enjoyed the fun.” Clearly, therefore, he could not have been always on the treadmill of duty. Yet somehow Mr. Nicolson hardly ever allows us to see Mr. Black in his dressing-gown and slippers: he appears always in the sober frock coat of the inveterate church-goer, politician, and man of business. Besides, Mr. Nicolson has been a most unconscionable time in publishing his book. It is eleven years since Mr. Black died, and the bloom is off the rye of the local struggles to which he gave his contribution of “serious faith”—and it would now seem also of “inward glee.” The Young Scotland that hung its head in shame and impotent rage when Macaulay was driven from Parliament, that looked upon Adam Black as somehow Macaulay’s avenging angel in gaiters, that rioted at least twice a week in the scenes of Aristophanic comedy, which Alexander Russel, *ultimus Romanorum*, constructed out of Edinburgh cabals and

jealousies, has become bald and cold, and painfully aware of the Black Care that sits behind, and of the Shadow that waits in the waste in front. Really, Mr. Nicolson ought not to spring a funeral sermon upon us ten years after date. Not more than five should elapse between a death and the erection of a biographical cairn.

Mr. Adam Black lived a long, happy, successful, essentially uneventful, and, in spite of some appearances to the contrary, a peaceful life. The son of a worthy and prosperous master builder, he was born in Edinburgh 101 years ago. Educated at the High School, and to some extent at the University of that city, he was trained to the book-selling business partly there and partly in London. When quite a young man he started in business in his native place, with a small stock of capital, but with hope, health, good habits, and sturdy political and religious principles, which, however, inherited caution prevented him from asserting with unnecessary or untimely audacity. So he prospered, slowly, perhaps, but steadily and surely. From the first, young Black was a stout reformer, and a defender of the rights of Dissenters, although in his old age he seems to have become more tolerant—his opponents said “less robust”—both in his political and his ecclesiastical opinions. As a matter almost of course, he entered the Town Council of Edinburgh, and filled in succession the offices of Treasurer—showing himself an uncompromising economist—and Lord Provost. Finally, when Macaulay retired from the representation of Edinburgh in 1856, Mr. Black, as his leading supporter, was returned in his place. He sat in Parliament till 1865, when, like Macaulay, nearly twenty years before, he was driven from his seat. Unrepiningly, Mr. Black—who evidently found the hard life of the House of Commons, well-managed, conducive to longevity—fell back upon travel, business, and such work as so eminent an Edinburgh citizen could not fail to be asked to do. Among other things that he did, Mr. Black was instrumental in appointing the late Principal of Edinburgh University, Sir Alexander Grant, and the present Professor of Moral Philosophy, Dr. Calderwood. Finally he passed peacefully away, in 1874, at the great age of ninety. A strong sagacious man, who, amid personal difficulties and public disappointments, never lost his head or his happiness, and who translated Wordsworth’s “Ode to Duty” into “douce” Scotch life and practice—he worked hard at everything, even, as Mr. Nicolson shows, at family worship. Mr. Black is, after the lapse of these years, well worth studying as a self-made man and as a Scotch type.

Such portion of this memoir as has come direct from the pen of Mr. Nicolson is written with great taste and sound judgment; and here and there his narrative is relieved by passages of sub-cynical, Thackerayan, but not unkindly reflectiveness. But Mr. Nicolson, in great measure, effaces himself; and, instead of his own narrative, which he describes as “second hand,” he gives prominence to certain autobiographical reminiscences, which Mr. Black wrote for the perusal of his family when a member of Parliament and well on in years. These are simply written,

and help us to understand the character of Mr. Black. He had himself, it is evident, a shrewd insight into the character of others. Thus, he was introduced to Pope Pius IX. in Rome, and writes of him that under different circumstances he would have made a good Scotch laird or “moderate” Scotch minister. Naturally enough, the earliest reminiscences, though they have nothing in them of the character of “revelations,” are the most interesting. When Adam Black was drudging as a lad in London, he had little time or money to devote to amusements, and he lived for a year in a room eight feet long, and not quite so broad, for which he paid half-a-crown a week. Yet he visited Drury Lane on December 6, 1804, during the opera season, when George III. and his family were present. “The King,” he says, “is very much like his picture, a jolly, honest-looking man, dressed in regimentals. The Queen is a very decent-looking woman, dresses plain, and she is a great snuffer. The Princesses wore richer dresses than the Queen.” Here is a curious glimpse of the hero of Camperdown:

“Adam had a lively recollection of what he witnessed (in Edinburgh) in 1792, on the king’s birthday, 4th June, one of the holidays always marked by a demonstration of popular feeling. He was playing in George Square, when he saw a squad of masons coming up from Buccleuch Place, carrying an effigy of Dundas (then ‘uncrowned king’ of Scotland) on the top of a pole. They turned into the south side of the square, and stopped opposite a house seven or eight doors to the west, where Dundas and a party had been dining. They set fire to the effigy, and commenced breaking the windows when Dundas’s company opened the door, seemingly prepared to give battle. Capt. Duncan, afterwards admiral and Lord Camperdown, with all the heroism of a true British tar, came out flourishing a golf club round his head, charged the mob, and broke the line for a little distance. But the enemy began to close in upon him, and his retreat was in danger of being cut off, when he was struck by one of the legs of the effigy thrown at him. He wisely made his escape into the house; but, before shutting the door, he turned round and showed his contempt for his assailants by clapping his hand on his stern! All this time I was sitting on the top of a lamp-pillar enjoying the fun.”

WILLIAM WALLACE.

“The Badminton Library.”—*Hunting*. By the Duke of Beaufort and Mowbray Morris. (Longmans.)

“HANG a dog in a crab-tree and he will not care for verjuice,” says Richard Blome in *The Gentleman’s Recreation*, 1683. After reading much of what has passed in the last few years for hunting literature, it was with considerable diffidence that we opened this book. It would probably consist, we thought, of descriptions of runs from Fenny Oak to No Man’s Meadow, so by Blind Head to &c., &c., varied with hunting slang and an apotheosis of those who were in at the death, Lord A, Mr. B, young C, and the rest of them. Dozens of such accounts may be found week after week in the sporting papers, and some people apparently never tire of them. With a sigh of relief, we hasten to inform readers that there could be no greater mistake than these surmises.

This book is the most practical on hunting as a science that has been written since Peter Beckford's *Thoughts* appeared more than a century ago. Setting before it as its aim an encyclopædic treatment of every subject connected with the horse, the hound, the expenses of the sport, its best encomium is that it has very fairly succeeded in its purpose. Certainly it is not for want of experience that its authors have in any case fallen short of the standard they set before themselves.

Fifty has the volume appeared, just as hounds and horses have come into condition, and meets are about to be advertised once more. Dedicated to the Prince of Wales, beautifully illustrated by Sturgess and Charlton (who might be court painters to Diana), and with the hunting-horn on its cover, it may safely be left to blow its own trumpet. A glance over the table of contents shows how carefully its writers have endeavoured to put forth a manual for huntsmen rather than a highly-coloured description of the charms of their sport. Riding, indeed, cannot be taught in the armchair any more than the fly-fishing tiro can learn to catch trout from the pages of Stewart or Walton; but, for the sake of kindling enthusiasm, for directing the beginner along the main road of his pursuit and suggesting the best sort of implements to employ, every sensible man will resort to the most trustworthy manuals which experience has produced. There has been a lack of such handbooks hitherto in the art of hunting. Running the eye over the useful bibliography of hunting and hunters which the authors have thoughtfully appended to this volume, the reader will find many sketches, stories and verses relating to the sport; but it seems as if human nature were too exhausted after a day's run with the hounds to stoop to chronicle the numerous requisites of skill, care, and experience which must be taken into account before a pack of fox-hounds can be sent to the meet with any probability of furnishing a good day's sport. Here, however, the embryo M.F.H. may learn the many responsibilities of his office. The duties of whippers-in, earth-stoppers, kennel attendants and the like are minutely set forth. Expenses are estimated; the most modern management of hounds enunciated; plans of the most approved stables and kennels added; many hints and wrinkles garnered together which will largely conduce to the comfort of hounds, horses, and riders. There is an excellent chapter on the history and literature of hunting which would keep awake even the most languid of fox-hunters; while anecdotes of the great names of the craft, interspersed with reminiscences of the historical runs round Melton and the Cotswold uplands, lighten the more serious pages of the book. Hunting in the shires—restricted by hunting men to Leicestershire, Rutland and North Hants—and also in the provinces, is duly described. What will interest many busy men even more is the chapter on hunting from London as a centre. Lists of meets and expenses, titles of the best maps and the like render this section of the book very useful to those who, with the late Anthony Trollope, almost require an occasional day's hard exercise to qualify their arduous literary occupations.

The chapter on hunting hares with beagles, followed on foot, will appeal to many country-

lovers who are not hunting-men proper. The suggestion that one man should invariably follow the pack on horseback, who

"should have strict injunctions not to ride to the hounds, but to hover on the outskirts of the line of chase, always leaning to that side which is nearest to the forbidden country; and his duties should be, in the first place, to head the hare away from that direction, and if he fail in that, to stop the hounds before they enter such country,"

if calculated to save much bad blood, rather detracts from the simplicity dear to those who have followed beagles afoot after the old fashion. Even otter-hunting is not forgotten. To our minds otter-hunting has no scientific side. Its entire absence of conventionality and the miscellaneous breeding of the hounds, together with the air of a promenade with ladies and gentlemen out for a walk by a pleasant river on a fine morning, which pervades the sport (and very often means all the sport), remove it from all scientific conditions. The Rev. E. W. Davies, however (for we recognise his style), writes a capital chapter on this "going a-gipsying" after an otter. Then there are lists of names of hounds for those who do not possess dictionaries or are blessed with little imagination, and a useful table in an appendix of the chief packs in the United Kingdom, with their masters, days of hunting, and the like. We cannot fancy a book which would prove more useful to all hunting men.

Here and there are signs of the volume being written in a hurry. The index is very imperfect; the names of Sir R. Sutton and of the Yarborough Hounds—surely both of them noteworthy in the annals of hunting—are not to be found in it, though they appear in the text. "Accidentation" of ground is a word unknown in the language. These and the like blemishes might easily be removed in a second issue. As we close the book which celebrates this popular sport, the words of a hunting song nearly a century and a half old float across the mind which will bear repetition, even if Mrs. Chaworth Musters has transcribed them among her "Hunting Songs":

"Here's a health to all hunters, and long be their lives,
May they never be crossed by their sweethearts
or wives;
May they rule their own passions, and, ever at rest,
As the most happy men be they also the best."

M. G. WATKINS.

THE NEW VOLUME OF MOMMSEN'S HISTORY OF ROME.

Römische Geschichte. Von Theodor Mommsen. Fünfter Band: "Die Provinzen von Caesar bis Diocletian." (Berlin: Weidmann.)

(Second Notice.)

CHAPS. VII., and viii., and x., on European Greece, on Asia Minor, and Syria, deserve to be read together, because of the view they give of the diffused Greek cultivation of that day, and not less because of their insight into the differences of character which made themselves felt through the common Hellenism. We have splendid pictures drawn of the city of Antioch, and of Syrian deserts under successful cultivation.

"The brilliant side of Syrian affairs is the economic side. In manufactures and trade

Syria takes (with Egypt) the first place among the provinces, and even in some aspects rises superior to Egypt. Agriculture thrives under the abiding peace, and under the intelligent system of irrigation, to a degree which shames modern civilisation. . . . Even of districts which are now mere deserts, and where it seems impossible for men to live, a great part was formerly a field of labour for industrious arms. East of Hemesa (Homs), where now you see no green leaf, no drop of water, the remains of very numerous oil-presses are found. . . . Travellers from Hemesa to Palmyra now carry water with them on camels; yet the road runs all the way through the remains of villas and towns."

"What Syria could do, is best seen in its chief town, Antioch, the town which was (till the founding of Constantinople) the chief city of the eastern provinces, inferior in population only to Rome and Alexandria, and perhaps to Seleucia. . . . Of course, it took an active part in the trade and manufactures of its province; yet it was the residence rather of consumers than of producers. In all ancient history there was no city in which the enjoyment of life was so much the main point, its duties so purely secondary. . . . Antioch was superior to any other city of the empire in the magnificence of its public buildings and grounds. Its chief street, of vast length, with a broad way bordered on both sides by colonnades, running straight through the town along the river, was imitated in many an ancient city, but could not be matched even in imperial Rome. Water was supplied to every house in Antioch; under the colonnades you could walk all through the town sheltered at any season of the year from rain or sun; at night the streets were lighted—a fact which is reported of no other ancient town."

But in the luxury of Antioch the muses were not at home. For earnest devotion to literature, for real taste in art or letters, just as for quiet orderliness and domestic life, we must look away from Syria to Asia Minor, or, better still, to Greece itself. Uneasy recollection of past glories, ambition and the want of a career, tormented many a European Greek; and yet the good old-fashioned, quiet ways lingered not only in Rhodes, as the compliments of Dion Chrysostom would lead us to suppose, but in many other parts of Greece. Dr. Mommsen's sympathies have not always been with the most amiable characters; and it is pleasant to find him speaking well of Plutarch, and able to regard him as in some degree a type:

"Like most able Greeks, he did not care to be a Professor or to enter the service of the State. He remained faithful to his home, enjoyed domestic life in its best sense with his excellent wife, his children, and his friends, and contented himself with the moderate means which he inherited, and with the offices and honours which Boeotia could give him. In him comes out the difference of the Hellene and the Helleniser. Such a Greek life as his was possible neither in Smyrna nor in Alexandria; it belonged to the soil, like the honey of Hymettus. There are many men of greater talent and deeper nature; but we shall hardly find another writer who could submit so cheerfully to the force of circumstances, and stamp so plainly on his writings the marks of his own peace of mind."

What with prosperity and luxury, literature and sobriety of life, the picture of the inner life of the Greek provinces is no unpleasant one; but the neighbourhood of the Parthian and the Persian sorely disturbs it. Dr.

Mommsen has carefully traced the wars with these nations, and set before us in a masterly way the Asiatic policy of Rome. We have never seen more clearly put the alternative policies of annexing Armenia, of letting Parthia absorb it, or of doing neither the one nor the other, but keeping it as a client-state with a Parthian prince under Roman suzerainty; the insolent rashness with which Chosroes overthrew an understanding which was working well; and Hadrian's decision to resign Trajan's conquests as costing, if kept, too much in men and money. But the accounts of the movements in the field are hardly so lucid as we could wish. Both in regard to the campaigns of Corbulo in Armenia, and those of G. Cestius Gallus, Vespasian, and Titus against the Jews, a non-military reader would probably get a better view of what was done, and the strategical reasons for it, in Schiller's *Nero*, though he would, of course, lose the advantage of seeing these campaigns told as members of a series.

In spite of this, chap. xi., on the Jews, is of deep interest. One is accustomed to find Roman institutions working well enough, and only giving way after centuries and among altered circumstances; but in Judaea no Roman can ever have imagined for a moment that things were going on well. There was a rooted incompatibility of temper and views. The Jews had an antipathy for Rome and for Hellenism which was reckless of life, and expected support from miracles. On the Roman side there was great tolerance and considerable flexibility of system; but yet the very excellence of the highly-developed government of the Romans did what such excellence always does with alien and fanatic peoples; it goaded the Jews, who did not want it or understand it, and it led to a certain irritation among the Romans at the sight of so perverse and obstinate a race. All the more creditable was it to the Romans that their tolerance stood this incessant wear, and even the strain of repeated risings. Dr. Mommsen thinks it probable (not more than probable) that the Temple was fired purposely by Titus as a lesson to the Jews and a sign of a new attitude in their masters; but much beyond this even irritated Romans did not go. "The government made war not against Judaism, but against the high priests and the Synagogue." The high priests disappeared after Titus's victory; but, by the beginning of the third century, the indulgence of Rome allowed "the stiff-necked people of God" to recover their high priests under the name of *ἐθνάρχης*. Even in Italy Claudius's suppression of the Jewish worship was the last measure of the kind. Out of Italy the privileges of the Jews (as exemption from military service) were usually spared, or at least speedily restored. But the Jews would not be pacified or conciliated. The marble railings which partitioned off the inner space of the Temple (one of which has recently been found, apparently bearing the axe-marks of Titus's soldiers) bore in Greek and Latin a prohibition to intruders: *Μήθ' εἰς ἀλλογενὴ εἰσπορεύεσθαι*; and defeat after defeat only made the people more stubborn in adherence to this principle.

I wish I had space to dwell on the surveys of Gaul and Spain. Much is to be learnt, too, from the chapter on North Africa, but it

is less taking in style. Lively as Dr. Mommsen can be, he has not the pen which gave such vividness to M. Renan's sketch of the Berbers; and the shifting divisions and pettier interests of Numidia and Mauretania do not allow of so broad and plain an outline as is possible for Gaul or Asia Minor. But still we can see that the empire repaired the wrongs inflicted by "the short-sightedness and narrowness, one might almost say the perversity and brutality," of the republic; and that the change from an order of things based on Phœnician or Carthaginian town institutions to an order based on Italian town institutions was begun by Caesar. "Latin Africa is Caesar's work just as much as Latin Gaul." As this change was wrought out, and as the predatory tribes were pushed backward by the force of arms or the contagion of civilisation, the province became one of the most prosperous. This can yet be seen from the splendid remains of baths, theatres, tombs, or triumphal arches; and the prosperity was all the more genuine because "the economic force of the country lay not in the villas of the nobles, as in Gaul, but in the middle-class of yeomen." The elaborate system of roads tells the same tale. But we are not sure of Dr. Mommsen's meaning when he remarks that "special advantage was taken of this opportunity [that of making the roads] in this province to show respect to the emperor." This may allude to the custom of placing the reigning emperor's name on milestones (see, e.g., the ACADEMY, Aug. 15, 1885), but it is far from clear. Dr. Mommsen now gives up the connexion between the names *Afer* and *Hebrew* which he suggested in his first volume.

Egypt, of course, stands apart from the rest of North Africa, locally cut off from it by the desert, widely distinct from it in the character of its civilisation, and separated from it by the special arrangements of Augustus. When civilisation did lay hold on Africa, it was Roman civilisation; but that which the Romans found in Egypt was partly native and partly Greek, and it never gave way before them. The native language was not extinct till the seventeenth century; the Greek (or Macedonian) institutions had to be taken over and worked by the Romans. Egypt stood divided into two groups; the two great Greek towns of Alexandria and Ptolemais faced the country with its thirty-six nomes. The two groups had very different footings, although, as Dr. Mommsen says, following Juvenal's *Barbara famoso non cedit turba Canopo*, "the peculiar uniformity of vice set up between them a mischievous likeness in evil." Each nome found its business-centre in a township, and its religious unity in the cult of its peculiar native deity, just as Alexandria and Ptolemais worshipped Alexander and the first Ptolemy. The nomes had no autonomy, and the Greek cities very little. Royal officials administered everything; there was none of the life of local politics. Thus the Romans found Egypt peculiarly helpless, and they had to go on governing with a like system of tutelage. But, furthermore, Augustus, in reorganising the world, did not feel at liberty to throw Egypt open to all Western influences. Men of the highest Roman rank must, for political reasons, be forbidden to enter the country.

Nor had the province, like others, an assembly. Self-centred as it was by nature, administered apart as it was from necessity, it is little wonder that Egypt remained unlike the rest of the Roman world. Yet, in spite of the care with which Egypt was watched, it is likely that she was a loser by the fall of the Macedonian dynasty.

"The industrious agricultural population kept up its numbers under the Empire; but for certain the burden of the taxes weighed heavier than under the government of the kings, little merciful though that was. Not only were the taxes heavier in themselves, but the proceeds went out of the country."

But for the commerce with India and Arabia the country must have been more rapidly impoverished. The Mediterranean commerce of Egypt makes less show, for, though we know it went on, and though we meet with guilds of Alexandrian merchants at Perinthos, and even at Tomi, yet Italians seem to have taken up much of the carrying trade for Egyptian wares.

Further than this we must not follow Dr. Mommsen's fascinating account. Nor could we always follow him with agreement. He has not yet quite given up his exasperating way of making a startling statement without giving authorities, or of putting down as known and certain a matter which is not certain. Sometimes, but by no means always, we have the opportunity of going fully over the ground elsewhere with Dr. Mommsen, and seeing what his case really is. The way in which he presents the movement of Vindex in Gaul, A.D. 68, in a cursory mention in his present work, may be found fully explained, and perhaps substantiated, in *Hermes* (January 1878). But, to take a smaller instance, one in which, if Dr. Mommsen has argued out the matter, I at least have not met with his discussion. In Spartianus's Life of Hadrian, c. vi., we read, *Cum rege Roxolanorum qui de imminutis stipendiis querebatur cognito negotio pacem composuit*; and Dr. Mommsen explains *stipendia* of buying-off the attacks of the Roxolani, as if there were no other explanation possible. But it is rather a humiliating explanation; and there is the other view, that the Roxolani complained of their military pay as allies or mercenaries of Rome against Dacia being diminished or withdrawn. There seems to be no other passage bearing on the matter; and it is not easy to see how it can ever be made certain, unless some singular good luck should bring to light a relevant inscription. The notion (p. 549) that Hadrian's government locked upon circumcision as a form of castration needs more proof than the footnote gives, if it is to be saved from a somewhat ludicrous air; and the assertion that the Numidian Berbers worshipped "the great Numidian king," Masinissa, and his family, though quite possible, requires to be better supported than by the authority of Cyprian, saying that the Mauri (who were not subjects of Masinissa) *reges suos colunt*.

But Dr. Mommsen far more often compels our assent and admiration. Thirty years have passed since his third volume traced out the last days of the Republic, and even now he has not picked up the thread quite where he dropped it. But that long interval has enabled a history of the empire to be written far more complete in one sense than could

have been produced a generation ago. No great discoveries have been made in the history proper; we have not brought to light the lost books of Tacitus or the private journal of Claudius or Domitian; but the details of public and private life, of administration, of religion, of society, of associations, have been recovered to an immense extent by the systematic study and combination of coins and inscriptions. Dr. Mommsen's own share in either one of these two departments of study would have been enough for the life's work of most men. Abundant use is made of such materials in this volume. The fortunes of Parthia or Armenia or the Bosporan kingdom are traced or illustrated by coins. It is not without meaning and importance that Roman villas stop short at Aldborough, that Mithraic caves have been found in Northumberland, that the tomb-inscriptions of Roman soldiers are scarce beyond Hadrian's Wall, and that none are yet known further north than the solitary instance at Ardoch. The old-fashioned history, which, after the manner of Tacitus or Suetonius, saw everything centre round the emperor of the moment, is out of fashion, and makes but little progress. Even the rehabilitation of imperial monsters has palled upon the world. But the other kind of historical study has grown fast, nor can we see any limits to its development. Many years must pass before the *Corpus Inscriptionum Latinarum* has yielded up all it has to teach. The *Corpus* of Greek inscriptions has yet to be brought up to the same level; and, when that shall have been done, perhaps the course of politics may have begun to throw open the buried treasures of Asia Minor. Of the interest attaching to the many orders of facts observable in such ways, Dr. Mommsen reaps, and deserves to reap, the full advantage. He seems to have thought but modestly of the interest of his new volume. "It is for the artist," he says, "not for the historian, to make out the features of Arminius; with renunciation was this book written, and with renunciation must it be read." But the interest will be found little inferior to the solid value. It is a book which no other living scholar could have written.

FRANKLIN T. RICHARDS.

NEW NOVELS.

- John Haile.* By the Author of "Sleepy Sketches." In 3 vols. (Sampson Low.)
- A Girton Girl.* By Mrs. Annie Edwardes. In 3 vols. (Bentley.)
- Nuttie's Father.* By Charlotte M. Yonge. In 2 vols. (Macmillan.)
- The Hunger-Pastor.* By William Raabe. Translated from the German by "Arnold." In 2 vols. (Chapman & Hall.)
- Less than Kin.* By J. E. Panton. (Ward & Downey.)
- The Pennant Family.* By Anne Beale. (Hodder & Stoughton.)
- A Singer's Story.* By the Author of "Flitters, Tatters, and the Counsellor." (Chapman & Hall.)
- Through a Refiner's Fire.* By Eleanor Holmes. (Griffith, Farran & Co.)
- To write the political and social novel is no

easy task, nor do the public much care for this hybrid kind of literature, even when ably written. When they take up a novel they want a novel, and prefer to go elsewhere for their politics and sociology. The author of *John Haile*, which is professedly "a story of successful failure," deals not so much with the politics of to-day as with the imaginary politics of thirty years hence. His horoscope of England's progress does not appear to me to be very successful. The subject is not new, and the prophetic works already published are sufficiently numerous to relieve us from a continuation of the series. I have not read the author's *Sleepy Sketches*, nor will I affirm that that title would be more appropriate to the present work; but it is certainly possible to find more exhilarating reading than the biological and political disquisitions in these volumes. It is a pity that the writer has cast his work in this mould, for there are many evidences of ability in *John Haile*, and assurances that he could tell a story well. Such plot as appears is somewhat bewildering, and there is a want of grip in handling the characters. When John Haile went up to Oxford there was chaos in religion, politics, and society, and England was waiting for some able leader to lead her out of her doubts and perplexities. "The nineteenth century had ruined the country; railroads had destroyed all true beauty, school-boards and trade all true respect." In religion, especially, there was a great revolution—a belief in the supernatural and the acceptance of unreasonable tenets having been declared by Bullen, Bishop of Bangor (in 1898), to be no longer necessary. This deliverance, and the complete acceptance of the evolution theory, caused great excitement. In one chapter the writer is very severe upon the Society journals, which became rather worse under the new dispensation than they are now. Upon a benighted nation, all at sixes and sevens, rose the beneficent sun of John Haile; but I must leave the reader to gauge the power and the effects of this luminary. In his next novel, the anonymous author, who is certainly not without talent, would do well to aim at more story and less preaching.

Mrs. Edwardes is one of the cleverest of living lady novelists. She has a piquancy of style and an originality of view which are very refreshing after the dreary inanities of many of her own sex. One can at any rate discover quickness of sympathy and power of discrimination in her books. The only fault I should have to find with them is an occasional exhibition of cynicism which seems to point to *blasé* views of life. What is the good of it all—she seems to ask—this love, this learning, this labour, this duty? This is unquestionably a false note for a woman to strike. But let me hasten to say that Mrs. Edwardes's *Girton Girl* is altogether a charming creature. She is only a Girton girl for a few moments towards the close of the story. In the outset she is bitten with the desire to emulate the more learned of the masculine sex, but Gaston Arbuthnot predicts of her that she will "prove herself a very woman after all." The steps by which this is brought about, with the not very smooth love discipline through which she passes, the reader may discover for himself, and he will be deeply

entertained thereby. Suffice it to say that in the end she finds her woman's sphere, and becomes the wife of Gaston's relative Geoffrey Arbuthnot. Besides Marjorie, the Girton girl, there are some other powerfully-drawn characters which will attract the reader's sympathy. The novel is throughout most enjoyable reading, and in parts distinctly brilliant.

Miss Yonge's new story, *Nuttie's Father*, is distinguished, as are all her works, for its high tone. It might be put into the hands of any child, and yet there is sufficient in it to interest children of a larger growth. Nuttie Egremont, the heroine, passes through troubled waters on account of the aberrations of her father, who is not one of the most favourable specimens of humanity. Both parent and child, however, learn something from their troubles; and the loss of his wife, followed by that of his only son, exercises a refining effect upon Captain Egremont. As we part from him, his last state is better than his first. He dies in comparative peace, and the discipline which the impulsive Nuttie has been called upon to endure elevates her character, and gives it strength and stability. There are some love incidents in the book, though not of a very exciting kind. One or two of the characters, in addition to those I have mentioned, are sketched with some force, and the story altogether is very readable. Judging from a phrase in the second volume, which speaks of someone "having seen *Patience* at the Princess's," Miss Yonge would appear to be but an infrequent visitor at the London theatres.

A series of fine character-studies will be found in *The Hunger-Pastor*. The author, the well-known German writer Raabe, has before shown a strong capacity for tracing the development of a soul, and this power is maintained in his delineation of Hans Unwirrh, the hunger-pastor. "Man is born with a hunger after the infinite," observes the writer, "but he experiences this force to a greater degree early in life." He accordingly traces graphically the career of Hans from the age of childhood,

"when the first notes of the world's great harp fall lightly on the listening ear; when one loves to roll in the grass or to lie still and listen to the wind whispering in the leaves, or to watch the clouds float through the air, and gaze at the distant hills; when one tries to find the spot where the rainbow touches the earth; when one understands the language of tree, grass and shrub; talks with God, with every bird that flies, every gay gnat, every bright beetle that crawls; in a word, when one is a Pantheist in the fullest acceptance of the word!"

Humour and pathos are close companions in Herr Raabe's pages, and both possibly lose something by translation, though this reproduction is excellent and spirited. Uncle Gruenebaum and Cousin Schlottbeck are worthy of Dickens, as Dickens would have drawn such characters had he been born a German; while Herr Raabe presents us with ideas and sentiments of a more elevated kind than are generally to be found in the productions of the English novelist.

There is considerable power in *Less than Kin*, and Mrs. Panton keeps up a certain mystery about a murder with much skill

right to the close of the volume. The extraordinary affection which Grace Allerton displays for John Mainprize—a passion which leads her to sacrifice herself completely on his behalf—is very rarely witnessed in real life, though the strange and devious courses of the human heart forbid us to say it is impossible. It would be a pity to reveal the plot of the book, but the reader will assuredly find his attention closely held by it.

The Pennant Family, by Miss Beale, deserves a word of cordial praise. It is well written, the plot is striking, and the narrative flows smoothly. The scene is laid on the Welsh coast, and there is many a weird incident connected with wrecking, &c. The story of the Earl of Craigavon, related here at length, is founded on fact, and may be read in the History of Glamorganshire under the heading "Dunraven Castle." But, besides this, the author traces the strange fortunes of a child that has been cast ashore from a wreck. She passes through many vicissitudes, and is at last found to be the daughter of Sir George Walpole. The whole story is thoroughly healthy and deeply interesting.

A Singer's Story is a shilling novel in paper covers. It is readable without being particularly striking. There is a good tone about it, however, and I decidedly prefer it to many of the "shilling dreadfuls" which have recently attained such great and discreditable popularity. The chief incidents in the present sketch, viz., the discovery of a wonderful voice in a governess, and the subsequent development of that voice until its owner became a ruling star in the musical firmament, may not be exactly new, but they are certainly treated in an entertaining manner.

Young ladies who flirt too much should read *Through a Refiner's Fire*, in which story they will perceive to what disastrous results their giddy propensities may lead them. Lizzie Fletcher had two lovers, Legeyt Purdon and Graham Leigh. The latter was the genuine article, and Lucy really loved him; but not knowing where to stop in her flirtations she was the cause of his fighting a duel and being banished from England for twenty years. It is true that she remained faithful to his memory, for she was a girl of sterling character at heart; but the wedding bells might have rung in her happiness and that of Leigh many years before they did had it not been for her own conduct. The narrative is fairly well told.

G. BARNETT SMITH.

GIFT BOOKS.

"Us": an Old-fashioned Story. By Mrs. Molesworth. With Illustrations by Walter Crane. (Macmillan.) Christmas after Christmas, for more seasons than we care to recollect, Mrs. Molesworth and Mr. Walter Crane have conspired to present us with a story-book for children, in a binding "that once might have been called 'red.'" First came the immortal *Carrots*, who has given the colour, if not the name, to the long series. Next to *Carrots* we are disposed to rank *Herr Baby*; and if some of the later volumes fell below the original standard, this is partly because the author either raised the age of her heroes and heroines, or placed them among unfamiliar surroundings. This year we are glad to find that Mrs. Moles-

worth has returned to an English nursery, while she has contrived to introduce a new charm by calling back to life the days when Pamela was not an impossible name. We must not attempt to tell her story for her. Suffice it to say that, while the web is the familiar one of childish simplicity, it is crossed by a woof of incident more exciting than usual. Though the time is distant, veracity is attained not only by the unchanging traits of human nature, but also by a skilful framework of tradition that connects the past with the present. Of the illustrations, the first and the last are the most pleasing.

In the two past years Mr. Gordon Browne has published with Messrs. Blackie & Son illustrated editions of *The Pilgrim's Progress* and *Robinson Crusoe*. This year he has chosen for his pencil *Gulliver's Travels*, perhaps the only other book that can vie with them in popularity. His conception of Gulliver himself fails to satisfy us. Even to the last he represents him rather as the "apprentice to Mr. James Bates" than as the ship's surgeon, weatherbeaten by many voyages. Nor do we think the full-page plates so successful as the smaller sketches. But, taking the book as a whole, we are disposed to rank it on an equality with its two predecessors. Mr. Gordon Browne's great merits lie in his power of delineating movement, of suggesting more than he actually draws, and of catching the humours of physiognomy and dress. Above all, he never scampers his work.

The Boy in the Bush: a Tale of Australian Life. By the late Richard Rowe. (Hodder & Stoughton.) As there is no intimation on the title-page that this story has appeared before, we presume it is one more of the large number of unpublished MSS. which the writer seems to have left behind him at his death. We are glad to find that the supply is not exhausted, for every boy who has read one of Richard Rowe's stories will be eager to read another; and he cannot read anything more wholesome. The author of *Episodes in an Obscure Life* died, we believe, in extreme poverty, and his name is comparatively unknown; but many a writer who has attained both fame and fortune has not possessed a tithe of his genius. This tale does not show him quite at his best; but, although Richard Rowe wrote much, he never, to our knowledge, wrote badly. The sketches of Australian life and scenery are singularly real and vivid; and if there is a little more of startling adventure than is consistent with probability, that is not a fault which young readers will severely condemn. There are encounters with bushrangers, a flood, a bush-fire, and struggles with black-fellows, in the course of which the boy-hero is taken captive. He is saved from death by an old gin (who supposes him to be the ghost of her dead son), and at last makes his escape. The volume is exceptionally attractive in type and illustrations, but the cover is frightful.

For Fortune and Glory. By Lewis Hough, with eight illustrations by Walter Paget. (Cassell.) An exciting story of the Soudan war. Minute descriptions are given of Hicks Pasha's disastrous campaign, of the fighting near Suakim, of the storming of the heights at Kirebkan and of the march across the desert and battle of Abu Klea. We read much of the bravery of "Tommy Atkins" and of the glory of war, but still more of the hardships endured by man and beast, and of the unavoidable cruelties perpetrated alike by English and Arabs. There is an intrigue about a lost will, which, however, serves principally to open and to wind up the story.

Hugh's Sacrifice. By Cecil Marryat Norris. (Griffith, Farran & Co.) This is a capital story for boys. It is a sermon on the text, "Be

sure your sin will find you out." Two boys disobey the rules of their school and an innocent boy suffers in their stead. He is high-minded, and does not like to bring into trouble his brother and the companion who led him astray. The bad boys some time afterwards meet with a terrible accident which well-nigh costs them their lives; from that moment they resolve to turn over a new leaf. There are some excellent illustrations by Mr. H. Furniss.

The Wooing of Aethra. By Moyr Smith. (Sampson Low.) This curious little book is an attempt at a historical tale, the leading character in which is Aegæus, King of Attica! The style of the performance is as eccentric as the selection of the subject; but the story is too slight to call for criticism. Probably the book was written for the sake of the "illustrations" by the author—about sixty tiny drawings (most of them not larger than a postage stamp), which really show a good deal of cleverness.

THERE is this year more story and less moralising than usual in the S. P. C. K. books. This tendency is very noticeable in *Tim Yardley's Year*, by F. S. Potter. It consists of four idylls, one for each of the seasons, well calculated to delight country boys, for whom it is written, and to inculcate moral courage. The author has evidently studied nature. He writes amusingly—"Nobody who has not seen a good deal of pigs could believe how contrary some of them can be, for there's difference among them as there is among Christians." *The Oliver Children*, by Mary Davison, will please little ones, and is a well-written tale. Social hypocrisies are denounced in *A Bright Farthing*, by S. M. Sitwell. Evidently the author does not believe that "the poor in a loomp is bad," for she makes the owner of a general shop shed tears when obliged to announce to a customer that she cannot give any credit. In *A Woman of Business*, by M. Bramston, there is a charming heroine, not oppressively good, but such, it may be hoped, as is often met among the middle classes, and whose example brightens more of the world than she thinks. The love story of the book is simple, not to say common-place, but is well worked out, and to the reader's delight all ends well as in an old-fashioned novel. Three more stories by the same writer, *Toads and Diamonds*, are pleasing specimens of what may be called the domestic love story. The temptation to destroy a will in one of them has often been a godsend to the story-teller. Miss H. A. Forde shows some of the many earnest endeavours being now made to rescue the poor outcasts of London in her *Dust Ho! and other Pictures from Troubled Lives*. *The Last Hope*, by Esmé Stuart, is a historical romance of the time of the French Revolution. No period was more fertile in heroic characters and unlooked-for events, and the author has with much skill interwoven them in her story of life-long constancy and love stronger than death. The Rev. A. N. Malan entitles seven short addresses on the Christian virtues *Searching for the Stone*. The title is not happy, but the discourses are earnest, and the book could be carried in the waistcoat pocket.

LEAVING the publications of the S.P.C.K., the Rev. G. Everard has linked together under the title *Your Sundays* (Nisbet), fifty-two short readings on sacred subjects. They seem well suited for mission work, and are especially intended for schoolboys. *The Wreck*, by Ethel (Griffith, Farran, & Co.), tells its story in the title. It is a tale of rescue from sins and sorrows, as well as from a shipwreck. *Follow my Leader*, by T. B. Reed (Cassell), is a romance of schoolboy life. A good many Winchester "notions" are adopted, and there is plenty of incident and action. The boys are too boyish for a public school, and talk too

much slang, greatly as schoolboys at present exceed in this respect. A healthy tone, however, pervades the book, and it cannot fail to delight lads; while its bulk, if it catches boys' fancy, will prove grateful to elders fond of a quiet life. *Meta in England* (Griffith, Farran, & Co.) is evidently a first book. The author, M. C. Sterndale, writes long sentences with direful confusion of pronouns. The story, too, is purposeless, and schoolgirls, for whom it seems written, can easily find more healthy literature. Theodore Wood in *Our Insect Enemies* (S. P. C. K.) presents us with chapters on insects which remind us of Kirby and Spence's Entomology. The juvenile reader obtains a tolerable conspectus from this book of many forms of winged life familiar to most country lads. Two books more distinctly of the religious type come from the S. P. C. K.; *The True Vine*, by the author of the "Schönberg Cotta Family," six excellent meditations; and a most useful book for the clergyman or district visitor, the late Canon Hawkins's *Sick-bed Services* compiled from the Holy Scriptures and the Book of Common Prayer. The print is large, and the services much to the point.

MESSRS. CASSELL have sent us twelve volumes of a new series of popular biographies they have begun to publish under the title of "The World's Workers." Most of them are confined to the life of a single man, such as General Gordon and Charles Dickens, with which the series open; but some contain two, and some as many as four lives. Each volume has a frontispiece, giving a portrait or portraits, as the case may be, reproduced from photographs by some mechanical method of woodcutting that is very effective. We would single out for special notice the volume on Dickens, which is written by his eldest daughter, and has a portrait from an unpublished photograph taken in 1861. The others seem to be more in the nature of compilations from published works. The series is excellently adapted for providing a choice of prizes at Sunday schools.

NOTES AND NEWS.

CAPTAIN BURTON writes to us that five volumes of the *Nights* are in the hands of the printers [American? Indian?], that the sixth will be lodged with them in a few days, and that the remaining four will be ready for the transcriber in three months.

PROF. KÖLBING, of Breslau, has been again in England, to copy the unique MS. of the prose version of the Early English romance of *Ipomydon*, which the Marquis of Bath has kindly sent to the British Museum for him. Prof. Kölbing will add this prose to the hitherto overlooked verse version, in 10,000 lines, of this romance in the Chetham Library, Manchester. As this latter version is corrupt in many places, and can hardly be understood without the help of its French original, Prof. Kölbing will add the French poem in a companion volume to the English one.

DR. FURNIVALL has written the articles on Mr. and Mrs. Browning for Cassell's "Dictionary of Men and Women of the Century," which Prof. Lloyd Sanders is editing, and also the article on Andrew Boorde, one of the raciest writers of Henry VIII.'s time, for the next volume of the Dictionary of National Biography.

THE *Official Baronage of England*, by Mr. James E. Doyle, which has long been expected, and is now announced for immediate publication by Messrs. Longmans, is conceived upon a somewhat novel plan. Its chief object is to assist the student of mediæval English history to obtain a distinct idea of the great nobles who formed the ruling class in early days.

While family history has not been neglected, special attention has been given to the offices held by peers, and to the personal characteristics of each individual. In order to keep the work within limits, barons, in the common acceptance of the word, have been excluded; but some description is given of every duke, marquis, earl, and viscount from the Conquest to the present time. The work will be published in three volumes quarto, with about 1,600 illustrations, consisting of portraits, shields of arms, badges, and autographs, the last mentioned going back in many cases to the fifteenth century.

Two lives of the great Duke of Marlborough are announced for immediate publication: the one, an elaborate estimate of his military genius, upon which Lord Wolsley is known to have been long engaged; the other, a volume by Mr. G. Saintsbury, in the series of "English Worthies."

BESIDES an important new poem already announced in the ACADEMY, and a novel published during the present week, Mr. Robert Buchanan has followed the fashion by writing *Reminiscences of his Literary Career*, which will appear before long in two volumes, with a portrait.

THE Life of Lord Westbury, by Mr. Richard Kennard, the appearance of which has been awaited with much curiosity, is now announced for publication this winter by Messrs. Bentley.

MR. HOWARD WILLIAMS has in the press a volume entitled *Letters and Letter-writers of the Eighteenth Century*, containing large selections from the letters of Swift and Pope, with illustrative notes. Each section will be preceded by a critical biography and a portrait. The volume will shortly be published by Messrs. Bell.

MR. R. E. FRANCILLON has worked in collaboration with Mr. William Senior ("Red Spinner") this year in the production of his annual Christmas story. Its title is *The Golden Flood*; a Cloud in Seven Colours. The Australian scenes in the story are the work of Mr. Senior.

King Solomon's Mines, Mr. Rider Haggard's new "treasure story" has met with so favourable a reception that already the first edition has been exhausted. A second edition, which is in course of preparation, will be ready during the course of next week.

THE first catalogue of English books printed in this country was issued by Andrew Maunsell in 1595. Copies are naturally very rare. Mr. John Lawler is engaged in bringing out a reprint of this catalogue, with notes and comments on the various books mentioned in it. It will be published by Mr. Elliot Stock.

WE understand that, in his work, *The Brontë Family, with Special Reference to Patrick Branwell Brontë*, to be issued almost immediately by Messrs. Hurst & Blackett, Mr. Francis A. Leyland will include a good deal of unknown poetry by the brother of Currer, Ellis, and Acton Bell, which he wrote privately, and mostly for the perusal of his friends, under a characteristic pseudonym.

THE next volume in the series of "Eminent Women" will be *Rachel*, by M. Kennard.

MR. T. FISHER UNWIN will publish this week, *The Three Reforms of Parliament: A History, 1830-85*, intended for the information of the new electorate in their past history and future responsibilities. The author is Mr. W. Heaton, of Leeds, the first editor of the *Free-man*.

A REVISED edition of Mr. Kinlock Cooke's popular *Handy Book for Electors*, a short and easy guide to what may be done, and must not

be done, under the Corrupt and Illegal Practices Prevention Act, 1883, will be issued immediately by Messrs. Griffith, Farran, & Co.

MAX O'RELL's last book *Les Chers Voisins!* was translated by the author's wife. The twentieth edition is announced in Paris.

WE learn that the book entitled *Why I am a Liberal*, containing contributions by the leading members of the Liberal party, will be published by Messrs. Cassell & Co. on Monday next.

WE are glad to hear that Mr. Bertram Dobell intends to continue his series of facsimile reprints of original editions of Shelley, which was begun with *Alastor*. *Hellas* is now almost ready.

Don Gesualdo is the title of a short story by Ouida which is offered to the newspaper press by Messrs. Tillotson & Son, of Bolton.

MR. T. FISHER UNWIN announces a new edition of Mr. Mackenzie Bell's monograph on Charles Whitehead, with illustrative extracts. Also, new editions of the same author's *Verses of Varied Life* and *Old Year Leaves*.

TO the next number of the *Antiquary* Mr. Round will contribute a paper on "Municipal Offices," in which he points out the importance of forming a complete list of officers and their duties for each borough town. Mr. Hazlitt will continue his "Notes on Brand's *Popular Antiquities*," and Mr. T. F. Ordish will give another paper on "Old London Theatres," dealing with the inside of the theatre.

THE November number of *Walford's Antiquarian* will contain a paper on the proposed restoration of Waltham Cross, and also an article by Mr. W. Rendle on the Globe Playhouse in Bankside. Under the heading of "Autograph Letters" will be printed the transcript of a holograph letter written by the celebrated Lord Lovat to Sir Andrew Drummond.

MR. WILLIAM ARCHER will contribute to the November number of *Time* a criticism of the works of Mr. R. L. Stevenson. In the same magazine will appear "The Real Countess Guiccioli," by Mr. J. Carew Martin; "Personal Reminiscences of M. Barthélemy St. Hilaire," by Mr. J. B. Latham; and "Women's Work and Women's Wages," by the editor, Mrs. Whishaw, better known till lately as Miss E. M. Abdy-Williams.

A FRIEND and pupil of the late Mr. William Veitch, the eminent Greek scholar, will give a sketch of him in the *Scottish Church* for November, which will also contain papers on the Highlands, the Church, and the Universities.

PROF. HENRY DRUMMOND, author of *Natural Law in the Spiritual World*, will deliver a lecture in the hall of Trinity College, Oxford, next Sunday evening, intended primarily for junior members of the university.

THE first meeting of the fifth session of the Browning Society will be held at University College on October 30, at 8 p.m. Dr. Richard Garnett, of the British Museum, will preside; and a paper will be read by Mr. J. T. Nettleship, on "Browning's Development as Poet or Maker."

THE annual meeting of the Aristotelian Society, for the systematic study of philosophy, will be held at 22 Albemarle Street, on Monday next, October 26, at 8 p.m. The president, Mr. Shadworth Hodgson, will deliver an address on "Philosophy and Experience."

MR. F. STORR will deliver a lecture to the Education Society on Monday next, October 26, in the Memorial Hall, Farringdon Street, at 7.30 p.m., on "The Literature of Education."

THE last issue of Mr. Quaritch's *Catalogue* (No. 364) deals with the history, topography, and ethnology of Asia, Polynesia, and Africa. The most noticeable numbers are the sets of the publications of Oriental societies, and the books relating to the Portuguese in India, many of which seem to have come from Dr. Burnell's library.

THE five Académies that compose the Institut of France intend to celebrate the ninetieth anniversary of their foundation by a banquet to be held on October 25.

AMERICAN JOTTINGS.

THE New York *Critic* of October. 3 gives prominence to a long letter from Mr. H. F. Harrington, bringing three charges against Poe, which we believe to be new, from the writer's personal knowledge: (1) that in 1847 he deserted his wife on her death-bed; (2) that in the following year he attempted to seduce a married lady, whose name is given; (3) that shortly afterwards he did seduce another married lady, well known to the writer.

MISS JEANNETTE L. GILDER, who is, we believe, one of the joint editors of the *Critic*, has in the press a volume entitled *Representative Poems of Living Poets, American and English*. Though Miss Gilder has edited the collection, the poems have been selected by the poets themselves, and Mr. G. P. Lathrop has written an introduction. The book will be published by Messrs. Cassell in this country at the same time as in America.

MR. LOWELL's *Hawthorne*, in the series of "American Men of Letters," is announced for immediate publication.

MESSRS. HOUGHTON, MIFFLIN, & Co., announce a volume of *Italian Popular Tales*, translated by Prof. Crane, of Cornell.

SINCE the death of Mrs. Helen Hunt Jackson, the literary champion of the Indians, who used as a poet the initials H. H., and who is best known in England by her novel *Ramona*, the American papers have been much occupied with stories about her, for in her lifetime she was very retiring. Only four days before her death she wrote the following letter to President Cleveland:

"From my deathbed I send you a message of heartfelt thanks for what you have already done for the Indians. I ask you to read my *Century of Dishonor*. I am dying happier for the belief I have that it is your hand that is destined to strike the first steady blow towards lifting this burden of infamy from our country, and righting the wrongs of the Indian race."

At her own special request, the life of Mrs. Jackson is to be written by Mr. Hamilton W. Mabie, to whom many of her friends have promised their assistance.

MR. R. H. STODDARD has declined the appointment that was offered him of United States Consul at Athens.

THE *Publishers' Weekly* has now published eight articles on copyright. A Chicago paper, the *Literary Life*, promises to devote two columns a month to the discussion of the subject. A yet more interesting piece of news to English authors is that Mr. G. W. Munro, the publisher of the "Seaside Library," has applied for an injunction against his brother to restrain him from "doing business under the Munro name in a manner to confuse the public mind."

THE usual prize competition in the New York *Literary News* for October, thus classifies recent works of fiction: *The Tinted Venus* (30 votes), *Col. Enderby's Wife* (29), *Carriston's Gift*

(9). It will be observed that all three are English.

M. BENJAMIN SULTE, of Ottawa, has published a pamphlet entitled: *La Situation de la langue française au Canada*, in which he contends that the French spoken by descendants of French colonists in America, from New Orleans to Manitoba, has preserved the idiom and vocabulary (though not the accent) of the language spoken in the time of Louis XIV. with greater purity than in any part of France itself. It appears that the total number of French speaking people in Canada and the United States amounts to nearly two millions.

THE Association of Collegiate Alumnae has collected statistics with regard to the health of 705 women graduates of colleges throughout America. On entrance, 78 per cent. were in good health, 2 per cent. in fair health, and 20 per cent. in poor health. At the end of the college course, 21 per cent. were improved in health, and nearly 20 per cent. were injured in health.

ORIGINAL VERSE.

A SONNET SEQUENCE.

Surrey.

A SUBURB reeking of the city's breath
Beside the Thames, where'er the eye may turn;
Southward a champaign, green with whortle and fern,
Flaming with gorse-gold, flushed with purple heath;
Heights clothed with beeches; belts of oak beneath;
Pine-woods, the murmurous home of doves that yearn
Above their nestlings; plains of wheat that burn
And oats that smoulder, growing ripe for death.
Sites which are old with memories older still
Whereon a new and coarser world intrudes;
Where stood a Tudor palace flaunts an inn;
A rich fool's whim has marred yon Celtic hill;
Yet here for him who loves her solitudes
Nature has kept them clear from smoke and din.

Kent.

The white-horsed Saxon's rich unconquered land!
Girdled by sea and river; ridged with hills,
Green slopes wood-fringed, that shed a score of rills,
And screen a hundred towns on either hand,
Ere rearing their full height to guard the strand
With stern white faces. Flowing plenty fills
Each range the eye o'er-travels. Sailing mills
Stretch to the ripening fields wherein they stand
A wide-armed blessing. Leagues of mead and marsh,
Flecked white with sheep, or mottled brown with kine,
Green-golden hop-fields, wreathed with cone and bine,
And glades of orchard reddening to the south
Trend in accord where, clamouring loud and harsh,
The giant city opens its myriad-mouth.

Sussex.

The southern warder of our fortress-isle
Fixed at his sea-post with the hills for shield;
Dinted with wounds from many a battle-field
Where Roman, Celt, and Saxon strove erewhile,
'Fore all the fray which crowned the Norman's guile
With empire at Senlac. Those wounds have healed,
But left their scars: the watch-camps 'bove the Weald,
The castle's wall, the votive cloister's aisle.
To day a land of peace! A flock of sheep
Feeds in the fosse. The cloister-arches hide
Behind a timbered grange. The ivied keep
O'erlooks a village whither townsmen flee
For change of toil to climb the steep hill-side,
Or restful idlesse by the unresting sea.

HENRY G. HEWLETT.

OBITUARY.

ALPHONS THUN.

THE death of Prof. Alphons Thun at so early an age is a severe loss to the science of national economy. He was born at Dorpat in 1853, studied at the Gymnasium, and later at the University, where he devoted himself passionately to the science to which he promised to contribute so much. After passing a brilliant examination, and receiving his doctor's degree, he went to Russia, in order to study the social and revolutionary movements upon the spot. In 1881 he was appointed Professor of National Economy and Statistics at the University of Basel, where he managed to inspire his scholars with something of his own zeal for social and statistical research. During his unwearying labour as a teacher, he found time to write the book which rapidly made his name known, the *Geschichte der revolutionären Bewegung in Russland seit 1825*, and also a work on the local statistics of Basel, *Die Vereine und Stiftungen des Kantons Basel-Stadt*. In 1883 he received a pressing call to the University of Freiburg (in Baden), which he accepted. Here he was struck down by the illness with which he had long been contending, but worked hard at an exhaustive treatise on "Gewerbepolitik," which he has unhappily left incomplete.

MAGAZINES AND REVIEWS.

Macmillan's Magazine for October has an article by Mr. Pater, called "A Prince of Court Painters." Mr. Pater has thrown into the shape of a contemporary diary a sketch of the character and career of Antony Watteau. The writing is distinguished by the fineness of analytical perception which specially characterises Mr. Pater's work, and the setting chosen for his remarks is extremely happy. It is seldom that a magazine contains such a piece of finished workmanship. Another article of some importance, though it seems out of place in *Macmillan*, is by Mr. Christie, on the subject, "Was Giordano Bruno really burned?" It answers some historic doubts recently raised by M. Desdouts; but it is difficult to imagine that general readers would interest themselves in determining the genuineness of a letter of Scioppius.

Blackwood's Magazine gives an instructive account of "Competitive Examinations in China," by a traveller who has inspected the mechanical appliances used by the Chinese Government. We are glad to discover that China gives no countenance to the lavish expenditure of the University of Oxford on examination schools. Much as China believes in examinations, it does not try to make them comfortable. The examination hall at Canton is simply a walled enclosure, containing a number of sheds, one for each candidate.

In the current number of the *Revue Historique*, M. Forneron furnishes a series of articles in which he has traced, from documentary sources, the career of Louise de Kéroualle, Duchess of Portsmouth. M. Forneron's work will be an addition to the scandalous chronicle of the reign of Charles II. It shows us the deliberate way in which Louis XIV. made use of the known weakness of Charles II. to establish a French emissary at the English court, who for fifteen years succeeded in paralysing the foreign policy of England. M. Forneron's work is well and thoroughly done, though we notice some want of familiarity with English literary history. He speaks of "un certain Andrew Marvel," and persists in quoting the diarist as "Peppy."

THE *Deutsche Rundschau* has several serious articles. Herr Bailleu begins a historical sketch of Prince Louis Ferdinand of Hohen-

zollern, which contains documents bearing on Prussian history at the beginning of the century. Herr Geffcken discusses the question of bimetalism with reference to its probable influence on German commerce, which he thinks would be disastrous. Dr. Meyer writes on the "Increase of Insanity," and notes all the conditions of modern civilisation which tend to develop the sensibility and destroy the power of the brain.

THE three numbers of the *Boletín de la Real Academia de la Historia*, July-September, are issued together. The chief contents are a paper on the portraits of Isabel la Católica, by Dios de la Rada; the two preferred are that in the Royal Palace by Antonio del Rincon for advanced age, and the more youthful one of Santo Tomás de Avila. Friedman's *Anne Boleyn*, Sauvaire's *Arab Metrology*, and H. Derembourg's *MSS. Arabes de l'Escurial* are all favourably reviewed. In discussing the Keltiberian coins of Segisa, Pujol y Camps fixes its site in Aragon, east of Calatayud. A paper on Roman ruins in Fez, by T. de Cuevas, turns on the sites of Oppidum Novum, Frigidæ, and Aurelia Banasa. Padre F. Fita deals with Roman inscriptions of Cacerès, Ubeda, and Alcalá de Hénarez, with excellent illustrations and grammatical remarks; but perhaps the most important paper is the first part of an account, with the originals and translations, by F. Fernandez y Gonzalez, of a Jewish representative assembly held at Valladolid in 1432. From some of the fifty legends of Gil de Zamora in honour of the Virgin we gather that the alb was neither always white nor always linen, but sometimes of silk and coloured, and that marriages of the clergy continued apparently down to the author's time.

THE ninth Fascicule of the *Archives Historiques de la Gascogne* contains the "Archives de la Ville de Lectoure (Gers) XIII^{me} au XVI^{me} Siècle," edited by P. Druihet. Like some other charters of Southern France, the form alone of those of Lectoure is feudal. Both Edward I. of England and Philippe le Bel only confirm anterior rights in use from time immemorial. The "Res Publica Lactoratensium" had substantially preserved, through all the troubles of the early middle ages, its old Roman franchise. To the references given for the charter of Edward I. (1273) may be added the Wolfenbützel MS., "Recognitiones Foedorum," by M. and J. Delpit, p. 100. (Paris, 1841).

CORRESPONDENCE.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

Edinburgh: Oct. 19, 1885.

I desire to endorse what has been already said by Dr. Stokes and other scholars in the ACADEMY regarding the necessity of placing as accurate a text as possible of the Brehon Laws in the hands of students. Translations and comments are necessary for the general reader: the first and foremost requisite for the Celtic scholar is a reliable text. Mr. Stokes's request that a facsimile of considerable portions of these MSS. should be published, and that all the scholarship available should be utilised, is surely not unreasonable. The documents themselves are not always free from error; but when to these are added such mistakes as even the most competent transcribers and interpreters commit, students who can have no direct access to the MSS. are hopelessly astray.

The matter is of general interest, but I should wish to enter a special plea on behalf of the Scottish Celt. It is to the Irish that we have to look for the oldest forms of our own Gaelic speech. The laws of Ireland became the laws of the Dalriadic colony in Scotland. And although our Gaelic institutions and language subsequently pursued a more or less independent path, still the old Celtic customs of Scotland receive their most satisfactory explanation through the larger and more perfect literature which has been preserved in Ireland.

The publication of old Irish MSS. is of as much importance to the Highlander as to the Irishman, while Celtic scholars all over the world are equally interested in securing the greatest possible accuracy in such documents of this kind as are published.

DON. MACKINNON.

University College, Liverpool: Oct. 17, 1885.

I was very glad to see in the ACADEMY Dr. Whitley Stokes's article pointing out the great deficiencies in the printed text of the Brehon

Laws, and the ready support which his arguments have received from Dr. Moore and Mr. Standish H. O'Grady. As the only way to drive home the nail is by repeated strokes of the hammer, I would beg leave to join my voice to theirs. From a comparison I made some time ago of part of the printed text of the *Senchas Mór* with the original MS. Harl. 432, I am able to confirm every word of their severe criticism. I may say that on the average there are two mistakes in every line, and many of these as gross and as palpable as those instanced by Dr. Stokes. I also fully subscribe to the proposals made as to a revision or reprint of the whole text, for I believe that the only account these four volumes can now be turned to is to make them the basis for a complete revision and renewed edition of the whole matter contained in them.

KUNO MEYER.

"ADITI."

London: Oct. 19, 1885.

A good deal has been said lately about the merits of the philological method in mythology. May I offer a fresh example? In writings about the Veda, few names occur more frequently than that of Aditi. Far be it from me to have an opinion of my own about Aditi: I only stand and mark the harmonious decisions of scholars. Certain gods are called, in the Veda, Adityas—"sons of Aditi" the word is (sometimes) rendered. Aditi may be taken and is taken (by some) as if it were the infinite region from which the solar deities rise. "Aditi, the boundless," was, it is believed, "one of the oldest names of the dawn, or more correctly, of that portion of the sky from whence every morning the light and life of the world flashed forth" (*Hibbert Lectures*, 1878, p. 228). Thus understood, "Aditi is derived from *diti*, and the negative particle *a*. *Diti*, again, is regularly derived from a root, *dâ* (dyati), 'to bind.' . . . *Aditi*, therefore, must originally have meant without bonds, not chained or enclosed, boundless, infinite, infinitude" (*Hib. Lec.*, p. 227). On the other hand, Mr. Whitney suggests that "the elevation of Aditi to the rank of a distinct personage may be a reflex from the derivative" (*Aditya*), "which was capable of being interpreted as a patronymic." This resembles the notion (held by some) that Cronus is a god invented to account for Cronion and Cronides, names capable (like *Aditya*) of being interpreted as patronymics. (*Oriental and Linguistic Studies*, p. 39). About Aditi we learn (*Rig Veda*, x. 72, 1-8. *Satapatha Brahmana*, cf. Muir, *S. T.* iv. 13) facts which place her and her legend somewhat on a footing with that of the Maori mother of Maui. The Aditi of the Brahmana gave birth (like Maui's mother) to an abortion, whom (like Maui's mother) she threw away, but whom the gods cut into shape, making an elephant out of the fragments! In another Brahmana (*Taittiriya Br. Muir*, v. 55 1-27,) Aditi, being desirous of offspring, cooked a brahmandana oblation for the Sadhyas. Of course all these *λόγοι* are at some distance from the Infinite, to which we are directed by etymological science. Is Science quite certain whether Aditi means "boundless," "infinite," as in the *Hibbert Lectures*, and in M. Bergaigne's view, or does she lean to Mr. Whitney's suggestion, or are we to give up both, and cleave to M. Paul Regnaud? M. Regnaud writes (I hope he is mistaken, but it is just this kind of thing that is so dreadfully unsettling): "Rien n'est moins sûr que l'étymologie même du nom d'Aditi, et, par conséquent, que les explications, qu'on a prétendu d'en tirer" (*Revue de l'Hist. des Rel.* xii., i.). M. Regnaud goes on to derive *Aditi* from "*Ad* dans le sens de briller"; and he is so bold as to declare that the

derivation from *da*, with a primitive is (I write his words with regret) "grammatically improbable, and logically impossible." However, he gives his reasons, which scholars must decide upon. M. Regnaud ends, and here, perhaps, he is not so very wrong, by asserting that, if scholars are still so far from agreed about the meanings of words in the Veda, mere *vulgarisateurs* (like a gentleman who regards Aditi as a "Chthonian goddess") had better leave the whole business alone. Yes, we must wait before believing science, till science speaks with a less bewildering variety of contradictory voices. For here we are not dealing merely with vexed questions in the rendering of dead languages, questions vexed even when these languages were living, and now only of literary importance: we are dealing with attempts to found a Science of Religion, a theory of the origin of Belief and of Myths, on the sands (and how shifting and treacherous are these sands!) of etymological conjecture.

A. LANG.

JOHN HARVARD'S AUTOGRAPH.

Liverpool: Oct. 19, 1885.

Possibly I may notice elsewhere a little pamphlet on John Harvard by Mr. William Rendle, which has just been published; but you will render service to many persons, both in this country and in the United States, if you will permit attention to be drawn at once in the ACADEMY to one point which is treated of in its pages.

Speaking of "the only contemporary record of John Harvard" which Emmanuel College possesses, and which is described as "a receipt of 10s. for his admission," Mr. Rendle says:

"The handwriting of John's name is as formed and steady as the University signatures, going to show that he was not a boy when he came up. At all events, it is very like his signatures for his degrees—B.A. 1631, and M.A. 1635—in the University Registry."

And he makes a distinction between this "handwriting of John's name" and other writing, which he thinks is "some scribe's attempt at John Harvard's name."

Now, what Mr. Rendle styles "a receipt" is, in truth, an entry in a College account book, headed "Recepta ab ingredientibus," and it reads just in this way:

from Oct 25 1627

"John Harverd Midlsex: Decemb: 19 0. 10. 0"

The first two words of this entry, Mr. Rendle states, by implication, to be in Harvard's autograph. For this statement there is not the faintest shadow of foundation.

"His signatures for his degrees" are "the University signatures," and are also, let it be plainly and distinctly mentioned, the sole scraps of John Harvard's handwriting which the most active and diligent researches have yet brought to light.

There is much more calling for observation in the few words which I have quoted from a very remarkable production, but I will not further trespass upon your space.

EDWARD DISNEY.

THE NEW WAY UP THE JUNGFRAU.

Magdalen College, Oxford: Oct. 17, 1885.

The paragraph on p. 260 of to-day's ACADEMY relating to the new way up the Jungfrau is so misleading that I trust you will allow me to correct it.

1. A daring attempt to ascend the Jungfrau from the Roththal was made as early as August 20, 1828, by Messrs. Yeats Brown, and Slade (*Alpine Journal*, v. 374); but this and other attempts were unsuccessful, till on August

9, 1864, the ascent was made by way of the Roththal Sattel, by Messrs. Leslie Stephen (the well-known writer), F. Craufurd Grove (the present President of the Alpine Club), and R. J. S. Macdonald (see *Alpine Journal*, ii. 162 *sqq.*). This route has been several times repeated (*Alpine Journal*, vi. 98-9), and it was while trying it that von Allmen and Bischof were killed on July 24, 1872.

2. Dr. Dübi's more direct route by the Silberlautobel was made on July 25, 1881 (*Jahrbuch d. S. A. C.* xvii. 273 *sqq.*). Hence Bischof and his companion did not perish in 1872 when attempting to repeat Dr. Dübi's route of 1881, as is stated in your note.

3. Of the new way struck out by Herr Grossrath Fritz von Allmen (*not* Altmen) and five Lauterbrunnen guides I possess full details in the narrative published in the number of the *Oberland* newspaper for September 26. Dr. Dübi climbed up the "outer" or western of two ridges coming down into the Roththal, while Herr von Allmen ascended the "inner" or south-western. The difference between the two routes is thus but slight, at any rate in the lower portion of the ascent. It is stated that the new route is comparatively easy and safe; but it must be remembered that, on an ascent made so late in the season, little snow is found on the rocks, and a definite judgment on the new route must be deferred till it has (like the others) been made in July or August.

W. A. B. COOLIDGE.

MACKLIN'S "LOVE À LA MODE."

Lerwick, N.B.: Oct. 19, 1885.

I possess a copy of Macklin's farce of "Love à la Mode" published by Oliver & Boyd, Caledonian Press, Netherbow. It contains an engraving of "Mr. Cook as Sr. Archy Mac Sarcasm," bearing the date 1811. J. M'G.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 26, 7.30 p.m. Education Society: "The Literature of Education," by Mr. F. Storr.

8 p.m. Royal Academy: Introductory Lecture on Anatomy, by Prof. John Marshall.

8 p.m. Aristotelian: Annual Address on "Philosophy and Experience," by Mr. Shadworth Hodgson.

WEDNESDAY, Oct. 28, 3 p.m. Egypt Exploration Fund: General Meeting.

8 p.m. Royal Academy: "The Bones of the Human Body," I., by Prof. John Marshall.

9 p.m. Egypt Exploration Fund: "Naukratis," by Mr. Flinders Petrie.

THURSDAY, Oct. 29, 9 p.m. Egypt Exploration Fund: "Goshen," by M. Naville.

FRIDAY, Oct. 30, 8 p.m. Royal Academy: "The Bones of the Human Body," II., by Prof. John Marshall.

8 p.m. Browning Society: "Browning's Development as Poet or Maker," by Mr. J. T. Nettle-ship.

SCIENCE.

TWO EDITIONS OF CICERO'S "ORATOR."

M. Tulli Ciceronis ad M. Brutum Orator.

Edited by J. E. Sandys. (Cambridge: University Press.)

M. Tulli Ciceronis Orator. Recensuit Th.

Stangl. (Leipzig: Freytag.)

ENGLISH scholars, and especially Cambridge scholars, bid fair to wipe away in very satisfactory fashion the reproach, so long well merited, of neglecting to help on the study of Cicero. Much more has been done within the last ten years for the criticism and elucidation of his philosophical and rhetorical works especially than during at least a century previously. Notice has already been taken in the ACADEMY of Prof. J. B. Mayor's admirable work on the *De Natura Deorum*, and of Dr. Reid's no less valuable labours on the *De Finibus* and the *Academicis*. Now

the Cambridge Public Orator, appropriately enough, has issued an edition of the *Orator*, which, for wide learning, finished scholarship, and elaborate completeness of execution, well deserves to stand by the side of the works previously issued from the press of his university, while five well-chosen illustrations and a lithographed facsimile of the principal MS. make it even more beautiful in its external appearance.

It was a happy choice which led Mr. Sandys to select the *Orator* as a subject for his exhaustive commentary; for it would be difficult to name another work of the same compass which would have called out to an equal extent that mastery of the most diverse fields of learning which his previous publications prove him to command.

In the introduction he gives a masterly sketch of the history of Greek oratory and rhetoric, which could only have been written by a scholar long familiar not only with the great Greek orators themselves, but also with the far less attractive band of their ancient and modern critics. Again and again in the notes, as well as in the interesting illustrations, we have proofs of that wide knowledge of archaeology which bore such good fruit in the beautiful edition of the *Bacchas*. The important questions of philology which arise from Cicero's valuable references to the history of Latin pronunciation are dealt with in a manner which shows how Mr. Sandys, with all his familiarity with the old learning, has kept up with its most recent developments. The minutely accurate collation of the famous Avranches MS., and the excellent § viii. in the text of the *Orator*, give evidence of the practised textual critic. Finally, the happiness of many of the renderings, and the life infused by appropriate illustrations into the dry lists of technical terms, remind us of many an occasion on which the honours of the university have gained additional grace from the felicitous language of its official mouth-piece. If any general criticism is to be offered as to the execution of Mr. Sandys' comprehensive task, it can only lie in the direction of a modest inquiry whether the very fulness of his knowledge has not led him occasionally into a discursiveness embarrassing to the reader. He seems not seldom to be unable to mention a name without reviving by some passing allusion the reminiscences which it awakens in the mind of the scholar, though they may be far enough removed from the subject in hand. For instance, if Piderit of Hanau publishes a useful school edition of the *Orator*, this cannot be mentioned without recalling the fact that this "is the town where those dauntless explorers of fairy-land and of philology, the brothers Grimm, were born one hundred years ago." Such touches are perhaps more in place in the lecture-room than in a standard edition, to which the pruning-knife has to be remorselessly applied if it is not to outgrow all reasonable bounds.

The criticism of the text is based mainly upon the materials collected with wonderful patience by Dr. Heerdeggen, the appearance of whose edition led Mr. Sandys to re-write his own critical notes when ready for the press. But the collations of Dr. Stangl have also been utilised, and Mr. Sandys has himself very minutely collated the Avranches MS.

and examined many of our English MSS. sufficiently to determine their general character and their readings in particular cases. We miss with regret an expression of his own judgment on some of the most interesting questions as to the relation of the various classes of MSS. For instance, since the date of Kayser's paper in 1851 the *codices mutili* have commonly been regarded as preserving a purer text than the *codices integri*. Recently, while this is admitted as regards the order of words, it has been argued that the same by no means holds good as to the omissions in the former, which appear to be in some cases clearly due to carelessness. Mr. Sandys, however, after giving in brief Heerdegen's account of the relation of the other *mutili* to A, and noticing Stangl's contention that some of them are of independent origin, adds no more on the general question but that "the extent of this interpolation is, however, very uncertain." He has, probably, come to some conclusion as to the weight which ought to be assigned to omissions in this class; and it would have been well if he had given his judgment on a point now much disputed. Nor does he tell us whether he agrees with Heerdegen in believing that we have three direct and complete transcripts of the lost *Codex Laudensis*; and, if so, what value he would attach to them. On the whole, Mr. Sandys does not seem unduly biassed in favour of A; indeed, he sometimes departs from it unnecessarily. It is not easy to see why *disceptant*, in § 116, is preferred to the *disceptant* of A, accepted by Heerdegen and Stangl; or *ambigetur* to *ambigitur*, in § 126. On the other hand, he is certainly right as against Heerdegen and Stangl in reading *paenitet* with A for *non paenitet* in § 130. He defends the soundness of the words omitted by A in § 185; and, on the whole, his text is a conservative one. But, of the ten emendations suggested by Madvig in the last volume of the *Adversaria Critica*, Mr. Sandys accepts three; and an editor would be somewhat bold who admitted any other. Dr. Reid's emendation, accepted in § 200, needs a word of explanation for the ordinary student, who will hardly see the point of it. This, it may be noted, is the only one of the emendations proposed by that scholar—some twenty in all—which Mr. Sandys accepts; and here again his caution is laudable, for, though almost all of them are improvements, not one is inevitable.

The orthography is, as a rule, very correct and scholarly; but there is one point which calls for a word of protest. Mr. Sandys' note on § 155 shows that he has got beyond the pre-scientific notion that *-um* of the genitive plural is contracted for *-orum* or *-arum*. What possible justification can there be then for retaining in his text misleading forms like *deum* and *liberum*, which are due solely to an obsolete blunder?

With regard to the very full explanatory commentary, there is little to be said except in the way of hearty commendation. A careful examination shows that it is singularly free from any kind of inaccuracy, and the completeness with which every point of difficulty is elucidated could only have been secured by frequent and laborious revision. It is in every way worthy of the editor's high reputation, and will be welcomed as a

very valuable contribution to the study of Ciceronian Latin in general and of his rhetorical system in particular. The only regret that can possibly be felt in connexion with it is that the completeness with which the work has been done, combined with the remarkable excellence of the paper and printing, makes the book somewhat expensive for use in schools, for which it would otherwise be admirably adapted.

This fault certainly cannot be found with Dr. Stangl's little edition of the text, which is really a marvel of cheapness. Here we have a clearly printed text, with critical footnotes, a brief introduction, containing all that need be said about the MSS. as well as an "argument" of the work, and useful indexes, all for the sum of sixpence! The text is in some places less satisfactory than that of Mr. Sandys, but, on the whole, it has been settled with sound judgment. If the series of Greek and Latin texts to which this belongs, published by Freytag, at Leipzig, under the general editorship of Dr. Schenkl, numbers many editions as excellent as this, and the *Ovid* of Zingerle and Güthling, it will be a formidable rival to the familiar Teubner series, and will deserve to find very general favour in our schools and colleges.

A. S. WILKINS.

INDO-CHINESE PHILOLOGY.

On Tuesday last, October 20, Prof. Terrien de Lacouperie delivered his inaugural lecture, on "The Science of Language and its Recent Progress, in connexion with the Languages of Indo-China," at University College. The following is a short abstract of the lecture.

The languages of Indo-China are a new field of research in comparative philology which may lead to a reconsideration of several vital problems in the science of language. They offer a more satisfactory solution of these problems, and one better in accordance with the known facts of language past and present. Nevertheless their influence has hitherto been injurious to the progress of linguistic science. Much has been done on the languages separately, though little has been accomplished with the languages of South-Eastern Asia as a whole. The most important works are those of J. Leyden (1808), J. Crawford, N. Brown, Brian Houghton Hodgson, Max Müller, John Logan, the Chinaman T'wan-yuh-ts'ai, J. Edkins, E. L. Brandreth, A. H. Keane, and the late Capt. Forbes.

The classification of languages into Monosyllabic, Agglutinative and Inflectional, according to their respective processes of word-making, which is now recognised to be inadequate, was based on the hypothesis of a primitive monosyllabic stage in the history of human speech, which was for many years a fool's paradise to the science of language. The roots of languages as now extracted by linguistic research are results, not beginnings. The root-making period is still existing and will never cease. Roots are produced by the unconscious work of the mind seeking for symbols of general ideas. The nature of language is to be in a state of never-ceasing evolution and transformation, and there is no reason to suppose that there were activities and influences at work in former times other than those at work in the present day. The languages of Tibet, Burmah, Pegu, Siam, Annam, China, are generally called monosyllabic, and are still erroneously supposed by many to be living illustrations of the imaginary primitive language of monosyllabic roots. Such monosyllabism does not and never did

exist. In reality there are three sorts of monosyllabism only—one of Decay, one of Writing, and one of Elocution. It is to the last that the tongues of South-Eastern Asia belong, while the monosyllabism of English belongs to that of Decay.

"Isolating" is another denomination of the same languages which they deserve by keeping apart words of signification from words of relation. The former alone can coalesce together and then decay and shorten by wear and tear. Their decay is often produced by a difference of pitch, otherwise of tone, in pronunciation. These tones have been considered to be a survival of the language of primitive humanity, "when speech was but the song of the soul," while, as a matter of fact, they are only a common phenomenon of linguistic equilibrium. These languages were greatly injured by decay, and their former and fuller phonetism can be restored to a certain extent by paleography and dialectical comparison. The state of their grammar determines the fourth of the six divisions into which the languages are distributed. The six are—(1) Incapsulating, (2) Incorporating, (3) Alliteral, (4) Isolating, (5) Agglutinating, (6) Amalgamating. These are states, not successive stages. They are the outcome of the two great forces which produce language—the mental faculty of conceiving and expressing general ideas, and the sluggishness of the organs of speech. These two forces act sometimes in harmony, sometimes in antagonism, with all degrees of energy—the energy of one being somewhat independent of the other.

The curious phenomena of mixed and hybrid languages is here largely illustrated. A language is mixed when its vocabulary only is pervaded with foreign elements, and hybrid when its grammar is disintegrated. Grammar offers an internal and external evolution: internal, when in stretching its possibilities of development it remains faithful to its congenial tendencies; external, when it goes beyond and mixes with another grammar.

The languages of the far East belong to two great stocks: the Turanian and Himalayan, besides a residuum of Negrito and Papuan dialects. Turanian is represented by the great Kuenlunian branch, including (a) the Chinese family, (b) Tibeto-Burman group, (c) Yao-Karen group, (d) Dravidian family. Himalayan includes two great branches: (1) Indian, for the Kolarian languages, &c.; (2) Indo-Pacific, with four divisions—(a) Mōn-Taic, subdivided into two families—(1) Mōn-Annam, (2) Tai Shan; (b) Malayan; (c) Polynesian; (d) Micronesian.

The next lecture, on "the Formation, Evolution, and Influence of Chinese," will be delivered on Tuesday, November 17.

OBITUARY.

MR. THOMAS DAVIDSON.

THE life of Mr. T. Davidson, LL.D., F.R.S., which closed last week, shows how a scientific reputation of the highest character may be achieved by steady application to a limited department of knowledge. Mr. Davidson was recognised in all countries as the highest authority on the group of brachiopods. Born in Edinburgh in 1817, he was taken at an early age to the continent, and though at one time a student at the university of his native city, most of his scientific education was received in France. There he had the advantage of attending the lectures of some of the first naturalists of the day, including such masters as Milne Edwards, Elie de Beaumont, Cordier, Dufrenoy, and Geoffroy Saint Hilaire. At about twenty years of age he was induced, by the advice of Von Buch, to undertake the study of the Brachiopoda, and henceforth this became the main

business of his life. His writings were numerous, and many of his memoirs were written in French. The Palaeontographical Society published his splendid series of monographs on fossil brachiopods, which are everywhere regarded as the standard works on this subject. Mr. Davidson was not a mere conchologist, but a philosophical student of the anatomical structure of the molluscs. He was also a talented artist, having studied art practically in Paris and in Rome; and most of his works were illustrated by his own pencil. Although belonging to an important family in Midlothian, he spent most of his time in Brighton and in Paris. It is believed that provision has been made for the transfer of his important collections to the British Museum. An excellent portrait of Mr. Davidson appeared in the *Geological Magazine* for April, 1871.

CORRESPONDENCE.

AN INDEX TO ORIENTAL JOURNALS.

London: Oct. 20, 1885.

It will probably be of interest to readers of the ACADEMY to know that I have, for some time past, been working at an Index of Oriental Asiatic journals, from the commencement to the end of 1885, and that I hope to be able to complete my task some time next year.

The following are the journals I am indexing:—*Journal of the Royal Asiatic Society of Great Britain and Ireland*, from Old Series 1835, and New Series 1864; *Journal of the Bombay branch of the Royal Asiatic Society* from 1841; *Journal of the Indian Archipelago and Eastern Asia* from 1847 to 1859 (all issued); *Journal of the Straits branch of the Royal Asiatic Society* from 1878; *Journal of the Ceylon Branch of the Royal Asiatic Society* from 1845; *Transactions of the Asiatic Society of Japan* from 1872; *Madras Journal of Literature and Science* from 1834; *Journal of the American Oriental Society* from 1849; *Journal of the Asiatic Society of Bengal* from 1832; *Journal of the North China Branch of the Royal Asiatic Society* from 1858.

J. T. CARLETTI.

THE DATE OF KUMĀRADĀSA.

Bombay: Sept. 29, 1885.

In a paper read before the Bombay branch of the Royal Asiatic Society some little time ago, I pointed out that Kshemendra assigns a verse, which is apparently quoted in the *Mahābhāṣya*, to Kumāradāsa, a circumstance which I hoped might one day prove a valuable datum for the *Mahābhāṣya* itself. "Unfortunately," I had to add, "We do not as yet know Kumāradāsa's own date."

Will you let me note, in the appropriate corner of the ACADEMY, that I have lately come across a date for Kumāradāsa, and the name of his book. In Jalhana's *Sūktimuktāvalī* the following verse of Rājas'ekhara's treats of this poet:

"Jānakīharanam Kartum
Raghuvāṇ's'e sthite sati
Kaviḥ Kumāradāsa's'cha
Rāvasas'cha yadi Khamah."

It is clear from this that "Kumāradāsa" wrote his *Jānakīharanam* after Kālidāsa.

P. PETERSON.

SCIENCE NOTES.

WE learn that the observations on the changes of lunar radiant heat during the total eclipse of October 4, 1884, made at the Earl of Rosse's Observatory by Dr. Otto Boeddicker, will appear very shortly (with a Note by the Earl of Rosse) in the *Transactions* of the Royal Dublin Society.

THE following changes in the council of the London Mathematical Society will be proposed at the annual meeting on November 12: viz., to elect Mr. C. Leudesdorf and Captain P. A. MacMahon in the place of Dr. Hirst and Mr. R. F. Scott, who retire. At the same time the annual meeting will be made special, for the purpose of considering certain alterations in the rules, which will be proposed by the council.

It is stated that Prof. du Bois Reymond, the veteran biologist, of Berlin, will shortly publish a work tracing the history of physiological research during the present century.

THE Geological Survey of India has lately published, as one of its *Memoirs*, an interesting account of a visit to Barren Island, in the Bay of Bengal, by Mr. F. R. Mallet, deputy superintendent of the survey. Most previous observers had paid only hasty visits to the island; but Mr. Mallet remained long enough to examine its geological structure in detail, while a topographical survey was made by Capt. Hobday. The island of Narcondam was also examined. It is suggested that the name "Narcondam" may originally have been applied to Barren Island; for according to Col. Yule, the word probably means a "pit of hell," and such a term is quite inapplicable to the island now called Narcondam, inasmuch as it does not possess a crater, and has never shown signs of activity during the historic epoch. On the other hand the name would be appropriately bestowed on Barren Island, with its pit-like amphitheatre and clouds of sulphurous vapours.

PHILOLOGY NOTES.

DR. CARUANA, the Director of the Public Library in Malta, has just made an important discovery. He has found a Phœnician inscription of four or five characters engraved on one of the huge stones which form the ancient temple in the island of Gozo, now called the Giants' Tower. It is the first time that Phœnician letters have been found associated with these megalithic structures.

At the meeting of the Académie des Inscriptions, on September 25, M. Bergaigne criticised the work of Prof. Ludwig, in which an attempt is made to fix the date of certain hymns in the Rig Veda by means of references to eclipses contained therein. According to M. Bergaigne, it is not certain that the passages refer to eclipses at all; if they do, the eclipses may not have been contemporary with the writing of the hymns; and the references may not have been suggested by any eclipse in particular. M. Léopold Delisle exhibited a facsimile of a Bull of Pope Sergius IV., dated 1011, and written on papyrus, which is preserved in the library of Perpignan. Its chief interest is due to the material, which proves that papyrus was still used for papal bulls long after the more durable parchment had been adopted in the chancery of the Merovingian kings. M. Clermont-Ganneau called attention to two inscriptions from Palestine. One is in French, and of the time of the Crusades, to the following effect: "Ici cist [sic] Jaque le saboni [er] qui trepassa al segunt jor de genvier en lan m cc lvi." The other is in Arabic, and dates from the first century after the Hegira. It was found at El Khan, between Jerusalem and Jericho. It records the distance of 109 miles from Damascus, and mentions the name of the Emir, Abd el Malik. The characters are similar to those on the cupola of the Sakhra at Jerusalem, where it has been suspected that the name of Sultan Almamun (813 to 833 A.D.) has been substituted for that of Abd el Malik. Dr. Moses Schwab made some observations upon two magical cups from Mesopotamia,

bearing inscriptions in Aramean, probably of the fifth century A.D. The characters mark a transition between the square Hebrew letters and the cursive script called Raschi.

THE *Bulletin* of the Société Borda de Dax, for the last quarter, has two descriptive articles on the 27 votive Gallo-Roman altars found at Aire in June last. Mars Lelhunnus is compared by Dr. L. Sorbets with Leherenn, a possibly Iberian deity; but is referred by M. E. Taillebois to the name of a neighbouring spot *le Houns de la Lanne*, i.e., in Gascoun, the fountain of the Landes, or perhaps, the end of the Landes, and thus it becomes a mere local appellation.

Die Sprachlaute in Allgemeinen und die Laute des Englischen, Französischen und Deutschen im besondern. By Dr. M. Trautmann. (Leipzig.) Prof. Trautmann has some right to speak on the subject of phonetics, for having studied the sounds of speech from the physiological side he has proved the practical success of his views in the lecture-room. His pupils are enabled to overcome the difficulties of English pronunciation, and to speak our language with a purity of accent the more certain, because their practice is founded in the first instance on some knowledge of the sound-producing organs, and of the mouth, which modifies the issuing sounds. The principle on which he founds his system is that the sounds which are produced in speaking accord with musical law from their origin and independently of the modifications on them exercised by the mouth; and he contends that they ought therefore to be classified according to harmonic tones. The position of the mouth must indeed be taken into consideration, "but the chief thing is the pitch (*Klang*);" and he proves it by showing that the relation of sounds to one another is the same when whispered as when spoken. The formulas of his system are therefore taken from the best representative specimens of vowels whispered; and he claims for the full extension of it, at least as regards vowels, that it will not be easy to meet with a vowel sound that will not find a place within it. The first part of the treatise is devoted to the details of this method, which is intended to furnish a framework for phonetics common to all tongues; the second to the special study of English, French, and German sounds on the application of the principles laid down. The systems of other phoneticians, with some of whom Prof. Trautmann seems inclined to do battle, are passed in review and critically compared.

FINE ART.

Lessons in the Art of Illuminating. By W. J. Loftie. (Blackie.)

THIS volume, which belongs to Vere Foster's admirable "Water-colour Series," is one of the best executed and most interesting of all. In these days of revival it is impossible to say to what extent the old art of illumination may become again a living and a growing one. It died a death which may be called natural; and, notwithstanding a gallant attempt to adapt itself to the new discovery of printing, its existence was threatened from the moment that writing ceased to be the only means of multiplying books. When calligraphy was itself an art, and men would devote a lifetime of patient piety in transcribing the Scriptures, no time could be too great to spend in decorating the rare and precious volumes with border and initial and dainty miniature. They were the flowers of the old art of writing, and sprang into life almost as naturally and spontaneously as those roses and

daisies, lilies and columbines, from which the old illuminators drew their inspiration.

It is one of the merits of this volume that it does not attempt to modernise the art. All the examples which are given for imitation (and they are many) are taken from choice old MSS. dating from the wonderful Book of Kells of the ninth century to a naturalistic border of the sixteenth. The student has, therefore, before him a fairly historical selection, which will give him a good notion of the history and development of the art in various countries, from the exquisitely ingenious work of the Irish decorators, which touches barbaric ornament, to its final suicide in the sea of illustration. More than this could scarcely have been wished for or expected in so small a compass. The same good sense is shown in the introductory chapter, in which the general history of the art is told tersely and clearly.

The possessor of this manual will therefore be able, with great ease, to understand in what the true art of illumination consisted, and be provided with pure examples for imitation, and clear instructions how to copy them. To what use he will turn his skill when acquired it is less easy to say. It is to be feared that the pure art has departed with its reason for existence. To emblazon a coat of arms on vellum, to make initials for an "album," or to decorate a diploma or a testimonial, such seem to be almost the only uses of the art of hand-illumination nowadays. In connection with printing, however, the study of the art may yet be of considerable value. Its old enemy may turn out to be not a bad friend in the long run. With the aid of chromolithography, as the illustrations to this volume show, a great deal, though by no means all, of the exquisite handiwork of the "Old Masters" may be initiated, and by one who understands how to adapt and select coloured ornament, their designs may be profitably studied for the beautifying of modern books. It is perhaps all the better that some of the special triumphs of the old illuminator—his varied treatment of gold, and the exquisite fineness of his lines—are beyond mechanical reproduction. New life can never be infused into an old art unless some of the old beauty is beyond imitation. What must always survive of illumination is the desire to make a beautiful page. Whether the text be written or printed, mere clearness of character will never quite suffice to the lover of books; and the child, no less, perhaps more, than the man, will always like those books best that are pretty to look at as well as nice to read.

It is in a mixture of the illustrative and the decorative that this desire shows itself most in these later days, and perhaps such artists as Miss Greenaway and Mr. Walter Crane may in this sense be connected with the old miniaturists. The sweetly embroidered pages of Blake are something of a link between.

It must, however, be allowed that there is a great gulf between the work of such artists and the art which forms the subject of Mr. Loftie's little book, and it is well that he has not tried to bridge it. If those that study it never get farther than to be able to make faithful copies of old work, the time they have spent will not be misapplied, even though it only enables them to acquire

dexterity of hand, a sense of the simpler harmonies of colour, and a true reverence for the skill, the patience, and the self-denying spirit, of the old illuminators.

COSMO MONKHOUSE.

THE TERRA-COTTAS OF NAUKRATIS. (Second Notice.)

Archaic Art—(continued). Many of the small terra-cottas discovered in the mounds of Naukratis are fragments of vases. Among these must be especially noted several specimens representing a half-length female figure crowned with a lofty cylindrical head-dress, from beneath which hangs a square veil with corners descending to the shoulders. The faces of these little figures are of Asiatic type, with eyes obliquely set, and an expression of smiling repose. They are moulded in two halves and joined down the sides, the clay being of a dark and brownish red. Though rare, these types are not unique. The same figure, modelled at full length and enthroned in a kind of arm-chair, has been found in the necropolis of Camirus at Rhodes, in Syracuse, Apulia, Sardinia, and Northern Syria. M. Heuzey figures two examples in the Louvre, one from the necropolis of Amrit (Marathus), on the Phoenician coast; the other from the necropolis of Camirus. In every respect but one, these statuettes are so precisely alike that they might have been turned out from the same workshop, if not from the same mould. They differ, however, in the treatment of the eyes, which are level in the Phoenician type, but in the Rhodian example incline upwards at the corners. These figures represent a funerary goddess—Demeter, in Greece; and some analogous divinity in Phoenicia. Notwithstanding the fashion of the head-dress, which is an ancient Phoenician tiara peculiar to queens and goddesses, M. Heuzey classifies this type as a product of the Graeco-Asiatic school of 600 B.C., and pronounces it to be of Rhodian origin. The Greeks, in his opinion, borrowed the lofty tiara and veil from Phoenicia; and Phoenicia, in return, borrowed the throned Demeter in her Phoenician trappings. What, then, of our Naukratis specimens? Are they Phoenician, Rhodian, or local? The oblique setting of the eyes—a distinctive trait of Greek archaism—effectually sets aside the Phoenician hypothesis, while the intimate commercial relations which subsisted between Naukratis and Rhodes make it probable that such small objects were imported rather than imitated. The British Museum (besides, I believe, one or more examples of the throned statuette) possesses some of the truncated sort, adapted, like those of Naukratis, for use as vases. These are all from Camirus.

A warrior, half length (terra-cotta). Another vase figure, and apparently of the same period. It represents a beardless warrior wearing on his head a kind of casque, imitated from the Egyptian "pschent," or double crown. This imitation, or adaptation, is distinctly Cypriote; cf. the precisely similar pseudo-Egyptian helmet on the head of a remarkable statue found at Golgos by General di Cesnola, and figured in Perrot and Chipiez's *Histoire de l'Art dans l'Antiquité*, vol. iii., p. 523.

Another head (marble), from a statuette, wears a "pschent"—like helmet less glaringly incorrect than the foregoing, but still wrong, and evidently not Egyptian. There can be little doubt that both came from Cyprus.

Head of Herakles in the lion's hide (terra-cotta). Another vase fragment, and almost certainly of Cypriote work. The face of the god—square-cut, broad-featured, thick-lipped—looks out from between the grinning jaws of the dead lion as from a close-fitting hood. A black moustache is painted on the upper lip.

The clay is peculiarly fine and smooth, and of a brilliant red colour. A very similar head, though somewhat less archaic, forms the body of a small Cypriote aryballos in the Piot collection (see *Histoire de l'Art dans l'Antiquité*, vol. iii., fig. 505, p. 697). The resemblance between these two vases is very striking. Both are in terra-cotta, and in both the popular Cypriote Herakles is represented with the same short nose, full eyeballs, large lips, and moustache. In the Piot aryballos, as in the Naukratis example, the lion's jaws fit closely round the face of the truculent-looking deity.

Youth carrying a ram (limestone). This interesting fragment repeats in little the subject of the celebrated limestone, "Sacrificer," or Hermes Criophorus, of the Cesnola collection. It is in bad condition, but apparently of Cypriote work.

Reclining female figures rudely carved in relief (limestone). Of these Mr. Petrie has found three examples: one in good condition, and none exceeding twelve inches in length. The figures are nude, the right arm lying at length, the left bent at right angles and resting across the body. The heads are clothed in what looks like a rough imitation of an Egyptian wig, and are supported on Egyptian head-rests. In the largest and most perfect example a small upright figure is roughly indicated, standing at the foot of the couch. It is not easy to determine whether these curious little reliefs are funerary or votive. If votive, they may possibly commemorate recovery from childbirth, which would account for the small figure above mentioned. If funerary, they would stand for rough and barbarous versions of the dying scene so frequently represented in Greek memorial tablets.

Torso of a female figure (limestone). A fragment of surpassing delicacy and finish, which it is scarcely possible to classify with precision. The type is distinctly Egyptian, combining fullness of contour with extreme length and slenderness. The head, the middle part of one arm, and both legs from a little above the knee, are lost; the hands and arms are down, and pressed closely to the sides; and it is evident that the feet were brought together, the whole figure being drawn into as narrow and upright a compass as possible. The exquisitely smooth sculptured surface is coated with a film of tinted stucco upon which the necklace, bracelets, armlets, and garlands which were this damsel's only attire are touched in lightly with the brush, not even the rings upon her long fingers being omitted. That this delightful little statuette represents a dancing-girl, adorned in the flower-wreaths for which Naukratis was famous throughout the ancient world, cannot be doubted; but it is my own impression that the head carried some kind of tray, or cup, and that the slender straightened figure served but as a pedestal for some knickknack of the toilette table. The question of date is perplexing, the lengthened elegance of the forms being indicative rather of the Saitic than of the Ptolemaic school; while as regards the artist, if he was not an Egyptian, he was, at all events, a Greek working strictly after Egyptian models.

Two female heads (terra-cotta). These two little heads, adorned with fillet and earrings, are of especial interest, for they mark the actual moment of transition between archaism tinged with Eastern influences and art emancipated by the genius of the Greek. Greek feeling, however, predominates.

Among minor objects in terra-cotta, some of which are mere toys—the bric-a-brac of antiquity—may be noted an admirably clever little tortoise, sketchily modelled in a light tawny clay, the flappers being merely pinched up, and showing the impress of the artist's fingers; also two spirited horses' heads; and a pair of archaic bulls' heads. The latter, if not part of

some vase decoration, may be designs for bulls-head weights.

Want of space compels me to pass over many other archaic objects of interest, but a griffin's head with a long neck and a fragment of a tiny group representing a four-horse chariot are too important in their historical relations to be omitted. Both are in glazed pottery, and both are duplicates of similar objects in the Louvre. The griffin's head had been originally coated with a pale bluish glaze, now nearly all rubbed off, the eyes being tinted brown. The Louvre specimen is classified by M. Heuzey as Assyrian work, and described as

"fragment décoratif de terre blanche à glaçure vitreuse d'un beau vertbleu, modelé et moulé avec une précision pleine de caractère . . . il provient de la collection de Clot-Bey et représente tout un lot d'objets du même style, trouvés en Egypte, où ils avaient été portés dès l'antiquité par le commerce" (*Les Figurines Antiques de Terre Cuite*, pl. 1, p. 2).

Of the little four-horse chariot fragment discovered by Mr. Petrie at Naukratis only enough remains to show the design and the green tint of the glaze. The Louvre specimen is almost perfect, but unglazed, and of a light orange-coloured clay. It was found in the necropolis of Marathus, and is consequently of Phoenician work, but is classed by M. Heuzey as an imitation of the Assyrian style.

Finest Period.—Under this head may be classed a large number of very beautiful fragments in terra-cotta and marble, several charming little terra-cotta figures of the Tanagra school, a variety of miniature masks, tragic and comic, &c. The following are the most important:

Torso of an Apollo (?); height 8½ inches (white marble). Very fine.

Two heads, apparently of Apollo, height about 4 inches (white marble). Though not in quite the finest style, these are of a good school. One is blackened as by the action of fire.

Fragment of a hand, half lifesize (white marble). This is a mere splinter from the back of a hand—evidently a man's; but the art is so admirable, the indication of bone and muscle under the skin, and the delicate relief of the veins upon the surface, are so fine, that the loss of the statue to which the hand belonged is simply incalculable.

Female head (terra-cotta). An exquisitely tender, girlish head from a draped figure; the clay of a soft gray tone; circa 400 B.C.

Ditto (terra-cotta). A spirited aristocratic type; very noble expression; circa 350 B.C.

Head of Athena (terra-cotta). A sweet and graceful head, but singularly girlish for the helmet of Athena. Probably of the same period as the foregoing, or a little earlier. Found in the stratum immediately above the house of the scarab-maker.

Head of Artemis (terra-cotta). A very beautiful fragment, generally accepted as the gem of the Naukratis exhibition. The features are modelled with the utmost refinement, and moulded in the purest Greek type. The lips are slightly parted, and the head a little thrown back, as if in the act of light but rapid movement. The hair, free and flowing, is partly gathered over a diadem, and partly massed in a knot of curls at the back of the neck. This precious and perfect little head may be ascribed to about 300 B.C.

Period of Decadence.—Arriving at the period of Roman rule, the mounds of Naukratis lose their distinctive character, and yield the usual run of Romano-Egyptian terra-cottas. Lamps, cake-stamps, moulds for casting faces, grotesque vases and toys, and comic and realistic heads, apparently from portrait statuettes, have been found in abundance. The lamps are of the ordinary types, stamped with the palm ornament, the tortoise, the fish, &c., &c.

The cake-stamps, which are like our butter-stamps, vary from three to six inches in diameter, and bear a variety of patterns, as spirals, rosettes, stars, bunches of grapes, wreaths of flowers and leaves, and the like. One is impressed with a magnificent cock in high relief, and another with a bull's head. One bears the name of "PLATON." Some small vases, in the form of pigs fantastically patterned in black, are curious from their resemblance to a pig-vase found by Dr. Schliemann at Hisarlik (see *Troy and its Remains*, p. 232); and a few fragments of small terra-cotta friezes, some glazed, some painted (one apparently representing a Bacchanalian procession), are interesting from their novelty. The portrait heads, however, are by far the most attractive objects of this epoch. Their variety is endless. Some old, some young, some bluff and hearty, some thin and hollow-cheeked, some laughing, some sad, they bring before us, almost as vividly as might be done by photography, the dead and gone people of this long-lost city. One square-jawed, good-humoured burgher of Flemish type wears a turban; and this, I think, must be the earliest appearance of the turban in art. Some heads are clad in Phrygian caps, and one man wears a curious peaked hat. Others are bare headed; as, for instance, a perfectly bald, corpulent fellow with a roll of fat across the nape of his neck, and another with flowing hair and fine, thin features, curiously like Mr. Henry Irving.

Want of space compels me to close this too imperfect catalogue; but I have said enough, I trust, to show that the "treasure-trove" of Nebeirah is of a kind more precious than mere "barbaric pearl and gold." The intrinsic value of these relics is absolutely nothing; but their value as links in the history of art is beyond computation. AMELIA B. EDWARDS.

P.S.—In my article of last week (p. 262, col. 2, l. 3), for "Psammetichus I." read "Psammetichus II."

NEW PRINTS.

WE have received from Messrs. Buck & Reid, of 179 Bond Street (well known from their long connection with the late firm of Messrs. Goupil) a fine photogravure, after a picture of "Orpheus" by Mr. John W. Swan. In the midst of a bare and rocky vale Orpheus is seen fascinating a number of lions by the charms of his music. His lute is of strange antique fashion, and his figure, though that of a handsome Greek clad in classical raiment, has a wildness in keeping with the scene. The principal beast is a young lion gazing at the musician in calm wonder, while at his side his consort abandons herself to the charm with gestures at once feline and feminine. Other beasts roll and stretch themselves with delight or lie in a half-stupor at the lyrist's feet. The lions are admirably drawn and designed with a fertile imagination. Without enforcing too much any analogy with human sentiment, each beast has an individual character seen under the domination of a powerful spell.

M. OBACH, of Cockspur Street, has commissioned from M. Waltner an etching after a fine picture by Rembrandt. It will be of large size, like another which the same etcher has recently completed after the famous portrait of a man with clasped hands and red cap left by Lord Colborne to the National Gallery. A still more important work of this master of the needle which may also be expected shortly is his interpretation of Rembrandt's "Night Watch," a plate on which he has been engaged for several years.

THE publication by M. Georges Petit, of Paris, of the following etchings is also announced: "Le Rixe," the famous Meissonier,

by F. Bracquemond; "Bergère," a well-known *chef d'œuvre* of J. F. Millet, by Damman; "Charles I.," the celebrated Van Dyck of the Louvre, by A. Mathéy; "Harmony," by H. Vion, after Egusquiza; and Jules Breton's "Glaneuse" (the Luxembourg picture), by L. Dautrey.

OBITUARY.

WILLIAM PAGE.

THE death is announced of Mr. William Page, one of the foremost of early American painters, and the worthy contemporary of Thomas Cole, Washington Alston, and Asher Durand. In 1851 he went to Venice, and became an ardent student of the school of Titian, the results of which were seen in his famous picture of "Venus," exhibited at the Salon of 1859. Among his best-known works are portraits of Robert Browning, Charlotte Cushman, Henry Ward Beecher, Mrs. Theodore Tilton, and "Admiral Farragut in the shrouds of the frigate *Hartford*," the last of which was presented to the Emperor of Russia. In 1870 he was elected president of the National Academy of Design at New York, and an exhibition of his collected works was held at that city in 1877. Besides being an artist, Mr. Page was an enthusiastic lover of Shakspeare, especially of the sonnets; and Mr. Lowell has dedicated to him one of his volumes of poems. He died at Staten Island, on September 30, at the age of seventy-four.

CORRESPONDENCE.

A HEAD FROM NAUKRATIS.

Park Lodge, Weston-super-Mare: Oct. 19, 1885.

In Miss Amelia B. Edwards's first notice of Mr. Flinders Petrie's collection she mentions the upper part of an alabaster statuette (ACADEMY, Oct. 17, 1885, p. 262):

"The features are regular, placid, and of a soft, semi-Semitic cast. The face is beardless. The head is covered by a small round helmet, very slightly conical in form, with a knob on the top and two small volute-shaped (or possibly asp-shaped) ornaments just above the ears. . . . This elegant little fragment betrays both Egyptian and Greek influences. . . . the helmet, modified from the more ancient Cypriote shape, is not unlike the casques of the Sardinian mercenaries as depicted in the bas-reliefs of Medinet-Haboo and the frescoes of Abou-Simbel."

I have not seen this fragment, but the description reminds me of the very curious cameo (at Berlin) bearing the head of Nebuchadrezzar in profile, with a cuneiform inscription. The beardless face, slightly conoidal helmet, volute ornaments, and general cast, are points of resemblance. I have not seen the statuette from Naukratis; but I make no apology for calling attention to the cameo-profile, of which a woodcut is given in Vigouroux, *La Bible et les Découvertes modernes* (4^{me} ed., iv. 325). And I earnestly ask for competent opinion on this very interesting gem, which Dr. Schrader will have to represent the great monarch himself, and not a later namesake. Now, the mother of Nebuchadrezzar was a Saïte princess of Saïte Egypt. Remembering the characteristics of Saïte art, and the Greek influence which had already set in, is it unlikely that the young Nebuchadrezzar should have employed (if so indeed it were) a Greek artist?

I see that M. Babelon, in his continuation of Lenormant's *History* (iv. 394), looks on the cameo of the Hague as the original, of which that of Berlin is a reproduction, and indicates no doubt as to its representing the great Babylonian monarch. He gives a woodcut of the former gem. I shall be very glad if this hasty note should draw out some response from those who have studied this branch of archaeology.

HENRY GEORGE TOMKINS.

NOTES ON ART AND ARCHAEOLOGY.
PROF. MASPERO leaves Paris for Egypt this week.

By kind permission of the managers of the Royal Institution, the general meeting of the Egypt Exploration Fund will be held on Wednesday next, October 28, in the rooms of the Royal Institution, in Albemarle-street, at 3 p.m., with Mr. C. T. Newton in the chair. At the same place, and on the same day, at 9 p.m., Mr. Flinders Petrie will deliver a lecture on "Naukratis," and on the following day M. Naville on "Goshen."

The removal of the National Portrait Gallery to Bethnal Green Museum has been completed; and the private view of the collection in their new, and, we trust, very temporary, home took place on Wednesday.

In Bond-street will be opened next week an exhibition at the Fine Art Society of a collection of sketches of life and landscape in India and Cashmere, by Mr. Herbert A. Olivier, and another at Dowdeswell's Gallery of landscape drawings in water-colour by various well-known artists. In Oxford-street Messrs. Mansell's annual collection of Christmas Cards by all the principal makers will be on view; and in Mount-street Messrs. Hogarth have an exhibition of drawings by Girtin, Cotman, Copley Fielding, and other artists of the early English school.

MR. GEORGE P. JOHNSTON, of Edinburgh, will shortly publish a portfolio containing a series of ten etchings, with descriptive letter-press, by Mr. Frank W. Simon, entitled *Bits of Old Edinburgh*. Among the subjects selected are John Knox's house, Smollett's house, the Gra-smarket, and the Lawnmarket. The impression will be limited to 250 copies.

No less than three books dealing with early Christian art are announced for the coming season. One is a new edition of the late Earl of Crawford's *Sketches of the History of Christian Art*; another is the second volume of Didron's *Christian Iconography*, edited by Miss Margaret M. Stokes; the third is *Symbols and Emblems of Christian Art*, by Miss L. Twining.

THE next examination of the London Institute for the Advancement of Plain Needlework for certificates and diplomas will be held at Whitelands Training College, by the kind permission of Rev. J. Fannthorpe, on Tuesday next, October 27, at 10 a.m. Persons who wish to be examined are requested to apply at once to the manager, 8 Great Queen-street, S.W.

At the recent meeting of the British Association at Aberdeen, Gen. Pitt-Rivers gave an account of the results of his work as inspector of ancient monuments under Sir John Lubbock's Act. About one-half of the owners of monuments scheduled have voluntarily placed them under the protection of the Act. Of those owners who refused, most contended that they were as well able to protect the monuments as is the Government; while a few demanded compensation in cases where the monuments were comprised in lands let on lease.

A good example of Francesco da Vannuccio da Siena has been presented to the Museum at Berlin. It is an altar front painted on both sides: on one is represented the Crucifixion, on the other the Virgin. The latter is on glass, and both pictures have a portrait of the donor. The work is dated 1370.

M. AUGUSTE RODIN's noble door for the Musée des Arts décoratifs, the design of which is inspired by Dante's *Inferno*, is to be cast in bronze by the process "à cire perdue." A credit of 35,000 francs will be opened for the execution of this work next year.

A MILITARY monument has lately been erected in Mount Auburn Cemetery (U.S.A.) in the form of a female sphinx, with the American eagle, in place of the traditional basilisk, upon her brow. What a fruitful source of discussion and controversy this curiosity of modern sculpture provides for the archaeologists of the remote future!

THE STAGE.

THE Browning Society's performance of *Colombe's Birthday* will take place on Thursday, November 18, at St. George's Hall, Langham-place. The general control of it is committed to Mr. Foss, the able stage-manager of "The Dramatic Students' plays. Miss Alma Murray has kindly volunteered to take "Colombe," and Mr. Outram "Valence." Mr. Foss, who is a son of the late well-known biographer of the English judges, will play Guibert; and Mr. Webster, Mr. Rudolf de Cordova, and other professionals and amateurs will complete the cast. The performance is a private one; no tickets will be on sale, but a few will be reserved for Browning students other than members and their friends. For these early application should be made to the hon. secretary, 29 Albert Hall Mansions, Kensington Gore, S.W.

MUSIC.

CRYSTAL PALACE CONCERT.

THE first concert of the thirtieth series took place last Saturday afternoon. Mr. E. Prout's symphony, no. 3, in F (op. 22) was given under Mr. Manns' direction. We noticed this clever work when produced at the Birmingham Festival in the month of August, and a second hearing strengthens our opinion. We spoke of it in very high terms, and are pleased to find ourselves in good company. It is somewhat unusual in an analysis of a work to find any personal expression of opinion; but Sir George Grove, at the close of his remarks in the programme-book, does not hesitate to say: "I am bound to confess that the symphony has given me great pleasure both to analyse and to hear." He probably refers to the Birmingham performance when he speaks of having heard it. The Palace performance must have given him still greater pleasure, for it was an unusually fine one. Mr. Manns seems to have spared no pains to give as faithful as possible a rendering of the composer's intentions. At the close the composer was called to the platform and enthusiastically cheered.

Beethoven's pianoforte concerto in G was played by Miss Fanny Davies. This young lady is, we believe, a native of Birmingham, and has studied under Mr. C. Hallé and M^{me}. Schumann. Her technique is most finished, and she interprets, besides, with rare intelligence and expression. Her touch is very delicate. She played the two interesting cadenzas written by M^{me}. Schumann. In the first movement Miss Davies was perhaps, at times, a little too quiet and reserved, but in her rendering of the other movements there was no fault to find. We shall hope to hear her again during the season. Mr. Arthur Chappell will surely give us an opportunity at the Popular Concerts. At the close of the performance she received enthusiastic applause. Later in the afternoon she played, with success, short solos by Schumann and Graun.

M^{lle}. Pauline Cramer sang the "Invocation to Hope" from Beethoven's "Fidelio," and took part with Miss H. Arnim and Messrs. E. Lloyd, Hirwin Jones, and Mr. Thorndike, in the quintet from "Die Meistersinger." The lady has a fine voice, but either from indisposition, or possibly nervousness, certainly did

not do herself full justice. The programme included an instrumental selection from "Die Meistersinger" and Cherubini's charming overture to "Lodoiska." J. S. SHEDLOCK.

MUSICAL PUBLICATIONS.

Carols for Use in Church. By R. R. Chope. (Metzler and Novello.) In a valuable introduction, by the Rev. S. Baring-Gould, an account is given of the origin of "cribs of Bethany" and of carols; also some curious details respecting the Mysteries of the middle ages, and the performances still to be witnessed in Belgium and Bohemia in connection with the feast of the Epiphany. The writer, remarking how frequently carols were formerly accompanied by a sort of "solemn sacred dance," reminds us that religious dances were in vogue among the Romans and the Druids. He might surely also have mentioned the Jews. David, we are told, "danced before the Lord with all his might." Mr. Gould believes that the doctrine of the Incarnation may be brought home to simple minds more powerfully by carol than by sermon or hymn, and strongly advocates its adoption in churches. The Roman Catholic church, as he himself has shown, made this discovery long ago. The music has been edited by Mr. H. S. Irons, late organist of Southwell Minster, and in the accomplishment of his task has shown taste and discretion. He has harmonised old melodies, and composed new carols, some, such as No. 36, very effective. Most of the music contributed by the Rev. R. F. Smith is exceedingly good—taking melodies and tasteful harmonies. There are some very old carols which will be found specially interesting. There are also useful notes in the index of lines, words, and music; but some might be shortened, and others omitted. For instance, we are told that No. 7 is the "author's special favourite"—not a matter of public interest. Again, such a note as "These telling words were expressly written for Mr. Brown's admirable carol" would read better without the adjectives.

Christmas Carols. Words by Mrs. Hernaman. Music by Mr. Alfred Redhead. Second Series. (Griffith, Farran & Co.) The melodies are simpler than those of the first series, and, as the carols are specially intended for children, more likely to please. The accompaniments, if not all that could be desired, show signs of improvement.

Music. By H. C. Banister. Twelfth Edition. (Cambridge: Deighton, Bell, & Co.) There is no need to praise this little volume; for years it has been the guide and friend of many a pupil and many a teacher. Its non-sectarian character has made it a universal favourite. We are not, therefore, under the necessity of pointing out its principal features and merits, but will say one word about the chief addition made in this, and also in the preceding edition. It consists of an appendix giving a *résumé* of the Day theory, which, as is well known, is the foundation on which Prof. Macfarren has built up his system of harmony. The number of examples given will be of great service to the student. Since the eleventh edition, a special exercise has been added on some of the progressions to which reference has been made. For the harmony examinations at the Royal Academy of Music, some knowledge of the Day theory is requisite; these additions are, therefore, most welcome. There are, besides, many minor emendations which show how carefully the work has been revised.

New High-School Music Reader. By Julius Eichberg. (Boston: Ginn & Co.) This book contains useful solfeggio exercises for alto and

soprano, and a numerous selection of songs in two, three, four, and five parts. Many of them are excellent, but we regret to see Beethoven's op. 48, no. 4, a song for solo voice, arranged for four voices, with alterations in the harmonies. Mendelssohn's "Es ist bestimmt," Weber's charming little Wiegenlied (op. 13, no. 2), and Schumann's "Fröhlicher Landmann" are still more roughly handled. There are plenty of good part-songs, and there is no excuse for such monstrous disarrangements.

J. S. SHEDLOCK.

MUSIC NOTES.

MR. A. J. ELLIS read a paper by Mr. A. J. Hipkins on the Spinnet, Harpsichord, and Clavichord, in the Music Room of the Inventions Exhibition last Wednesday evening. Mr. Hipkins, who is an authority in these matters, gave many interesting details respecting the history, mechanism, and characteristics of the most important of the group of keyed instruments that preceded the pianoforte. There were also musical illustrations. Mr. Hipkins played on a spinnet some pieces by Byrd and Bull; on a double-keyed harpsichord, pieces by Purcell, Handel, and Scarlatti; and on the clavichord, the favourite instrument of J. S. Bach, that master's Prelude in C, the first of the 48, and the Fantasia Chromatica.

READERS of Browning will be interested in a series of articles on the life and works of the Abbé Vogler (Abt. Vogler) by the Rev. J. H. Mee, Fellow and Tutor of Merton College, Oxford, which began in the *Musical World* of October 3. These articles will form a more complete record of the great extemporiser's doings than has yet appeared either on the Continent or here.

THE tomb of Victor Massé, the composer, has just been completed in the cemetery Montmartre, after the design of his friend, Charles Garnier. It is composed of a granite urn upon a pedestal, ornamented with a lyre, a crown of roses, and branches of palm, in bronze. The only inscription is the name of the musician, with the date of his birth and death.

MESSRS. NOVELLO announce a series of oratorio concerts at St. James's Hall, on the following dates: November 10, December 1 and 22, February 2, March 2, and April 6. The principal works to be given are Mackenzie's "Rose of Sharon," Gounod's "Mors et Vita" and "The Redemption"; Dvorak's "The Spectre's Bride," and "Stabat Mater." Liszt's "St. Elizabeth" will be produced at the last concert, and the composer has accepted an invitation to be present. Mr. A. C. Mackenzie will be the conductor.

MR. DANNREUTHER announces a series of concerts at Orme Square, on the following dates: November 5 and 19, December 3 and 17. The programmes, besides many standard works, include a new pianoforte Trio by W. Weckbecker, Dr. C. H. H. Parry's Quintet for strings (revised), and two new songs by Brahms.

MESSRS. BRINSMEAD announce a series of Symphony concerts at St. James's Hall, on November 7 and 21, December 5 and 19. The orchestra will be under the direction of Mr. G. Mount and Mr. W. Ganz. Mr. E. Prout's Birmingham Symphony will be given at the first concert.

HERR PEINIGER announces a series of interesting recitals of old violin and concerted string music at Steinway Hall, on October 27, November 10 and 24. A harpsichord, as well as a piano, will be used.

THE second season of the Hampstead popular concerts will commence on October 29. A spring series is also announced to commence on January 21, 1886.

TWO LEADING Illustrated Monthly Magazines.

A NEW VOLUME commences with the NOVEMBER PART of

THE CENTURY MAGAZINE.

Among the Contents are:

GENERAL GRANT'S DESCRIPTION OF THE BATTLE OF CHATTANOOGA. Being the Third of the Series of Four Papers General Grant contributed to the "War Series."

LIVING ENGLISH SCULPTORS. By EDMUND GOSSE. With Illustrations of the Works of Joseph Edgar Boehm, Thomas Brock, A.R.A., Charles B. Birch, A.R.A., George Tinworth, E. Onslow Ford, &c.

A PHOTOGRAPHER'S VISIT TO PETRA. By EDWARD L. WILSON. With Introduction by THOMAS W. LUDLOW, and Illustrations of Mount Hor, the Khazneh, the Altar of Baal, &c.

JOHN BODEWIN'S TESTIMONY.—I. By MARY HALLOCK FOOTE. A Novel of Western Mining Life, by the Author of "The Led Horse Claim."

DANGER AHEAD. By LYMAN ABBOTT. With a Full-page Engraving, by T. Johnson, of "The Socialist," from a Painting by Robert K. Miller.

THE UNITED CHURCHES OF THE UNITED STATES. By Prof. CHARLES W. PHILLIPS. Being the First of a Series of Papers by different Writers on "Christian Unity."

THE MYSTERY OF WILHELM RUTTER. By HELEN JACKSON (H. H.).

TYPICAL DOGS: Setters. Field Ethics and Training.—The Gordon Setter.—The American Setter.—The Irish Setter.—The Llewellyn Setters.—The Modern English Setter.

A STORY OF SEVEN DEVILS. By FRANK R. STOCKTON.

A CLOUD on the MOUNTAIN. By MARY HALLOCK FOOTE. Illustrated with a beautiful Frontispiece Picture, drawn by Author and engraved by T. Cole. &c. &c. &c.

Monthly, price Sixteenpence.

The Full Prospectus for the Coming Volume is now ready.

A NEW VOLUME commences with the NOVEMBER NUMBER of

ST. NICHOLAS:

A Magazine for Young Folks.

Among the Contents are:

LITTLE LORD FAUNTLEROY. Chap. I. By Mrs. FRANCES HODGSON BURNETT. [This, we understand, is the First Serial Story for Children that the distinguished Authors of "That Lass o' Lowrie's" has written.]

UNCLE and AUNT. By SUSAN COOLIDGE.

NEW BITS OF TALK for YOUNG FOLKS.—I. Magic Clocks, Part I. HELEN JACKSON (H. H.).

HOME-MADE CHRISTMAS GIFTS. ELLA S. WELCH. With Thirty-three Illustrations by the Author.

THE CANDY COUNTRY. LOUISA M. ALCOTT. With Seven Illustrations by E. W. Kemble.

PERNALLY CONDUCTED.—IV. Great Rome again. FRANK R. STOCKTON. Four Illustrations by Joseph R. Pennell.

TWO MIDDIES at EPHESUS. H. H. CLARK.

BARTY'S TURKEY. SOPHIE SWETT.

A NOVEMBER EVENING. CELIA TEATTER. With Frontispiece by Mary Hallock Foote.

THE BROWNIES and the BICYCLES. PALMER COX. Illustrated. &c. &c. &c.

Monthly, price One Shilling.

The Full Prospectus for the Coming Volume is now ready.

ST. NICHOLAS. The bound Volumes for 1885.

THE TWELFTH YEAR OF ISSUE.

In royal 8vo, cloth gilt, each 8s.; or the 2 vols. 16s.

Edited by MARY MAPES DODGE.

With Hundreds of Choice Original Illustrations.

Either of the Volumes are sold separately.

PART I. comprises NOVEMBER, 1884, to APRIL, 1885.

PART II. comprises MAY, 1885, to OCTOBER, 1885.

ST. NICHOLAS is now recognized as the most perfect embodiment of Amusing, Instructive, and Attractive Reading, as well as one of the most Beautiful Books that can be placed in the hands of Boys or Girls.

Its wealth of Stories, Serial Stories, Short Stories, Fairy Stories, and pages of large-type Stories for the Little Ones; the Hundreds of Pictures, serious and comic; the charming Rhymes, Jingles and Poems, and its general tone, alike recommend it everywhere.

ST. NICHOLAS for 1884-85 surpasses in the number and beauty of its Original Illustrations all its previous efforts. Its continued and increasing sale is due to the great excellence of its production. It is everywhere acknowledged by the Press to be quite in advance of all publications of its kind.

Cases for Binding the Volumes can be had, price 2s. each.

LONDON: FREDERICK WARNE & CO., BEDFORD STREET, STRAND.

WARD & DOWNEY'S NEW BOOKS.

In 2 vols., demy 8vo, with an Etched Portrait of Richard III., and other Portraits and Illustrations, 30s.

THE UNPOPULAR KING: the Life and Times of Richard III. By ALFRED O'LEGGIE, F.C.H.S.

"Richard III. is one of the most complex figures in history....The mystery surrounding many of his acts, deepened by the lack of manuscript records of the time, has made him a surpassingly interesting personage." *St. James's Gazette.*

In 2 vols., large crown 8vo, with an Original Etching of Charles II., and Eleven other Portraits, 25s.

ROYALTY RESTORED; or, London under Charles II. By J. FITZGERALD MOLLOY.

The World says:—"Mr. J. Fitzgerald Molloy makes a remarkable advance beyond his preceding works in style and literary method. His book, which is the best, may very well be the last on the subject. It ought not to be pleasant reading for a good many of our hereditary legislators, for it stirs the mad in the fountain whence their honours flow mercifully. But it has much merit, apart from the retrospective plain speaking about people who lived in habitual contempt of the laws of God and man, and enjoyment of all the world could give. The shrewdness, the cynicism, and the profound egotism of the Merry Monarch are dexterously conveyed in this picture of him, and the book is variously and vividly interesting."

VICTOR HUGO: his Life and Work. By G. BARNETT SMITH. 6s.

"Excellent....Mr. Smith tells the story of a brilliant but chequered career in his easy manner and with sympathetic discrimination." *Times.*

THE NEW NOVELS.

MIND, BODY, and ESTATE. By F. E. M. NOTLEY, Author of "Olive Varcoe," &c. 3 vols. [This day.]

WHERE TEMPESTS BLOW. By M. W. PAXTON, Author of "Miss Elveston's Girls," &c. 3 vols.

LESS than KIN. By J. E. Panton, Author of "Jane Caldecott," &c. 1 vol.

IN SIGHT of LAND. By Lady DUFFUS HARDY. 3 vols.

"A thoroughly pleasant book; and not only a pleasant book, but a very able book, well constructed, full of fine, vigorous characterisation and admirable description." *Academy.*

AS in a LOOKING-GLASS. By F. O. PHILIPS. 2 vols.

"In every sense a most attractive and remarkable novel." *Life.*
"A really remarkable story....It is at once a powerful tragedy, a portfolio of character sketches, and a diorama of society scenes." *Globe.*

THE SACRED NUGGET. By B. L. FARJEON. Second Edition. 3 vols.

"A story full of such touching passages as might well have come from the pen of the great American writer just mentioned [Bret Harte], and as ingeniously conceived as one of Wilkie Collins's tortuous plots." *Daily Telegraph.*

A PRINCE of DARKNESS. By FLORENCE WARDEN, Author of "The House on the Marsh," &c. 3 vols.

"Undeniably clever. The secret is extremely well kept, and the discovery of the mysterious Mr. Beresford's identity deserves to rank with the unmasking of Godfrey Ablewhite at the end of Mr. Wilkie Collins's 'Moonstone'." *Saturday Review.*

Next week, a NEW STORY for BOYS, entitled THE NEW RIVER: a Romance of the Days of Hugh Myddelton. By the AUTHOR of "THE HOVELLERS of DEAL," &c.

NEW AND CHEAPER EDITION OF THE POPULAR NOVEL, A MAIDEN ALL FORLORN. By the AUTHOR of "PHYLLIS," "MOLLY BAWN," &c. 3s. 6d. [This day.]

A CATECHISM of POLITICS for the USE of the NEW ELECTORATE. By FREDERICK A. HOFFMANN, Author of "Stray Leaves from Gladstone's Diary," &c. Cloth, 1s.

"An excellent little book....May be warmly commended." *Morning Post.*

Pictorial wrapper, 1s.; cloth, 1s. 6d. AN ENTIRELY ORIGINAL STORY.

HUNTED DOWN. By Max Hillary, Author of "Once for All," &c.

"An intensely interesting little story." *People's Journal.*

LONDON: WARD & DOWNEY, 12, YORK STREET, COVENT GARDEN.

season I will call for thee." All note-books are opened, and for some ten minutes the preacher lays down the lines of the rivalry between religion and morality as the basis of society. The one is now represented by Catholicism, the other, no longer by Protestantism, but by modern science. The exordium has been lengthy—we settle down for the main argument. Just a few incisive words—reconciliation has been attempted in vain—"it is a struggle for existence, a struggle which can only be settled by the survivance of the stronger," and the sermon abruptly closes. The judge, released like Felix from an unseasonable discourse, hurries off to open the commission, and we disperse, speculating how far this application of the text was designed, and what it really all meant. But that it meant something, that it was no mere empty eccentricity, but of a piece with the grave and pregnant irony of such worthies as South and Andrewes we never doubted. To the reader these discourses will appear essays. To the hearer they were in every sense sermons, delivered, as they were, with all the authority of an intellectual pontiff. The test lies not in the matter, but in the manner.

The later discourses (omitting the Assize Sermon) form two groups: III., IV., and V. upon philosophy in relation to university education, and VI., VII., and VIII. upon the relations of philosophy and religion. Though perhaps somewhat wanting in definite arrangement and method, they embody a consistent whole of opinion so far as it goes, and they offer so many occasions for comment and touch incidentally on such varied and interesting questions in theology, philosophy, history, and practical politics, that to deal with them in the limits of a single notice would be as presumptuous as it is impossible. Those who had the advantage of hearing any of them will be surprised to find how familiar many passages sound after the lapse of years, and every thoughtful reader will experience but the same feeling—one of painful regret that many a sentence was not expanded into a chapter and many a page into a volume. *Non omnis morietur*, for this *pars magna*—this scanty book, a small part indeed of him who was so much—is in itself, and compared to others, truly great, and great enough to live.

E. PURCELL.

The Greville Memoirs. Part II., 1837—1852. (Longmans.)

"I MIGHT," writes Mr. Greville in 1850, "I have very little doubt, write that which would be acceptable to one person or another, by recording my own personal experiences and the communications that I have with different people on different matters, which certainly are ludicrously miscellaneous. Some people like politics, some gossip, and almost all like political gossip. I have had within these few weeks consultations and communications on the most opposite subjects: men coming to be helped out of scrapes with other men's wives, adjustments of domestic squabbles, a grand bother about the Duke of Cambridge's status in the House of Lords, a fresh correspondence with Lady Palmerston about the *Times* attacking her husband, communication with Cardinal Wiseman about the troubled state of ecclesiastical affairs, and so forth" (iii. 365).

Mr. Greville's journals are, in fact, much such a medley of private and public affairs as this from the beginning to the end; and, if not quite what Louis Philippe said of them, "du St. Simon tout pur," quite fascinating enough without Mr. Reeves's hint of suppressed passages still to be published. This instalment, however, is less piquantly scandalous, less personal, and more exclusively political, than was the first part. Mr. Greville's own peculiar position, at once intimate with and apart from most of the leading politicians of his day, made him especially acquainted with the private and personal side of public affairs. Sometimes, though not perhaps very often, his journals contribute something substantially new to the history of these years, as, for instance, about O'Connell's attitude to the Irish Poor Law and Irish Municipal Bill. His intimacy with Sir James Graham, Lord Clarendon, the Duke of Bedford, and M. Guizot, gave him unusual knowledge of the details of political life, and he was almost regularly employed by the one side to convey information to, or to sound, the other. He was often a mediator, and sometimes a little of a meddler, between parties. It was an interview of his with the Duke of Wellington which directly led to the appointment of Sir Charles Napier as Commander-in-Chief in India, in 1849, and it was he who warned Lord John Russell of Palmerston's intention to receive Kossuth.

"Here am I," he says in 1841, "strangely enough established as the medium of communication between the present and the past Prime Ministers, and have got the office of smoothing away the asperities of royal and official intercourse. If I can do any good and prevent some evil . . . I shall be satisfied" (ii. 43).

The early years of the present reign were remarkable for the extraordinary disorganisation and indistinctness of political parties; and there seems, both in the leaders and in the followers, to have been an unusual want of principle. The period of radical reform was followed by one in which nothing was so much dreaded as the spread of Radicalism. Two other factors have great importance in the course of political events, personal consideration for the Queen, which kept Lord Melbourne in office long after his government had been defeated in the House of Commons, and horror on the part of both parties of a dissolution. In the elections of 1837 the country applications for candidates to the Reform Club were for Whigs not Radicals, and the Radicals were everywhere defeated. When Macaulay came back from India he found the Radical party "extinct, reduced to 'Grote and his wife.'" On the other hand, during the Canadian Insurrection, the great body of the Tories manifested a "selfish and unpatriotic spirit"; and a Tory-Radical of 1837 Greville defines as

"a politician, who for Tory party purposes endeavours to influence the minds of the people against the laws and their administration, not because he thinks those laws either ill-conceived or ill-executed, but because he thinks that the consequences of such popular discontent will fall upon his opponents, and that he can render the angry feeling instrumental to his own selfish or ambitious designs" (i. 19).

Of politicians, Lord Brougham in the

earlier years, and Lord Palmerston in the later ones, are the objects of Greville's express dislike. He never wearies of chronicling the mischievousness, restlessness, vanity, jobbery, and "lies" of the one, and the audacious unscrupulousness, the disregard of his colleagues at home, and the dictatorial meddling and bullying abroad of the other. He meets someone "not unlike Brougham, and would be very like if his nose moved about." He tells of his writing articles for the *Edinburgh Review* in court, instead of listening to the cases before him.

"His last appearance in public is in the shape of a correspondence with an Anti-Corn-Law Leaguer and Quaker of the name of Bright, which is long and not very intelligible either; but it is amusing, inasmuch as it exhibits the slyness of the Quaker, who contrives to baffle his angry 'friend' by a good deal of cunning, and rather disingenuous verbiage" (1843, ii. 151).

Lord Palmerston he dogs and exposes relentlessly. Though living on friendly, and even intimate terms with him, he writes of him without mercy. He does, indeed, full and even admiring justice to his ingenuity, his resourcefulness, his dash, and his courage. But again and again he tells how Palmerston sent off important despatches without informing Lord John Russell; how he received information and kept it to himself; how when passages were struck out of his despatches by the Premier, the Foreign Secretary coolly re-inserted them behind his back. Palmerston was extraordinarily imprudent. He would talk without reserve to any newspaper editor who chose to call on him, and thought himself safe so long as he did not commit himself on paper. He was so dilatory that in one year alone the Foreign Office spent £12,000 in chaises and four for messengers to overtake the mail with his private letters. He was so independent in his own office that Mr. Greville says he gave a "federal character" to the government; and yet his ascendancy over them was such that "they seem to think it quite natural and proper to leave the great question of peace and war to be dealt with by Palmerston as a mere matter of official routine."

From the Syrian question and the Spanish marriage to the arms sent from Woolwich to the Sicilian insurgents, his indecent pressure of the English indemnities on the Neapolitan government, the affairs of Pacifico and Kossuth, and the approval of the "man of December," Palmerston's conduct was a strange mixture of resolution and skill with personal spite and jaunty recklessness. No wonder the prospect of his return to the Foreign Office excited almost a panic on the continent. His formula for diplomacy was simple. "Never give up anything; insist on having the thing settled in your own way, and if they won't consent, let it remain unsettled." And yet, in spite of it all, he seemed impregnable in his office: he was the inevitable Whig minister. Well might Greville write (1851):

"Palmerston is out—actually, really, and irretrievably out. I nearly dropped off my chair yesterday afternoon when Granville rushed into my room, after the Cabinet had broken up, and said, 'It is none of the things we talked over; Pam is out; the offer of the Foreign Office goes to Clarendon to-night, and if he refuses it is to be offered to me.' . . . For nearly three weeks

a correspondence was going on between the Queen, Lord John, and Palmerston, of which not one word transpired, and which was known to nobody but the Duke of Bedford. None of the Ministers had the least idea why they were summoned—nor was it till they were all assembled in the Cabinet room in Downing Street, that they were apprised of the astounding fact that Palmerston had ceased to be their colleague. The secret was as well kept as Louis Napoleon's, and the *coup d'état* nearly as important and extraordinary" (iii. 426, 7).

It must be owned that Mr. Greville was a good hater. His judgment was acrid, and his mode of expressing himself pungent and bitter. He was not incapable of seeing a man's good qualities, but he was incapable of not seeing his bad ones. Lord John Russell he finds a "little" man; he marvels at Sir James Graham's timidity; and though he afterwards somewhat recants, and does him rather tardy and prolix justice, he is occasionally very harsh to Peel. He dwells on his coldness. He speaks of a report,

"no doubt put into his head by some of the low hangers-on of his party, and to which if he had a more generous mind, or a greater knowledge of mankind, or more free communication with other men, he could never have given one moment's credit" (1841, ii. 12).

In 1841 he says of the Queen :

"After dinner she spoke to Aberdeen and then to Peel much as she used to her old Ministers. I saw no difference in her manner. She talked for some time to Peel, who could not help putting himself into his accustomed attitude of a dancing-master giving a lesson. She would like him better if he would keep his legs still" (ii. 12).

And he tells the following curious anecdote of Peel on Arbutnot's authority :

"When he was at the Treasury one day, old Sir Robert Peel called on him and said, 'I am come to you about a matter of great importance to myself, but which I think is also of importance to your government. If you do not speedily confer high office on my son he will go over to the Whigs and be for ever lost to the party.' He told Lord Liverpool this, who immediately made young Peel Irish Secretary" (ii. 387).

And of Lord Derby he says :

"His extreme levity and incapacity for taking grave and serious views, though these defects may be partially remedied by the immensity of his responsibility, will ever weigh upon his character, and are too deeply rooted in it to be eradicated. His oratory is his *forte*, and without that he would be a very ordinary man . . . but the notion, which is generally entertained, of his being so high-minded and chivalrous is a mistake. He is not so in private life, that is, in his transactions on the turf" (iii. 448).

Disraeli he disposes of as having "nothing but the cleverness of an adventurer. Nobody has any confidence in him, or supposes he has any principles whatever."

There is a considerable account of Macaulay, whom Greville met frequently at Holland House and elsewhere. Someone asked Brougham in 1839 if Macaulay was to be Secretary for War. "No," said Brougham; "Melbourne would not consent to it. He would not have him in the Cabinet, and could not endure to sit with ten parrots, a chime of bells and Lady W——." He describes his voice as "unmusical and monotonous"; his face as "not merely inexpressive, but positively heavy and dull; no fire in his eye, no intel-

ligence playing round his mouth." At Broadlands he writes :

"Macaulay subdued in talking, but still talking more and better than anybody else. . . . Macaulay has been always talking. Never, certainly was anything heard like him. The drollest thing is to see the effect upon Rogers, who is nearly extinguished, and can neither make himself heard nor find an interval to get in a word. He is exceedingly provoked, though he can't help admiring, and he will revive to-morrow when Macaulay goes. . . . Macaulay went away the day before Christmas Day, and it was wonderful how quiet the house seemed after he was gone, and it was not less agreeable. Rogers was all alive again" (ii. 69, 71).

In fact, Macaulay could not help talking, whether people followed him or not. He met Ranke once.

"The professor, a vivacious little man, could talk no English, and his French, though spoken fluently, was quite unintelligible. On the other hand Macaulay could not speak German, and he spoke French without any facility and with a very vile accent. It was comical to see the abundance of his matter struggling with his embarrassment in giving utterance to it—but the struggle was of short duration. He began in French, but very soon could bear the restraint no longer, and broke into English, pouring forth his stores to the utterly unconscious and uncomprehending professor" (ii. 203).

For Macaulay, however, Mr. Greville had a genuine liking and admiration. He felt shame on comparing himself with those vast attainments and solid parts. But only for Wellington has he good to say without grudging, and without qualification. Not blind to his foibles or failings, still throughout these years it is the Duke's patriotism, his freedom from party bitterness, his magnanimous bearing to his opponents when the national interest required party considerations to be laid aside, which he chiefly, and with most pleasure, records. With the death of the Duke, and Greville's character of him, these volumes fitly close.

Though much too long (and a well-drawn description of character can hardly be too short), the characters in these volumes are exceedingly well done and very interesting. Peel, Melbourne, and the Duke, of the first class; the Hollands, Allen, and Buller, and the really terrible descriptions of Lords Sefton and Hertford, of the second, are the best. And yet the most interesting character of all is Mr. Greville's own, drawn unconsciously by his own hand, and always unfolding before us. How pathetically he bewails his idle life, how bitterly he speaks of his pleasures. No man ever could say more genuinely *video meliora*. How bitter his disappointment at the mishap to his horse "Alarm," which lost him the Derby and such winnings as would have freed him from racing, and have enabled him to quit his office and live as he wished—to help others. Unconscious, apparently, of his really remarkable talents, soured and disillusionised, he perpetually lamented his failings, and with growing years and infirmities sank deeper into the bitterness to which his mind was prone. His own picture of himself is but a woeful one. Let us hope he was unjust to himself, and was a happier man in his life than in his journals.

J. A. HAMILTON.

A Concise Dictionary of the English Language: Literary, Scientific, Etymological, and Pronouncing. By Charles Annandale. (Blackie.)

DR. ANNANDALE'S edition of Ogilvie's *Imperial Dictionary* unquestionably ranks among the three or four best of the existing dictionaries of the English language; but what is the exact place which it occupies in the list is a question which it would be difficult to answer, as it depends on the relative importance to be assigned to various kinds of merit. With regard to this *Concise Dictionary*, however, I have no hesitation in affirming that it stands first—and by a long interval—among all the one-volume English dictionaries hitherto published.

The word "concise" in the title of the present work must be understood chiefly as indicating its relation to the *Imperial Dictionary*, of which it is, in a certain sense, an abridgment. The actual quantity of matter which it contains is larger than that which is given in many dictionaries which extend to several volumes. Exclusive of the appendices and introductory portions, the book consists of 784 pages of three columns, the size of type being that known to printers as "pearl"; and the typographical arrangement adopted is such as to secure the utmost economy of space consistent with perfect facility of reference. The small print will, perhaps, be found objectionable by persons of weak sight; but the type is extremely clear, and the inconvenience caused by its minuteness will by most people be thought to be more than compensated by the resulting advantages—the admirably handy size of the volume and the unusual fulness of the information which it contains.

Although the etymological part is not the most important thing in a dictionary for popular use, it is naturally the first point which attracts the critic's attention, because it is in this department that the ordinary English dictionaries are most conspicuously found wanting. A very hasty examination of Dr. Annandale's work is sufficient to show that it is at any rate far superior in this respect to all its rivals. No doubt when Dr. Murray's great undertaking has arrived at its completion, a large proportion of the etymologies here given will have been proved to be untenable. But of course the book must be judged by the standard of the present state of philological knowledge; and the author's etymological remarks for the most part give evidence of sound scientific judgment and careful study of the most trustworthy authorities. Nearly all those of his derivations which I should myself dispute have been sanctioned by scholars of deserved repute, such as Prof. Skeat, Eduard Müller, and Littré, in whose company it is pardonable to err. There is, however, a considerable number of instances in which words in other languages are erroneously quoted as cognate with the English word. For example, *brink* is said to be "allied to Welsh *brynkyn* [*sic*], a hillock, from *bryn*, a hill." In a dictionary of this kind the insertion of merely cognate forms is apt to confuse the reader's apprehension of the actual derivation, and would be better dispensed with altogether. The "Hints on English Etymology" prefixed to the work deserve very high praise. In the compass of only

three pages the author manages to give a lucid and accurate summary of the mutual relationship of the Aryan tongues, and of the leading phonetic laws affecting the etymology of English words. Not only is Grimm's law described in some detail, with well chosen examples, but, wonderful to say, even Verner's law receives a passing mention, and in terms which are quite correct so far as they go.

It is a matter of course that this *Concise Dictionary* does not profess to include a complete vocabulary of the English language. The obsolete words, except such as are found in the Bible or in Shakspeare and other widely-read authors, are systematically excluded; and it is stated in the preface that other words have been omitted as unimportant or of rare occurrence. On the other hand, Dr. Annandale has inserted a large number of words, especially scientific terms of recent coinage, which are not found in any other dictionary. With regard to the inclusion of words of this kind in a popular dictionary, the rule should be to admit all such as are likely to be found in books addressed to general readers. It is mere waste of space to insert such terms as are used only in the scientific treatises where they are, or ought to be, provided with a much more complete explanation than any dictionary definition can supply. If Dr. Annandale has erred at all, it is rather in inserting too many scientific terms than too few; but the error is on the right side. The units of measurement in electricity and physics, *erg*, *dyne*, *farad*, *ohm*, *volt*, *weber* (not, however, *watt* and *joule*) are (I think justifiably) included. Of course, the explanations given of words of this class will often fail to convey any very clear idea of their meaning to the mind of a non-scientific reader; but they may be sufficient to enable him to understand the context in which they occur in a newspaper or magazine article, and it is something to be told to what science they relate and where further information may be sought respecting them. I note a few omissions of scientific terms which seem to have a fair claim to be included, such as *locomotor ataxy*, and the word *locomotor* itself, the substantive *factorial*, *potential* in its application in electricity, and *tangent* as denoting a trigonometrical function. Of the words belonging to the ordinary vocabulary, I believe very few that are worth inserting will be found to have been omitted. Perhaps *battels* ought to have had a place in the dictionary; and under *pedal-bass* there is a cross-reference to *organ-point*, but the latter word does not appear in its alphabetical place. The verb *boycott* is very properly inserted, as it seems certain to live, though at present it has not quite emerged from the probationary stage indicated by the use of the initial capital.

The definitions, for the most part, seem to be as good as possible, Dr. Annandale having, so far as his limits of space permitted, retained the encyclopædic character possessed by the *Imperial Dictionary*. In the definitions of names of plants and animals, however, it would have been better if the corresponding scientific names had been given as an aid to identification. This is especially desirable in the case of the popular names of plants, which are often applied to several different species having no botanical affinity. Now

and then I think Dr. Annandale carries the "encyclopædic" principle a little too far, as in the article "Darwinism," where he devotes twenty lines to an exposition of the leading points of the Darwinian theory.

The only important deficiency in this dictionary appears to be the want of any systematic indication of what may be called the *status* of words—that is to say, whether, for example, their use is confined to familiar or playful conversation, or whether they belong to the vocabulary of poetry or elevated composition. If only for the sake of "the intelligent foreigner," whose interests ought to be in some degree considered in an English dictionary, it is desirable that some intimation should be given that "pate" is not an equally dignified word with "head." In Smart's English Dictionary (1840), an excellent book for the time at which it was published, a good deal of information of this kind was supplied by the use of typographical signs, though the manner in which it was done would admit of some improvement. Dr. Annandale uses a special mark to denote obsolete words, but it is prefixed only to the catchwords, obsolete senses and phraseological combinations being left unmarked. The use of *indifferently* for "impartially" (familiar from its occurrence in the Prayer-book), and the old meaning (really the only correct meaning) of *ingenuity* as a synonym of "ingenuousness," are noted in the definitions of the respective words, but there is nothing to show that they are now obsolete. Similarly, under *abode*, the phrase "make abode" is given without any hint of the fact that it is not nineteenth-century English.

The notation employed for indicating the pronunciation is simple and intelligible, the "key" being, as it always should be in a pronouncing dictionary, repeated at the foot of each page. The pronunciations given seem, so far as I have examined them, to be in accordance with good usage.

On the whole, it may be fairly said that for all the ordinary purposes of an English dictionary—so far as illustrative quotations or explanations of obsolete words are not required—Dr. Annandale's work will be found amply sufficient. The book reflects the highest credit on the author, and also on the publishers, who are entitled to a special compliment for the unusually handsome and substantial binding in which the volume appears.

HENRY BRADLEY.

Where Chinese Drive: English Student-life at Peking. By a Student Interpreter. (W. H. Allen.)

WITH a frankness which leaves nothing to be desired, the author of this work explains in his Preface the object with which his book was written. "Partly," addressing "dear S—," he says,

"to satisfy this desire of yours for some account of my states of being during the last two years, and partly to show you how mistaken you were in wishing for anything of the sort, I send you this. It is but a rough sketch, such as the special artist, when in a hurry, might despatch from the seat of war, with a 'here are houses,' or 'insert men and boys,' scrawled over his blank spaces."

After such an announcement it is only fair

that we should accept the author's own estimate of his work; and this we can conscientiously do. Our only regret is that he should have sought to enlist the sympathies of a larger public than that he first desired to interest. One knows the cold reception commonly given to the narrator of personal reminiscences of an everyday character in a mixed company of strangers; and we cannot but think that the author of this work has run the risk of sharing a like fate by desiring to take the public into his confidence. Not that the book is devoid of interest, but the interest is of too subdued a kind to make it generally popular.

A quarter of a century ago such a work as the present would have been hailed with acclamation, but Peking has of late years been so often described by travellers and others, that our jaded appetite requires some fresh ingredient in the story to stimulate it afresh. This the Student Interpreter does not profess to supply, but instead he gives us an account of the daily life of himself and his fellow students. As their *raison d'être* at Peking was the study of the language, they were expected each day to devote six hours at least to the course of instruction provided for them. At other times they amused themselves as their inclination guided them. As they were numerous enough to make a society of their own, they were comparatively independent of outside acquaintanceships. They had a fairly good library, and living being cheap, they were able to indulge in amusements which are beyond the reach of young men in England with incomes of £200 a-year. Their mess was a marvel of economy. "On first joining the mess the student pays an entrance fee of twenty-five dollars. We contracted with the cook to supply us with breakfast, tiffin, and dinner at 50 cents—1s. 10d. or 1s. 10½d. a day." House-rent, though this item does not enter into a student's expenditure, is equally moderate, between £400 and £500 a year only being paid for the English legation, which forms a magnificent series of buildings, covering several acres of ground. Before the war of 1860 this *Fu* or palace belonged to the Duke Liang; and although many of the buildings have been adapted to English requirements, they yet bear much the same outward appearance they did before they changed owners.

In summer the students, in common with most of the foreign residents, betook themselves to the mountains on the north of the capital, where in large Buddhist temples they found a grateful relief from the heat and dust of Peking. With the fear of periodical examinations before their eyes, idleness, whether in Peking or on the hills, was impossible, and the results of late years have certainly shown that the system pursued with students is favourable to scholarship in Chinese. For a detailed account of English student-life at Peking we must refer our readers to the work before us, and we will now merely add that the volume is handsomely printed, and is illustrated with some curious examples of Chinese block-printing.

ROBERT K. DOUGLAS.

Royalty Restored; or London under Charles II. By J. Fitzgerald Molloy. (Ward & Downey.)

THE reign of Charles II. has been unfairly treated by historians. A full and accurate investigation of what took place during the quarter of a century that Charles ruled has never been given to the world; but in its place we have more books than we care to count, which deal with the sayings and doings of wicked men and women, who had openly abandoned those restraints which the church and the world have alike agreed are most needful for keeping society in equilibrium. Another class of writers, less numerous, and even less useful, are those who have endeavoured to extract arguments in favour of popular government from the misdeeds of a time of great intellectual ardour and wild social experiment. The notion that we can gain any direct advantage in our endeavour to solve the highly complex political problems of the present from a study of a time when almost everything was in a state of flux, has been abandoned by serious thinkers; but the charm—for it has a charm to some people—of the wild license of that strange court seems to act with sufficient force still to induce competent writers to retell the old tales, and a multitude of people to read the books in which they are contained.

Mr. Molloy's volumes make no pretence of being a history in the only sense in which we should consent to use the term, but they are amusing gossip; and we are quite willing to concede to him the merit, such as it is, of presenting the court beauties to us once again in a manner at least as attractive as we have ever met with them before. We find ourselves in a strange company, where the moral order is suspended, and its place taken by something not so cruel as the contemporary orgies in France, and very far less vulgar than the profligacy of the German courts, but having very little that can commend itself to the imaginations of those who are accustomed to make the common distinctions between right and wrong. The strange thing about it all is that the women, abandoned as they had become, were, it would seem, much less depraved in heart than their male companions. There was not one of the *hetairas* about the court, whose name has come down to us, who would not have shrunk from committing the crimes with which Anthony Ashley Cooper or George Villiers were stained.

How this strange reaction against strictness of life is to be accounted for is one of those problems in history which awaits solution. That the sternness of the Puritans was the cause of it all no one who has more than the merest surface knowledge of the times believes; that it arose from the corrupt training which the king and a few other refugees had received in France and elsewhere is an absurdly insufficient reason. We ourselves believe that the orgies of the latter part of the seventeenth century were the outcome of thoughts which had long been agitating the English mind, and that if the Restoration had never taken place that there would still have been a breakdown in the moral order as it was then taught and understood. It does not require any extraordinary knowledge to see that the instincts of those who had

accepted the Reformation were for two or three generations as completely under what may be called the Catholic-Feudal influence as if the breach with Rome had not occurred. This could not last long. Feudalism, which had moulded the moral faculties almost as much as the Church, had fallen to pieces, and its influences, so far as they remained at all, were now on the side of laxity. The Catholic system of teaching morals on authority had only died by slow degrees; but many of the most staid and orthodox of the Puritans had taught theories as to the foundation and even the superstructure of moral obligation which might be used to justify the wildest excesses that human beings have ever fallen into. Lawrence Clarkson's little pamphlet, called *The Single Eye*, published about the time of Cromwell's death, contains suggestions made in the purest good faith, which, if taken as a guide for action, would destroy society. Another reason for this gross laxity, which Mr. Molloy and others have found so picturesque, is, we believe, the fact that the religious and political convulsions of a century had implanted in some minds an ideal of female excellence far different from that with which the English world had been content since it became Christian. Martha, not Mary, had been the ideal of family life; and it is not wonderful that when the human mind was loosed in part from its fetters that the "Mere-trix speciosa et grata" of the Vulgate should have to men who revolted against the past attractions superior to those of the married drudge, whose highest functions were then thought to be the ruling of servants and the ordering of children aright.

Admitting, as we are fully prepared to do, that Mr. Molloy's book will be found entertaining by a large section of the reading public, and that he really deserves commendation for the picturesque way in which he has described the Plague in London and the Great Fire, we cannot pardon him for not being more severe on Charles II. than he has been. His treatment of the Queen was most abjectly shameful, and no words that we may use are fitted to describe the position of a king who would permit his personal friends, whom he knew to be innocent, to be done to death because the rabble believed in the words of Titus Oates. Mr. Molloy may rest assured that the scandals he has repeated as to the private character of Oliver Cromwell are pure fiction. A little research would convince him, we think, that Heath is not a historian to be relied upon. We are also really sorry that he should have reproduced the calumny that Beck [Rebecca] Marshall, the actress, was a daughter of the well-known Stephen Marshall, the Puritan preacher. If he will consult the late Col. Chester's *Registers of Westminster Abbey* he will find that the learned genealogist demonstrated the story to be impossible. Mr. Molloy gives a description of the "Protestant Flail," the instrument with a handle that "resembled a farrier's blood-stick," which was joined by a strong ligature to a piece of hard and heavy wood. We are not aware that a single specimen of this murderous instrument is now in existence. There is, however, an engraving of it in a place where few would be likely to look for such a thing. The third plate in the *Account of Roger Earl of Castlemaine's Embassy to the Pope* (1688);

has on it, among other allegorical symbols, a naked male figure, labelled "Rebello," in whose hand is one of these instruments answering precisely to Mr. Molloy's description.

EDWARD PEACOCK.

NEW NOVELS.

The Prophet of the Great Smoky Mountains. By Charles Egbert Craddock. (Chatto & Windus.)

Voices crying in the Wilderness. (Macmillan.)
Dedham Park. By John Bradshaw. In 3 vols. (Sampson Low.)

Jephthah's Daughter. By Jane H. Spettigue. In 3 vols. (Fisher Unwin.)

A Girl in a Thousand. By Jean Middlemass. In 2 vols. (Chapman & Hall.)

St. Austin's Lodge. By Agnes Giberne. (Nisbet.)

Nigel Lennox of Glen Irvine. By L. N. Hyder. (Hodder & Stoughton.)

His Good Angel. By Arthur Ready. (Maxwell.)

How far the problems of Duty and Destiny are capable of treatment in fiction is a matter of controversy; but the fact that six of the eight novels in the present list are concerned mainly or largely with these problems may fairly be regarded as a striking testimony to the interest which they command. In *The Prophet of the Great Smoky Mountains* they have all the advantages, from the artistic standpoint, that mountain scenery and wild humanity but little removed from savagery can give. Mr. Craddock's work may here and there recall Mr. Bret Harte, especially in his earlier sketches; but Hiram Kelsey, the spiritual instructor of an outlying and all but lawless community of the United States, is a perfectly original character, and indeed superior to any that Mr. Bret Harte has drawn. The wrestlings of this strange being with his own passions, his still sorer wrestlings with his own unbelief, his confession of the tragic failure of his life and creed before his complacent or hypocritical colleagues and his congregation, his securing the martyr's crown by dying in the place of his worst enemy, constitute a most powerful tragedy. Next to Kelsey as an object of interest is Dorinda Cayce, an untamed girl, whose relatives are engaged in illicit distillation, and who, owing to the prophet's indirect influence, rejects, as essentially unworthy, her two lovers—the jealous Rick Taylor and his more prosaic rival Amos James. As a series of positively lurid sketches of scenery, character, and life, all harmonising with each other—for it can hardly be called a novel—*The Prophet of the Great Smoky Mountains* surpasses anything of the kind that has yet come from America.

Voices crying in the Wilderness is certainly a remarkable and original story, or parable. Arthur Vane, who is revealed in the first chapter as a worshipper of the sun "on a flower-starred Pacific island," is transferred on the death of his father, who is surely the most eccentric of English gentlemen, to the custody and house of his uncle, a cultured rather than soft dean. The bulk of the story is devoted to the conflict in Arthur's own

mind between Sun-worship and Christianity—a conflict which has its effect upon all with whom he comes in contact, his uncle, his uncle's wife, Lady Agatha, and his half-cousin and kindred spirit, Ernestine Lester. An engagement into which Arthur drifts with his cousin on his mother's side, Phoebe Brown, a pretty, shallow-hearted coquette, whom he discovers in the position of a nursery governess, is the one incident in the story which is not suffused with "high seriousness," and it is, therefore, welcome as a relief. Such as it is, this parable is told with a power and earnestness which recall Mrs. Oliphant. The effect which cathedral music has upon Arthur Vane seems in some eerie but soothing fashion to communicate itself to the reader.

Mr. Bradshaw would probably not deny that he has written *Dedham Park* in the "squares" interest, to defend the Church against infidelity and "Ebenezer," and the rights of property against socialism. We would rather have been spared long controversies in which a rector, a strong-minded lady, and a successful banker who dabbles in literature and philosophy, take the leading parts. Even less necessary to the plot-interest of *Dedham Park* are political digressions like one which is introduced to prove that Tiberius Gracchus "was an ignorant, vain, and self-sufficient man." Yet, if Mr. Bradshaw's country society is taken precisely as it is offered to us, and if all his politics and half of his descriptions of scenery are skipped, *Dedham Park* will be found a pleasant story, and very much more suggestive of culture on the part of the writer than the enormous majority of modern novels dealing with the same side of life. Sir George Braidwood as a modern Squire Western, given to strong opinions and prejudices, but not to strong liquor, is a really admirable portrait, and so is his political opponent, Andrew Jardine, best of fathers and *parvenus*. Their daughters, Nora and Winifred, are also very charming girls, although their love difficulties proceed on decidedly conventional lines. Mr. Bradshaw evidently intended to score a great success by his sketch of "blind Johnny" Wingfield, who is, in his own humble way, a bulwark of the Church; but here he allows—as it seems to us—his ecclesiastical sympathies or prejudices to interfere with his art. The parochial squabbles of the modern sort caused by High Church practices and School Board innovations give a favourable opportunity for the display of Mr. Bradshaw's peculiar humour.

The moral of *Jephthah's Daughter* is that it is in the highest degree dangerous to read, or even hear about, the correspondence column in our respected contemporary, the *Spectator*. Hester Carnesew is fascinated by some letters that have appeared there about "euthanasia," and provides her Uncle Samuel with the happy despatch in the shape of a laudanum bottle. She then exiles herself from England, and appears in Cape Colony as Lucy Browning. She falls in love, and her lover ascertains that Uncle Samuel died of a fall among rocks, and not of Hester's laudanum. There is in *Jephthah's Daughter* a good deal of irregular power; but there is also in it far

too much of rather crude speculation, and the dialogue interrupts the narrative sadly.

A Girl in a Thousand is an unpleasant and tragic story, and not altogether worthy of its author. It is, at all events, too cruel of her to make Phyllis Knight and Irene Stanhope each marry the wrong man. In recent fiction there has probably been no more disagreeable incident than the deliberate sacrifice by Henry Stanhope of his daughter by marrying her to a profligate Russian Prince to save the revelation of the seamy side of his own life. Phyllis's lot is not so hard, for Tom Chilton, whom she marries to oblige the Stanhopes, is a good, if plain, man, and, as likely as not, makes a better husband than his rival, Geoffrey Stanhope, would have done. But it is not easy to forgive Miss Middlemass for marrying Irene to Sergius Lenskoff, even although, "after a three years' probation, when an heir was born to his vast possessions, she laid her hand in his, and promised to forget the tale of depravity that had been revealed to her."

St. Austin's Lodge is a very good example of the author's now well-known style. It depicts the every-day life of the Berkeleys and the Beverleys, two middle-class families in the country, in all its social and moral details. Sometimes the religious purpose of the book seems to be obtruded upon the reader; and is there not a suspicion—to say the least—of farcicality in this argument in favour of orderliness addressed to Una Berkeley, the pretty hoyden of the story, who is perpetually getting herself and others into scrapes?—

"One little particular—not really little—tells volumes: I mean the neatly folded grave-clothes, on the morning of the Resurrection. Even in that supreme moment, they were not flung down in a careless heap. There could not be disorder in connection with Him."

But Miss Giberne very seldom strains her "purpose" to such an extent as she does here. Her strength lies in unpretentious photography; and, all things considered, that strength is not to be despised, even although it must be allowed that she takes her characters in too many attitudes. John Berkeley, whose nieces are the heroines of this story, and a great source of trouble to himself, is a very good study of a precise and autocratic uncle, who is called upon to play the part of a father, and makes a very good father indeed when he is softened by a misfortune brought upon him, in great measure, by his own carelessness. Emlyn Beverley, who marries Violet, the eldest and best disciplined of the Berkeley girls, is somewhat too serious a lover, but he makes a most self-sacrificing doctor. Una, unconventional and undisciplined, will, however, be a more general favourite than Violet, although she very nearly succeeds in getting a number of her friends, as well as herself, killed by a madwoman, and scandalises her future brother-in-law by being out at strange hours and in strange places. *St. Austin's Lodge*, even if it be a trifle too long, has, for stories of the kind, the virtue of reality, which atones for many faults. It is carefully written, and is in all respects a conscientious performance.

The courtship of Nigel Lennox of Glen Irvine, an elderly Scotch millionaire and con-

tractor, and Agatha Hastings, a literary and philanthropic spinster of a certain age, is rather a dreary affair. "The King of Bricks and Mortar," as the young humourist of the story styles Nigel, preaches and sprawls too much; but he is in every respect a worthy man. Mr. (or Miss) Hyder makes him perfect master of a particular variety of the Scotch dialect; and whenever he flags either in his Scotch, his magnanimity, or his racial humour, the ball is taken up and kept rolling by a comic secretary of the name of Jock Micklejohn, who is not without his points of affinity to Dominie Sampson. Worldly selfishness of the sort to be found in the Midlands and Highlands respectively is presented very skilfully in the portraits of Mrs. Langhorne and Mrs. Cheyne. The religious element in this story—apart from Agatha, who is religion itself projected into action and literature—is contributed by the Rev. Malcolm Cheyne, a curate who is cured of Agnosticism by everybody's guardian angel (surely it is superfluous to inform us that "Agatha was thoroughly well up in the subject of Christian evidences"), and by pretty Blanche Langhorne, who is cured of frivolity to make a model parson's wife. *Nigel Lennox of Glen Irvine* is, from the ordinary secular point of view, a good and well-written story, and is greatly superior to most books of its class.

The society of poisoners, welshers, actresses, and hard drinkers, is not of the pleasantest sort; but a whiff of Bohemia is not unwelcome after a course of novels with a purpose. Mr. Ready certainly supplies this whiff in *A Good Angel*, which is a very fair example of the class of fiction which owes a good deal to Miss Braddon and not a little to Mr. Hawley Smart. It has a retelling plot, and is full of action. Finally, Virtue triumphs all along the line. The chief villain commits suicide by swallowing prussic acid, and his best—or worst—lieutenant is nearly murdered on the race-course as a welsher. The hero, a young peer of good instincts but weak will, is saved from dipsomania and slow poisoning to become a pillar of the House of Lords and the husband of his cousin and "good angel," Esther Langton. Mr. Ready might, without disadvantage to his story, have softened the repulsive scene, in which the blackguard brother of the feeble Lord Ellaby pours into Esther's ear the hideous falsehood that her mother was not married to her father. A very pleasant character is Major Pendlebury, who watches over Esther while she is trying to make a living as a member of a comic opera company.

WILLIAM WALLACE.

BOOKS OF TRAVEL.

Jottings from the Pacific. By W. Wyatt Gill. (Religious Tract Society.) These "Jottings" could only come from the pen of a writer who, like Mr. Gill, combines considerable culture with long and intimate acquaintance with the South Pacific. They include visits to remote groups of islands at a time when native customs had been but little changed by European influence; notes on natural history, the study of which, as his former books show, the writer has diligently cultivated; and some curious specimens of the style of the native teachers, who, ever teaching by parable or proverb, draw quaint and pointed illustrations—

not always without a dash of incongruity—from objects, or customs, or events, familiar to them. Coral islands have often been described before; but Mr. Gill adds much to the value of his pictures by his detailed and interesting description of the more characteristic trees of these islands, and of the parts they play in the domestic life of the people. Among his "Zoological Notes" are some curious bits of information on the growth and habits of the swordfish; on the *Lopaphus cocophagus*, the destroyer of the cocoa-nut trees, dreaded in these islands almost as much as the locust in the old world; on robber-crabs and sting-rays; and on clam and other fishing. His thorough acquaintance with the ways and thoughts of the people, and with their history and traditions, gives much value to the stories he quotes from the lips of his native friends. The extraordinarily rapid conversion of these cannibal savages into, in many cases, devoted Christians, and, at the least, into decent and orderly—not to say humdrum—citizens, is a remarkable story; and it will always remain a matter of surprise, as well as regret, that the influences which could do so much for the race, have been unable, as a rule, materially to arrest its decline, even under the most favourable circumstances. But, indeed, to what extent, or for how long, such decline had been in progress before the discovery of the islands must be in most cases a matter of conjecture. A curious philological observation made by Mr. Gill is the use—confined apparently to the Ellice group of islands—of the word "atoa" (all), for ten (i.e., all the fingers).

Australian Life Black and White. By Mrs. Campbell Praed. (Chapman & Hall.) Mrs. Campbell Praed gives an amusing account of her early days passed in what was then the small penal colony of Moreton Bay, now developed into Queensland. Her parents settled there when she was seven or eight years old, and she grew up in the society of rough squatters and stockmen, with native children for playfellows.

"My childhood," she writes, "albeit that in some respects it was an exceedingly happy one, has always been a kind of nightmare to me. I feel occasionally that Nature having allowed me to develop certain faculties which might have been of service had I remained in my original condition of barbarism, Fate defrauded her by casting my lines in pleasant and civilised places. I still walk warily in long grass lest a death adder should be lying close to my feet. I have not ceased to dream that I am on an out-station besieged by blacks; and during many a night do I fly through the endless forests and hide in stony gullies, pursued by my aboriginal as ruthlessly as was ever De Quincey by his Malay. Conventionality is a burden to me, and society a penance."

Her life was one of adventure, and she was familiar with all kinds of horrors. Under the guidance of two black boys she witnessed, from a place of concealment, a *Corroboree* which was the forerunner of the wholesale massacre of a settler's family. Mrs. Praed gives us a trifle too much of her neighbours and their love affairs. The little subsidiary novelette relating to the courtship of Robina Daring and her tragical end fills one-third of the book, and would have found a better place in a magazine. We do not, however, wish to find fault, and are glad to recommend Mrs. Praed's book as both pleasant and interesting.

Wild Life in Canara and Ganjam. By Gordon S. Forbes. (Sonnenschein.) Canara and Ganjam, it may be as well to state, are two districts of the Madras presidency far removed from one another, and not less far removed from the capital. Canara is on the Malabar coast and contains some of the finest scenery of the Western Ghats, including the unrivalled (but little known) waterfall of Gairsappa. Ganjam

is on the Coromandel coast, bordering the Bengal province of Orissa. Here is to be found the wildest portion of the Eastern Ghats, and the picturesque Chilka Lake. Mr. Forbes, who is a retired member of the Madras Civil Service, is therefore justified in entitling his book "wild life." He tells us about the strange races he had officially to deal with, and about the shooting expeditions which occupied his holidays. The whole is pleasant reading, and stands apart from the common books of Anglo-Indian life. One sporting incident will probably be new to most. The author came across a gipsy tribe who train tame antelopes to catch wild ones by means of an entanglement of nooses round their horns and bodies. The tame antelope mixes with a wild herd, challenges a buck to fight until he is caught by the horns in a noose, and so holds him till the men come up.

Visitor's Guide to Siena and San Gimignano. By J. L. Bevir. (Stanford.) For the swiftly passing traveller a Baedeker or a Gsell-Fels is all very well. The visitor, however, who prefers to halt for considerable periods in this and the other town of interest soon finds that compendious essences of information were never intended to supply nutriment for him. Any person contemplating a visit to Siena of more than a week's duration (and who that has the time to spare, could spend it more profitably?) will do well to provide himself with Mr. Bevir's Guide. Not that it is by any means an ideal book—it is printed in too large type on too thick paper, and would be heavy and uncomfortable in the pocket—still it is better than any existing Italian guide-book to Siena. The first chapter, of course, deals with the history of the town, and seems accurate in names and dates; but the author would have done better if he had regarded the subject from a different point of view, and made it his chief business to show how the developments and retrogressions of the art-schools of the town were the outward and visible signs of social and political movements. The next chapter deals with Siennese artists, and again handles them accurately enough, but in a rather perfunctory fashion. It is a catalogue of artists, not a history of a school of art. The connection between the various artists should have been more clearly shown. The growth of the school should have been indicated as the growth of an organic body. The influences brought to bear by the Florentine and Umbrian upon the Siennese schools, and the effect of the artists of Siena upon those of Umbria and other localities, should have been briefly, but plainly, pointed out in the right places. The "Guide" part of the book is a great deal better—is, in fact, good. It contains plenty of information, and reveals the existence of many objects of interest about which the ordinary guide-books are silent. When Mr. Bevir issues a second edition of his little "Guide" (as we hope a brisk demand will enable him to do), he will have the opportunity of correcting one unpardonable omission: that of an index of artists' names with references, not to the pages only where their works are mentioned, but to the localities where those works may be seen.

A Ramble round France. By J. Chesney. (Cassell.) The design of this little work is to give to a child in a pleasant form some idea of the geography and history of France, and to arouse the desire for further research. If read with a map, and with the aid of a teacher to point out somewhat more distinctly the general physical features of the country, a very fair notion of the geography and of the history of the country, and of its chief historical towns, may be gained from it. The illustrations are numerous and attractive. All are not of equal merit, but those of the Pyrenees and of the

Jura are especially good, and will greatly assist the imagination of the young reader. Unusual attention is given to modern history, and the distinction between communism and the commune, so often confused by English writers, is very well put. On p. 25 is a misprint of Henry II. for VI., and the statement (p. 42) that the head-kerchief worn in the south is tied over a white cap is certainly inexact: it is knotted "in many curious and intricate ways," but never in that fashion. This would be an excellent gift-book for boy or girl previous to a tour in France.

Reminiscences of Berlin during the Franco-German War, 1870-71. By Shephard Thomas Taylor. (Griffith, Farran, & Co.) Mr. Taylor, like many another uncultured, light-headed, good-hearted medical student, worked for eighteen months or so in the medical school at Berlin, and that just at the war period. He seems to have done the Berlin sights, made excursions and long walks, and explored the more accessible beer gardens. And so, having already proved by a previous literary failure his incompetence as a writer, he now naturally feels bound to compose a treatise on Berlin. We may as well go through the contents. Chap. i., "The University"—about which a few details, probably from official books, are worked up with stupid gossip. Among other student tales is given a disgusting legend ("if not true, certainly well invented," he says) about Prof. Frerichs and his family dining by mistake on a diseased human liver. Chap. ii., "The Environs"—Rosherville and her rivals, clearly filtered from a guide-book. Chap. iii., "The Spreewald," and Chap. iv., "The Spree"—two little excursions made by the author, uninteresting in themselves, and most feebly narrated. In Chap. v., "Royalty"—almost every member of the Imperial family, alive and dead, is assailed by gross impertinence, or patronising familiarity. No doubt a cat may look at a king, but at least she keeps her reflections to herself. Some of Mr. Taylor's victims are what we call ladies, or, as he would say, "fine fleshy women," or "representatives of the Cyprian deity." Luckily for him their husbands and brothers are too highly placed ever to hear of, or resent, his rude playfulness. So ill-informed is our second-hand Court chronicler, that news of the death of Prince Frederic Charles has not yet reached him, else we are sure he would have suppressed his flippant and unfounded speculations on the Prince's married life, of whose daughters he goes on to observe, "I arranged a marriage in my own mind between the eldest and the Duke of Edinburgh; but *l'homme propose*" [meaning, of course, Mr. Taylor, not the lover], "*Dieu dispose*, and so the Duke married another Marie," &c. "But although the Princess Marie did certainly disappoint me . . . her younger sister Louise gratified my feelings by marrying the Duke of Connaught, so that I had my own way after all to some extent." Chap. vi., "The War"; chap. vii., "The Five Millions"; and chap. viii., "The Three Emperors at Berlin," are much more solid—mainly borrowed from the journals, no doubt; but many reflections, if rather hackneyed now, are well selected. Chap. ix., "The Burning of the Kaiserhof," is a funny inspiration—sixteen pages of the ordinary penny-a-line description of a big fire, evidently worked up from the newspapers. It doubtless impressed the author as a spectator, but otherwise it was a very ordinary (non-fatal) fire indeed. Chap. x., "Celebrities"; including Bismarck, Moltke, the advertising quack, Hoff, and the English clown at the circus. The remaining chapters on the Jews, the Dogs of Berlin, Philology, Etiquette, Matrimony, Justice, "Alimentary," and Recreation, contain little information, and that familiar to everybody, and a great deal of nonsense,

which is sometimes amusing enough. Mr. Taylor deserves little indulgence, though personally we rather like his airy, foolish, goodnatured obtuseness. He has already been warned, it seems. Owning that he "writes books which nobody reads except himself, and which the malignant critics pronounce incomprehensible trash," and mourning that "plain English no longer goes down with the British public or the reviewers, whatever pearls of truth may be hidden therein," why does he not give it up? We will quote one specimen of the plain English, marking the pearls by italics:

"The River Spree bears a certain *general resemblance to the Thames* in its course through the city of Berlin. . . . *Like the latter*, it meanders from west to east, or more correctly, from east to west, dividing the city into a northern and a southern half, of which the latter is the larger and more important of the two, containing, as it does, the celebrated Unter den Linden, &c., and the Thiergarten, which corresponds to our Hyde Park both in situation and aristocratic dignity. . . . In the city itself the Spree is a truly mean and contemptible stream, not presenting a vestige of the grandeur of Old Father Thames."

The Land of Rip Van Winkle: a Tour through the Romantic Parts of the Catskills, its Legends, and Traditions. By A. E. P. Searing. (Putnam.) The book before us is not exactly a guide-book and not exactly a story-book, but it partakes of the character of each. A tourist party, in the mystic region which Washington Irving made his own in literature, form the slight framework required for the narratives, historical and legendary, and for descriptions of scenery and places, which the author is pleased to give us. There is a "Literary Fellow" in the party who does the legendary part, while one "Captain Oldbore" contributes the matters of fact—not, as his name would imply, in a dry-as-dust fashion, but in a manner as interesting as, and closely resembling, that of the "Literary Fellow" himself. We note as a positive merit of this "Literary Fellow" (whom we venture to identify with the author), that he has escaped the peril—to which a weaker man, writing of the Catskills and their legends, would surely have succumbed—of attempting an imitation of Washington Irving's style. He has, in fact, a strong, direct style of his own. Of course, the party would not be complete without some pretty young ladies who encourage the story-tellers, and listen with exemplary patience—never interrupting. It was not necessary to reprint Irving's version of *Rip Van Winkle*; but, as this gave us an excuse for reading the ever fresh and delightful story once more, we ought not to complain. The book is a handsomely printed quarto, and is illustrated throughout in a style worthy of—shall we say?—the *Century*, and no reader is likely to find any part of it dull.

De Nicopolis à Olympie, by D. Bikelas (Paris: Ollendorff), is a narrative in the form of letters of a fortnight's journey in Greece, in the neighbourhood of the Gulf of Arta (Ambracian Gulf), from thence through Acarnania to Mesolonghi, and afterwards by way of Zante to the coast of Elis and Olympia, returning by Patras. The earlier part relates to a district little visited, and shows, among other things, how easy and safe it now is to travel in what was formerly the wildest portion of Greece. It is interesting to the English reader to learn that, during his stay at Mesolonghi, M. Bikelas was rowed across the lagoons in the neighbourhood of that place by the same boatman—a hale veteran of eighty years of age—who was in Byron's service at the time of his residence there shortly before his death. But the chief value of the book consists in its giving the impressions of an intelligent Greek from Western Europe on his visiting for the first time the interior of Greece.

M. Bikelas's remarks contain many suggestions which deserve the attention of foreigners, and others which his own countrymen may with advantage lay to heart.

NOTES AND NEWS.

LORD TENNYSON's forthcoming volume, which is to appear in December, will take its title from a poem on Teiresias.

MR. E. GOSSE, Clark lecturer at Trinity College, Cambridge, upon whom the university has conferred the honorary degree of M.A., will deliver a course of six lectures this term on "Sir Walter Raleigh as a Man of Letters."

ARRANGEMENTS have been concluded for the establishment at Oxford of a theological hall in connexion with the Congregational body. From the source of its endowment it will be called Mansfield College; and it will have a head, a staff of six lecturers, and a chapel. The first head, we are glad to hear, will be Principal Fairbairn, of Airedale College, Bradford.

MESSRS. MACMILLAN & Co. will shortly publish a volume of Popular Italian Tales, edited, with introduction and notes, by Prof. T. F. Crane. The collection will be of much interest to all students of folklore, as it contains a good many tales either unpublished or only published in obscure periodicals. The tales will be illustrated by constant references to their parallels in other European languages.

THE address recently delivered by Prof. Henry Sidgwick, as President of the Economic Section of the British Association, will shortly be published in separate form by Messrs. Macmillan & Co.

WE understand that Prof. Mommsen's new volume of the *History of Rome* (recently reviewed in the ACADEMY) has been translated by Prof. Dickson, of Glasgow, the translator of the former volumes, and will be published immediately by Messrs. Bentley.

MR. J. CHURTON COLLINS has collected into a volume the three articles on "Bolingbroke" which attracted so much attention when they originally appeared in the *Quarterly Review*. The volume will also contain an essay on Voltaire in England.

MESSRS. CHAPMAN & HALL will shortly publish a work on moral philosophy by Mr. W. L. Courtney, Fellow of New College, Oxford. The book will be entitled *Constructive Ethics*, and its subject will be a review of modern moral philosophy in its three stages of interpretation, criticism, and reconstruction.

MESSRS. LONGMAN will publish shortly the second volume of *Lives of Greek Statesmen*, by Sir George W. Cox. This volume will contain the lives of Ephialtes, Kimon, Perikles, Phormion, Archidamos, Kleon, Brasidas, Demosthenes, Nikias, and Hermokrates.

THE Clarendon Press will publish immediately *The Governance of England: otherwise called the Difference between an Absolute and a Limited Monarchy*, by Sir John Fortescue; a revised text, edited with introduction, notes, and appendices, by Mr. Charles Plummer. This treatise claims the attention of the reader partly on the ground that it is the earliest work on the English constitution written in the English language; but still more because of its close connexion with a period of English history the materials for which are extremely scanty, and on which it will be found to throw considerable light. This connexion the editor has endeavoured to draw out in the notes, by bringing together from contemporary sources whatever seemed to illustrate the meaning of the author. He has also tried to show to what previous writers Fortescue was in any way in-

debted, and in what relation the present treatise stands to Fortescue's other writings. The Introduction is divided into three parts—historical, biographical, and bibliographical; and it is believed that in each section some facts have been brought to light which have escaped previous investigators. The appendices consist of writings of Fortescue hitherto inedited or imperfectly edited. One of these is of especial interest as containing an earlier draft of a considerable portion of the present treatise, drawn up in the shape of a programme for the Lancastrian restoration of 1470. The text of the work has been carefully revised throughout, and is based on the oldest existing MS., collated with all other MSS. the existence of which was known to the editor. The whole is furnished with indices, glossarial and general, and a chronological table.

DEAN HOWSON is about to publish, through Mr. Elliot Stock, a volume entitled *Thoughts on the Saints' Days of the Christian Year*.

M. VAMBERY, acting on a suggestion made by several of his friends during his visit to this country in the spring, has prepared a boys' edition of his *Life and Adventures*, which will be published next week by Mr. T. Fisher Unwin. It has undergone a thorough revision, all political and other matter which would possess but little interest for boys being eliminated, and it is further embellished by a new portrait and seventeen illustrations.

MR. UNWIN will also publish a new history of Holland and Belgium, under the title of *A Short History of the Netherlands*, by Mr. Alexander Young. It will contain nearly eighty illustrations.

MESSRS. SWAN, SONNENSCHNEIN & Co. will publish next week the first volume of a new edition (the fifth) of *Dyce's Shakespeares*, in ten volumes, to be issued at the rate of one volume a month.

THE second volume of Cassell's "Rainbow Series," entitled *A Crimson Stain*, by A. Bradshaw, will be published early next month.

MISS BRADDON's annual, *The Mistletoe Bough*, consisting of several short stories, with illustrations, is about to be issued by Messrs. J. & R. Maxwell, and will, we understand, be similar to its predecessors in attractiveness and interest.

THE next volume in the shilling series of "Canterbury Poets," published by Mr. Walter Scott, will be *Shakespeare's Songs, Poems, and Sonnets*, edited, with prefatory notice, by Mr. William Sharp.

WILLIAM CLOWES & SONS will shortly publish *The Law of Torts*, by Mr. Francis Taylor Piggott; and, by the same author, *Additional Notes and Recent Cases on Service out of the Jurisdiction*, being an appendix to his work on *Foreign Judgments*; also an important collection of Admiralty Cases, never before printed, by Sir William Burrell, who died in 1798—for permission to publish this volume the editor, Mr. Reginald G. Marsden, is indebted to the kindness of Sir Walter Burrell, in whose library, at West Grinstead Park, the originals were discovered; a work on *Salvage*, by Mr. Harry Newson; *Practical Instructions and Suggestions to Young Solicitors*, by Mr. H. Moore, a solicitor of fifty years' standing; a new edition of *Wetherfield's County Court Statute*; and a translation, by Mr. Philip A. Ashworth, of *The History of the English Constitution*, by Prof. Rudolph Gneist, of Berlin, in two volumes, octavo.

MESSRS. PITMAN will shortly publish, in monthly parts, an edition of the Bible in shorthand, at the price of sixpence a part. The work is to be illustrated, and will be produced under the care of Mr. Ford, editor of the *Reporters' Journal*.

So great has been the interest evoked by the issue of *Why I am a Liberal* (published on Monday last by Messrs. Cassell & Co.) that the entire edition was absorbed in a few hours. A second edition, now being rapidly produced, will be ready for delivery in the course of next week.

The Lives of Robert and Mary Moffat, which appeared on October 1, has reached a second edition.

A SECOND edition also of Mrs. Pfeiffer's *Flying Leaves from East and West*, issued last week from The Leadenhall Press, has already been demanded.

THE sixth edition of Mr. George Moore's novel *A Mummer's Wife*, will be ready next week. The author has written a preface, in which he speaks of a revised text, contending the while that plain speaking has always been a characteristic of English literature.

A SIXTH edition of Mr. Sydney Buxton's *Handbook to Political Questions of the Day*, with the arguments on either side, is now in the press. The whole has been revised, and fresh sections have been added on free schools, allotments, and the incidence of taxation.

GEN. GRANT'S paper on "Chattanooga" will be printed in the *November Century*. It takes up the writer's military career at Vicksburg, and follows the campaign of Chattanooga from the beginning of his connexion with it. His *Wilderness* article, which is to follow soon, is a description of the preparations made for the *Wilderness* campaign, by which Gen. Grant meant the movement of all the Union armies begun in May 1864.

THE publication of *Eastward Ho!* a monthly magazine dealing with East-end subjects, which has just completed its third volume, has passed into the hands of Messrs. Swan, Sonnenschein & Co.

NEXT month will appear the first number of the *Nottingham Magazine*, a local periodical intended to be in some sort a continuation of the *College Record*. The editors are Mr. J. Potter Briscoe, Mr. Ph. H. Stevenson, and Dr. C. U. Yates, all members of the Nottingham Literary Club; the publisher is Mr. Derry Wheeler Gate, of Nottingham; and the price is one penny a month. A special feature will be a complete list of the books purchased by the Free Public Library during the preceding month.

DR. GREVILLE M. MACDONALD will deliver a course of four lectures during November at the Hampstead Library on "Expression, in its Human, Philosophical, and Artistic Aspects."

IN connection with the Armitstead Trust a series of six lectures will be delivered in Dundee during the months of November and December. Among the lecturers are the Duke of Argyll, Prof. E. A. Freeman, Archdeacon Farrar, and Sheriff Nicolson. Tickets for the whole series can be obtained for sixpence.

THE seventh branch library in connection with the Nottingham Free Public Libraries was opened at Leen Side on Wednesday, October 21.

THE King of Portugal has conferred the rank of Knight Commander of the Order of Christ on the Rev. Prof. D'Orsey, for services rendered to the people of Madeira.

THE Clifton Shakspeare Society commenced the work of its eleventh session on October 3. Mr. J. W. Mills was elected president in succession to Mr. Francis F. Fox. The plays for consideration are "Richard III.," "Campaspe," "Romeo and Juliet," "Loorine," "Richard II.," "Faustus," "John," and "Edward II." The secretary, in his annual report, said that the introduction of plays of some of Shakspeare's contemporaries would make the society more

Shaksperian than ever, as it was impossible to get a proper grasp of the man either as a personality or as a writer unless his environment and its consequences are taken into account; and that much interest would, with the late Richard Simpson's invaluable help, follow from a fuller consideration of the way in which Shakspeare was influenced by the mighty events going on around him, of which there must be a reflex in his plays. The introduction of contemporary plays will afford a convenient opportunity of dealing with the various points of interest arising out of the connexion of Shakspeare with the play-writers of his time. The first critical meeting of the session was held on October 24, when a paper on "The Botany of 'Richard III.," by Mr. Leo. H. Grindon, was read. Mr. Grindon said that in a play so full of blood and cruelty there was scarcely any room for sweet or poetic mention of trees and flowers. But there was sufficient evidence both of Shakspeare's power of giving new life to old allusions, and of his marvellous faculty of observation of nature. Miss Phyllis Spencer, in a paper on "Margaret," came to the conclusion that the consistency of the character in 3 "Henry VI." and "Richard III." pointed to a common authorship. Mr. G. Munro Smith read a paper on "The Two Murderers in 'Richard III.," pointing out that Shakspeare always invested even his small people with distinct individuality. But with this power he yet portrayed his murderers in the most unnatural way. These two talk not only with shrewdness, but also with taste, and even suffer from remorse, although they are professionals, who despatch their work effectually and artistically. The murderers in "Macbeth" are clumsy, needlessly violent, and hurried. The second murderer in 2 "Henry VI." shows compunction. The two murderers in "Richard III." have most unnaturally to urge each other to strangle their feelings of right, and preach Clarence quite a sermon by way of justifying themselves. Nevertheless, granting that it is permissible thus to represent professional murderers, the whole scene between themselves and with Clarence is finely told. The hon. secretary (9 Gordon Road, Clifton) will be glad to receive, for the society's library, newspaper scraps, magazine articles, or anything else that possesses even the least direct or indirect Shaksperian interest.

ORIGINAL VERSE.

LITERATURE AND NATURE.

'Mid Cambrian heights around Dolgelly vale,
What time we scaled great Cader's rugged pile,
Or loitered idly where still meadows smile
Beside the Mawddach-stream, or far Cynfael—
Nor tome, nor rhythmic page, nor pastoral tale,
Our summer-sated senses would beguile;
Or lull our ears to melody, the while
The voiceful rill ran lulling down the dale.
In London town once more—behold, once more
The old delight returns! 'Mid neights how vast,
In Milton's verse, through what dim paths we
wind;
How Keats's canvas glows, and Wordsworth's lore,
As tarn or torrent pure, by none surpass'd,
Sheds light and love—unfathomed, undefined.

SAMUEL WADDINGTON.

MAGAZINES AND REVIEWS.

THE longest and most interesting article in the September *Livre* (Fisher Unwin) is one containing a commentary on five unpublished letters of Balzac, referring to his Breton sojourn in 1823, a sojourn which gave occasion for *Les Chouans*. The writer takes occasion incidentally to contrast Hugo's and Balzac's style of description of the same district—that of Fougères. He has illustrated very well what all students of

Victor the Great know already—the fact that any place in his hands at once lost reality, and became the *lieu de fantaisie*, which, it is said, should be the poet's sojourning place.

Le Livre for October contains a short but good notice of the private printing press of Dampierre, a continuation of M. Ernest Chesneau's gossiping, but not unscholarly, articles on English publishers, and a note by M. Ashbee on Capt. Burton's *Arabian Nights*. The number may be specially recommended to buyers for a large and excellent reproduction of Duché's curious view of the room at Ferney, called the "Chambre du Cœur de Voltaire."

THE current number of the *China Review* opens with an interesting sketch by Mr. Piton of the life and adventures of Lü Puh-wei, a statesman who was largely instrumental in founding the fortunes of the Ts'in Dynasty, in the third century, B.C. Following this article comes another chapter of Mr. Parker's contribution towards the topography and ethnology of Central Asia, extracted from the P'ei-wên yün-fu. The material thus collected may possibly prove of value to those who are able to produce order out of the chaotic notions of geography possessed by Chinamen. Dr. Edkins contributes two articles, one on Chinese roots, and one on Chinese early mythology. Both contain a considerable amount of information. Many of the headings in the article on roots show a curious identity of arrangement with the vocabulary chapters of the Yih-king, and, though much of the contents are based only on supposition, they are eminently suggestive. In his article on mythology, Dr. Edkins points out, in agreement with the views which have from time to time been expressed in the *ACADEMY*, that, at the time of Laou-tse, the author of the *Tao-tih King*, the influence of Indian philosophy had made itself plainly felt in China. The notices of new books are particularly interesting and instructive. The works chosen for remark are of more or less importance, and the reviews, all of which are signed "E. J. E.," are written with judgment and critical discrimination. The number closes, as usual, with a collection of notes and queries.

THE *Bulletin* of the Institucion libre de Enseñanza for September contains a valuable study by D. Joaquin Costa on the Political Programme of the Oid. The writer investigates the sources of the *Poema*, and attempts to indicate the earlier documents still embodied in it, and the changes made by after compilers in order to bring the free politics of the original more into accordance with the ruling ideas of their own period. D. Mariano Arés treats of the *Colegios Mayores*, of Salamanca, narrating the history of the early foundations (parallel in date and object with many of our University Colleges), and of the reform of 1876, which is said to be working well. There are forty bursaries or exhibitions of two pesetas per diem in the Colegio Minor, and twenty of four pesetas in the Colegio Mayor, for those who proceed to the Doctorate, with exemptions of fees for degrees. All are gained by open examination. There are also travelling fellowships of £160 per annum, one qualification for which is that the candidate should show sufficient acquaintance with the language of the country which he proposes to visit, to enable him to travel with profit in it.

THE PROPOSED TEACHING UNIVERSITY FOR LONDON.

IT is understood that the professors of University College have, by a unanimous vote, expressed their dissatisfaction both with the scheme of the Teaching University Association and with that of the special committee of convocation, which is to be further considered

by convocation on Tuesday, November 3. A preliminary scheme of a different character is to be submitted to convocation as soon as may be practicable, one of its aims being to meet the claims of the colleges by assimilating the London University more closely to the two older English universities, and especially to the University of Oxford. The proposals are:

1. An enlargement of the powers directly exercised by Convocation.
2. An increase in the proportion of senators to be nominated or elected by convocation, and the limitation of the tenure of office, in the case of all senators, to a term of years.
3. The encouragement of mature study and original research among the members of the university, by such methods as may be considered suitable and expedient, and especially by the establishment of university lectureships of limited tenure in different departments of learning and science.
4. The introduction into the constitution of the university of such modifications as may remove all reasonable ground of complaint on the part of any institutions connected with the university as to the absence of means for expressing opinion concerning the examination regulations and the changes proposed to be made therein from time to time.

In order to give effect to (4) it is proposed to establish a congregation of the University of London, consisting of (a) the senate, (b) members of convocation possessing such qualifications as may be considered suitable, (c) the examiners and other officers of the university, (d) representatives of such institutions as may be in connection with the university.

It is not proposed that all members of congregation shall also be (as at Oxford) members of convocation. Such a rule would exclude a considerable proportion of the professors in the colleges, of the examiners, and even some of the existing senate.

CORRESPONDENCE.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

Oxford: Oct. 26, 1885.

I quite agree with what your able correspondents have written about the printed texts of the Irish laws. I happened one day, not long ago, to look at the Bodley MS., Rawlinson, B. 506, a portion of which has been published in the second volume of the laws, and in the first half-a-dozen lines I at once came across a serious error. What is printed in the fourth line as *in* I find is the abbreviation for *maine*, so that instead of translating "She shall obtain one-sixth or one-third of all the corn then," one would, if you retain the other words of the translator, have to say—"She shall obtain one-sixth or one-third of the corn, unless she obtain the whole in that case." The Irish, as printed, will not, so far as I can see, construe. Besides committing such errors as this, which have crept into the published text, the editors do not pretend to follow the MS. in minor details, which in one instance means, it must be confessed, that they have corrected the scribe's spelling and punctuation. For my part I should prefer to have his text accurately printed with all its defects, as they may be useful in helping one to form a critical opinion of the value of the MS. followed. The object of my writing, however, is not to emphasise the shortcomings of the existing edition, for that, I think, has been sufficiently done already by Dr. Stokes and the other scholars who have favoured you with their views in the matter; but to suggest that the Irish of the laws should be done over again, and that Dr. Stokes should be invited to undertake the work. I am speaking entirely in the dark as to whether he could be induced to do so; but one cannot help seeing that he is qualified for the task to an extent that no other man living can be said to be, combining, as he does, the most advanced scholarship with a thorough acquaintance and experience with law. The first thing, as you have already been told, is to have a reliable text; the translation will even then be in many cases a very difficult undertaking, which it may require generations of Celtic scholars to perfect. J. RHYS.

HERODOTUS REDIVIVUS.

London: Oct. 26, 1885.

M. Maspero contributes an interesting little paper to the new number of the *Journal Asiatique*, entitled "Sur une Version Arabe du Conte de Rhampsinite." The history of this Arabic reproduction is as follows. In February last, a European living at Luxor, in Upper Egypt, informed M. Maspero that he had heard an Arab "Antee," of Neggadèh, relate a tale closely resembling the well-known legend of Rhampsinitus recorded in the Second Book of Herodotus; whereupon M. Maspero set to work to obtain a copy of the tale, which was finally jotted down for him in Arabic by the son of the French consular agent residing at that place. This version, with all its errors of orthography and its departures from the original story as told in the Greek, M. Maspero has transcribed verbatim for the pages of the *Journal Asiatique*. Having secured a copy of the story-teller's narrative, it remained to discover by what curious chance a stray leaf from Herodotus (or from the far more ancient legendary lore of Pharaonic Egypt) should be found surviving thus in the coffee-shops of the sleepy little town of Neggadèh. Further enquiry elicited a solution of the mystery. A certain Signor Odescalchi, resident in Upper Egypt, had shown some civilities to M. Maspero; and M. Maspero, by way of acknowledgement, had presented to Signor Odescalchi a copy of his charming little volume of translations from ancient Egyptian papyri, &c., entitled, *Les Contes Populaires de l'Égypte Ancienne*; among which figures the old French version of Rhampsinitus, by P. Salist. The Italian—by profession a schoolmaster—had, it seems, related some of these stories (translating them into Arabic as he went along) to the good folk of Erment and Goorneh. Repeated from lip to lip, they found their way to Luxor, and from Luxor to Neggadèh. By this time they are probably current in most of the villages of Upper Egypt, and in the course of a year or two they will be popular from Alexandria to Assouan. Thus it happens that a dozen or thirteen tales of love, magic, and adventure, some of which were already of remote antiquity in the days not merely of Herodotus, but of Rameses the Great, are destined towards the close of the nineteenth century to live again, and again to be popular in the ancient country of their birth.

M. Maspero publishes the facts in order that travellers and savants may not be misled by this phenomenon. Yet how delightful it would have been to believe that the "Tale of the Two Brothers," "The Romance of Setna," the history of the taking of Joppa, and all the rest of these rare old stories had never really died out from the memory of the people of Egypt! For my own part, I confess that I half regret the loss of a possible illusion.

AMELIA B. EDWARDS.

GERMAN TRANSLATIONS OF THE BIBLE BEFORE LUTHER.

London: Oct. 16, 1885.

Although Mr. Hutchison has given his last word on this subject, your readers, who have been especially warned against my "assertions," may, perhaps, pardon me for desiring to add my last word also.

My "assertions" are contained in the following statements, which I will ask your readers to note are perfectly independent: (i.) Luther's September Bibel was not a translation from the original Greek, but practically a reproduction, with no very great variations, of the existing German Vulgate. (ii.) Luther had a very insufficient knowledge of Greek at the time when he is usually considered to have made his translation from it.

The object of my second assertion is to explain how it came to pass that Luther followed the German Vulgate; but the first would remain even if the second could be disproved. Let us see how Mr. Hutchison controverts these assertions, and establishes (1) that Luther knew Greek for nearly nine years before he began his translation, and (2) that he used the Greek text as the basis of his translation, which was "an original work." Mr. Hutchison's method is throughout the appeal to authority. Now, to what sort of authority does he appeal? First, to "respectable German theologians," and he takes as his type Dr. Rhiem, a gentleman capable, as I showed in my former letter, of making statements which conclusively prove he has never studied the original texts. Secondly, he gives a string of opinions from various authors, in which there is no statement whatever which I can describe as evidence. In particular he lays great stress on Schröckh, and, apparently, thinks to crush me beneath the weight of the thirty-sixth volume of that terrible writer. *Es ist ja schrecklich!* but I must confess that the opinion of that writer has absolutely no weight with me when balanced against fact.

Now to my assertions: (1) Luther copied the German Vulgate. Is this a matter of opinion? Certainly not: it is a question of fact, simply enough proved by anyone who will take the trouble to open the September Bibel side by side with the Codex Teplensis, or, better still, the ninth German Bible. I could fill your columns with chapters in which there is hardly an important word which differs. Is such evidence to be outweighed by the opinion of Schröckh? The only way to controvert my assertion is to prove, by a comparison of the texts, that I am making a false statement, not to quote other persons' opinions. More than two years ago I attempted to draw attention to this coincidence; but the pill was apparently too bitter for our Evangelical theologians to swallow. But as opinion weighs much with them, let me quote that of a Lutheran professor of theology, Dr. Krafft, who writes as follows, after comparing long parallel extracts:

"Wer diese Parallelen mit einander vergleicht, der wird wohl keinen Zweifel mehr hegen, dass das Zusammentreffen Luthers mit der deutschen Bibel des 15. Jh. kein zufälliges ist. Dass Luther auch noch später dieselbe im Auge behalten hat, lässt sich aus den vielen Verbesserungen seiner Uebersetzung mit denen er bei jeder neuen Ausgabe eifrig beschäftigt war, entnehmen. In zahlreichen Fällen kehrt er später zu dem älteren Wortschatz wieder zurück, den er bei der ersten Ausgabe des N. T. verlassen hatte (Die deutsche Bibel vor Luther)."

In other words, Luther himself recognised that *Wortschatz* as "homely and true." I do not deny that Luther occasionally assisted himself by the labours of Erasmus; but I assert that the statement that "his translation was an original work," could only be made by one who has never studied a pre-Lutheran Bible.

Let us turn to my second assertion: (2) Luther knew Greek very insufficiently at the time when he is said to have translated the Bible from that language. Mr. Hutchison tells us that he began to study Greek in 1512; I say that, although he may have known a few words before Melancthon arrived in Wittenberg, he really began to study it under that Humanist. Mr. Hutchison again quotes mere opinion. I shall endeavour to bring evidence. My evidence is as follows:

(a) *Luther's College Lectures*.—These are invariably based on the Vulgate text. Luther's exegesis often depends on the turn of a Latin word, and I have found it frequently even comic on that very account. No appeal is made to the Greek text to solve difficulties. In Erfurt there might have been opportunity of learning Greek: in Wittenberg there was none. Mr. Hutchison likes opinion: on this

point I will quote that of the strong Lutheran Prof. Köstlin:

"Vorlesungen übers Griechische zu hören, gaben ihm die philologischen Collegen an der Universität keine Gelegenheit. Erst Melancthon hat nachher griechische Lektionen zu Wittenberg in Schwung gebracht. Unverkennbar zeigt sich der Mangel an sprachlichen Kenntnissen auch bei jenen Schwierigkeiten welche das Verständniss der wichtigsten Aussprüche des Römerbriefes Luthern so lange Zeit gemacht hat (*Leben Luthers*)."

(b) *Luther's Letters*.—Up to the arrival of Melancthon in Wittenberg these betray no real knowledge of Greek, and for sometime after that all texts are quoted from the Vulgate; then begin isolated Greek words and phrases, which are singularly typical of the growth and extent of Luther's Greek knowledge. Mr. Hutchison quotes the discussion on *μετανοειν* from the summer of 1518; but this seems to me very unfortunate, for in the original letter to Staupitz Luther uses the Latin spelling (*meta, noyn, melanea, melanoen, metania, metanoim, &c.*) I could have given him a better example of Luther's Greek than this. In a letter to Lang of September, 1517, he writes thus: *cacodoxa*, and puns upon this expression a week later with the word *κακιστοδοξα*, both written as I have reproduced them! A further letter to Lang, dated merely February 19, has by some editors been placed in 1518. This letter contains a few Greek words, which might be taken as showing a rudimentary knowledge of the language. As, however, it contains a reference to More's *Utopia*, only published in March, 1518, I think there is little doubt the proper date is February, 1519.

(c) *Luther's own Statements*.—Let us finally examine what Luther himself says in his letters as to Melancthon's arrival in Wittenberg:

"To Spalatin. Aug. 31, 1518—

"Ego plane Graecum praeceptorem illo ('nostro Melancthone') salvo, alium non desidero."

"To Staupitz, 1 Sept., 1518—

"Coepit est apud nos Graeca lectura, graecissimus omnes propter intellectum Bibliae."

"To Spalatin, 2. Sept. 1518—

"Auditorium habet referum auditoribus; imprimis omnes theologos, summos cum mediis et infimis, studiosos facit Graecitatis."

"To Spalatin, 12. Nov. 1518—

"Studium nostrum prospere et feliciter agit, praesertim Graecitatis."

In a jovial letter to Melancthon of November 1518, Luther signs himself *Fraterculus Martinus* 'Ελευθέριος. Obviously his Greek is advancing; but it reaches on January 19, 1519, a climax. In a letter to Spalatin of this date there are nearly five broken lines of Greek, concluding—*εἰς γὰρ πολυμαθίας, ἢ ποτε πολυμαθίας*. This is, indeed, the very schoolboy! Yet Mr. Hutchison supposes it to represent seven years of Greek study. What happened between 1519 and 1521 I have described in my first letter. These years were not the years of a student, but of a public agitator. I decline to allow that this man, who began to study Greek in 1518, could know sufficient in 1521 to translate the New Testament in three months. I leave it to your readers to decide between my "assertions" and Mr. Hutchison's opinions backed by the terrible Schröckh and the phalanx of "respectable German theologians."

KARL PEARSON.

"MILTON AND VONDEL."

Northolt Vicarage, Southall, Middlesex:
Oct. 27, 1885.

Mr. Gosse, in his lengthy critique upon my little book, *Milton and Vondel*, in the last number of the ACADEMY, has treated my work, on the whole, though in a not unprovoked spirit of hostility, with much fairness; and I take the opportunity of pointing out that I never, as he imagines, stated that his essay on

Milton and Vondel was "based on second-hand and unsifted evidence."

The question of translation, on which Mr. Gosse has entered at some length, is one of much difficulty. I have elsewhere (*Milton and Vondel*, p. 37) stated my reasons for rendering Vondel's rhymed six-foot lines into blank verse. Mr. Gosse, however, says further that I "have used language, as Miltonic as possible, which resembles that of *Paradise Lost* as closely as a general adherence to meaning will admit." I have done so, to some extent, advisedly, and for this reason. My object being to show that, consciously or unconsciously, Milton made use of certain passages of Vondel in writing his own poems, the only way to exhibit to an English reader the parallelism was to translate the Dutch lines, as far as it was legitimate to do so, in the Miltonic words. As my appendix contains every quotation in the original, it is clearly open to anyone acquainted with the Dutch language to test the accuracy of any particular rendering. Mr. Gosse has done this in a single instance, and he says that he has selected this special passage because I "emphasise it as containing proof positive of Vondel's influence on Milton." He has omitted to add the qualifying words, "coming as it does to re-inforce the testimony" of other passages. He declares that I have here been guilty of mistranslation, and has given us his own version. The materials are before us, let us then examine the question. I have translated—

"Men vaert er in ruimschoots, met paarden en karos,
Eerst over keizelsteen, en dan door kreupelbosch."

thus—

"Here a host might freely pass
With horse and chariots in loose array
O'er stony ground at first and then through brake."

I admit at once that my translation is somewhat too free. The more exact rendering would be—

"Here people freely pass,
With chariot and horses, roomily
O'er flinty ground at first and then through brake."

Mr. Gosse's version runs thus:

"One drives in easily, with horses and a coach,
First over flinty stones, then through a hedged approach."

As we read, reminiscences of schooldays float before our mind, and we recall once more the cadence of that simple English unadorned, wherein the fifth-form boy translates an Aeschylean chorus. Why this emphasis upon an article which has no existence in the original? Why, moreover, in a Biblical epic, use the non-Biblical word *coach* when the extremely Biblical word *chariot* is, etymologically, the exact equivalent of *karos* (= Flemish and German *karre* = French *char*). Is not this precisely an instance of that "vein of burlesque" which I have elsewhere brought as a charge against Mr. Gosse's translations from the *Lucifer*? Vondel's expression, "met paarden en karos," is quite indefinite as to number; and the context tells us that he intended the opening to be wide enough for many chariots. Curiously enough, in all the voluminous writings of Vondel I have found "paarden en karos" in only one other passage, but it is exactly to the point:

"Men zag het voorspel van dees statale aan
liveryn
Van silver, groen en rood, aan pagien en lakeyen,
Aan paarden en karos, trompet en banderol."

Keurgedicht aan Prins Mauritijs.

Here certainly not one equipage, but many, form the procession. If Vondel had meant "a coach and horses," he would have written "een koets en paarden."

Mr. Gosse states that "*ruimschoots* is nothing

in the world but easily." Like many other expressive Dutch words, *ruimschoots* has a nautical origin (*ruim* = spacious, roomy; *schoots* = the sheets of a ship filled with wind), and signifies the freeness with which a ship with sails wide extended will go before a breeze. I have in my translation endeavoured to express its full meaning.

How Mr. Gosse could possibly translate *kreupelbosch* as "hedged approach" I cannot conceive! *Kreupelbosch* means "stunted brushwood" (Hannot's Dutch Latin Dict. = *dumetum*). *Brake* = *dumetum*, "a bottom covered with tangled brushwood," is its exact English equivalent (Halliwell's Dict.).

Mr. Gosse has been unawares translating Virgil instead of Vondel. *Facilis descensus Averni*, "to drive with a coach and pair along a hedged approach to the nether regions."

GEORGE EDMUNDSON.

THE ARISTOTELIAN SOCIETY.

London: Oct. 24, 1885.

Referring to the notice of this society which appeared in last week's ACADEMY under the heading of "Notes and News," kindly permit me to say that the expression "annual meeting" is misleading, and might unintentionally injure the society, if uncorrected. The meeting spoken of as "annual" is really the first meeting of the present, or seventh, session. The systematic study of philosophy, which is correctly stated to be the purpose of the society, requires more than one meeting in the year. The session, in fact, extends from October to June, and the meetings (barring interruptions at Christmas and Easter) are fortnightly; particulars of which may be obtained by writing to our hon. secretary, Mr. E. H. Rhodes, 22 Albemarle-street, W.

SHADWORTH H. HODGSON, President.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 2, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Royal Academy: "The Bones of the Human Body," III., by Prof. John Macall.

TUESDAY, Nov. 3, 8 p.m. Biblical Archaeology: "Remarks on the Bahr-el-Yusuf," by Mr. Cope Whitehouse; "An Early Babylonian Deed of Brotherhood," by Mr. Theo. G. Pinches; "Are there Totem-Clans in the Old Testament?" by Mr. Joseph Jacobs.

8.30 p.m. Zoological: "The Phytophagous Coleoptera of Japan obtained by Mr. G. Lewis, 1880-81, Part II., Halictinae and Galerucidae," by Mr. Martin Jacoby; "Two Collections of Lepidoptera recently received from Somaliland," by Mr. A. G. Butler; "A Troch of *Mastodon latidens* from Borneo," by Mr. R. Lydekker; "A Monograph of the Genus *Parabururus*, F. Cuv., by Mr. W. T. Blanford; "A New Species of *Mus* from Sind," by Mr. J. A. Murray; "The Specific Characters and Structure of some New Zealand Lumbricidae," by Mr. F. E. Bedford.

WEDNESDAY, Nov. 4, 8 p.m. Royal Academy: "The Joints of the Human Body," by Prof. J. Marshall.

8 p.m. Geological: "The Premaxillaries and Scalpriform Teeth of a large Extinct Wombat (*Phascolomys curvirostris*)," by Sir Richard Owen; "The Structure and Classificatory Position of some Secondary Madreporaria," and "Some Points in the Morphology of the *Astrocomias* of the Sutton Stone in the Infra-Lias of South Wales," by Prof. P. Martin Duncan.

THURSDAY, Nov. 5, 4 p.m. Archaeological Institute: "Nau-ratia," by Mr. Flinders Petrie; "Notes on Wolsey Church," by the Rev. B. W. Gibbings.

8 p.m. Linnean: "Flora of the Peruvian Andes, its History and Origin," by Mr. John Bell; "Recent Brachiopoda," I., by the late Dr. Thomas Davidson.

FRIDAY, Nov. 6, 8 p.m. Royal Academy: "Muscles of the Human Body," I., by Prof. John Marshall.

8 p.m. Philological: "Notes on some English Etymologies," by Prof. Skeat.

SCIENCE.

Diophantos of Alexandria: a Study in the History of Greek Algebra. By T. L. Heath. (Cambridge: University Press.)

Of all the great Greek mathematicians—perhaps one ought rather to say, of all the Greek mathematicians who have left great

works—Euclid, Archimedes, Apollonios of Perga, Ptolemy, Pappos, Diophantos—the last is probably the least known to mathematicians in general. There are several reasons for this unacquaintance on which it would be superfluous to dwell at present. It is sufficient to note the fact, and to remark that, thanks to Mr. Heath, one of them at any rate can no longer be pleaded.

The present work consists of eight chapters and an appendix. In the first chapter the evidence respecting the name and date of Diophantos is carefully reviewed, the conclusion reached being that he belongs to the second half of the third century of our era. The second and third chapters contain an account of the works of Diophantos, the *Arithmetics*, the treatise on *Polygonal Numbers*, the *Porisms*, and of the writers who have edited, translated, or commented on him. In the fourth chapter the notation and definitions of Diophantos are discussed, and a curious point is raised as to the origin of the symbol, the Greek final sigma, for an unknown quantity. The symbols used for the square and the cube of the unknown are the two first letters of the words *δυναμις* and *κύβος*, written $\delta\sigma$ and $\kappa\upsilon$, the fourth, fifth, and sixth powers being represented by $\delta\delta\upsilon$, $\delta\kappa\upsilon$, and $\kappa\kappa\upsilon$, abbreviations of *δυναμοδύναμις*, *δυναμόκυβος*, and *κυβόκυβος*. Why, then, should σ be chosen as the symbol to denote *ἀριθμός*, the name Diophantos gives in the second definition of his first book to the unknown quantity? Mr. Heath answers this question by suggesting that the symbol is a corruption after combination of the two first letters of the word, alpha and rho. The reasoning by which he supports this suggestion is exceedingly ingenious, one would almost be disposed to say conclusive, if more MS. authority could be adduced for intermediate forms. Mr. Heath's explanation of the fantastic MS. symbol for subtraction, an inverted truncated psi, that it is a combination of lambda and iota, the latter written inside the former, is plausible enough, and may be the correct one; but it is also possible that the explanation may be sought for in quite another direction. The fifth chapter, on Diophantos' Methods of Solution, is the longest and most important of the book, and is by far the best classification yet given of the contents of the *Arithmetics*. It must be read, of course, with the appendix, which is an abstract of the whole of Diophantos. The author says in his preface that the appendix claims to have no independent value apart from the rest of his work, and that, owing to its extremely condensed form, he can hardly hope that by itself it will even be comprehensible to the mathematician. If a reader who wished to make acquaintance either with the methods employed by Diophantos, or with the results enunciated or established by him, had to choose between Bachet's translation and commentary and Mr. Heath's appendix, it is not difficult to predict what his selection would be; and as to this part of his work Mr. Heath may be assured that, while he has laboured to be brief, he has not become obscure. The sixth chapter treats of the *Porisms* of Diophantos, which seem to have been a set of propositions concerning the properties of certain numbers. The seventh

chapter discusses the vexed question how far Diophantos was original, and the conclusion arrived at is that of Nesselmann, that Diophantos is not a mere learned compiler, but that the greater part of his propositions and his ingenious methods are his own. The last chapter, on Diophantos and the early Arabian algebraists, is taken up with showing that in Arabian algebra generally, at least in its beginnings, the Greek element greatly predominated.

From the preceding brief account of the text and appendix, it will be seen that this "study in the history of Greek algebra" is an exceedingly valuable contribution to the history of mathematics. Mr. Heath has spared no pains to make it as complete as possible—first by a careful analysis of his author, and, second, by a discussion of such collateral matters as tend to illustrate him. He has very commendably refrained from speculating on questions regarding which no evidence exists, and where the evidence is insufficient or conflicting his judgment is marked by moderation and sobriety.

May I be allowed to express the hope that Mr. Heath, who is so competent for the work, will by and by give us a more accurate edition of Diophantos than Bachet's, and, if he thinks it necessary, a complete translation? Mr. Heath speaks (p. 19) of six known MSS. of Diophantos; surely there are more, for there are four in Paris alone. One of them, he will be interested to know, contains the translation into Latin made by Joseph Auria, of Neapolis; though it does not, as the title on p. 51 states, contain the scholia of Maximus Planudes, or a translation of the treatise on *Polygonal Numbers*. Its date must be subsequent to Xylander's translation. I may add that the statement (p. 56) in the *New American Cyclopaedia* seems to be borrowed from De Morgan's article on Diophantos in Smith's *Dictionary of Greek and Roman Biography and Mythology*. J. S. MACKAY.

CORRESPONDENCE.

THE DERIVATION OF LATIN "FORTASSIS."

Oxford: Oct. 24, 1885.

In old Latin *fortasse* (from *fortassis*, the final *s* dropped as usual before a word beginning with a consonant, and the vowel softened) takes an infinitive; whence Prof. M. Warren (*American Journal of Philology*, July 1885, p. 231) supposes *fortassis* to be "some much-abridged verb-form." It is, I would suggest, an old 2nd sing. subjunctive of a verb *fortare*, "to assert," formed from *fortis*, "strong," as *fir-mare*, "to assert," from *fir-mus*, "strong," and meant originally "you would assert."

E. R. WHARTON.

SCIENCE NOTES.

WITH the beginning of the new year, the *American Journal of the Medical Sciences* will be published in London as well as in Philadelphia, under the new title of the *International Journal of the Medical Sciences*. Dr. I. Minis Hays, of Philadelphia, remains the American editor; while the English editor will be Mr. Malcolm Morris, already known to the lay public as the editor of *The Book of Health*. The journal will be issued quarterly, each number containing about 400 pages of printed matter, with woodcuts. Its main features will be—(1) original articles and monographs, (2) reviews of the chief contributions to medical literature, (3)

quarterly summaries of the progress made in all departments of medicine. The list of those English doctors and surgeons who have promised to contribute is so comprehensive that it would almost seem a stigma to be omitted. It is announced that the first number will have articles by Sir James Paget, Sir Henry Acland, Sir Andrew Clark, Dr. Matthews Duncan, and Mr. Jonathan Hutchinson. The London publishers are Messrs. Cassell & Company, limited.

THE November number of the *Journal* of the Anthropological Institute contains two ethnological papers of much interest—one by Dr. Garson, of the College of Surgeons, on the people of Tierra del Fuego, and the other by Prof. A. H. Keane on the Lapps, as illustrated by the group exhibited last summer at the Alexandra Palace. Among other papers in this number we may note one by Dr. Rink on Eskimo dialects, and a very suggestive essay by Mr. F. Galton, the president of the institute, on Regression towards Mediocrity in Hereditary Stature.

PHILOLOGY NOTES.

THE forty-third session of the Philological Society will open on Friday next, November 8, when the president, Prof. Skeat, will read "Notes on Some English Etymologies." Among other papers promised are three by Mr. Whitley Stokes, a dictionary evening by Dr. J. A. H. Murray, a Stanford dictionary evening by Mr. Fennell, and a report of dialectal work by Mr. A. J. Ellis.

THE Clarendon Press will issue immediately *Fragmenta Herculanensia*, by Walter Scott, Professor of Classics in the University of St. Antony. This volume contains (1) an Introduction, with an account of the Herculean papyri; (2) a catalogue of the Oxford facsimiles of the same (which give the best text of the papyri); (3) an edition of Philodemus *περί θεῶν διαγωγῆς* and *περί θεῶν δ*, also of the *περί αἰσθητικῶν*, the *περί παινεμάτων*, and the *περί μαθημάτων*, based on a collation of the Oxford facsimiles, the Naples facsimiles, and the originals preserved at Naples; and (4) engravings of several of the Oxford facsimiles, including those of the *Carmen Latinum de Bello Actiaco*.

PROF. FICK has just published the first part of his hypothetical reconstruction of the *Iliad* according to its original Aeolic form, in continuation of his ingenious attempt to apply the same principle to the *Odyssey* (see ACADEMY, November 12, 1884). The second part is promised for the beginning of next year.

AT the meeting of the Académie des Inscriptions on October 9, Prof. d'Arbois de Jubainville read a paper on the light thrown by philology upon the early history of the Celtic peoples. From the close affinity between Celtic and Latin—as shown by the passive and deponent in *r*, the future in *b*, the termination of nouns in *-tio*, the genitive in *i* of nouns of the second declension, &c.—he argued that the Italian and Celtic races must at one time have formed a single people. On the other hand, though Celtic and German are as far as possible distant from one another in grammar, they possess a common vocabulary, which is not shared by other Indo-European languages, especially in words relating to social organisation and military affairs. From this he inferred that, probably during the fourth and third centuries B.C., Celtic domination extended over part of Germany as far as the basin of the Oder and even of the Vistula, which is corroborated by the names of towns in this region preserved to us by Ptolemy.

THE *Berliner Philologische Wochenschrift* of October 3 contains a review of the second part

of Prof. Kennedy's *Studia Sophoclea*, by Mr. F. Haverfield.

WITH reference to his letter in the ACADEMY of last week entitled "An Index to Oriental Journals," Mr. Carletti wishes to state that a very copious double index to the papers and contributions to the *Asiatick Researches* and the *Journal and Proceedings* of the Asiatic Society of Bengal from 1788 to 1882, is contained in the *Centenary Review* of that society recently officially issued, which is published in England by Messrs. Trübner.

IN the abstract of Prof. Terrien de Lacouperie's lecture on Comparative Philology in Indo-China in the ACADEMY of last week, page 276, col. 3, l. 12, for "Their decay is often produced by a difference of pitch" read "Their decay has often produced differences of pitch."

MEETINGS OF SOCIETIES.

HELLENIC SOCIETY.—(Thursday, Oct. 22.)

At the last council meeting of this society the following were elected members of the society: Mr. J. C. Morgenthau, Sir Charles Nicolson, Mr. S. L. Rogers, Dr. F. Deibel, Prof. John Strachan, and Mrs. Barlow. Prof. C. T. Newton, V.-P., in the Chair. The chairman read a paper by Mr. A. S. Murray on a terra-cotta statuette of a Diadumenos recently purchased in Smyrna by Mr. W. R. Paton. The writer argued, from its resemblance in style and subject to other known statues, that it was probably a copy of the famous Diadumenos of Polycleitus, and from the fineness of the workmanship that it was a model carefully made for the use of students of art. The beauty of the statuette was established by a cast submitted to the meeting. Commenting on the paper, Prof. Newton said that in general treatment this terra-cotta reminded him of fragments modelled with extraordinary beauty which he had found on the ancient surface of the Mausoleum. This would bear out Mr. Murray's theory as to the date. As to the Farnese Diadumenos, it might, as supposed, be a copy from Polycleitus, but certain traits characteristic of the Attic rather than of the Argive school suggested the possibility of its being a copy of a somewhat similar statue by Phidias, described in Pausanias. This Farnese statue was remarkable for the development of legs and chest and the pinniness of the arms. These traits would, in Prof. Owen's opinion, characterise a runner. Mr. Gardner, showing photographs of the new statuette and of the Farnese Diadumenos, pointed out that the Smyrna figure was far more finely modelled, and agreed with Mr. Murray that it had probably been made for the use of young sculptors. Mr. George Macmillan (hon. secretary) read a paper by Prof. W. Ridgeway on "The Land System of Homer," the object of which was to examine into the true nature of the land system of the Greeks of the Homeric age by means of the evidence contained in the poems. Prof. Campbell, while admitting the high interest of the inquiry, thought that on some points too great assumptions had been made, and that the meaning of some words had been strained to suit the theory. Mr. Gennadius pointed out some interesting parallels both in the use of words and in agricultural customs between the Homeric and modern Greek usage. In all such questions he contended that a knowledge of the language and customs of modern Greece was of the utmost importance. This contention was confirmed by the chairman, who gave interesting examples from his experience in the Levant. Similar testimony was borne by Mr. Bent in regard to the Greek islands. Both papers will appear in the forthcoming number of the *Journal of Hellenic Studies*.

EGYPT EXPLORATION FUND.—(Wednesday, Oct. 23.)

THE annual general meeting was held at the Royal Institution at 3 p.m., with Prof. C. T. Newton in the Chair. Next week we shall give a report of the proceedings. In the evening, at 9 p.m., Mr. Flinders Petrie delivered a lecture on "Naukratis." The lecturer began by the startling assertion that though the site of Naukratis has only recently

been discovered for science, yet the site has been so much worked away by Egyptian diggers for manure that the greater part of the ancient remains has already been destroyed or dispersed among European museums. Mr. Petrie detailed the evidence which had led him to expect to find Naukratis at Tell-el-Kebireh; how his anticipations were justified by the discovery of inscriptions; and how, finally, on examining the ancient authorities he found that they in no way contradicted his facts. To give some idea of the extent of the remains, Mr. Petrie remarked that the great inclosure which he proposes to call the Panhellenion was once surrounded by a wall of bricks as high as a London house, and as long as the Strand. In detailing the ancient history of Naukratis the lecturer remarked that its foundation was certainly earlier than the time of Psammetichus I., but that under that monarch began its most flourishing time, and that its subsequent history was one of gradual decay, so that most of the remains recovered belong to the earliest period of Greek art. He showed how the mounds which cover the ancient cities of Egypt were formed by the falling to pieces of the unbaked bricks of which they were composed, so that the antiquity of a city can be determined partly by the height to which its ruins are heaped. The lecturer proceeded to show how the site of Naukratis was admirably adapted for the trade of the Greeks; and, finally, coming to the remains brought home by himself and Mr. Griffith, he went over the groups one by one and showed by induction what were the trades which flourished in the city, and what classes of remains may be ascribed even when found on other Greek sites, to an origin in Naukratis.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oils), and hand-painted, framed. Everyone is invited to purchase pictures at a special price. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

SEBASTIANO DEL PIOMBO IN A NEW LIGHT.

I.

THE sort of thing that has happened to Sebastiano Luciani is analogous to what occurs to a star when it comes within the luminous fringe of another of greater magnitude. From the circumstance of having been over-borne, as it were, by the dazzling genius of the greatest draughtsman the world has yet seen, it was his misfortune, veritable though he was, to appear less than the reality. It has given the impression mainly that he was scarcely more than what Italian writers would call "un maestro dozzinale," a term they apply to one of those innumerable practitioners who never lift themselves above mediocrity. But this is not true. That he was versatile in no ordinary degree is proved from the fact that when by the persuasion of his intimate friend and companion, Giorgio Barbarelli, he betook himself to painting, he was already known to the best society of Venice as an accomplished singer and musician—especially skilful upon the lute. Giorgione and himself had frequently met in the saloons of wealthy Venetians—not as painters but as musicians—and the sympathy of like tastes drew the young men together. Both were personally attractive, and were no doubt sought after by the noble youth of Venice for their good companionship. It was chiefly as a singer that the famous banker and merchant, Agostino Ohigi, first made the acquaintance of Sebastiano in Venice; but discovering by and by that the genial and amusing youth was also a skilful painter—indeed, an altar-piece that Sebastiano had painted for the Church of San Giovanni Crisostomo had been mistaken for the work of Giorgione—invited the young Venetian to return with him to Rome. Sebastiano had studied under both Gian Bellini and Giorgione. He had already taken up the pencil in good earnest, and with the rapidity which somehow seems an inherent

quality of the Venetian genius soon made such a reputation as a colourist as enabled him to take a front place among his contemporaries. Power of drawing was never, even at the best of times, the forte of Venetian masters; but as two summits in the same art at the same time, and by the same person are incompatible, the faculty of outline, such as it was, passed muster, sustained and overshadowed by the splendour and glow of the Venetian palette. At Venice, therefore, Sebastiano was considered to be a very able painter before anybody in Rome knew anything about him. Biagi, who as president wrote a memoir of him for the Venetian Athenaeum, calls him "insigne pittore." It is well known that Vasari uses him largely as a foil for his great favourite, Michelangelo, and hitherto almost every succeeding writer has taken it for granted that Vasari's estimate, or rather Vasari's account, was the whole of the truth. It is clear something remains behind when it is admitted by Vasari himself that, on the death of Raffaello, Sebastiano was held to be the first painter in Rome, popular opinion, and opinion in high places, passing by all Raffaello's able assistants and scholars.

When Agostino Chigi took him to Rome, it was in order to get his help in the decoration of the new palace he was then building by the Tiber. Raffaello was already engaged upon it, and was notoriously Chigi's supreme favourite. It was not, therefore, to supersede the Umbrian master that Sebastiano was introduced at the Farnesina, but simply for the sake of variety, and in order to bring to the decoration some of the splendid colouring and powerful chiaroscuro for which Venetian painters were justly famous. Hitherto Raffaello's colouring was by no means splendid; for, although his pictures were suave, graceful, and pleasing, colour was not his strong point. So by way of change and contrast, Luciani takes his place by the side of the other decorators. It was not perhaps, without some little jealousy on their part but, certainly, not to any serious extent, as we find both Raffaello taking hints from him, and himself working after Raffaello's outlines. But this mutual interchange of services and assistance was not in any way unusual, nor considered at the time to be derogatory either to one or the other. It is after-comers and the prejudiced followers of Raffaello, as against Michelangelo at the time of their operations at St. Peter's and the Vatican, that have raised the pother about Sebastiano's inferiority and his inability to design for himself. Before the question was raised, long before it was discovered that he could not draw, he had already designed and painted the eight lunettes in the garden saloon of the Farnesina, and was so well thought of by the owner as to be requested to paint a companion figure to the famous "Galatea" of Raffaello; and this figure, the "Polyphemus," he did actually paint, and we are told that it was greatly praised. Besides this, his picture in the Church of San Pietro, in Montorio, was looked upon as the work not of "un maestro dozzinale," but of a worthy rival of the best painters then in Rome. The "Holy Family," now at Naples, is another evidence of his right to the highest rank in his art. Of course, in a society such as then lived in the imperial city, there were cliques and parties and favouritisms and jealousies. It was a society which contained a very large proportion of men connected with the arts. Besides the painters, there were sculptors, goldsmiths—and among them Cellini—medallists, architects, musicians, miniaturists, all manner of persons interested in each other's success or failure, as few except artists can be, because of the keenness of their susceptibilities. Of course, therefore, much rivalry, scandal, and backbiting, nay, even open fighting, not to mention secret attempts

at assassination—for matters sometimes went even as far as that—and a large amount of one-sided criticism. That in the midst of this the great Florentine Cardinal, Giulio de' Medici, should select Sebastiano as the one man fit to paint a companion picture to the "Transfiguration," both ordered by the cardinal for his cathedral at Narbonne, is a fact worth loads of the detraction piled up by the interested partisans of an imaginary rivalry. From the known gloom and haughtiness of Michelangelo's temper, it was the endeavour of the popes and cardinals who employed him to keep him and his fellow artists apart. He was undoubtedly fully capable of undertakings which could not be given to him because of his intolerant and unsociable behaviour. He was rarely cordial with other artists whose practical abilities, whatever might be their intellectual grasp, were considered by their common patrons as good enough for the work assigned to them. It was to keep him and Raffaello apart in their work that Michelangelo was given employment which sent him from the Vatican. Of course, he could not openly be told this. And, while the great sculptor became sullen and distant in consequence of what he believed to be neglect, people set him down as jealous of his younger rivals; and it was thought that he secretly supplied Sebastiano with designs, in order that he might successfully out-rival the too-clever and popular Raffaello, whose sweetness of disposition and charming manners disarmed everything like jealousy or malice.

There is absolutely no proof, either that Michelangelo assumed so shameful a part, or that Raffaello was conscious of any such rivalry. The expressions attributed to the latter with regard to this point are quite apocryphal; and the whole matter, with its corollary that Sebastiano was, consequently, an inferior artist, has grown out of the position of affairs at the Vatican which has just been referred to.

J. W. BRADLEY.

THE SCOTTISH SOCIETY OF PAINTERS IN WATER-COLOURS AT GLASGOW.

THIS exhibition, which opened to the public last Saturday, is more extensive in scale and more widely representative in character than any of the previous displays of the society. Hitherto its exhibitions have been restricted to works by its members, and up to 1882 they were held in connexion with the interesting Black and White Exhibitions of the Glasgow Institute. These latter displays having been discontinued, the society has now invited the co-operation of all painters in water-colours, and has brought together a gathering which completely fills the galleries of the institute.

Nearly all the honorary members of the society contribute. The Marchioness of Lorne sends an effective painting of a "Sailor Boy," the only work in oil that is included in the exhibition. Mr. Alma Tadema is represented by an excellent little Roman subject, "The Street Altar"; Sir J. D. Linton by his telling and dramatic picture of "Rejected"; Sir W. Fettes Douglas, P.R.S.A., shows three slight, but delicate and artistic, examples of his recent work in water-colour—scenes of landscape and coast; and Sir John Gilbert sends a characteristic, though rather mannered, woodland subject with figures of "Banditti Gambling."

The president of the society, Mr. F. Powell, exhibits several carefully finished sea-pieces. His "Sunlit Waters" is brilliant in colour and excellent in its expression of evening radiance, while his "Opalescent Sea" renders with much delicate beauty the fleecy masses of many-tinted clouds. The broad handling of Mr. Wm. McTaggart, and his fine sense for atmosphere

and unity of general effect, are visible in his large river scene, "The Blackbird's Nest," and in his coast scene, "On the Dorlin"; and Mr. Henry Moore is excellently represented by sea-pieces like "Strudland's Bay—Calm," and "A Bright Afternoon—Coast of France." Mr. David Murray's best works are scenes in Picardy—"The Pivot Mill," "Roadside Pasture," and "A Courtyard"; Mr. Arthur Melville sends three of his cleverly-handled studies of Eastern buildings and figures; and Mr. Henry Wallis is represented by his gorgeously coloured rendering of "An Oriental Glass-Merchant."

Among the numerous members of the London Royal Institute who contribute are Messrs. H. G. Hine, J. Aumonier, G. Hayes, and F. G. Cotman; and Mr. W. L. Wyllie has a telling subject of shipping, "The City of Rochester." Most of the Scottish Academicians are represented. Mr. MacWhirter shows delicately finished views of "The Arch of Titus" and "The Colosseum, Rome"; Mr. J. C. Noble sends a telling effect of evening light shed over harvest fields; and Mr. Alex. Fraser has forcible work in the rendering of landscape and of still life.

On the whole, the exhibition is an excellent and successful one. Very few works indeed that should not have been hung have found a place upon the walls; and it argues well for the future of water-colour art in the North that two such gatherings as the present and that recently closed in Edinburgh—including in all nearly two thousand works—should have been brought together in Scotland in one year.

J. M. GRAY.

MINOR EXHIBITIONS.

THE small collection of water-colour drawings by various artists more or less well known, which at present occupies Mr. Dowdeswell's gallery in Bond Street, contains a good many pretty things. To this category certainly belong the vignettes of Thames scenery by F. W. Cartwright, and the small pictures of town and castle by C. Robertson, R.W.S. Among the contributors of larger drawings are A. W. Hunt, R.W.S., whose "Moel Siabod" is fine in colour and poetical in feeling, Sutton Palmer, R.A., K. Marshall, George Fripp, R.W.S., Clayton Adams, David Law, E. G. Warren, E. M. Wimperis, J. Aumonier, and J. Jackson Curnock. Among other charming drawings may be mentioned "Sheila's House," by Lennox Browne, and "Cookham Deane," by Max Ludby; A. H. Enock is an artist already of repute in the North, whose drawings are worth noting.

At the Fine Art Society are a vivid series of drawings of life and landscape in India and Cashmere by Herbert Ollivier, a gentleman who accompanied the Duke of Connaught during his recent absence in India. The artist has a sure hand and considerable technical skill, which he uses with much effect in rendering the bright sunlight and colours of India. Some of his figures are also good, and evidently to be trusted. The best of them perhaps is the "Benares Toilet Club," a clever and humorous study of an Indian open-air barber and his client; but the "Indian School at Poona," "Sari-Weaving, Poona," "The Ghâts of Benares," and other drawings, give bright and veracious glimpses of Indian life. Some of the landscapes are of much beauty and rich in colour. "In the Liddar Valley, Cashmere," "Jumnotri and Gungotri," with its snowy slopes covered with trees and blue shadows, and "The Approach to Benares"—a beautiful drawing—are among the best.

NOTES ON ART AND ARCHAEOLOGY.

MR. HOLMAN HUNT's great picture, the "Triumph of the Innocents," will be moved from the Fine Art Gallery in London, on November 1, to Manchester, and thence to Leeds and Glasgow, for exhibition in those cities.

At least half-a-dozen exhibitions will open to the public at the beginning of next week, with a private view to-day. These are: (1) the twenty-third annual exhibition of pictures by British and Foreign artists at the French gallery in Pall Mall, where the special feature is a collection of the principal works of Prof. Leopold Carl Müller; (2) a collection of the works of Mr. Carl Haag, including several lent by the Queen, at the galleries of Messrs. Bousso, Yaladon, & Co., in New Bond Street; (3) and (4) the usual exhibitions of Messrs. Tooth, and Mr. McLean, next door to each other in the Haymarket; (5) the autumn exhibition of the Nineteenth Century Art Society, in Conduit Street; and (6) a novel exhibition of reproductions of ancient and modern sculpture, held by Messrs. Moeller & Dinkelacker, at Messrs. Gladwell's galleries in Gracechurch Street. We may also mention, as opening at the same time, the eleventh annual exhibition of modern pictures in oil at Brighton.

A NEW History of Art, by Mr. Francis C. Turner, will be published in the course of a few weeks by Messrs. Swan, Sonnenschein & Co., who will issue at the same time Mr. Everitt's work on English caricaturists.

MESSRS. SOTHEY will sell next Monday the library of the late John Middleton, of Cheltenham, which comprises many valuable architectural treatises and books of prints.

THE sum required for the publication of the *Codice Atlantico*, of Leonardo da Vinci, in the Ambrosian Library at Milan, has been secured. It contains 399 sheets and 1,750 drawings. The publication will take eight years and require an annual expenditure of £480. Among the principal subscribers are the King of Italy, the ministers, and the Order of St. Maurice and Lazarus, which has given £400.

THE well-known bronze column in the form of a serpent, now at Constantinople, which is supposed to have served as a support for the votive offering of the Greeks to the temple at Delphi, after Plataea, has been freshly examined, with the result of correcting several errors in the commonly accepted reading.

AT two recent meetings of the Académie des Inscriptions, M. Alexandre Bertrand read a paper upon the three ages of stone, bronze, and iron. The author of this classification is Thomsen, of Copenhagen, who applied it with success to the objects found in Scandinavia. There we have, before the introduction of Christianity, three archaeological periods: (1) when metals were unknown and all implements were made of stone, and the dead were buried under megalithic monuments; (2) and (3) when metals were known, and the dead were burned, but in (2) the only metals known were gold and bronze, while in (3) we find also iron and silver. This distinction, however, is peculiar to the Scandinavian peninsula, and does not rest upon any necessary order of development. The real distinction is twofold—into the age before metals, and the age after metals; and even this does not inevitably involve synchronous periods of time. It may be that a country was first colonised so late that its earliest inhabitants already knew the use of iron. In illustration of this, M. Bertrand brought forward Germany and Greece, where, he said, there are hardly any traces of an age of stone (?). Along the western and northern coasts of Europe, from Portugal to Denmark, several ages of

stone may be distinguished: (1) that of quaternary man, contemporary with animals now extinct; (2) that of the cave men, who have left us their engravings on the horns of reindeer; (3) that of the neolithic man, the author of megalithic monuments and of lake dwellings. It is this last alone which is represented by Thomsen's stone age in Scandinavia. A bronze age, according to M. Bertrand, is to be found only in Scandinavia and in Ireland [this seems to ignore the Homeric *χάλκός*]. It is true that in Gaul also bronze is the earliest metal known; but it is found together with stone implements under megalithic monuments. As to iron, its introduction has varied so greatly in time that it is absurd to talk about an iron age. In Africa, and notably in Egypt, iron was certainly in use several thousand years B.C.; in Scandinavia and in Ireland it seems to have been introduced about the beginning of our era; in Gaul perhaps from the seventh century B.C., though iron has been discovered together with bronze in megalithic monuments; in Italy, and in the valley of the Danube, some centuries earlier than in Gaul. A bronze and an iron age have therefore no real existence.

M. GERSTER, of Neuchâtel, is at present occupied with a series of large and careful photographs of the ruins of Aventicum. Hitherto the only obtainable photographs of Avenches have been very indifferent and small in size.

THE STAGE.

THE Dramatic Students did well to revive Charles Lamb's farce of "Mr. H" (ogsflesh) last Tuesday at the Gaiety. It is amusing, and called forth many hearty laughs from the audience. Why it should have been damned on its first production is hard to conceive; for, though the plot is slight, the situations are good, and the explosion, when the fancied Lord Howard or Prince of Hesse Cassel lets out his real name of Hogsflesh, is effective. All lovers of Lamb must have been glad to see the farce. Douglas Jerrold's "Housekeeper" was not so happy a choice. Though oldsters revived at it their memories of Charles Kean and his wife, and of Mr. and Mrs. Keeley, in the play, it was hard to feel the slightest interest in the story or its working out. The play has no dramatic value. Almost the only telling bit in it was Mr. Evans's solemn warning to the two girls that their married life would be misery unless they always kept—a corkscrew in the house. Miss Lillie Belmore's simulated fear of the fabulous ghosts and terrors was good. The young lady may be congratulated on her first appearance in London. Why should not the Dramatic Students turn from the past stage to the future one? Surely they could have found among the innumerable unacted dramas still in MS. one more worthy of their pains than Douglas Jerrold's poor production. They, we hope, are among the coming lights of their own profession: why should they not take the bushel off the now hidden lamps of unknown playwrights on which managers will not deign to look? Student actors might well help student writers to public notice. By so doing they would give themselves a better chance than they do now in trying to galvanise into life obsolete plays which wise old Time has allowed to die. At any rate, a mixture of the future with the past might surely be tried.

MUSIC.

RECENT CONCERTS.

FRAULEIN LILLIE LEHMANN, *prima donna* from Berlin, and Herr Rummel gave an evening concert last Thursday week at the Steinway

Hall. The lady's success a year ago at Covent Garden in the arduous rôle of "Isolde" is still fresh in the memories of those who heard her. Last week she sang Wagner's "Traume" and Liszt's "Mignon's Lied" with admirable taste and dramatic instinct. Her performance of the showy Aria from Mozart's "Entführung aus dem Serail" was a fine specimen of vocalisation, but owing to the high pitch of the piano her high notes were not perfectly in tune. Herr Rummel is a first-rate pianist so far as head and finger work are concerned, but he sometimes allows his feelings to get the mastery of him. His rendering of the Bach "Chromatic Fantasia and Fugue" and of Beethoven's Sonata, op. 57, though in many respects admirable, was at times exaggerated. By the way, if pianists wish to use the Bülow versions of these masterpieces—and they are perfectly free to do so—a proper announcement ought to be made in the programme. Herr Rummel was very successful in some short solos by Mendelssohn, Brassin, and Chopin. There was a good attendance.

Mr. F. Corder's overture "Prospero" was played for the first time last Saturday afternoon at the second Crystal Palace concert. The stately theme for the trombones recalls, of course, the magician Prospero, and in the impetuous principal theme we detect a sea-motive; but although the composer has attempted to give a musical picture—it was, indeed, originally intended as a prelude to a *ballet d'action* on the subject of Shakespeare's "Tempest"—his music may be judged and enjoyed quite apart from the thoughts which occupied his mind while composing it. The writing is extremely clear and graceful. The middle section is ingenious and free from all eccentricity. The conclusion is, perhaps, somewhat tame, but we must remember that it is not a concert overture in the strict sense of the term. The instrumentation is very effective. At the conclusion of the performance the composer was summoned to the platform. Herr F. Rummel gave a brilliant rendering of Liszt's Concerto No. 1 in E flat. This work has a wonderful fascination for pianists, yet at best it is but as sounding brass or tinkling cymbal. Herr Rummel was deservedly much applauded. He afterwards played solos by Handel, Brassin, and Mendelssohn. The programme included Berlioz's overture to "Benvenuto Cellini," Beethoven's Pastoral Symphony, and vocal music sung by Mmes. Hélène Crossmond and Mr. Ben Davies.

Herr Richter gave the first of a series of three concerts at St. James's Hall, last Saturday evening. The introduction and closing scene from "Tristan und Isolde" are always received with favour, and the same must be said of Liszt's Hungarian rhapsody in F, a clever work certainly, but not a great one. The programme also included Wagner's Kaiser-March, Beethoven's "Egmont," and Berlioz's "Carnaval Romain" overtures. The performances were all exceedingly good, though the tone of the strings appeared to us weaker than usual. The concert concluded with Schumann's Symphony in D minor. If not the greatest and most interesting of that composer's four symphonies, it contains, nevertheless, some wonderful music. The two middle movements are charming, but in the opening and closing ones the thematic material is dry, and it is only by skilled workmanship and persistent energy that the composer has made much out of little. Herr Richter gave a very careful rendering of the work.

Mr. Walter Bache's annual pianoforte recital was held at St. James's Hall, last Monday afternoon. The programme commenced with Bach's prelude and fugue in A flat from the second book of the "Wohltemperirte Clavier." This was followed by Beethoven's variations and fugue

in E flat (op. 35). Here there is work for head and hands—very much indeed for the latter; but with Beethoven technical difficulties are, as they always should be, only means to an end. The piece was played by Mr. Bache with his accustomed skill and intelligence. We were less pleased with his rendering of a selection of ten preludes from Chopin's op. 28: nearly all were satisfactory as to *technique*; but there were points of *tempo* and phrasing to which we could not say amen. The programme included three studies of Liszt and three Paganini-Liszt caprices. For these the pianist received considerable applause. They are enormously difficult, but at what an unmeasurable distance do they stand from the difficult variations above mentioned. The former are the strivings of a master, the latter the tricks of a conjuror. The recital was very well attended.

Herr Peiniger gave his first recital of the third series at the Steinway Hall, last Tuesday evening. He received much applause for his intelligent rendering of some interesting solos by Lang, Brooks, and Jones, English composers of the seventeenth and eighteenth centuries. The programme included pieces by Corbett and Vivaldi for strings and harpsichord—the ordinary orchestra, in fact, of the eighteenth century. Besides these, there were solos by composers of the nineteenth century—Spohr, Volkmann, &c. Mrs. Dyke sang with taste a song by Purcell, and was accompanied on the harpsichord by Mr. Fuller-Maitland. Why was not that instrument used to accompany the English solos mentioned above? The scheme of Herr Peiniger's is very interesting and instructive. There surely might be programmes for those who do not care to pay sixpence for a book. The next recital will take place on November 10.

J. S. SHEDLOCK.

AUTOTYPE.

AUTOTYPE BOOK ILLUSTRATIONS

(SAWYER'S COLLOTYPE)

are printed direct on the paper with suitable margins any size up to Demy, 22 inches by 17 inches. This process is noted for its excellence in

Copies of Ancient Manuscripts;
Copies of Coins, Seals, Medallions;
Copies of Pen-and-Ink Sketches;
Copies of all Subjects of which a
Photograph can be taken;

THE NEW ANNUAL

By the AUTHOR of "LADY AUDLEY'S SECRET," &c.

LONDON: J. & R. MAXWELL. And at all Booksellers.

NEW BOOKS AT THE LIBRARIES AND BOOKSELLERS':

THE LIFE and TIMES of WILLIAM LLOYD GARRISON, 1805—40: the Story

of his Life told by his Children. 2 vols. Upwards of Twenty Portraits and Illustrations. Demy 8vo, 30s. [November 2.]

The *Nation* (N. Y.) says: "This biography, tracing the ancestry, boyhood, training, and adult development of Mr. Garrison to the close of his thirty-fifth year, with a wealth of documentary evidence, much of which has never before been published, now for the first time enables the man to be seen in his true light. A special interest attaches to the interviews with Wierforce and Clarkson in England, and with Harriet Martineau in this country." In addition to the names mentioned in the foregoing, there will be found Garrison's connection with Wendell Phillips, Whittier, Lafayette, Fowell Buxton, Daniel O'Connell, Lady Byron, Mrs. Optie, Haydn, Sir John Bowring, Dukes of Sutherland, Zachary Macaulay, The Howitts, Elizabeth Fry, Theodore Parker, Dr. J. Abercrombie, &c.

SECOND EDITION.

THE LIVES of ROBERT and MARY MOFFAT. By their Son, John Smith Moffat. Portraits, Illustrations, and Maps. Demy 8vo, 18s.

"The weird picture of Moffat and his wife living on in their solitude through those troublous times, striving hard to civilise and Christianise one vast black kingdom, while coalitions of neighbours and swirling enemies strove to crush and enslave it with impetuous onset; that picture retains ever its perennial value as a splendid monument of human effort and Divine success."—*Pall Mall Gazette*.

A BOYS' EDITION OF

ARMINIUS VAMBERY: his Life and Adventures. Written by Himself. With Introductory Chapter dedicated to the Boys of England. Portrait and Seventeen Illustrations. Crown 8vo, 5s. [Nearly ready.]

"A most fascinating work, full of interesting and curious experiences." *Contemporary Review*.

THE COMING ELECTION.

THE THREE REFORMS of PARLIAMENT: a History, 1830-1885. By WILLIAM HEATON. Crown 8vo, 5s.

"The language is clear and expressive, and the author has succeeded in obtaining a thorough grasp of his subject."—*Leeds Mercury*.

LONDON: T. FISHER UNWIN, 26, PATERNOSTER SQUARE, E.C.

A HISTORY OF HOLLAND.

A SHORT HISTORY of the NETHERLANDS (HOLLAND and BELGIUM). By ALEX. YOUNG. 77 Illustrations. Demy 8vo, 7s. 6d. "He writes in a fresh, earnest, and interesting manner, after a thorough study and digestion of his subject."—*Critic* (N. Y.).

SECOND AND CHEAPER EDITION OF

EUPHORION: Studies of the Antique and the Mediæval in the Renaissance. By VERNON LEE, Author of "Belcaro," &c. 1 vol., demy 8vo, 7s. 6d.

"The book is bold, extensive in scope, and replete with well-defined and unbacked ideas, clear impressions, and vigorous and persuasive modes of writing."—*Athenaeum*.

SATURDAY, NOVEMBER 7, 1885.

No. 705, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

LITERATURE.

At the Sign of the Lyre. By Austin Dobson. (Kegan Paul, Trench, & Co.)

ONLY a churl, or one indifferent to what is delicate in literature, could find words of censure for this collection of graceful lyrics, so exquisitely finished with accomplished art, so characteristic of their author's genius in the subtle blending of gentle pathos and light humour, so just in criticism both of manners and of letters, so marked by solid English sense amid the refinements of highly studied versification and the quaintnesses of scholarly archaisms. We hail this volume, together with its elder brother, *Old-World Idylls*, as one of the most perfect products of that latest Anglo-Gallic culture, to which English literature is also indebted for Mr. Lang's *Ballades* and *Rhymes à la Mode*, as well as for some of Mr. Edmund Gosse's most artistic work.

Mr. Dobson is so well known as a poet wherever English is spoken that it would be superfluous to dwell at length upon the salient features of his style. Like Caldicott and Edwin Abbey, he has lived by imagination into the spirit of the eighteenth century. Of the manners and mental atmosphere of that period he reproduces in his verse all that is fanciful, urbane, capricious, omitting its grossness and passing with a genial toleration over its darker aspects. The London of Vauxhall and Grub Street, of the Mall and the Ridotto, has become familiar to him not so much in its prosaic reality as in a vision of delightful fairyland. This volume adds a dozen highly finished masterpieces, cabinet pictures of perfect tone and execution, to the gallery of Georgian studies in which our artist excels. The most enjoyable of these, to my mind, are "The Old Sedan Chair," "Molly Trefusis," "The Book-Plate's Petition," "A Familiar Epistle," "The Dilettant," "The Squire at Vauxhall," and "A New Song of Spring Gardens." If I mistake not, these are already so well known to American and English readers that any detailed analysis of their old-world graces would be an impertinence; yet I cannot refrain from calling attention to the consummate skill with which an empty-pated connoisseur of the last century is sketched in "The Dilettant."

"Just then popped in a passing Beau,
Half Pertness, half Puerilio;
One of those Mushroom Growths that spring
From *Grand Tours* and from Tailoring;
And dealing much in terms of Art
Picked up at Sale and Auction Mart."

The fellow has at his fingers' ends all the cant phrases of a by-gone age of aesthetic affectation, which, though obsolete now, could easily be paralysed by like ephemeral inepti-

tudes from the slang of South Kensington coteries:

"That 'Air of Head' is just divine;
That contour Guido, every line;
That forearm, too, has quite the *Gusto*
Of the third Manner of Robusto. . . ."

He glibly hazards more technical criticisms:

"The middle Distance, too, is placed
Quite in the best Italian Taste;
And nothing could be more effective
Than the *Ordonnance* and Perspective."

In short, he is a living epitome of what Mrs. Malaprop called "bigotry and virtue"; and since some incarnation of the "bigotry and virtue" in fashion must be always with us, this admirable creation of the poet will last not only as the portrait of an extinct species of fop, but as the symbol of aesthetic humbug for all ages.

Mr. Dobson is so steeped in the atmosphere of his favourite period that he prefers to cast his didactic or genially satiric pieces in the form of that century. "The Two Painters," "The Claims of the Muse," and "The Successful Author," lose none of their point and application by the antiquated setting he has given them. Even that finely-edged piece of modern sarcasm, "The Poet and the Critics," while reproducing contemporary commonplaces of hack-criticism, is tricked out with the quaint use of capitals and the apt allusions to our classic age of Anne which betray its author's predilections.

Still, it must not be thought that the eighteenth century in England is the only paradise of Mr. Dobson's fancy. He is almost equally, almost as pleasurably, at home in old and modern France. "The Curé's Progress" is a gem of sympathetic portraiture, while "A Revolutionary Relic" transports us to the chateau life of Touraine and the tragedies of the Terror. If English song-books inspired the two evanescently suggestive opening lines of "A Madrigal"—

"Before me careless lying,
Young Love his wares comes crying"—

we may welcome an even rarer reproduction of French literary charm in "A Fancy from Fontenelle." There is, indeed, nothing in the book which takes my fancy by its masterly workmanship and restrained pathos more than this. Pity that a place was not found for it in Mrs. Boyle's anthology from the rose-garden of the poets, *Ros Rosarum*! On Italian things, Mr. Dobson's touch does not strike me as quite so unerringly true; and the one original sonnet in the collection, "Don Quixote," exhibits less command of form than his rondeaus do.

The motto on the title-page of *At the Sign of the Lyre* is *leviore plectro*; and a pretty *jeu d'esprit*, entitled "A Roman Round-Robin," shows that the author is somewhat bored with Horace's moralisings. We look, indeed, in vain, for deep or serious matter in these lyrics, although a sound and wholesome philosophy of life, with much of shrewd world-wisdom, is conveyed in their subversive pleasantries. Yet one of the rondeaus strikes a deeper note. This little poem, besides being beautiful in form, reflects so fair a light upon the poet's aim that I am fain to transcribe it at length. Together with the "Fancy from Fontenelle," I feel sure that it will chain my

attention whenever I chance to turn the leaves of this book.

"In after days when grasses high
O'er-top the stone where I shall lie,
Though ill or well the world adjust
My slender claim to honoured dust,
I shall not question nor reply.

"I shall not see the morning sky;
I shall not hear the night-wind sigh;
I shall be mute, as all men must,
In after days!

"But yet, now living, fain were I
That someone then should testify.
Saying, 'He held his pen in trust
To Art, not serving shame or lust.'
Will none? Then let my memory die
In after days!"

In his verses of society upon contemporary and personal or quasi-personal themes, Mr. Dobson shows that he has been an appreciative student of Præd, and not, perhaps, with the most felicitous results in all cases. The terse pruned couplets of Gay are surely more worthy of his genius than the jingle of which we have almost a disagreeable specimen in "Poor Miss Tox." There is a spavined canter in the rhythm, and not even Mr. Dobson's ingenuity in rhyming can reconcile the ear to a succession of stanzas ending in Tox. Why, oh, why, we keep saying, as we read, does he not make another set of stanzas on "frocks," "hocks," "rocks," and "pox," when he is about it?

The poems about little girls, which belong to this contemporary section of Mr. Dobson's verse, spring from a very real and amiable source of inspiration. Nothing can be imagined prettier than the portrait of "Little Blue-Ribbons," nothing more refreshingly anti-Philistine than "A Fairy Tale." The lines called "Household Art" seem to indicate that Mr. Dobson likes even little girls *à la mode du ci-devant*; for Ruskin's Lectures are scarcely less eulogistic of Miss Greenaway's artificial naturalism than are these verses. Ours is a singular age: so terribly in earnest, so utilitarian in its main energies; so fond of trifles and *rococo*, masquerade and *bric-à-brac*, day-dreams of a travestied past and castles in the air of half-assimilated antiquities, in its hours of leisure. To draw the conclusion that therefore this is not a creative age would be unjust. It is a learned and a scientific age, the inheritor of what remains of the whole culture of humanity to us wards. Those poets who breathe their own life-breath into puppets of the past, with adequate knowledge, intelligent sympathy, and just tact, are creative. It is not necessary to apply to Mr. Dobson's work Walt Whitman's austere dictum—"Poems distilled from other poems pass away." For he converts into living poetry a mood of sympathy with the past which is very real to him, and also to numbers of his contemporaries. Fine criticism, loving study, exquisite workmanship, and vivid vision are so subtly mingled here with sense, with fancy in its sphere not less alive than Keats's, and with a genuine droplet of what Mr. Dobson styles "The Lost Elixir," that some not all too friendly critic may safely prophecy a diuturnity in human memory for these light-winged things, *κοῦρά τινα καὶ πτηνά*, when heavier poets' wares are sunk in clay.

JOHN ADDINGTON SYMONDS.

Popular Government. By Sir Henry Sumner Maine. (Murray.)

THIS volume is a faggot of spent rockets. The four essays of which it is composed have been read by nearly everybody as articles in the *Quarterly Review*. Many will read them again in their collected form; but probably few will be as much impressed by the second reading as by the first. Some, at least, of these essays were, on their anonymous appearance, attributed to Lord Salisbury; but what was then high praise now seems like the bitterest satire. Nor would the satire be wholly undeserved. More ingenious than profound, more epigrammatic than original, more dazzling than persuasive, this work would be worthier of the present Prime Minister than of the author of *Ancient Law*.

It is true that in the preface to *Popular Government* Sir Henry Maine endeavours to establish a connexion between his earliest and his latest work. One object of the former was, as is well known, to show that the idea of natural law (in the ethical sense), while it has exercised a powerful influence on jurisprudence and politics, is itself so far from being "natural" that it demonstrably originated in a particular phase of Greek philosophy. And now we are told that the modern faith in democracy springs to a great extent from the same most powerful, but most delusive, idea. But hardly any attempt is subsequently made to substantiate this sweeping assertion, only ten pages out of 254 being devoted to the subject (pp. 152-162). Throughout the rest of the volume the arguments for and against the necessity or the advantages of democracy are given without any reference to a state of nature, real or supposed. The pleas in its favour are cited not from Rousseau, but from Bentham and De Tocqueville. In other words, they are utilitarian and historical; and, instead of pointing out that the primitive arrangements of society, even had they been democratic, which they were not, are valueless as a precedent for ourselves, Sir H. Maine labours to show that democracy is not necessarily the ultimate form of government, nor at any time a particularly desirable form. It cannot, indeed, escape the most superficial observation that both here and abroad the popular cause is made more and more to rest on grounds of expediency and experience. There is certainly one recent work which has much to tell us about natural rights, and at least an ideal social contract. But this work is not by a democratic thinker; and Sir Henry himself refers to it as the "admirable volume" of Mr. Herbert Spencer on *The Man versus the State* (p. 49).

There is, however, this much of unity in Sir H. Maine's teaching that—here as well as in *Ancient Law*—it is a protest against unreasoned convictions, a blow struck for freedom of thought against what may be merely phantasmal tyrants. As such it illustrates a characteristic note of English philosophy, which is nothing if not a school of individuality and fearless questioning of received opinions. So far, both political parties are interested in hearing what it has to tell us. If democracy is a bad thing, then it should be opposed or restrained by every fair means. If it is a good thing, it must be protected and promoted with unrelenting vigilance and energy.

In either case the attitude of lazy fatalism is the most mischievous conceivable.

On the other hand, what seems highly objectionable is the method pursued, which is that not of the philosopher, but of the lawyer, or even the sophist. The history of government is studied apart from the more general history of society and civilisation, with the result that the whole subject is thrown into uncertainty and confusion. Popular government on a large scale is, we are told, something very new. Towards the close of the last century it had proved, in most instances, more unstable than monarchy and aristocracy, and under the republican form was very generally discredited, even in America. By parity of reasoning, just as serious a case might be made out against citizen armies, which have only been employed on a great scale during the present century, while in antiquity, the Middle Ages, and the Renaissance, they failed to hold their own against mercenaries. Sir H. Maine is fond of quoting Aristotle; but he seems to have overlooked a very wise remark of the Stagirite's, to the effect that different polities are adapted to different social conditions. A popular, or at least a democratic, government cannot be worked except where there is a relatively high average of intelligence and education, combined with easy and rapid means of communication among the members of the state. Formerly these conditions were only realised in small communities. In course of time such communities came into collision with great territorial states governed by monarchs or aristocratic castes; and, although often victorious, finally succumbed in the unequal struggle. How vast a revolution has been effected by the representative system and the printing-press, the railway and the telegraph, needs only a moment's reflection to perceive. One is almost ashamed to bring forward such commonplaces; but the fault lies with those by whom they are ignored.

Again, Sir H. Maine appears to think that he has scored a point by triumphantly enforcing the proposition that democracy is a form of government. This seems a harmless truism enough until we find what interpretation is put on it. Just as monarchy means government by one and aristocracy government by a few, so also, we are informed, does democracy mean government by the many. It puts the people in the place of the king, and is an inverted monarchy. That there may be no misapprehension on this matter, the constitution of the United States is expressly referred to as an illustration (p. 60). "The advanced Radical politician of our day seems to have an impression that democracy differs from monarchy in essence. There can be no grosser mistake than this, and none more fertile in further delusions" (*ibid.*). The reader, whether an advanced Radical or not, will be surprised to find farther on that what the founders of the American constitution really put in the place of the king was not the people but the president (p. 211). He will then perhaps observe that the gross mistakes are not all on one side. The truth seems to be that wherever the ultimate source and sanction of power may be placed, the government of a state must always rest in the hands of a few, while the supreme initiative sometimes is, and sometimes is not, possessed

for lengthened periods by a single mind. This unity of initiative and direction may appear in all forms of government and under very different names, as it is wielded by a Pericles, a Caius Gracchus, a Frederic, a Pitt, a Nicholas, or a Lincoln. The real difference between democracy and all other forms of government is that it entails publicity, freedom of criticism, and responsibility of the rulers to the ruled; whereas despotism excludes these conditions, and the intermediate constitutions, while not necessarily excluding, do not necessarily imply them. And this, *pace* Sir H. Maine, seems to amount to an essential distinction; for publicity and responsibility tend to prevent the governing minority from abusing their power, and, while not incompatible with the successful conduct of great military operations, they harmonise with the requirements of an industrial and scientific society. In other words, the cause of democracy is identical with the cause of advancing civilisation.

Here, however, we are met by a hinted argument that democracy favours spoliation and stagnation, thus making war at once against industry and science. To some extent the one imputation neutralises the other. If, as Sir H. Maine contends at length, the mass of the people are averse from all change, they are most unlikely to sanction so momentous a change as the confiscation of property to any great extent would imply. To prove the likelihood of such confiscation, we have nothing but a passage from Mr. Labouchere (p. 43). Against it we have the fact that "a law establishing a progressive income tax was negated under a Cantonal Referendum" in Switzerland (p. 96); and the assurance that the theories of Mr. Henry George have no chance of being realised in the United States (p. 248).

To prove the alleged hostility of the people to science, only a single fact is adduced:

"The central seat of all political economy was from the first occupied by the theory of population. This theory has now been generalised by Mr. Darwin and his followers, and stated as the principle of the survival of the fittest. It has become the central truth of all biological science. Yet it is evidently disliked by the multitude, and thrust into the background by those whom the multitude permits to lead it. It has long been intensely unpopular in France and the continent of Europe; and, among ourselves, proposals for recognising it through the relief of distress by emigration are visibly being supplemented by schemes founded on the assumption that, through legislative experiments on society, a given space of land may always be made to support in comfort the population which, from historical causes, has come to be settled on it" (p. 37).

On this it may be remarked that the theory of the survival of the fittest, while independent of the assumption that population tends to outrun the means of subsistence, would rather discourage state-aided emigration as helping the unfit, whereas a very democratic paper, the *Pall Mall Gazette*, strongly advocates it; that if the French regard Malthusianism with horror, their sentiments must, to say the least of it, differ very widely from their practice; and that the bulk of the higher classes are just as much opposed to any economical truth which conflicts with their interests as the multitude can be.

When Sir H. Maine enumerates a string of improvements which the majority of the English people would, according to him, have rejected under a *régime* of universal suffrage (p. 36), the democrats might answer that he is, against his own declared principle (p. 4), writing hypothetical history, and that the very effect of aristocratic government is to keep the people in that state of brutal ignorance from which they are extricated by democracy. Really, when one compares the attitude assumed towards certain scientific theories by the higher and lower classes respectively in France and Germany, the charges brought against "the multitude" seem not merely overstated, but the direct reverse of true.

The chapter on "The Age of Progress" is the most brilliant and entertaining, but also the most sophistical, in the book. Observing a great enthusiasm for political reform at the present moment, Sir H. Maine attributes it to a love of change for its own sake, which again he is sorely puzzled to account for, seeing that, according to him, nothing is more alien to human nature than such a taste. The obvious answer is, that what people desire is not change as such, but change from a worse to a better condition. There seems, also, to be a thorough confusion about the assumption that because the democratic parliaments of the immediate future are expected to legislate on a great scale they are therefore to continue legislating on the same scale through all time. It is held that there are considerable arrears to make up, and that unforeseen cases may subsequently arise needing special provision to be made for them—surely not a very extravagant belief.

In his chapter on "The Constitution of the United States" the author deals with a subject of which he is an unequalled master—the evolution of forms of government; and here, accordingly, he shows himself at his best. Perhaps the orderliness and progressiveness which he signalises as characteristic of the American people are less due to mere legislative enactments than he seems to imagine; but that they should be admitted to exist, for whatever reason, goes far to neutralise much of the anti-democratic special pleading in the earlier portions of his work. Few besides those who are opposed to all progress will agree with his half-hinted wish that the forces of obstruction already operating among ourselves should be aided by the elaborate precautions against organic change which the constitution of the United States has provided.

ALFRED W. BENN.

The Journal of Mary Frampton. From the year 1779 until the year 1846. Edited, with Notes, by her Niece, Harriot Georgiana Mundy. (Sampson Low.)

THIS book, though scarcely to be entitled a journal, inasmuch as the bulk of it consists of correspondence, contains a good deal that will be read with interest. Miss Frampton, the daughter of a well-connected Dorset squire, enjoyed some special opportunities for learning what took place in the worlds of fashion and politics at an eventful epoch; and, through her mother, who lived to the age of ninety-two, her recollections may be said to extend over more than a century.

She remembered Mrs. Montagu, the chimney-sweeper's friend, and was present at her May-day festivities. She remembered when all the world wore powder and pomatum and pyramids of hair, and when "twenty-four large pins were by no means an unusual number to go to bed with on your head." She also remembered the French Revolution, the rise and fall of Napoleon, the alarms for England's safety and the triumph of Waterloo. But it is on the former class of subjects rather than on the latter that her reminiscences throw a useful side-light.

Miss Frampton, for instance, tells us that silver forks, rugs, and foot-stools were luxuries unknown a century ago, except in the very highest families. This, perhaps, rather exaggerates the fact so far as regards the dwellers in towns; nor must we suppose that all country squires with £4,000 a year lived, like Mr. Frampton, in one of the worst rooms of his house, employing it for breakfast, dinner and supper, as well as for more general purposes. But the country had its compensatory advantages, and among them the low price of the necessities of life. Butcher's meat in 1784 was 2½d per pound; and though it rose some years afterwards to 3½d. and 4d., it was evidently not from his stock that the Dorsetshire farmer made his livelihood or paid his rent. In those days, in contrast to these, corn was everything; in those days also there was not that equalisation of prices which railways have brought about.

Moreton, the Framptons' country seat, was within easy distance of Weymouth, and consequently exposed to the invasion of any members of the royal family who might happen to be staying there. The Duke of Gloucester came over on one occasion to shoot pheasants—so numerous that in one field more than 100 brace were feeding, "yet then no arts were used to entice them by giving them corn!"—and invited himself to dinner, which generally took place at three or four o'clock. How the hostess extricated herself from these and similar troubles may best be learnt from the volume itself, in which there is displayed a love of royalty and a disposition to chronicle as important all its sayings and doings, which we cannot certainly call old-fashioned. One anecdote that is recorded reflects more credit upon "the best dressed gentleman in Europe" than much that has come down to us, and it bears the authority of Mrs. Dawson Damer (*née* Seymour), whom Mrs. Fitzherbert had adopted.

"On the death of George IV. in 1830, some jewels and trinkets were directed to be given to Miss Seymour; amongst others was the counterpart of a brooch containing a portrait of George IV., set with a diamond [face] instead of a glass. The diamond had been cut in half, and the other part, set in the same way, contained a miniature of Mrs. Fitzherbert herself. Great search was made at Windsor for this valuable jewel, but in vain. Some time afterwards, the Duke of Wellington, when one evening sitting next to Mrs. Damer, said to her with some hesitation, 'I daresay you may like to know something of the lost jewel'; but, added, 'perhaps I had better not tell you.' She pressed him to continue, when the Duke proceeded to state, with some confusion, that in his office as First Lord of the Treasury, it had been his duty to remain till the very last with the body of the King, who had given him

strict instructions not to leave it, and to be buried with whatever ornaments might happen to be upon his person at the time of his death. The Duke was quite alone with the body, and his curiosity being excited by seeing a small jewel hanging round the neck of the king, he was tempted to look at it, when he found that it was the identical portrait of Mrs. Fitzherbert, covered with the diamond for which the unsuccessful search had been made."

The story was afterwards told to Mrs. Fitzherbert (who scarcely ever alluded to her former connexion with the king), and she displayed much emotion on hearing it.

The comments upon contemporaries made by the journalist and her correspondents are, of course, not the least entertaining bits in the volume. Mrs. Siddons is described as a dull woman in conversation, extremely good-natured, and possessed of a considerable talent for modelling. Mary, the "Beauty of Buttermere," was, in 1810, "a coarse, dirty, fat, rather old mother of two or three children—not at all like a lady of a lake." But the same writer, George Eden (afterwards Earl of Auckland), who thus dispels a poetic illusion, speaks in terms of warm appreciation of Mrs. Lamb, the wife of Lord Melbourne's brother, and one of the charms of Devonshire House. Of Miss Edgeworth Lord Lansdowne writes:

"She has a great deal of imagination, which you would not, I think, expect from her works, and the happiest facility of seizing remote analogies, joined to the strongest perception of humour and wit, whenever it is to be found. The children [of Mr. Edgeworth's second marriage] do ample justice to their scheme of education. They live entirely with their parents, and consequently with whoever may be in the house, but they are always happy, employed, and never in anybody's way, entering into what is going on in conversation without asking troublesome questions or being ashamed of giving their opinions if asked. Mrs. Edgeworth is a very agreeable and sensible woman, and seems to admire and love Miss Edgeworth as she ought. Mr. Edgeworth is tiresome sometimes. . . ."

Then, in 1818 there occurs this notice of Baron Stockmar, with whose name we have lately been made so familiar.

"The Baron and Dr. Stockmar go with Prince Leopold. If Mr. Frampton makes acquaintance with any of these gentlemen, he will find the doctor the smallest body, but the largest mind of the party. The little man is shy and very retired, or I should say retiring."

Of course, in noticing such a book as this, one is tempted to deal largely in extracts. There cannot be any one characteristic feature where the writers are a score in number, and the topics absolutely innumerable. All we can say is that the letters from France during the Revolution, and also in 1815, are full of interest, and that even the trivial gossip, which largely occupies the pages, has acquired through age a certain degree of value. The notes are copious and useful, for without their aid it would be difficult to identify half the personages who are brought beneath the reader's notice. They have fallen back into an obscurity from which rank alone had served to rescue them. Now and then, however, the editor is distinctly redundant. Thus the Dowager Lady Vernon writes in 1814 to recommend Miss Frampton *Mansfield Park*, adding, "It is not much of a novel—more the

history of a family party in the country—very natural, and the characters well drawn." A footnote contains the superfluous information—"One of the incomparable novels by Miss Austen. They are all true pictures of real life, and have deservedly preserved a lasting reputation." The note could alone be justified by their reputation having been lost.

CHARLES J. ROBINSON.

Sardinia and its Resources. By Robert Tennant. (Stanford.)

MR. TENNANT tells us more than once that Sardinia is "almost a *terra incognita*," and that this must be his excuse for adding to the scanty stock of works on the famous Mediterranean island. His volume, however, requires no apology; for, even had it been a poor instead of a very useful description of an interesting country, every fresh mind, so long as the possessor is a man of intelligence and knowledge, enables us to see an old object in a new light. But, when one turns over the five great volumes to which Count Albert della Marmora devoted his life, it is impossible to accept Mr. Tennant's dictum as applicable to anyone except the tourist, who is scarcely a criterion where geographical erudition is concerned. However, we daresay not many of the holiday folk have ever heard of the *Voyage en Sardaigne* or of the *Buletino Archaeologico Sardo*; and, in any case, the statistics in the former of these treatises are by this time rather stale, so that from the literary point of view there was plenty of room for a new book.

Mr. Tennant, who is not unknown in Parliamentary circles, visited the island as the agent of certain financiers who have been exploiting its undeveloped resources. As might be expected, he was received with effusion, and had better opportunities of examining the country than a traveller less likely to put money in the pockets of the people. This was the one great advantage which he possessed as the possible author of an English description of "Sardegna." But "whilst thus engaged no thoughts of 'writing a book' were present" to his mind, "and it was not till his labours were nearly completed" that the idea which he has now embodied in printers' ink was suggested as at once likely to be useful and original. Whether this is intended as an apology or a recommendation it is difficult to say. But from neither point of view is it acceptable. To say that you have written a book without making special preparation for so serious a task is more censurable than pleading that it has been published "at the request of friends," since these kindly critics may, after all, be capable judges, and not likely to advise the coming author to give the enemy an opportunity for rejoicing. The man who, after visiting a country for one purpose—or perhaps for no purpose in particular—is induced to compile a volume out of his vague recollections, or fragmentary notes, is apt to draw on memory for what only descriptions prepared on the spot are satisfactory, and to supplement the absence of personal knowledge by the oft-times erroneous or antiquated accounts of his predecessors. If he had determined beforehand to perpetrate a literary escapade, he would, if wise, have made himself master of what had already

been written, noted the particulars in which the authors read were weak, and after carefully mapping out the projected work, jotted down under each head the data which must be revised, the assertions which must be sifted, and the still untouched questions which must be eviscerated when the opportunity for doing so was at hand. Otherwise, lost chances will be deplored, and second-hand facts, which are perhaps not facts at all, accepted in place of the writer's own observations, which, if not irrefragable, are, at all events, personal. Mr. Tennant has not, we fear, owing to some of the causes indicated, written so good a book as he might otherwise have done. Still, we are not inclined to find fault, or to declare that his book is intellectually unnutritious, simply because here and there he has given us tinned geography when the carnal man might have preferred the fresh article. On the contrary, we do not know another English book which contains anything like so full or accurate an account of Sardinia, and, with the exception of Della Marmora's monumental tomes, of which Mr. Tennant seems to have made very little use, any foreign one worthy of being compared with it.

After a brief and uncritical *résumé* of the chief historical events connected with the island, Mr. Tennant, who makes no pretension to antiquarian knowledge or to literary experience, devotes ample space to descriptions of the agriculture, the forests, the mines, the railways, and the various industries which formed the reason of his mission to the country. The railways, indeed, get a somewhat undue share of attention; but here he is on his own ground, and the chapter is, therefore, more authoritative than most of the others. The various characteristics and manners of the people, their ceremonials and their superstitions, are sketched more briefly, but, so far as we have been able to see, with unpretentiousness, impartiality, and good sense. The author is an enthusiastic sportsman. The game animals accordingly come in for a large portion of his attention; and, as the ordinary run of Sardinian tourists are bent on slaughter, the information is sure to be acceptable. Mr. Tennant does not, however, seem to be a scientific zoologist; otherwise, even after making allowances for the numerous typographical errata of a book printed at Rome, he could scarcely have so frequently blundered over the names of the beasts and birds described. It might puzzle anyone not acquainted with the Mediterranean, to detect the common *Pinna* in "a crustaceous fish," or the byssus of that well-known bivalve in "the bunch of silk which it contains" (p. 135). Nor is it quite accurate to say (p. 197) that there can "be no doubt" the moufflon is "indigenous to this island and to Corsica, and is not found in another country." It is a native of Greece, and also of Cyprus. However, as he appears to have for the most part relied on Cetti's rather untrustworthy *I quadrupedi di Sardegna*, this, and a few similar mis-statements may, perhaps, be laid at that writer's door. It may likewise be pointed out that to constantly speak of the "Sarde language" is apt to confuse the unphilological reader. Numerous dialects are spoken in Sardinia. But they are no more "languages" different from the Italian than are the tongues of

Naples, Modena, Rome, Lombardy, Sicily, or Corsica, though, like these dialects, widely apart from the typical Tuscan. In the northern part of the Island it is possible to get along with Latin—if the words are written. At Alghero, on the west coast, Catalan is spoken, and the Genoese dialect prevails at Carloforte. But as the literary Italian is taught in all the schools, and is universally spoken and written by the higher classes, and in the larger towns, and is the official tongue, which must be understood by the military recruits, it is fast displacing the local dialects.

There is a very fair map of the island, and several instructive, though very roughly executed, woodcuts. Yet the lack of an index makes it difficult to ransack, without an expenditure of much time and patience, the 311 closely packed pages of what is likely to remain, for some time at least, the most authoritative treatise on Sardinia in the English language. Mr. Tennant is very severe on the blunders of other *litterati*. This is a weakness of most travellers; and, unfortunately for the puzzled reader, this assumption of superior accuracy only holds good until the critic, in his turn, falls into the hands of a third writer. It is a common delusion to mistake the varied impressions of different men for absolute misstatements. There is a Browniate of truth, Wendell Holmes tells us, and a Smithiate of truth; and no doubt there is a Tennantiate of the same polymorphous element. His Nemesis may perhaps come in the shape of a rival author, who will demonstrate to his own satisfaction that Mr. Tennant was no more precise in his assertions than some of the people whom he causes to pass under the harrow. We can only say that our experience is in favour of the contrary view.

ROBERT BROWN.

NEW NOVELS.

The Master of the Mine. By Robert Buchanan. In 2 vols. (Bentley.)

The Beauty of the World. By A. J. Duffield. In 3 vols. (Hurst & Blackett.)

Rainbow Gold. By D. Christie Murray. In 3 vols. (Smith, Elder & Co.)

Yoked Together. By E. L. Davis. (Nisbet.)

A Generous Friendship. (Griffith, Farran & Co.)

The Will. By Ernst Eckstein. Translated by Clara Bell. In 2 vols. (Trübner.)

Too Fat. By Luke Lovart. (Bristol: Arrow-smith.)

THERE is probably no contemporary man of letters more heedless of his reputation than Mr. Robert Buchanan. He takes the magic rod in his hand, and refreshing waters gush forth, and he is hailed with acclaim by many who are athirst. A little later, and his voice is heard again in waste places, the wand is once more waved, but the issue is of the scantiest and the savour brackish, if not salt. How the same author came to write *The Shadow of the Sword*, or *God and the Man*, and such a book as *Stormy Waters* must have puzzled even the most indiscriminate reader: the waters ran clearly enough in the former, in the latter they were "stormy" indeed, not to say turbid. Perhaps it would be too

hard upon *The Master of the Mine* to bracket it with the last-named, but it is undoubtedly inferior to any other of Mr. Buchanan's romances. It is certainly safe to say that if this had been the author's first novel he would not have gained a hundredth part of the audience whom he has undoubtedly won over. Throughout it is manifest that Mr. Buchanan has had his eye on the stage, and the stage not of the Haymarket or the Court, but of the Olympic or Drury Lane. In these pages we breathe the air of melodrama, and unfortunately one is more apt to be wearied than amused by certain *banalités* beloved of a wide class of theatre goers. There are scenes that border on the ridiculous: for example, that where the determined hero enters the drawing-room of the manor-house, "first, however, having the grace to take off [his] hat," and refuses to be daunted by any refinements or splendours, "even by the presence of a king"; or, again, in the would-be very dramatic scene in the next chapter, where, in true stage manner, the heroine remains in a dark corner of the drawing-room (unobserved, though her lover and her hostess have been sitting there since dinner), and comes to the front just as Hugh Trelawney, the hero, is about to strike her false lover, i.e., just as the curtain of an intermediate act falls. Mr. Buchanan shows himself to best advantage in descriptions of aspects of nature. The following account of a phenomenal herald of a great storm is vivid; and the present writer can vouch for its truth, having seen something of the kind off the coast of Brazil:

"As the afternoon passed, and the dull leaden twilight increased, we saw, looking seaward, the phenomenon to which I have alluded: two suns—one round and purple, the other pink and ghostly—floating in the vapours to the west. Both were quite rayless, and they hung, as it were, some fifty yards from each other. Both seemed so near to us that one would have thought it possible to reach them with a bullet from a gun. . . . I cannot express in words the strangely depressing and vaguely alarming effect of this phenomenon on myself and all who witnessed it. Nor was the effect lessened when the dimmer of the two suns suddenly disappeared, and the other changed in a moment from purple to jet black—a jet black ball in the midst of a waste of leaden grey."

A very different novel, indeed, is *The Beauty of the World*, by the author of that striking but unequal book, *Needless Misery*. Mr. Duffield is in earnest, and below all his banter there is much strong feeling. It is not, however, as a story that *The Beauty of the World* is most fascinating, for the construction is peculiarly unsatisfactory, many of the characters are mere shadows, and there is a striking lack of a strong central motif. Its charm lies in its noble and manly sentiment, its quaint originality of expression, its narration of certain stirring religious and humanitarian movements that took place in England about half a century ago, and the glimpses it affords us of one or two famous personages thinly disguised under the names of Edward Irvington, Henry Drummard, and Lord Demanville. I have read no novel of recent date containing a tenth part of the thought and mental stimulus of this powerful book, from the perusal of which no one could fail to arise intellectually refreshed. To perpetrate a "bull," there is,

perhaps, nothing in the book more interesting than the preface—a rare characteristic of any work of fiction. According to a statement made therein, the "Beauty of the World" (Bacon's phrase in *The Wisdom of the Ancients*, "the souls of the living are the beauty of the world") was first revealed to the author during a season of "trial and horror." Curious names are those that the reader soon comes across, and no less curious characters. Mr. Samuel Flick, popularly known as Sammy Flick, the reformed brute and inspired revivalist; Tobias Elejuice, prodigal son and nobleman; old Matthew Elejuice, a Jew of Jews, trained to perfection in the art of "taking in" wealthy Gentiles, yet with a certain greatness of character, like a distorted oak, full of sap, and sound at the core; Kerenhappuch Ruck, who marries Matthew D'Anson, the clergyman at whose house the great "seers" of the time are wont to congregate, are, with several others, veritable portraits. The scene is, for the most part, laid in the Warwickshire district, once Shakspeare's beloved corner of England, now in great part foul with natural corruption and human degradation. It is impracticable to give even the barest details of the story, so complicated are the threads of narration. Briefly, it may be said that it is a many-sided survey of social conditions of the England of forty-five years ago (and, to a great extent, of the England of to-day), delineated by one whose life has known something of the struggle, the despair, the scanty victory. Sam Flick sought to save souls by prayer and faith and passionate exhortation; Edward Irvington, mighty of tongue, and Henry Drummard, and others of their kind, would fain have done so through prophesying and transcendental exaltation of spirit; Tobias Elejuice and his disciple George Godson, humanitarians, would have turned degradation and misery into prosperity and gladness through the revelation of man's dependency on man, on man's continual effort, on man's awakening to "the beauty of the world." "Get to work, all of you; have a hand in the New Creation" were not only the last words of George Godson, but are the keynote to all the life-work of Tobias Elejuice. A novel, however, Mr. Duffield's book still is, and for those who read only for the pleasure of the moment it may be an encouragement to learn that, even from their point of view, this original and powerful book will be found greatly interesting.

Mr. D. Christie Murray in *Rainbow Gold* avoids the melodramatic Scylla against which Mr. Buchanan has wrecked his craft and the confusing formlessness of that Charybdis which has absorbed Mr. Duffield. A story that is strongly interesting, that is healthy and robust in tone, and that is permeated with the true romantic flavour is decidedly a book worth reading. All this, and more, is the last novel by the author of *Joseph's Coat*, and other charming tales. Many a reader of the *Cornhill* must have received pure delight in monthly instalments for some time past, for in that magazine *Rainbow Gold* has been appearing as a serial. There are many novels issued annually bearing the sub-title "A Romance," though the majority of them are noteworthy mostly for the total absence of the genuinely romantic spirit. Mr. Murray

does not so designate his latest production, yet it seems to me more worthy to be called a romance than any novel I have read for sometime. It has a far-away suggestion of Mr. R. L. Stevenson's *Treasure Island*, though the two books are, both in scheme and treatment, entirely distinct. Since his first book the author of *Joseph's Coat* has developed in his art: his characters are real, lifelike, and act and speak like human beings, not as if they were simply the novelist's mouthpieces. Job Round is the name of the hero, and a fine fellow he is. The village life of Castle Barfield, where he spends his youth, is delineated with admirable skill and *vraisemblance*, and some of the minor characters are realised by the reader with the vividness almost of actual contact. Job's love for the daughter of the fine-natured Armstrong; his quarrel with his headstrong old father, Ezekiel (who ultimately redeems himself in the eyes of the reader by his steadfast upholding of parish rights); his departure from home, his enlistment and his exciting adventures thereafter, with the vague hints of romantic mystery dropped concerning his ultimate relation with the strange Frenchman, Hercule Asmodée Bonaventure, occupy Book I. There is something very tantalising in the fact that the eventful years that follow are left shrouded in mystery. There is ample opportunity here and throughout the remainder of the volume for the reader to imagine anything wild and desperate he may choose—something of the kind he knows must have occurred, but *what* is the mystery. Herein Mr. Murray shows his artistic cunning. When we next meet Job he is some twenty-five years older, is back again in Castle Barfield, is a widower with a beautiful daughter (having married the daughter of Armstrong, for whose sake long ago he had left his home), and is quite one of the most respected citizens of his native place. How one Bowling, *alias* William Dean, a strange sailor addicted to new and startling expletives and speaking foreign tongues, turns up; how also General Conynghame, an old-time enemy of Job, comes to reside in the neighbourhood; how the love-plot grows and grows, how innocence is nearly ruined, and how the wicked spin the web of their own entanglement; how also one great discovery becomes more and more imminent; how through it all the mysterious hidden treasure, the "rainbow gold," seems to be the hinge on which everything turns; and how in the end justice is satisfied and true lovers are made happy, must be left to the reader to find out, who will find the process a delightful task. Mr. Murray's romance must be one of the most successful books of the season. Certainly no more wholesome and no more thrilling excitement could be afforded; while—and this is no small matter—the author is the capable writer throughout, finding even the most minor incidents (many of which are characterised by delightful humour), since worth telling at all, worth telling well.

It was a good step from *The Master of the Mine* to *Rainbow Gold*; it is a much farther one back again from the latter to *Yoked Together*. The story turns on the unhappiness attending the marriage of an extremely narrow-minded young lady of evangelical principles with a lawyer of the name of

Saddlethwaite—is, in fact, intended to portray the evils of marriage when husband and wife are not both “safe in Christ.” Miss Davis’s intention is doubtless good; but the story is frequently vulgar in tone and generally unpleasant, leaving behind it a disagreeable sensation of having wasted one’s time in commonplace and wholly uninteresting company. Out of the batch of novels and tales which I am reviewing, three have prefatory notes wherein some more or less direct allusion is made to critics: Miss Ellen Louisa Davis has a lofty scorn for the human animal, and appeals elsewhere. “May the Lord, who alone can ‘establish the work of our hands,’ set the seal of His approval on this *Tale of Three Sisters*,” &c., &c.

A much pleasanter, as well as better-written and very much healthier girl’s-story, is *A Generous Friendship*. The writer does not put her name on the title-page, but she has no need to be ashamed of her authorship. Girls will delight in the story of Celeste, the young musician, and all her trials and experiences; in the adventurous and unintentional voyage to England; and in the naturally described love-episodes. There is some dwelling on the “Christian spirit” here also, but in an entirely natural, sympathetic, and genuine manner.

The Will is an interesting study of contemporary German life by the well-known author of *Quintus Claudius*. There is a good deal of mystery, much interesting “unweaving of the tangled web,” and some vivid characterisation. Roderick Lund, the poet-dramatist, and Pröhle, the socialistic workman, are recognisable types. Miss Clara Bell, known to many through her translations of George Ebers’ novels, has accomplished her task exceedingly well.

Too Fat: a Domestic Difficulty, is certainly a mirth-provoking production. The married life of one Edward de Saumarez is rendered miserable through a steadily growing tendency of his wife to “develope adipose deposit.” There is much play upon words, sometimes very clever, occasionally rather far-fetched; and an enjoyable half-hour can be spent in learning how Mrs. de Saumarez indulged in “furtive farinaceousness,” and grew fatter and fatter; how the home of the unhappy pair was broken up; how, at last, in humiliation and sorrow, Edward returned to his Marian; how a radical change was wrought; and how they “lived happily ever afterward.”

WILLIAM SHARP.

GIFT-BOOKS.

King Solomon’s Mines. By H. Rider Haggard. (Cassell.) The author of this new “treasure story” is already known by a work on South Africa, and by more than one novel of merit. He has here combined his personal experience with his practice in fiction to write a traveller’s story which will stir the pulses of juvenile readers, and will commend itself only in a less degree to the blasé critic. Let it be said at once that *King Solomon’s Mines* is not another *Treasure Island*, just as *Treasure Island* was not exactly another *Gold Bug*. Poe remains unsurpassed in the art of unfolding the stages of a mystery, and Mr. Stevenson need fear no rival among living writers in the portrayal of character and in the finish of literary style. Mr. Haggard must rest content with the praise

of having written a boys’ book of the first class, which holds the attention from the first page to the last. If the baronet is but the ordinary paladin of this class of literature, and the naval officer has been met with before, yet Mr. Quatermain himself almost reaches the dignity of an original creation, by force not so much of what he does as of his shrewd reflections and simple character. Concerning the incidents, we will only make two remarks, which are not intended to be captious. It seems a mistake to make the treasure consist of diamonds rather than of gold; for any precious stones in such abundance as is here implied would inevitably fall to the value of painted glass, while it is scarcely possible to conceive an over-production of gold. And, in the second place, we have felt disgust at the lavish introduction of bloodshed, to which no remembrance of the Zulu war can reconcile us. Under all the circumstances, we are glad that the book has come out without any illustrations.

In Quest of Gold. By Alfred St. Johnston. (Cassell.) Here we have another “treasure story,” with this additional point in common with *King Solomon’s Mines*—that both authors have themselves seen the wild life they describe. To this advantage is due the freshness with which Australian life is given—the physical precociousness of the two boys who are the heroes, their resourcefulness and independence, and their feats of horsemanship. The character of the *magal*, or “black” is even more effectively rendered. He is thoroughly loyal to his masters, out of gratitude for the saving of his life; and on many occasions his savage instincts and habits prove of great service. But the common mistake is not made of raising him to a moral hero, or of making the whites dependent upon the black. His laziness and his gluttony place him decisively in a place not far above the brutes. The weak point of the book is the plot, which demands too large a number of fortunate coincidences. In the illustrations, the indefatigable Mr. Gordon Browne has struck a new vein, and shown that he can draw horses as effectively as men. The picture that is repeated on the cover is a marvel of spirited draughtsmanship.

Two Thousand Years Ago; or, the Adventures of a Roman Boy. By Prof. A. J. Church. (Blackie.) We must confess at once that we are disappointed—not so much with this book, as with its author. The hero of it is a grand-nephew of Marius and a *protégé* of Cicero, who is brought into contact with Spartacus and Verres, with Mithradates and Pompey, and with Virgil’s “old man of Corycus.” Here was the very opportunity for a professor of Latin, and the author of that charming series of “Stories from the Classics,” to write a tale that might banish *Gallus* to the shelf of books of reference. We find, indeed, plenty of moving incident by land and sea, and somewhat too many love scenes; but we miss altogether any presentation of the historical importance of the period and of “the grandeur that was Rome.” The larger portion of the story is laid in Asia Minor—among the Galatians, of whom so little is authentically known, and still further east in Armenia and Pontus. Worse than all, young Lucius Marius is depicted after the fashion of a modern Englishman, saving the life of a Greek damsel, finally acquiring, by good luck, a large fortune, and settling down to the career of a country gentleman in Arcadia. The book, too, shows signs of hasty composition. In the first chapter, we are introduced to a certain Caius, whom the hero promises not to forget, but of whom we never hear again. The illustrations are no more antique than is the story.

For Name and Fame; or Through Afghan Passes. By G. A. Henty. (Blackie.) Mr.

Henty requires to be warned against the danger that besets the popular writer, no less than the popular painter, of presuming upon his facility in a special genre. Too much of the present book reads like extracts from newspaper correspondence about the Afghan war. In particular, the first campaign of Sir F. Roberts in the Kuram Valley is narrated at tedious length. The story itself, as might be expected from so practised a hand, is full of exciting (not to say marvellous) incidents. The book opens with the kidnapping by gipsies of a well-born boy, who, of course, bears a strawberry mark. Having been brought up in a workhouse, he is apprenticed to a Yarmouth trawler. A Dutch ship runs down the trawler and carries out our hero to the Malay seas, where follow the familiar shipwreck and adventures among savages. So far, if there is no novelty, the story moves briskly along. Arrived at Calcutta the boy enlists for active service in Afghanistan, takes part in nearly all the operations of the two campaigns, and retires from the service as a full captain after not very many months. It was, indeed, a bold conception to make him be present at the massacre of Cavagnari and his party. Incidentally, he saves his father’s life, and is duly recognised as his son. The illustrations are by Mr. Gordon Browne, whose versatility, boldness, and thoroughness of draughtsmanship we are never weary of admiring. In our judgment, they raise the book from what may be called the third class to the second class of juvenile literature.

A Soldier Born. By J. Percy Groves. (Griffith, Farran, & Co.) A thoroughly interesting story of military life, made to extend throughout almost the entire century by tracing the history of a regiment in which grandfather, father, and son have all served. There is the usual sub-plot of love and doubtful identity, with a spice of smuggling and piracy thrown in; but the real value of the book is its historical character, vouched by the dedication. On the last page is a not unnatural ebullition of *esprit de corps*, suggested by the recent introduction of territorial names for regiments. But even here the truthfulness of the author supplies an answer. On p. 93 we learn that about 1820 the same regiment had already changed its uniform from green to red, undergoing at the same time a more material alteration of title; and, on p. 247, it is stated that the result of the Crimean War was to reduce the battalion to “hardly 100 men fit for duty.” The illustrations, by Mr. W. Pearce, are of more than average merit, special care having been taken to preserve historical accuracy of costume.

The Vanished Diamond: a Tale of South Africa. By Jules Verne. (Sampson Low.) We incline to think that Jules Verne is most fascinating when he is in the region of the impossible—up in the moon, or under the sea, or travelling round the world in eighty days; but even when he taxes his inventive powers less seriously he is always an attractive writer, and this story of life in the diamond fields is certain to delight the audience to which it appeals. Even here we have something of the marvellous, for the diamond which vanishes—the largest diamond in the world—is not found but manufactured by Victor Cyprien, the young French chemist. The adventures of Cyprien and his wonderful stone are sufficiently thrilling, and the telling of the story is of course admirable.

The Rover of the Andes. By R. M. Ballantyne. (Nisbet.) The fathers, mothers, guardians, uncles, and aunts who wish to find an acceptable birthday or Christmas present for a healthy-minded boy of normal tastes, cannot possibly go wrong if they buy a book with Mr. Ballantyne’s name upon the title-page. *The Rover of the Andes* is a tale of adventure in South America,

a comparatively unworked region; and the story, like Othello's, is full of hair-breadth escapes and moving accidents.

MR. FISHER UNWIN has published this week a "boys' edition" of Prof. Vambéry's *Life and Adventures*. Except for the illustrations, the book deserves nothing but praise. By omitting political disquisitions the volume is reduced in size, and at the same time made more suitable for its new circle of readers. As all writers of boys' books know, from Defoe downwards, no form of narrative is more effective than the autobiographical; and in this case autobiography is not a mere matter of form, but the natural vehicle for expressing the intense vivacity of the author. In his "Introductory Chapter to the Boys of England," M. Vambéry tells a touching story about his lameness in early childhood; and he implies that a more complete autobiography is reserved for publication after his death.

Key-Hole Country. By Gertrude Jerdon. (Sampson Low.) Alice went through the looking glass, Gwendoline goes through the key-hole, for Miss Jerdon is one of the many who have waved the wand of "Lewis Carroll," and endeavoured to reproduce his incantations. It must, however, be added that she is among the ablest of the crowd of imitators; and those who love the duchess and the mock-turtle will be pleased to make the acquaintance of the caller herring, the old woman who lived in the shoe, and the other heroes and heroines of song. Miss Jerdon has not had the good fortune to secure the artistic services of a Tenniel, but the illustrations have a good deal of pleasant humour, and are not unworthy of the text.

A Bunch of Berries and the Diversions thereof. By Leader Scott. Illustrated by C. Paterson. (Griffith, Farran & Co.) This is a really delightful volume, full of interest and of bright, happy humour, and, altogether, one of the best children's books we have seen for a long time. The Berries were children, and there were eight of them, three belonging to Mr. Charles Berry, who lived in the country, and five belonging to Mr. Herbert Berry, who lived in the town. First, we have the life of the little Berries—Elderberry, Strawberry, and the rest at home; then their adventures at the seaside; and, finally, the papers of the Berrie Scribbleological Club, to which they are all contributors. *A Bunch of Berries* is not only a very good book, but a very pretty book, and the illustrations by C. Paterson—we do not know whether the initial stands for Charles or Catherine—are capital.

Who was Philip? A Tale of Public School Life. By the Rev. H. C. Adams. (Griffith, Farran & Co.) Mr. Adams has become so favourably known by his previous stories that his name will probably carry as much weight as any recommendation of ours; but, as we must pronounce judgment, we will simply say that *Who was Philip?* is an exceedingly interesting and wholesome story. Juveniles as well as their elders enjoy a spice of mystery; and the question concerning the parentage of Philip Fairford supplies the popular element.

Nimrod Nunn. By the author of "Our Valley," &c. (S. P. C. K.) The S. P. C. K. is generally fortunate in its story-tellers. They manage, as a rule, to be both interesting and edifying without allowing the edification to overpower the interest by becoming too aggressively obvious; and to do this needs a good deal of cleverness, tact, and common sense. These qualities are all exhibited in *Nimrod Nunn*, which is so full of incident that it never drags, and which is written throughout in a pleasant, natural style. We do not, however, see the necessity for the sad ending.

Child Pictures from Dickens. (Griffith, Farran, & Co.) Though we are not among those who hold that Dickens's children are his happiest creations, it is impossible not to welcome this attempt to introduce our own young people to the writings of the great novelist. The method adopted is to tell just so much of the story as is necessary to explain the illustrations of Little Nell, Tiny Tim, Oliver, Smike, &c. But was the Fat Boy a child? The heads on the cover by George Cruikshank the younger are certainly clever; the drawings inside, which seem to be by different hands, are of various degrees of merit.

The Ministry of Flowers; being some Thoughts respecting Life, suggested by the Book of Nature. By Hilderic Friend. (Sonnenschein.) This is a collection of sermons, in which the phenomena of the plant world are made to serve as texts for the teaching of moral and religious lessons. The author is not free from the charge of treating "the Book of Nature" with the same sort of violence as most of his clerical brethren are accustomed to apply to the Bible. The "lesson" to be taught is more frequently put into the text than elicited from it by any natural method of interpretation. However, Mr. Friend is a good botanist, and an agreeable writer; and his records of personal observation will be read with interest by many who are not particularly anxious to hear about "the brevity of human life," or "the terrible potency of evil habits."

Queer Pets and their Doings. By Olive Thorne Miller. (Griffith, Farran & Co.) They are indeed queer pets. A house in a pleasant village near New York is full of cats, dogs, birds, squirrels, &c., and many wonderful—yet we imagine perfectly true tales are told about them. This charming book cannot fail to please young people; and it is not only amusing but also instructive. The illustrations by Mr. J. C. Beard are excellent.

Three Martyrs of the Nineteenth Century. By the Author of the "Chronicles of the Schönberg-Cotta Family." (S. P. C. K.) The three martyrs to whom this volume is devoted are Dr. Livingstone, General Gordon, and Bishop Patteson. There is occasionally a suspicion of high-pressure and consequent jerkiness in the literary style; but the stories are picturesquely and movingly told, and the fact of its authorship is certain to secure for it the success which it seems to deserve. We say "seems," for we have taken the volume largely on trust, and book-buyers will probably follow our example.

A Diary of Golden Thoughts for the Year. (Fisher Unwin.) A little oblong book, very daintily and tastefully got-up, containing admirably selected brief extracts from great writers, one being apportioned to each day in the year. The selections have a freshness which testifies that they are the gleanings of individual reading, and the volume is one with which a very pleasant half-hour may be spent.

Jesus, Lover of My Soul. By Charles Wesley. (Nelson.) This little *édition de luxe* of Charles Wesley's well-known hymn will attract some present-buyers of a devout bent, but it does not seem to us to have any very obvious reason of being. The publishers give us a memorial sketch of Charles Wesley by "H. L. L.," a musical setting of the hymn, and a number of illustrations by Mr. Clark Stanton, and other artists, which have not greatly captivated us.

The Fairyland A B C for Little Folk. Illustrated by E. A. Mason. (J. Clarke & Co.) The idea, though perhaps not novel, is a clever one, of introducing under their initial letters pictures of the personages, animals, and things that are familiar to all children, either from old-fashioned nursery rhymes, or from the works of Hans Anderson, Grimm, Lewis Carroll, &c.

A SIMPLE tale of faith in a German household, *Goetz Jäger's Son*, by H. J. M. G. (S. P. C. K.), will please all lovers of quiet, restful stories, in preference to the strongly contrasted characters and scenes of too many modern tales.

Broken Hearts are Still, by Phoebe Allen (S. P. C. K.), is a touching narrative of sorrow and forgiveness, far more real than the bulk of such stories. No better book could be suggested for a parish library, but the grim woodcuts which accompany it cannot be called illustrations.

Marie's Home; or, a Glimpse of the Past, by Mrs. Austin (Blackie), goes back to the first French revolution for incidents. It is somewhat confusing, as in the first chapter a girl is supposed to read the eventful history of her family from a journal of that time of terror which had been written by her great-grandmother. The rabble are introduced mobbing Marie Antoinette at Versailles and clamouring for bread, but the author has forgotten that the Queen was said at that supreme moment to have asked them, with much astonishment, "If they had no bread, why could not they eat cake?" The moral of the book is excellent—in all vicissitudes to walk in the path of unselfish duty.

Girlhood Days; or, Auld Lang Syne, by the author of "Chaucer's Stories Simply Told" (Griffith, Farran & Co.), is an aimless tale for school-girls, with some curious lapses from Lindley Murray which are not to be commended; such as, "the governess sat with we girls hanging over her," and "people are advised to consider their life a sort of necessary preparation to something better, which one has no right to expect very smooth and easy." The cover of the book is pretty.

STORIES written for other than literary ends are seldom very successful, and *Vexed*; or, the Wife's Sister (S. P. C. K.), is no exception. One sister states the arguments against the Deceased Wife's Sister Bill with much learning; the other marries, and, without the least cause for jealousy, absolutely dies from fear that her husband should wish to marry the clever sister. The book is so contrary to all experience that it overshoots its mark.

Ways and Means in a Devonshire Village; a Book for Mothers' Meetings, by E. C. Sharland (S. P. C. K.), is excellent in every way. The turns of language and thought are true to the western county; the dialogues are smart and amusing, while the receipts and directions for thrifty housekeeping interspersed would do much good to the class for which the book is meant. We highly recommend it.

Abyssinia; translated from the German of Dr. H. W. J. Thiersch by Sarah M. S. Pereira (Nisbet), contains a lucid account of the early Christianity of that country, together with a narrative of King Theodore's arbitrary proceedings, which led to his destruction by Sir Robert Napier's expedition. Events have moved too rapidly for Dr. Thiersch, who pleads for substantial support from England as an abiding bulwark against Islam and the hordes of the Mahdi. The book is a useful epitome of the history of Abyssinia.

THE Rev. C. R. Ball has added another to the many manuals on the subject, *Familiar Instructions on the Church Catechism* (S. P. C. K.). It is simple, brief, and exhaustive.

A Glad Service (S. P. C. K.), by Elinor Lewis, consists of twenty Bible lessons thoughtfully, and with much care, drawn out as a help to be used at young women's classes, or as a gift book to girls. This little book will prove a great assistance at girls' friendly meetings and the like.

NOTES AND NEWS.

MR. NAPIER, the newly-appointed Professor of English Language and Literature at Oxford, will begin his first course of lectures on November 20. The subject he has chosen is "The Earliest English Literature down to the Conquest."

Two fresh "autographs" (so-called) of Shakspeare have just turned up in a copy of the Prayer Book of Edward VI., printed by Edward Whitchurch in June 1549. This book was sold, with some other old volumes of theology, to a country doctor in 1878 by the trustees of a grammar school who wished to buy some newer works for their boys. All the volumes had been on the school shelves for a time beyond the memory of any inhabitant. The Prayer Book was shown to Mr. Toon, the widely-travelled second-hand bookseller of 38 Leicester Square; and he, seeing one signature of "Shakspeare" in the inner margin of the title, tempted his customer to exchange it for some beautiful old Salisbury books, &c. Mr. Toon then found a second signature "W. Shakspeare" at the foot of one of the leaves in the inside of the book, and several "S S" on another margin. Dr. Farnivall was asked to inspect the book, and at once gave his opinion that the signatures, though old, of the seventeenth century—not by Collier or Ireland—were not Shakspeare's. Still, they are interesting, as witnessing to the popularity of Shakspeare's name in his death-century. The British Museum opinion is, we hear, divided on the point, some of the experts being more or less pronouncedly in favour of the genuineness of the signatures, while the head of the MS. department is against it. Mr. Toon's copy of this Prayer Book has as its last leaf the very rare Proclamation of Edward VI. fixing the price at which the book is to be sold. This was wanting in the Museum copy, and has now been supplied from Mr. Toon's original; while the latter's one missing leaf has been facsimiled from the Museum copy. Mr. Toon asks the moderate sum of £90 for his rare volume.

MESSRS. BLACKWOOD, who have recently issued an account of *The River Column*, by its commander, Gen. Brackenbury, now announce for immediate publication *From Kortli to Khar-tum*, by Sir Charles Wilson, being the journal of his march across the Bayuda Desert, and his voyage up the Nile in the fruitless effort to relieve Gordon.

The Broken Shaft; or, Tales Told in Mid Ocean, is the title of a collection of short stories that Mr. Fisher Unwin will shortly issue as his Annual for 1885. The contributors, who were all fellow-passengers on board the *Bavaria* when the accident occurred, include Messrs. R. L. Stevenson, F. Marion Crawford, F. Anstey, W. Archer, and W. H. Pollock.

MESSRS. TRÜBNER will publish in January *A Common-Place Book of the Fifteenth Century*, printed from the original MS. at Browne Hall, Suffolk, by Lady Caroline Kerrison, with notes by Miss Lucy Toulmin Smith. Among the contents are a poem of "Adrian and Epotys," never before printed in England, a religious play treating of Abraham and Isaac, and several minor poems; several sets of local accounts; and many entries relating to manorial courts, forms of charters, &c.

MESSRS. MACMILLAN will publish shortly a popular edition, in ten volumes, of Mr. Francis Parkman's historical works treating of the French in America.

THE same publishers announce a new book by Mr. Alfred Russel Wallace, entitled *Bad Times*.

MR. ROBERT LOUIS STEVENSON is engaged on a new story, the scene of which is laid in

Edinburgh and in Australia. It will form the Christmas number of the *Court and Society Review*.

MR. T. FISHER UNWIN will publish next week a novel, entitled *The Bachelor Vicar of Newforth*, by Mrs. Harcourt Roe. It is a story of clerical and social life in an English country town. The same publisher announces a volume, by Major Stewart Harrison, entitled *The Queen of the Arena, and Other Stories*. Some of the tales were first published many years ago in *Once a Week*. The volume will be illustrated with four engravings by Millais and other artists.

MESSRS. HURST & BLACKETT have in the press *The Egyptian Campaigns and the Events which led to them*, by Mr. Charles Royle, containing a detailed account of the relations of England and Egypt for the last ten years.

THE new *Life of Bunyan*, by Mr. Brown, of Bedford, the present occupant of Bunyan's pulpit there, will be published next week on both sides of the Atlantic—by Messrs. Isbister in London, and by Messrs. Houghton, Mifflin, & Co. in Boston and New York.

Notes on Siamese Musical Instruments is the title of a pamphlet by Mr. Richard Edgcumbe, which will be issued by Messrs. Clowes in a few days, with numerous illustrations.

MR. WILLIAM WESTALL has written for *Cassell's Saturday Journal* a story entitled "Two Pinches of Snuff" the opening chapters of which will appear early in December. The scene of the story is laid in Manchester and in Dresden.

MR. PIMBLETT'S *English Political History, 1880-85*, will be issued in the course of a few days by Mr. Elliot Stock.

MR. BROWNING will not leave Venice for London till near the end of November, so that he will not be able to see Miss Alma Murray in his "Colombe's Birthday" at the Browning Society's performance on November 19. Two points of some importance in the interpretation of the character of Colombe on which Miss Murray differed from the stage-manager and another authority, were referred to Mr. Browning; and he has decided both entirely in Miss Murray's favour, and has complimented her warmly on the way in which she had exactly entered into his conception of his heroine on these points.

THE inaugural meeting of the Scarborough Browning Society was held in the Art Schools last Saturday, the chair being taken by Arch-deacon Blunt. Mr. Ernest Radford addressed the society upon the scope and quality of Browning's work, and a short discussion followed. Papers are promised upon "The Epistle of Karahish" and "Rabbi Ben Ezra."

THE Oxford Browning Society will hold two meetings this term: on November 11, the Rev. C. Plummer will read a paper on "The Historical Aspect of some of the Poems"; and on December 2 "Colombe's Birthday" will be read.

THE *Quiver* Christmas number this year will be called "Sure and Swift." It will include a long story by Mary Linskill; a paper by the Bishop of Liverpool, stories by the Rev. P. B. Power, Edwin Goadby, F. M. F. Skene; a new tune to the carol "While Shepherds watched," by the organist to the University of Cambridge. The illustrations are by Mary Gow, C. Gregory, Gordon Browne, M. Ellen Edwards, F. W. Burton, G. Grenville Manton, W. S. Stacey, and W. J. Hennessy.

THE Prince of Wales has consented to become patron of the Bethnal Green Free Library, in place of the late Lord Shaftesbury.

AN authorised German translation, by E. Wöhler, of Prof. Jebb's *Life of Bentley*, in the "English Men of Letters Series," has been published by Herr Gaertner, of Berlin.

SIG. TILVAGNI'S *Rome: its Princes, Priests, and People*, an English translation of which was recently issued, has just been placed on the Index Expurgatorius.

THE last addition to the pretty series of "Canterbury Poets" (Walter Scott) is *Cowper*, edited by Eva Hope. The introductory notice is gracefully written, and gives a fair presentment of the man and the poet; but we must protest against the misprint by which the name of the St. Alban's doctor is given twice (p. 15) as "Colton."

THE senate of the University College, Liverpool, now incorporated into the Victoria University, is preparing a "business curriculum" such as shall be suitable for clerks and apprentices. The curriculum is to extend over a space of two academical years, and is divided into two portions, one more especially devoted to languages, and the other to science. The business men of Liverpool are, it is satisfactory to know, heartily co-operating with the senate; and it is anticipated that a number of firms will meet the wishes of the senate by consenting to relax one year of the apprenticeship of young men who shall be holders of a certificate to the effect that they have satisfactorily passed the examination to be held at the end of this curriculum. It is obvious that if the local English colleges are ever to attain to the importance of the Scottish universities, they must find some means of persuading the business men and shopkeepers of England that a good education is a good thing in itself, and does not incapacitate from business. There is also no doubt that if the University authorities wish to attract to them the young men of the great business centres, they must make every endeavour to secure the co-operation and learn the views of business men as to the kind of education necessary to fit men for business. It is a great thing to know that at both colleges of the Victoria University modern languages are well taught, and that oral examinations are held in them, so that a diploma from that university, or from either of the colleges, setting forth that a young man had passed satisfactorily in these, would have a valuable import.

AMERICAN JOTTINGS.

It may be as well to contradict a rumour, which has got into print, to the effect that Mr. F. Wedmore, who is now on a visit to America, has been seriously ill. As a matter of fact, he is quite well and has been enjoying his tour much. He is to lecture at Baltimore at the end of the present week, and sails for home on November 19 in the *Baltic*.

THE representatives of Ralph Waldo Emerson announce that a number of his letters to Carlyle appear to have been stolen. They caution all persons against buying, selling, or publishing any papers purporting to be the originals of letters from Emerson to Carlyle, and they ask that anyone who may hear of the existence of any such letters will do them the favour to inform them where the letters may be found. Address Mr. Edward W. Emerson, Concord, Mass. These MSS. were all given by Carlyle to a member of Emerson's family, and the right of publication, of course, belongs by law to the writer's representatives.

MESSRS. HARPER have concluded an arrangement with Mr. W. D. Howells by which all the new writings of that author—his novels, short stories, descriptive sketches, and dramatic pieces—will be exclusively at their disposal.

from the beginning of next year. Mr. Howells is also to contribute monthly to *Harper's Magazine*, beginning with the January number, an editorial department having a relation to literature corresponding to that which the "Editor's Easy Chair" has to society. The new department will probably be styled the "Editor's Study." It will be purely literary in its character—not a review of books, but a discussion of literary topics suggested by the salient features of current literature in America and Europe.

THE papers which Dr. Oliver Wendell Holmes has been contributing to the *Atlantic Monthly*, under the heading of "A New Portfolio," will be published immediately by Messrs. Houghton, Mifflin, & Co., of Boston, in book form, with the new title "A Mortal Antipathy."

THE new volume of *Lippincott's Magazine* will begin with the new year, instead of in November. Among the special features will be the publication, simultaneously with their appearance in England, of stories, essays, and sketches by well-known English contributors to the magazines.

A PARAGRAPH has been going the round of the American papers to the effect that Tennyson's forthcoming volume will contain "an echo of *Poverty, Poverty, Poverty* [sic] in another dialect."

IN a review of Mr. Hall Caine's novel, *She's all the World to Me*, the *Nation*, which is not usually given to hyperbole, says of the author: "He has written a poem in strength and beauty of idea, in artistic unity and completeness, in the harmony between the expression and the scenes, incidents, and thoughts presented."

As the book has not yet been published in this country, Mr. Hall Caine still has a chance of giving it another title.

A VOLUME, just published by Mr. Crowell, of New York, entitled *Poor Boys who became Famous*, by Mrs. Sarah K. Bolton, passed into a second edition immediately it was issued. The author says that Mr. George W. Childs possesses an autograph letter of Poe, in which he offers to his publishers thirty-three short stories, enough to fill two large volumes, "on the terms which you allowed me before: that is, you receive all profits and allow me twenty copies for distribution to friends." The favourable reception of this book has induced Mrs. Bolton to write a companion volume on *Famous Women*.

TRANSLATION.

TO THE READER.

(From the French of Sully Prudhomme.)

WHEN once my song's gone forth, this heart
No longer knows it for its own;
Within me stays the better part,
My truest verse will ne'er be known.

As silvery butterflies crowd near
The flowers they're eager to caress,
So round the thoughts I hold most dear
Sweet verses, trembling, beat and press:

I strive to seize them, lo! they spring
And rise and whirl in sudden flight,
Nought leaving but the powder light
Brushed from their frail and startled wing.

My touch would spoil their tender hue;
And I must take their life away,
If here, stretched out, I'd have them stay,
With heart transfixed, set two by two.

Thus ever filled our souls remain
With songs that all unsung shall die.
Light moths unseen—only the stain
Our fingers keep as they flit by.

I. O. L.

MAGAZINES AND REVIEWS.

THE *Scottish Review* for November certainly deserves its name, for of the eight articles that appear in it six deal with Scotland. It was, perhaps, inevitable that, with the General Election in sight, the subject of Disestablishment should be discussed; and the two sides of it are dealt with by Principal Tulloch, of St. Andrews, as champion, and the Rev. Dr. Hut-ton, of Paisley, as assailant of the Church of Scotland. To these, we, ourselves, prefer such papers as "Scottish Catholics under Mary and James," and "The Scottish Parliament." The latter is a very interesting account of a venerable Northern institution which there would appear to be some idea of reviving under the designation of a "National Council." Perhaps the most notable papers are an informative one on "The York Mystery Plays," and another on "Scotland's New Departure in Philosophy." The latter is a temperate summing up of recent Scotch philosophic work, which is largely of the character of a revival of idealism. This magazine has now found a place—and a very good place—for itself in Scotch periodical literature.

MR. THEODORE BENT's paper in the *Antiquary* for November on the travels of certain Japanese ambassadors in Europe under the guardianship of the Jesuits is most interesting. We wish he had made it more clear where the diaries now exist from which he has made his extracts. Mr. Horace Round's essay on "Municipal Offices" is but a first instalment. It is not fair to criticise until his labours are more complete. From the little he has given us we are hopeful that he will materially increase our information on a subject which is as yet very obscure. "Witchcraft in the Sixteenth Century" has no author's name. It does not add to our knowledge of a painful subject. In a paper entitled "Scotter and its Manor," Mr. Edward Peacock draws attention to the silly fashion which was prevalent at the time of the great enclosures of altering the names of places, so as to make them sound more pleasantly to polite ears. We fear this kind of mutilation is still going on in rural places.

CORRESPONDENCE.

COLERIDGE'S MS. NOTES ON MALTHUS.

London: Oct. 31, 1881.

The British Museum is understood to possess a large number of books from the library of Coleridge, annotated by his own hand. They passed into its keeping on the death of his executor, Dr. Joseph Green, some five or six years ago, and there is no doubt about their history. It seems, however, very desirable that some account of the MS. notes should be given to the public by the Museum, for the notes of Coleridge on such different authors as Shakspeare and Schelling, Herder and Malthus, would be of very unlike originality and value.

The question of handwriting adds a fresh difficulty. Among the books is the quarto copy of the Essay of Malthus on Population (1803). Its broad margins are covered with a running commentary and criticism, part in pencil, part in ink, amounting, when read together, to a review of the entire book. Now it is a striking fact that these notes on the essay occur, with hardly the change of a letter, in a review by Southey of the same work, in Aikin's *Annual Review* for the year 1803. To which poet did the real authorship of the notes belong? The question has been answered by Mr. Richard Garnett, of the British Museum, who has kindly taken the trouble to look closely at the handwriting. He finds that on at least two pages the handwriting of the notes is that of Southey, not of Coleridge; and he supposes that Coleridge found the arguments, and freely gave them over to Southey. In support of this opinion Mr. Garnett relies on expressions in the MS. where Coleridge seems to address a would-be reviewer: "Quote this paragraph as the first sentence of your review." On the other hand, Southey, in his *Letters*, claims the article as his own, and makes no acknowledgment of debt to Coleridge or to anyone else. Perhaps some admirer of Southey will explain this silence. Coleridge, no doubt, would have jotted down his thoughts as readily on a friend's book as on his own; but, if this particular volume was borrowed at all, it was apparently not borrowed from Southey. Coleridge writes on its fly-leaf: "E dono D. Stuart armigeri. S. T. Coleridge." J. BONAR.

UNIVERSITY COLLEGE AND THE UNIVERSITY OF LONDON.

London: Nov. 2, 1885.

Permit me, as one of the professors of University College, to assure you that you are misinformed when you state that that body have, by a unanimous vote, expressed their dissatisfaction with the scheme of the special committee of the convocation of the University of London. A meeting of professors was held to consider this subject a fortnight ago, and certain resolutions were carried; but the meeting, having been called by inadvertence at an hour already fixed for an important committee, I was unable to be present, and I believe that many of my colleagues were likewise absent.

The view which I hold with regard to a future University of London is that it should be a professorial university governed by its professors, as are the German and Scotch universities; and in this view, I believe, many of my colleagues agree. We are, therefore, not "satisfied" with the scheme of the committee of convocation; and I, for one, think it important that we should take steps to put forward our views in as authoritative a manner as possible.

At the same time this appears to me to be a position entirely compatible with warm approbation of the proposals made by the committee of convocation for the reformation of the University of London as at present constituted. Those proposals do not embody my ideal; but they may possibly lead towards it, and, at any rate, offer an immense improvement on the present condition of things. They are also, in my judgment, greatly to be preferred to what I will venture to call the extraordinary scheme sketched in your article of October 31.

It seems to me that for any body of men to endeavour to thwart a practical proposal of reform, of the beneficence of which they are convinced, because it does not carry out their furthest aspirations, which are necessarily only to be realised in a somewhat remote future, is an altogether unreasonable and unworthy course; and I cannot for a moment admit that the professors of University College are likely to enter upon such a course. It is one thing not to be "satisfied" with a slice only of the loaf, and another thing to refuse to eat that slice oneself, and also to prevent any one else from eating it.

Among the conflicting interests, opinions and prejudices which centre round the question of the University of London, it appears to me that the scheme drawn up Lord Justice Fry has the best chance of gaining a majority in convocation, and of effecting some useful change in the present organisation of Burlington Gardens; and, accordingly, I would do all in my power to carry it through.

The only item in the scheme to which I feel a distinct objection (and I understand that this objection is shared by others who are prepared to take steps for its removal) is the admission of the Class C of constituent colleges—viz., those "which are intended to aid the evening studies of persons engaged in business." Such institutions are, in my opinion, of great value to the community, but should not be allowed to introduce a discordant element into the faculties of the university, the business of which lies in a different direction. The effective working of a composite body, such as the governing body of any university must be, depends upon the identity of interests of the individuals composing that body. The failure of convocations and congregations, both at Oxford and Cambridge and in London, to render anything like assistance to the government of the university is due to the fact that only a small proportion of their members can possibly feel any healthy interest in the real business of the university.

The alternative scheme for the reform of the University of London—which is sketched in your issue of this week—has two radical defects, according to my judgment—a judgment which may, I am aware, find opposition among some whose opinions are, I fully admit, entitled to consideration and respect.

The first defect is the proposal to imitate the organisation of the University of Oxford. To me, knowing very intimately the working of that organisation, this is simply astounding. Oxford exists in spite of a governing machinery, which those who know her best—from Goldwin Smith onwards—regard as both pernicious and ridiculous. To imitate this machinery in London would be as reasonable as to base political reform on an imitation of the Turkish empire. The second defect is the proposal to give increased powers to convocation. There is current a complete misconception as to the origin of the powers of convocation, or the body of graduates in our old universities, and as to the value of its interference in university management. Originally the graduates who took part in the government of the university at Oxford and at Cambridge were simply and solely the resident teaching masters of arts, or those who were licensed to teach. The practical extension of certain powers of voting upon statutes to all masters of arts of Oxford and Cambridge who keep their names registered and pay certain fees—is a disastrous innovation which has come in with the increased facilities for travelling afforded by railways. This voting by masters of arts who are not concerned in the teaching and studies—that is the actual business of the university—is an unmitigated evil. In no other universities in the world do the graduates exercise these powers, even where they possess a feeble right of protest, as in the University of Edinburgh: only the universities of Oxford and Cambridge among older universities are cursed with this "old man of the sea." Why the newly founded University of London should have been subjected to a convocation, it is difficult to imagine—unless it is that those who drew up its constitution believed that two blacks make a white, and created it as a balance to the equally ill-devised senate.

I cannot believe that the individual members of convocation of the University of London are such strangely constituted persons as to care about continually meddling in the management of an institution which happened to give them in past days a certificate of proficiency in science, art, medicine or law. It really cannot matter to them what the university does in the future, and, if it did, it would matter to them in so many divergent ways that they could not carry out details of administration without an immense amount of friction and waste of energy. The persons to whom it does really matter most seriously are the teachers in various London colleges; and the recognition by Lord Justice Fry's committee of this fact is a proof that there is a distinguished body of men in the university who are by no means anxious to increase their responsibility as members of convocation. It is sincerely to be hoped that a majority of convocation will take the same view.

I trust that members of convocation will not be bribed into voting against Lord Justice Fry's scheme either by the worthless promise of increased power, or by the crude suggestion made by its opponents of "university lectureships of limited tenure."

E. RAY LANKESTER.

JOHN HARVARD'S AUTOGRAPH.

Emmanuel College, Cambridge: Oct. 28, 1885.

Mr. E. Dicey, in the ACADEMY of October 24, denies with great confidence that the entrance of John Harvard's name in the Emmanuel College

book is an autograph. I believe, however, that this is by no means as certain as he thinks it to be. I must premise that Mr. Dicey has fallen into an inaccuracy as to the spelling of the name. It appears plainly in our book as Harvard, not Harverd. Again, his account of the book does not at all adequately describe it. It contains besides these *recepta ab ingredientibus*, lists of entrances from the first opening of the college, disciplinary orders from 1586 signed by the master and fellows, lists of college plate and of books in the library, *exiits* and *reditits*. In fact, it is a record of the internal proceedings of the college from its earliest year of activity for a considerable period. It will be evident that in such a book autograph signatures would be more probable than in a mere account book. But an examination of the name itself as written would, I think, make it appear very probable to anyone that it is John Harvard's autograph. For—

1. It corresponds in almost every letter to the signature in the University degree book. The final *d* in Harvard is especially marked in both, being finished off with a bold loop something in the nature of a small Greek delta. Other letters are nearly as remarkable for their resemblance in both cases.

2. Though in many cases whole blocks of names are evidently entered by the same hand, yet in several pages there is a great variety of handwriting, which seems to point to individual signatures.

3. In the page in which John Harvard's name appears there does not seem to me to be any other name in the same handwriting.

4. After John Harvard's name is the abbreviation *Midlsex*; out of five other entries in the same and opposite pages it is once written *Middlesex*, four times *Midlesex*, never *Midlsex*. This, again, looks like an individual peculiarity.

It is true that these remarks do not make the fact asserted by Dr. Rendle certain; and it is true, also, that the name in our book is somewhat less boldly and firmly written than that in the University book, but I think I have said enough to show that Dr. Rendle's assertion cannot be rightly described as not having a "shadow of foundation."

E. S. SHUCKBURGH.

"MILTON AND VONDEL."

Middle Temple: Nov. 3, 1885.

As a student and appreciator of Vondel, I may perhaps be permitted to make one or two remarks on the controversy between Mr. Gosse and Mr. Edmundson. In the letter which appeared in last week's ACADEMY, the latter has confined himself to a criticism of Mr. Gosse's translation and a justification of his own; but it seems to me, and I fancy most authorities will agree with me, that for various reasons Mr. Gosse's version is to be preferred. One of the chief of these is that a translator of Vondel ought as far as possible to preserve the outward form of the original. Vondel was a thoroughly—shall I say—artificial writer, and frequently himself tells us that in writing his tragedies he kept the dramatic laws of Aristotle constantly before him. Now, one result of this has been to make the outward form of his tragedies one of their chief merits, and the adoption of such a metre as Mr. Edmundson employs cannot but destroy a great deal of the force of the original. No doubt Mr. Gosse's version is open to criticism. I cannot but think, for example, he is in error in his translation of "*karos*," "*Chariot*" is a much more poetical word than "*coach*." In addition to the two passages known to Mr. Edmundson, the phrase occurs again in *Maria Stuart*, v. 447: "*Gevollegh in 't verschiep van paerden en karossen*," the only difference being that we have here the plural case.

With reference to the proof of the connection between Vondel and Milton, it appears to me that very little reliance can be placed on mere parallelisms of expression. These can only form a part of the proof, and a very small part, and unaccompanied by other facts would not have much weight. Looking, however, at the matter from every point of view it seems more than probable that Milton was acquainted with Vondel's works, and that very soon after they were respectively published. In his essay Mr. Gosse admits, indeed, that "the Dutch language was not so little studied" in Vondel's time as it is now; but he almost passes over those other strong historical facts bearing on the question, which cannot fail to impress an unprejudiced mind. Notice, for example, ought to be taken of the fact that in the beginning of the seventeenth century Holland was at the height of its prosperity, its merchantmen were, so to speak, the world's common carriers, as a maritime power it was among the first in Europe, its fleet gained more than one victory over the English, and on one occasion threatened to destroy even London itself.

At this period, too, there were in Holland many English refugees—Nonconformists and others; but of these some were constantly returning to their own country, carrying with them, no doubt, much information about the Netherlands. Mr. Gosse must surely have made a slip of the pen when he applied the term "obscure poetry" to the works of the writer of the *Palamedes*, who acquired such a fame during life as to be styled on the medal which was struck in commemoration of his funeral, "the oldest and greatest poet." Without doubt his fame was not confined to the Netherlands, and those Englishmen who were passing at that time from one country to the other must have been acquainted with his story. Besides, it must always be borne in mind that Milton's original intention was to treat the subject of his *Paradise Lost* in dramatic form, and therefore if he took the idea from the *Lucifer* it is all the more to his credit, as a poet, that he perceived the mistake which Vondel made in making the *Lucifer* a drama instead of an epic poem.

J. R. MACILRAITH.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 9, 8 p.m. Royal Academy: "The Muscles of the Human Body," II., by Prof. J. Marshall.

TUESDAY, Nov. 10, 8 p.m. Anthropological Institute: Opening remarks by the President, Mr. Francis Galton; "Experiments on Testing the Characters of School Children," by Mrs. Bryant; "A Comparative Estimate of Jewish Ability," by Mr. Joseph Jacobs.

8 p.m. Civil Engineers: "The Theory of the Indicator and the Errors in Indicator Diagrams," by Prof. Osborne Reynolds; "Experiments on the Steam Engine Indicator," by Mr. A. W. Brightmore.

WEDNESDAY, Nov. 11, 8 p.m. Royal Academy: "The Muscles of the Human Body," III., by Prof. J. Marshall.

8 p.m. Microscopical: "Some New and Rare Desmids," by Mr. W. B. Turner; "The Amplifying Power of a Lens or Objective," by Dr. E. Gilbey; "Limits of Resolution in the Microscope," by Mr. F. Crisp; "Microbiological Technique," by Dr. E. Froehner.

THURSDAY, Nov. 12, 8 p.m. Mathematical: Annual Meeting; "Waves propagated along the Plane Surface of an Elastic Solid," by Lord Rayleigh; "The Application of Clifford's Graphs to ordinary Binary Quantities," by Mr. A. B. Kempe; "Unicursal Curves," by Mr. R. A. Roberts; "Clifford's Theory of Graphs," and "The Linear Covariants of the Quintic and a Calculus connected with the Theory of Rows," by Mr. A. Buchheim; "Some Consequences of the Transformation Formula $y = \sin(4 + A + B + C \dots)$," by Mr. J. Griffiths.

8 p.m. Telegraph Engineers: "The Telegraphs of the Nile Expedition," by Gen. Webber.

FRIDAY, Nov. 13, 8 p.m. Royal Academy: "The Face," by Prof. J. Marshall.

8 p.m. New Shakespeare: "The Play of Richard III.," by the Rev. Stopford A. Brooke.

SATURDAY, Nov. 14, 8 p.m. Physical: "Testing Thermometers at the Melting Point of Mercury," by Mr. G. V. Whipple; "The Electromotive Force of certain Tin Cells," by Mr. E. F. Herroun.

SCIENCE.

Louis Agassiz: his Life and Correspondence.
Edited by Elizabeth Cary Agassiz. In 2 vols. (Macmillan.)

AMONG the chief scientific names of the middle decades of the nineteenth century the name of Agassiz will always stand forth in full prominence with a certain brilliant and melancholy glory all its own. To few men does science owe more; from few men did its main achievement in the present age receive more steadfast, sturdy, and unreasoning opposition. A creature of impulse, urged forward from the beginning by an enthusiasm of knowledge no less contagious among those with whom his lot was cast than the enthusiasm of religion or the enthusiasm of humanity in great preachers and great philanthropists, Agassiz, with all his width and depth and electric personality, was, nevertheless, cramped and hidebound from his boyhood upward by the restraining limitations of his Swiss sectarian theological prejudices. Two wonderful life-works he accomplished successfully. In the first place, his researches among fishes, living and extinct, resulted in the earliest classification with any pretence to the claim of naturalness in that most difficult department of vertebrate zoology. In the second place, to him more than to any other single man do we owe the discovery and triumphant demonstration of the existence and extent of the glacial epoch. Yet, through some strange fatality, the very thinker who by his theory of synthetic or prophetic types securely laid one of the main corner-stones on which Darwin was afterwards destined to rear his magnificent superstructure of the Origin of Species, himself refused to the very last, with true Celtic obstinacy and doggedness, to accept the natural and obvious conclusion from the facts he had in person so clearly proved and so admirably marshalled. In this matter a dense veil seemed to cloud and obscure his ardent intellect. But the aberrations of so great a mind may fairly be excused on the excellent ground of previous general good conduct. He loved nature much, and to him, therefore, much may be forgiven.

Jean Louis Rodolphe Agassiz was born on May 28, 1807, at the parsonage of Motier, on the Lake of Morat, in Canton Vaud. His life divides itself into two nearly equal halves—the one European, the other American. Brought up among the pretty sub-Alpine hills, the boy displayed his love of beasts and birds, but especially of fishes, from his earliest childhood; a love which afterwards slowly widened out by imperceptible degrees into scientific interest and anatomical knowledge. Educated at Lausanne, Zürich, and Heidelberg, he was practically bilingual from the first, and therefore the more readily able to transplant himself successfully, on the verge of forty, to a new country and a new tongue. Mrs. Agassiz, a thoroughly competent person in every respect, has translated her husband's polyglott correspondence with great felicity, and has told the story of his life with a simple directness admirably in keeping with the habits and character of her simple-minded hero. The smoothness of Agassiz's younger days reads almost like a fairy tale to those of us whose lot has been cast in these latterday times of crowded competition. At twenty-

one he was already engaged in arranging Spix's Brazilian fishes, the tractate describing them being written in Latin and dedicated to Cuvier. At twenty-three, when he visited Vienna, he found himself received as a well-known associate in all the scientific society of a great capital. Soon after, we see him mixing freely at Paris in the company of Cuvier, Humboldt, and Ferussac. At twenty-five his appointment to the chair of natural history at Neuchâtel put him beyond the period of struggle and adventure, and enabled him to devote his whole time and his unrivalled energy to the cause of science, freed from the petty sordid care *de lodice paranda*. So sudden a rise would now be simply impossible, even for the brilliant and precocious intellect of an Agassiz in person.

Teaching was, with Agassiz, not only a gift; it was a passion, an enthusiasm, an attractive influence. At Neuchâtel, his success was extraordinary.

"He was intellectually as well as socially a democrat," says his wife, "in the best sense. He delighted to scatter broadcast the highest results of thought and research, and to adapt them even to the youngest and most uninformed minds. In his later American travels he would talk of glacial phenomena to the driver of a country stage-coach among the mountains, or to some workman, splitting rock at the roadside, with as much earnestness as if he had been discussing problems with a brother geologist; he would take the common fisherman into his scientific confidence, telling him the intimate secrets of fish-structure or fish-embryology, till the man in his turn grew enthusiastic, and began to pour out information from the stores of his own rough and untaught habits of observation. Agassiz's general faith in the susceptibility of the popular intelligence, however untrained, to the highest truths of nature, was contagious, and he created or developed that in which he believed.

When Agassiz was twenty-seven he published the first number of the *Poissons Fossiles*. That great work, the earlier of his two chief title-deeds to fame, contained among its most novel results the remodelling of the classification, and especially the recognition of the Ganoids as a distinct order, so pregnant of after consequences in zoological development, as well as the discovery of the combinations of bird-like and quasi-reptilian characters in the early geological fishes, and of the analogy existing between embryological phases and the introduction of the various successive types upon the face of the earth. In pointing out these admirable theories Agassiz was all unwillingly and unwittingly leading up to the later evolutionism, whose most stubborn enemy he was destined to show himself.

"Except for the frequent allusion to a creative thought or plan," says Mrs. Agassiz, "his introduction to the Fishes of the Old Red might seem to be written by an advocate of the development theory rather than by its most determined opponent, so much does it deal with laws of the organic world now used in support of evolution."

But to Agassiz the coincidence between geological succession, embryonic development, zoological gradation, and the geographical distribution of animals and plants in the past and the present, rested not upon any material connexion, but upon a supposed intellectual coherence in the mind of the Creator. He

fancied he could fathom the thoughts of God. Fully accepting all the premisses of evolutionism, he denied the obvious and almost irresistible conclusion. From first to last, the scheme of the universe unrolled itself definitely before his eyes, not as the product of self-contained evolution, but as the result of a designing anthropomorphic intelligence.

Nevertheless, where teleological preconceptions did not outbalance his scientific judgment, Agassiz was capable of the saving grace of reconsideration and frank recantation. His first researches in glacial phenomena were brought about, indeed, by an incredulous visit to Charpentier at Bex, for the sake of exploding the absurd claims made, as he believed, in error by that too enthusiastic apostle of glacial extension. But he who went to mock remained to investigate. Facts were too much for him: moraines and *roches moutonnées* and glacial striae were demonstrated visibly all over the valley to the naked eye; and, as there was no fundamental preconception here to bias his decision, Agassiz forthwith opened his eyes and became the veritable Paul of the glacial creed. His *Études sur les Glaciers* fairly made the great Ice Age. From that day forth the existence of an epoch of universal glaciation throughout the length and breadth of both temperate zones became a prime article of the orthodox geological faith. He lived to see his own belief universally endorsed by catholic geology.

In 1846, when Agassiz was thirty-nine, he went to America. At first, his visit was meant to be a visit only; but circumstances turned it into a permanent residence, and the welcome he received from critical Boston decided him to remain beyond the Atlantic, living over a new life in a new land. The first M^{me}. Agassiz died during her husband's absence; and a second marriage with the lady who is now his biographer bound him at once by ties of closest relationship to his adopted country. Indeed, that fresh union with an English-speaking wife must have helped to give to Agassiz's two lives an organic distinctness seldom attained by any single individuality in this brief world of ours. Nevertheless, the new Agassiz was the old Agassiz still. At Cambridge, as at Neuchâtel, his fiery but genial individuality drew around him all the best spirits of the place. In a society which numbered among its members Longfellow, Lowell, Prescott, Ticknor, Motley, Holmes, and Asa Gray, Agassiz, by right of his personal qualities, still stepped almost at once into the first rank. The account of his earnest professorial life at Cambridge, his foundation of the museum now popularly, though not officially, called after his name, his pleasant summer days in his retreat at Nahant, and the prodigious effect produced in New England in part by his lectures, and still more by his personality, are all given by Mrs. Agassiz with the delightful freshness of first-hand narrative. Of the immense influence exerted by his character upon everyone who knew him little doubt can possibly exist. "There is hardly a naturalist to-day in all America," Dr. William James, of Harvard, once said enthusiastically to the present reviewer, "who doesn't owe his adoption of science to the mere accident of Agassiz's arriving one day in Boston, setting up there

his zoological laboratory, and preaching with all the magnetic energy of his fiery nature that the one thing worth doing for a young man of promise was to come to him at once and study biology." That is, perhaps, saying a great deal too much. In such an environment as the soil of New England naturalists indeed must spring spontaneous; but the very fact that Dr. James could assert it gives sufficient proof of the wonderful power of attraction possessed by the eager Vaudois zoologist. His later life was largely sacrificed to the cause of scientific education in America. When he ought to have been making fresh discoveries, he was engaged in collecting funds for his beloved museum. It was his fate to leave the Word of God and serve tables; but, in truth, his life's work was already finished. He had fairly reached the end of his tether. With the publication of Darwin's theory, he declined from the position of an accepted and respected scientific leader to that of a recalcitrant and reactionary scientific heresiarch. He could not digest the new doctrines. "I detest them," Sedgwick had written to him long before, "because I think them untrue." A strange perversion of the genuine fact: they thought them untrue because they detested them. In all Agassiz's violent denunciations on this cardinal point we nowhere come across one single reason, one definite argument, one gleam of the dry light of logic. Mere prejudice governed his conviction. Unhappily too—and see here how error in belief necessarily leads up to error in action—Agassiz was induced by his theoretic views on specific fixity into that pestilent heresy of asserting the total distinctness of the negro from the white man, thus directly playing into the hands of the unspeakable and doomed proslavery party. Such an error was the more unpardonable, because he had been in the south, and knew the negro; and the man who, knowing the negro, denies his essential community with ourselves, proves himself thereby a bad systematist, a worse psychologist, and a worst humanitarian. Of evolutionism he said cheerily "I trust to outlive this mania also." That prediction was not destined to be realised. It is given to no man to outlive humanity.

He lies buried in the beautiful and romantic cemetery at Mount Auburn, near Boston. A boulder chosen from the glacier of the Aar marks the grave of the prophet of the Great Ice Age: pine trees sent from his beloved Switzerland are fast growing up to shelter it with their shade. Let them protect a noble heart from passing censure. What he saw wrongly will soon be forgotten: what he saw rightly will last for ever. GRANT ALLEN.

CORRESPONDENCE.

ARCHDUKE RAINER'S COLLECTION OF PAPYRI.

Vienna: Oct. 23, 1885.

The *Neue Freie Presse* of October 23 contains a highly interesting report of recent discoveries made by Prof. Karabacek and Drs. Wessely and Krall in the course of their exploration of the Archduke Rainer's already famous collection of papyri.

The chief results affecting the Greek classics are the discovery of a papyrus with about two hundred verses from the *ἔργα καὶ ἡμέραι* and the *ἄριστος* of Hesiod, which is older than all the

known MSS.; of a fragment in uncial characters of the Argonautica of Apollonius Rhodius, which agrees in a remarkable manner with the readings of the Codex Florentinus; and of a fragment of the *Odyssey* dating from the second century A.D. This last piece is particularly valuable, as hitherto no papyri of the *Odyssey* have been met with. Among the numerous private papers in the Greek language, lately examined, there are a good many with dates from the reigns of Trajan, Hadrian, Antoninus Pius and Marcus Aurelius, which throw much light on details of the civilisation of that period. Historically important are: a document drawn up during the short reign of the emperors Macrianus and Quietus, A.D. 261; and another, which mentions Pupienus, Balbinus, and Gordianus the younger as co-regents.

The Coptic papyri have yielded large fragments of the translation in the Saidic dialect of a Greek work on Penance and Continence by one of the Fathers of the Church, Johannes Chrysostomus; and a set of very curious instructions concerning the manner of framing the lists of taxes, issued at the beginning of an *indictio* (in the ninth century) by Rashid, the Arab receiver-general in Egypt, to his subordinates. This is the only official document in the Coptic language that has hitherto been found. It proves that in the first centuries after the conquest of Egypt Arabic was not the only language used for public business. A long Arabic letter of the beginning of the ninth century, written by a Jew in square Hebrew characters, is most valuable for determining the ancient pronunciation of Arabic. The method of transcription differs in many respects from that used in later times by Jewish scholars. The use of the Hebrew characters in this document must probably be explained by a temporary renewal of the order of the Khalif Omar, which forbade the use of Arabic letters to Jews and Christians.

Perhaps the most important find made is a strip of paper, 42 centimeters by 8.5, containing Arabic prayers, among them one by a companion of the Prophet Abū Dujāna. It dates from the ninth century. The whole text, as well as some marginal ornaments, have been printed from a block of wood. It thus appears that the art of block printing was known to the Arabs more than five hundred years before it came into use among the Western nations. Perhaps we may assume that the Arabs received it from the Chinese and communicated it, like so many other elements of civilisation, to their European neighbours. G. BÜHLER.

SCIENCE NOTES.

THE first volume of *Geology, Chemical, Physical, and Stratigraphical*, by Prof. Joseph Prestwich, will be published immediately by the Clarendon Press. This work is a general treatise on geology adapted both for elementary and advanced students. Vol. i. treats of questions in chemical and physical geology, and special attention is paid to such subjects as hydro-geology, the geological bearings of the recent deep-sea explorations, volcanic action, joints, mineral veins, the age of mountain ranges, and metamorphism. Vol. ii., which is far advanced, treats of stratigraphy and palaeontology, and touches upon various theoretical questions. The author advocates the non-uniformitarian views of geology. The book is copiously illustrated with woodcuts, maps, and plates.

MRS. BRYANT, of the North London Collegiate School, the first lady who has taken the degree of D.Sc. at the University of London, will read a paper at the Anthropological Institute next Tuesday evening. In this communication, which is likely to prove highly suggestive, she will describe some experiments which she has lately undertaken for the purpose of

testing the character of children. We understand that her method is to introduce the children to a room which they have never entered before, and, after allowing them to remain there for a few minutes, to remove them and require them to write a description of what they have seen. From these written returns Mrs. Bryant attempts an analysis of the character of each child, and by practice has found it possible to assign comparative numerical values to many of their faculties. It is obvious that in anthropology there is wide scope for the work of women, and indeed a "Womens' Anthropological Society" has lately been founded at Washington.

THE sixty-ninth Session of the Institution of Civil Engineers will be opened on Tuesday, November 10, when the first business will be the formal presentation, by the president, of the premiums and prizes awarded for papers submitted last session, after which a discussion will be taken on "The Steam Engine Indicator" and on "Errors in Indicator Diagrams."

PHILOLOGY NOTES.

A COPY of Part II. of Dr. Murray's new English Dictionary is to be laid on the table at the Philological Society's first meeting of this session on Friday, November 6.

GEN. SIR FREDERICK GOLDSMID has been appointed secretary to the Royal Asiatic Society, in the room of the late Mr. Vaux.

A DISTINGUISHED Sanskrit scholar, Prof. Garbe, of Königsberg, has gone on a pilgrimage to Puna and Benares. He will stay about a year in India, and study, in particular, the Indian philosophical system. The Prussian Government has sent him and given him a liberal allowance. Dr. Hultsch, of Vienna, has received an offer of the post of epigraphist in the Madras Presidency.

THE library of the late H. A. J. Munro is to be sold at Cambridge on Monday, November 16, and the four following days.

THE Clarendon Press will publish, in a few days, Mr. Jowett's translation of *The Politics of Aristotle*, with introduction, marginal analysis, essays, notes and indices. This work has been many years in preparation, and was originally undertaken for the purpose of illustrating the *Laws of Plato*. Vol. i. contains the introduction and translation, and vol. ii., part i., the notes; part ii., the publication of which is unavoidably postponed for a time, will contain nine essays on various subjects of interest arising out of the study of the *Politics*. The author has in all respects followed the canons of interpretation by which he was guided in his English versions of Plato and Thucydides. The work is dedicated to the Rev. William Rogers, rector of Bishopsgate.

MEETINGS OF SOCIETIES.

EGYPT EXPLORATION FUND.—(Wednesday, Oct. 28.)

The third annual general meeting of the Egypt Exploration Fund was held at 3 p.m. in the theatre of the Royal Institution, Albemarle Street, by permission of the managers. The chair was taken by Mr. C. T. Newton, C.B., who opened the proceedings by stating that letters and messages expressing regret at their inability to attend the meeting had been received from His Grace the Archbishop of Canterbury, His Excellency the French Ambassador, the Earls of Aberdeen, Ducie, and Wharfedale, the Earl Percy, the Lord Wynford, the Dean of Windsor, Gen. Sir Charles Wilson, Sir John Fowler, K.C.M.G., Mr. William Fowler, M.P., Mr. Villiers Stuart, M.P., and Mr. Sheldon Amos. Mr. Newton next read over a list of newly-elected vice-presidents and officers of the fund; the Rev. W. C. Winslow, M.A. (who is also hon. treasurer for America), and Mr. Henry

Willett, of Brighton, being nominated vice-presidents; and Sir John Fowler, Mr. William Fowler, M.P., and Mr. E. Maunde Thompson, Keeper of the MSS., British Museum, being appointed members of the committee. Also, as hon. secretary for Australia, Josiah Mullens, Esq., of Sydney, and as hon. secretary for the Dominion of Canada, H. R. Ives, Esq., of Montreal. These appointments were unanimously carried. The Chairman then made some remarks upon the work done on account of the fund during the past year by Mr. W. M. Flinders Petrie, who was assisted in his labours by Mr. F. Llewellyn Griffith, the Egyptological student attached to the fund. It was with peculiar satisfaction, said the Chairman, that he called special attention to the unearthing of the unspeakably precious remains of the Græco-Egyptian city of Naukratis by Mr. Flinders Petrie in connexion with the fund. At the meeting of the Oriental Congress, held in London eleven years ago, he had himself remarked at some length on the vast importance of this great Hellenic settlement in the Delta of Egypt as likely to turn out one of the most interesting links of historical tradition in the world. Here the culture of Hellas in all its youthful prime first came face to face with her elder Egyptian sister in the time of the Psammetici and the other Pharaohs belonging to the Saite dynasty commemorated by Herodotus. He was not unaware at the time of the great difficulties with which the problem of its identification would be met; but in view of his own labours and successes at Branchidae and elsewhere in Asia Minor, he did not despair of the untying of the knot, and he was eagerly on the look-out for something of the kind to illustrate his own work and even to consolidate the results, chronological and archaeological, at which he had arrived. The Naukratis diggings had, indeed, far surpassed all his expectations; and he was sure all who had seen the collection of amphoræ, oinochoæ, and other ceramic gems which had been on exhibition for some months past in the Vase Room of the British Museum, would share in the delight with which he had so often feasted his eyes upon them. There were there ample materials for comparison of this wonderful store of porcelain from Naukratis with that of Rhodes and other specimens from the Greek isles and mainland; plenty of archaic objects of all sorts in alabaster and the finest of potter's clays, illustrative of Hellenic arts and commerce. The Chairman added that he ought to mention Mr. Ernest Gardner's voluntary offer to resume Mr. Petrie's fruitful excavations, especially devoting his attention to palæographical research. Other branches of the inquiry centred in Tanis or Zoan of the Bible, but on this head he would call on Mr. Poole, who was more familiar with the subject than he himself professed to be.—Mr. R. Stuart Poole (hon. secretary) stated that the objects brought by Mr. Petrie from Tanis (Zoan) had arrived in this country, and might soon be seen on exhibition in the British Museum. These objects were calculated to richly illustrate the history, religion, and domestic life of this interesting district. Mr. Poole then went on to say that the papyri found by Mr. Petrie in the ruins of private houses in Tanis had now been skillfully laid down. They had been seen by Prof. Revillout, of the Louvre, our first authority on the demotic writing, who had pronounced the demotic specimens (which constitute the majority) to be of very high interest. Prof. Revillout is, however, unwilling to report upon these documents before subjecting them to a closer examination, after which he will produce an important analysis of those documents. An exhaustive report (shortly to be published) had in the meanwhile been prepared by Mr. Griffith upon a unique papyrus containing a list of hieroglyphic signs with transliterations into the hieratic script, each sign accompanied by its name in the same character. This report, Mr. Poole said, had been approved and passed by M. Naville, who found it to be perfectly correct. Mr. Petrie had also presented a report, which Mr. Griffith had edited, upon a geographical temple-list similar to those published by Dr. Brugsch, but with important variants. It contained the name of Khufu, of the IVth Dynasty, the builder of the Great Pyramid, twice repeated, either as founder of his territorial arrangement with its priestly organisation, or possibly as founder of Zoan. Referring to the lecture which M. Naville was

that evening to deliver upon "Goshen," Mr. Poole said that the audience would then and there have the opportunity of learning all that was known to science upon that important topographical question. No living Egyptologist was more cautious than M. Naville; not one was more thoroughly scholar-like; and the identification of sites in the land of Goshen, which would by-and-by be laid before his hearers, would be second in interest only to his discovery of the far-famed store-city of Pithom. Goshen he had found to be the eastern half of the Delta; but he (M. Naville) placed it further to the southward than did other geographers, and consequently nearer to Heliopolis, the On of the Egyptians and of the Bible.—The Chairman deeply regretted that the Society's able treasurer, Mr. E. Gilbertson, was not present to read his financial statement. The sum of £1,431 had been received during the past year in the form of subscriptions and donations. Of this sum £546 had come from across the Atlantic, being collected and forwarded by the Society's American treasurer, the Rev. W. C. Winslow, of Boston. This total did not, however, include certain special funds, as the Student Fund and the Fowler Fund.—Miss Amelia B. Edwards (hon. secretary) then spoke upon the importance of the Fowler Fund. This fund was generously started by Mr. William Fowler, M.P., who had offered, in 1883, to give £50 for the excavation of the mounds of Zoan (Tanis), provided that nineteen other donors would give the like amount; thus raising a special fund of £1,000, the last donation to be given by the founder. Mr. Fowler had specified that the money should be employed at Zoan, not only because the site is one of extraordinary interest, but because it is also of such great extent that if the society were not merely to nibble at the surface here and there they must have a full purse to draw from. Miss Edwards pointed out that more than three years had now elapsed and the Fowler Fund was still uncompleted, £650 having up to the present time been paid in. Mr. Flinders Petrie had, however, just signified his generous intention of adding £50 to the paid-up subscriptions; and Mr. Gurney Barclay had promised another £50 as soon as £800 should be collected. Miss Edwards then dwelt upon the desirability of continuing the excavations at Zoan (Tanis), and appealed to her hearers to co-operate in the effort to obtain further subscribers to this fund. Two or more members of a family, or two or more friends, might combine to make up a £50 donation, and so help to bridge over the gulf which separated the latest donor from Mr. Gurney Barclay, and that other chasm which separated Mr. Gurney Barclay from Mr. William Fowler. [It may here be mentioned that Miss Edwards's appeal was so far successful that, at the close of the meeting, Mr. D. Parrish, an American gentleman, added his name to the list of donors to the Fowler Fund, thus raising the paid-up total to £750.] Miss Edwards also sketched the probable programme of the coming season. Mr. Petrie will resume work at Naukratis. Leaving this work after a while to the superintendence of Mr. Ernest Gardner, he (Mr. Petrie) will then proceed with Mr. Griffith to either the principal cemetery of Zoan or to another equally promising site in that direction. M. Naville also, it was hoped, would be induced to place a short portion of his valuable time at the service of the society, and so be enabled yet further to augment our knowledge of the Biblical cities of Egypt. Absorbed, though we knew him to be, Miss Edwards said, in *The Book of the Dead*, Mr. Naville must not be allowed to forget that he belongs pre-eminently to the Book of the Living.—Sir Charles Nicholson moved, and Dr. Hermann Weber seconded, and the meeting unanimously adopted a resolution presenting to the trustees of the British Museum an important and valuable collection of antiquities discovered by Mr. Petrie and M. Naville.—Mr. Bond, C.B., the principal librarian, returned thanks for the trustees, and recommended a formal application to the Government for a grant in aid of the important undertakings in which the society is engaged.—Mr. John Evans, F.R.S., moved a resolution to the effect "that this meeting presents to the Fine Art Museum, of Boston, U.S.A., with sincere thanks to the Rev. W. C. Winslow, Vice-President of the Egypt Exploration Fund, a selection of antiquities discovered by Mr. Petrie and M. Naville."—The motion was seconded by

Miss Edwards, who paid an earnest tribute to the sympathy and support received from our Transatlantic brethren and from the Transatlantic press. American orientalist and archaeologists had already taken an important stand among the scholars of the world; and no more substantial proof could be given of the interest with which America regards such researches as those in which the society is engaged than the recent formation of an American Oriental Society, of an American School at Athens, and of an American Commission for the explorations at Assos.—The American Minister said that it gave him the greatest pleasure, on behalf of the trustees of the Fine Art Museum, of Boston, to tender their acknowledgments for this valuable gift, their congratulations on the good work done by the fund, and their best hopes for further and future work. These objects would, undoubtedly, be so used and applied in Boston, called "the Athens of America," as to promote that interest in Egyptian history, and that practical co-operation in the work of Egyptian exploration, which he understood to be the main object of the society. He believed that the time was fast approaching when every enterprise for the extension of human knowledge, and for the alleviation or improvement of the general condition of mankind would find its co-ordinate branches on both sides of the Atlantic, and that the two countries would join hands for that purpose across the sea, which now no longer separated, but united them by a common highway. His Excellency went on to say that any branch of historical research which bore upon the confirmation or elucidation of the truths of the Christian religion could not be over-estimated, and that any man who contributed to the elucidation of those truths conferred a benefit upon the human race. He begged to thank the chairman for the warmth of his greeting, and in the name of his country he most heartily responded. The chairman would, however, permit him (Mr. Phelps) to correct him upon one point. The English and Americans were not cousins—they were brothers. The Atlantic no longer sundered them as of old. It united them by steam and by electricity. Votes of donations of antiquities to the museums of the Louvre, of Berlin, of Karlsruhe, Geneva, Bristol, Bolton, York, Liverpool, Sheffield, Edinburgh, Charterhouse School, &c.; including special donations to the Fitzwilliam Museum, Cambridge, and the Ashmolean Museum, Oxford, were then unanimously voted; and, with votes of thanks to the chairman, the hon. secretaries of the Egypt Exploration Fund, to the president, hon. secretary, and managers of the Royal Institution, and to the president and council of the Archaeological Institute, the proceedings terminated.

(Thursday, Oct. 29.)

M. Naville delivered a lecture on his last season's work for the Egypt Exploration Fund. It was matter of regret to him that the material results had not been so rich as before. The difficulties of discovery in the Delta, as compared with Upper Egypt, are due to the character of the country, which is wholly alluvial soil, and to the continuous demolition of monuments from the Roman period to the present time, no other stones but those of ancient temples being available for the needs of the abundant population. If, however, the results of this season are almost wholly scientific, we must remember that the determination of the obscure geography of the Delta is of the highest consequence in Biblical and Egyptian archaeology. M. Naville first excavated at Khataneh, not very far from Tanis, where he discovered remains of a temple of the remote age of the XIIIth dynasty, anterior to the Shepherd rule, and probably to Abraham. The burial-place of this large city presented very rare vases of the epoch of the XIIIth dynasty, and burnt bones found in them showed the practice of cremation, though it was not certain that the bones were human. This is an extraordinary deviation from Egyptian custom as to both men and sacred animals. M. Naville's most important result was the identification of Saft-el-Henna, near Zagazig, a site of a large ancient town, with the capital of Goshen. The monuments found here had been mostly destroyed, but enough remained to show that a monolithic sanctuary of the date of Nec-

tanebo II., the last Pharaoh, stood here; and his statue, unhappily broken, was also rescued, and was exhibited to the audience, with drawings of the sculptures of the sanctuary. The name of Kesem, here found as that of the capital of the nome or province of Arabia, has been long identified with Goshen or Gesem, but no site had yet been surely fixed. We could now safely do this, and so fix also the territory of Arabia—first a district and then a nome. It is remarkable that this nome was first constituted by Rameses II., and we thus understand how the land of Goshen became the land of Rameses. The god Sopt, a form of the sun and a warlike divinity, was here revered as residing in a sacred sycamore. It may now be considered highly probable that the land of Goshen, exceeding in extent the Arabian nome, reached Pithom on the east and nearly Heliopolis or On on the south.

FINE ART.

SOME WINTER EXHIBITIONS.

MR. WALLIS has devoted one side of his "French Gallery" this year to a collection of pictures by Prof. L. C. Müller, all of which have in previous years been painted for him, and are now lent for exhibition by the several owners. Representing as it does the work of some ten years, the collection does not impress by its size; but Prof. Müller, broad in effect as his pictures are, does not belong to the modern slapdash school, but paints with exceeding care and patience. The result of this high respect for his art and his gifts is seen in the splendid quality of his pictures, which in strength, in colour, and light would completely overwhelm most modern work. Here is the famous "Cairene Café," with its intent tric-trac players and its statuesque coffee maker; here also is "The Guardian of the Sacred Well," which, as a piece of mere realistic painting of light and broken wall, could scarcely be excelled, while it is not less admirable for the dignity and simplicity of its design and the fine feeling in the figures. Scarcely less to be admired are the scenes in the desert, alive with animals and figures bathed in Eastern light, and each figure a lifelike study; and "An Alme's Admirers," with its admirably poised dancer and enamoured audience. As usual, there are here some fine works by Carl Heffner, but his large view of Windsor seems to us to be scarcely up to his usual mark, and there is a mannerism both in design and colour in his smaller works which begins to tell. The rest of the pictures are scarcely so good as we expect from Mr. Wallis; but we may except "Pursued" and "A Horse Fair in Germany," by W. Velten, "Left to the Church," by C. Mayr Graz, "Dragging for Laurels," W. H. Bartlett, "Le Forgeron," by E. Allan-Schmidt, "Studying his Score," by Carl Rickelt, and some others.

The most striking picture at Messrs. Tooth's galleries is the "Ave Maria" of L. Bazzaro. Some white-robed monks are seen kneeling hastily and uncomfortably in a boat upon a lake or large pond, which is apparently in or near the grounds of their monastery. The startling effect of the picture is produced by the contrast of the reflections in the water. Behind, a long white wall, overtopped with trees, stretches right across the canvas. On this the warm low sun strikes and sends a vivid yellow reflection of it into the lake. In the front, where the boat floats, the deep blue sky is reflected; and dividing the blue from the yellow is the sombre and neutralising reflection of the tree-tops. It is a strong effect strongly realised, and the picture, as a whole, is impressive, if somewhat sensational. The English school is fairly represented here, especially by a very clever picture by Seymour Lucas, where we see a buxom young village maiden flirting with a soldier of the last century, to the dis-

comfiture of her civilian lover, who watches them jealously from the window-seat. There is a good large Leader, which would be still more enjoyable if it did not hang so close to a little gem of a landscape by T. Collier. Among other English landscapes are "Crossing the Common," by C. Smith, with a fine evening sky; a large and solemn wood-scene by Ernest Parton (not, we fancy, a very recent picture), and good examples of A. J. Hook, W. L. Wyllie, J. Clayton Adams, and others. Among the more notable of the foreign works are Hugo Salmson's "Communion," the head of a girl in white like a Bastien Lepage; a large picture of French harvesters by Léon Lhermitte; two pleasant heads by G. Jacquet; a fine small Van Marcke, and clever pictures by Binet, Heffner, Kuehl, Galofre, Madrazo, Sorbi, Schloesser, Senet, Luis Jimenez, &c. One of many artists with unpronounceable names is Brykierfiekdiez, by whom there is a very spirited and well-painted scene called "Gossips." We are afraid to hazard a guess as to the nationality of the soldier who has left his white pony to flirt with a peasant girl; and we recommend to the consideration of Messrs. Tooth that it might be convenient to give a little more information in his catalogue about the foreign artists whom they introduce to the British public and about the locality of their subjects. It is not everybody who has heard of Brykierfiekdiez, nor of Carmiericke, to say nothing of Crachorski and Kleazyinski. In a smaller room are some old friends, including Alma-Tadema's "Seasons," and Hook's "Wild Harbourage," and there is also a charming and new Edouard Frère.

At McLean's Gallery is the picture which first brought Munkacsy to fame. It looks rather black, this "Last Day of the Condemned," but it is doubtful whether the artist has ever painted anything with a finer dramatic sense, or with greater power. Of the newer pictures the finest is "A Shepherdess, Brittany," by Pierre Billet, a study in the Millet vein, but original and fine both in expression and colour. Abounding in character, truly studied, and very dexterous in execution, is Benlliure's "Preaching in a Parish Church in Valencia, Spain." It is a pity it is so grimy and crude in colour. Open to much the same praise and blame is "Les Offrandes à Notre Dame de la Salut," by A. Mas y Fondevilla. The collection also includes a choice example of Andreotti, "The Vintner's Daughter"; a good but rather dull and empty Israels; a nice little Edouard Frère; a clever, but rather vulgar, Madrazo; a very pretty figure of a lady putting on her gloves for "The Morning Walk," by V. Brozik, and minor examples of Rosa Bonheur, Albert Moore, Sir J. D. Linton, L. W. Hawkins, G. H. Boughton, Roybet, Reuben, and other good artists too numerous to mention.

CORRESPONDENCE.

FOUNDATIONS OF THE CAMPANILE OF ST. MARK AT VENICE.

London: Oct. 30, 1885.

Last July, under the superintendence of the able Venetian antiquary, Signor Giacomo Boni, a hole was dug at the N.W. angle of the great Campanile in the Piazza of St. Mark with a view to discover the materials and construction of its foundations—a point of especial interest, as it can obviously have been no easy matter to construct a safe bed for a building of such enormous height and mass on the rather treacherous bottom of a Venetian lagune. Though it is close upon a thousand years since this foundation was constructed the Campanile yet remains without visible settlement, and is almost, if not absolutely, without inclination from the perpendicular. On reaching a depth of about two feet five inches below the present

paving of the Piazza an older pavement made of "herring-bone" brickwork was discovered. This is the pavement shown in Gentile Bellini's great picture of the square of St. Mark, painted shortly before the year 1500.

The Campanile, which is built of brick, rests on a plinth of massive stonework, with three offsets or footings visible above the modern level of the Piazza; two other offsets are hidden between the present and old pavement, so that originally its visible plinth consisted of five stone footings. Below this once visible plinth are seven courses of massive stone blocks, finishing at the bottom with a course nearly three feet thick, which rests on a double layer of stout oak planks, laid crosswise. This oaken floor rests on a mass of closely driven piles, formed (strange to say) of posts only about eight inches in diameter, not of oak, but of the soft white poplar which grows in the neighbourhood of the Venetian lagunes.

The area of this wooden platform is only a few inches larger than that of the stone base of the Campanile, and depends for its solidity on the extreme density of the clay bed into which the piles are driven. Though nearly ten centuries have elapsed since this foundation was constructed, the wood, both the oak and the white poplar, are well preserved, and have not lost their ligneous and fibrous character—thanks to the preserving influence of the dense clay in which they are embedded. The piles are made each of a small tree, roughly rounded, and the oak planks of trees rudely squared and then sawn in half.

Sig. Boni notes that at an early period in the history of Venice it was the custom to use local woods, such as the oak, the poplar, and the elm; but that later on, when the Venetian territory had become more extended, the fine conifers from the lower slopes of the Alps came into use. Thus he has discovered that the foundations of the Doge's Palace, constructed early in the fourteenth century, rest on a double layer of planks of red larch-wood from Cadore.

There is also an important difference in the method of constructing the foundations of the older Campanile and of the Doge's Palace. In the first case piles are driven in, forming a wooden base, with very little spread beyond the base of the tower; in the second case, that of the palace, no piles are used, but a very extended base is formed by a large series of projecting footings, so that the weight is distributed over a much larger surface than that of the visible base of the walls or columns. The stone of which the large foundation blocks of the Campanile are formed is very various. Several kinds of trachyte and porphyry occur—grey, red, and green, and also some of the fine hard Istrian limestone, which is also used in the tomb of Theodoric at Ravenna, with its marvellous dome cut out of one solid block of stone. The porphyritic stones employed are of extreme hardness, and their use implies a wonderful amount of patient labour on the part of the ninth-century workmen. The mortar in which the blocks are set is made of the weak white Istrian lime mixed with sand, and this has mostly perished, owing to the lime possessing no hydraulic qualities. In the oldest part of the Doge's Palace the same weak lime was used, without any admixture of sand; but after the year 1424 the stronger "black lime" of Albetone was employed with much improved results. The fact is, however, that when large and carefully squared blocks of stone are used it matters but little what the quality of the mortar is, or whether any mortar is used at all. Thus, in many of the most carefully constructed buildings of ancient Rome no mortar at all is used, and in other cases it is merely a thin stratum of pure lime, laid there, not to bind the blocks together, but merely to give their beds

a more smoothly fitting surface. An interesting paper, illustrated with a very minute and careful drawing, to record these discoveries about the foundations of the Campanile, has been published by Sig. Boni in the *Archivio Veneto* (Serie II.), vol. xxix., part 2.

J. H. MIDDLETON.

ROMAN INSCRIPTIONS AT WHITLEY CASTLE AND SOUTH SHIELDS.

Liverpool: Oct. 31, 1885.

There has just been discovered at the Roman station of Whitley Castle, near Alston, the right-hand lower corner of an inscribed Roman tablet. The letters—few in number—upon it are important. They are

°S III V.
O' LEG.
S' PR' BR.

and evidently refer to an imperial legate whose term of office was during the third consulate of some emperor, (C)'S III. being the commencement of the remaining part. I am inclined to read *co(n)s(ul) III. Vi(ri)o (Lup)o Leg(ato) Aug(usti) co(n)s(ulari) Pr(ovinciae) Br(itanniae)*. *Sub* will have to be taken as understood before *Virio*. The letters *BR* at the end are plain, and are not *PR* for *prætor*. The third consulate of Septimius Severus was in A.D. 202; and, as he was never consul a fourth time, the numeral *III.* followed the abbreviation *cos* in all inscriptions in which his name occurred after that date, and in which his consulships were mentioned.

Virius Lupus was legate in Britain, as we know from other sources, in A.D. 197; but in A.D. 205 we find Lucius Alfenius Senecio holding that title. Whether Lupus was in our island the whole of the intervening time has hitherto been unknown, but from this inscription I think we may gather that he was here as late as A.D. 202, if not later.

At South Shields a small altar, 2 feet 3 inches in height, of sandstone has been found inscribed

D' ESCVLAP.
P' VIBOLEIVS
SECUNDVS
ARAM
D'D

There is a *præfericulum* sculptured on the right side, and on the left a *patera*. The expansion, of course, is *D(e)o Esculapio. P(ublius) Viboleius Secundus, Aram D(onum) D(at)*. It is the fifth dedication to Aesculapius found in Britain, so far as recorded.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MR. HUBERT HERKOMER will deliver his inaugural lecture as Slade Professor at Oxford, on Wednesday, November 18.

MR. PERCY GARDNER has been re-elected to the Disney Professorship of Archaeology at Cambridge.

THE University of Cambridge has made a grant of £100, from the Worts travelling scholars' fund, to Mr. Ernest A. Gardner to enable him to undertake archaeological research at Naukratis in conjunction with Mr. Petrie. We understand that Prof. Sayce will also, for a short time, make one of the party.

THE Standing Counsel to the University of Oxford has given an opinion that the delegates of the common fund, though not empowered to make a grant of money to the proposed school of archaeology at Athens, may yet found scholarships tenable there.

THE STAGE.

MISS CALHOUN, the young and gifted American lady, whose impersonation of Dora last summer in "Diplomacy" is yet fresh in the memory of all who witnessed that delightful performance, has just come back to us. Having left these shores on August 23, Miss Calhoun re-embarked for England after a brief stay of only five weeks in her Californian home, and landed at Liverpool on Sunday last, November 1. Her re-appearance on the London boards may be looked for about the end of this year, or early in January. That she will be warmly welcomed is very certain.

MR. BUCHANAN'S drama, "Alone in London," was produced at the Olympic Theatre on Monday, and met with an emphatic, if not an unqualified, success. It contains little or nothing that is new to the stage, but the material is cleverly handled. The lines of drawing, both as to plot and character, are broad and bold, without any pretence of subtlety. One scene, the last of the second act, is vigorously wrought up to a climax of pathos and some power; and another scene, comprising the whole of the last act, is skilfully constructed to build up the interest to the fall of the curtain. But better than either of these is the first scene of the sluice houses in the third act. This is really a powerful piece of dramatic writing, and it was powerfully acted. The manipulation of the forged note and the business of the lamp is as ingenious in its way as the famous chapter in *Les Misérables*, in which the villains in the garret become the instruments of their own ruin. Other scenes in Mr. Buchanan's play are less to our taste. Many passages of the dialogue are strongly written, but as literature the play is certainly not strong. Probably the author did not wish it to be so. The acting was admirable from first to last: Miss Roselle was impassioned; Miss Harriet Jay most picturesque and pathetic; Mr. Standing manly and effective; and Mr. Boyne as full of humour as of genuine tragic passion.

MUSIC.

RECENT CONCERTS.

A "SPECIAL GRAND" concert was given last Thursday week at Covent Garden Theatre. Mesdames Valleria and Trebelli and Mr. Santley sang light and sentimental songs, which, to use a hackneyed phrase, "brought down the house." Mme. Norman Néruda played with her usual charm and finish two movements from Mendelssohn's ever-popular Violin Concerto. An overture entitled "Peveril of the Peak" was performed for the first time. Mr. E. H. Thorne, with this composition, won the prize of twenty-five guineas offered by Mr. W. H. Thomas, and awarded by Mr. E. Prout. The overture is not a very striking piece of music, but it contains much which testifies to the composer's ability, and also to his diffidence. The encouragement thus given to native musicians to write is worthy of note. We refer not so much to the money stimulus as to the ever-increasing chances of getting their works produced.

Antonin Dvorak's Symphony No. 2 in D minor was performed last Saturday afternoon at the Crystal Palace. This work, produced last April at one of the Philharmonic Society's concerts, under the composer's direction, is not a *pièce de occasion* easily applauded and easily forgotten, but a combination of genius and labour, of which time alone can test the character and strength. A symphony, if made of the true stuff, will be none the worse—nay all the better—for keeping. And so far as we can judge of this one of Dvorak's after two hearings, it will keep a long time, and each fresh performance will strengthen

past impressions and reveal new beauties. The quaint thoughts, the unexpected changes of rhythm, the bold harmonies, the varied tone-painting, will gradually become familiar to us; but, no longer dazzled by novelty, we shall be better able to estimate the work at its true value. It is pleasant in this age of mushroom celebrity to meet with a man who writes for the future rather than the present. The symphony, splendidly performed under Mr. Manns' direction, was well received. Signorina Gemma Luziani made her first appearance, and was heard in Mendelssohn's G minor Concerto. She rendered the music with neatness and decision, and bids fair to become an excellent player. Mr. W. Winch was the vocalist, and his pleasing voice and graceful style of singing secured for him much applause. A graceful romance from the Serenade in G for strings, by Mozart; the "Oberon" overture, and Sullivan's "Merchant of Venice" music completed the programme.

The first concert of the season of the Borough of Hackney Choral Association was held last Monday at the Town Hall, Shoreditch. The programme commenced with Schubert's Mass in F. This work, written by a youth of only seventeen years of age, has justly been regarded as one of the most wonderful specimens of the precocity of genius. The choral singing was exceedingly good, especially in the "Cum sancto spiritu," which, by the way, was taken at somewhat more than *allegro vivace* pace. A little fault could be found here and there with the performance, but the time at disposal for rehearsal with band scarcely admits of perfection. In the second part of the concert was given Mr. Prout's dramatic cantata, "Alfred," written a few years ago specially for the society. Choir and band were heart and soul in the work, and the performance was—so far as these and the conductor were concerned—entirely satisfactory. The solo vocalists were Miss Clara Leighton, Mr. Selwyn Graham, and Mr. J. Bridson. The lady sang with taste and great purity of intonation, but with the gentlemen there were moments when one had to accept the will for the deed. The hall was well filled, and the audience enthusiastic.

We need not speak in detail about the second Richter concert last Tuesday evening. There was no novelty in the programme—for the Andante and variations in D minor for strings and horns, by Mozart, can scarcely count as such. The performance of the Love-Duet from "Die Walküre," by Madame Valleria and Mr. E. Lloyd, was exceedingly fine. Brahms' Symphony in D received a most careful rendering from Herr Richter, who, by the way, used a score. Beethoven's "Leonora," No. 2, opened the concert. The tone of the strings still seems to us to lack tone.

The performance of Gounod's "Mors et Vita" for the first time in London at the Albert Hall last Wednesday evening naturally attracted a large audience. Mr. Barnby took many of the movements at a quicker rate than Herr Richter; and although perhaps less in accordance with the composer's *tempi*, we think the change in most cases an improvement. The Dies Irae, the Lacrymosa, and the Judex movements, however, were certainly too fast. Of the work itself we have nothing new to say. We doubt whether it will prove as great a success as the "Redemption," although from a purely musical point of view it is in our opinion, superior. Mme. Albani and Messrs. Lloyd and Santley were all in excellent voice. Miss Hilda Wilson, who sang in place of Mme. Patey, was very successful. The choir had a fine opportunity of distinguishing itself, and of this it took full advantage. Mr. Barnby conducted throughout with the utmost care.

LITERATURE.

Sermons. By Mark Pattison. (Macmillan.)
(Second Notices.)

A just appreciation—rarer than now—of the scope and consequences of the scientific epoch of 1859 inspires the two series of academical lectures which commenced two years later. The course upon Liberal Education opens with the universal antagonism of the individual and the type in moral developments as in material organisms. Education, no less than government, must tend to favour one; usually the latter, namely, orthodox uniformity. Plato's *Republic* is cited in proof of the selfish elements in the parental educating instinct of society. But how much, we might ask, does education owe to-day to zeal in enlisting young recruits for our own party; how much to fear for our throats and consols? This school teaching is referred to later on (Lec. vii., 104-10), and in clear terms. It must be entirely passive, receptive, acquisitive and practical. Society must inculcate whatever it thinks the best; which means, I suppose, that the majority of the electoral mob must decide what is best, and enforce it. As there cannot be two bests, an iron uniformity ensues. But culture, Pattison thought, is an affair of college, not of school. True, if school is to end in college. For millions it does not. They are our rulers. They are being taught *things*, not *to think*. Teach them all the *same* things, and those the very best, when they come to think (as they will this month), they will not think uniformly, but erratically—in fact, just anyhow. Thus you do not even attain your stable uniformity after all: your consols are no safer. Teach them *how* to think, give them culture, and, with due allowance for self-interest, idiosyncrasy and the rest, they will virtually agree. At least, you will have intelligent variation based on a common method instead of anomalous aberration from a low type. Pattison's views on this subject (here obscurely hinted, but which came out in private discussions) I have always keenly regretted. Intent on fanning the flickering flame of University Education, he was willing to carry the sacred fire to kindle humbler altars, but that was all. Admitting that "mental enlargement should be the equal right of all; that it is in no mystical connexion with the learned languages—it requires very few books, and the observation of quite common things" (p. 66)—he could hardly conceive it apart from academical forms. The liberal culture was no heritage for hinds and craftsmen. One sees, of course, that, given our English hierarchies of ascending rank, wealth, and leisure, it is well to supplement them with a hierarchy of education, better still to make the strata

of all four coincide. Though he sanctioned my view that our only hope is a recovery of human contentment, our only progress development within a class, and not promotion to a higher, so overpowering was his conviction of what he called the vast sum of English brutality, that he could see no hope for the many who could not emerge into the higher sphere of the few. Logically, this involves the vulgar, the almost universal, error that the working classes are to be raised by founding scholarships to steal away their best boys and transform them into college gentlemen. The causes of his apparent indifference are not far to seek. Pattison was an intellectual aristocrat. His benevolence and straightforwardness inspired familiarity rather than awe in poor people; they liked and respected him as "a very curious gentleman"; but he could no more enter into their minds or mentally appreciate them than he could the passman. Admitting that the ambitious honourman, the *Graeculus curiens*, was hopeless, he failed to see that in the rich, leisured, unbiased, able-bodied passman lay the virgin soil in which his theories might have taken root. The joyful young barbarian was a "sordid animal," just as the sleepy old parson was a "wretched *crétin*." He believed it. A shy nature, a self-concentrated life, some contemptuous indifference perhaps, precluded his studying the latent powers of inferior minds—an indispensable study, I think, for all who would train as well as teach. Otherwise he might have gathered round him a young band of disinterested workers, and started a movement which would have sapped the foundations both of examinations and athletics.

To return. With this practical teaching of what is dominant in each age— theology, letters, or science—he contrasts with impressive eloquence the higher education, the training and cultivation of the individual mind. He pleads for the old classical curriculum, not on the ground of utility, but as a symbol of great aims. Some of us who have almost forgotten our little Latin and less Greek will be found not less strenuous in supporting the one badge which distinguishes the university from a fortuitous agglomeration of training schools and technical colleges. Such timid hope as he here expresses of a revival of the true academical spirit was short-lived. He lived to see the reforms he had been among the first to agitate, and the original research bubble he had innocently sanctioned, recoil upon his cherished ideals—a vast temple of Janus reared for the celebration of the examination mysteries, a suburb peopled by its hierophants, and the Academia resounding with "brutal games." The future alone can justify or condemn his despondency. *Multi pertransibunt et augebitur scientia*—scarcely *sapientia*. High flights in speculation, brilliant scientific discoveries, plodding acquisition of facts, feverish assimilation of opinions, cannot animate an university, but the regular circulation of its vital fluids—the gentle spirit, the philosophic temper, the scientific habit—through all its members, great and small. If that circulation be impeded the head becomes over-heated, and the feet grow cold. Wherein is an allegory.

In the fourth lecture the inquiry is carried

up into a higher sphere—what he calls the ascetic element in the liberal education, as morally identical with early monastic asceticism. This view of the intimate relations of *ἀσκησις* and *φιλοσοφία* is doubtless original; probably it is equally sound. Further (Lec. v.), the philosophical and ascetic processes—the mental training and the moral discipline—are internal, not external. The student has now to think, to discover, to create for himself, to apply Baconian method in the elimination of error. The office of the educator is but to stimulate, to suggest methods, and to remove hindrances. The final stage is a free growth on prepared soil. Both Catholic and Positivist theories are identically opposed to this view: their plan, inculcation of dogma—their object, the supremacy of opinions—their attitude, distrust of the individual intellect. Conscience and duty prescribe a truculent abuse of the teacher's opportunity, as one mischievous writer avows, "treading in the truth day by day into the ready memory, and wedging and tightening it into the expanding reason." Education, however, has less to fear from these parties than from the wide-reaching forces—authoritative ignorance and debased animalism—of which they are the respectable types. The private-adventure proselytism which the author reproved has been succeeded by avowedly propagandist institutions. Another sectarian college is just announced. In fairness we must have all, or none. Put up the student-mind to auction and all the proselytisers will flock to the bidding. Useless to point out that thus they surrender the undoubted advantages of the seminary—perfect discipline and harmonious teaching untroubled by opposition—without in any way profiting by the free academical atmosphere; they do not think so. But with the utmost stretch of respectful sympathy for zeal like theirs, we cannot cease to insist that such institutions, secularist or religious—however admirable elsewhere—are here an intrusion and a menace; that they should have—and indeed can have—no place or lot within an university, since by their mere recognition it ceases to be an university at all.

The three lectures on the attitude of the Church towards philosophy must be treated together, their historical plan being somewhat involved. Briefly it is this. Philosophy confined to the few, and couched in a learned language, did not at first come in contact with the Church, which had to deal with the many *δευδαίμονότατοι*, in a peculiarly religious and superstitious period. (This point is usually misrepresented.) By them, and their tools, the Caesars, it was persecuted. The second century (the whole passage is valuable) brought the "victory of moral ideas." Philosophy, long sulking in ascetic seclusion, now assumes a philanthropic mission, comes into contact with the Church, and is welcomed (1) as anti-idolatrous, (2) as unitarian, (3) as moral. The Church recognises itself in the eclectic phase of philosophy, "the rational residuum of centuries of Greek mental activity." However the fathers explain it, the fact remains that reason and faith were once reconciled, and are therefore reconcilable. This fusion of thought, and even of literature, is again disintegrated, to reappear once more in the scholastic system—

truly philosophical because universal in scope. Then the revolt of Humanism, soon paralysed by Protestantism. The natural theology of the eighteenth century—especially Leibnitz's *Theodicea*—framed to embrace the Newtonian Cosmos, marks the third epoch (pp. 178-182 and 202-206). Sapped by the obscurantism of the Evangelical and Catholic movements (here mercilessly analysed), this has now broken down in face of new discoveries and a vaster Cosmos. The remedy hinted at is a new *Theodicea*.

This thin abstract of an abstract is doubtless inadequate, possibly inaccurate. A few comments. The reduction of the moral principles of the early plebeian church to the martyr-spirit seems to me questionable. The necessary evasion of the ominous silence of Josephus by a forged interpolation might well have been cited side by side with the "exitiabilis superstitio" of Tacitus in proof of contemporary ignorance of the Gospel events. It has been suggested to me that Pattison goes too far in making Dio Chrysostom the "first Greek writer who had pronounced the principle of slavery to be contrary to the law of nature." Taking "principle" in the widest sense to include the cases of captives and degraded aborigines, I venture—under correction—to regard any earlier protest (if such exists) on behalf of Aristotle's *φύσει δοῦλοι*, as a personal and rhetorical eccentricity. Again, the accurate terminology of the schoolmen is contrasted with "the slipshod and intangible metaphor which the revival of classical learning has introduced." Whereupon I note with pleasure that in this book there are fewer metaphors than pages. Pattison has exaggerated the formal hostility of the Church towards science. A very able scientific assailant has admitted that "the question of the earth's motion was the single point in which orthodoxy came into real contact with science." Too much is here made of the "astronomy which the Church had striven to crush as heresy." It merely used the Ptolemeian system until the astronomers had quite agreed on a better. Perhaps it waited too long. Even so that was better than giving its imprimatur in succession to every new theory from Descartes' vortices to Byrne's algebraical demonstration of the Athanasian Creed. Besides, the emendations of Copernicus (merely reducing it from a dogmatic law to a disputable hypothesis), as well as the Galileo affair, were not the work of the Church, but of a faction of the Inquisition.

Pattison is, of course, most at home in the eighteenth century. Science in the seventeenth had been humbly apologetic. Its close saw an impetus of the human mind (not less marked, we may add, than the Renaissance) which at first ran into scepticism. But the aspirations of Locke soon took definite form under Leibnitz. Here we expect and we find an indulgent partiality. Granted the sublimity of Leibnitz's conception of the Unity of Truth, and his inference of spiritual and moral from material laws, we must, I think, ask what light his sophistical theory of the Pre-established Harmony throws upon his method? Again, no doubt, the old rational theology was rejected by the Evangelical as unedifying and by the Catholic as superfluous; but surely that is not all. They uncon-

sionally revolted against its irreligion. Quite apart from late scientific proofs of bungling and pretence-work (Pattison would hardly have denied their force), the Great Artificer, puffed, patronised, excused, and defended by Butler, is a degradation of the Deity. And may not much of the spiritual palsy of the eighteenth century be indirectly traced to the debasing methods and smug, well-beneficed tone of the Evidential rabbis? We are told (p. 180) that "the popular manuals of Butler and Paley are part of the heritage of all cultivated men," but (p. 198) that they are "a dead letter" and "completely obsolete." In truth, the *Theodicea* has evaporated with its "divine artisan." Its spirit, Pattison trusted, might be revived in a new synthesis of science and faith.

Such hope is common to all theologians. This one stands nearly alone in basing its realisation upon loyalty to reason, in his contemptuous repudiation of the nebulous evasions and tortuous manipulations of the popular Broad school. "The questions must be fairly faced," if faced at all. In truth, at this juncture the attitude of the clergy is far more important than the strength or weakness of their case. What is it? Let us hear them in council. The Church Congress discusses "the intellectual trials of the spiritual life" (note the peculiar phrasing throughout). One speaker dwells on "the trials which beset this life through the side of the intellect," the "trial which distressed many when confronted by the uniformity of Nature," the "black philosophy," also the "backward philosophy which is a great trial." Another pronounces that "the intellectual man is not a competent judge of spiritual things, being rather hampered by special hindrances, from which he should seek relief by patience and prayer"; again, "the signal trap of our time is the triumph of the so-called [this curious epithet is a favourite] physical sciences." Another mourns that "spiritual facts seem so dim, vague, and cloudy compared to material facts"; "another difficulty arises from the habit of over-indulgence in intellectual curiosity"—the cure is "to remember that we were meant to be under the conditions of unsatisfied knowledge, that we were meant to be under the discipline of ignorance." So the discussion proceeds. Next week an exegetical prelate, charging upon "the alleged discoveries of science," advises us "to begin by postulating the truths of religion, and then contrast with them the truths which science claims to have established." This partial paralysis of reason upon a single subject extends to laymen, even those whose genius and principles are above criticism. Mr. Gladstone, in his article of yesterday, first challenges, and then evades, argument. He gravely asserts that modern science has pronounced the Scriptural order of creation—viz., (1) the water population, (2) that of the air, (3) that of the land, (4) man—a "demonstrated conclusion and established fact." No proof being offered, we assume that some one has somewhere said something which somehow by rhetorical manipulation can sanction the grouping, for example, under one stage of development of the whole varied water-population from protoplasm to mermaids. But to the triumphant argument that the author of Genesis could

never have guessed this order, and so his knowledge must be divine, the obvious answer is that the order, even if right, is clearly the order of ignorance, of childish intuition—in fact, the order in which any sharp child would place them if asked; the order of the responsive sympathy of pets, of their relative companionableness, and so of their consanguinity to man. This, by the way—my point is that after this show of argument the author instantly retires through the dust-cloud of rhetoric to his entrenchments, whence he discharges an effective peroration appealing directly to sentiment, opportunism, and unreason.

These instances may tend to show whether we are really "facing the question." To plead, as Pattison did, for fair and candid reasoning is to be accused of bias by both sides; but this little book should shake the complacency of the most complacent unreasoner. We may refuse to argue, we may simply claim to believe. Thus, if we may hardly challenge respect, at least we shall not merit contempt as men who accept a hazardous arbitration with the deliberate intention of repudiating it. To that illustrious Church which Mark Pattison adorned his warning is of special force. An open rupture with science must be her death-warrant. For just as in the onward march of democracy, liberal philosophy and culture must be driven perforce into the trenches of conservatism, so—paradox as it may seem—the Church of England may live to find her most strenuous and powerful supporters in those who, caring nothing for her dogmas, will venerate her as the historic guardian of a reasoned faith and sober practice, and as the effectual—the only—bulwark against the inundation of wrangling sects and low superstitions.

E. PURCELL.

The Brontë Family. With special reference to Patrick Branwell Brontë. By Francis A. Leyland. In 2 vols. (Hurst & Blackett.)

"I THOUGHT," said a friend who saw this book lying upon my table, "that everything had been written about the Brontës that could possibly be written." The possibilities of literary production are, as the much-enduring reviewer is well aware, an unknown quantity; but as regards Brontë biography there has probably been a general opinion that these possibilities were exhausted, and that Miss Robinson, whose charming memoir of Emily Brontë supplemented the previous works of Mrs. Gaskell and Mr. Wemyss Reid, had really said the last word. The general opinion is now proved to be erroneous. Mr. Leyland has a later word still, and as this later word flatly contradicts most of the earlier ones, I fear that the end is not yet.

I should not, perhaps, use the word "fear," for any new information concerning this wonderful family is of real and permanent interest; and we have reason to be grateful to Mr. Leyland, not only for the facts which he has himself contributed, but for any additional facts which may now be brought forward by those whose estimate differs from his own. The nature of his book is accurately described by its title. It deals with the whole Brontë family, and gives much new and interesting information concerning Mr.

and Mrs. Brontë and their six children; but it is mainly important as an attempt to set in a new light the character of Branwell Brontë, who has been treated by all previous writers with an emphatic *consensus* of condemnation. Still, though Branwell is the centre of interest, there is another member of the family who, in Mr. Leyland's opinion, has been treated with marked injustice by the biographers, and a word or two must be said concerning the chapters which treat of the Rev. Patrick Brontë. Mrs. Gaskell, in the first edition of her *Life of Charlotte Brontë*, drew a picture of Charlotte's father so extremely unpleasant that it may fairly be called repulsive; and though, in later editions, the biographer withdrew certain specific charges which she found could not be sustained, a definitely disagreeable impression had been stamped upon the mind of the reading public, and it could not be effaced by the mere silent suppression of this or that libellous anecdote. Substance and apparent credibility have gradually been given to a Brontë legend, the hero of which is an old man, stern, selfish, and tyrannical, an unkind husband, and an unfatherly father, whose fits of rage, in which he was wont to burn or otherwise destroy the clothes of his wife and daughters, seemed, in a man of culture and education, more like exhibitions of madness than of ordinary passion.

If Mr. Leyland had done nothing more, he would, by discrediting this legend, have earned the gratitude of those who would like to think well rather than ill of Charlotte Brontë's father, to whom it is clear that she was ardently attached. The positive statements round which the legend accreted itself were made to Mrs. Gaskell by a person whom she described as "a good old woman," and who was accepted as an authority because she had nursed Mrs. Brontë in her illness. Her goodness, if it existed anywhere save in the biographer's charitable imagination, must have been acquired subsequent to the time of her leaving the Brontë household. Mr. Leyland writes:

"It is known that, whatever good qualities this person may be supposed to have had, her conscientiousness and rectitude, at least, were not of the first order, and she was detected in proceedings which caused Mr. Brontë to dismiss her at once. With the double effect of explaining her dismissal and injuring Mr. Brontë, this person gave an account of his temper and conduct, embellished with the stories which I have quoted from the first edition of the *Life of Charlotte*, to a minister of the place, and it was in this way that Mrs. Gaskell became acquainted with her and them."

Mr. Leyland goes on to give some rebutting evidence which is of more positive value than this destructive criticism, but for which I have not space here. His witness, Nancy Garra, who was the faithful servant of the Brontës during the whole time of their residence at Haworth, and who still survives, gives a version of one of the libellous stories which puts an entirely different complexion upon it; meets the others with a point blank denial; and speaks of Mr. Brontë as a most affectionate husband, an affectionate father, and a kind master, adding, "he was not of a violent temper at all; quite the reverse." If a man be not a hero to an ordinary respectable valet it is not at all improbable

that he will be a scoundrel to a peculating nurse; and Nancy Garra's testimony must be preferred to that of Mrs. Gaskell's "good old woman," especially when supported, as it is, by the emphatic and dignified statement of Mr. Brontë himself, who has never been accused of falsehood, and by the unanimous testimony of all who really knew him.

To the whitewashing of Branwell Brontë Mr. Leyland devotes much more space than to the vindication of his father; but I cannot think that he is here quite so successful in proving his case. In fact, it is not quite clear what his case really is, for he certainly cannot suppose that even the most receptive readers of his plea for the defence can regard Branwell as an admirable, or even as a lovable, character. What he apparently means to prove, and what I think he succeeds in proving, is that Branwell has been the victim of considerable misrepresentation and exaggeration, that he was weak rather than radically vicious, and that much of his conduct at the time of his life when he inflicted the greatest sorrow upon those who loved him was the result of monomania rather than of wickedness. Mr. Leyland, for example, seems to convict Miss Robinson of serious inaccuracies in her account of the manner in which Branwell left Bradford, where, with commendable industry, he had been endeavouring to secure independence as a portrait painter; and other writers have evidently been led into similar errors, which Mr. Leyland has been able to correct by the evidence of competent and credible witnesses. If, however, we ask ourselves "What do all these corrections and re-statements come to?" we can only answer, "Not very much." It may be quite true that Branwell did not leave Bradford in debt, as Miss Robinson says he did; that she has considerably ante-dated the opium-eating; that the story of his attempting to shoot his father is pure fiction; and that a number of other discreditable stories are either fictitious or grossly exaggerated: the fact remains that Branwell even as he is seen in these pages is a very sorry figure. All lovers of literature are, I should think, willing, indeed eager, to extend not merely just dues but generous allowances to anyone bearing the name of Brontë; but when justice and generosity have given all they have to give, their giving avails little to reverse, though in some respects it may serve to modify, the popular verdict. One important modification certainly must be made. Mr. Leyland's revelations leave hardly any reason for doubt that Branwell's extraordinary conduct after his dismissal by the employer, for whose wife the young tutor had conceived a mad passion, was not an outburst of mere commonplace profligacy, but was the symptom of a form of monomania familiar to experts in mental disease; and that, therefore, he could not for the time be regarded as in all respects a responsible person. His fixed delusions as to matters of actual fact, and his curious habit of imparting them in the strictest confidence to every person whom he met, remind one of the episode in the life of Hazlitt recorded in that strange book, the *Liber Amoris*. The cases are not wholly alike. Hazlitt's brain had a resisting power of which Branwell Brontë's alcoholic excesses had wholly or in part deprived him; but there is clear evidence that in both instances the

mind had for the time, and in relation to one subject, entirely lost its balance.

The most unsatisfactory and irritating portion of Mr. Leyland's book is that devoted to the really absurd question as to whether Branwell Brontë was wholly, or in part, the author of *Wuthering Heights*. While thoroughly sympathising with Miss Robinson's treatment of the ridiculous theory that Emily Brontë had won her laurels by the meanest of false pretences, I could not help feeling something like annoyance at the seriousness with which she treated the charge; but of that seriousness Mr. Leyland's chapter is a justification after the fact. I may be doing him injustice, but his handling of the subject strikes me as being somewhat wanting in candour. One receives the impression that he is hinting at a belief which he does not like fully to avow—that, like Macbeth, he is "letting 'I dare not' wait upon 'I would.'"

He will not say that Branwell wrote the book which his sister claimed as her own; but he gives a number of reasons for regarding the hypothesis as tenable, and finally compromises the matter by formulating a theory of joint authorship, against which there is only one thing to be said—that there is not a tittle of tangible evidence to support it. All Mr. Leyland's ingenious parallelisms are of no value so long as we are confronted by the obvious fact that he cannot produce a line written by Branwell Brontë exhibiting the faintest adumbration of the genius which shines through every page of *Wuthering Heights*. It may, indeed, be urged that even Emily Brontë's own verse gives no adequate intimation of her extraordinary power in the region of prose fiction, but there is no impassable gap between *Wuthering Heights* and the *Poems by Ellis Bell*, such as there certainly is between the great romance and the generally thin, characterless verse of Branwell. I say "generally" because it may frankly be admitted that some few of the poems printed by Mr. Leyland have beauty of thought and an occasional fine felicity of diction; but there is nothing in any of them—in the best of them—to render possible the thought that their writer had it in him to tell the tale of Heathcliff and Catherine. In so far, therefore, as Mr. Leyland has attempted to raise Branwell Brontë to a vacant pinnacle and confer upon him an honour which assuredly is not his due, his book is a failure; but it is so full of interesting information that as a contribution to literary biography it may be considered a real success.

JAMES ASHCROFT NOBLE.

The Chersonese with the Gilding Off. By Emily Innes. In 2 vols. (Bentley.)

THE titles of books, like language as defined by Talleyrand, being now mostly intended to conceal their contents, it becomes necessary to explain that the curious title of this work simply means unpleasant experiences in the Malay Peninsula, or something to that effect. Miss Bird, who not long ago paid an agreeable visit to that region, travelling "under official auspices and entertained at the houses of officials everywhere," called her delightful book, *The Golden Chersonese*. So Mrs. Innes, who as wife of one of those officials "saw the Malayan country under totally different cir-

cumstances," calls her almost equally interesting work *The Chersonese with the Gilding Off*. The one sees everything from the sunny side; the other lives behind the scenes, and discovers by sad experience that there is a very dark side to the picture. Miss Bird's passing glimpses of bright prospects, gorgeous tropical vegetation and sparkling waters, beheld under the most favourable conditions, are vividly reflected in her brilliant descriptions, presenting the sharpest contrast to the somewhat gloomy, but by no means dull, pages of Mrs. Innes, who "vegetates amid these scenes for years without books, friends, or wholesome food, and with mosquitoes." Both accounts, faithfully embodying personal impressions from different standpoints, are thus complementary rather than contradictory of each other, for both are literally true in the highest sense of the term.

It was in the spring of 1876 that Mr. James Innes, late of Sarawak, was induced to accept the post of collector and magistrate at Langat, in the native state of Selangor. Although at that time the residence of Sultan Abdul Samat, nominal ruler of the country, Langat was not an inviting place even for a couple accustomed to the amenities of Sarawak. There was not much to choose between Dyak and Malay; while the mud-swamp, with one mud-path a quarter of a mile long between two padi-fields, and an attap or house of palm leaves on piles, of which Langat mainly consisted, could scarcely be regarded as an improvement on their Borneo experiences. Yet here they managed to hold out for three years till the completion of a new bungalow more pleasantly situated on a well-wooded height in the neighbourhood.

But there was worse to endure than the rude natives, the fever-stricken mangrove swamps, the "tiger" mosquitoes, and the real tigers which kept nightly vigils within a stone's throw of the compound. There was a British resident, also recently appointed and stationed at Klang (Kalang) as the official superior, but in all other senses immeasurably the inferior, of Mr. Innes. With admirable forbearance the author never once mentions the name of this person, and here it will suffice to say that his six years' tenure of office (1876-82) did not quite succeed in ruining British interests and civilising influences in Selangor. Even during her passing visit in 1879 Miss Bird could not fail to notice that all was not right; and such expressions as "a fussy government," affairs "somewhat mixed," "the people harassed by a vexatious and uncertain system of fees and taxes," "the various departments in a state of huggemugger," seem to drop unconsciously from her graphic pen. But what she did not know or suspect was his ungenerous treatment of Mr. Innes, an able and efficient servant of the Crown, placed at his mercy by the monstrous regulations of the Colonial Government, and at last driven from the service by the insufferable "insolence of office."

Thanks to this deplorable issue, Mrs. Innes is here able to speak her mind freely; and the reader cannot but admire the singular reserve with which she places on record a tale of official meanness and petty persecution happily rare in the annals of the colonial department. Let one incident suffice. Soon after removing to his new bungalow on

the hill, the collector receives a visit from the resident with his daughter, who are overheard dilating on the charms of the place, and

"consulting how it would be advisable to apportion the rooms. He was just coming to the room where we were sitting, with the words 'And this, you know, will do beautifully for the nursery,' on his lips, when he perceived us. Knowing we must have heard what he had said, he explained that he was thinking what an excellent house it would be for his son-in-law, should he be the person sent to do Mr. Innes's duty for him during his leave."

In fact, as it presently appeared, the bungalow was wanted for this son-in-law; and Mr. Innes was soon after "promoted," under official pressure, to Durian Sabatang, in Perak, a station which had the reputation of being "the white man's grave."

But, it will be asked, how could these things be? Was there no remedy, no means of protesting, or reporting matters to the authorities? None, absolutely none! All such complaints, by the departmental regulations, had to be forwarded *through the resident*, who returned any obnoxious passages scored in red, with an order to re-copy the report, omitting them. Then, if the expunged part was made the subject of an independent communication to the governor, the only result was a reprimand for neglect of official routine, so that

"it seemed impossible, so long as Mr. Innes remained in the service, to get a hearing. Afterwards, when he had resigned, and met some of the Singapore officials face to face, they tried to console him by telling him that on every occasion, while he had received a reprimand for form's sake, his immediate superior had received a much severer one, because it was evident that he was in the wrong."

Among the disorders that signaled this resident's administration was the so-called "Pangkor Murder" of 1878, when Mrs. Innes, at the time on a visit at Captain Lloyd's, narrowly escaped with her life. The account she gives of her share in the horrible drama is extremely graphic, and suggests a curious psychological problem. Roused by the noise in the next room, and peeping over the partition,

"I saw a sight which at once convinced me that all was not right. In the doorway opposite me, which I knew was Mrs. Lloyd's room, were two Chinamen dashing open a box with hatchets. Yet I was far from guessing that my host had been murdered a few minutes before, and that he and his wife were now lying, weltering in their blood, just inside that doorway! I cried out loudly, 'Captain Lloyd! Mrs. Lloyd! What is all this? What is the matter?' There was, of course, no answer; but one of the Chinamen looked up, saw me, and, with his hatchet still in his hand, made for the door of my bedroom. I darted down and held the door, in the insane hope of keeping him out; but, alas! it was only made, like the rest of the house, of palm-leaves lashed together with rattan, and in another moment the Chinaman had forced it open and stood before me. Even then I did not understand that he intended to murder me. . . . The Chinaman marched gravely and stolidly into the middle of the room, I retreating before him, and saying in Malay, 'What are you doing here? What do you want? Get out!' He made no answer, but held the hatchet up in front of him, grasping the handle with both hands, and, without the smallest change of

expression in his countenance, *made cuts, as I then thought ineffectually, at my head*. I raised my hand to parry the blows, and, *as I felt absolutely no pain, fancied I had succeeded*; but I must have fallen down insensible, as I remember nothing more. The doctor, on afterwards examining my head, found three trifling cuts and one severe one upon it, the latter about four inches long and tolerably deep."

Her tardiness in grasping the idea that she was being murdered she attributes to the demeanour of the Chinaman, calm, composed, phlegmatic, advancing without the smallest emotion or flurry, exactly as if going about his ordinary business. But the description of the scene seems rather to suggest a state of hypnotism, brought about by extreme tension of the nervous system, and no doubt aided by the impassive demeanour of the Chinaman. She receives the cuts aimed at her head as in a trance, resists almost unconsciously, fancies the blows miss their mark, and feels no pain. In this same ecstatic state she appears to have been taken by the gang to another room and thrust under the bed, where she afterwards recovered her senses, without being able to remember how she got there.

Mrs. Innes had much trouble with her Malay servants, whom she nevertheless preferred to the Chinese or Klings (Indians), as more handy, faithful and devoted. Yet one of them, "disorderly Suleh," was three months learning to handle a knife properly; mixed claret and porter instead of beer and porter to make "half-and-half"; handed round the sawdust instead of the ice packed in it; and made many other blunders worthy of Handy Andy himself. Others acquired a certain proficiency in English, and after assimilating a number of words to the Malay phonetic system came to regard them as native terms, and insisted on their being pronounced as such. So when their mistress used such words as *glass, bottle, strips, blacking*, she would be respectfully informed that the proper pronunciation was *gullass, botole, essateripe, berleckin*. Otherwise the English language was held rather in contempt, there being an impression that it was spoken

"Only by about a dozen people in the world, even counting the Governor of Singapore and his followers, while wherever you go—to the north, south, east or west, or beyond the wind—you find Malay spoken."

Our civilisation also was scarcely so fully appreciated as many people fancy in their insular sense of superiority. In a discussion about the respective merits of fingers and forks a native raja argued against the use of forks and spoons as being

"such a dirty practice. We say to ourselves 'What do I know of the history of this fork? it has been in a hundred, perhaps a thousand, mouths; perhaps even in the mouth of my worst enemy.' This thought is very repulsive to us." "But," said I, "the fork is thoroughly cleaned, or ought to be, every time it is used, first with soap and water, then with plate-powder." "Ought to be; quite so; but how do you know that your servant does not shirk his work? If you have a lazy servant you are liable to eat with a fork that has not been thoroughly cleaned; whereas, I know that my fingers are clean, for I wash them myself before eating. They are quite as clean as the cleanest fork, and they have two great advantages over it—one, that they have never been in anyone's mouth but my own, and another that they are

never lost, or mislaid or stolen! They are always at hand when one wants them."

It will be seen that under depressing circumstances Mrs. Innes can write vivaciously, and that her pages are far from being so "dull and gloomy" as she fancies.

A. H. KEANE.

Fifty Years of Concessions to Ireland. By R. Barry O'Brien. Vol. II. (Sampson Low.)

Those who have read Mr. O'Brien's former volume will not need to be reminded of the able and singularly lucid way in which, beginning with 1831 and ending with the break up of Lord Melbourne's ministry, he proved that every act of simple justice to Ireland, whether in regard to education, or parliamentary reform, or tithes, is rightly styled a concession, extorted, as it has been, by the *ultima ratio* of violence, and marred in each case by conditions which hampered its action and sometimes made it almost valueless. In this second volume he takes the same course with the same result, so that the unprejudiced reader closes the book convinced that even the Land Act of 1881 was a concession to the Land League, and was dogged by the ugly spectre of the Coercion Bill.

Landlordism is in Ireland an "upas tree" of old growth. Mr. O'Brien, indeed, traces it no farther back than the breach of the treaty of Limerick, whereby was secured the division of the people into two hostile nations; but we see in Spenser that the break up by English violence of the old clan system, and the transformation into a lord after the English type of the chief with his vaguely limited rights, tended to make him despotic. He acquired the new law-guarded powers of the landlord while retaining the traditional privileges of the chief. These powers were held in abeyance during the desperate struggle for the ownership of the soil which ended in 1690. Then, when Dopping, Bishop of Meath, advised the Lords Justices to "keep no faith with a people so perfidious as the Irish," and, accordingly, the clause which secured the Catholics in their estates was dropped out of the treaty in spite of William's express orders for its re-insertion, landlordism began to have free scope. So long, indeed, as William lived those who had maimed the treaty were checked by the knowledge that he was an honourable man; but Queen Anne's Penal Laws, "which," says Lecky, "abolished Catholic landlords and reduced Catholic tenants to a position of abject and hopeless serfdom," gave these treaty-breakers their opportunity. Then began the reign of rack-rents, middlemen, process-servers, and the like, not because the Irish landlord differed in grain from landlords elsewhere, but because instead of being, like the landlord in England, an individual dealing with individuals, he was one of that caste through which England elected to govern the country, and which she was, therefore, bound to protect. Hence one capital difference between Ireland and Scotland. The Scottish chief, too, became a landlord, shamefully ignoring his clansmen's rights; but he was still a Scot, one with his people in sentiment, in traditions; and, therefore, "Sutherland evictions" have till lately been the exception. After 1690, the Irish

landlord was (as one of his champions described him) "alien in blood, religion, and language," and he had the whole power of England to help him in enforcing the monstrous land-law which, in what Mr. O'Brien well calls the Colonial Parliament, he and his fellows had enacted. This should never be forgotten by those who are so ready to lay all the blame on "Irish landlords." In seven cases out of nine they were Englishmen by blood as well as sympathy, and they were placed by the English government in an inevitably demoralising position. They did not grow, they were made. Under such conditions, a race of angels would have degenerated into men "caring no more," says Mr. Froude, "for the souls and bodies of those committed to their charge than the drivers of a West Indian plantation for their herds of slaves." But, rampant as the Penal Laws made him, the landlord had not it all his own way. Tories and Rapparees (those waifs of broken families) were succeeded by Whiteboys, Oak-boys, Hearts of Steel (Ulster Presbyterians, evicted because Lord Donegal, wanting to raise £100,000, let their holdings to Belfast merchants), Rightboys who aimed at equalising tithe, Ribbonmen, &c., of whom sober-minded Arthur Young remarks, "the real cause of the disease lay in the gentlemen, not in the wretches they doomed to the gallows." Of these secret societies, each handed on to the next the torch of discord, the British government acquiescing in a state of things the most monstrous the civilised world has ever seen, because it was so hampered with "no Popery" as to be afraid to concede a grain of justice to its Catholic subjects.

The British Government acquiesced, but the British traveller never failed to see where the fault lay. Whether it is Arthur Young, going from landlord to landlord a century ago, or Wakefield in 1808 interviewing the Whiteboys round Tarbert, or Lord John Manners, or Mr. Nassau Senior, or Mr. Bright—in all there is a strange consensus. It is an old story, but the object of retelling it is twofold—first, to vindicate Ireland from the charge of ingratitude. The complaint is: "We're so anxious to give her justice, but we get no thanks for it." Thanks! Tardy justice, grudgingly conceded, has small right to them. And if the English people did at last come to desire to do Ireland justice, successive English ministries acted as if they wished to stave off each instalment so long as they could, and to make it as unpleasant as possible. The Encumbered Estates Act was "a boon to landlords only"; the motion for a Commission on the Irish Church went hand-in-hand with the inevitable Habeas Corpus Suspension Continuance Act; the vaunted Land Act of 1870 at once increased the number of evictions by nearly a third. Of the educational measures Maurice O'Connell's dictum is true: "The things we want are refused; the things we don't want are forced upon us." So much for Irish ingratitude. The other object is to give cumulative proof that force is no remedy. "Coerce, coerce," was dinned into Thomas Drummond's ears by coercion-reared officials; but that true statesman, a sketch of whose too brief career fittingly closes Mr. O'Brien's book, steadily refused to call for or to accept extraordinary powers. He so combated inertness and imbe-

cility, and so vitalised the ordinary machinery of the executive, that a police inspector who at first had cried out "impossible" pretty soon confessed: "If the business is well followed up, and for a sufficient time, the mischief will presently be put a stop to." Drummond putting down faction fights by sheer force of character is grander even than the same man telling landlords that property has duties as well as rights, at a time when an agent boasted that by suddenly raising the rents he had "done a good day's work—put £10,000 into his master's pocket." Throughout Drummond was a model administrator (look at his delicious correspondence with Col. Verner); and if he failed to wholly quell Ribbonism it was partly because he had not time, mainly because Lord Melbourne was thwarted in his attempts to support by proper remedial legislation his Under-Secretary's efforts.

Enough to call attention to a remarkable and timely book, which ought to be studied as a whole by those to whom Irish history is still a riddle. One thing will strike even the most casual reader—how often the Irish peasant has fought in the van of progress. Commons' enclosures were, till yesterday, sullenly acquiesced in by the English; the Whiteboys stood out against them. The tenants' co-partnership in the land, all advanced men are formulating it, *ad nauseam*, with all sorts of variations and back-looks at primitive usage; to the Irish peasant it has always been an heirloom for which he struggled and killed and died. Land nationalisation, peasant proprietorship, put it how you will, it is all summed up in his ineradicable belief that he had right on his side in resisting an eviction which meant utter ruin. Now that English reformers are going in for these very things, one cannot help feeling that the lines:

"Tritt du, mein Volk, der Völker vor;
Lass du dein Herzblut rinnen,"

are far truer of Ireland than of Germany.

The peasant has won at last; but at what a cost? The country impoverished; capital frightened away by insecurity bred of atrocious misrule; the spy-system made part and parcel of the national life; the nation split into two hostile camps secret societies ("agricultural trades' unions"); counterbalancing the still abnormally state-supported power of the landlord caste. What an indictment against "the English in Ireland"! And now that we say: "Leave us to ourselves; we can't possibly do worse than you have done for us," Mr. Chamberlain, the Champion of the Right, comes forward with the argument of brute force, and cries: "Four millions must give way to thirty," i.e., if England wills it, the old coercion system shall go on as merrily as ever. Happily there are other millions who say "No" to this astounding threat; and their powerful voice makes one almost bless the famine of 1846, the death-pangs of which were in some sort the birth throes of that greater Ireland which Mr. Chamberlain forgot to take into his account.

I have not striven to be non-political: it is hopeless in reviewing a work of this kind. At any rate, I have kept clear of party politics, with which, indeed, Ireland has, and can have, nothing whatsoever to do. And now a word on the more welcome sub-

ject of ethnology. Mr. O'Brien, like so many more, assumes that the exceptional lawlessness of Tipperary is due to the stronger admixture of English blood. It may well be so. In Denver City, when Hepworth Dixon knew it, and in many another "frontier of civilisation," the Englishman has proved that he is only law-abiding so long as the law is really a *force majeure*. In Ireland the Somersetshire men of the Barony of Forth were the staunchest in '98. But let no one think that the Tipperary peasant is necessarily "Cromwellian" because he has grey eyes and light-brown hair. The heroes and heroines of Gaelic legend had hair "as yellow as the flower of the St. John's wort"; and the Romans, who were not blind, said *aurea caesaries ollis*, and contrasted them with the Basque-like Silures. The notion that "the Celt" is a short dark man may go with the belief in rock-basins, and ovates, and Cuthites.

HENRY STUART FAGAN.

NEW NOVELS.

White Heather. By William Black. (Macmillan.)

What is a Girl to do? By H. Sutherland Edwards. (Chapman & Hall.)

In his own Hand. By Mrs. G. Linnaeus Banks. (White.)

The Mystery of Allan Grate. By Isabella F. Mayo. (Bentley.)

Social Silhouettes. By Edgar Fawcett. (Trübner.)

Cassandra's Casket. By Mrs. Marshall. (Nisbet.)

Damages. By Vincent M. Holt. (Maxwell.)

SOME hard things have been said of late by an inconstant and ungrateful public, ever seeking after some new thing, of Mr. Black's books. But there is one thing that, whatever any great or small public may say, no critic will ever say—and that is that Mr. Black is unreadable. His writing and his narrative both slip along with a practised ease which certainly no other living novelist excels, if any other equals it. You may get out of the boat at the end and depart with as little excitement as the ordinary passenger who pays his two-pence and steps ashore at a ferry; but if you possess a judicial mind you cannot deny that the ferryman is a deacon in his craft. We do not particularly admire the principal distinguishing point of *White Heather*—the profusion of verse from the supposed hand of its hero with which its pages are studded. Not that Mr. Black is a bad verse-writer. On the contrary, his perfect familiarity with the always charming ballad common-places of Scotch literature, and a certain knack of smooth stanza-stringing with which the upper powers have gifted him, make his verses not much less pleasant reading than his prose. But there is little distinction about them, and as part of a novel they have an air of inappropriateness. The wicked critic catches himself wondering whether Mr. Black wrote the novel to bring in the verses, or the verses to eke out the novel; and though this is a base and brutal thought, it somehow or other occupies the mind. Still there is not the slightest ill-

feeling on the critic's part when Mr. Black and the critic part company. For his scenery Mr. Black has left the great and wide sea, and has gone to *eau douce*: though Highland lochs and rivers are not so very douce either, if a bilingual play on words may be permitted. His Highland heroine is the same kind of creature, rather too bright and good, &c., as his Highland heroines frequently have been. His American heroine is decidedly better than the average of American heroines as represented both by their countrymen and others, and may be pronounced a really attractive womankind. Her father is not too much of a bore, despite his velvet and gold slippers, and his Republican principles, and there is considerable *verve* in the buxom Glasgow widow, Kate Menzies. We have expressed but qualified respect for the verses of Mr. Ronald Strang, gamekeeper and genius. But there is a certain sense (Irish we believe) in which the words "a great poet" might be applied to him. And we should be glad to be more sure of the happiness of Miss Meenie Douglas, the ethereal young woman above referred to, after she has been assigned as daily food to such a human nature. Of the book as a whole it can only be said that Mr. Black has done worse work, and better.

Mr. Sutherland Edwards's book is a sufficiently lively and varied account of the fortunes of a self-helpful young lady who is cheated of her inheritance by a wicked French uncle, and mixes in London literary, musical, and dramatic society of a semi-Bohemian character without any unpleasant results on her morals and manners. Perhaps Mr. Edwards's sketches may do a little, a very little, harm by keeping up in the public mind the extremely unfounded idea that Bohemianism is more or less inseparable from literature and art. But the said sketches are amusing enough, never offend seriously against good taste, and, as initiated persons will easily recognise, are not unfrequently founded on fact without the founding on fact being of an objectionably personal kind. The latter part of the book deals with the war of 1870, and is written with spirit and knowledge, while Mr. Sutherland Edwards has also brought in by no means tediously or *mal apropos* his acquaintance with Russian things. Of all persons concerned Mr. Edwards writes amiably, except, perhaps, of writers of leading articles. Now, it is doubtless easier to write leading articles than to write, say, *Paradise Lost* or *Vanity Fair*; yet, we think, we have heard of practised men of letters who could not manage a leading article.

Readers of Mrs. Linnaeus Banks's stories of life in the midland and northern counties know that she is fond of taking a historic personage of the minor kind, or, at any rate, a historical incident, and working it up into a novel. It is scarcely necessary here to pass any elaborate judgment on the wisdom of this proceeding. It at any rate secures that there shall be no lack of matter, though, perhaps, it does not exactly facilitate the dealing with that matter in a way wholly agreeable to the laws of art. The hero of *In his own Hand* is William Hutton, of Birmingham, a man well enough known, though, perhaps, not to the present generation. Hutton's career, with the Priestley riots for an inspiring finish to the

third volume, has given the author a subject by no means ill suited to her peculiar tastes and talents, so that the book may very fairly rank by the side of *The Manchester Man*. The scenes and characters are sufficiently varied, and if there is not a great deal of plot there is plenty of action.

The Mystery of Allan Grate is a title which a pedantic critic might describe as possessing the quality of polarity. That is to say, it is likely to attract some readers and repel others for exactly the same reason. We confess to being rather of the latter class. The fictitious persons who leave their hats in pools and themselves (or something that, being in the condition of Sir Thomas in the *Ingoldsby Legends*, is capable of being mistaken for them) somewhere near the hats do not greatly arride us. On the other hand there are many people who love them dearly, especially when, as here, there is a ghostly knock at the door thrown into the bargain and several trifles of the same kind. Moreover, it is fair to say that the book is very far from being all rawhead-and-bloodybones, and that there is plenty of commonplace dialogue and action—action and dialogue, indeed, so commonplace as to remind the reader strikingly of Mrs. Henry Wood. Now, Mrs. Henry Wood, like other distinguished persons, is a popular writer; and we do not know why Miss or Mrs. Mayo should not be one likewise. Her opening chapter is better written than the greater part of her book, and this probably shows that she can do better than *Allan Grate* if she tries.

To say that Mr. Edgar Fawcett's prose is a great deal better than his verse may seem a rather ungracious compliment; but as a faithful record of critical impression it cannot be avoided. Even in Mr. Fawcett's prose there is occasionally a good deal of the *style tourmenté*. When one finds that he cannot tell us how a rather good-looking woman had an ugly nose without saying "her nose in its abandonment of symmetry should perhaps not be recorded of her so to speak: there seems even a sort of ungallantry in mentioning it, since the rest of her face is a sort of wistful feminine apology for her having it at all," there is very little to be done except to ejaculate "Lord! Lord!" or "Papae!" or "Aballiboozabanganorribo!" or anything else that comes handiest, and pass on. The matter, too, as distinguished from the form of the book (which is a series of sketches of New York society, supposed to be furnished by a certain Mark Manhattan), has the drawback of most social sketches, the drawback of being too evidently conventional. As a matter of fact (though it is a fact that only social satirists of the calibre of Thackeray or Fielding recognise) men and women do not fall into the hard-and-fast types that the minor social satirist loves. Still Mr. Fawcett has some amusing sketches, and one or two decidedly clever ones. "An Anglomaniac with Brains" (Mr. Fawcett, by the way, appears himself to have Anglomaniacs rather on the brain), "The Young Man who imagines," and "The Gentleman who Lived Too Long," have considerable merit; nor is "The Lady who is Sensational," from which the above singular sentence is extracted, altogether unhappy. It is odd, though, that

while it contains a sneer at the late Mr. Trollope, at least one side, the less amiable one, of the heroine's character, is either a reminiscence of, or a very curious coincidence with, the great Madalina Demolines.

Cassandra's Casket is not an American book, which it is well to mention, because of the sense which American fancy for fine language has put on the word "casket." Cassandra is not a corpse, nor is she like Madame Sarah Bernhardt. Her casket is only a little silver box which she finds on the sea-shore, and she herself is only a school girl who gets into trouble with a prim half-sister. The book, like all Mrs. Marshall's books, is well principled and well intentioned in every way, though we doubt the wisdom of always, as somebody once irreverently phrased it, "chucking in a death-bed" to impress the youthful mind. The story is told with sufficient liveliness, and the school scenes and conversations are natural. There are illustrations which are, we think, nearly the worst we ever saw.

The hero of Mr. Holt's *Damages* remarks at the end to his papa, whom he has (the word is fortunately not actionable as applied to a fictitious character) swindled out of sixty thousand pounds by a collusive action for breach of promise, with the intention of then marrying the young woman and living comfortably thereon, "It may be a mean trick, father." Lord Mainoaks's candour is exemplary, and we shall only say that it would have been better if he had substituted "is" for "may be." So it appears the modern version runs: "Though father and mither and a' should go mad, Yet ye'll just allow me to bring an action against ye, and they'll have to pay the damages, and then, without the trouble of whistling, I'll come to ye, my lad." We are only very foolish fond old critics; but we like the ancient ways better.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

"**ENGLISH WORTHIES.**"—*Charles Darwin.* By Grant Allen. (Longmans.) No other man could have been found so well qualified as Mr. Grant Allen for the task of writing such a thoroughly popular account of Darwin's life and achievement as might appropriately find a place between the "fancy boards" of a volume of the "English Worthies" series. In any other hands of equal scientific competence the book on Darwin would have been—very excusably, most people would have thought—the least entertaining of the series; but Mr. Lang will be a fortunate editor indeed, if many of his contributors succeed in rivalling the charm of style and unfailing popular interest of the opening volume. The manner in which the biographical portion of the work has been written has a peculiar appropriateness to the subject. The author observes in his preface that he regards Darwin's life "mainly as a study in the interaction of organism and environment"; and in this spirit he has tried to show how Darwin's greatness was the result, on the one hand, of the qualities he had inherited from both lines of his ancestry, and, on the other hand, of the intellectual movements that were at work in "the world into which he was born." After tracing the course of the studies by which Darwin was conducted to his epoch-making discovery, and sketching the history of the approximations which had been made by earlier enquirers to an anticipation of the Darwinian theory, Mr. Allen proceeds to

give an account of the principles set forth in *The Origin of Species*. The author says in a footnote that those who are acquainted with the original work may safely "skip" the pages which he has devoted to this subject. We cannot second the advice: the reader who follows it will certainly miss some very charming writing, and possibly a useful lesson in the art of popular scientific exposition. Although Mr. Allen himself does not seem very sanguine on the point, we do not think that many readers of these pages will fail to obtain a clear idea as to the true nature and bearings of the much-misunderstood doctrine of "Natural Selection." The story of the gradual acceptance of this doctrine by the scientific world is then briefly told, and an outline is given of Darwin's later scientific labours. The volume concludes with two chapters, headed "Darwin's Place in the Evolutionary Movement," and "The Net Result." These closing chapters are certainly not calculated to reassure those persons who are terrified by the thought of the destructive inferences that may be drawn from the Darwinian principles. In fact, the author has rather needlessly gone out of his way to excite adverse prejudice by apparently making Darwinism responsible for consequences which (as he would doubtless admit) it has not been proved necessarily to involve. To Mr. Allen's ardent faith the victory of Darwin carries with it the victory of Mr. Herbert Spencer, and he cannot forego the opportunity of singing his song of triumph—a little more loudly than is consistent with good taste. Only very fervid partisans, we fancy, will quite approve of the tone of such sentences as the following:

"Dogmatic Comte was forthwith left to the little band of his devoted adherents; shadowy Hegel was relegated with a bow to the cool shades of the common rooms of Oxford; Buckle was exploded like an inflated wind-bag; even Mill himself"—

but we need not complete the quotation. Once or twice in the book Mr. Allen indulges in scoffing remarks about scientific "solidity" and "plodding," which seem by no means appropriate in a biography of the most thorough and patient of all students of nature; and he utters no wholesome word of caution against the socialism which plays at inventing explanations of facts which it has never taken the trouble to master. Such a caution would have been eminently in place, because speculation of this kind nowadays generally calls itself Darwinian—very naturally, for in rash and unskilled hands the keys on the Darwinian bunch can always be made to revolve beautifully in the lock, whether they draw the bolt or not. It is quite plain that Mr. Allen's instinctive sympathies are rather with the brilliant theorists than with the class of cautious investigators to which Darwin belonged; but it is all the more to his credit that this bias has not betrayed him into any defective appreciation of Darwin's personal greatness or of the importance of his scientific work. If the book is not faultless, it is at any rate a performance of which the author has a right to be proud, and which sets up a standard of excellence that the writers of the succeeding volumes of the series will not find it easy to surpass.

The River Column: a Narrative of the Advance of the River Column of the Nile Expeditionary Force, and its Return down the Rapids. By Maj.-Gen. Henry Brackenbury. With Maps by Major the Hon. F. L. L. Colborne. (Blackwood.) Events move so rapidly in contemporary history, that even the lengthy sub-title of this book may fail to bring to the remembrance of some the military achievement which it records. And yet scarcely nine months have passed since we were all anxiously reading telegrams from Korti, Merawi, Hamdab, Birti, and Kirbekan. The "river column"

was technically a "flying column," i.e., a force cut off from its base of supplies, whose duty it was to reach Berber by the river, and there cooperate with the "desert column" from Metemneh. The fall of Khartum and the death of Gordon caused its recall, when it had broken the opposition of the enemy by the brilliant action at Kirbekan, and had overcome the still more formidable obstacles presented by the rapids of the Nile. In one sense, therefore, its operations were fruitless; and at no time did it run such serious hazard as did the desert column. The measure of success which it attained is of special military interest as representing the furthest development of Lord Wolseley's much debated plan of conveying his army up the Nile in boats to Khartum. That this plan was feasible there can be no doubt; but it seems no less clear that it involved a longer duration of time than was compatible with the supreme object of the expedition—the rescue of Gordon. Gen. Brackenbury, who succeeded to the command of the river column after the death of Gen. Earle at Kirbekan, has here written a plain narrative, almost in diary form, of the incidents of the expedition, which no other single man could describe with equal knowledge. Though he has purposely avoided the usual efforts after fine writing, we undertake to say that his book will be read as widely and as carefully as it deserves. For by force of its subject it is an entirely novel contribution to military history. To the lay reader, its chief interest consists in its explanation of the supreme importance of transport, commissariat, and other staff arrangements. The military student will be not less attracted by the excellent maps of a practically unknown region, which we owe to a grandson of the first Lord Seaton. May we take the liberty of suggesting to the author a motto out of *Hypatia*?

"Why do you not sit down, man," quoth Cyril. "Pardon me," said the monk, with a piteous gesture; "of sitting as of all carnal pleasure, cometh satiety at the last."

New Guinea: an Account of the Establishment of the British Protectorate on the Southern Shores of New Guinea. By Charles Lyne, Special Correspondent of the *Sydney Morning Herald*. (Sampson Low.) The circumstances of Commodore Erskine's recent cruise were detailed in the newspapers at the time. It is a slight exaggeration to say that "a great deal of New Guinea and its people was seen," even by the Special Correspondent; but the protection of the men-of-war and the guidance of the missionaries afforded exceptional opportunities, and Mr. Lyne made good use of them. All the chief places along the limited extent of coast embraced by the Protectorate were visited, and its object carefully explained to the people, the visit of the ships being rendered more welcome by the fact that they took back with them from Queensland a number of natives who had been kidnapped or decoyed under false pretences by the "Labour" vessels. The success of the expedition, however, was due almost entirely to the beneficent influence established in the last few years by such men as Messrs. Lawes and Chalmers, the missionaries, the civilising effect of whose work has been very remarkable. Those who are interested in the subject will not, naturally, expect to learn from an account of this flying visit anything about the country or the people which has not already been recorded by writers like Mr. Chalmers or Mr. Wyatt Gill; but Mr. Lyne is a practised writer, and relates all that he saw very pleasantly and intelligently. He is, for instance, especially careful in describing the peculiarities of ornaments, and of personal appearance, which distinguish one tribe from another. The unfavourable view which he takes of the capabilities of the country for settlement is worthy of notice.

SIR EDMUND DU CANE's volume on *The Punishment and Prevention of Crime*, the latest addition to the "English Citizen" series (Macmillan), contains much pleasant reading for those who believe in the gradual improvement of the human race. The number of criminals is diminishing every year, while the population is increasing even more markedly. The unfortunates or the wilfuls who are under restraint offend less and less each year against the prison regulations, and the cost of maintaining the vast establishments which are required for the housing of the criminals is being rigidly reduced, much to the satisfaction of the taxpayer. Eight years ago the annual expenditure on prisons amounted to £496,000, and they were then under local authority; now, when all the fancied evils of State management have been introduced, the cost has dwindled steadily to £381,000. Two of the chapters of Sir Edmund du Cane's book have interested us greatly. One of them contains a description of prison life at the present time, and the details of the trades which the inmates are taught; the other supplies some information, necessarily limited, on the register of criminals which is distributed annually to the prisons all over the kingdom, and on the societies which have been formed for ameliorating the condition of the prison inmates when they are once more restored to liberty. The records of the past seem to have been freely opened to the Surveyor-General of Prisons, and much antiquarian information is incorporated into the pages of his treatise. It would be difficult to cap the story (p. 57) of the felon who was confined in a prison where Bible reading formed his chief occupation, but was unfortunately liberated from his cell and interrupted in his studies when he had only "got as far as Ephesians," whereupon he stole a sheep to go back once more into restraint and learn the rest of the Testament. Sir Edmund du Cane seems inclined to hesitate in accepting the statement that some contractors who had purchased convicts at Bristol for transportation to the Colonies landed their property at Lundy Island, but we think that it is corroborated in Mr. Chanter's description of Lundy. Both amusement and instruction may be acquired from this guide to prison life.

Les Chers Voisins. Par Max O'Rell. (Paris: Calmann Lévy.) This latest volume will in some degree repair the injury which the author did to his own reputation by the silly and vulgar performance called *Les Filles de John Bull*. Perhaps the new book is not quite equal to *John Bull et son Ile*; it is rather carelessly put together, and contains some commonplace padding—the worst specimen being a ridiculous chapter on sea-sickness. But on the whole it is decidedly worth reading. The writer's professed object is the promotion of mutual respect and goodwill between Frenchmen and Englishmen, and he therefore dwells chiefly on the more attractive features of national character; but the oddities and weaknesses of both nations come in for a good deal of clever and good-humoured satire. Some amusing illustrations are given of the reciprocal mimicry of each other's fashions and language by the French and the English. In Parisian middle-class society, it seems, it has become usual for cards of invitation to contain the singular intimation: "On fiveocloquera à neuf heures." The chapter headed "Pharisiens et Crocodiles" very aptly hits off the contrast between the forms which hypocrisy assumes in England and in France—between the English cant of piety and morality, and the French cant of high-flown sentiment. The remarks on the difference in usage between the words "British" and "English" is neatly put.

"On dit: 'Histoire de la littérature anglaise': on ne dira pas: 'Histoire de la littérature bri-

tannique.' Il y a dans le mot *British*, soit quelque chose de goguenard, soit quelque chose de chauvin. On dira fort bien *British Soldiers*, *British Army*. La dame qui a rempli les journaux de ses hauts cris sur les quelques nudités qui ont été exposées au Salon anglais de l'année, n'est connue que sous le nom de *British Matron*. . . . L'*English Public*, c'est la bonne société: le *British Public*, c'est le commun des mortels du Royaume-Uni."

The author adds that "British" is to "English" much as "Gaulois" is to "Français"—an observation which may be true *mutatis mutandis*, though the saving clause means a great deal. Speaking of the political power of epigrammatic phrases in France, and of the many cases in which rashly uttered sayings like Ollivier's *cœur léger* and Jules Favre's "not an inch of our territory, not a stone of our fortresses," have destroyed the political career of their authors, "Max O'Rell" remarks: "L'histoire de France pourrait s'écrire entre des guillemets." Of the English public-school system, of which he has had much experience, the author is an unqualified admirer, contrasting it with the system of the French *lycées* entirely to the disadvantage of the latter. It rather surprises us to be told that England (now, as the reader is reminded, the country of Newton and Harvey) has long ceased to occupy herself in scientific discovery or invention. We are not of those Englishmen who believe that "France never invented anything but the guillotine"; but a list of the greatest discoverers and inventors of the last thirty years would show more Englishmen than Frenchmen, though, so far as industrial inventors are concerned, there would probably be more Americans than either. Altogether, though the book is not calculated for more than an ephemeral popularity, it very fairly deserves the kind of success at which it aims.

NOTES AND NEWS.

PROF. MAX MÜLLER is now at Florence, where he intends to remain for the next three weeks.

PROF. SAYCE purposes to leave England on Nov. 27. He goes direct to Egypt via Brindisi, and hopes to spend some time with Mr. Flinders Petrie and Mr. Ernest Gardner on the site of Naukratis.

THE *Oxford Magazine* prints a list of Oxford men who are candidates at the general election. The total is no less than 193, of whom 108 are Liberals and 85 Conservatives. It is interesting to find that, of those who took first-class honours, 64 are Liberals and 25 Conservatives; of those who took first-class honours in the final classical school, 25 are Liberals and 5 Conservatives; and of those who took double first classes, all are Liberals. The same proportion seems to hold good at Cambridge, where, out of the candidates who took first classes, 25 are Liberals and 12 Conservatives.

As much interest has been aroused by the announcement of Mr. James E. Doyle's *Official Baronage of England*, we may state that, though the large paper copies of the work are now ready for subscribers, the issue of the ordinary edition will probably be postponed for a few weeks. Mr. James E. Doyle, we may add, is the nephew of the famous "H. B." of *Punch*, and the writer of the text of *Brown, Jones and Robinson*.

A NEW poem, entitled *Eros and Psyche*, by Mr. Robert Bridges, the author of *Prometheus the Firegiver*, is in the press, and will be published by Messrs. Bell & Sons before Christmas.

WE are glad to hear that the sale of the new collected edition of Mr. George Meredith's novels far exceeds the estimate of his publishers.

THE "Murray Indemnity Fund," set on foot by the Philological Society to repay to the editor of its New English Dictionary the £400 borrowed, and £150 advanced by him to bring out part i. of the dictionary, has accomplished its main objects. The £400 and the £150 have been repaid, the heavy costs of printing and postage in raising the sums have been discharged, and a balance of about £30 is in hand, which will be placed at Dr. Murray's disposal. The fund will be kept open till the middle of December, so that contributions may still be paid to the treasurer, Mr. B. Dawson, the Mount, Hampstead, N.W.

THE Wyclif Quincentenary Committee, having failed to raise funds for the erection of a statue to Wyclif, has handed over its balance of sixteen guineas to the Wyclif Society for the publication of Wyclif's Latin works, and thus ended its labours.

THE Wyclif Society has two books just ready for issue—Prof. Loerth's edition of Wyclif's *De Ecclesia*, whose last sheet is in proof; and Mr. Alfred Pollard's edition of the *Dialogues*, whose text is printed, and whose introduction, notes, and index are nearly finished.

LAST year we remember the American papers boasted that their magazines were entirely supplied with native fiction. For the coming year *Harper's* will have a novel by Mr. R. D. Blackmore, entitled "Springhaven," dealing with rural England at the time of the Napoleonic wars; and *Lippincott's*, a novel by Mr. W. E. Norris, entitled "Hope," in addition to a series of stories, sketches, &c., by some dozen English authors, published simultaneously with their appearance in England.

NOT a few readers of the ACADEMY will be interested to know that the grave of the late R. H. Horne, at Margate, has been marked by a tombstone, erected by an old friend, which contains inscriptions stating who he was and what he wrote, with a quotation from *Orion*.

MR. W. E. FORSTER will contribute a preface to a work which Messrs. Cassell & Co. are about to publish, entitled *The Citizen Reader*. This book, which is written for the use of the upper standards of elementary schools, will contain an account, in simple and popular language, of the legislative and administrative arrangements of our country, and give clear instructions in regard to the rights, duties, and privileges of English citizens. It will be fully illustrated with wood engravings, and will contain two coloured plates.

A NEW edition of Mr. R. L. Stevenson's *Treasure Island* will be published next week, the special feature of which is numerous illustrations, now appearing for the first time.

The Last Meeting, the new story which Mr. T. Fisher Unwin will publish next week, is by Mr. Brander Matthews, who has sought to unite the delicate character-drawing and brilliant dialogue of the new American school of fiction with an elaborate plot, turning on a mysterious disappearance.

MR. T. FISHER UNWIN will also publish a new book by Dr. Charles Grindrod, entitled *Tales in the Speech-House*. It consists of a series of short stories by a party of snow-bound travellers in the Forest of Dean, the stories being linked together by the personality of the tellers. Illustrations of some of the chief points of the forest scenery accompany the work.

MESSRS. BLACKWOOD announce *The Shire Highlands*, by Mr. John Buchanan, planter at Zomba, in East Central Africa.

The Wit and Humour of Life is the title of a volume by Dr. Charles Stanford, which will be published shortly by Mr. Elliot Stock.

Sylvan Winter, Mr. Francis George Heath's new book, which will be published immediately by Messrs. Kegan Paul, Trench & Co., will include seventy illustrations by Mr. Frederick Golden Short.

MESSRS. T. & T. CLARK, of Edinburgh, have acquired the sole right of translation of the late Prof. J. A. Dorner's *System of Christian Ethics*.

MESSRS. BURNS & OATES will publish shortly a popular edition of Mr. J. N. Murphy's *Chair of Peter*, with more than 100 pages of new matter and the statistics brought down to the present year.

MR. JAMES BONAR's *Malthus and his Work* has had the distinction of being reprinted in Messrs. Harper's "Handy Series," which is almost entirely confined to popular works of fiction.

MR. J. THEODORE BENT will contribute another article on "Diaries of Early Travel" to the next number of the *Antiquary*. For the same journal Mr. Edward Solly has written a bibliographical study of Steele's *Christian Hero*, and there will also be given a transcript of a contemporary MS. account of the rebellion of the Earl of Essex. Miss Toulmin Smith will write an article on the House of Lords.

DURING next week, beginning on Monday, and during the whole of the week following, Messrs. Sotheby will sell by auction the collection of rare books and MSS. formed by Mr. Ellis, the well-known dealer of New Bond Street, who is retiring from business in consequence of ill-health. Many of the books have recently appeared in the auction mart, but there are also a number of privately printed works such as do not often come up for sale. Among the MSS. is the interesting little volume of Blake's poems and drawings which belonged to the late D. G. Rossetti. The total number of lots is 3201.

THE number of men in residence this term at Durham University is 186, of whom 123 are attending the arts course and 63 the theological. Only a few years ago the proportion between the two faculties was exactly the reverse.

The annual general meeting of the Society of Cymmrodorion, for the encouragement of literature, science, and art in Wales, will be held on Thursday next, November 19, at the Holborn Restaurant, at 6 p.m., followed by the annual dinner at the same place at 6 p.m. Prof. F. T. Roberts is announced to take the chair at the meeting, and the Earl of Powis at the dinner.

WE have received some interesting statistics concerning the Wandsworth Public Library, the only free library (we believe) in South London, which was opened by the Lord Mayor on October 1. The total number of books is 6840, of which 1774 are in the reference department. During five weeks, the number of readers' tickets issued has been 1368, the total population of Wandsworth at the census of 1881 having been just 28,000; the number of volumes issued has been 6881; of the total number issued for home reading, 3839, or 68 per cent. come under the class of fiction, and 9 per cent. under the class of juvenile books. Though this proportion looks large, we are assured that it is somewhat lower than the average in other free libraries. The catalogue has been compiled by Mr. Alfred Cotgreave, well-known to all "librariologists." His aim has been to anticipate the wants of readers by abundance of cross-references. Most books are entered three times over—under their author's name, their title, and their subject; while important articles in serial works (e.g., those in the *Encyclopædia Britannica*) are also entered under their subjects.

MR. F. T. ELWORTHY, and his ten fellow committee-men, have put forth a very interesting Report on a collection of Fresh Devonshire Verbal Provincialisms. Besides many excellent old dialect words, racy new ones are being coined. For instance, a mechanic's wife, whose sick child the chemist had failed to cure, brought him to the doctor, saying, "I chemis't him a few days first, sir, but finding him no better, I've brought him to you." Another word illustrates Shakspeare's "mobled queene" (Folio 2), our "mob-cap" &c.: "If I did'n [couldn't] do it better than that blind-mobbed [blind-folded, muffled] I'd have my arms cut off," said a farmer about some bad work.

COUNT UGO BALZANI has contributed to the Società romana di storia patria a paper upon a curious contemporary account of Joan of Arc. It is an appendix to the chronicle known as the *Breviarium Historiale*, of which many MSS. exist, and which was printed at Poitiers as early as 1479. So far as is known all the copies stop short at the year 1428, with the exception of the one lately discovered at Rome. This is written by the chronicler himself, and is carried one year later, to the end of 1429. It records the deliverance of Orleans, but not the oath of the king at Rheims. No new facts are given; but the account is important as showing the interest felt in the exploits of the Maiden. Of the chronicler nothing is known beyond that he was a Frenchman, living at Rome in the court of Pope Martin V.

THE "Fondation Pestalozzi" in Canton Vaud is asking for the subscription of 25,000 francs for the erection of a bronze statue of the great educator on the scene of his labours at Yverdon from 1805 to 1825.

WITH reference to Prof. Ray Lankester's letter, the writer of the article on "The Proposed Teaching University of London," in the ACADEMY of October 31, wishes to state that he had been informed by one of the professors of University College that about two-thirds of his colleagues were present at the meeting which expressed dissatisfaction with the scheme of Lord Justice Fry's committee. The convocation of London University, on November 3, passed, by a large majority, a vote adverse to the same scheme.

THERE has been sent to us a contrivance called the "Academy Easel," which deserves the notice of all who use pen or pencil. It may be described as a folding slab of wood, hollowed out to contain writing or drawing materials. When not in use, it is carried over the shoulder by a strap, like an opera glass. It is brought into use by being opened out, when it forms a sort of portable desk, still sustained by the strap, and ingeniously fitted to the right hip. Its great merits are its simplicity and excellence of workmanship. Its mechanism can be understood at once, and can hardly get out of order. For newspaper correspondents and reporters, who must furnish copy under all conditions; for staff officers in the field; for artists on tour; for such persons as are accustomed to write in a railway carriage, or in an easy chair—in short, wherever a table is not at hand, we should say that it would prove invaluable. The inventor of the "Academy Easel" is Mr. E. H. Bramley, himself, we understand, a reporter of long standing. His agents for sale are the North of England School Furnishing Company, 121 Newgate Street, E.C.

FRENCH JOTTINGS.

Two new works by M. Renan are announced for immediate publication: the one is a philosophical play, in five acts, entitled *Le Prêtre de Nemi*, the other is a translation of *The Song of Songs*, with etchings by MM. Boilvin and Hédouin.

M. PAUL BOURGET will publish shortly a continuation of his *Psychologie contemporaine*, containing essays upon Goncourt, Alexandre Dumas fils, Leconte de Lisle, Tourgueneff, &c.

M. ZOLA's forthcoming work, entitled *L'Œuvre*, will deal with the world of artists and studios.

THE next volume in the series of "Chefs-d'œuvre du roman contemporain" will be George Sand's *Mauprat*, with ten etchings by Toussaint after J. Le Blant.

THE bureau of the Académie française, as constituted for the present quarter, consists of M. Cherbuliez as director and M. Duruy as chancellor.

TOURISTS through France will miss a familiar object at Dijon. The beautiful curved spire of the Cathedral of St. Bénigne has been removed, with very great damage to the appearance of the church. This step has been taken in consequence of danger to the building. It was feared that the spire, being so much bent, might fall and crush in the roof.

A STATUE is about to be erected at Nantes to a citizen who well deserves the honour. Guépin, of Nantes, was not only a charming and learned writer, he was a leader of democratic opinion, an active political propagandist, and last, but not least, a distinguished oculist. A Bas-Breton by birth, this many-sided, largely-gifted man possessed the geniality of a Gascon, combined with the tenacious convictions of the Breton character. No man was ever more beloved, and none was ever more devoted to the cause of the poor and the unhappy. His contributions to the celebrated *Dictionnaire de Bretagne* of Ogee were important, and his *Histoire de Nantes* is still invaluable. His *opus magnum*, *La Philosophie du XIX^{me} Siècle*, published in 1854, shows much independent thought and leaning towards advanced theories, especially with regard to education and the position of women. He also wrote many works on the eye, its diseases and their treatment. The statue is to be erected partly at the cost of the state, senators, deputies, and above all, the inhabitants of Nantes and of the Loire Inférieure aiding in the work. Nantes has already named one of her streets after her illustrious townsman, and a monument has been erected to his memory in the cemetery by penny contributions of working men.

As an example of the interest now taken by thoughtful Frenchwomen in the questions of the day, we cite the following works by Madame Laboulaiz (Paris: Lafitte): *Considérations sur l'amélioration du sort moral de l'ouvrier*, and *Causeries d'un ancien ouvrier avec ses jeunes camarades*. This lady goes upon the lines of not writing down to the capacities of the unlettered. She has found, and her experience is considerable, that the French workman can appreciate good language as well as good thought. Her writings show deep sympathy with the *ouvrier* as a class. Yet we are perpetually talking of class antipathies in France!

MAGAZINES AND REVIEWS.

The *Expositor* for November contains two valuable extracts from Mommsen's fifth volume on the reference of the Apocalypse to Nero, and on the "Itala"; a continuation of Messrs. Jennings and Lowe's lively criticisms on the Revised Version, and of Prof. Warfield's Messianic Psalms of the New Testament; M. Godet's article on 2 Corinthians, and Dr. Maclaren's on Colossians, Baron Moncrieff on Pascal, Dr. Cheyne on Kalisch, and "Brevia."

THE *Theologisch Tijdschrift* gives the conclusion of an excellent paper on the *Didachè* by Dr. Meyboom, complaining *inter alia* of the unrestrained wilfulness of critics; and an article

by Dr. Scheffer (whose name is new to us in this department) against the theory that Joel is an apocalyptic writer of 400 B.C.

In the *Revista Contemporanea* for October, Alvarez Sereix recounts the labours of the Geographical and Statistical Institute of Spain. Besides more purely scientific results, the topographical surveys are of the highest importance to the government. In six provinces more than two million hectares were found beyond those in the assessment, only two-thirds of the actual surface having paid taxes. Such a fact shows that the charges of corrupt administration made by Gonzalez Janer, in the same number, are not exaggerated. One remedy suggested by the latter is competition for public offices by open examination. Dionisio Chaulis, in "Cosas de Madrid," tells what the practical jokes of the city were in the days of his youth. Mariano Amador writes a highly coloured narrative of the first siege of Zaragoza. Becerro de Bengoa narrates in descriptive verse some "Excursiones Artísticas," and Solar Arqués concludes his popular description of the Farthest East.

THE *Boletín* of the Real Academia de la Historia for October is occupied almost wholly with ecclesiastical matters. Fernandez Duro establishes the date (1524) of the institution of the Patriarchate of the Indies, and gives a list of the patriarchs. Padre F. Fita prints some inedited Papal Bulls of *sac.* XII., which mention the Church of the Atocha in Madrid.

ORIGINAL VERSE.

THE HIGHLAND WIDOW'S LAMENT.

WHY' w' roamin' I sit in the gloamin',
I sit on my ain door-stane,
The flocks i' the fauld nestle close fra' the cauld,
I sit an' I sigh here, my lane.

The bent trees are groanin', the sad wind is
moanin',
The shadow creeps over the hill,
The burn as it flows tells the tale of its woes,
But I as the shadow am still.

The road at its turnin' my dim eye discernin',
I mark where he cam wi' the kye,
Whan the day's wark was done at the set o' the sun
In the season for ever forbye.

Fond hope that deceived me, cauld death that
bereaved me,
My gudeman he left me sae young,
That, old an' forlorn, he might hold me in scorn,
Should I take his dear name on my tongue.

Still, I oft by my gleamin' lone hearth fall a-
dreamin',
And think of that season of auld,
Of a love was sae near, of a love was sae dear,
It has gared every ither seem cauld.

Should the grave in undoin' once bring me
renewin',
More bonny for sairly-tryed truth,
I wad dare then to name you, my Willie, an' claim
you,
Nae longer sae fashed by your youth.

EMILY PFEIFFER.

CORRESPONDENCE.

SHAKSPERE'S "WONDROUS STRANGE SNOW."

3 St. George's Square, N.W.: Oct. 28, 1885.

Theseus, when reading and commenting on Philostrate's "briefs" of the sports which he might see on his wedding-eve, thus speaks of the play by Bottom's company:

"A tedious briefs Scene of young *Piramus* and his love *Thisby*: very tragical mirth. Merry and tragical? Tedious and briefs? That is, hot Ice and wondrous strange Snow. How shall we find the concord of this discord."

This "wondrous strange Snow" has puzzled the critics. Chancing this afternoon on a passage in one of Shakspeare's great authorities, Holinshed, in which "an artificial kind of snow, all strange, marvellous," is mentioned, I think the passage worth quoting. The chronicler says of "Albertus de Lasco, palatine of Siradia in Poland..." (on his visit to Oxford, A.D. 1583),

"he personally was present with his traine in the hall [of Christchurch], first at the plaieng of a pleasant comedie intituled *Rivales*; then at the setting out of a verie statelie tragedie named *Dido*,

wherein the queenes banket (with *Eneas* narration of the destruction of *Troie*) was liuelle described in a marchpaine patterne: there was also a goodlie sight of hunters with full crie of a kennell of hounds, *Mercurie* and *Iris* descending and ascending from and to an high place, the tempest wherein it hailed small confects, rained rosewater, and snow an artificiall kind of snow, all strange, marvellous, and abundant" (Holinshed's *Chronicle*, vol. iii., p. 1355, col. 1, l. 64, &c).

F. J. FURNIVALL.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.

London: Nov. 9, 1885.

The following few passages, with translations, are offered as a contribution towards the right understanding of a certain order of Irish locutions which we meet occasionally in the text of the Brehon laws, and very often indeed in the great mass of romances that has come down to us from the earliest times. I allude to the use of the word *dia* (day) in conjunction with one or other of the remaining nouns of time—e.g., *laithé, laa, lá* (day), *nómad* (period of nine days), *mí* (month), *bliadain* (year).

1. In *The Battle of Cenn Abrait* (B. of Leinster, p. 288), Lugaid says, when challenging Eogan: "allasa i cind mis dotéis co comairsem i cind abrait"—i.e., "this day at a month's end come that we may meet in Cenn Abrait." The story continues: "ba fir són immorro. condreacat dia mis cach cona shochoiraithe..."—i.e., "and this came true, they encounter that day month, each with his gathering..."

2. In the *Contention of the Two Swineherds* (Eg. 1782), one of the most extraordinary of the tales prefatory to the *Táin Bó Cuailnge*: "bidta (or bitta? in any case, leg. *biadta*) dono la Fiachu on lo sin gus indla alaili dia bliadna ocus is Fiachnu feissin no tegid cona chuid do gach dia"—i.e., "now it [the reptile] was fed by Fiachna to that day year exactly, and Fiachna himself it was that used to take it its allowance each day." (The passage is too idiomatic to admit of a word for word English translation.)

3. In the account of Conachar mac Nessa (B. L. 106): "adcoibrastarside in mnái .i. Ness do mnái dó. natho ol sisi condomrab a log .i. rige mbliadna dom mac... tania didiu cend na ree hisin dia bliadna"—i.e., "he [Fergus] coveted the woman Ness to wife for himself. Nay, said she, until I have value for it, viz., that my son shall reign for a year... then that period's end arrived that day year."

4. In *The Wooing of Emer by Cuchulainn* (Harl. 5280): "aspet iarom inti Aiffe ba torruch ocus mac nosberad si. cuirfesai diu dia secht mbliadan co hErinn hea ol si ocus faaibee ainm ndou"—i.e., "afterwards Aiffe said that she was with child, and that it would be a son she should bear. Then I will send him to Ireland, said she, that day seven years, and do thou [Cuchulainn] leave a name for him [in the meantime]." (In this MS. *diu* = *didiu*, *passim*).

5. In the same tale: "dombeur an ingen dit for Ruad ocus iofad fein a tinnorai. Nato ol Cuchulainn. tiocend dia bliadna imm deugaidse co hErinn mad ail ndi ocus fogepai messe ann"—i.e., "I will give thee the girl, said Ruad, and will myself pay her portion. Nay, said Cuchulainn, [but] let her come to Ireland after me this day year if she please, and she will find me there." Cuchulainn and his charioteer Laegh then return to Ireland, and the story proceeds thus: "then came a year's end. Laegh, said Cuchulainn, it was for this day that we trusted Ruad's daughter, only we know not the precise place."

6. In *The Battle of Moytura* (Harl. 5280): "scaraid iarom as in comairlie go comairidis die teoru mbliadan," i.e., "then they broke up from that council [upon the understanding] that they should meet that day three years."

And, again, a little further on, "dia bliadhnae," i.e., "that day year."

7. In *The Contentions of the Swineherds* (Eg. 1782): "tet muccaidh Buidb fa thusaid dana dia dochumsum dia bliadhna cona mucuib coeulbeis for mesrugud hi tirib Connacht," i.e., "so Bodhb's swineherd [in his turn] goes northward to visit him [the other swineherd] that day year, taking with him his lean swine to mast-feed upon the lands of Connacht." The version in the B. of L., which in other respects offers some variations, also reads *dia bliadhna*.

8. In the imperfect version of *The Wooing of Emer* preserved in L. U., Conachar sends nine messengers into every province of Ireland to seek out a fitting mate for Cuchulainn: "tanacatar uli na techta dia bliadhna ocus ní fuáratar ingin ba toga la coiculaínn do tochmaro" (p. 122), i.e., "the messengers all returned that day year, but they had not found a young girl whom Cuchulainn might choose to woo."

9. In a tale of King David and a poor man (Eg. 92), the latter draws near to the hide upon which are displayed the riches which the king was, according to his wont at stated seasons, distributing to the poor. He does not consider the suppliant to be a proper object, and rejects his prayer for alms. The text runs on: "donic didiu dia bliadain . ní damsa a David ol se . . . is tu fil ann ol David . . . bidat marb dia tis doridisi. dia bliadain conacca chuire doridisi in fer cetna. tanacais ol David. tanac didiu ol se. nosbeird amach dia crochad ol David," i.e., "now he came to him [David] that day year [again]. Give me somewhat, O David, said he . . . it is you that are there, said David . . . you shall die if you come again. that day year he [David] saw the same man approaching him again. You have come, said David. I have so, quoth he. Take him out to be hanged, said David."

10. In *The Wooing of Emer* (Harl. 5280): "orala iarom a muindteras dia in tress laei," and (Eg. 92) "orala iarom a muindteras dia an tres loi," i.e., "then, when their friendly intercourse was established, on the third day . . ."

11. In the same: "dombeurt iarom indingen comairli ndou Coiculaínn dia in tres laei," i.e., "then the daughter [of Scuthach] gave Cuchulainn counsel on the third day." (Here Eg. 92 omits the article, and reads "dia tres lai," cf. "tres laa iarum ria samuin"—*Echtra Nero*, Eg. 1782—i.e., on the third day before All-hallowtide.)

12. In *Táin Bó Dartada* (Eg. 1782): "doroideth o Ailill ocus o Meidb condigsaid dianacallum. Raguso dianagallum eim ol Eochaid dia samno," i.e., "a message was sent from Ailill and from Meidb that he should come and confer with them. I will go to confer with them, indeed, said Eochaid, on Allhallow's day."

13. There are several good examples of this usage in the Tripartite Life of St. Patrick. Of these it will suffice to quote one, viz., "dia laithi bratha," i.e., "at the day of judgment."

14. In *Echtra Nero* (Eg. 1,782): "No tege Nero co cuail connuid don dun gach dia. Atohid ass in dun cach dia ar a chiunn dall ocus baecoch for a muin," i.e., "Nero used to take a bundle of faggots to the fort every day. He used every day to see already coming out of the fort a blind man with a cripple on his back" = every day he found a blind man, &c. (This is doubtless the *Echtra Nera* said by O'Curry to be lost, cf. his *MS. Materials*).

It will be observed that, with the exception of No. 9, the examples adduced show us *dia* with a dependent genitive. Dr. Windisch is perfectly right when he says of this word, "*wird besonders in gewissen Verbindungen gebraucht*," and his translations of *dia mis* and *dia teora nmad* are correct so far as this, that what is true of the universal is true of the particular. It would seem to be established, by Nos. 1 and 2 especially, that *dia*, when used

with any noun of time not synonymous with itself, strictly defines and limits the period in question. In conjunction with its synonyms *laithie*, *laa*, *lá* (day), it emphasises, as in Nos. 10, 11, 13. From the nature of the case it can do no more.

A full discussion of this word, both as to usage and declension, would lead me too far afield. Zeuss is vague and meagre on the subject. But it would be a pity to neglect an opportunity of studying Prof. Zimmer's method when he meets with an obstacle which his knowledge of Irish idiom does not enable him to surmount. It may be called the method of elimination. He simply abolishes the word or words which he does not understand, as good as calls the old scribes fools and rogues all round, and then quotes from some mysterious volume which he seems to have always at his elbow, and calls the *Codex Archetypus*. This codex he understands thoroughly. At p. 35 of the learned professor's *Keltische Studien* (part i.) he discusses a passage in *Scél Muice mhic Dáthó*, as printed by Dr. Windisch in his *Irische Texte*. In this passage occurs the abbreviation *diabl*. Dr. Windisch lengthens it out *dia bliadain* (cf. no. 9 supra), and Prof. Zimmer deals with it as thus (I translate): "In the *Codex Archetypus* . . . there stood *diall* or *diall*, with a mark of abbreviation; the abbreviating stroke was drawn somewhat far through the last *l*, so that the writer of [codex] y fancied he read *diabl*. We must resolve it *diailill*, i.e., to *Ailill* (King of Connacht. . .)."

This is the outcome of an octavo page in Prof. Zimmer's airiest style. Suffice it for the moment to say that the passage needs no emendation. That the scribes and Dr. Windisch are right, and the *Codex Archetypus* nowhere. What would be said of the English scholarship of a foreigner who could write some such critique as this: "Dr. N. N. finds in his MS. *this y* Julius Caesar invaded Britain; and, not knowing what to make of it, prints at a venture *this year Julius*, &c. In the *Codex Archetypus* there stood *h* or *h^e*; the light being bad, the scribe capsize the *h* and made *y* of it. Die Stelle lautet nun: *this here Julius Caesar invaded Britain*." STANDISH H. O'GRADY.

"CATCHPOLL" IN OLD ENGLISH.

Berlin, S. W., Kleinbeerenstr. 7: Nov. 2, 1885.

Prof. Kluge, in a valuable paper in the *Anglia*, viii. 450, drawing attention to *kecewol* in the Addit. MS. 32,246, instead of *hæcewol* in Junius's copy of the lost Rubens MS. (cf. Anglo-Saxon and Old-English vocabularies, edd. Wright and Wülker, 111, 9 "*Exactor hæcewol*"), adds: "Auch so bleibt mir das schwierige Wort unverständlich." But, one of the most frequent errors of Old-English scribes being the interchange of *w* and *p*, I think we must read *kecepol* = Middle-English *cachepol*, Modern-English *catchpoll*, Old-French *chacipol*, Low-Latin *cacepollus*, &c. It is interesting to see that Ducange, explaining *cacepollus*, quotes "*exactor hæcewol*"; cf. also Schmid, *Gesetze der Angelsachsen*, p. 219, and E. Müller, *Etymologisches Wörterbuch*, s.v. "catchpoll."

JULIUS ZUPITZA.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 16, 8 p.m. Royal Academy: Demonstration, "The Foot and Leg," by Prof. J. Marshall.

8 p.m. Aristotelian: "Kant's Metaphysic of Morals," by the Rev. E. P. Scrymgeour.

8.30 p.m. Geographical: Opening Address by the President, the Marquis of Lorne; "Exploration-Survey for a Railway Connection between India, Siam, and China," by Mr. Holt S. Hallett.

TUESDAY, Nov. 17, 7.45 p.m. Statistical: Opening Address by the President, Sir Rawson W. Rawson, on "International Statistics, illustrated by Vital Statistics of Europe and of some of the United States of America."

8 p.m. Civil Engineers: "The Theory of the Indicator, and Errors in Indicator-Diagrams," by Prof. Osborne Reynolds; "Experiment on the Steam Engine Indicator," by Mr. A. W. Brightmore.

8.30 p.m. Zoological: "Notes on the Visceral Anatomy of Birds, Part I, the so-called Omentum," by Mr. F. E. Beddard; "The Origin of the Urinary Bladder," by Mr. John Bland Sutton; "The Rodent Genus *Heterocephalus*," by Mr. Oldfield Thomas.

WEDNESDAY, Nov. 18, 8 p.m. Royal Academy: Demonstration, "The Knee and Thigh," by Prof. J. Marshall.

8 p.m. Society of Arts: Opening Address by the Chairman of Council, Sir Frederick Abel.

8 p.m. Geological: "Results of recent Researches in some Bone-caves in North Wales (Cae Gwyn and Fynnon Beuno)," by Dr. Henry Hicks; "Description of the Cranium of a new Species of *Eriacus* from the Upper Miocene of Oeningen," and "The Occurrence of the Crocodilian Genus *Tomistoma* in the Miocene of the Maltese Islands," by Mr. R. Lydekker; "Old Sea beaches at Teignmouth, Devon," by Mr. G. Wareing Ormerod.

THURSDAY, Nov. 19, 6 p.m. Gymnrodorion: Annual General Meeting.

8 p.m. Linnean: "The Perignathic Girdle of the Echinoides," by Prof. P. M. Duncan; "Anatomy of *Sphaerotherium*," by Mr. Geo. O. Bourne; "Immature Stages of *Tegocranus caepheniformis*," by Mr. A. D. Michael.

8 p.m. Chemical: "Aluminium Acetate, III. Aluminium Orthoacetate and its Products of Decomposition by Heat," by Dr. Gladstone and Mr. Tribe; "The Constitution of Hydrated and Double Salts," by Mr. S. U. Pickering; "Some Vanadium Compounds," by Mr. J. T. Brierley.

FRIDAY, Nov. 20, 7.30 p.m. Civil Engineers: Students' Meeting: "Recent Researches in Friction," by Mr. J. Goodman.

8 p.m. Royal Academy: Demonstration, "The Trunk," I., by Prof. J. Marshall.

8 p.m. Philological: "Biblical Aramaic, with special reference to Hebrew," by the Rev. Dr. Th. Stenhouse; "The Oxford Edition of *The Battle of Ventry*," by Mr. Standish H. O'Grady.

SCIENCE.

Anecdota Oxoniensia. "Classical Series," Vol. I., Part 5. By R. Ellis. (Clarendon Press.)

MR. ELLIS has given us a valuable and interesting volume in his recent contribution to the series of "*Anecdota Oxoniensia*." First in order, and also in importance, comes a collation of the MS. of Ovid in the British Museum (Harleian MS. 2,610), which Mr. Ellis discovered and brought under the notice of scholars two years ago in the *Journal of Philology* (vol. xii.); then follow twenty-four Latin epigrams from Bodleian or other MSS.; and a series of Latin glosses on Apollinaris Sidonius from one of the Digby MSS. in the Bodleian.

The Harleian MS. of Ovid (containing *Mot.* i., ii., and iii., 1-622) is declared to belong to the end of the tenth century and to be of German origin. It is written with remarkable accuracy in matters orthographical; thus we find *inposuit*, *imperfectus*, &c., with considerable regularity—a very good test. Among the new readings which it presents may be mentioned *ipse* (i. 664) for *inde*, which is awkward, and may have been caused by the *unde* of the next line:

"ipse procul montis sublime cacumen
Occupat, unde sedens partes speculatur in omnes."

In ii. 691 our MS. reads *tenuit* for *timuit*; and here, too, seems decidedly to have the advantage:

"Hunc tenuit blandaque manu seduxit. . ."

In i. 727 we have a curious reading: *circuit* for *terrui*, of which Mr. Ellis says, "ex hoc uno elucet praestantia codicis." The passage describes the persecution of Io by Argus:

"profugam per totum terruit orbem."

Substituting *circuit*, Mr. Ellis apparently translates "dogged her steps over the whole world." Ovid no doubt is rather fond of the

verb *circuso* (cf. *Met.* vii. 258, *flagrantes circui aras*); but I do not find that he uses the form *circui* as a perfect, and, besides, the reading is too obscure to command the general assent of editors. I prefer to regard it as an instance of careless reading on the part of the scribe.

A better test of the excellence of our MS. may be had in ii. 128 and 765, where it preserves the correct readings *volentes* and *belli* for *volantes* and *bello*, which are found even in the Codex Marcianus, a MS. formerly in the library of the monastery of St. Mark at Florence, now in the Laurentian.

Other passages worthy of note are ii. 183 (story of Phaeton), where we have

"Jam genus agnosci [i.e., agnosci] piget et valuisse rogando"

for

"Jam cognosce [or Jamque agnosce] genus piget," &c.

Here the passive seems undoubtedly better than the active; at the same time, the tense of *agnosci* and the change of subject at *valuisse* "incipit scrupulum." In ii. 476, our MS. reads *adversam* for *aversam* (Codex Marcianus); either *adversam* or *aversa* (Burmah, Korn) should be read. In ii. 642, it is not impossible that the form *toto* (dative) should be retained, with our MS. and the large majority of others, for *toti* (cf. "Propertius Septem urbs alta iugis, toto quae praesidet orbi"). In i. 719 our MS. has *repem* for *rupem* ("maculat praeruptam sanguine rupem"). Mr. Ellis considers this to point to an original *sedem* or *sepem*. But neither *sedem* nor *sepem* appears the right word. Is not *repem* a mere error? Again, in i. 327, *ambo*, which occurs twice for *ambos*, is hardly supported by the usage of Ovid. But, on the whole, there can be no doubt that Mr. Ellis has brought to the light a MS. of which future editors of Ovid will have to take account. Is it too much to hope that he himself will some day give us an edition of the *Metamorphoses*, and will prove the interpreter for Ovid—"dignus ipsius saeculo, dignus nostro"—that he desiderates for Sidonius?

Of the unedited epigrams collected by Mr. Ellis, some are pretty and some are very obscure. As a specimen of the former may be quoted No. XIX.:

"Lapsus in aeternum fatali lege soporem,
Officiu linquis taedia longa tui.
Ante tibi requiem nox importuna negabat:
Nunc dormire simul nocte dieque potes:"

No. II. is, to the present writer, dark:

"Tela, Cupido, tene, quoniam non ille sed illa
Sustinet esse meus vel mea, tela tene.
Tela tene. quid amo quod amat non reape? Sed
huius
Quod fugit, huius ero? non ero. Tela tene.
Tela tene, quia non teneo quod amo tenuisse.
An dixi, quod amo? non amo. Tela tene.
Tela tene, uel tange parem. ne feceris, imo
Dico tibi, sine, uel tange, Cupido, parem."

The Digby glosses on the Epistles of Sidonius are a valuable contribution to the study of a little known, but highly interesting author. The "glossator" quotes not only from Terence, Cicero, Vergil, Horace, Ovid, Lucan, Persius, Juvenal, Statius, Claudian, Jerome, Isidore, but also from Petronius, Macrobius, and Symmachus. The passages from the latter author are of special interest. The "glossator," as Mr. Ellis remarks, shows

great knowledge of Justinian law. Many of the glosses contain Middle English and Old French words. These must be later additions belonging, probably, to the time when the MS. was written (twelfth century). Such are "*cirrus* loc" (i.e., lock of hair), "*poplites* hamme," "*fuligo* soth" (i.e., soot). It is very curious how words of Romance origin and Old French spelling are interspersed side by side with English; e.g., "*tessoras* dez" (dice), "*glutinium* glu" (glue), "*angor* destresse" (distress), "*domicilia* .i. *cilicia* domus quod *romance* est seuerunde" (eaves).

Among the glosses of an important nature may be mentioned "*exoccupatus* magna occupatione." The writer declares *exoccupatus* to be a single word (*una dictio*); the sense which he ascribes to it does not appear in any dictionary. Du Cange gives as its equivalent *ab occupationibus liber, otiosus*. We should like to hear Prof. Nettleship's opinion about this word. In etymology the glosses in this volume are, of course, pre-scientific. We read with amusement, "Moys enim aqua. Unde Moyses [Moses] dicitur aquaticus, quia de [sic] aqua fuit sublatus"; or again, "trabea, quasi ultra alias vestes beans et pacificans"; "caseus, quasi carens sero." Sometimes the philology of the writer is more happy, as in "obscenus, a caeno quod est lutum."

E. A. SONNENSCHIEIN.

A Comparative Dictionary of the Bihāri Language. By A. F. R. Hoernle and G. A. Grierson. (Trübner.)

THIS work, though as yet only in the initial stage, promises to be a valuable addition to our knowledge of the modern vernaculars of India. In the year 1880, Mr. Hoernle brought out a grammar of the Gaudian languages, with special reference to the Eastern dialect, one of the great branches of the so-called Hindi tongue. When it is remembered that Hindi, in all its varieties, covers the whole area of country between the Panjāb and Lower Bengal, and from the Himalayas to the Vindhya range, and that it is the mother tongue of seventy millions of people, it is not surprising that there should be a considerable number of dialects in so wide a space, and that as these impinge on cognate languages, such as Panjābi, Bangālī, and Oriyā in Bengal, or on Gujarāti and Marāthi in Bombay, there should be a closer assimilation to these tongues than to Hindi as spoken in the Doāb of the North-west Provinces. It may be added that Hindi, as we find it in Southern India, has become so impregnated with the construction of the Dravidian languages as to be hardly intelligible at first to a person accustomed to the purer tongues spoken in the North.

To our authors' work is attached a map showing the various stages of the Prākṛit from the earliest times down to the present day, from which it appears that the modern Gaudian may be classified as follows—viz., Western Gaudian, including Sindhi, Panjābi, Hindi and Gujarāti; Eastern Gaudian, including Bihāri, Bangālī, and Oriyā; Southern Gaudian or Marāthi; and Northern Gaudian or Naipālī. A closer investigation will probably show the existence of numerous dialects in these divisions, which are confessedly only

approximate; while in selecting the Bihāri language as the basis of their dictionary the authors specify no less than four dialects in this single division, viz., Baiswāri, Bhojpūri, Magadhi, and Maithili. It is the vernacular of an extensive tract lying between Lakhnau (Lucknow) and Bhāgalpur, west and east, and between Bettia and Bilāspur, north and south, and comprising, therefore, many of the most fertile and densely-populated districts of the North-west Provinces and Lower Bengal. Many of the celebrated capitals of ancient and modern India are in this tract, while the flower of the old Sepoy army were Bais and Bhojpūri Rājputs. It is evident, therefore, that our authors have done wisely in bestowing their attention on a vernacular which is of singular interest, while the close investigation which they have made of its literature has enabled them to lay before the public the very interesting and erudite work under notice. A list is given of all the native productions, printed or in MS., which form their authorities; and from this one may understand what a rich, but hitherto almost unknown, mine of literary wealth awaits those who will take the trouble to explore the much-neglected vernaculars of India. Some years ago Mr. Gover, of the Madras civil service, published a translation of the folk-songs of Southern India; and it may safely be said that a perusal of these popular ballads gives a better insight into native ideas and aspirations than a dozen years spent in official service in the country. In fact, the heart of the people is to be sought and found in the vernaculars of India; and any publication which enables us to understand Indians better, brings us more and more into sympathy with them, and confers a benefit on both races.

Part i. of the comparative dictionary before us extends only from the letter *a* to *ag'māni*, or forty pages; but it is enriched by numerous quotations from various writers, which add much to its value and give evidence of extensive research on the part of the authors. Students will find the introduction specially useful in clearing away the difficulties that arise in defining the peculiarities of a vernacular which differs considerably from what may be called orthodox Hindi. One of these is the transliteration of the short sounds of the vowels which, though always recognised in the Dravidian class of languages, has not hitherto received adequate attention in rendering the Prākṛit tongues into Roman characters. In the section devoted to explaining the terms *tatsama* and *tadbhava*, we find an interesting account of the gradual development of the various Prākṛit dialects, showing their origin and diffusion till they attained their present standard.

The work under review, of which we trust to see the completion, not only adds largely to our knowledge of one of the most widely spread of the vernaculars of India, but should act as an incentive to others to imitate the laudable example of Messrs. Hoernle and Grierson in other parts of the vast field of the languages of that country.

LEWIN B. BOWRING.

OBITUARY.

DR. FLIGHT.

WE regret to announce the death, on November 4, after a lingering illness, of Dr. Walter Flight, F.R.S., the well-known chemist and an old contributor to the ACADEMY on chemical subjects. He was born in 1841 at Winchester, and educated at Queenwood College, Hants, at Halle (under Kirchhoff), Heidelberg (under Bunsen), and Berlin (under Hoffmann). He entered the British Museum in 1867, and remained there until a few months ago, when he resigned, owing to ill-health. His work, which was characterised by great exactitude, was directed chiefly to the analysis of minerals. Of recent years he devoted himself especially to a study of the structure and composition of meteorites, the results of which have been published from time to time. He had almost completed a History of Meteorites, some part of which has already appeared in the *Geological Magazine*; and it is understood that arrangements have been made for its early publication under the supervision of his former colleagues. From 1874 onwards he served on the Luminous Meteors' Committee of the British Association, and contributed to its Reports. For several years he occupied the posts of Assistant Examiner in Chemistry to the London University, and Examiner in Chemistry for the War Department. His death at a comparatively early age is not only a loss to science, but leaves a serious gap in the small group of workers at Mineralogical Chemistry.

The following is a list of Dr. Flight's more important scientific papers:

1. "Ueber Darstellung und Zusammensetzung des jodsäuren Kalks" (*Halle Zeitschr.*, 1864).
2. "Ueber die thermoelectrische Spannung verschiedener Mineralien" (*Ann. Chem. Pharm.*, 1865, and *Phil. Mag.*, 1865).
3. "Ueber den chemischen Zusammensatz einer Bactrischen Münze" (*Ann. Phys. Chem.*, 1870).
4. "Mineralogical Notices" [with Mr. Maskelyne] (*Chem. Soc. Journ.*, 1871 and 1872).
5. "On the Character of the Diamantiferous Rock of South Africa" [with Mr. Maskelyne] (*Quart. Journ. Geol. Soc.*, 1874).
6. "An Examination of the Methods for effecting the Quantitative Separation of Iron Sesquioxide, Alumina, and Phosphoric Acid" (*Chem. Soc. Journ.*, 1875).
7. "Examination of Two New Amalgams and a Specimen of Native Gold" (*Phil. Mag.*, 1880).
8. "Report of an Examination of the Meteorites of Cranbourne in Australia, of Rowton in Shropshire, and of Middlesborough in Yorkshire" (*Phil. Trans. Roy. Soc.*, 1882).
9. "Contributions to our Knowledge of the Composition of Alloys and Metal Work, for the most part Ancient" (*Chem. Soc. Journ.*, 1882).
10. "Examination of Mr. A. Stephen Wilson's 'Sclerotia' of *Phytophthora infestans*" [with Mr. George Murray] (*Journ. of Botany*, 1883).
11. "Examination of a Meteorite which fell on February 16, 1883, at Alfanello, in the District of Verolannova, in the Province of Brescia, Italy" (*Proc. Roy. Soc.*, 1883).
12. "Two New Aluminous Mineral Species—Evigtokite and Liskeardite" (*Chem. Soc. Journ.*, 1883).

WE have also to record the death of Dr. William Carpenter, the eminent writer on physiology, and for twenty-two years registrar of London University. He died, from the results of an accident, on November 10, in the seventy-third year of his age.

SCIENCE NOTES.

At the anniversary meeting of the Royal Society on November 30, Prof. Stokes will be proposed as president in succession to Prof. Huxley. The list of new members of council includes the names of Profs. Clifton, Dewar,

Bartholomew Price, Pritchard, and Schuster, Drs. Geikie and W. J. Russell, Admiral Sir Cooper Key, Mr. Norman Lockyer, and Gen. J. T. Walker.

THE first meeting of the present session of the Royal Geographical Society will be held on Monday next, November 16, when the opening address will be delivered by the President, the Marquis of Lorne; and a paper will be read by Mr. Holt S. Hallett on "An Exploration-Survey for a Railway Connection between India, Siam, and China."

THE first meeting of the present session of the Statistical Society will be held on Tuesday next, November 17, at the Royal School of Mines, when the president, Sir Rawson W. Rawson, will deliver an opening address on "International Statistics, illustrated by Vital Statistics of Europe and of some of the United States of America."

MR. WHITAKER, of the Geological Survey, has written a description of the two deep borings lately undertaken at Chatham in connexion with the dockyard extension works. One of these sinkings is of unusual interest to geologists, from the light it throws on the structure of the south-east of England. After passing through 682 feet of chalk, the borer pierced the Gault, which was found to be 193 feet thick, and then entered sandy-beds belonging to the Lower Greensand. These beds were only about 40 feet in thickness, and were found to repose directly on dark-blue clay, which, on the evidence of its fossils, is indisputably the Oxford clay. The remarkable point connected with this boring is the fact that the Weald clay and Hastings beds, which in the typical Weald area are about 2,000 feet thick, have so rapidly thinned out as to completely disappear at Chatham.

PHILOLOGY NOTES.

THE Clarendon Press has, at the instance of Dr. Furnivall, bought the copyright of the late Dr. Stratmann's Dictionary of the Old-English Language of the twelfth, thirteenth, fourteenth, and fifteenth centuries, together with the author's MS. additions. The Press has appointed Mr. Henry Bradley to prepare a new and enlarged edition of the work, which will take its due place in the Clarendon Press Series of Dictionaries.

At Dr. Whitley Stokes's request, Mr. Standish H. O'Grady will read a paper on "The Oxford edition of *The Battle of Ventry* (*Cath Finntrága*)" at the next meeting of the Philological Society, after Mr. Stenhouse's "Notes on Biblical Aramaic."

PROF. TERRIEN DE LACOUPERIE will deliver his second lecture at University College, on Tuesday next, November 17, at 4 p.m. The subject is "The Formation, Development, and Influence of the Chinese Language."

MR. S. A. KAPADIA has been appointed Lecturer on Gujarati at University College, London.

THE second number of Dr. Geldner's edition of the *Avesta* has just appeared in two editions, with German and English notes respectively. It extends from Gátha 21 to Gátha 46, thus including the "Haptanghaiti." Among the numerous additional MSS. now collated for the first time is a very valuable Vendidad sáda from Persia, copied by Fredun Marzapán A.D. 1618, and derived from an archetype independent of the best MSS. hitherto known.

PROF. GUSTAV OPPERT, of Madras, has completed a second volume of his Catalogue of Sanskrit MSS. in private libraries in Southern India. It contains the titles of no less than 10,421 MSS., chiefly in the districts of Salem,

North Arcot, Chingleput, Tanjore, and the state of Mysore. Each MS. is catalogued under its title in both Devanagari and Roman character, with its subject-matter and author's name. At the end are three indexes—of titles, subjects, and authors.

MEETINGS OF SOCIETIES.

ARISTOTELIAN.—(Monday, Oct. 26.)

SHADWORTH H. HODGSON, Esq., President, in the Chair. The opening address of the session was delivered by the President. The subject he selected was "Philosophy and Experience." Philosophy is the last in a series of three ways of regarding experience: the first being that of ordinary or common-sense thinking, and the second that of positive science. It therefore stands on a purely experiential basis, and differs from the two foregoing ways of thinking by simply analysing experience subjectively. In other words, it begins, not by assuming existence as something *per se notum*, but by asking what we mean when we assume it—what *Being* is. Philosophy, therefore, is (1) subjective; (2) analytic; and its method is to begin by asking the question *what* of everything, and then going on, when this is answered, to the further questions *how it comes* and *how it behaves*. The application of this method to experience results in distributing the whole consideration of it; that is, the whole of philosophy, under four heads or rubrics, 1st, the Distinction of Aspects; 2nd, the Analysis of Elements; 3rd, the Order of Real Conditioning; and 4th, the Constructive Branch of Philosophy, which last deals with the limits of Knowledge, the question of the Infinite, and the question of Religion. The entire results of positive science were shown to be capable of incorporation with philosophy, namely, under its third rubric; while, by means of its fourth rubric, philosophy is in a position to mediate between positive science and religion, which is based on man's *de facto* relation to the infinite. The question of method and logical articulation of philosophy on a purely experiential basis is the vital question for philosophy, and that which, before all other questions, presses itself on the consideration of a society formed for the systematic study of it.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(General Meeting, Monday, Oct. 26.)

THE Rev. G. F. BROWNE, President, in the Chair.—In the course of some remarks made on taking the chair as President, Mr. Browne mentioned the loss the society had sustained in the death of Dr. Corrie, the late Master of Jesus College. Few, if any, had done more for the progress of the society in its earliest days than Dr. Corrie, and his interest in its welfare continued to the end. The first of the quarto series of the publications of the society was edited by him in 1840, "A Catalogue of the original library in St. Catherine's Hall, 1475," one of the many evidences of the interest he took in the college which owed so much to him.—The President exhibited and described a stone cross-head, presented to the Cambridge Museum by the Royal Architectural Museum, Westminster. In *Archæologia*, vol. xvii., p. 228, there is a letter from the Rev. T. Kerrich, Librarian of the University of Cambridge, dated March 29, 1813, describing a number of sculptured stones found in the course of demolishing Cambridge Castle, in 1810. They were found under part of the original ramparts, so that Mr. Kerrich took them to be at least as early as the erection of the castle by William I. The letter is accompanied by two plates, which show, besides some small stones, five complete stones like coffin-lids, and portions of two others, all ornamented with interlacing work. Mr. Cutts in his Manual of Sepulchral Slabs shows two of these stones, and states that one of them was in the Fitzwilliam Museum. His engraving, however, does not represent the stone now in the portico of the Fitzwilliam Museum, but merely reproduces that one of Mr. Kerrich's engravings which is most like it. The Fitzwilliam stone was found more recently, Mr. Way stated in the *Archæological Journal* (xii. 202; a woodcut is given on page 201), ten or twelve feet from the foundation of the castle, to the south. It lay outside the castle, in gravel, about six feet deep, and north and south. Mr.

Way gives as its date "about Xth century." It deserves a more protected position, especially now that the discovery of like stones under the early work at Peterborough has shown that the Cambridge stones are not isolated specimens in this district. One in particular of the stones shown by Mr. Kerrich must have been a remarkably handsome example. In the *Archæological Journal*, vol. xi., p. 70, there is a woodcut and a description of the head of a stone cross found at the same time with the stones described by Mr. Kerrich, i.e., in 1810. It had been in the possession of the Camden Society, and at the date of the description in the *Journal*, 1854, it was in the Royal Architectural Museum, Westminster. The cross-head is about eighteen inches high, fourteen wide, and six thick. It is a simple but interesting and unusually perfect example of a "wheel-cross," probably the only one in all East Anglia. The upper limb and the two arms are of the same size; the lower limb expands into the shaft without any boundary line. The portion of the shaft which remains shows the commencement of simple interlacing bands, of the same character as those on the stone in the Fitzwilliam Museum. So far as style and material are concerned, there is no reason why this cross-head, with its shaft, and the stone in the Fitzwilliam Museum, or one of those shown in Mr. Kerrich's plates, should not have formed respectively the head-stone and body-stone of the grave of some East Anglian magnate a hundred or a hundred and fifty years before the Norman conquest. The account in the *Archæological Journal* states that the cross is plain on the back. That is not so, for the back, though somewhat damaged, is ornamented in the same way as the front. The edge, too, is ornamented, and in a very unusual manner, by a single band forming a rectangular scroll; this, perhaps, developed lower down the shaft into the key pattern so usual on the Anglian sculptured stones.—The Rev. W. F. Creeny (vicar of St. Michael's, Norwich) then gave a lecture upon foreign monumental brasses. His remarks were illustrated by thirty magnificent rubbings, which were hung round the room, and excited universal admiration.

BROWNING SOCIETY.—(Friday, Oct. 31.)

DR. RICHARD GARNETT in the Chair.—A paper "On Browning's Development as Poet or Maker" was read by Mr. J. T. Nettleship. The writer began by remarking that the object of the paper was to look at Browning as an artist to whom, for the purposes of his art, morality and immorality, right and wrong, are of equal value, and assumed that the development of his genius as poet or maker began with *Pippa* and culminated in the *Ring and the Book*. His poetic development has taken place by an apparently capricious, but really ordered flux and reflux. His twofold nature, the poetic on one side and the spiritual and intellectual on the other, has been perpetually at war. But that flux and reflux was the necessary condition of his producing at all, and in this necessity he stands alone among his contemporaries. His natural knowledge of all organic life is the basis of his widely creative genius. From his love of animals to his love of men, and so to his delight in the spirit, the essence, of man, his course, dramatically speaking, has been upward. And he has found, as his life went on, the immense dramatic value, in his study of men and women, of the sublime truths and ideas whence have sprung the nobler religions of the world. But his personality has nothing to do with his art: it is in the manner alone, not in the matter, that his personality can be said to tinge his creations. His two most productive periods, in point of bulk, lay—(1) between 1840 and 1846; (2) between 1864 and 1868. His work may be divided from the point of view of poetic development as follows: (1) the three poems of his youth; (2) the seven pure dramas and many lyrics and romances; (3) various poems (named), showing great increase in concentrative poetic force, between the thirty-fifth and fifty-second years of his life; (4) the final triumph of dramatic psychological and analytic qualities, between the fifty-second and fifty-sixth years of his life—a triumph carried on at the same height of power to the present year. His power as objective poet has helped him to achieve his success as subjective or soul-painting poet. In the struggle or interaction between the objective and subjective powers his

genius has been helped or retarded through *Sordello* and *Pippa* to the *Blot in the 'Scutcheon* and *Luria*, published in 1846. The poems between 1846 and 1855 represent further development acting still according to the law of flux and reflux, and display an increased subjective dramatic faculty, which finds its fullest expression in the *Ring and the Book*. Browning has used his resources nobly, generously, and self-forgetting always. Every right reader of his poems gains that influx of vitality whence spring the strength of faith and purpose that go to make a single life and a great aim.—The Chairman, in proposing a vote of thanks to Mr. Nettleship, expressed his high sense of the ability and suggestiveness of the paper, and went on to remark on the scanty traces of development he found in Browning's work, contrasting him in this respect with another great intellectual poet—Goethe—whose poems are distinctly divisible into epochs. To assign dates to Browning's poems from internal evidence would demand very subtle criticism indeed; and the criterion would more often be found in the style than in the spirit, at least after the first youthful lyrical efforts in more or less dramatic form—*Pauline* and *Paracelsus*. Even this distinction is often faint enough. The Chairman saw no decay in poetical or in intellectual power in the later works, only a disposition to be satisfied with a mode of presentment intelligible to himself instead of the earlier striving to be intelligible to the reader as well. Speaking roughly, and recognising many and even important qualifications, in the later utterances, the ideas were as powerful and as abundant, but written in shorthand instead of, as in the earlier, writ large. His variety must be sought not in his own spiritual or intellectual movement, but in the number of well-defined and picturesque human types suggested by his own observation or produced by his creative faculty, a number greatly exceeding those called into being by any metrical writer since Shakspeare.—Further discussion followed, in which Miss Hickey, Dr. Furnivall, Dr. Berdoe, W. Revell, and others, took part.

BIBLICAL ARCHAEOLOGY.—(Tuesday, Nov. 3.)

CANON BEECHY, V.P., in the Chair.—Mr. Cope Whitehouse, with the aid of maps, charts, surveys, diagrams, and photographs, explained the course of the Bahr Jüsuf, which he has followed from Behnesa to the Birket el-Qerün, and into the desert near Gharaf. He gave the Muhammedan traditions which attribute this canal and the redemption of the Fayoum to the Patriarch Joseph, and showed that the common derivation which attributes the name "Bahr Jüsuf" to Saladin (A.D. 1166) is plainly an error. If the name Beni-Suef dated from the time of the Muhammedan invasion, and was due to the tradition that this region was occupied by the sons of Joseph, then it might be connected with the *Σοφείας* of Syncellus, and with the alleged constructors of the Pyramids. Following this clue still farther back, Herodotus said that the Pyramids were called after the Shepherd Philiton, who has been identified with the Hyksos. Thus an independent line of Greek evidence connects the Pentateuch with profane history, while the stream of tradition blends with the great branch of the Nile, which now waters the Arsinoite home. It is further corroborated by the geographical papyrus of Boulaq, and the well-known Egyptian word SaP, and the names of places in the Nomos Oxyrhynchites. This raises the whole question of the land of Goshen, as to which there is no agreement among scholars. Jablonski (circa 1760) identified Goshen with the Fayoum, relying in part upon St. Jerome. His treatise is of the highest critical value, although necessarily impaired by his scant knowledge of the physical conditions of the Nile Valley. The Egyptians, whether Jews, Copts or Muhammedans, put a Goshen near Belbis, extending from Heliopolis northward for a few miles. But their Exodus route is across the desert to the south of Cairo. The modern Arabs make the home of the tribe of Benjamin near Minieh, give to Ephraim or Ephratim the Nomos Aphroditopolites and to Manasseh the Fayoum, with Gizeh as the birthplace of the Levite Moses. A map illustrating the local traditions, therefore, fixes the permanent residence of Joseph's Pharaoh near Heliopolis, east of the Red Sea (into which a west

wind blew the locusts), with a northern Jashan to which Jacob went down after he had seen Pharaoh, but assigns to this same King "Reian" the valley which has been shown to be a part of Lake Moeris. In answer to questions by Canon Beechey, M. Oppert, Rev. C. J. Ball, Mr. Wallis Budge and others, Mr. Cope Whitehouse said that he believed that these traditions were not only in entire harmony with the Pentateuch and profane history, but that Genesis xlviii. and xlix. have been rendered unintelligible by supposing that they refer to the condition of the tribes in Palestine. The prophecy of Jacob described the situation of the twelve tribes in Egypt immediately before the Exodus. The similes were in part the hieroglyphic names of the places where they lived. The order from north to south puts Reuben at Abu-Roash, intermingling with the natives, and losing his right of primogeniture. The religious war, provoked by Simeon and Levi, identified with the two pyramids of Gizeh, is the same to which Herodotus alluded. Chaeremon relates that Isis appeared in dreams to King Amenophis, and blamed him because her sanctuary had been demolished, and this brought about the expulsion of the Jews. The very word is preserved in the paronomasia of the Hebrew oracle. "For in their anger they slew a man (*Isa* = Isis) and in their self-will they houghed an ox (*Apis*)"—R.V. Judah, connected with the vineyards of the Fayoum by troops of asses, was described as the Sphinx, at whose feet the Arabs say the Exodus commenced. Zebulon dwelt at Zidon on the Nile, and, as Josephus says, carried on extensive commerce. Sokari, now Saqqara, retains the name of Issachar, who saw that Men-Nofer, or Memphis, was "a good resting-place" for the living and the dead, and exchanged his nomadic life for the shelter of its fortress. The town of Tan is represented by a serpent; the *serpent rugissant* of the myth of Horus. The verse in which Gad is described is remarkable for the frequent repetition of the root *gad*. Asher lived near Dashur; while Naph-tali was in fact compared to the groves of trees where the valley widens. Joseph is *ben porath*, not a fruitful bough, but the offspring of the river. His daughters (branches) are the two canals represented on the geographical papyrus of Boulaq. Lycopolis, or Assiut, is the wolf of Benjamin, who devoured the Nile in the East to divide it in the West. In answer to a question by M. Oppert, the speaker said that the interpretation was, he believed, wholly novel. He had observed the chief facts in 1881, and his opinion had since been strengthened by a large amount of corroborative evidence. On the other hand, there was nothing against it, except, in some minds, the support given to the antiquity of Genesis. The silence of the Targums and the Fathers, with the ambiguity of the LXX. and Vulgate, seemed to show that this interpretation had been lost. Mr. Cope Whitehouse offered it as a contribution to the exegesis of a part of the Old Testament which presented very great difficulty when considered as referring to any period after the tribe of Levi had become the acknowledged priests of the Israelites.

PHILOLOGICAL SOCIETY.—(Friday, Nov. 6.)

THE REV. PROF. SKEAT, President, in the Chair.—The second part of the society's *New English Dictionary*, edited by Dr. J. A. H. Murray, going from ANT to BATTEN, was laid on the table. Good progress with part iii. was also reported.—The president read his paper on "Some English Etymologies": first, eight Shakspeare words, *braid*, adjective, which stood for *braided*, "full of deceit, trick, fraud," the adjective being shortened as past participles in *ed* so often were in Early-English; *phoeze*, verb, "drive away," "put to flight," Anglo-Saxon *fesian*, *sesan*, verb, *fus* a, "prompt, quick"; *geak*, "a dupe," Dutch *geek*, "a fool" (Hexham); *lither*, "pestilent, stagnant," also applied to the air in Anglo-Saxon; *minz*, East-Friesic *minsk* (German *das Mensch*), "woman" (with a touch of contempt); *moy*, "a piece of money," probably French, from Portuguese *moeda*, Latin *moneta*; *scroyles*, "scurvy fellows, scabs" (French *escroquille*), "afflicted with scrofula"; *sennet* or *signate*, "a trumpet-call," Old-French *sinet*, *signet*, dim. of *signe*, Italian *segnetto*, English *signet*. Next, Christmas-box was an actual box in which gifts were collected, as Brande shows; *cad* (an attendant spirit or familiar) was the Scotch

"caddie," French *cadet*; *ease*, French *aise*, was from Low-Latin *agius*, "at ease, at liberty," Italian *agio*, verb *agiare*; *feaster* was French *festel*, *feestre*, verb *festrier*, from Latin *festula*; *gavial* (the crocodile of the Ganges), French *gavial*, Hindustani *ghariyal*, "crocodile"; *hobble-de-hoy*, French *hobbeau*, *hobrel*, "the hawk hobby, a mongrel," *de hoy* (*hodie*), "of to-day," (*abereau*, "a young minx, a little proud squall"); *hock-day* (*hoke-tide*), Anglo-Saxon *hoo-dog*, *hoo* (Chaucer *hoke*), "mockery sport," from the rough sport of men and women at Easter; *inveigle*, from Wm. of Waddington's *enveugler*, a variant of French *aveugler*, Latin *ab-oculare*; *kraal*, from Portuguese and Sanskrit *coral*, "an enclosure"; *kelpie*, "a ghostly water-horse," (?) from Gaelic *colpach*, "a cow," &c.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BISS, 116, Strand, near Waterloo-bridge.

THE ART MAGAZINES.

THE Christmas number of the *Art Journal* has already appeared. Last year it was devoted to Sir Frederick Leighton, this year its subject is Sir John Millais. The career of this artist is ably described by Mr. Walter Armstrong, who compares his development with that of modern art itself, "for, after all, the progress from the 'Isabella' of 1849 to the 'Lady Betty Primrose' of 1885 is but the growth of four centuries writ small on a single brow." Not the least interesting section of the study is that devoted to Sir John's own views upon art, which are as full of knowledge and common-sense as one might expect. It is illustrated with steel engravings of "The Bee-feater," "Chill October," and "The North-west Passage," and numerous woodcuts and "process" engravings of pictures, sketches, and book illustrations.

In *The Portfolio* Mr. F. G. Stephens writes with knowledge and sympathy about Mr. Burne Jones and his art. The article is illustrated by a photogravure of "Venus's Looking-Glass." The same number contains a reproduction of a drawing, by Mr. H. Railton, of the Memorial Chapel at Windsor, and another of Mr. J. Pennell's brilliant pen-and-ink sketches. The subject of the latter is the porch of St. Mary's, Oxford. Mr. Loftie and Mr. Martin Conway continue their papers on "Windsor" and on "The Influence of the Mendicant Orders on the Revival of Art."

AMONG other good things, the *Magazine of Art* contains an article by Prof. Sidney Colvin on the Berlin Photographic Company's reproductions of pictures in the Brunswick Gallery, with an admirable example of them as a frontispiece for the new volume—the "Cascade with a Watchtower," by Jacob van Ruysdael. It also contains articles on "J. W. Waterhouse, A.R.A.," by Mr. J. Arthur Blaikie; "the Lower Medway," by David Hannay, well illustrated by Mr. Anthony Henley; and "A French Theatrical Museum," by Mr. Brander Matthews. The poem of the number is an admirable "Ballade of Dead Actors," by the Editor, powerfully illustrated by Mr. Elihu Vedder.

MR. E. J. POYNTER's well-known picture of "A Visit to Aesculapius" has been beautifully engraved by Mr. W. Ridgway for the *Art Journal*. In the current number Mr. H. Wallis continues his learned papers on "The Early Madonnas" of Raphael, and Miss Helen Zimmern commences a study of the life and work of Domenico Morelli, the famous Neapolitan artist. Mr. J. S. Hodson's article on "Modern Processes of Automatic Engraving" is another of the varied and able papers in the last part of this magazine.

THE *Gazette des Beaux Arts* contains a very interesting article, by M. Louis Gonse, upon Rembrandt's last years, *apropos* of the new museum at Amsterdam, the arrangements of which are severely criticised. The paper contains a long and important letter from M. E. Durand-Greville on the famous "Ronde de Nuit." This picture appears to have been cut down both at the top and sides, in order to fit between two pillars in a room in the Hotel de Ville, whence it was removed at the beginning of the last century. It has also been repainted, and was once a scene of broad daylight. Part of these assertions is based on the small copy of the picture in the National Gallery, which was painted by Gerrit Lundens from the original composition while in a perfect state. Some documents about to be published by MM. Bredius and Roever, throwing much light on the last years of Rembrandt, and on his relations with Hendrickje Stoffels (generally called Hendrickje Jaghers, and considered as Rembrandt's second wife) have also furnished M. Gonse with matter of great interest. It appears that the whole of the property saved from Rembrandt's creditors was held by this woman and Rembrandt's son Titus, and that they managed his affairs entirely, giving him board and lodging, and receiving the fruits of his labour. The establishment seems to have been a sort of Rembrandt company, at which his pictures, etchings, &c., were sold. At Hendrickje's death her share in the concern was left to her (and Rembrandt's) daughter Cornelia, of whom Rembrandt was appointed guardian under Hendrickje's will.

SEBASTIANO DEL PIOMBO IN A NEW LIGHT.

II.

BUT I want to show that, whatever might have been Sebastiano's position as a painter, his versatility probably reaches out in directions hitherto quite unsuspected. It is well known that he was a graphic letter writer. His correspondence with Michelangelo, Aretino, and others is excellent evidence of this. Nevertheless, the actual wording of his letters has seldom been given with accuracy. I shall give a letter preserved in the British Museum as an example. Versions of it have appeared frequently in print, but it has never been given exactly as it is in the original. I now give it with its Venetian spelling and peculiarities, immediately and literally from the MS. (Additional MSS. 23744). Hitherto these little matters have been smoothed over, or misunderstood, or converted into modern Italian.

"Compar Car^{mo} mio gia molti zorni Receuj una ura ame gratissima la quale ui ringrazio fumamete ui haueste degnato acetarmi p compar uro. Et d le ceremonie d l donne a casa nra nō fi uxano basta ame meslate compare. Et p quest'altra ui mader lagna. O gia molti zorni feci Batizar il putto. Et oli meffo nome luciano ch... e il nome d mio padre. Et d m' Domenico boinsegnj fe lui... vora degnar essermi Compare mi fara singular apiacere p ch nō uoglio se nō homini dabene p comparj.

"Vro Compar fidellissimo

"Sebastiano picture in Roma."

The letter is indorsed across:

"Dnō Michelangelo,
Sculptorj Jn Firenze."

I have given this letter *literatim* in order to point out how it differs from all versions hitherto given of it. The only really accurate reproduction was the facsimile published in 1836 by S. Woodburn, in the Fourth Catalogue of the Exhibition of Drawings collected by Sir Thomas Lawrence. It aims, of course, at perfect fidelity, thought it does not quite transmit the spirit of the original handwriting. I must explain that the italics are letters which have a stroke across the limb, which could not be given without special type. It simply means a contraction, as also does the mark —.

The version generally most accredited is that of Bottari, which I shall therefore repeat, that the reader may judge for himself as to its accuracy. I say nothing of the liberty taken in partly translating it into modern Italian. In subject, the letter is extremely interesting, as it relates to three or four facts concerning the writer which bear upon the question of rivalry with Raffaello, and accordingly have been quoted as supporting the surreptitious designs theory. It further confirms Sebastiano's family name, and states that he had just finished his great picture of Lazarus, and—what is most important to my view of the unsubstantial character of the assertions so often made about Michaelangelo having assisted in its execution—it clearly shows that he had had no hand in it or he would not have needed any such description. It also implies that Raffaello's companion picture of the Transfiguration was not yet finished as, in fact, it was not, or the writer would not have compared his own Lazarus with the cartoons for the *arazzi* or tapestries just come from Flanders, which he thinks—in the drawing, mind—inferior to his own performance. It may be granted that Michelangelo did furnish Sebastiano with some hints for his picture, such as the somewhat dry and meagre sketch for the Lazarus preserved in the British Museum. But it is going much too far to say that the great draughtsman had any further share in this most masterly composition, admitted by all competent judges to be one of the finest and most important Italian paintings in the National collection.*

But, to come to the transcription of the letter, which I translate freely. Compare

"Carissimo mio,—

"Già molti giorni recevi una vostra a mi gratissima la quale vi ringrazio summamente, vi avete degnato acceptarmi per compar vostro, et de le ceremonie de le donne a casa nostra non si usano. Basta a me che mi siate compare.

"My dearest gossip (or sponsor),—

"It is now many days since I recd your very acceptable letter, for which I thank you most sincerely, and for having deigned to accept me for your gossip, and, as to the compliments of the ladies, they are not

*Grimm, in his *Life of M. Angelo*, ii. 491, says: "There is no proof existing that M.A. designedly supported Sebastiano as an adversary of Raphael's." Nor indeed is there, but there is this letter to show that M. Angelo had to be informed what the painting was like which the supporters of the rivalry theory assume that he assisted in producing. Anybody might see he had no hand in the actual painting.

E per quest'altra vi manderò lagna. Già molti giorni feci batezzare il putto, e gli ho messo per nome Luciano, che i il nome, di mio padre, e di Messer Domenico Boninsegni se lui vorrà degnare essermi compare, mi farà singular piacere perche non voglio se non uomini da bene per compari. Altra di questo, io fo intendere come io finito la travola ed holla portate in palazzo e più presto è piaciuta a ognuno che dispiaciuto, eccetto agli ordinari ma non sanno che dire.

"A me basta che M. S. Reverend. mi ha detto che io l'ho contentato più di quello lui desiderava. E credo la mia tavola sia meglio disegnata ch'è panni degli arazzi che son venuti di Fiandra. Ora avendo io fatto dal canto mio a presso che l'debito, io ho recerato da avere tutto fine del pagamento mio. E Monsignor Signoria Reverendissima mi ha detto che lui vuole che secondo che convenissimamente insieme. E con Messer Domenico vuole che voi giudichiate questa opera, benchè per presto a conclusione io la rimetteva in Sua S. Reverend. lui non vol per niente. E gli ho mostrato il conto del tutto. E lui a voluto che ve lo mandati et così velo mando. E che vedete il tutto. E così vi prego se mai mi faceste a piacere, vogliate fare questo senza suspicione alcuna, per che Monsig. Signoria Rever. e me liberamente la rimettiamo in voi; basta che avete visto l'opera prencipiata ed è quaranta figure in tutto, senza quelle del paese. Ed in quest gl'è il quadro del Cardinale Rangone che va a questo conto che ha visto Messer Domenico e sa di che grandezza gli è.

"Io non vi dirò altro Compar mio, vi prego a spedirmela presto inanzi che Monsig. Signoria facta da Roma, perchè a dirvelo a voi, son al verde. Cristo sano vi conservi. Raccomandatemi a Messer Domenico. Ed a voi mi raccomandando per infinite volte. Roma, 26 December, 1510."

customary in our house. It is enough for me that you are my sponsor, and for this latter reason I will send you the lamb. It is now many days since I had the boy baptized, and I had him named Luciano, which is the name of my father; and, as regards M. Domenico Boninsegni, if he would consent to become sponsor for me, he would do me a special pleasure, for I want no other than men of consideration for sponsors. Besides this matter I must explain that I have finished the painting, and have taken it to the palace, and it was at once admired rather than otherwise by everybody, except by the usual faultfinders, but they do not know what to say.

"It is enough for me that His Reverence has told me that he is satisfied with it beyond what he expected. And I think my picture is better than the cartoons of the tapestries which are come from Flanders. Now, having done, for my own part, about what was due, I expected to have had a complete settlement of my account. And His Reverence has told me that he is willing to pay what you conjointly agree upon. And he wishes that you, together with M. Domenico, should judge this work, though, to expedite a settlement, I sent it to His Reverence, he would not decide at all. And I showed him the account in full. And he wished me to send it to you, and so I send it you. And that you should look it through, so I pray you, if you would ever do me a favour, that you will do this without any hesitation, because His Reverence freely gave us leave to send it to you. It was enough that you have seen the work begun; and there are forty figures in all, without counting those in the distance. And in this work is included the portrait of Cardinal Rangone that goes to this account, which Mr. Domenico has seen and knows what size it is.

"I will say no more to you, my gossip. I beg you to send it me soon, before His Reverence leaves Rome, because, to tell you the truth, I am completely done up. Christ keep you well. Commend me to Messer Domenico, and I commend myself to you everlastingly. Rome, 26 December, 1510."

J. W. BRADLEY.

SOME WINTER EXHIBITIONS.

ALTHOUGH there is no picture of very striking merit at the Winter Exhibition of the Nineteenth Century Art Society, it is full of accomplished and pleasant work. The place of honour is given (and on the whole deservedly) to a life-size figure of a little girl who has had a tiff with her cat, painted by Otto Leyde, R.S.A. It is executed with much vigour and freedom. Among the promising landscape painters are A. Fuller Maitland, who sends some bright breezy bits of land and sky (principally sky); and William Scott, one of whose little Venetian scenes, "Campanile of S. Felice, Venice," is very charming in light and colour. Henry Dawson, in his pictures of "Middleburgh," "Antwerp," and "An Old Man of War," shows himself a worthy son of his father, and an able continuer of Turner's tradition. Very delicate in its colour and rendering of atmosphere is "Cliffs near Lowestoft," by Edgar Wills; but this artist shows still more promise in a fine picture of sheep reposing in "Welcome Shade." A few of the other artists who have sent good pictures are J. H. Bradley, Edwin Ellis, G. Montbard, E. Aubrey Hunt, A. Williams, A.R.H.A., Marmaduke Langdale, Henry Zimmerman, Walter J. Shaw, E. Law, Arnold Heleke, Eliza Turck, A. Quinton, Harry Musgrave and O. Rickatson. There are several good water-colourers, but we can only mention T. B. Hardy's "Orontes entering Portsmouth Harbour," H. S. Tuke's "Coming Home" (a capital figure), E. S. Calvert's broad and clever "When Morning breaks," and Henry Murhman's "Boy on the Heath" (pastel).

To lovers of our National School of Water-colour Painting none of the numerous exhibitions now open will be more interesting than that at the little gallery of Messrs. J. Hogarth & Sons, 96 Mount Street, where a small, but very choice selection of early drawings are now hung. The good Dr. Monro, of the Adelphi and Bushey, might look down with pleasure on this little gathering, which consists mainly of the works of his protégés Girtin and Edridge, William Hunt, Copley Fielding and Cotman, not to mention Turner, the greatest of all, by whom there is one early drawing only. The collection is, perhaps, mainly remarkable for the number of drawings by Cotman, and a few by Bonington—all of them fine. For combined breadth and delicacy and pure sweet colour, nothing excels, the latter's superb drawing of Calais; and two small heath scenes, by the same artist, are remarkable for their luminous quality. Of G. Barret, who, as well as Bonington, excelled even Turner in transparency, there are three good examples—one, a classical landscape like Turner's "Isis," especially fine. There is also a drawing by Finch, his imitator, which is almost good enough for a Barret. Of the swift and sure brush of Girtin—who of all, perhaps, went straightest and surest to his goal—there are two fine examples; but in simplicity and breadth he scarcely excels Cotman, to whom, perhaps, on the whole, the palm of the exhibition falls. Of De Wint and Prout there are fine early broad examples, a Patrick Nasmyth, and two John Varleys; nor must we forget to mention one of John Crome's rare water-colours, glowing with sun. It would be interesting to learn the date of this drawing, for he was some years the senior of Turner, Girtin and Constable. By the latter there are two small water-colours more dexterous than usual, for this artist never seems to have attained mastery in this medium. Müller is, we think, the youngest of the group represented. His audacious handling and splendid gift of colour are shown in a study of trees and a heath scene with a stormy sky. David Cox is perhaps the most notable absentee from this group of humble-minded, but truly great and original artists, who founded our only

really English school, and may be said to have discovered and perfected a new system of colour based entirely upon the atmospheric harmonies of nature. This little gathering suffices to show us how they worked together, mostly friends and associates, beginning at the same point: at first the work of one may easily be mistaken for the work of another, but each gradually develops his own individuality, while the great figure of Turner stands outside watching and working and absorbing the merits of all, but never with all his greatness, ever quite obscuring any one of them.

At Messrs. Gladwell's, in Gracechurch Street, are to be seen some specimens of statuettes and reliefs composed of a new artificial substance made from marble dust, which lends itself to the imitation of various substances besides marble, and can be coated with metal so as to represent bronze. Messrs. Moeller and Dinkelacker, the manufacturers, have reproduced with great success many statues of antique and modern art, including the "Venus of Milo" and the "Laocoon." The famous statuette of "St. Francis," at Toledo, is a good example of their powers of imitating wood and ivory. Gatti's vigorous parti-coloured busts of "Algerians," and Foley's "Caractacus," the Naples antique "Narcissus," and several fine embossed shields exhibit the variety of their well-selected gallery. Messrs. Moeller and Dinkelacker have also some successful reproductions of the Tanagra figures at Berlin and elsewhere.

MESSRS. MANSELL & Co., of Oxford Street, have opened their usual exhibition of Christmas cards by the principal makers. Neatly arranged round a large room in glass cases against the walls may be seen all "the last new things," from the bunch of flowers with a seasonable text to beautifully coloured and gilded pictures, religious and secular. There is nothing, we think, prettier than Messrs. Hildesheimer's series of dainty young ladies with birds and kittens, relieved on a gold ground; but Messrs. Marcus Ward, Schipper, Prang, Delarue, Raphael Tuck & Co., and others have cards of variety and merit. Messrs. Mansell's own contributions are all photographic, and not the least pleasant. They include a number of very pretty heads, including one large series of much beauty, like drawings in sepia. They have also a set of moonlight views on a greenish ground, which are very effective. Also to be seen at Messrs. Mansell's are a large number of photographic reproductions of the popular Bartolozzi prints, which they have recently published. Whatever severer critics may say of the art of Angelica Kauffmann, Cipriani, and the other artists of the same class that delighted our great-grandfathers, there is no doubt about their grace and the charm of their decorative effect. These qualities, together with the attractive "sanguine" tint, are preserved in Messrs. Mansell's reproductions, which are sold, framed in the pretty old style, at a truly popular price.

NOTES ON ART AND ARCHAEOLOGY.

A COPY of Winterhalter's portrait of the Queen, painted in 1859, and now in Buckingham Palace, has been placed in the Lerwick Town Hall. The copy has been made by Mr. George H. Park, and is presented by Mr. W. Peterson, a Melbourne merchant. The inscription on the frame describes Queen Victoria as thirty-first in descent from the first Norse Jarl of Orkney, and mentions also her descent from King Harald Fairhair and St. Olaf.

ON November 4, Miss J. E. Harrison delivered, in the lecture theatre of the South Kensington Museum, the first of a course of six lectures on "Homeric Mythology in its Con-

nexion with Greek Vase Paintings." The subject of the first lecture was the Myth of the Judgment of Paris. The illustrations, which were very numerous and beautiful, were admirably managed by means of the oxyhydrogen light. The proceeds of these lectures are destined by Miss Harrison to the building fund for the British School of Archaeology at Athens. Among a distinguished audience of Hellenic scholars and artists who were present at the lecture were Mr. Newton, of the British Museum, Mr. Ernest Myers, Mr. Burne Jones, Mr. Boughton, and Mr. Walter Leaf, &c. The course will be continued on each following Wednesday at 5.15 p.m. On November 7 Miss Harrison also delivered the first of a course of three lectures on "The Parthenon Marbles," in the Archaic Room of the British Museum. We may add that Miss Harrison will be glad to see students who desire further help or advice at 45 Colville Gardens, W., on Thursday, November 19, from 4 to 6 p.m.

THE Royal Academy of Fine Arts at Berlin will hold a "Great Exhibition" from May to October next year. It will be under the patronage of the Emperor, and the Crown Prince will be its president. It will comprise painting, sculpture, architecture, and decorative arts. The payment of the transport by rail of all works exhibited (to and from the exhibition) is guaranteed by the Academy. All works intended for exhibition should be sent between March 1 and March 31 next. The Academy are also preparing a solemn celebration of the fiftieth anniversary of the admission of Adolphe Menzel among its members.

At a recent meeting of the Académie des Inscriptions, M. Homolle submitted a report upon the result of the archaeological exploration in the island of Delos carried out under his direction. The entire surface of the *temenos* of Apollo has been excavated, the circuit of the wall laid bare, the position of the gates and of the roads determined. About fifty fragments of sculpture have been discovered, several terra-cottas, and some pieces of bronze. One of the most interesting objects is a vase bearing the name of Iphicartides of Naxos. The inscriptions found number altogether about 224, entire or fragmentary. Some consist of more than 200 lines, and one has as many as 600. They date from all periods between the fifth and the first century B.C., but most of them from the third and second. Their contents throw much light upon the political constitution and the commerce of the Cyclades.

THE STAGE.

THE arrangements are now completed for the performance of "The Eumenides" at Cambridge. The play will be given altogether seven times, at different days and hours during the week ending Saturday, December 7. Applications for reserved tickets should be made to the secretary of the committee (J. W. Clark, Esq., Scroope House, Cambridge) not later than November 14, as they will be distributed on that date by ballot. An acting edition of the play has been prepared, with a translation by Mr. Verrall facing the Greek text; and the incidental music has been written by Mr. C. Villiers Stanford, who will himself conduct it. Both of these are published by Messrs. Macmillan and Bowes, of Cambridge. The scenery and proscenium have been painted by Mr. John O'Connor. In the cast of characters we notice several names that are familiar from their performance in "The Birds," with the notable addition of a lady for the part of Athena. There are two choruses, one of Furies, the other of Attendants, none of whom double their parts.

MUSIC.

RECENT CONCERTS.

MESSRS. JOHN BRINSMEAD & SONS commenced their scheme of orchestral concerts last Saturday evening at St. James's Hall. On Wednesday Herr Richter gave the last of his short autumn series, and so if they do their best to deserve success they will probably obtain it. It is essentially an English undertaking, and, if properly conducted, ought to be supported by the public. The band, led by Mr. J. T. Carrodus, is a splendid one. Mr. G. Mount wielded the bâton with considerable tact and energy. Hitherto our notices of this gentleman's conducting have certainly not been favourable, and we are pleased to be able to modify our opinion. The last piece in the programme—Liszt's "Rhapsodie Hongroise"—was given quite à la Richter. Justice, however, compels us to notice that nearly a quarter of the band were Richter men. Chevalier E. Bach played Beethoven's Concerto in E flat, but in a manner so inexact, so effeminate, and, at times, so jerky, that the result was anything but satisfactory. It is fair to mention that he was much applauded. Mr. E. Prout conducted his Birmingham symphony, and, at the close, received the honour of a double recall. The recent success of this work, both in Birmingham and London, accounts for, and justifies, its choice. Besides the pieces named, Mendelssohn's graceful overture, "Melusina," and the "Procession" movement from Moszkowski's symphonic poem, "Johanna d'Arc," was also given. Mr. Maas was the vocalist.

The Popular Concerts commenced last Monday evening. Sig. Piatti, in consequence of the accident to his arm, will not be able to take his accustomed place till after Christmas; but Herr Franz Néruda, well known in connection with Mr. Halle's recitals, proved an efficient substitute. Madame Norman Néruda led Beethoven's Rasoumowski Quartet in F (Op. 59, No. 1) with great skill, but not quite with her accustomed purity of intonation. M. V. de Pachmann, who did not play last season in London, made his first appearance. Raff's Giga con Variazioni, from the Suite in D minor (Op. 91), served to show the delicacy of his touch and the dexterity of his fingers, but it is not good enough for a "popular" programme. The public can now understand, appreciate, and applaud the sonatas of the great masters. We have not forgotten that last season the selection of pianoforte solos was often injudicious, and hope that as matters have perhaps come to the worst—with Raff's tawdry variations—that they will now mend. Mme. Néruda's solos also were scarcely classical enough for a programme including one of Beethoven's great quartets and a small though fine one by Haydn. Both artists were loudly and deservedly applauded for their performances, but we regret to find that encores are still likely to be the fashion at these concerts. Mr. E. Lloyd sang songs by Wagner and Schubert: he was in excellent voice. Signor Romili did not accompany the "Preislied" as if he cared much about it.

The first of Novello's oratorio concerts was given last Tuesday evening, at St. James's Hall, and we are pleased to be able to record a brilliant success. The new choir, of about three hundred members, is made up of excellent material. The voices, especially of the ladies, are bright and tuneful. The chain of choruses in the second part of "The Rose of Sharon" was given with great vigour and precision. In some numbers of the work a little want of attention to the *pianos* and other marks of expression was noticeable, but one must not criticise too severely the first performance of a new choir. It has been well trained, and gives excellent promise for the future. Mr. Mac-

kenzie directed his work with great care. We shall, however, be better able to judge of his merits as conductor when he has to deal with other composers' works. His reception, both at the beginning and end of his oratorio, was most flattering. Of "The Rose of Sharon" itself we need not speak in detail: it may already be counted as one of the popular oratorios. The solo vocalists were Mme. Albani, Mme. Trebelli, and Messrs. Lloyd, Santley, and Tufnail. All were in first-rate voice, and did full justice to the music. The band was led by Mr. J. T. Carrodus.

M. V. de Pachmann is one of the few pianists who are able to fill St. James's Hall. The programme of his first recital last Wednesday afternoon commenced with Beethoven's Sonata in D minor. The individuality of a player may, and indeed must, be shown in interpreting the Bonn master, but too much is as bad as too little. In all three movements the pianist, by certain little tricks and affectations, prevented one from thoroughly enjoying the music. Weber's Rondo in E flat was given with wonderful neatness; but if M. de Pachmann prefers Weber tricked out to suit modern taste, let him announce the name of the arranger, or, rather, disarranger, of the piece. He played also Raff's prelude and fugue from the Suite in E minor. He ought, however, to have given the whole suite; for the prelude is not an introduction to the fugue, but to the other numbers which precede it. Henselt's "Si Oiseau j'étais" was so deliciously played that the audience asked for it over again. The Chopin selection—which included the Nocturne Op. 62, No. 2, the second Impromptu, a Valse, and Polonaise—formed, we need scarcely say, the special attraction of the afternoon. M. de Pachmann is a Chopin player *par excellence*. J. S. SHEDLOCK.

THE LIFE OF A GREAT THEOSOPHIST.
Now ready, crown 8vo, 7s. 6d.

F. V. WHITE & CO'S

LIST.

The Popular Novels at all Libraries.

HER SUCCESS.

3 vols.
By ANNIE THOMAS (Mrs. FENDER CUDLIPI),
Author of "Eyre of Blendon," "Dennis Donne," "Jennifer," &c.

IN HIS OWN HAND.

3 vols.
By Mrs. G. LINNUS BANKS,
Author of "God's Providence House," "The Manchester Man,"
"Forbidden to Marry," &c.

"The author seems to have made a speciality of these biographical novels,
and there is one thing to be said in their favour; they are not the worthless
trash now so prevalent, and so persistently thrust down the public's
throat. . . . A novel of interest, which we are sure will draw the intel-
lectual portion of the community."—*Public Opinion*.

IN the OLD PALAZZO. 3 vols.

By GERTRUDE FORDE.

IN a GRASS COUNTRY: a Story

of Love and Sport. 3 vols. By Mrs. LOVETT CAMERON, Author of
"Doodlers Ever," "A North Country Maid," "A Dead Past," &c.
"There is a good deal of vigour in this novel, both of plot and of character
portraiture."—*Academy*.

"Mrs. Lovett Cameron is one of the best story-tellers of the day. The
tone of her books is invariably wholesome, and her pages are so full of life
and movement that not one of them is willingly missed. She has the rare
faculty of making her readers rejoice or mourn, as the occasion demands,
with the fictitious joys and woes of her personages. This is eminently
the case in her new novel of love and sport. . . . The picture of the far-away
nook on the Devonshire coast, which heads the first chapter of her book, is
a specimen of the author's delicate touch in word-painting. . . . Eve Latimer
is a charming creation of the novelist's fancy. Her brightness, which has
known no cloud until love for 'Dick' Gaskell steals into her heart, and the
busy, rattling life she leads in the midst of her liege subjects, form a sunny
picture that is specially taking. Graphic, humorous, and pathetic by turns,
Mrs. Cameron has told the tale of 'little Tom's' death in so touching a
fashion that few will be able to read without emotion her account of the
dying boy's last moments. The attention is irresistibly drawn towards the
group formed by Eve Latimer and her brothers, but the author's gift of
delineation of character is more visible in her sketch of Dick Gaskell, well-
meaning but 'unstable as water,' and in the strongly marked traits of the
portrait of Lord Harlome. . . . Mrs. Cameron's capital pictures of the hunt-
ing-field, as seen 'in the jolly shires of our native land,' add much to the
merit of her clever and exciting novel."—*Morning Post*.

IN a LONDON SUBURB. 3 vols.

By W. HARTLEY.

"There are flashes of genuine fun, which make us laugh almost in spite
of ourselves."—*John Bull*.
"Showing an intimate knowledge of the petty miseries of suburban life,
as well as familiarity with the world of London, 'In a London Suburb'
is a really clever novel. . . . The author's characters are strikingly lifelike.
No better specimen of feminine spite can be imagined than that contained
in the waspish repartees of Miss Biffon, which strike her friends' weak
points with unerring accuracy. She and the widow, Mrs. Cowdy, are
sketches full of mirth-provoking humour. . . . Quite in keeping with the
tone of the day, which inclines to photographic fidelity of detail, the
'intimate modernism' of this story is in itself a recommendation, especially
when it does not transgress the bounds of good taste."—*Morning Post*.
"There is excuse for many a hearty laugh contained within the covers of
Mr. Hartley's book, which we can thoroughly recommend to everyone as
one of the most first-class pieces of humour that has been produced during the
last few years."—*Whitell Review*.

HEARTS or DIAMONDS? 2 vols.

By IZA DUFFUS HARDY, Author of "The Love that He Passed By,"

"Not Easily Jealous," "Love, Honour, and Obedience," &c.
"Miss Hardy's workmanship is perfect. . . . It is in the Californian portion
of the story that we find the author's most winning and captivating work.
There are some love scenes, the grace and tenderness and truthfulness of
which we have never seen surpassed. . . . In the wonderful skill with which
the writer differentiates, she manifests a penetrative subtlety of insight
which rises to genius. . . . She rises to a great opportunity, and her touch
has such mastery that no one who reads the chapter of the Tragedy, and
those which succeed it, is likely soon to forget them. . . . The novel is one
which, in itself, suffices to brighten the dull season in the publishing
world; for it has freshness of conception, strong grasp of character,
triumphant handling of strong or delicate situation, and unflinching felicity
of literary workmanship."—*Academy*.

J. S. WINTER'S CHRISTMAS ANNUAL.

At all Booksellers' and Bookstalls, in paper wrapper, pictorial cover, 1s.

IN QUARTERS; or, Chronicles of

the 35th (Black Horse) Dragoons. By the Author of "Bootie's Baby,"
"Cavalry Life," "Hoop-La," "Regimental Legends," &c.

At all Booksellers' and Bookstalls.

"SELECT" NOVELS.—1 vol., cloth, 3s. 6d. each.

THE ACTOR'S WIFE. By Edmund
LEATHES. (Immediately.)

THE MATCH of the SEASON. By Mrs.
ALEXANDER FRASER.

A DEAD PAST. By Mrs. Lovett Cameron.

"POPULAR" NOVELS.—Picture boards, 2s. each.

ONLY a VILLAGE MAIDEN. By Lady
CONSTANCE HOWARD, Author of "Sweetheart and Wife," "Mollie
Darling," &c.

LOVE, HONOUR, and OBEY. By Iza
DUFFUS HARDY, Author of "Not Easily Jealous," &c.

POPULAR ONE-SHILLING NOVELS.—In Paper wrapper.

LIGHTLY LOST. By Hawley Smart,
Author of "Breezie Langton," "At Fault," &c.

STABBED in the DARK. By Mrs. Lynn
LINTON, Author of "Patricia Kemball," "Under which Lord," &c.

A PEERESS of 1882. By Mrs. Alexander
FRASER, Author of "A Fashionable Marriage," &c.

LITERATURE.

"The Apostolic Fathers."—Part II. *S. Ignatius, S. Polycarp*. Revised Texts, with Introductions, Notes, Dissertations, and Translations, by J. B. Lightfoot, Bishop of Durham. Two volumes in Three. (Macmillan.)

(First Notice.)

In the present publication we have the fulfilment of a promise made so long ago as the year 1869, when the first part of Lightfoot's "Apostolic Fathers," dealing with Clement of Rome, appeared. A considerable delay in the fulfilment of this promise was compensated by the publication of a new volume of commentary on the Pauline Epistles, by the papers in answer to *Supernatural Religion*, and by a supplemental volume on S. Clement, made necessary by the recovery of new authorities for the text in the Constantinopolitan MS. which Bryennius made known to the world, and in a Syriac version, which came to light about the same time. Meanwhile, the edition of Ignatius was understood to have advanced some way to completion, when in 1879 Prof. Lightfoot's work at the university was brought to an end by his call to the episcopal bench. It cost students an effort to share the general satisfaction felt at this action of the Crown, creditable though it was both to the minister who was responsible for advising it and to Archbishop Tait, who it was understood took a leading part in inducing both the making and the acceptance of the offer. It was seen that the Church's gain must be purchased by the withdrawal in a great measure from literary work of one of our most active and successful labourers. And so to a certain extent it turned out. The bishop states in his preface that his official duties left him such scanty leisure for literary work that for weeks, and sometimes for months, together he had not had time to write a single line; and he adds that his book would probably have appeared three or four years sooner if he had remained at Cambridge.

It is a cause for satisfaction that the work was not broken off, but only delayed; for, now that it has appeared, it must be pronounced one well worth waiting for. It is characterised throughout by the admirable thoroughness with which Bishop Lightfoot does all his literary work, for I do not know any writer who inspires his readers with more just confidence that no work has been scamped, that on every question all the available evidence has been laid before them, and the arguments on both sides fairly presented. The conclusions at which he arrives are generally so much in accordance with my own that I should be a suspected witness if

I praised his sobriety of judgment and the general soundness of his decisions; but whatever disability attaches to my judgment in this matter attaches equally to that of most of his readers. And certainly if the decisions of a judge be such that those who have heard him sum up a case are irresistibly led to adopt his conclusions, one must show good reasons who ascribes this result merely to the ability with which the cases have been stated, and refuses to acknowledge that it is the substantial equity of the decisions which has gained assent.

I own I was one of those who had regretted that Bishop Lightfoot should have turned aside from the work on which he had embarked of commenting on St. Paul's Epistles to that of editing the "Apostolic Fathers." The appearance of the present volumes puts an end to my regrets; and I acknowledge now that it is more likely that some other scholar, working on the model Bishop Lightfoot has set, may complete whatever he may leave unfinished of commentary on the Pauline Epistles, than that we should have obtained from any one else such an edition of Ignatius and Polycarp as that which he has given us. For one thing, the Ignatian field was that in which far more work remained to be done. It would not have been possible, in the case of any book of the New Testament, to collect such a mass of new materials as are here brought together both for the determination of the text and the illustration of the history. Our author informs us, in his preface, that he was not diverted by any new attraction from his work on St. Paul, the Ignatian question having excited in him keen interest nearly thirty years ago, and having ever since engaged his attention in the intervals of other literary pursuits and official duties. In fact, the project of forming an edition of all the Apostolic Fathers was but the enlargement of a plan for which his interest in Ignatius was the motive.

In saying how much remained to be done for Ignatius I am wise after the event, for it is only by comparison with the Pauline Epistles that this field can be described as little worked. In particular, Zahn, in his work *Ignatius von Antiochien* (1873), and his subsequent edition of *Ignatius und Polycarp* (1876), had investigated the Ignatian question so thoroughly that it seemed difficult for a successor to add much to his results. And though some important gleanings were made by Funk (*Apostolic Fathers*, vol. i., 1878, vol. ii., 1881), chiefly in respect of the spurious long form of the Epistles, yet the advance made by Funk on Zahn was quite insignificant compared with that made by Zahn on his predecessors. It would, no doubt, be rash to describe the present edition as "final," yet it is difficult to say what more could be done either in the way of verification of authorities, or in the collection of illustrative matter, than has now been accomplished. In constructing his text Bishop Lightfoot has trusted to none of his predecessors, but has either personally examined the MS. evidence or has had new collations made for him. Some of his authorities are now used for the first time; and the list of these would have been longer if it were not for the length of time during which the work has been going through the press, in consequence of which he

has in some cases lost his priority of publication. For example, Bryennius, in the preface to his edition of the *Didaché*, tells how Lightfoot, whom, by a pardonable error, he describes as an Oxford professor, obtained from him in 1877-8 a collation of the Constantinople MS. of the longer Ignatius; but, for some reason unknown to him, was prevented from editing it, and how he then gave another collation to Funk, whose edition appeared in 1881, thus getting four years' start of the previous applicant.

In the present edition the value of each of the authorities for the text is carefully tested. As charming examples of the author's critical skill may be mentioned his proof (p. 111) of the worthlessness of a MS. which purports to be a transcript by Leo Allatius of a MS. in the Vatican library, but which is here convincingly shown to contain only a made-up text, in the construction of which printed editions have been used; and a similar proof (p. 116) that a MS. on which an argument had been founded by Pearson is really derived from Morel's printed text of 1562. The present edition is furnished with a complete apparatus of illustrative matter, which saves the student the necessity of turning to other books, there being chapters of "quotations and references" which give at full length, with annotations, all the passages from ancient writers, down to the end of the ninth century, which throw light on Ignatius. There are also dissertations on several questions raised in the course of the enquiry. Thus the study of the history of the martyrdom of Ignatius is facilitated by a complete discussion of the chronology of Trajan's reign, and that of the martyrdom of Polycarp by a dissertation on the office of Asiarch. But what most readers will regard as giving the book its highest value is its complete vindication of the priority and genuineness of what our author calls the middle form of the Ignatian epistles. The case, indeed, had been so ably argued by Zahn twelve years ago as to bring conviction to my own mind; but his work had been generally neglected by those who were too strongly wedded to the view which had become traditional in their school to trouble themselves to hear arguments on the other side. But it will not be easy to treat with like neglect so important a contribution to the literature of the subject as the present volume. In this, Zahn's arguments are restated with admirable clearness, and are reinforced with so many additional proofs that, in my opinion, a man must be argument-proof who shall hereafter deny the genuineness of the Ignatian letters known to Eusebius.

The present review is scarcely likely to be read by anyone who will need explanation as to the three forms in which the Ignatian letters have circulated. These are (1) the longer form, in which the epistles circulated for centuries, and in which alone they were known at the time of the revival of learning. This form contained a collection of twelve letters, or (including a letter not from but to Ignatius) thirteen; but when the question came to be investigated, just suspicions of interpolation arose from the fact that only seven letters were known to Eusebius, and that the quotations from Ignatius in early writers

differed a good deal from the current form. (2) The shorter Greek, or, as it is here called, the middle form. The recovery of this form presents an interesting chapter in the history of criticism, as affording an example of the fulfilment of a scientific prediction, resembling that of the discovery of the planet Neptune. Archbishop Ussher took notice that the quotations from Ignatius in three mediaeval English writers coincided in form with those of the early writers, whence he inferred that MSS. of this form must at one time have circulated in England, and predicted that if search were made such would be found. And so it proved; and Ussher was thus enabled to edit a Latin Ignatius of the early type. The greater part of the corresponding Greek was almost immediately after recovered and published by Voss, and the text was afterwards completed by Rinnart. Bishop Lightfoot calls attention (p. 84) to another instance of Ussher's sagacity in predicting that further light would be thrown on the Ignatian question by the recovery of an Armenian version. (3) The short or Syriac form. This became known through the publication in 1845, by Dr. Cureton, of a Syriac version from two Nitrian MSS. It contained but three epistles, and these in a much shorter form than even the shorter Greek. Cureton contended that in this Syriac form we had the genuine nucleus out of which the two current Greek forms were successively expanded. Cureton made many distinguished converts, including Lightfoot himself. On the other hand, the Greek Ignatius had many defenders; some of whom maintained that Cureton's Syriac was but a "miserable epitome made by an Eutychian heretic," while again, there were those who agreed with Cureton in holding the priority of the Syriac form, but did not admit the genuineness of either. The controversy raged fiercely for a time, but may be now said to have nearly died out, the Curetonian cause having been gradually deserted by its ablest defenders.

In the present volumes the claims of the longer recension are first examined; and, though these claims have now no advocates, a useful work has been done in presenting clearly and decisively the reasons for their rejection. There is now also general unanimity among critics as to the time when this longer recension was manufactured, namely, the last half, or perhaps quarter, of the fourth century. There are, however, two questions concerning the framer of this recension about which controversy still exists. One is as to his doctrinal views. The weight of critical opinion is in favour of the view that this writer was an Arian; but Lightfoot points out that the arguments in favour of his Arianism come much short of demonstration, and that he uses no language which might not have been employed by an orthodox man, vehemently opposed to Sabellianism and zealous to maintain the unity of God. Still, it seems to me that if there be not proof of his Arianism, there are, at least, grounds for vehement suspicion. In every theological controversy we are accustomed to find the extreme views on both sides separated by intermediate views shading off one into another by very fine gradations. Heresy very commonly arises in a too violent reaction from some opposing form of error; and it

often happens that men, themselves desirous to remain within the limits of orthodoxy, have more dislike of the error which the heretics oppose than of that which they affirm, and are, therefore, sorry that men whom they find much to sympathise with should be excluded from the Church. The line of distinction, therefore, between the Arians and those who were only Arianisers may be too faint for us to be able to determine on which side of it the false Ignatius lay, the grounds for suspicion being not so much what he says as what he refuses to say. But it is no guarantee of his orthodoxy that he is willing to give to our Lord the title God, this language being used without scruple by Arians, who, nevertheless, held that "there was when the Son was not." The other question still disputed is as to the relation between the false Ignatius and the interpolator of the Apostolic Constitutions. Lightfoot proves demonstratively that there is a relation of dependence between the two documents; but Ussher had believed that the same hand had been at work in bringing both documents to their present form, and this view has lately been very ably advocated by Harnack. Harnack's essay did not appear until after the section of the present work which deals with this subject had been printed, and, consequently, the bishop could only notice it in a couple of lines in the *corrigenda* at the end of the volume. He there contents himself with referring to what he had previously said as giving his reasons for believing the two documents to be the works of different authors. But the matter really deserves a new investigation with a view to this special question, for much of what had been said without direct reference to it is really not applicable. For example, the fact that blunders made in the Apostolic Constitutions are repeated by pseudo-Ignatius is equally explained whether we suppose that either writer was misled by his predecessor, or that the same man made the same mistake on two different occasions. The case would be different if it could be shown that the false Ignatius had misunderstood the Apostolic Constitutions, and had been led by them into a blunder of which they are innocent. If the two writers are found to be different, it will have to be decided whether the later writer was ignorant of the spurious character of much of the former work, and, if so, what interval of time it is reasonable to believe separated the two forgeries. The doctrinal tendencies of both are the same. Indeed, Mr. Ffoulkes, in his recent work, *Primitive Consecration of the Eucharistic Oblation*, quite passionately asserts the Arianism of the framer of the Clementine Liturgy. For myself I shall be better pleased if it turns out that we can be permitted to believe that the forgeries that made their appearance toward the end of the fourth century were all the work of one clever and unscrupulous man than if we are forced to recognise the existence of a school of successive forgers.

The next chapter of the bishop's work deals with the short or Syriac form of the Epistles, in the priority of which he had himself at one time been a believer; and if the Curetonian were the only form, or could be proved to be the primitive form, of the Syriac text, its claims might be maintained. But,

both indirectly, through the Armenian version, and directly, there is evidence of the existence of a Syriac version of the Ignatian Epistles corresponding to the Vossian Greek; and it is found to be on many grounds immensely more probable that the Curetonian is an abridgement of this version, than the latter an expansion of the former. To these considerations Lightfoot adds an argument founded on a minute comparison, made now for the first time, of the diction of those parts of the Ignatian Epistles which Cureton accepted with those which he rejected, establishing common authorship so decisively that we may count it as proved that the MSS. used by Cureton merely contain extracts from a version of the Greek Epistles, though we need not suppose the extracts to have been made with any heretical intent. The third form must be considered in another article.

GEO. SALMON.

TRANSLATIONS FROM VICTOR HUGO.

Selections, chiefly Lyrical, from Victor Hugo.

Translated into English by various authors; now first collected by Henry Llewellyn Williams. (Bell.)

Translations from the Poems of Victor Hugo.

By Henry Carrington, Dean of Bocking. (Walter Scott.)

Several considerations militate against Mr. Williams' design having more than a *succès d'estime*. Victor Hugo, whatever else he had or had not, certainly had a large unmistakeable manner—we do not mean a mannerism—which rarely left him, and is almost as recognisable in his earlier as in his later poems. Translation is gravely faulty, to say the least of it, if it fails to reproduce something of this manner, by some unity of treatment or of tone. But this is out of the question in a volume like Mr. Williams's, an amalgamation of translations new and old, literal and free, by translators of all powers and qualifications. Here are versions by Caroline Bowles and by "Father Prout," side by side with others by Toru Dutt and Prof. Dowden, Mr. A. Lang and Bishop Alexander: each has his manner, and we seem to see Victor Hugo's work in a mirror cut into facets. It is puzzling, almost bewildering. We almost wish the translations had been differently arranged, and the work of each individual translator put together, instead of being scattered up and down the volume.

On the other hand, the book can, and does, give a most impressive idea of Victor Hugo's range. Translators of every conceivable quality have found in him, and here give us in their own words, something they profoundly admired. The diversity of subject and treatment is marvellous—how much more marvellous was the single genius which underlies it and rouses it all! In endeavouring to make some critical selection among the many workers in this broad flowery meadow, we labour under some difficulty, from the great number of anonymous contributions, referred vaguely to *Fraser* or *Dublin University Magazine*, &c. We do not know whom, nor how many, we are criticising; and comparison becomes guess work.

Among the early poems, we give a high place to Mr. J. L. O'Sullivan's versions of

"Les Orientales" (pp. 47, 58-62, 66-9), as also to the very spirited "Lost Battle" (p. 53), which is signed W. D. This latter is too long to extract—its merit lies in its racing speed and vigour. Of Mr. O'Sullivan's versions we must give a specimen—it shall be the last stanzas of "Sara la Baigneuse":

Fancying herself a queen,
All unseen;
Thus vibrating in delight;
In her indolent coquetting
Quite forgetting
How the hours wing their flight.

To the harvest-fields the while,
In long file,
Speed her sisters' lively band,
Like a flock of birds in flight
Streaming light,
Dancing onward hand in hand.
And they're singing, every one,
As they run:
This the burden of their lay:
"Fie upon such idleness!
Not to dress
Earlier on harvest day."

This is not very solid poetry, but it is extremely airy and picturesque, and certainly gives the tone of its original better than most of these versions. The same may be said of the next, "Expectation" ("Monte, écureuil"), by the same hand.

But, among the longer poems, Mrs. Newton Crosland carries off the palm with her "To some Birds flown away" (pp. 121-7), translated from "Les Voix Intérieures." It is an exquisite poem, exquisitely rendered. We can only give its grave and tender close. The poet begs the children, who have unknowingly burned some verses of his and been banished, in his momentary anger, from his presence, to return again:

"Children, whose life is made of hope,
Whose joy within its mystic scope,
Owes all to ignorance of ill,
You have not suffered, and you still
Know not what gloomy thoughts weigh down
The poet-writer weary grown.
What warmth is shed by your sweet smile!
How much he needs to gaze awhile
Upon your shining, placid brow,
When his own brow its ache doth know. . . .
Come back then, children! come to me,
If you wish not that I should be
As lonely, now that you're afar,
As fisherman of Etréat,
Who listless on his elbow leans
Through all the weary winter scenes,
As tired of thought—as on Time flies—
And watching only rainy skies!"

The worst we could say is that the thought is Victor Hugo's, but the touch more like Mr. Matthew Arnold's.

The many versions by Toru Dutt are all interesting and some excellent, but her necessarily imperfect mastery of English makes them, like her other poems, uncertain and uneven. Often some emphasis or usage, familiar to any English reader, is unknown to the Indian lady, who, in her short life, felt so deeply the poetry of the West.

But nothing, we think, in the whole book is quite so good as two of Mr. Lang's versions—one grave, one gay; both admirable. The first is to be found on p. 111. It is from "Les Chants du Crépuscule," and entitled by the translator "More Strong than Time." It formed a gem, long ago, in *Ballads and Lyrics of Old France*, and those who read it there will welcome its reappearance. We should like to give it entire, but the last three

stanzas we must give. If there be anything finer in Victor Hugo's minor poems, or anything better translated anywhere, we have not seen it:

"Since I have known above my forehead glance
and gleam,
A ray, a single ray, of your star, veiled
always,
Since I have felt the fall upon my lifetime's
stream,
Of one rose-petal plucked from the roses of
your days;

I now am bold to say to the swift changing
hours,
Pass, pass upon your way, for I grow never old.
Fleet to the dark abyss with all your fading
flowers,
One rose that none may pluck, within my
heart I hold.

Your flying wings may smite, but they can never
spill
The cup fulfilled of Love, from which my lips
are wet.
My heart has far more fire than you have frost
to chill,
My soul more love than you can make my soul
forget."

Mr. Williams, or his printer—I hardly think it can be Mr. Lang—has substituted, in l. 7, "flee" for "fleet," and, in the last word but one, "love" for "soul": I have quoted from the original version, published in 1872.

The second of Mr. Lang's renderings is on p. 169—"How Butterflies are born." Here, also, there are minor changes from the original version, which do not all seem improvements; but the poem is charming.

Mr. Williams's own versions are of unequal merit. We regret that he tried his hand on such a masterpiece, such a "lyrical tragedy" as "Gastibelza" (pp. 138-40). This poem needs a poet to translate, as it has had one to praise it; it is:

"The crying of one for love that strayed and
sinned,
Whose brain took madness of the mountain
wind."

And that mountain wind moans and whistles
drearly through the utter hopeless tragedy
of the original; but this is all Mr. Williams
hears of it.

"I saw her pass beside my lofty station—
A glance—'twas all!
And yet I loathe my daily honest ration,
The air's turned gall!
My soul's in chase, my body chafes to wander—
My dagger's fled—
O! this chill wind may change, and o'er the
mountain
May drive me wild!"

May we call Mr. Williams's attention to a discrepancy in the translation on p. 275? He ascribes it vaguely to the *Dublin University Magazine*, but treats it as anonymous. It may have appeared there for aught we know; but it is certainly not anonymous. It occurs in Mr. Swinburne's second series of *Poems and Ballads*, pp. 225-26; only, as printed by Mr. Williams, the last stanza will not construe, the first does not scan like the others, and other slight discrepancies are observable. Is it possible the *Dublin University Magazine* was hoaxed?

On the whole, next to Mr. Lang's, we think those that we have mentioned, with Bishop Alexander's, Mr. Edwin Arnold's, and some of Lord F. Leveson Gower's, are the best translations here.

An extremely pleasant little prefatory essay, signed E. Martinengo-Cesaresco, is prefixed to the Dean of Bocking's translations. It is sympathetic and genial, without being effusive, and contains an anecdote so characteristic of the poet as to be worth reproducing. "You spoil those children," said Mme. Drouet to the poet, speaking of Georges and Jeanne. "It is you who should be put in the dark cupboard." "Never mind, grandfather," whispered Jeanne, "when you are in the dark cupboard, I will bring you the pot of jam." The little lady had clearly had her reasons for not dreading the dark cupboard particularly! For the poetic sequel of the event, see "L'Art d'être Grand-père." It is a pity that such a pretty little volume should be so defaced with misprints: the list of *errata* is terribly long.

One of the prettiest versions in either of these volumes is Mr. Carrington's rendering (p. 58-60) of "Les Bleuets." One verse will show how gracefully it runs:

"They knew not. Alice, simple maid,
Was loved and then she loved again;
And so Xarama's blooming plain
Beheld her won, and then betrayed.
The twain at eve, with lingering feet,
Wandered beneath the starry sky—
Away, away, young maidens hie,
And pick the corn-flowers in the wheat."

And here (p. 102) is a rendering of the exquisite "June Nights" in "Les Rayons et les Ombres."

"In summer daylight fled—where flowers abound,
The fields their luscious fragrance pour afar;
With half-closed eyes, ears scarce awake to
sound,
Slumbering, our minds not all unconscious are.
The stars more pure shine through the shadowy
skies,
Uncertain twilight tints th' eternal vault,
Dawn, soft and pale, waiting its hour to rise,
Seems all night long on heaven's low ridge to
halt."

This is not perfect: the first words are ambiguous. We do not like "to halt" as a rendering of *errer*, and for "ridge" we would fain read *verge*. But it has a rhythm and tenderness of expression—qualities more observable in Mr. Carrington's book than in much of Mr. Williams's collection, and particularly frequent in the shorter poems—as, e.g., in "If my Verses had Wings" (p. 119). Mr. Carrington is less happy in fiercer poems like "The Party of Crime" (pp. 111-15); but in that gentlest of Hugo's masterpieces, "Les Pauvres Gens," we prefer his couplets (p. 176-84) to Bishop Alexander's quatrains: he misses too much of Hugo's strength—as who does not?—but has really a portion of his sweetness.

It is impossible to read translations, even so good as many of these are, without feeling that we want a real poet for the great task of showing Victor Hugo's best work to English readers who are limited to their own language. Remembering what Chapman's Homer did for the Greekless Keats, some may wonder respectfully if our living poet and panegyrist of Hugo, fitted as he is beyond other men for the task, might not now leave praise of Hugo to others, and give us some of Hugo himself? E. D. A. MORSEHEAD.

A History of Norfolk. By Walter Rye. (Elliot Stock.)

A SERIES of popular county histories that should give sound instruction as to ancient and modern times—avoiding, on the one hand, the exhaustiveness of the folio history, which was intended only for the great public libraries and the shelves of the student or book-collector and, on the other, the dull instructiveness of the guide-book—is a most excellent idea. If all the shires of England are treated with the same care and discrimination which Mr. Rye has shown in his *Norfolk*, the set of books, when complete, will be of great interest and value. They can never take the place of the exhaustive history, but will give a general picture which must be found instructive by all who desire to know about the past.

We value Mr. Rye's book highly, but when fault-finding has to be done it is better to begin at once. The only serious objection we have to make to his volume is that references to the sources from which he has derived his materials are not sufficiently numerous. We would also suggest (though this is a minor matter where tastes differ) that the account of the "Broads and Marshes" is by far too long. It is not a journal of an actual tour, neither does it read quite like leaves from a guide-book; but it is something between the two, which is out of place in a county history, whether its scale be large or small.

Mr. Rye's first chapter is excellent. He states, with a clearness and precision that leave nothing to be desired, the theory that Norfolk was inhabited long before the Roman invasion by a people who spoke a Teutonic tongue. We are strongly moved to call this a fact, not a theory only, so very strong is the evidence which points in this direction. As there are, however, many persons who still cling to the opinion taught in the popular history books, that such Norse blood as we of the eastern shires possess has come entirely from the pirate hordes of whose doings the Saxon Chronicle makes mention, it is well to speak at present with great caution. We cannot, however, see how Mr. Rye's arguments can be answered, and we know that if he had cared to strengthen his case by going beyond the bounds of his own county that he might have made most important additions to the evidence. What he says of Norfolk applies with equal, perhaps, indeed, with somewhat greater, force to Lincolnshire and the large district in the East Riding of Yorkshire called Holderness. In these places there is not a single place-name, except perhaps those of a few rivers and streams (and this is doubtful), which can be traced to Celtic. They are all Low German (Saxon) or Norse. The experience we have had of other invasions, such as Spain by the Moors, Neustria by the Northmen, and Asia Minor and the lands now known as Turkey in Europe by the followers of Islam, show that conquest, though it may alter the spelling and modify the sound, has little power in changing the place-names of a country. The conquest of Judaea by Joshua, according to the evidence which has come down to us, was far more complete than that of the eastern counties of England by the Danes, in the historic time, can have been; but yet, if we may trust the evidence of

experts, traces of an older race yet remain in rock and valley, village and stream, all over the land of promise. That a Celtic people had at some early time a few settlements in the land of *bys* and *thorpes* we do not understand that Mr. Rye calls in question. We believe the testimony of graves points to this; but beyond a few urns and personal ornaments there is no evidence that the Celtic wave of population ever reached us, or, if it did, that it was more than a passing overflow. We trust that Mr. Rye will expand this most instructive chapter into an independent work which shall settle the question so far as Norfolk is concerned. We would remark that names of towns and villages are not the only evidence on which he should rely. The field-names should be gathered from charters, enclosure awards, the lips of men, and every other available source. We have had the advantage of examining some of the materials for a catalogue of this kind relating to the whole of Lincolnshire. This large, though still imperfect, collection bears out to the fullest extent the opinion that the name-givers were Teutons. As it is very important that evidence should not be overstated, especially on a subject which is still a matter of controversy, we must beg to call in question the conclusion that the termination *dale* in Burnham Deepdale had any relation to valley. We as fully accept Mr. Rye's "transplantation" theory as to the place-names of Norfolk as everyone does who sets himself to account for the English, French, Spanish, and Portuguese names which stud the map of America; but it does not, therefore, follow that Burnham Deepdale or Bracendale are transplanted names. They may be; but the fact that there is not a valley in either place does not in the least affect the question. The Old-English *Dæl*, a part or share, has certainly entered into the composition of many local names where the notion of a valley is out of the question. This has probably been the case at Kirby Underdale in Yorkshire; but the assumption may admit of question. There is no doubt, however, as to the meaning of the scores of *dales* which are to be met with in Lincolnshire. The Ordnance Map shows on the lowlands adjoining the river Witham Blankney Dales, Martin Dales, Timberland Dales, and Tilney Thorpe Dales. In 1503 there was at Temple Brewer a plot of land called Temple Daile; and from some law proceedings of that date it is evident that this place was a "lot" or divided portion of open land. The evidence given by a certain Thomas Baker is "that there was a grete bounde-stone standing of the south syde of the Temple Daile when he was yong" (*Sketches of New and Old Sleaford*, 1825, p. 341). This stone evidently was a mark of separation between the *dale* or share of land which had belonged to the Knights Templars, and someone else. There were *dales* at Ashby in the parish of Bottesford in 1606, at Kirton in Lindsey in 1616, and *dales* exist at Scotter and Willoughton at the present time. Mac-kinnon, a writer of the year 1825, who could have no idea of the value of the information he was recording, says that in the parish of Messingham, before the enclosure, when any person had six lands together in one place in the open field, it was called a *dale*.

Norfolk had to bear but few of the miseries

of the great Civil War of the seventeenth century. That little Mr. Rye has told well, and without the party prejudice which so often disfigures the writings of moderns, who fancy that they see in the contest between the king and his parliament a foreshadowing of the political janglings of our own day. Though Norfolk was spared from much of the suffering which Roundhead and Cavalier inflicted, it has not passed scot free. The law of compensation has been fulfilled. Norfolk has been the victim of the Squire forgeries which misled Carlyle, and there are yet some credulous persons who accept them as genuine. Mr. Rye devotes some little space to them. It is not much, but is quite sufficient to disprove the authenticity of such rubbish.

The curious and minute details which Mr. Rye has collected on almost every conceivable subject which relates to his county is beyond all praise. We note a few merely as samples. Castle Rising was one of the rottenest of rotten boroughs. The burgesses who returned the members became reduced at last from fifty to two. The entire proceedings were carried on in the chancel of the church. From the few extracts given we should imagine that the Burnham court-rolls contain much that is amusing and instructive. In the 28 of Edward I. John Doget was fined sixpence because he slandered (*vilipendulat*) a pig belonging to Martin de Southmore. This reminds one of a complaint which a Lincolnshire peasant recently made to a neighbouring justice of the peace, that a malicious neighbour had been "illifing" the complainant's foal. Great dissatisfaction was shown because the magistrate did not at once interfere.

Mr. Rye gives several instances of the wanton destruction of the memorials of the dead. One clergyman, it seems, actually went so far as to refuse permission to a properly accredited person to copy the inscriptions in the parish church. If this ecclesiastic is really so ignorant as to think that the parish church is his private property, it is time that some zealous missionary should instruct him as to the limitations of his power.

EDWARD PEACOCK.

English Life in China. By Major Henry Knollys. (Smith, Elder & Co.)

CHINA is confessedly a country of enigmas, and there is so much that is strange and novel to be found there that when writing of it it is quite unnecessary to seek for imaginary wonders with which to astonish the world. But then it is presupposed that the traveller is in a position to appreciate the strange novelties it presents. This, however, does not appear to have been the case with Major Knollys. He knew nothing of the language, for which he expresses a supreme contempt; and, with the exception of a medical man or two and of a few other residents whom he met, he seems to have depended solely on his "boy" for information on all points of interest.

The results are such as might have been expected. The author has been grossly misled, and has been induced to publish a work which is disfigured throughout by grotesque blunders. To everything Chinese he shows the deepest aversion. His account of the dirt of the cities

is so exaggerated that it becomes ridiculous. Hankow is, comparatively speaking, a fine city, and yet he describes his entrance into it in these terms :

"We pass under the portals; and at the first glimpse the thought occurs to my mind, 'Abandon hope, all ye who enter here.' But for the shame of irresolution it is not improbable that I should turn round and flee. I scarcely think that the historical hero of the 'Night in a Workhouse' had greater need to clench his teeth, hold his breath for a moment, and vow that he would go through with his self-imposed task."

When speaking of the people he describes them as the "ill-governed, overwhelmingly numerous brutish Chinese nation." For such a race a religion which "is comprised in the observance of a few symbolical rites, and in the study of the moral precepts of Confucius and Lao-tse, and which is held in contempt by the learned, the indifferent and the materialist," is plainly appropriate. We have at different times read many strange statements with regard to the Chinese, but this is the first time we have met with the assertion that the precepts of Confucius are held in contempt by the learned. Perhaps Major Knollys's "boy" was a Buddhist. It may be, also, that he got much of his information about the work done by the Protestant missionaries from the same source, as it is almost equally untrustworthy. On this subject his knowledge is so elementary that he seems to consider that there is only one version of the Bible in Chinese, and he is good enough to assure us that "a revised translation is an urgent desideratum."

These and other errors might possibly be explained on the ground of faulty information, but it is difficult to find any excuse for the prevalent mistakes arising from the want of common care in observation. For example, after having performed his pilgrimage through the streets of Hankow he embarked in a boat on the Yang-tze, and writes :

"My flagging interest is at once roused by this remarkable water highway. There is a junk laden to its gunwale with copper cash, and yet the amount estimated does not exceed in value £5, or about 29,000 coins."

This junk must have been as remarkable as the water highway. 29,000 Chinese cash, the coins spoken of, would go comfortably into a hand-basket, and that such a number should load a junk to its gunwale is passing strange. One other instance of Major Knollys's careless observation and we have done. The most marked peculiarity of Chinese speech is the sing-song intonation imparted to it by the "tones" of the language, but this is passed unheeded by Major Knollys, who remarks :

"We usually talk of the pitch, the intonation of the human voice—it is high or low, soft or discordant, and thereby we imply the existence of musical attributes. But the Chinese voice possesses not the faintest trace of melody or resonance. I can only liken it to the noise produced by pieces of bone or lumps of wood knocked against each other."

There are, however, two points to be commended in Major Knollys's book: it is well printed and tastefully bound.

ROBERT K. DOUGLAS.

TWO BOOKS ON HORSES.

Horse and Man: their Mutual Dependence and Duties. By the Rev. J. G. Wood. (Longmans.)

Our Horses; or, The Best Muscles controlled by the Best Brains. By A. Saunders. (Sampson Low.)

THESE books are written with the same object—to recommend a rational, common-sense treatment of horses. Too often custom and fashion prescribe the harnessing and management of the horse. Mr. Wood, especially, is diligent in pointing out the frequent absurdity and many cruelties of such a system. His motto is "follow nature"; and, seeing that the horse in its native wilds is an inhabitant of the hard dry plains of Central Asia, he would have most horses taught to do their duty unshod, believing that the hardest roads not only do not, in such a case, injure them, but that they are positively beneficial in keeping down the superabundant growth of the hoofs. Indeed, the horse is equally at home on grass, stony ground, or rocks. Its sureness of foot is marvellous if only left to itself. Thus, the ponies on Exmoor seem to prefer rough and rocky ground, climbing and leaping with all the agility and truth of eye ordinarily associated with goats or mountain-sheep. No "horsey" man, however, will appreciate this book; no admirer of the vagaries of fashion with regard to the harnessing of a horse will care for it. Such men will put down Mr. Wood's researches among horse-shoes and bits as mere theories. But the author simply adduces facts to illustrate his statements, and then leaves the reader to draw his own conclusions; and this is ever the most persuasive kind of argument.

The book opens with a capital account, illustrated with figures, of the anatomy of the horse, especially of the legs. This is a commendable feature, continued throughout the book; and the homologies of the horse's skeleton with our own frame will astonish those who only know the horse as a machine for traction or locomotion. The *rationale* of horse-shoeing is next examined, and no more important chapter could be recommended to every one's attention who keeps a horse. Too often the whole procedure is left to the country blacksmith, and from his ignorance or carelessness half the ills arise which beset a horse. "The shoe causes laminitis, quitters, thrush, and navicular disease, all being inflammatory in their nature. Contracted hoof, greasy heels, and sand-crack are equally attributable to the shoe." From being shod, moreover, a horse contracts bad habits, such as clicking, cutting, and the like. Passing to the harness, here again nature is ruthlessly trampled upon; "gag" bearing reins are employed, martingales, long-cheeked curb bits with their corresponding chains, and blinkers to prevent a horse using its eyes. Not satisfied with these torments, fashion attempts to improve the horse itself. Its ears may be cropped, or, as this is not now the mode, the hairs inside them, expressly placed there by nature to exclude flies, dust, and the like, are singed off by some stupid groom with a candle. If not injured by having its mane "hogged," its appearance is disfigured by the process. "Docking" and "nicking" the tail, which were customary in the beginning

of the century, are, Mr. Wood fancies, again gaining ground, and cannot be too absolutely condemned. These are effected by cutting off the hair (given the animal in order to whisk off flies) and then cutting off several of the joints of the tail, and searing the bone with a red-hot iron. The reader will hardly credit that in July, 1884, a council of veterinary surgeons was found to vote unanimously that "the docking of horses' tails was conducive to human safety." We shall leave Mr. Wood to stigmatise this vote as it deserves. Clipping horses, again, is not only senseless, as opposing a law of nature, but leads frequently to many illnesses. It will surprise most horse owners to be told that clipping is quite a recent invention, and was only introduced from the Continent about 1825, the Peninsular War having taught the custom to our officers. Mr. Wood has much more to say upon the ventilation of stables, upon giving plenty of water to horses, and the need of a stable floor being level rather than sloping. All these reforms are so consonant to common-sense that we wish every owner of a horse could read this excellent book. We are confident that in some point or other his horse would be grateful to him before a month had elapsed. It is no manner of use listening to a groom on such points as are here treated. He cannot leave the faulty traditions of his class behind him. *Idola stabuli*, as Lord Bacon might have called them, are far too powerful for him. This is emphatically a book for owners of horses. They, too, often need to have it impressed upon them that gentleness is the true way to manage a horse. This animal ought, according to the familiar words—

"Magis atque magis blandis gaudere magistris
Laudibus, et plausae sonitus cervicis amare."

We are thankful to see that Mr. Saunders agrees with Mr. Wood in advocating most of these reforms. As he himself says "unthinking brute force is not the weapon with which man can hope to make the best of his most willing and most timid servant, the horse." His book is a complete manual, based on the best modern experience, of how to rear, break in, ride, drive, and treat horses. Thus it will be seen it is far more comprehensive in its aim than Mr. Wood's work. The uninitiated, with this book in their hands, will be saved from falling into Dr. Johnson's mistake about the "pastern" of a horse; although it will still be as well for them, in spite of Mr. Saunders's figures of a horse's teeth at different ages, not to trust their own judgment unreservedly when purchasing at a horse fair. "Copers" and "bishops" cannot be entirely checkmated even by Mr. Saunders. Similarly, although he describes in every detail the process of subduing a wild horse, it may not be advisable for a beginner to attempt to tame another "Cruiser." The author is throughout most practical: ailments, breeding, rearing of foals, and the like, are usefully described. We turned with some curiosity to the sections on the vice of rearing. Patience and a mild bit are Mr. Saunders's specifics; in extreme cases a recourse to the old custom of letting the horse rear, when driven with long reins into a soft spot of ground, and then, by means of a powerful bit, dragging him over backwards

several times. Nothing could be more sensible and less cruel than this treatment.

For a practical guide to the horse-keeper *Our Horses* is highly to be commended. We should suggest a table of the headings of the chapters in a new edition, and the index, though full, is frequently ludicrously so, and proves the need there was for an Index Society to be constituted. Turning to the entry "Shepherd's Dog," in some wonder what it could have to do with a horse, the section referred to bids us treat our horses with love, as the dog is treated by "the poor mountain shepherd." Similarly, the entry "Elman's Southdowns" informs us "What Bakewell's, [*sic*] Leicesters, and Elman's Southdowns are to sheep," so are Clydesdales among horses. So far as we can see, the index-maker has set down every proper name in the text, whether used as an allusion or not. The effect of this not unfrequently reminds us of the celebrated index-story of Mr. Justice Heath's great mind.

M. G. WATKINS.

NEW NOVELS.

Through Love and War. By Violet Fane. In 3 vols. (Hurst & Blackett.)

Love—or a Name. By Julian Hawthorne. (Trübner.)

A Strange Voyage. By W. Clark Russell. In 3 vols. (Sampson Low.)

Mind, Body and Estate; and Sea Maidens. By F. E. M. Notley. In 3 vols. (Ward & Downey.)

Fair Katherine. By Darley Dale. In 3 vols. (Hurst & Blackett.)

Marah. A Prose Idyll. By E. M. Marsh. (Field & Tuer.)

Grace Murray. By Ella Stone. (Nisbet.)

Through Love and War sustains neither the promise of *Sophy* nor the performance of the *Edwin and Angelina Papers*, having neither the interest and movement of the former nor the sense of fun which pervaded the latter. It is merely an average society novel made up of old stock materials, not even disposed afresh, and reads as though the author herself viewed it as a disagreeable piece of taskwork, which had to be padded out to the requisite dimensions by the introduction of wordy digressions and wordier letters, the longest of which comes from a man who, given the portrait of him in the book, would have said all he wanted on one side of a sheet of "Queen's note." The story is not so dull as to be unreadable. Possibly those who have not met with "Violet Fane's" earlier work may find it passable, though they cannot think it fresh; but her own capacity for doing better must decide the critic's verdict. In the one place where she seems to intend breaking comparatively new ground (not quite new, for it is touched in *Little Dorrit*), namely, some sketches of life among the burrowers in the warren of Hampton Court Palace, which might well supply amusing materials, she has failed to be lively, and where she is didactic there is nothing for it but to skip.

Mr. Julian Hawthorne has made to some extent a fresh departure in his latest book,

which has already run its course in one of the monthly magazines, for he has followed in the track of the writers of *Democracy* and *An American Politician*. The chief motive of his story is the cleavage in American political life caused by the coming of the question of civil service reform to the front; and his attitude seems to be that of a sincere and convinced "mugwump." He puts into the mouth of his leading character strong language in condemnation of the political system in the United States, not merely as it is practically worked, but even as it is theoretically framed. Thus, he not only gives us such a sentence as this: "A man in public life, unless he have commanding genius, cannot afford to be good; there is no place nor occupation for him;" but adds later, speaking of the constitution of the United States, "This government is the systematised robbery of the many by the few. No one is responsible, and no one cares. . . . What is everybody's business is nobody's business, is a good old proverb, and the Constitution of the United States is its prophet!" Accordingly, the speaker of these words, a man of much ability, culture, wealth, and force of character, who is secretly devoured with ambition, though professing indifference to public life, conceives a plan for purifying the public service by a revolution which is to put a permanent Dictator, unofficial and irremovable, but all-powerful, behind President, Senate, and House of Representatives. But the flaw in the conception is that the man is himself not honest and fair-dealing, being just as ready to use dirty means and dirty tools as any of those against whom he declares war, and having quite as selfish motives, though happening to prefer substantial, if secret, power to money or place. Such a man would have none of the zeal for official honesty with which Seth Drayton is credited by Mr. Hawthorne. The minor plot of the book, from which it takes its title, is the relation of Warren Bell, a young man whom Drayton has drawn into his scheme as a valuable ally, just because of his courage and honesty, to a girl named Nell Anthony, whom he has loved, and who does love him, but who rejects his offer of marriage, because she sees that it is rather a sense of quasi-duty which has prompted it than warm affection, and that his heart is really occupied with his schemes of personal advancement. The portrait of this girl is the chief reminiscence of Nathaniel Hawthorne's manner in the story; but Mr. Julian Hawthorne has defeated his end by making it super-subtle as a study, so that it lacks clearness of presentment. Drayton's plot is betrayed by his own daughter to a man who has a long-standing grudge against him, and who plans and carries out a devilish revenge, which has tragic results, and is painful, if vigorous, reading. On the downfall of the scheme, Warren Bell discovers that love is better than a name, and seeks Nell Anthony once more; but we are left in the dark as to whether Mr. Hawthorne himself shares in the optimistic view advanced by that young lady, that the Republic is bound to come right in the long run, and that lobbying, log-rolling, and all the rest of it, will vanish in due time.

There is a sixteenth-century true story which serves as a useful apologue, and whence

Mr. Clark Russell may take a hint. A Spanish adventurer, newly returned from South America, went into a jeweller's shop, and produced a fine emerald, asking its market value. "It is worth fifty gold cruzados," was the answer. Hereupon he took a still larger and more beautiful stone from his purse, and asked its worth. "That stone is worth three hundred cruzados." Much delighted, the owner begged the jeweller to come with him to his inn to see some more, and displayed a box filled to the brim with scores of large emeralds. "These, señor," drily remarked the jeweller, "are worth one cruzado." Mr. Russell undoubtedly "struck oil" with his earlier sea-stories. They were the best since Marryat's, and with a quality of scenic and atmospheric description which Marryat's did not possess. But they have lacked variety of treatment, chiefly because the story proper, the personal interest, is usually subordinated to the fate of the ship and the details of the storm which wrecked it—details which may have perennial freshness for mariners, but which pall at last on the critic, who is inevitably a land-lubber, and who would not turn a hair if he were to read of belaying the main truck or keelhauling the companion hatchway. Now, Marryat did not fall into this kind of error. His sea-novels were so diverse in handling that *Peter Simple*, *Newton Foster*, *The King's Own*, and *Mr. Midshipman Easy* might have been written by four different authors; whereas Mr. Russell has become mannered, and one is almost tempted to think that if three or four of his later novels were to have the volumes mixed up, a not exceptionally inattentive reader might be pardoned if he took up vol. ii. of novel B, in continuation of vol. i. of novel A, and ended by reading vol. iii. of novel C, without discovering that he had changed the venue twice over. Now, this is impossible to the reader of Marryat. The human interest is the leading one in all his sea-novels, and the rest is simply the picturesque frame in which he places his figures. Mr. Black, after the success of his *Princess of Thule*, gave way for a while to the temptation of exploiting the Hebridean seas, and making his stories mere logs of a yacht; but when it came to *White Wings*, the public would stand it no longer, and he was wise enough to accept their judgment, and to mend his ways. It is to be hoped that Mr. Russell will do the like; for the present novel, though it would make its mark were it a first effort, merely tells over again a story not materially different from that of half-a-dozen of its precursors, and contains no character in whom the reader can feel interested, while there is not the element of action and personal movement which is found in the best of his former books, the *Ocean Free Lance*.

"Mind, Body, and Estate," are the names given by the hero of the story to himself (an artist), to a handsome man about town, and to a young peer—all of whom are suitors to the same heiress. There are two distinct narratives threaded together, one lying in the past, and the other dealing with a younger generation. The latter is a fairly bright novelette; but the earlier is not quite so well managed, being somewhat deficient in evident motive for some of the leading situations. *Sea Maidens* is an excursion into

the field of imaginative romance, with an extra-human element in it. It displays considerable fancy; but has scarcely been worked out clearly enough to be vivid, or to carry the reader away by making him feel that, once granted the possibility of the starting-point, the rest must naturally have happened. Further, though there is no precise indication of date, yet the story must fall within the present century, and ought to have been thrown back at least two hundred years to ensure acceptance as a legend, impossible of credence if told of a family in our own day.

Fair Katherine is the first book on a large scale to which the name on the title-page seems to be attached, though some short tales have also appeared, similarly ascribed. It is a very clever novel indeed, much above the average of a season, with a well-managed plot, skilfully working up materials which have, no doubt, often served before, but which are here handled in a fresh and effective fashion. All the leading characters are clearly drawn and individualised, and the dialogue is natural and suitable, while in some places a quiet sense of humour is evident. It is not an epoch-making book, and it has the literary defect of an excess of minor details here and there; but it is capable of being read twice, and that is exceptional merit for a new writer to have attained.

THE author of *Marah* has contrived a good plot, and has drawn two characters with some power; but the book is injured by the style, which is stilted throughout, no doubt with the object of giving the story a quasi-poetical form in accordance with its title of idyll, but which is not good art. And the reader of the rhapsodies put into the mouth of the Count de St. Gris will have nothing for it, in his amazement at them, but to exclaim with Henri Quatre, "Ventre St. Gris!"

Grace Murray is a very short, simple, and wholesomely written story of a girl with strong artistic tastes, who meets with a disappointment in love, and finds consolation in the practice of her skill in painting, refusing other means offered her by more than one admirer.

RICHARD F. LITTLEDALE.

GIFT-BOOKS.

Brownsmith's Boys. By G. Manville Fenn. (Blackie.) Hitherto we have known Mr. Fenn chiefly (if not solely) as a writer of those stirring tales of adventure in foreign lands which are considered to be the appropriate diet of boys during the Christmas holidays. The present book belongs to a higher class of literature. The hero, indeed, is a boy, and so was the hero of *David Copperfield*. But as no one, we suppose, is greatly interested in the hero of Dickens's masterpiece, except so far as the incidents are auto-biographical, so the merit of this book lies in its subordinate characters. Brownsmith No. 1 (we cannot say so much of Brownsmith No. 2) is a real creation; so is Shock; so is Ike. All the market-gardening scenes, and notably the midnight journey from Isleworth to Covent Garden, are described with a truthfulness and enthusiasm that should delight the heart of our great novelist "grower." Despite a few conspicuous blots, *Brownsmith's Boys* excels all the numerous "juvenile" books that the present season has yet produced. The worst of these blots are the two stepsons of Sir Francis, and the weak conclusion. If

Mr. Fenn would only avoid such yieldings to popular convention, and undertake a real novel on a larger canvas, we can promise him that he will win his way into the front rank. The illustrations are by Mr. Gordon Browne, whose pencil must have been very busy during the past summer. Judging from the results, he does not seem to have felt the same interest in his author's story that we have done. The design on the cover, which is not repeated in the body of the book, is the best.

The King of the Tigers. By Louis Rousselet. Illustrated. (Sampson Low.) If there had been no Jules Verne, there would probably be no Louis Rousselet; certainly there would be no Louis Rousselet in English. Not that the latter has ever reached—or even attempted—the marvellous flights of semi-scientific imagination that made the former deservedly famous. It is rather Jules Verne's second manner that has furnished Louis Rousselet with his model. *The King of the Tigers* recalls, in some of its characters as well as in its general conception, *The Steam House*. But it is only just to add that the present book has the advantage, both in being strictly limited to the possible, and in being evidently founded upon a personal knowledge of India. We have been specially attracted by the good humour with which some of the less agreeable traits of Anglo-Indian life have been satirised. The satire, of course, is broad, otherwise it would be wasted on young readers. But it never quite passes into farce, and is always combined with a respect for the persons satirised, which we are not accustomed to find in a French writer. The Frenchman of Leech, if not more true to life, is certainly more creditable to his creator than is the Englishman of "Cham." Having said so much upon the ethical or international aspect of this book, we must add that we have read it through with pleasure and with rapidity, and that the illustrations are as clever as the text.

Friends and Foes from Fairy Land. By Lord Brabourne. (Longmans.) Lord Brabourne's witches and fairies are of the old-fashioned type, and his stories gain effect by the happy way in which the reality of their existence is taken for granted. The volume before us consists of three stories. The Cat-man details the adventures of an unfortunate mortal, converted into a cat and placed in the service of a witch, but who happily recovers his true form and liberty by aid of a good fairy. The witches of Headcorn cause the disappearance of a girl from her father's home; the father recovers her after many trials, and the witches are duly dispersed and punished. Rigmarole is the story of an elf, born with good propensities, who seeks a soul, but dies on obtaining the fulfilment of his desire.

The Lion Battalion, and other Stories. By M. E. Hullah. (Hatchards.) Two of the stories in this volume—"The Fireman's Little Maid," and "Mr. Greysmith"—entitle the author to a place in the first rank among writers for children. It is a long time since we read anything better of their kind. The other four stories are less noteworthy, and are somewhat too foreign in tone—they deal with child-life in Germany—to be attractive or even intelligible to English children; but older readers will appreciate the poetic feeling and the singular grace of expression by which they are characterised.

When I was a Child; or, Left Behind. By Linda Villari. (Fisher Unwin.) To all appearance this book is an actual portion of Madame Villari's autobiography. The names of persons and places, we presume, are changed; Croydon, for instance, is called "Wandleton," though the description of the place is exact in every detail. Whether there is any other

fictitious element in the story we cannot tell: if so, it is skilfully managed. The book is worth reading; but for children we can scarcely recommend it, on account of the atmosphere of gloom and discomfort by which it seems to be pervaded.

The Little Doings of Some Little Folks, by Chatty Cheerful (Cassell), is a real child's book—one which children of eight or ten will read, and children of three or four will listen to, with eager interest from beginning to end. It tells how the "little folks" of a country household visited their cousins in town, how the cousins returned the visit, what games they played at, and what stories they told. The illustrations, of which there are more than a hundred, are of various degrees of merit, but several of them are admirable. We suspect that some of them may have done duty before; but if so, the text is so cleverly written up to them that they seem to be exactly where they ought to be.

Every-day Fables: No. 1. "The Modern Giant-killer"; No. 2. "The Pebble and the Brook"; No. 3. "The Door-mat and the Scraper"; No. 4. "The Oak and the Nettle"; No. 5. "The Butterfly and the Toad"; No. 6. "A Patch-work Quilt." Written and depicted by R. André. (S. P. C. K.) An excellent series of parables, illustrated with much humour. The language is, perhaps, somewhat above the standard of little folks, but the lessons inculcated are admirable, and the pictures should bring them home to the audience with the least possible admixture of the didactic.

The Queen of the Arena and Other Stories. By Major Stewart Harrison. (Fisher Unwin.) Major Harrison can write a good story. Several of these were well worth reprinting. "La Fleur de Ruel," "Six Inches of Steel," and "The Prize Maiden" are of the best. "The Queen of the Arena" is well told, but the pathos of the clown and the dying wife is rather threadbare; and the same string is harped upon in the next tale, "Chota Sahib Charlie," which is improbable and not very interesting. In short, the stories are unequal; but there is sufficient merit in the best to render the book welcome, and to make us hope that its success will be sufficient to encourage the author to issue a second selection in accordance with the hint in the preface. Three of the stories have their original illustrations—one of which is by Millais—and the grotesque headpieces are of much merit.

Fairy Prince Follow-my-lead, by Emily E. Reader (Longmans), is a daintily got-up volume. The doings of the fairies and their human playmate have a pretty want of consequence which suits the world to which they belong; and if the story has no proper ending, this is as it should be for those for whom it is meant, who will be all the more ready to listen to the next instalment.

Little Chicks and Baby Tricks. By Ida Waugh. (Griffith & Farran.) A very pleasant book for little ones, full of charming baby figures and creditable baby rhymes.

A Nineteenth Century Hero, by Laura M. Lane (S. P. C. K.), is a somewhat commonplace story of the establishment of a co-operative store by working men. The genius who conceives and carries out the idea is harshly separated from his sweetheart by her father, a grocer, who fears injury to his business from the project; but, in the course of ten years, everybody connected with the store grows rich and prosperous, and true love is rewarded in the end.

The Fate of the Black Swan, by F. F. Moore (S. P. C. K.), is the story of the search after a shipwrecked brother, lost on the coast of New

NOTES AND NEWS.

Guinea. The narrative is poor, and the characters not sufficiently interesting. A talkative blackbird, which accompanies the expedition during a part of its course, is introduced without apparent reason—unless it be to illustrate the superstitions of sailors, which seem, indeed, to be justified by the result. The pictures are inadequate.

Patience Wins; or, War in the Works. By George Manville Fenn. (Blackie.) A capital tale of strife between masters and men. The revelations of the Trades' Outrages Commission, and the bursting of the Sheffield reservoir, are the materials from which the author has constructed his story, which deserves as much popularity with boys as his previous works. The illustrations are good.

Silver Mill: A Tale of the Don Valley, by Mrs. R. H. Read (Blackie), is another story of Sheffield by a less practised hand. It is well written and excellent in moral, but lacks adventure, and is disfigured by some very ill-drawn and inappropriate illustrations.

The Will Power; its Range in Action, by J. M. Fothergill, M.D. (Hodder & Stoughton), "attempts to review the will in relation to other mental qualities and endowments, and to circumstance." It is a superficial production, with much moralising on the blessing of possessing a strong will, and many trite anecdotes of men who, in history or recent novels, have by perseverance succeeded in life. Some of these anecdotes are new to us; as, for instance, "Lord Coleridge overcame the famous Claimant at first; but a day or two's familiarity with the performance, and the Claimant fairly worsted him, completely vanquished him indeed."

ARCHDEACON NORRIS has reprinted (S.P.C.K.) his *Ten Schoolroom Addresses*, first published thirty-six years ago. They are admirably adapted for use both in elementary schools and in the schoolrooms of children of the higher classes as well, being earnest and lucid, raising children's thoughts instead of descending to them.

Letters by the late Frances Ridley Havergal. (Nisbet.) It is a boon to the public to be permitted to enter into the inner life of this true poetess. The tender heart that poured itself out in music and song was also the focus of home-work and painstaking, and a most patient scribe for all who sought her pithy words. Many who turn over this volume will get a message pregnant with light, and go on their way instructed and rejoicing. Its naturalness and fulness of sympathy give a wonderful insight into the daily life of one who was specially gifted both to stimulate and to refresh.

Harper's Young People, 1885. (Sampson Low.) There is no other juvenile magazine—none, at least, intended both for boys and girls—which is quite equal in the interest and variety of its contents, to *Harper's Young People*. The volume before us, which ends with the October number, contains half-a-dozen serial stories, besides an abundance of short tales and articles on every subject interesting to children. The papers on natural history are especially good. The American character of the magazine is not always a drawback to its interest with English readers; and a good many English writers are numbered among the contributors—notably, Mr. James Payn and Mr. David Ker. There are many hundreds of illustrations, on the whole very good, though we doubt whether their rough sketchy style is quite suited to childish taste, which, so far as our experience goes, delights in firm outlines and smooth finish. Each monthly part in this volume contains one of the beautiful coloured flower-pictures from Mr. Heath's *Sylvan Spring*.

WE hear that Mr. Swinburne has undertaken the article on "Webster" for the *Encyclopaedia Britannica*.

MR. RUSKIN's publisher reports very cheerily of the steadily increasing sales of Mr. Ruskin's works. He hopes to have the new edition of the *Stones of Venice* ready by February, and is already at work at the much-desired reprint of *Modern Painters*, which he will reproduce with plates equal to those of the first edition, in five handsome volumes at five guineas, during the course of next year.

THE day of election to the Professorship of Poetry at Oxford is fixed for Thursday next, November 26, from 2 to 4 p.m. The electors are Convocation, i.e., all masters of arts whose names are on the books. There are three candidates—Mr. F. T. Palgrave, of Exeter; Canon Dixon, of Pembroke; and Mr. W. J. Courthope, of New. Among the supporters of Mr. Palgrave are the names of Robert Browning, Matthew Arnold, Sir F. H. Doyle, and the Dean of Chichester.

PROF. FREEMAN is announced to give a public lecture at Oxford to-day on "The Historical Geography of South-Eastern Europe."

THE following is the text of the Latin speech with which the Public Orator at Oxford presented Dr. J. A. H. Murray for the honorary degree of M.A.:

"Insignissime Vicecancellarie, vosque egregii Procuratores, praesento vobis Jacobum Augustum Henricum Murray, olim Societatis Philologicae Praesidentem, de scientia linguistica, si quis alius, optime meritum. Jam nunc trecentorum fere annorum memoriam recolenti venit mihi in mentem vir doctissimus Robertus Stephanus, 'princeps lexicographorum.' Quis est vestrum quin cognoverit Thesaurum illum linguae Latinae, cuius in prooemio habetis eruditum auctorem his vocibus profitentem: 'minutissima quaeque adeo scrupulose adnotavi ut nullum fere verbum praetermiserim, quod ad Latine tum loquendum tum scribendum commodum esse existimarem?' Magni sane opus, ceterorumque omnium quae postea exstiterint quasi archetypum atque exemplar! Adest hodie Stephani discipulus summo magistro haud indignus, qui in Anglico sermone enucleando, illustrando, interpretando vel maiori sese operi et quidem Herculeo labori accinxit. Gratulor tibi, vir eruditissime; gratulor academiae quae impensis suis atque auspiciis tantum doctrinae monumentum in lucem proferre haud dubitaverit."

MR. GERALD MASSEY has just returned, with renewed health, from his visit to the Australian colonies. We understand that he intends to take the lecture field once more at home.

M. MAX O'RELL will lecture in England and Scotland during the months of December, January, February, and March. His first lecture will be delivered at Leamington on December 2.

MR. E. T. COOK has resigned the post of secretary to the society for the extension of university teaching in London. He is succeeded by Mr. R. D. Roberts, whose name is already known in connexion with similar work at Cambridge.

THE Latin play this Christmas at Bath College will be the "Mostellaria"—Prof. Sonnenschein's text, with a very few "cuts."

DR. JAMES MARTINEAU is revising a new edition of his *Types of Ethical Theory*, expressly for the American market.

A NEW edition of Miss Mary Robinson's latest volume of poems, *New Arcadia*, will shortly be brought out by Messrs. Longmans.

WE learn that *King Solomon's Mines*, by Mr. Rider Haggard, which has already reached a

third edition, is being translated into French and German.

MR. QUARITCH is about to publish a set of fourteen designs by "Scroodles," in which the more prominent champions of the Liberal and Radical party are very amusingly caricatured. Well-known nursery rhymes, slightly but skilfully adapted to the occasion, will face the illustrations, over each of which the author has punningly inscribed the name of a dish so as to make her little work a political menu.

MESSRS. GRIFFITH, FARRAN, & Co. will shortly publish a cheap issue of Mr. Swallow's account of the battle of Nevill's Cross, reprinted from his *History of the Nevill Family*.

MESSRS. CASSELL & Co. will, from the commencement of 1886, be the exclusive publishers of "Letts's Diaries," and of the Christmas annual *Yule Tide*.

MR. B. C. SKOTTOWE, author of *Our Hanoverian Kings*, has just published, with Messrs. Cooper, of Birmingham, a popular Life of Joseph Chamberlain.

THE New York *Independent* has purchased the little volume that recently came to light, containing a rhymed version of "Beauty and the Beast," the authorship of which has been attributed to Charles Lamb. The poem itself is to be printed in the "thanksgiving" number of that paper.

MESSRS. DODD, MEAD, & Co., of New York, have issued a catalogue of MSS. and rare books, with prices annexed, from which we make the following extracts: A vellum MS. of the fifteenth century, containing a chronicle of the early Dukes of Burgundy, with fifteen full-page miniatures, from the Didot sale (1000 dollars or £1200); two fifteenth-century *Horae* (1800 dollars or £360, and 1500 dollars or £300); a complete set of Audubon's works, in fifteen volumes, of which the *Birds* had been the property of the engraver Havell (2500 dollars or £450); a set of Dickens's works, in seventy-two volumes, mostly first editions, with many extra plates (1500 dollars or £300); Ruskin's *Stones of Venice*, *Modern Painters*, and *Seven Lamps*, nine volumes, all first editions except reprints of the first two volumes of *Modern Painters* (500 dollars or £100); the first folio of Shakspeare, in its original calf binding and in good condition (425 dollars or £85); a set of Dyce's editions of the English dramatists, in twenty volumes (340 dollars or £68).

THE City archives of Worms, which were in a condition of disorder and confusion, have now been arranged and chronicled by Prof. Boos, of Basel. The cost of the long and difficult work has been entirely borne by Herr Wilhelm Heyl, a wealthy manufacturer of Worms. Prof. Boos is now devoting his time to the *Geschichte der Stadt Worms*, which he began under such difficulties.

MR. FISHER UNWIN has just published a revised edition, in a single volume, of Vernon Lee's *Euphonia*. The public are to be congratulated, no less than the author, on the fact that a popular issue has been called for, in little more than twelve months, of a work that makes a serious effort to examine some of the most interesting problems in history, in literature, and in social life.

DR. FURNIVALL apologizes for sending us last week a before-printed extract from Holinshed about Shakspeare's "strange snow." A friend writes to him:

"Confound those ancients, they're always stealing our best things! Steevens, in a note on the 'Merry Wives' (p. 184, vol. viii., *Variorum*, 1821), gives the very passage quoted by Dr. F. in to-day's ACADEMY."

THE FORTHCOMING MAGAZINES.

THE first of three papers on Bishop Lightfoot's *Ignatius and Polycarp*, by Prof. A. Harnack, of Giessen, will appear in the *Expositor* for December.

PRINCIPAL FAIRBAIRN will reply, in the next number of the *Contemporary Review*, to Cardinal Newman and Dr. Barry.

PRINCESS LOUISE and the Marquis of Lorne will be joint contributors to an early number of *Good Words*. Their subject is "Our Railway to the Pacific," the Princess contributing the pictures, and Lord Lorne the letterpress.

THE December number of the *National Review* will contain the first part of a new novel by Mr. W. H. Mallock.

PROF. MAX MÜLLER is writing a series of "Short Biographies of Words" for *Good Words*, the first of which will appear in the January number; and with it will also appear the first portion of Mr. J. Thomson's account of his journey "Up the Niger to the Central Sudan." The Duke of Argyll will write on "Our Highland Mountains and their Origin." Mr. Froude's long-expected articles on "The Templars" will appear soon afterwards. Dr. Skelton ("Shirley") promises studies on "The Scotland of Mary Stuart," Mr. Augustus J. C. Hare, "Walks in Old Paris." Miscellaneous contributions include the names of the Archbishop of Canterbury, Sir Lyon Playfair, and Captain Markham, besides Mary Howitt's "Reminiscences," and the serial stories by Miss Mary Linskill and Mr. George Manville Fenn already announced.

THE December number of *Time* will contain an examination of Mr. Herbert Spencer's *Political Philosophy*, by Mr. D. E. Ritchie; "Indirect School Influences," by the Rev. Harry Jones; the conclusion of Stepniak's "Russian Storm Cloud," and a paper on Miss Gordon Cumming's forthcoming "Wanderings in China."

THE December number of Mr. Walford's *Antiquarian Magazine* will contain articles on "King Ina in Somerset," by Mrs. Boger; and on "Elizabethan Dramatists," by Dr. B. Nicholson; and, under the heading of "Autograph Letters," a communication from Horace Walpole (after he became Lord Orford) to J. C. Walker.

THE *Scottish Church* for December will contain papers on "Sir David Wilkie," "Ecclesiastical Assessments," and "The Church and the Nation," and the commencement of a new story, "Peniwerne Manse."

In the *Sunday Magazine*, Archdeacon Farrar is to write on "Every-day Christian Life"; Mr. Hugh Price Hughes a "New View of John Wesley"; Dr. Oswald Dykes, some chapters for young men on "David's Early Life"; and Mr. Horsley, of Clerkenwell Prison, some "Episodes in the Life of a Gael Chaplain." The serial story will be by L. T. Meade; and, besides the usual Sunday Talks with the Children, "Brenda" promises a special serial story for the young.

ORIGINAL VERSE.

SIR HARRY VERNEY AND THE LATE LORD SHAFTESBURY.

[Sir Harry Verney was one of the friends who stood round the body of Lord Shaftesbury during the funeral service in Westminster Abbey. He is nearly of the same age, and stood by his side in the cricket fields of Harrow, in the House of Commons, and in many of the good fights which Lord Shaftesbury waged for

so many years on behalf of the weak and suffering.]

AN old gray man lies in his coffin there,
And by his side stands one as old and gray;
And side by side these two have stood to play
In Harrow's cricket fields when boys they were;
Thus Time runs on who knows not how to spare;
Their morn of life long past and ripened day,
Their evening passing, one has passed away,
The other waits till Time his night declare.
And shall they once again, as here below,
Stand side by side, as Man's Hope promiseth?
Why are we here, and whither do we go,
And why this change from youth to age and death?
But hearts, that cherish love, doubt will not know,
Nor bear the thought that Life must end with breath.

J. J. AUBERTIN.

MANOR COURT ROLLS.

A PART of the *Proceedings* of the Society of Antiquaries, including the period between January 31 and June 26, 1884, has been circulated among the fellows during the last few days. It contains a communication from Lord Justice Fry on "Manor Court Rolls," which is so important to all who are interested in the growth of our social life, that we make no apology for printing a portion of it in the ACADEMY.

"The introduction into Parliament of a Bill to effect the compulsory enfranchisement of copyholds has revived a thought which has often, from time to time, presented itself to me, viz., that the extinction of copyholds will produce the gradual destruction of the court rolls of the manors throughout the country, and with it the loss of a large mass of materials of great value to the historian and the antiquary.

"That court rolls have this value is a point on which I need not dwell, as it must be familiar to many members of your society. No person can have a casual acquaintance with court rolls . . . without seeing that they throw great light on the history of the tenure of land, on the extinction of serfdom, on the ancient modes of agriculture, and on such communism as existed here in former times. Mr. Seebohm's work upon Village Communities, and Prof. Thorold Rogers's work upon Wages, are recent illustrations of the extent to which the court rolls (associated as they often are with the records of courts leet) throw light upon the social and economical condition of this country in past ages.

"These court rolls have, I suppose, been mainly preserved because of the frequent references made to them by the copyholder, and the consequent fees coming to the stewards of the manors. As copyholds become extinct the court rolls will, I also suppose, become valueless, and gradually pass to the rats or the glue-makers, or otherwise resolve themselves into their simplest elements. Such a gradual destruction of precious antiquarian documents would be a matter of great regret; and, on the other hand, the assured preservation of what now remains would be a matter for congratulation to all persons interested in the history and antiquities of our country."

The opinion of Lord Justice Fry on a matter of this kind is most important, and will carry conviction to many who would not have been influenced by what mere men of letters or antiquaries might say. We may add that manor court rolls are important documents for several other reasons besides those given by the learned judge. In many cases they go back to a time far antecedent to the institution of parish registers. We have seen several of the time of Edward I., and have heard, on good authority, of one series which begins in the reign of Henry III.; they are, therefore, of the utmost importance in tracing pedigrees. In some cases—the great manor and sake of Kirton-in-Lindsey, for instance—wills are entered on the rolls, copies of which, as far as can be ascertained, do not exist elsewhere. It may be useful, also, to point out

that in the earlier time each manor had its own system of government; and that we find many things entered on the rolls of extreme interest, which have no relation to land-tenure, but belong to what may be called the moral legislation of the people.

CORRESPONDENCE.

THE TEXT OF THE ANCIENT LAWS OF IRELAND.
Leipzig: Nov. 12, 1885.

As a foreigner, I should not like to be the first to urge upon the British Government the necessity of a new edition of the Brehon Laws. But, as competent English scholars have been discussing this necessity in the ACADEMY, I may take the liberty of joining them, and of declaring that in the main point I fully agree with Mr. Whitley Stokes, Mr. Standish H. O'Grady, and Dr. Norman Moore. There can be no doubt about the importance of the Brehon Laws. They are not only important as the old national code of Ireland, but also, from a more general point of view, as an Aryan code of original development, which was not influenced by the Roman law. They contain, moreover, linguistic material of the highest value to Celtic and comparative philologists. But these texts are very difficult. I tried to read them in the Dublin edition; but I never dared make use of them, because I was not

certain of their correctness and exactness as they are printed. Irish MSS. are full of contractions; and even to the best scholar it is not given always to hit the exact form meant by the author or the scribe. In publishing the older Irish texts it is quite necessary to mark the editorial additions and expansions. I think one may gratefully acknowledge the services which Dr. O'Donovan and Prof. O'Curry rendered to Celtic philology, and yet candidly confess that one does not approve of their transcripts being printed without any hint as to how far the words of the printed text are actually in the MSS. If these important legal texts are full of difficulties, scholars want at least to spend their time and labour only where they may be sure of really having before them the exact reading of the MS. I think the new edition ought only to give the Irish text printed according to a cautious method. The old edition would keep its value as containing also a first translation, notes, and introductions. To give also at once a new translation of the whole would be a very hard demand from any new editor, and would probably delay the appearance of the better text *ad calendas graecas*. Perhaps the result of the new edition will be that the first one was not so bad, if one makes allowance for a certain amount of faults due to human frailty, the chief calamity being the present uneasy uncertainty. Suspicion is raised, and ere it is removed there will be no sound progress in the study of old Irish law. I write these lines after having collated the facsimile prefixed to vol. iii. of the *Ancient Laws of Ireland* with the corresponding pages of the printed text (p. 278 *sq.*). I hope nobody will take offence at this brief statement of my opinion.

ERNST WINDISCH,

Professor of Sanskrit and Comparative Philology in the University of Leipzig.

CARTWRIGHT'S "ADMONITION."

Brasted, Sevenoaks: Nov. 14, 1885.

To the edition of Cartwright's *Admonition* in the Christ Church Library (Wake Collection) is prefixed this note by a later hand. "Printed according to Herbert in 1572. See p. 1631. This copy is peculiarly curious. It has some original lines by Field, one of the authors who, with Wilcox, was sent to Newgate, 2 Octob., 1572." The lines referred to are as follows:—

"To Mrs. Catesbie, my very friend.

"Reade and peruse this lyttle booke
With prayer to the Lorde,
That all maye yelde that therein looke
To truth with one accorde.

"Whiche thoughte our troubles it hathe wrought
It shal prevaile at laste,
And utterly confounde Gods foes
With his confoundinge blaste.

"As pope hath falne so muste all popes
And popelinges every one;
So muste his lawes whereby he rulde,
And Gods worde stande alone.

"Whiche is the scepter of the might
Of Chryste our Lorde and Kinge,
To whiche we muste subject of right
Our selves and everye thinge.

"Yo^u. in the Lorde,
Jo: FIELD.

The lines are on the original fly-leaf, and written in a beautiful small Elizabethan hand, somewhat faded.

H. A. TIPPING.

"MILTON AND VONDEL."

Northolt Vicarage: Nov. 17, 1885.

As several of the later reviewers of my book on *Milton and Vondel* have evidently derived their information upon the subject not from the work itself, but from the pages of the ACADEMY,

I should feel obliged if you would again allow me the use of your columns.

It is assumed by certain critics, sitting in the seat of the scornful, (1) that I have written in a spirit of hostility to Milton, and that I seek to convict him of vulgar plagiarism; (2) that some of the parallel passages I have brought forward are clearly traceable to a common source; (3) and with reiteration, that I have, to serve a bad purpose, translated with a metre "more or less Miltonic," instead of reproducing Vondel's rhymed Alexandrines.

With regard to the first allegation, I confidently appeal to the full unfolding of my purpose in my introductory chapter. With regard to the second, I refer the reader, among other passages, to chap. iii., p. 45; and as a complete answer to both charges, to the following sentences (chap. vii., pp. 190-191):

"It will be admitted, we think, after making every possible deduction, from the long array of parallel passages set forth in the preceding pages, for resemblances, which are accidental, for material derived from common sources, for comparisons that are strained, that we are justified in describing this disclosure of the obligations of Milton to Vondel as a curiosity of literature. We have already plainly stated, but again repeat, that depreciation of Milton's supreme poetical merits lies as much beyond our power as it is outside our purpose."

The metre I have adopted is only Miltonic because it is English. Blank verse is the national English equivalent for the rhymed Alexandrines of France and Holland, in dramatic dialogues. Nay, even with regard to the varied and complicated metres of Spanish plays, Lord Holland writes (*Life of Guillen de Castro*, p. 99), "A translation in good blank verse would alone do them justice." Moreover, in my special case, the necessity for absolute verbal accuracy necessitated the abandonment of rhyme; and whatever may be otherwise their merits or demerits, this accuracy I believe I have generally attained in my translations. It was a bold venture on my part to dare, in the presence of the Miltonic parallels, to give renderings in the metre which the great poet has handled so magnificently. "Mediocrity," to quote again Lord Holland, "escapes in the disguise of rhyme the censure which she would unavoidably incur, if her poverty were exposed to the nakedness of blank verse." And yet my critics, far from accusing me of making poor translations, insinuate that I have bettered Vondel! My modesty forbids me to take the compliment to myself. *Timeo Danaos et dona ferentes*.

Lastly, I feel compelled, however severe the shock may be to Mr. Gosse's *amour propre*, to state that he was not the first to bring the Milton-Vondel question before the English public. It was concisely but clearly stated in a paper, now lying before me, entitled "The Life and Writings of Joost van den Vondel," by the Rev. A. Fischel, in 1854. The writer, like myself, in order "to convey an idea of Vondel's style and genius," has translated a portion of the first act of the *Lucifer* into blank verse.

GEORGE EDMUNDSON.

"THE BRONTË FAMILY."

Oakwood, Skircoat, Halifax: Nov. 14, 1885.

I owe a debt of gratitude to Mr. Noble for his careful and appreciative review of my book, *The Brontë Family*, which appears in the ACADEMY of to-day; but I shall be glad if you will permit me a few lines in regard to one or two matters of fact with which he deals. I would point out that I have not aimed altogether at a "whitewashing" of Branwell Brontë. Indeed, I have distinctly stated that my object was to set him in a true light, not to clear him from failings that really were his; and this, as

Mr. Noble allows, I have been enabled to do. With reference to the question of the authorship of *Wuthering Heights*, Mr. Noble suggests that I may be wanting in candour in my way of dealing with it. He thinks, I infer, that having collected evidence which appears to have a certain cogency that Branwell had a hand in the work, I ought to have given my adherence to that view of the case. I confess, however, when I had regard to the whole of the circumstances, that I did not feel justified in doing so; and I stated my belief that the evidence on the point was probably insufficient. But I had been able to prove conclusively that Branwell had written a portion of a novel before his sisters undertook theirs, and I knew it had been alleged that he had written *Wuthering Heights*. I felt, therefore, that the story of his life would be incomplete, that I should not do justice to it, unless I included in my book what could be said on the question; and the evidence is, at least, curious. Branwell's verse, whatever may be its poetic worth—and it seems to me to show that he had great capabilities—has had a surpassing value to me, for it has illustrated most admirably what I had to say about himself.

FRANCIS A. LEYLAND.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 23, 4 p.m. Royal Asiatic: "The Buddhist Element in Oriental Life," by the Rev. Hilderic Friend.

7.30 p.m. Education Society: "Training in Abstraction and Classification," by Mr. H. Court-hope Bowen.

8 p.m. Royal Academy: Demonstration, "The Trunk," II., by Prof. J. Marshall.

8 p.m. Society of Arts: Cantor Lecture, "The Microscope," I., by Mr. J. Mayall, jun.

TUESDAY, Nov. 24, 8 p.m. Anthropological Institute: Exhibition of Ethnological Objects from Tierra del Fuego, by Mr. C. H. Read; Exhibition of Composite Photographs of Skulls, by Dr. J. E. Billings;

"Insular Greek Customs," by Mr. J. Theodore Bent; "A Game with a History," by Mr. J. W. Crombie;

"Migrations of the Kurnai Ancestors (Gippsland)," by Mr. A. W. Howitt.

8 p.m. Civil Engineers: "High-Speed Motors," by Mr. John Inrady; and "Continuous-current

Dynamo-Electric Machines, and their Engines," by Mr. Gisbert Kapp.

WEDNESDAY, Nov. 25, 8 p.m. Royal Academy: Demonstration, "The Shoulder and Arm," by Prof. J. Marshall.

8 p.m. Society of Arts

THURSDAY, Nov. 26, 8 p.m. Telegraph Engineers: "The Necessity for a National Standardising Laboratory for Electrical Instruments," by Dr. J. A. Fleming.

FRIDAY, Nov. 27, 8 p.m. Royal Academy: Demonstration, "The Fore-arm and Hand," by Prof. J. Marshall.

8 p.m. Brownings Society: "Brownings' Women," by Mr. J. J. Britton.

SATURDAY, Nov. 28, 8 p.m. Physical Society: "The Calibration of Galvanometers by a Constant Current," by Mr. T. Mather; "A New Driving Clock-work of Isochronous Motion," and "A New Direct-vision Spectroscope," by Mr. A. Hilger; "A Machine for the Solution of Equations," by Mr. O. V. Boys; and "A Machine for the Solution of Cubic Equations," by Mr. H. H. Cunyngnam.

SCIENCE.

Dictionnaire Etymologique Latin. Par Bréal et Bailly. (Paris: Hachette.)

THIS is an excellent book, but one which it would be easy to misjudge. It has not only two authors, but two names. The title-page offers us an Etymological Latin Dictionary; the book itself is inscribed "Les Mots Latins groupés d'après l'étymologie" (or, according to the fly-leaf, "d'après le sens et l'étymologie"). The first title is misleading; the second alone expresses the real nature of the work. It is a list of two-thirds (as we shall see below) of the root-words found in the ordinary classical Latin authors, with derivatives and compounds grouped where necessary under each, the meanings (where there are more than one) logically arranged, and, in the

case of about half the root-words, brief notes on the etymology. The authors warn us, in their preface, that etymology, "in spite of appearances," is not their chief object; and that this is not the Etymological Dictionary of which Prof. Bréal has given us so many brilliant fragments in the *Mémoires de la Société de Linguistique*. The book is intended for schoolmasters and students; and for both classes it is admirably fitted. The authors do not tell us how they divided the work. Without further information we should naturally ascribe the grouping of the words to Prof. Bailly, the history of meanings to the two authors jointly, the etymology to Prof. Bréal exclusively.

The lexicographical portion—which is by far the largest part of the book—deserves unqualified praise. Each of the more important articles—e.g., those on *ago*, *arguo*, *cado*, *cipio*, *cerno*, *dico*, *dies*, *do*, *dux*, *eo*, *facio*, *figo*, *gigno*, *is*, *laetus*, *liceo*, *lux*, *magis*, *manus*, *nē*, *officium*, *paenitet*, *peto*, *puto*, *qui*, *reor*, *sapio*, *sto*, *stringo*, *tango*, *ut*, *verto*, *video*—teems with interesting and suggestive remarks. No existing dictionary can compare in this respect with the work before us. This is a dictionary which it is a positive pleasure to read. If this is the way in which French boys are taught Latin they are lucky indeed. The quotations given are few, but sufficient, and to the point. The extreme condensation of the matter is so concealed by the ease of the style that it will often escape the reader. In no language but French could depth and elegance be so combined.

The authors give us no hint as to the limits they imposed on themselves in their choice of root-words. From internal evidence they seem to have intended to confine themselves to the classical period, ending with the death of Trajan, A.D. 117 (though they admit Suetonius's *scambus*), and, within this period, to the authors commonly read in schools, excluding, of course, fragments; though they include Attius's *ruspor*, Martial's *cucuma*, and the elder Pliny's *fiber*, *fritilla*, *scarabeus*, *secale*, *sphragis*, *vervago*. It is not, however, clear why they exclude about 1,000 of the root words found in ordinary authors. In the first ten pages we look in vain for Cicero's *acinus*, *acipenser*, *adminiculum*, *affatim*, *amita*, for Vergil's *acerra*, *umellus*, for Horace's *alec*, *ambubaisa*, *ames*, for Juvenal's *abolla*, *alapa*, *aluta*, for Plautus's *alcēdo*, or Caesar's *ambactus*; not to mention Greek words like *abacus*, *abrotonum*, *acalanthis*, *acinaces*, *aconitum*, *aota* ("shore"), *aegis*, *alucinor*, *amiracus*, *ambrosia*, *amōmum*—all found in Cicero, Vergil, or Horace.

The book contains 2154 root words; 970 of these are left entirely underived. The authors tell us in the preface that where no probable etymology of a word has yet been suggested, they have left the word untouched. In such cases they, as a rule, say nothing at all about the etymology; though occasionally they either mark a word as of uncertain derivation (e.g., *obacenus*, *pubes*, *testis*, *uxor*, *vē-*), or dispute some suggested etymology (as under *quies*, *tumultus*, *urbs*, *vitulor*). Scientifically they are doubtless right in excluding all doubtful etymologies (though we shall see that they have not wholly succeeded in doing so); practically their excess of caution will be found the one real drawback to the use-

fulness of the book. It is discouraging to find that one-half the words in their list are of wholly unknown origin; and the student will be tempted to doubt whether such is the fact. Surely the following words, if no more, do not lack connexions: in Latin itself, *celeber*, *columen*, *frequens*, *frivulus*, *medulla*, *murex*, *pulegium*, *sarcina*, *stilla* (*stiria* is omitted), *tores*, *tricae*; in Greek, *agnus*, *amārus*, *apis*, *celer*, *cinis*, *circus*, *coma*, *congius*, *dulcis*, *garrus*, *hūmeo*, *lacer*, *lacus*, *mūgio*, *murmur*, *nanciscoor*, *orior*, *palleo*, *pannus*, *pateo*, *perna*, *scabo*, *sero* ("join"), *serum*, *sportia*, *stupro*, *turtur*, *vas* ("surety"), *vereor*, *virus*; in Irish, *cum*, *laurus*, *sērus*, *siccus*; in the Teutonic languages, *ad*, *anus*, *avus*, *barba*, *caecus*, *cano*, *cipio*, *carpo*, *collum*, *corvus*, *fiber*, *flo*, *gula*, *hio*, *lābor*, *mare*, *margo*, *membrum*, *nidus*, *nōdus*, *nūdus*, *parco*, *plūma*, *sūgo*, *urgeo*, *vādo*, *vagus*, *vastus*, *vespa*; in Sanskrit, *balbus*, *largus*, *pasco*, *rītus*, *saevus*, *sono*, *ungo*, *verber*. It is hard to see why the English cognates of *fundus*, *ruber*, *venio*, *volvo* are omitted.

In an Etymological Dictionary it is always difficult to know what to do with the loan-words. In English but one-third of the root-words are of Teutonic origin (half being Latin, and one-sixth of the whole number borrowed from other languages than Latin); and an English etymologist like Prof. Skeat is obviously obliged to trace the origin of loan-words as carefully as that of native words. In Latin one word in six is of Greek origin, and one in five is a loan-word. In dealing with the 302 Greek words which they include, the authors of the work before us content themselves with saying in each case, "Mot emprunté: Grec—" (*camēlus*, *canna*, *gaza*, *marmor*, *metallum*, *prūnum*, *saccus*, are left unmarked: *caballus* is curiously enough, after Meunier, connected with *καταβάλλω*). They may fairly say that further explanation must be sought in a dictionary of Greek etymology; though we should have often been glad of some explanation of the words borrowed from Greek which the Greeks themselves had borrowed from other nations. Loan-words from other languages than Greek, like *mapāle*, *rhēda*, are merely marked as foreign (*covinus*, *ebur*, *mappa*, *murrha*, *soccus*, *sulfur*, *ūrus*, are left untouched: *petorritum* alone is explained at length).

There remain 882 words of whose etymology some account is given. Many of the best of the derivations given have already been published by Prof. Bréal in the *Mém. Soc. Ling.* (to which periodical we are, somewhat unkindly, referred for the etymology of *an*, *aveo*, *femur*, *penus*, *queo*, *rus*, *sepelio*). Some few are assigned to Corssen, Curtius, Max Müller, and Pott; but in general the authority is wisely left undetermined. Surely it does not matter who was the first author of a good etymology, even if it be oneself. No general principles of Latin etymology are given in the preface, though the extreme caution shown in the choice of cognates is plainly based on a severely scientific method; but valuable remarks on some points of philology are embraced under *fides* (strong and weak forms of roots), *decem* (Grimm's law), *linguo* (*q*—which should rather have been *qu*—and *π*), *serus* (*f* and *θ*), *vicius* (*v* and *F*), *flōs* (*r* from *s*), *septem* (*s* and *τ*), *funus* (*br* from *sr*), *olea* (the termination *-aster*). Alternative etymologies are rarely given (*fēmīna* from *fētus* or *fēlo*,

liber from *ἐλεύθερος* or *libet*, *stipulor* from *stipulus* or *stipula*, *tener* from *tenuis* or—surely impossible—*τέρην*, *vehemens* from *veho* or *vē-*).

Many of the connexions suggested are very striking, among them *furo* *θύ(σ)ω*, *inquam* *voco*, *ira* *hīra*, *lacertus*, "muscle," from "lizard" (cf. *musculus*), *loquor* *locus*, *luculentus* "rich" *lucrum*, *opinor* *ob*, *orno* *ordino*, *sēmīta* *sē*, *splendeo* *splēn*, *suppedito* *pedes* ("foot-soldier"), *tōtus* *τό*, *vēlox* *veho*, *vēlum* "mantle" *vestis* (as opposed to *vēlum* "sail," *veho*), *venūm* *Venus* ("philtre"), *vīlis* *vēnum*. Other new combinations are less satisfactory: *at* aut, *castrum* *caedo*, *frio* *frango* and *pūs* *pango*, *inānis* *Umbrian* *acnu* "land" (which, however, Bücheler renders "sacrifice"), *irrito* *hirrio* (what of *pro-rito*?), *jējūnus* *sē-* + *dīus*—"without the day's meal", *jocus* *invoco*, *litteras* *διφθέραι*, *omnes* *homines*, *so-dalis* *sum-*—"with" + *edo* (and so *sumo* *sum-* + *emo*), *tranquillus* **trans-liquillus* (which would surely give **trāquillus*). Some of the old etymologies which are admitted are simply impossible: *apio* *ἀπτω*, *frango* *ρήγγνμι*, *germen* *gen-*, *habeo* *German* *haban* (which should go with *cipio*), *horreum* *ὠρείον* (itself rather borrowed from the Latin), *lacrima* *δάκρυμα* (the roots alone should be compared), *redimio* *amicio* (and *Graii* from *Graeci*!), *simplex* *plico* (what of *simplum*?), *sincērus* "sine *cērā*," *traho* *English* *draw* (from *Pott*). The *t* in *lateo*, *pator*, *rutulus*, cannot represent *θ*. The connexion of *sol* and *ἥλιος* is not "doubtful," but impossible. Other combinations which perhaps should not have been received are *culina* *coquo* (Varro's "quod ibi colebant ignem" supplies a simpler explanation), *forma* *μορφή*, *glans* *βάλανος*, *globus* *glomus* (*promoscois* is too late to prove anything), *glōria* *κλέος*, *jacio* *ἵημι* (is *jīhmi* a possible form?), *meditor* *μελετάω* (*l* becomes *d* only through popular etymology or in vulgar Latin: the converse is the rule), *miles* *mille*, *monstrum* *moneo*, *nōmen* *ὄνομα* (which Havet rightly puts with *nun-cupo* alone), *ob* *ἐπί* (why the vowel-change?), *pons* *πάρος*, *post* *ὀπίσω*, *pulmo* *πνεύμων* (itself probably due to popular etymology), *rivālis* *rivus*, *scindō* *caedo*, *sculpo* *γλύφω*, *sterilis* *sterno*, *stringo* *German* *Strang* (against Grimm's law), *tempus* *tepor*, *tessera* *τεσσαράγωνος* (a *tessera* was really *ὀκτάγωνος*), *tribus* *tribus*, *vāgina* *vaco*. *Disco* can hardly stand for **di-dec-sco*.

Actual mistakes are hard to find. On p. 364 *σπογγία* and on p. 418 *εἰς* are wrongly accented. The forms *μυνώ* *σίπαρος* *σκαράβειος* do not seem to exist. Perhaps it does not much matter that *formucapes* is only a conjecture of Scaliger's; but the preposterous modern figment *nico* should have been excluded.

But in a work of such compass it is easy to find flaws. The etymological portion of the book is, indeed, at once so scanty and so good as to suggest the hope that Prof. Bréal will yet fulfil the promise which he, like Prof. Postgate, has so long made, and give us a complete Etymological Dictionary of Classical Latin. Books on the general principles of Latin etymology we have in plenty; an Etymological Latin Dictionary is still a desideratum, for Campos Leyza is scarcely worth mentioning, and Hintner is at once incomplete and unsatisfactory, while general Latin dictionaries, like Lewis and Short's,

derive but about one-tenth of the root-words they give, and the derivations they offer are naturally imperfect, and often unscientific.

E. R. WHARTON.

OBITUARY.

WILLIAM BENJAMIN CARPENTER.

Not only the scientific world, but the larger public, have heard with profound regret the news of the sad accident which has taken from among us the familiar and honoured figure of Dr. Carpenter. No one could have listened to him during the last few years without a feeling of admiration for the untiring energy which made him—when past his seventieth year—still one of the most forcible speakers, one of the most constant attendants, and one of the most eager debaters at the meetings of the Royal Society, the British Association, and similar gatherings. No man of science could witness, without respect and sympathy, the ardent devotion of the veteran naturalist to the cause of scientific progress, and the earnest simplicity of his character. Dr. Carpenter embraced early in life the profession of a student and teacher of biological science, and he never ceased to work with marvellous industry and extreme ability at the tasks which had thus become to him a duty. His interest in the problems which he had helped by his researches to solve, or by his speculations to simplify, was so keen that they were ever the chief occupation of his thoughts and conversation. Where another might have indulged in some trivial dialogue, Dr. Carpenter would, with a vivacity and sincerity that were the outcome of a contented and unwearied mind, captivate his interlocutor with a serious discussion of the grounds urged against his view of the animal nature of Eozoon, or as to the nervous system of Comatula; or, again, as to the theory of ocean currents, or the reform of the University of London. What he said on such occasions was admirable, and his willingness to meet fairly an antagonist was no less indicative of the true, single-hearted man of science than the almost boyish eagerness with which he would rush into the fray. The younger generations of biologists regarded him as a man of iron frame destined to grow younger, more laborious, more fruitful of good works, as they themselves grew on in years and sunk into rest and obscurity.

Dr. Carpenter's work was so abundant and varied that it is impossible, briefly, to give an outline of it. It was distinguished throughout by the highest and loftiest aims, and by a standard of excellence which, from the first, tolerated nothing but the very best and most thorough, both in scope and detail, which unsparring labour could attain. His three best-known books—his *Comparative Physiology*, his *Microscope*, and his *Human Physiology*—have each, in their day, exerted a powerful influence for good on the scientific education of the English-speaking world. In the first of these a brilliant and most successful effort was made to establish that common science of organic nature, dealing alike with its animal and vegetable phenomena, which has now received full recognition as "Biology." In the second the army of amateur observers, who delight in the revelations of the microscope, were trained to accurate work and led on to become useful auxiliaries of the professional explorers of the organic world. In the last a vast service was rendered to medical men, who had previously no such thorough exposition of the facts of human physiology in their hands. The observations and speculations on the functions of the brain and nervous system, contained in the earlier editions of that work, formed the starting-point of a new Physiology

of Mind, which the author developed at a later period of his career in a separate work—the merit of which is nowadays sometimes overlooked, owing to the fact that its teachings have become familiar commonplace.

Two great public movements owe their success to Dr. Carpenter's direction. As Registrar of the University of London, to which position he was appointed in 1856, he secured for natural science, in the examinations of that body, the prominent position which it has since held; and, in the vigorous administration of the duties of his office, contributed, beyond all other individuals, to the success and reputation of the university.

The *Challenger Expedition* and the preceding explorations of the deep sea by vessels of the Royal Navy would undoubtedly not have been carried out but for Dr. Carpenter's exertions, and for the fact that he personally took part in the earlier expeditions.

His direct contributions to science, in the form of memoirs embodying original discoveries, are splendid monuments in themselves of his skill and industry; but they become more remarkable still when we remember that they were produced by a hard-worked official, who, at the same time, was engaged in writing books and articles of a more general and educational character. The most important are (1) his beautiful memoirs on the structure of the Foraminifera in the *Philosophical Transactions*, and in a monograph published by the Ray Society (1868). This field he still cultivated in later days—as his last paper in the *Philosophical Transactions* two years ago—on Orbitolites—testifies; (2) his splendidly illustrated and minute researches on the structure and development of Comatula (Antedon); and (3) his later elaborate work (on which he was still busy) on Eozoon Canadense. In Comatula, Dr. Carpenter discovered a peculiar form of nervous system—the nervous nature of which was contested and denied by nearly all zoologists until within the last five years. Within that period the veteran naturalist had the satisfaction of finding his views on this matter very generally accepted, and of seeing his son, Dr. Herbert Carpenter, of Eton College, taking up, in the same thorough spirit as his own, the more extended investigation of the allies of the little Feather-star—the study of which he himself commenced thirty years ago in a summer holiday at Arran.

Dr. Carpenter was born in 1813 at Exeter. He was educated at University College, London, and graduated M.D. at Edinburgh in 1839. After commencing practice as a medical man in Bristol, he removed to London in 1843, and devoted himself exclusively to literary and scientific pursuits. He became Professor of Medical Jurisprudence in University College, which office he resigned in 1856, when he was appointed Registrar of the University of London. In 1878 he retired from the Registrarship on a pension, and devoted his well-earned leisure to scientific research, and to furthering, by his speaking and writing, a variety of philanthropic movements (for, like his sister, Mary Carpenter, he deserves the title of "philanthropist") connected with public education, public health, and the advancement of science.

In 1861, Dr. Carpenter received the Royal Medal of the Royal Society, in 1871 the degree of honorary LL.D. at Edinburgh, and in 1873 he was elected a corresponding member of the Institute of France.

Enough has been said, even in these brief lines, to show that in Dr. Carpenter we have lost a true leader of science, a man of rare character, whose example is of the most ennobling tendency, and whose influence has been and will remain, so long as the memory of British men of science endures, one of the brightest and best. E. RAY LANKESTER.

SCIENCE NOTES.

IN the current number of the *Proceedings* of the Geologists' Association there occurs, with other interesting matter, a suggestive paper by Mr. Goodchild, of the Geological Survey, in which he discusses the vexed question of the origin of the brick-earths and gravels of the Lower Thames Valley. The writer, after exposing the apparent inadequacy of other views, falls back on the hypothesis of the late Mr. Belt; and suggests that at the climax of the glacial period a huge arm of ice stretched across the mouth of the Thames and other rivers of the southern part of the North Sea basin, so as to pond back their waters, and raise their level to that of the upper edge of the dam. If this hypothesis be admitted, it follows that the evidence of the antiquity of man supposed to be afforded by the occurrence of implement-bearing gravels at high levels loses much of its significance.

PHILOLOGY NOTES.

THE Cambridge Press will publish immediately *The Divyāvadāna*, a collection of Early Buddhist Legends, now first edited from the Nepalese Sanskrit MSS. at Cambridge and Paris, by Prof. Cowell and Mr. R. A. Neil.

MESSRS. MACMILLAN announce an edition of *The Politics* of Aristotle, by Mr. R. D. Hicks; and also a translation of *The Rhetoric*, by the Rev. J. E. C. Welldon, headmaster of Harrow.

A NATIVE society, styling itself Rōmaji Kai, has lately been formed at Yedo for promoting the adoption of the Roman alphabet in Japan. At present the characters used to express the sounds of the language are either the *Katagana* (which consist of parts of certain selected Chinese characters), or the *Hiragana* (which are made up of cursive forms of these and other Chinese characters). In addition to these forms of writing, and commonly used indifferently with them on the same page, are the ordinary square Chinese characters. These systems as they stand are sufficiently perplexing; but the confusion is rendered worse confounded by the fact that the interspersed Chinese characters are sometimes intended to be read as Chinese words, sometimes as the synonymous Japanese words, and sometimes again as mere phonetic signs. Nothing beyond this statement is required to make out a *prima facie* case in favour of the project of the Rōmaji Kai. So far the promoters of the society sail with wind and tide, but their difficulties will begin when the vexed question of the best orthography to be adopted for the transcription of Japanese words becomes ripe for discussion.

THE issue of a large-print octavo edition of the British and Foreign Bible Society's new Hebrew translation of the New Testament, with the latest corrections of the translator (Prof. Franz Delitzsch), will be acceptable to many students of Hebrew. This is the seventh edition of 5000 copies.

A CLASS in Malayan has been opened this autumn in Cornell University by Prof. Roebrigg, who has been conspicuous for many years past in teaching a practical knowledge of several Oriental languages.

MEETINGS OF SOCIETIES.

UNIVERSITY COLLEGE SOCIETY.—(General Meeting, Tuesday, Nov. 10.)

THE SECRETARY (Prof. Morley) in his report showed that the society meant to be, and had already to a great extent become, an organisation that united all members of the college, both teachers and students, for the furtherance of social intercourse and fellowship. The number of its members at the close of the session 1884-5 was

998, and the subscription, which had been placed at the low sum of one shilling, had been sufficient for its purposes. Eight assemblies have been held by the society during the year now closed, at which the average attendance has been about 800. Other parts of the work of the society have been the furnishing of the common room of the college for men-students and the laying of the two lawn tennis courts in the quadrangle adjoining the college. The committee is now endeavouring to bring about the union of all the athletic societies of the college, and to find means for providing a ground within easy access of the college for the recreation and sports of the students. A representative committee (comprising professors and students in each of the faculties, fellows, and old students of the college) was next elected for the ensuing session, and, after the business of the evening, a social gathering, at which some 600 persons were present, took place. An interesting collection of pictures, painted by students of the Slade school, was on view, including one or two oil-paintings exhibited at the Royal Academy and a series of etchings by W. Strang. The proceedings terminated by a concert given in the Botanical Theatre.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Nov. 10.)

FRANCIS GALTON, Esq., President, in the Chair.—This being the first meeting of the session the President made some opening remarks, in the course of which he congratulated the Institute upon the obvious increase of public interest in the science of man. Besides the gratifying facts that more new members are joining the institute and that the corresponding section of the British Association was popular, there are such evidences as that the authorities of Trinity College, Cambridge, have extended the tenure of one of their fellowships to enable its holder to pursue his anthropological studies, and that at the meeting of the British Association at Aberdeen it was the rector of the university, Dr. Bain, who contributed one of the most thoughtful of the anthropological memoirs. Mr. Galton proceeded to insist upon the political value of anthropology as the science that best qualifies us to sympathise with other races and to regard them as kinsmen rather than aliens.—A paper containing a short account of some experiments in testing the character of school children as observers was read by Mrs. Bryant. In these experiments an attempt was made to read signs of character in an observer from the manner in which he makes an observation and describes it as made. From the written description of (1) a room, and (2) a picture, which the children experimented upon were first shown and then required to describe, a rough diagnosis of their character as observers can be made; and hence some idea of their character generally is obtained which, though very deficient in precision and still more deficient in certainty, may have, nevertheless, a real practical value for educational and other purposes. In the experiments made the most interesting points noticed were: (1) great variety in the proportions existing between the sensational and intellectual factors of perception; (2) the occasional prevalence of the tendency to substitute feeling for thinking, which is a very characteristic feature of general character where it exists; (3) varieties in degree and kind of orderliness; (4) differences in the degree of colour interest, as also of interest in form and number; (5) great variety in degree and kind of imaginative play as shown in the efforts of constructive explanation required to describe a picture.—Mr. Joseph Jacobs then read a paper entitled "A Comparative Estimate of Jewish Ability." This applied the same method to Jews and Scotchmen as Mr. Galton applied to Englishmen in his *Hereditary Genius*, with results favourable to the two former races in the order mentioned. The subjects in which Jews seemed to show superior ability were philology, music, metaphysics, and finance.

ARISTOTELIAN SOCIETY.—(Monday, Nov. 16.)

SHADWORTH H. HODGSON, President, in the Chair.—The Rev. E. P. Scrymgeour read a paper on "Kant's *Metaphysic of Morals*." Having insisted on the high importance of Kant's writings as demanding exact scientific distinction, especially in the department of morals, he pointed out how,

so far from quenching geniality, such moral determination secures a free social intercourse and establishes moral dignity. After reviewing these writings he described comprehensively the system of thought which they unfold; marking especially the three functions of Reason, as Understanding, Judgment and Will, in connexion with the three subordinate faculties of Sensation, Feeling, and Desire; and alluding to the obscure function of Imagination as leading on to the Hegelian development. He then dwelt at length on nine leading points brought out in the *Grundlegung*; showing how practical perplexity and speculative embarrassment are interpreted as arising in the play of the several functions of Reason, whereby, however, is effected the development of a good Will, as the true aim of Nature, through the discipline of Experience.

FINE ART.

Tiryns. By Henry Schliemann. (John Murray.)

(First Notice.)

At last, after sundry delays caused by the constant progress of further discovery, Dr. Schliemann's great work on Tiryns lies before us. It is the fourth great volume he has published, containing new materials, new results, new proofs of his remarkable genius and indefatigable labour. If we except the excavation of Orchomenus, which, though very instructive in some respects, was on the whole disappointing, all his ventures have turned out brilliantly successful—and this last, not least. Nay, it seems as if this exploration of Tiryns, though by no means so fruitful in gold work and other museum curiosities as those of Mycenae and Troy, is, from the antiquarian point of view, really the most valuable of them all. This arises in a great degree from the larger experience, and hence better method with which the work was carried out. Instead of probing by vertical shafts, which often destroy as much as they discover, the plan of uncovering the site in horizontal layers was carried out, and thus all the details of floors, housewalls, and thresholds in the old palace of Tiryns have come to light in a complete system. Furthermore, the clearing away of the rubbish necessarily accumulated by the work round the outer walls has not only restored its former appearance, but disclosed many additional facts, so important that the book was delayed for some months in order to include Dr. Dörpfeld's account of them. It is much to be wished that this systematic and reverent proceeding should be fully carried out also at Mycenae, where Dr. Adler expects that results of similar importance as to the ground plan of the palace may be obtained. These facts are mentioned in order to show the ripe maturity of Dr. Schliemann's latest labours, and how his keen insight has profited by every preceding experience. He will now have the well-merited reward of having made an epoch in archaeology, and a name as immortal as the science of his choice.

Our first duty is to give a summary of the most important facts elicited, and then to consider the inferences drawn by the author, or by his collaborators, from these facts. For every detail in the exploration we have the author's high authority, supported and verified by that most acute and cautious specialist, Dr. Dörpfeld, who now stands first among the archaeological architects, if we may coin a phrase, in the world. His experiences at

Olympia and in Sicily, and the brilliant proofs he has given of his ability on many fields of Hellenic exploration, have raised him to an unique position for his years; and anyone who reads through his modest and careful chapters (v. and vi.) will feel how thorough and conscientious is his work. He has not touched the pottery, which is Dr. Schliemann's own special ground—if the doctor can be said to have any authority greater in one department of prehistoric Greek archaeology than he has throughout all the science.

The main body of facts shows the following result. The whole upper (8.) plateau of the rock was occupied by a great palace, reached by a carriage-way sweeping round from the north-west, which was barred on its ascent, after the entrance gate, by an additional gate with vestibules fore and aft. The plan of all the vestibules was the same—it was that of the temple in *antis*. The stone thresholds are there, the round stone bases of the two pillars are there, and we can still distinguish the place where the side pilasters were set, if they are not actually *in situ*. In the case of the first massive gate which bars the approach, the great stone side posts are *in situ*; the holes for the transverse bolt to shut the gate are there; the pivot hole for the turning of the gate is still visible; and in another case even the bronze cap which protected the wooden pivot, and turned in its stone bed in the threshold, was there, and filled with wood ashes. Though all trace of the lintel and covering of the great gate had disappeared, it was easily seen that both in style and measurements it closely resembled the famous Lion-gate of the neighbouring Mycenae.

The inner gates, or entrances to the several courts, with their vestibules, had, on the contrary, no upper structure of stone. The pillars all through the palace were of wood, leaving no traces but some ashes, and the absence of all traces of architrave or other upper members of stone proves that all the roof and roof-beams were of wood. Hence we may regard the oft-attacked theory, that the Greek temple architecture was developed from wooden structures, as receiving a corroboration amounting to proof. We need only remind the learned reader of the evidence derived from the examination of the ancient Heraeum at Olympia, where all the pillars of stone vary in their proportions and design, being gradually substituted for the older wooden supports, according as they succumbed to age.

But let us return from inferences to facts. The numerous wall-courses, concrete floors, pillar bases, and thresholds laid bare by this careful system of clearing away the rubbish in horizontal layers have shown us a great complex of courts and chambers, making up a stately mansion, with offices, store-rooms, bed-rooms, and waiting-rooms, as well as state-rooms and ante-chambers, or ante-courts. And all this includes only the ground-floor of the palace. What ever upper storey existed—and there are evidences of room for staircases—has disappeared, on account of its structure being wooden, and so subject to conflagration. Even the brick walls have been glazed, and the tie beams in them burnt to ashes by the violence of the flames. Such could hardly have been the case had not a

vast mass of fuel been supplied by the wooden parts of the building. This, in itself, makes a wooden upper storey probable.

The great complex of ground-floor rooms may best be described as grouped round two centres: the hall of the men, with its ante-court; and the somewhat smaller hall of the women, with its ante-court. These two principal members of the palace lay nearly side by side, except that the latter was thrown back somewhat, and was therefore more secluded and more difficult of approach. They were not directly connected by any door or passage, so that the way from the one to the other led round by several corridors and passages, or out of the main entrance to the one and into the main entrance to the other. The ante-courts of both were surrounded by porticoes on the plan of the temple in *antis*; the floors were concreted and carefully drained; on the walls of the rooms were wall paintings both in animal and geometrical designs, and, moreover, plaques of alabaster with designs in blue glass paste. These remains of ornament are given in several splendid coloured plates at the end of the book, and are among the most curious discoveries ever made in prehistoric Greek art.

As regards the numerous smaller rooms which surrounded these large dwelling rooms—the main hall has an area of 120 square yards—little can now be determined. One of them only is quite clear as to its intention, and affords the most remarkable evidence of the advanced condition of house-building at Tiryns. It is the bath-room. Lying apart to the left of the men's court, as you enter, this room was floored with one great slab of sand-stone, about 8 by 10 feet, laid on foundation walls under its ends, but lying free in the centre. Its size and thickness implies a weight of not less than nineteen tons! This gigantic floor-stone is pierced with a drain hole, leading to a terra-cotta drain-pipe, and so carrying off water. The floor has raised edges, in which are visible the dowel-holes to hold wooden panels, with which the walls were coated, to prevent the sun-dried bricks from suffering by wet. Nay, even a fragment of the terra-cotta bath was found—smooth and painted, with a handle—wherein the old kings of Tiryns and their guests took their tub.

It is not possible within reasonable limits, to go further into the details of the palace at Tiryns. Suffice it to say that Dr. Schliemann's book superannuates all previous discussions on the Homeric mansions, built up as they were laboriously on stray inferences from the *Iliad* and *Odyssey*. The close similarity in plan of the palace at Troy, which has only now received its proper explanation, suggests that we have before us a general type, carried out in many examples through Greece during the heroic age.

We must not, however, conclude without stating the latest results attained by Dr. Dörpfeld during this year's excavations about the great walls of the fortress. These famous walls, long so well known, were supposed to have been piled together of huge uncut stones, merely selected as suitable to form a somewhat regular structure, without any binding, except that of little stones to fill gaps, and containing within their enormous thickness

covered ways and galleries in at least two places, which were formed by an ogival placing of the stones, and which had lateral openings and windows at certain intervals. The use of these galleries was unknown, and the thickness of the walls was quite in excess of what was needed even for their introduction. Dr. Dörpfeld has now uncovered many parts hitherto hidden, and has discovered (1) that the huge stones of the wall were not absolutely rude, but roughly hewn and shaped for their purpose; (2) that the walls were built with clay mortar, which has been washed away gradually and completely in all the exposed portions; (3) that the great thickness of the walls and towers was not without practical purpose, for that in these places chambers were constructed in the heart of the walls and towers either as storehouses, prisons, or lumber rooms; (4) that the galleries within the walls were for access to these chambers in the body of the outer walls. His revised plan at the opening of chap. vi. differs therefore from the previous plans in the book by its far greater completeness, and explains many things hitherto enigmatical. But the length of the present article compels me to postpone the discussion of the inferences to be derived from all these new facts to another number of the ACADEMY.

J. P. MAHAFFY.

THE WORKS OF CARL HAAG.

WE have been so long accustomed to look year by year for the latest drawings of Mr. Carl Haag at the Annual Exhibition of the Royal Water-colour Society, that, despite his un-English name, we almost need to be reminded that, by birth at least, he is no countryman of ours, but a Bavarian. Nearly forty years ago he first came to London, a young man of seven-and-twenty, after studying under Reinold at Nürnberg and under Cornelius at Munich; and he has been with us nearly ever since, devoting himself to that art of water-colour painting for love of which he is said to have left his native country.

Readers of the ACADEMY will scarcely need to be reminded with what skill and success he has practised it. The breadth of his treatment, the rich transparency of his colour, the finish of his execution, have appealed to most of them in many an Eastern scene resplendent with the glow of the sun on sandy desert and brick tower, and the vibrating blue of African and Syrian skies. We all know his splendid types of Arab and Jew and Armenian and Egyptian, clad in their picturesque Oriental costumes. What the younger generation know less are his earlier works: his views of Nuremberg and Bavaria, his scenes from the happy married life of our own Queen and the Prince Consort, and his portraits, with which he made his first successes before he came to England. Although the earliest of his drawings here show talent and executive skill, some of these seem already so old-fashioned that it is hard to believe that they were executed by the painter that we know. It is not only costumes that have changed, but taste and sentiment. Such drawings as the "Evening at Balmoral Old Castle, the Stags brought Home," and the "Morning in the Highlands, the Queen, Prince Consort, and the Royal Family ascending Loch-na-gar," painted in 1853, are certainly clever; but they also show how greatly the artist has, during the last thirty years, advanced in drawing, in colour, and in style. At the time it was painted, "The Fish-Market at

Rome" represented what was then probably considered as something like the acme of perfection in water-colour; but the merest tyro now, though he might find it difficult to imitate its careful workmanship, would shun its hard drawing and crude tints. It is not only interesting but instructive to see these old drawings. They show us what great progress has been made in art since the Exhibition of 1851; and there is none who can show us this better, or better afford to show it us, than Carl Haag, for he has kept fair pace with the time.

So far as we know, there has been no collective exhibition of his drawings since 1876, when eighty-eight of them (including sketches) were exhibited in Mortimer Street. A great many of the best of the present gathering (213 in number) have been executed since then; and the very latest show no decrease in mastery, while they are freer from that touch of Western sentiment without which, not so very long ago, not even a true picture of Oriental life was thought poetical enough for art. We see, in this collection, the reflection of many popular sentiments which have passed away. That of Eastlake is plainly visible in the drawing of "Pilgrims in Sight of Rome"; the scenes from royal life in the Highlands can scarcely fail to recall Landseer; and such drawings as "Danger in the Desert," and "Happiness in the Desert," fine though they be, and not more than some fourteen or fifteen years old, are not quite in keeping with more modern taste. The progress of art towards realism, which, if poetic, must seek its poetry within its subject, has been favourable to the imagination of the artist, which is rather interpretative than creative. He is never so much at home as in the East or in classical lands, which, to all artistic and cultivated minds, are filled with pictorial and poetic suggestiveness. How fertilising to his talent was his contact with the East may be seen by the comparison of the "Dalmatian Peasant Girl" (1854) with the "Son of Sheikh Mansoor" (1858). We mention these drawings because they hang together, but the same story is even better told by others. Although in such pictures as "On the Alert," and "A Night in Egypt," we find the artist's sense of the dramatic shown with spirit and propriety, it is in scenes of dignity and repose rather than in those of action that he succeeds best. If we were to seek for those drawings of his which to us seem to contain the most enduring elements of attraction, we should settle on the grand presentment of the "Sphinx of Gezeh," the "Acropolis" flushed with the afterglow, "A Mugharabee Bedawee at Devotion," or "Kaheen Amran, the Samaritan High Priest at Nablous, reading the Pentateuch," or any of his simpler studies of Eastern life, like "The Procession Camel." But, partly for the reasons already given, and partly from their beauty and variety, the whole collection is well worth seeing; and there is scarcely a drawing, from the smallest sketch to the giant drawing of the giant Ella (called "One of our Arcestors," No. 11), which does not attest the possession of genuine artistic feeling and rare technical skill.

NOTES ON ART AND ARCHAEOLOGY.

MR. HOLMAN HUNT's admirers and well-wishers will be glad to hear that his health has decidedly improved of late. His lungs are not affected. Whether he will be able to conquer ultimately the affection of the throat and bronchial tubes which has so troubled him is still doubtful, though he and his doctors have good hope that he may do so. He is painting daily in his studio at Chelsea, and always takes an afternoon walk.

THREE more exhibitions will open to the public next Monday, with a private view to-day: the Institute of Painters in Oil Colours; the winter exhibition of the Society of British Artists in Suffolk Street; and an exhibition of cabinet pictures in oil at the Dudley Gallery.

WE may also mention that Messrs. Agnew now have on view a proof of Mr. Macbeth's etching of the well-known picture by George Mason exhibited at the Royal Academy in 1869 under the title of "Girls dancing by the Sea." It is now re-named "A Pastoral Symphony."

THE Society of Lady Artists, with the addition of many new members, will hold its next annual exhibition of oil and water-colour pictures at the Egyptian Hall, Piccadilly, in February, 1886.

THE Wiltshire Archaeological and Natural History Society have undertaken the reprint of an elaborate work on "The British and Roman Antiquities of the North Wiltshire Downs," a large portion of the first edition of which was destroyed in the great fire in Paternoster Square in 1883. The author is the Rev. A. C. Smith, of Yatesbury, who has accumulated his materials during a close familiarity with the district for the past twenty-five years. The work contains an account of all the barrows, cromlechs, circles, camps, roads, dykes, &c., within an area of 100 square miles, with Avebury for its centre. It is illustrated with seventeen maps and 110 woodcuts. The London publisher is Mr. Quaritch.

A SUBSCRIPTION, to which Baron Alphonse de Rothschild contributed 40,000 frs., has enabled a committee of French gentlemen to present to the Louvre the following pictures: (1) a "Dead Christ," by Carlo Crivelli; (2) "The Annunciation," by Fra Angelico (two heads, one of the Virgin and the other of the announcing angel, from the Hamilton Collection; they are of great beauty, and fetched £1,312 10s. at the famous sale in 1882); (3) "The Annunciation" (School of Bruges); (4) The "Vierge au Puits," by Sandro Botticelli; (5) "Saint George," by Lucas van Gassel; (6) "Madonna," by Hugo van der Goes. The pictures were to be shown this week.

WE quote the following from the *Times*: The process of restoring a characteristic old wooden church at Hopperstad, in the Hardes district of Sogne, in Norway, has brought to light an interesting mediæval relic. In a closed niche a book, consisting of six wax tablets, was found, carefully enclosed in a casket of wood and leather. The tablets are of box-wood, covered with wax, each tablet having a thin border, so as to hinder the tablets from sticking together on closing the book; this precaution has helped to keep it in excellent preservation. The contents are chiefly drawings, made by a fine style, representing scenes from village and rural life. At the end there is a large catalogue in Latin of various kinds of animals, with a translation into old Norwegian; and from this it has been conjectured that the greater portion of the book dates from the close of the thirteenth century. But there are indications that part of the book is of earlier date. The tablets are fastened together at the back, and the cover is carved and inlaid with various small pieces of differently coloured woods. The book has been placed in the Museum of Antiquities in the University of Christiania, and it is intended to publish it shortly in facsimile.

THE report of the fifty-first session of the Congrès Archéologique de France, held at Pamiers, Foix, and St. Giron, in 1884, has only just appeared. The programme was but partially responded to, especially in philology. The

chief interest of the volume lies in the descriptions and illustrations of the Roman churches of Southern France, and in some prehistoric studies of different localities; that on the basin of the Rhone, between the Ardèche and the Gardon, by M. H. Nicolas, being the most complete.

THE old wall-paintings in the courtyard of the Rathhaus at Basel, originally painted by Hans Bock and his sons Felix and Peter in 1609, are undergoing a process of "restoration" for the fourth time. They were "renewed" in 1710, 1759, and 1825.

A STATUE of Balzac is to be erected at Tours, and one of Joan of Arc at Rouen, in front of the new Palace of Justice. The execution of the latter has been confided to M. Pèzieux.

WE have received from Messrs. Griffith, Farran, & Co. two series of drawing-books of an elementary kind, one freehand and the other geometrical. What with the "South Kensington," the "Vere Foster," and other similar series, there would seem to be no lack of these aids to education; but there is no doubt room for Messrs. Griffith, Farran, & Co.'s books, which are very well fitted for their purpose, being graduated with care and judgment, and furnished with plain and simple explanations for both teacher and student.

AMONG the acquisitions recorded in the last part of the *Jahrbuch der Königlich Preussischen Kunstsammlungen* the most important are the pictures from the Blenheim Gallery, including the "Andromeda" and "Bacchanal" of Rubens, the "Fornarina" of Sebastian del Piombo, a portrait of a young man formerly ascribed to Holbein, and the rare example of the Siena master of the fourteenth century, Francesco da Vannuccio. Among other important acquisitions, the panel representing "The Birth of Christ" from the predella of Duccio's famous altarpiece at Siena is the subject of an article by E. Dobbert. Another notable article is on Luca della Robbia, by W. Bode. Besides the illustrations in the text heliogravures are given of the Duccio, and of a relief of the Madonna and Saints by Luca now in the Museum at Berlin.

IF any of our readers have engravings or chromos to spare this winter time, the Working Lad's Institute, 12 The Mount, Whitechapel, E., will be very glad to receive them. The institute rooms sadly want enlivening, and the contents of some old portfolios would aid in the process.

THE STAGE.

THE Gorton Dramatic Society are going to act Gilbert's "Engaged" this term. A freshwoman—if that is the girl-equivalent of freshman—Miss Lilian Revell, is to play the second lady, Minnie.

MR. FRANK MARSHALL has been offered a handsome commission to write a new play for America.

THE full-dress rehearsal of Mr. Browning's "Colombe's Birthday" on Wednesday afternoon, by the Browning Society's friends and helpers, showed that the chief parts were well filled, specially those of Colombe, by Miss Alma Murray, and Valence, by Mr. Leonard Outram, who acted at times with rare intensity. Mr. Gould, as Melchior, spoke admirably; Mr. B. Webster made a gallant young prince, and the court officials' parts were fairly filled. The rehearsal promised a very creditable performance.

MUSIC.

SIGNORA AMERIS AT BALMORAL.

SIGNORA GIOVANNA AMERIS, of whose fine singing, when first privately heard in London, we gave some account at the time in the ACADEMY, had last week the distinguished honour of twice performing before the Queen and Royal party at Balmoral Castle: namely, on Wednesday the 11th and Saturday the 14th inst. On the second occasion Signora Ameris was summoned by telegraph, by special command of Her Majesty, who was graciously pleased to express her warm admiration of the young vocalist's voice and style, and who, moreover, presented her at parting with a beautiful cross set with pearls, rubies, and sapphires. Signora Ameris received her professional education at the Conservatoire of Milan, and has appeared with much success at La Scala and other continental opera-houses. She has great dramatic ability, and a contralto voice of rare sweetness, compass, and power.

RECENT CONCERTS.

AT the fourth Crystal Palace concert on November 7 was performed a concerto of Bach's for violin, two flutes, and strings. The *continuo* is not figured in the score, but an attempt was made to add a part on the pianoforte as a modern substitute for the harpsichord. The pianist only added chords or played the notes with the basses. Surely Bach required more filling in; for in some places figures for the solo instruments seemed to demand some answer or imitation from the pianoforte. The idea itself of using that instrument was, however, praiseworthy, for it made some sort of approach to the orchestra of the eighteenth century. The concerto—the fourth of the six famous ones dedicated to the Duke of Brandenburg—contains some interesting music. The *finale* is particularly lively and clever. A symphonic poem, "Leben und Liebe, Kampf und Sieg," by Mr. F. Praeger, was given here for the first time. This orchestral piece, with its numerous short themes, reminds one of Wagner, and, so far as their treatment is concerned, rather of Liszt. We cannot say that the work favourably impressed us, but it must be confessed that it was somewhat difficult to follow at a first hearing. The programme concluded with a fine performance of Schubert's Symphony in C, which "G," who believes almost against hope in the existence of a Gastein symphony, still persists in calling No. 10. Madame Valleria was the vocalist. Last Saturday afternoon the programme included no novelty. Mr. Max Pauer played Beethoven's Concerto in E flat in a highly creditable manner, and was well received. Mdlle. Antoinette Trebelli made her first appearance, and, with her pleasing and well-cultivated voice, speedily won favour. The programme included Haydn's delightful "Clock" symphony, and some numbers from Rubenstein's "Bal Costumé."

On Monday evening, Miss Fanny Davies, the young lady who recently made such a favourable *début* at the Crystal Palace, appeared for the first time at the Popular Concerts, and played Bach's Chromatic Fantasia and Fugue. It was a treat to hear this fine work played as Bach—according to the best tradition—would probably have played it. The "Bülow" version is generally used; and there is no doubt that the eminent pianist, by his additions and alterations, hoped to improve, and intended to honour, this masterpiece of the eighteenth century; but putting pieces of new cloth to an old garment is nearly always unsatisfactory. Miss Fanny Davies interpreted the music with intelligence and taste. The ornaments of the

fantasia were given neatly and without the slightest exaggeration. The fugue was taken at the proper pace, and its cleverness and beauty were left to speak for themselves. Miss Davies is young, and tone and temper are not fully developed, yet everything points to a most successful future. For her encore, Mendelssohn (Op. 7, No. 7), she was much applauded. In Schumann's pianoforte Quartett in E flat, she played with great care and reverence. The first two movements were excellent; in the slow movement, however, there was, perhaps, a little want of feeling, and in the *finale* a little want of power. Of the rest of the programme we need not speak in detail. Madame Néruda was the violinist, and Mr. E. Lloyd the vocalist.

Herr Heckmann and his associates, Herren Forberg, Allecotte and Bellmann, are again in London. They commenced a series of four concerts last Saturday evening. The programme included three fine quartetts, Schumann in A, Brahms in A minor, and Beethoven, Op. 59, No. 1. The Brahms, an interesting work, has not been heard in London for some years, and Herr Heckmann deserves thanks for its revival. We notice in the scheme of the four concerts that Beethoven's name occurs six times; and considering the many opportunities the public have of hearing his works at the Saturday and Monday concerts—to say nothing of other societies—we think Herr Heckmann might have devoted less space to the Bonn master. We are glad to see Schubert's great Quartett in G (Op. 161) announced for the second concert: it has only been given three times at the Popular Concerts. With regard to the performances last Saturday evening we cannot but admire the marvellous *ensemble*, and the earnestness and enthusiasm of the four players. Their very earnestness, however, leads them to a little exaggeration, and their playing at times is precise rather than poetical. Their reception was most enthusiastic. J. S. SHEDLOCK.

MISS COBBE'S WORKS.

A FAITHLESS WORLD. By FRANCES POWER COBBE. Reprinted from the "Contemporary Review," with Additions and a Preface.

MR. JOHN H. INGRAM'S MONOGRAPH ON POE'S "RAVEN."

"The steadily increasing body of Poe literature has lately received a curious addition, in the shape of a monograph on 'The Raven,' with a literary and historical commentary, by John H. Ingram [London: George Redway]. It consists of the text, with its variations; selections from translations in French, German, Latin, and Hungarian; a group of the more notable parodies upon the poem; and an account, with extracts, of some of the fabrications in imitation of its style which wags, making the great hoaxer himself their prey, have tried to palm off as Poe's works. . . . We content ourselves with commending the volume as a curious compilation, and a striking evidence of the international vogue of what was essentially a fugitive poem."

Nation (New York), October 29th.

THE RAVEN.

By EDGAR ALLAN POE.

With Literary and Historical Commentary by JOHN H. INGRAM.

LITERATURE.

A New English Dictionary on Historical Principles. Founded mainly on the Materials collected by the Philological Society. Edited by J. A. H. Murray. Part II. ANT—BATTEN. (Oxford: Clarendon Press.)

ONE year and nine months have elapsed between the issue of the first and the second part of the great English Dictionary. This long delay is in itself a smaller evil than would have been any serious decline from the unexampled excellence of workmanship attained in the first instalment; but if this slow rate of progress should be continued the commercial success of the enterprise would be impossible, and there would be much reason to fear that the work might never be completed at all. Happily, the difficulties which have retarded the appearance of the second part are not likely to recur; and Dr. Murray states in his preface that the enlargement of his staff of assistants, and his removal to Oxford, will probably enable him to bring out the third part early in next year, and the succeeding portions of the work at no very long intervals.

With regard to the care and ability displayed in the execution of the work, the new part will be found fully to deserve the same high praise which was unanimously bestowed on its predecessor. The general method of treatment is, of course, unchanged; but, owing to certain differences in the nature of the material some features of the system are now apparent which were not previously exemplified, and in some slight details the editor's increased experience has suggested improvements. It happens that the words from A to ANT include scarcely any simple nouns or verbs of native Old-English origin, and the two or three instances which did occur were dealt with somewhat inconsistently with regard to the form in which their etymology was presented. Although in the present part words of this class are found much less frequently than will be the case in subsequent letters of the alphabet, the instances are sufficiently numerous to illustrate fully Dr. Murray's manner of treating them. The etymological information in such cases is now exhibited (except where fuller discussion is necessary) according to a uniform plan, of which a typical example may be seen in the following remarks on the substantive *Bane*:

'Common Teut.: O.E. *bana*, *bona* = O.Fris. *bona*, O.S. *O.H.G. bano*, M.H.G. *bane*, *ban*, O.N. *bani*, Sw., Da. *bane* 'death, murder':—O.Teut. *banon*-wk. masc. Cogn. w. Goth. *banja*, O.N., O.E. *ben*:—O.Teut. **banjā-* (str. fem) wound; also with Gr. *φόνος*, *φόνή*, murder, slaughter, *φόνος* killer, murderer."

The sign (:) is to be read "direct phonetic

descendant of." The lucidity and conciseness of this method of statement leave nothing to be desired. Now and then (there is not perfect uniformity in this respect) the presumed Aryan ground-form or root is given in addition. As in the German etymological dictionary of Kluge, the views of the "new school" are adopted throughout with respect to early Teutonic and primitive Aryan phonology.

The interesting etymological novelties in the present part are not very abundant, Dr. Murray's researches having in many cases resulted in discrediting the hitherto accepted derivations, without suggesting any satisfactory substitute. The etymology of *bad*, which had almost been abandoned as a hopeless problem by scientific philologists, seems to have been thoroughly cleared up by the brilliant suggestion adopted by Dr. Murray from Prof. Zupitza, that the word is identical with the Old-English "*bæddel*, hermaphrodite," the final *l* having been lost, as in *much* from *mycel*, and in *wench* from *wencel*. The Middle-English sense of *badde*, "weak, worthless," is perfectly in accord with this etymology, and the only thing needed to establish it irrefragably is some evidence that *bæddel* was actually used as an adjective. Although such evidence has not yet been produced, it is well known that other Old-English substantives of similar meaning did come to be adjectivally employed. Dr. Murray derives *badger* (the animal) from the "badge" or white spot which it bears on its forehead. Until recently the prevailing view was that the name was identical with *badger*, "corn-dealer"; and that the animal was so called from its supposed habit of storing up grain. What gave some plausibility to this hypothesis was that the French name for the badger, *blaireau*, was believed to be a diminutive of *bladier*, a corn-dealer. This, however, has been shown to be phonetically impossible, and there seems to be fair ground for thinking that the creature may have obtained its French as well as its English name from its white spot. The word *badger* meaning "corn-dealer" was formerly supposed to be borrowed from *bladier*. Mr. H. Nicol, who pointed out that this was not in accordance with phonetic laws, suggested a derivation from a hypothetical Old-French *blaagier*, formed from *blaage*, "supply of corn." But even if the word *blaagier* could be proved to have existed, the loss of the *l* is anomalous; and Dr. Murray has a good case for discarding this etymology, and deriving *badger* from the verb *badge*, which occurs first in documents of the sixteenth century. On the origin of this verb he is unable to throw any light, beyond quoting Fuller's very unlikely guess that it is a cant contraction of the Latin *bajulare*. In the article *Arraign* it is shown, for the first time in an English dictionary, that to arraign a prisoner and to arraign (claim, appeal to) an assize are entirely distinct words, the latter having arisen through the Anglo-French *arramer* being misread as *arrainer*. Another etymological point of some interest is the derivation of *avadavat* from the place-name Ahmedabad, for the proof of which Dr. Murray is indebted to Col. Yule.

The most remarkable feature in which the second part of the dictionary differs from the first is the large number of words which have required to be treated at great length. As

every philologist will be prepared to find, some of the longest articles relate to some of the shortest words in the language. For as Dr. Murray gives thirty-four distinct senses, and for *at* forty-one; and in each case many of these senses are further sub-divided. More than seven columns are occupied with the prefix *anti-* and its compounds, exclusive of those which have been thought worthy of separate notice. Other long articles are those on *back*, *band*, and *bar*. It is not easy adequately to realise the amount of labour and ingenuity that has been expended in the classification and logical arrangement of the senses of such words as these.

The quotations given in the dictionary yield some curious results with regard to the date of appearance of words, and the senses in which they were first used. It seems at first sight hard to believe that *autobiography* is a coinage of the present century, but no earlier instance of it is known to exist. The earliest example of *atom* is in the sense of a mediaeval measure of time, one forty-seventh part of an ounce, which was equal to seven and a-half of our seconds. Why so utterly irrational a multiplier as forty-seven should have been selected is perhaps a question which it surpasses human ingenuity to answer. The word *atmosphere*, as Dr. Murray remarks, first occurs with reference to the moon, which is now believed to have no atmosphere. Another singular fact which is here pointed out is that Shakspeare neither uses *astrology* (or its derivatives), nor any compound of *anti-*, though both occur frequently in much older writers. By far the earliest occurrence of the word *article* (A.D. 1230) is in the sense of an "article of belief"; and in the next example in order of date it is used as a technical name in arithmetic for the number ten. The old arithmeticians (down to the last century, it seems) counted "digits, articles," instead of "units, tens." The appropriateness of this use of the word is not very obvious, but Dr. Murray has not attempted to account for it. I venture to suggest an explanation which, so far as I know, has not been anticipated. The word *articulus* in mediaeval Latin must sometimes have meant "toe." I am not aware that there is any literary evidence of the fact, but the existence of the French *orteil* (formerly *artail*) is sufficient to prove it. When "fingers" (*digiti*) had been adopted as a technical term for the units, the use of "toes" (*articuli*) as a corresponding designation for the tens would be a natural, if somewhat ingenious, afterthought.

Among the words of modern coinage which are now for the first time promoted to dictionary rank are '*Arry*' and '*Arryish*', the latter being quoted from a review by Mr. Wallace in the *Academy*. The number of abstruse scientific terms is much smaller in the present part than in the former one. Whether they are really less abundant in this portion of the alphabet, or whether Dr. Murray has chosen to exercise a more rigorous control over their admission, I do not know. If the latter supposition be correct, I think the decision is a wise one. The long names denoting certain chemical compounds, for instance, are really no more part of the English language than are the combinations of "symbols" by which they may be expressed; and the insertion of such words

only swells the bulk of the dictionary without adding to its utility. Dr. Murray has freely admitted what he aptly calls "nonce-words," some of which are rather amusing. *Assuoman-ship* is quoted from a letter of Southey's, and *antigigmanic* from—but it is quite unnecessary to say from whom. For *balloonacy* and *balloonatic* four quotations are given from newspapers of 1864-5 and 1882.

It is, of course, not to be expected that a work of such extent can be entirely free from omissions and errors, however watchful the care exercised in its preparation; but I have not succeeded in discovering more than two or three trifling oversights. Under *Bait* the combination "bait stables" is omitted, and under *Barcelona* "Barcelona nuts" ("barcelonas" is, or was, the term used in market reports) should perhaps have been mentioned. In some cases the quotations have not been brought down low enough in date; of *at once* in the sense of "immediately" the latest example given is dated 1812, though the expression is still in vigorous life. In the definitions the only mistake I have noticed is the statement (*s.v. Arctic*) that the Arctic circle is "the fixed parallel of 23° 28' north." On the whole, I am inclined to think that in the precision and accuracy of the definitions the second part of the Dictionary is, if possible, even better than the first.

If we may take as a basis for calculation the proportion of space occupied in other dictionaries by the words included in the portion now published of the *New English Dictionary*, it may be inferred that the work will be completed in about twenty-seven parts. As it now seems certain that the succeeding parts will be issued at much shorter intervals than those which have already appeared, there is good reason to hope that Dr. Murray will be able himself to finish a task which it is difficult to imagine anyone else taking up with equal success. HENRY BRADLEY.

From Shakespeare to Pope. By Edmund Gosse. (Cambridge: University Press.)

THIS book is somewhat disappointing. The disappointment may be due as much to the extent of our expectation as to the extent of the author's accomplishment; but, whatever the reason, this is not quite the book we were awaiting from the hands of one whose words on this subject have come to be invested with an air of authority, and whose verdict is presumably to be accepted as one approaching finality. It is very clever—anything from the pen of Mr. Gosse could not well be otherwise. It is mature in its scholarship, delicate and judicious in its criticism, brilliant in its illustration, easy and pointed in its style. It contains much new and interesting information, and embodies the research and the judgment of a scholar who knows his subject intimately. But, in the first place, the book too evidently suffers from the form into which it was originally cast. The lecture-form allows, and to some extent necessitates, an amount of repetition and a slightness of treatment that will not endure the scrutiny of a close reading. Mr. Gosse himself confesses the repetition; but he might have remembered that repetition, though useful for emphasis in a lecture, becomes tedious in a book. The charge of slightness is not one

that will damage the popularity of this or any other work; but for those who were expecting to hear some authoritative word upon the literary revolution which cast down Shakspeare and enthroned Pope, it is too much to find Mr. Gosse come forward smiling with sheets of anecdotal biography. He has allowed himself to run too much into these side issues of biography and of contemporary criticism, which serve no purpose. The result is that we have half-a-dozen very charming lectures; but much of the matter contained in them has little or nothing to do with the rise of the classical school of poetry. He has not compacted his work: it is not half knit together. So much is this the case that the lecture headed in the present volume "The Reaction" might almost be there for no other reason than that it would have been a pity to leave it out. It would have been a pity, for the chapter is highly interesting. But there is no indication that there was any such thing as a "reaction" among the men spoken of; and, if Mr. Gosse allows his subject to include Chamberlayne, Wild, Stanley, and others, why should he not have allowed himself to give us another equally interesting excursus on Dorset, Mulgrave, Roscommon, Sedley, Rochester, and Mrs. Behn? These form a group whose work might be regarded as in one sense a reaction with about as much justice as the work of those to whom Mr. Gosse applies the term. A reaction is not constituted by the crude doggerel of a few obscure and irresponsible poetasters. The fact is that the earliest point at which we can justly use the term, and even then only in a restricted sense, is when we come to the light society verses of Prior and the serio-comic pastorals of Gay.

We understand that the chief object of these lectures is to trace the rise of the classical style in English poetry during the seventeenth century, to show that the commonly accepted theory which attributes this style to the influence of France is erroneous, and to prove that this style was all but perfected in England long before the French classicism had touched our English verse. A further object which the author sets himself is that of tracing the causes which led up to this change, of indicating the reasons why England submitted to the loss of her poetical freedom, and to the arrest imposed upon her movements by the discipline of the classical school. Underlying the book there is also the ulterior aim of showing that this change was not only a necessity, but a change in the right direction; that the change which gave us Cowley for Spenser was one to be applauded; that "the classic movement supplied that basis of style upon which all more recent literature has been elevated." This is an extensive and important theme; and if Mr. Gosse had sustained throughout his work the lucidity, force, and fidelity of treatment with which he states his subject, this book might have been one to mark an epoch in literary criticism. As it is, there is nothing in the book equal to his statement of the subject, unless it be the brief critical summary at the close. Nothing could be better than the introductory lecture in which the scope of the theme is opened up to us; but we read on, and linger with him by the way, and wander with him into by-paths,

until, with a polite bow, he ushers us into "the railway-station of St. Lazare" and informs us our "journey is completed." We are surprised, and confess a painful sense of disappointment. We feel that we have missed the most of what we came for. We find that he has been discoursing about Waller, and Denham, and Davenant, and Cowley, and many others, in a most interesting manner; but, on looking back, we find that he has been telling us "all about" the classical school rather than giving us its *raison d'être*.

To be more particular, Mr. Gosse has treated the first part of his subject in a manner that leaves little to be desired. He has shown distinctly that classicism sprung up in England apart from continental influences, that Waller and others wrote perfect distichs before they could have heard of Malherbe, that the classical style in England was a national and original growth, and not a spurious importation. This, in itself, was a service worth performing, though it hardly justifies that claim of originality which Mr. Gosse advances on its behalf. Those must be very poor "text-books" to which Mr. Gosse refers if they make no account of the performances of Waller and Denham in heroic verse prior to the Restoration. If I mistake not, there are "text-books" in existence which quote those very lines of Waller upon the "divine Arion," though they were written as early as 1623. Still the tendency is too much to explain England away by learned references to foreign leaven, and Mr. Gosse justly emphasises the importance of the home product.

This, however, was not in itself worth a whole book: something more was needed, and it is here that Mr. Gosse seems to me to have fallen short. He has been so much engrossed in proving that the change to classical style was native to England, that he has suffered neglect to fall upon that other part of his subject which deals with the *pourquoi*. He explains that Waller and Dryden effected the change by their own bent and force; but how did it all come about? We search for the *raison d'être*, and find it referred to only in casual remarks. For example, "The seventeenth century was labouring under a plethora of ebullient genius; it craved a little rest, a period of common sense and literary decorum." If this is all the reason Mr. Gosse has to offer for the growth of classical poetry, it is really too suggestive of the ancient parable of the mountain and the mouse. In another part he alludes to that "want of sobriety" which existed in the later Elizabethan literature. This is more sensible, but Mr. Gosse's entire treatment of this part of the subject appears to me to be founded on a false method of criticism. At the very outset he emphasises the formal character of the change, and throughout his work insists on this apart from its "ethical and essential character." This is a dangerous canon to introduce into artistic criticism, and it is one which the whole history of art discredits. We cannot separate form and matter in this way. The history of a nation's art reflects the changes through which the national life has passed, and the art of any period is an embodiment of the "ethical and essential character" of the time which produces it. It is a product

rather than a motive power, and only by reflex action does it become a dynamic influence. So in England the true germs of the classical growth are to be found in the ethical character of that of which it was a product, viz., the ethical character of the revolution through which the country passed. So little does Mr. Gosse regard this,* that we find him calmly speaking of Waller as "the man who could effect such a revolution," as if Waller, by his personal influence, had turned the whole tide of English literature into a channel of his own. When one finds a hero, it is a somewhat pardonable weakness to exaggerate this hero's importance; but surely Mr. Gosse does not mean to imply that if Waller had not lived this revolution in style would never have taken place. The revolution would have come about though there had been no Waller; and Waller might have been writing ineffectually till the present hour, if the conditions of literature had not so altered as to render the classical style possible. This revolution is of a far too complicated character to be lightly dismissed with a flourish of the hand and the remark that "Mr. Waller did all this."

We must consider the "ethical and essential character" of classical poetry if we are to comprehend aright the rise of the classical form. Mr. Gosse alludes incidentally to this essential character, to the "prosaic anti-imaginative function conceived for poetry," to its "dry and obvious themes," its narrowed scope and reduced resources, its "key of common-sense." It was, as it boasted to be, the poetry of "an understanding age," just as the Elizabethan poetry was that of an age of passion and romance. But Mr. Gosse does not deal with the causes which operated to produce this change in the English mind. He refers to the natural tendency of the Renaissance passion to burn itself out; but he does not even allude to the influence of the Stuart government in rendering England less noble and men's ideas pettier, or to the rise of the scientific spirit, with its tendency to tone down romance into matter-of-fact, or to the spread of learning which fostered the growth of pedantry and affectation among the poets as well as among the preachers. The social revolution worked with a similar effect. Its fundamental questions appealed more to reasoners than to men of imagination. The whole course of the struggle afforded little stimulus to any emotion higher than that of party feeling, while the effect of the Puritan régime was in itself to harden and chill, to narrow sympathy, and to emphasise logic. All of these must be taken into account if we are to explain the decadence of the poetry of passion and the rise of the poetry of intellect. They confessedly deal more with the "ethical and essential" character of this poetry than with its formal character; but if we consider this "ethical and essential" character, we find that the formal change was rather a superficial thing after all, and that the change was neither very abrupt nor quite unintelligible. For example, in the fantastic style, which in England may be regarded as a

degenerate form of euphuism, we already find the intellectual quality predominant; and it was doubtless of the intellectual side of this poetry, rather than of its verbal quiddities, that Johnson was thinking when he used the term "metaphysical." The faults of this conceit school gradually cleared themselves away before the very forces which they called into operation; and the faults being removed, the same forces still continued to work in the way of frigid intellectual refinement. The same intellectual subtlety which produced the extravagances of Donne was devoted to the cultivation of more common-sense, if more common-place, ideas. Even in point of form the fantastic style is a step towards the classical. One of the effects of the fantastic rage had been to reduce poetry to verse-making, and even before the rage subsided verse-making naturally began to be considered for its own sake. Along with the avoidance of those grotesque conceits came an avoidance of the loose metres that so freely lent themselves to the construction of those conceits. Metrical finish was sought after, and the resources of language were employed to develop a neat strength rather than a striking oddity. The peculiar aptness with which the heroic couplet lent itself to this rising taste for epigrammatic neatness is one reason why this form of verse in particular became the vogue.

Again, Mr. Gosse appears to underrate the importance of the Restoration epoch, or rather to overrate the importance of the movement towards classicism which preceded it. Doubtless it is highly necessary to remember that classical distichs were written before the civil wars, but it is equally necessary to remember that what we here mean by classical poetry did not become the current and dominant fashion until the Restoration had rendered this possible. For here again we have to deal with the collapse of the Puritan ideal and the violent revulsion which set in upon the return of the Stuarts. We have to deal with the discredit into which Puritanism brought spiritual things, with the absence of any elevating stimulus, with the influence of the court, the heartlessness of the period, the growth of worldliness, the disbelief in or disregard of whatever did not appeal to the intellect. It is tantalising to find Mr. Gosse so intent upon his "distich" as to have his vision apparently closed to this other and more important side of the question. We shall probably, as he says, never understand the exact nature of the inspiration which made Waller the first polisher of the distich any more than we shall understand the inspiration that perfected Tennyson's early form. But to maintain that Waller effected the classical revolution in English literature is to advance quite an extravagant claim for one so small. We at once grant that Waller and his fellows were premonitors of the change that was meanwhile silently taking place; but we must be pardoned if we still hold to our date of 1660 as the epoch which marks the change proper, the beginning of the era of the worldlings and of the age of prosaic verse.

Mr. Gosse has given us some valuable contributions in this book, and much highly entertaining matter; but his method of investigation is one that exposes him to the

charge of having dealt too much with the surface of his subject. His third contention, that the formal character of this revolution was a distinct advance, is of too controversial a character to be considered here.

JOHN G. DOW.

Life in the English Church, 1660-1714. By Rev. J. H. Overton. (Longmans.)

As the joint author of an admirable history of *The English Church in the Eighteenth Century*, and as the sole writer of a sympathetic memoir of the mystical William Law—the devout recluse whose life, spent in good works amid the primitive peasantry of a retired village in Northamptonshire, and whose literary labours (the delight of such critics as Dr. Johnson) lent dignity to the declining days of the Nonjurors, the straitest of England's religious communions—Mr. Overton reappears before the world with excellent credentials in his favour. Both of those works were marked by a careful study of the religious world in the last century, by a candid acknowledgment of its defects as well as a warm appreciation of its merits, and by the courteous manner in which the works of divines only in partial agreement with the religious convictions of the author were discussed. The good reputation which Mr. Overton obtained by these publications will be but slightly, if at all, diminished by his present publication. If we are unable to yield a complete assent to all his conclusions, we shall readily allow that they are the result of independent enquiry; and if we point out a few sources of information with which he seems to be unacquainted, we cannot but acknowledge that much hard labour has been employed in the acquisition of the materials with which his volume is composed. With the lapse of years the author's tone seems to have become more imbued with clerical feeling; but it cannot be a fair subject of complaint that an English Churchman, describing the lives and the acts of the members of his own religious body at a period when it had but recently recovered its supremacy over its enemies, should lean towards the views of his predecessors in the Church. There is one sentence only—a sentence of but two lines (p. 269)—which we should wish to have been altogether expunged. It contains a comparison of the writings of a divine who was tutor to the wife of William III. with those of a well-known controversialist of the present age. Such a reference unnecessarily protrudes the religious differences of to-day before the eyes of the reader. It introduces a false note into the harmony of Mr. Overton's pages, and should be ruthlessly eliminated.

The aim of this volume is to bring before the present generation the life of the clergy and the means by which they worked in the period between the return of the Stuarts and the accession of the Hanoverian kings. The present generation, which is too apt to look back with contempt upon the actions of its predecessors, dwells with especial severity on the history of the English Church at this epoch; and the details which Mr. Overton has grouped together will furnish a useful corrective to those who entertain those crude notions of contempt. The life and working of

* If Mr. Gosse had regarded "matter" a little more, he would not have fallen into the absurdity of coupling the *Arcadia* and the *Oceana* as works of the same class. There is scarcely even a faint resemblance.

the clergy, the names and character of the "faithful laity" who adopted themselves, and laboured to spread among others, the teaching of their spiritual pastors, the services of the church, the societies which were formed to strengthen her influence at home, and to secure converts to her doctrines abroad, the design and scope of the books of devotion which were written by the clergy and their disciples—these are the subjects of the principal chapters within this volume. Mr. Overton makes use of the names of two divines—Bingham and Horneck—of the early part of the eighteenth century, to point out that in those days, as in many others, neglect was often the lot of those who were competent, by their theological attainments and by their preaching qualities to receive high preferment; but better examples of such neglect might, we think, have been selected. The former of these clergymen received, some time before he was forty years old, the gift of a living worth now at least £400 a year; and the latter obtained, when just turned fifty, what is oddly enough styled "a little addition to his income by being appointed Prebendary of Westminster, and subsequently of Wells," the fact being that the first of these preferments alone is, even in these days of diminished canonical incomes, worth the good round sum of £1000 per annum. The church appointments of Charles II. were, says Mr. Overton, "almost invariably good"; but this is too broadly stated, for if the appointments made when Lord Clarendon was in power be deducted, the nominees of this monarch would not be found to outweigh in character or in ability those who were elevated to the episcopal bench by other sovereigns. The following words of eulogy, that Charles was "a steady and intelligent patron of literature and the fine arts," will call to the recollection of many readers the obituary notice which Thackeray wrote on the death of his creation, the Marquis of Steyne. The personal interest of Charles in scientific observations, on which Mr. Overton fondly dwells, is immortalised in the popular mind by his good-humoured jests on the savants of the Royal Society; but his patronage of literature was fraught with baneful effects to the literary men of his time. Surely Mr. Overton has not forgotten the poet's passionate regret at the conduct of the king and court, who forced Dryden to play on against his better instinct to provide them with sport for their depraved imaginations. The prelates and divines of the second Charles are treated with as much leniency as their royal master. It is on the broad backs of the ministers of state that Mr. Overton lays the blame for the cruelties practised towards the Dissenters and the liberal minds of the age. He even tries to clear Dr. Fell, the dean of Christ Church (immortalised in epigram), and his obsequious canons, from the odium which attends them for all time through the expulsion of John Locke from that body. "They were but carrying out the king's mandate," he pleads; and then proceeds to urge on their behalf that if they had not executed the royal commands they themselves would have been driven from the academic groves of Oxford. We question whether the writer's conclusion is accurate. Arbitrary as the commands of the court sometimes were, the ministers of Charles would not have ven-

tured to proceed to such extremities against some of the most influential members of the National Church. It would have been better for the Church's reputation now, and it might have prevented the second James from attempting some of his boldest acts against the faith of the majority of his subjects, had her priests shown greater courage in such times as these. History does applaud the firmness of the fellows of Magdalen College in resisting the edicts of their reckless king; and history would have been equally generous to the canons of Christ Church, had they shown a spark of public spirit in defence of the interests of Locke. Mr. Overton is never tired of pleading that the intolerance of the age was rather the fault of the state than of the Church; and that the laws under which the Dissenters suffered were passed by laymen, and were particularly due to the fiercer spirit of the House of Commons. But such pleas as these have been used a hundred times in defence of crueller acts than those authorised under the restored house of Stuart. They are the stock arguments employed by the casuists who cannot defend the Inquisition on its own merits, and they are arguments which have not been able to avert the verdict of guilty.

The chapter entitled "The Restoration of Order," contains the fruits of much reading on the condition of the cathedrals and parish churches, and on the services which were performed within their walls. The picture which Mr. Overton paints is depicted in gloomy colours; but not in darker shades than the state of these fabrics justified long after, if the condition of those in the northern counties as given in the reports to Bishop Nicolson can be taken as a fair sample of the rest. It is pleasanter to turn to the pages in which Mr. Overton describes the company which gathered together in the country houses of the Church's devoted sons and daughters. At Longleat the saintly Ken found himself the centre of a circle of sympathetic Churchmen and of a few select followers of Nonconformity. Lady Elizabeth Hastings attracted to her home in Yorkshire prelates like Archbishop Sharp and antiquaries like Thoresby. A squire of Berkshire, whose love of sport did not drive away his liking for the society of men devoted to books or to divinity, threw open the doors of his house at Shottesbrooke to the distressed Nonjurors. It was to him that Hearne was indebted for his education; and Hearne has stepped aside from his quarrels with Low Church parsons or partisans of the House of Brunswick to commemorate in fitting terms the virtues of his patron. Lady Ranelagh is another of the charitable persons whose kindly acts towards those afflicted by poverty or by suffering are set out in these pages; but we do not notice any reference to the elaborate sketch of her character contained in the fifth volume of Mr. Masson's *Life of Milton*.

Mr. Overton does not always exhaust all the sources of information on the topics which he discusses. When he describes those whimsical devices for extracting money from the pocket which were technically known as "briefs," the collections of the indefatigable Mr. Cornelius Walford on this subject do not seem to have come under his notice. There is an account of the parochial libraries founded

in England at the close of the seventeenth century or at the beginning of its successor; but the paper read before the Library Association a few years ago on these curious collections of books, most of them long since obsolete, is not alluded to. And if we may mention another omission of this kind it would be to point out to Mr. Overton that the question of the authorship of the *Whole Duty of Man* cannot be adequately studied without a perusal of the letters on this subject by Mr. Doble which appeared a short time since in the *Academy*. We would not, however, be understood, from these remarks, as disparaging the result of Mr. Overton's researches. No one can read this volume through without both pleasure and profit. It contains an abundance of information set out in an attractive style, which must ever be of value to the student of past times.

W. P. COURTNEY.

The Panama Canal: its History, its Political Aspects, and Financial Difficulties. By J. C. Rodrigues. (Sampson Low.)

Six years ago Mr. Rodrigues was sent as the special reporter of a New York newspaper to examine the canal which M. de Lesseps had begun to cut across the Isthmus of Panama. His report was not favourable. Since that date he has been studying the financial aspect of the enterprise; and now, in a series of papers reprinted from a London "City" organ, he expresses in fuller detail his opinion of the way the *Grand Français* has been manipulating his scheme.

If we are to accept Mr. Rodrigues's view, the man who has been hailed as a heaven-born genius, is a compound of rogue and fool, who not only makes the most astounding blunders, but when quite aware of what he is about, deceives the dupes who have embarked their money in his enterprise. Now, though M. de Lesseps is sanguine to a fault, and foolishly impatient of any criticism when this does not fall in with his dicta, no one has as yet suspected him of being either rogue or fool. The Isthmus of Panama is, moreover, a tolerably well-known region. Thousands of very shrewd travellers pass and repass from ocean to ocean, every year, in close proximity to the line chosen for the canal; and we may therefore be certain, that if M. de Lesseps' calculations were so wide of the mark, we should have heard a great deal more about them than we have done. The Paris press, Mr. Rodrigues tells us, not without truth, is muzzled—bribed by the canal people. But surely that of England and America is not; and can one for a moment suppose that the few papers in either country which have opposed the canal are in the interest of the people who wish to cut a rival ditch across Nicaragua? But Mr. Rodrigues will not listen to any suggestion favourable to M. de Lesseps' sanity or commercial morality. Nothing is right. Everything is wrong. The engineers who resolved on Panama, made up their minds after a survey of only eighteen days, which, considering the fact that they had before them the elaborate labours of their predecessors, was ample enough. The congress at which the Panama route was selected was a sham; the committee was packed (p. 234),

and the surveyors were incompetents (p. 235). It was a deliberate falsehood on M. de Lesseps's part to say that the Americans were friendly to his scheme; and the compiler of this furious pamphlet in boards does not hesitate to assert that out of the first call on the shareholders £1,800,000 "went at once into the pockets of the promoters and concessionaires."

The estimated cost, he tells us, is quite erroneous. Here we are not inclined to join issue with M. de Lesseps's critic. At first M. de Lesseps reckoned the total cost of the canal to be £28,000,000. He now puts it as high as £42,000,000. Nor are we any more confident than is Mr. Rodrigues that the canal will be finished by the time M. de Lesseps promises it. But that bankruptcy is imminent unless the French Government takes up the works at the point where the company must suspend them we do not believe, and will require further evidence before even inclining to so pessimistic a suggestion. It must be remembered that the excavation is given out for contract; and that if anyone has underestimated its difficulties—and the difficulty of bridling the Chagres River and of cutting through the height of land in order to make a canal without locks or tunnels is, we think, minimised—it is the contractors who must be the primary sufferers. The work done on the canal is, in Mr. Rodrigues's language, most likely "grossly exaggerated"—a perfectly gratuitous insult, since he has no means of proving that the promoter is deceiving his shareholders; and there is a paragraph in the last report about the Chagres River which is "grossly misleading." Last of all, Mr. Rodriguez doubts whether the traffic in the canal, allowing that it is ever made, will really come up to the estimated figure. Even should it start with a business of 5,000,000 tons—which is 1,800,000 more than is calculated on by its enemies—there will be an annual deficit of £3,300,000. We are quite at one with those who think that M. de Lesseps depends too much on his Suez experience. Panama and Egypt are very different; and there is no comparing the forced labour of the fellaheen with the highly paid service of the Jamaica negro; while it is simply absurd to talk of the climate of the one country being as healthy as that of the other. This nonsense sounds well enough in a prospectus, but it deceives no one a little better acquainted with the fetid swamp which stretches along the Atlantic shore of the Isthmus than are the subscribers to the canal which is at present dividing it. The French investors cannot too soon look after their property.

At the same time, whatever may be the object of Mr. Rodrigues's book, the virulence of his attack will go far to neutralise any influence it might otherwise have possessed. Mixed, however, with a great deal of the strong language we have indicated, there is much sound information regarding the history of the enterprise and its political bearings, though even this is poisoned by that animus towards M. de Lesseps which is the leading feature of the volume. But, without an index, it is no easy task to discover these grains of wheat, hid as they are amid a prodigious quantity of what is—well, not quite so nutritious. ROBERT BROWN.

TWO BOOKS ON REFORM.

A History of Constitutional Reform. By James Murdoch. (Blackie.)

The Three Triumphs of Parliament. A History, 1830-85. By William Heaton. (Fisher Unwin.)

THESE two volumes are, both of them—that which the title of the last implies—a sketch of the struggles for the Reform Bills of 1832, 1867, and 1885. Whether either of them is entitled to the high-sounding name of a history is open to doubt. We are accustomed to expect in a work dubbed a history two things—first, some inquiry and investigation into facts, and that inquiry and investigation conducted with greater thoroughness and more scientific insight than is expected of the ordinary newspaper writer or platform speaker; and secondly, the power to put the result of the investigations into a scientific and literary shape. The historian must research for his story, like a man of science, and tell us the story like a philosopher and a man of letters. Now, Mr. Murdoch's volume is entirely deficient in both of these characteristics. It is true he makes a great show of scientific arrangement and philosophical induction, but their value may be gauged by two sentences from his preface. "The history of human government," he tells us, "exhibits an organic growth or development—it has a beginning, middle, and end. It begins with despotism, runs a course of constitutionalism, and ends with self-government." This is excellent. Who would have supposed that after the "beneficent iteration" of Mr. Freeman and Sir Henry Maine it would be still possible to find a writer on constitutional history who would thus compress the whole history of the human race into such a delightful little formula, which has the great merit of not being true even of the English people, from whose history it is presumably drawn? There is no evidence when Mr. Murdoch's scientific education began, but his historical education clearly closed about the same time as the last century. In chap. i., on the "Theory of Government," we are told that "nations," while in a savage state pending their progress to freedom, "elect a governor and give him despotic power"—under the original contract, we may presume; later, "the process goes on" until "the three estates combined—the Crown, the Lords, the Commons—rule the people with no responsibility," till "by and by the people arise and assume the ultimate position—they are masters, and those who once were masters are now the people's servants. Such is the result of political evolution" as contemplated with the aid of an imperfect historical education. Poor Mr. Freeman! to find that after all his efforts, not only do the Crown, the Lords, and the Commons constitute the "three estates" in England, but that these same "three estates" are to be found struggling in the same arrangement in every nation under heaven. But Mr. Murdoch enlightens every stage of our national history. "Under the Romans, the Britons" equally with "the Saxons, the Danes, and at first under the Normans," history is "really a narration of attempts to limit the power of the monarch"; and it was, no doubt, as a martyr of "constitutionalism" that Caractacus made his appearance at the court of the

Roman emperor. After a sketch of English history down to 1688, we come to a chapter headed "The *status quo* in 1688." What Mr. Murdoch means by the *status quo* in 1688 it is hard to guess. He does not mean the *status quo ante* the revolution, or *ante* anything else, nor apparently does it mean the position of affairs in 1688, since the next chapter is headed the "Position of the Country in 1688"; but whether it means "The Three Estates in 1688," and, in that case, the grammatical construction of *quo* is obscure, or "The State in 1688," or whether it is simply a slipshod vulgar use of a learned phrase, it is impossible to determine. Nor does it matter the least. All this magnificent preface has no more connexion with the story that follows than the Marble Arch with Hyde Park. You could get into the story better without the preface, just as you could get into Hyde Park more easily without the Marble Arch.

The story of the Reform Bill is told on the very simple plan of stating the various motions for reform made by members of Parliament before the bills were brought in, and giving an analysis of the debates that took place on the bills when they were brought in. This is a harmless if not heroic way of writing history, but more useful for the intending orator than the student or the casual reader. But Mr. Murdoch handles the paste and scissors better than the pen. He speaks of the people being divided on many questions "that split them up into Protectionists and Free Traders, &c., instead of having them arrayed simply into two great orders of Reformers and Conservatives." Again, "Reform is an interesting process to the philosophical student. It means the country growing out of the old system into the new." These and many more gems of style might be picked out from the few pages in which Mr. Murdoch gives himself a free hand. Altogether it is impossible to praise Mr. Murdoch's workmanship. It is too pretentious and too careless. At the same time a compendium of Hansard, the Annual Register, and, for the period of the Reform struggle of 1884, of the daily newspaper, is a useful and not uninteresting work.

Mr. Heaton's account of the Three Reforms is much less ambitious, less lengthy, and more lively. It is, he tells us, merely an amplification of a lecture delivered in several towns of the North of England last winter, and makes no pretence to be anything more than a sketch. But the sketcher has seized on the salient features of the times he describes, and has brought them into due prominence. He reminds us of one or two facts characteristic of the pre-Reform era which are apt to drop out of remembrance in these days—as, for instance, that in the whole of Yorkshire, which for parliamentary elections was one county, there was only a single polling-place.

There are occasional inaccuracies to be found. One is particularly noticeable. Mr. Heaton describes the place where the Peterloo massacre took place as "St. Peter's field or Peterloo, as it was also called." But this is a curious example of putting the cart before the horse, which misses the point of the name "Peterloo" altogether, the place being so called only after the massacre, in derision of the domestic Waterloo won by the Tory

Government there over women and unarmed men. Surely, too, it was not the "process of legislation" which followed the reform of 1867, but the material progress of the country that was described by Mr. Gladstone as "advancing by leaps and bounds." These, however, are trifles. Mr. Heaton's sketch is, on the whole, characterised by accuracy, sound judgment, and a vigorous and straightforward style.

ARTHUR F. LEACH.

NEW NOVELS.

Camiola. By Justin McCarthy. In 3 vols. (Chatto & Windus.)

In the Old Palazzo. By Gertrude Forde. In 3 vols. (White.)

By the Cornish Sea. By the Rev. John Isabell. In 2 vols. (Sampson Low.)

Charcombe Wells. By Eliza F. Werry. In 2 vols. (Elliot Stock.)

The Mistletoe Bough. Edited by M. E. Braddon. (Maxwell.)

Love, too, is Vanity. By Emma Brewer. (Bell.)

MR. JUSTIN MCCARTHY has of recent years mingled in the fray of politics, but we are glad that this has not deprived us of the man of letters. His numerous admirers could ill brook the loss of his admirable stories and other works. He writes with such a natural ease and grace that his novels would be very pleasant reading even if devoid of higher qualities. But he is more than a mere weaver of fiction. In most of his stories we can find touches of a subtle human philosophy, gleams of humour, and passages of poetic inspiration, though cast in the mould of prose. In some respects, *Camiola* can scarcely vie with *Dear Lady Disdain* or *Miss Misanthrope*, but in others it can claim the superiority. The plot may not be so strong; but it was not needed, for this latest story is really concerned with the development of character. There are three individuals in the story, all of whom are powerfully and graphically drawn. First, there is *Camiola* herself, the girl with a fortune, who is full of noble ideas without being foolish, romantic and yet practical at the same time, one of the most bewitching of all Mr. McCarthy's heroines. Then there is Mrs. Pollen, in her way the most original character of any—a widow in the prime of life, who has somehow missed happiness for herself, but is determined to impart it to others. Then there is Walter Fitzurse, a poor contemptible creature, who trades upon the weakness of the female sex by his supposed heroic and poetic ideas. Irresolute, conceited, vain, and narrow-souled, he stands as a type of man for whom every reader must cherish feelings of abhorrence. We shall not reveal the incidents of the story, nor how the characters we have named are thrown into relationships with each other, and with others we have not referred to. But if Mrs. Pollen is a kind of special Providence in her sphere, reclaiming those who seemed to be utterly given over to the devil, so we must not omit to do justice to the character of Bertie Romont, a sterling, straightforward, and upright Englishman, who is quite worthy of the prize he wins in the end. A very pathetic character also is

old Christian Pilgrim. We feel all through that there can only be a sad ending to his hapless life. The story is one of love and philanthropy, and both are shown in some of their higher developments. There is not a dull page in these volumes; and the reader will desire with us that Mr. McCarthy may live to give us many more stories of the same high-toned, clever, and elevating character.

It is an unusual circumstance to meet at the same time with two such good novels as *Camiola* and *In the Old Palazzo*. They have not much in common as stories, but both exhibit literary excellence of a high order. The scene of Miss Forde's novel is fixed partly in Rome and partly in England; and even a cursory reading will prove that the author is not only familiar with the Eternal City, but holds it in reverential regard. The heroine, Benedetta Campbell, had an English father and an Italian mother, and the characteristics of the two races are about evenly blended in the child. She fires the imagination and captivates the soul of a sculptor, Raffaellino Bartolucci, in Rome, while she also awakes all the slumbering forces of his better nature in a young English aristocrat, Beresford Corway. He turns from the trivialities of life and becomes a model landlord in the East-end of London, building cottages, reading-rooms, schools, and what not, for the poor. Of course, with two lovers in the field, there is plenty of scope for cross purposes. The Italian is dark and handsome, but the perverse Benedetta prefers the Englishman. She has grown up from a child with the young sculptor in Rome, and the affection she feels for him is only that of a brother. It is very touching when Raffaellino discovers that his suit is hopeless. Benedetta reproaches herself for not being able to respond to his affection; but he magnanimously replies, "You could not help yourself. Love is not a thing to come by call. He is a winged angel that lights upon the hearts of some, and passes others by. Do not blame yourself. It was my own foolish presumption to think for a moment of you." Raffaellino contradicts all the traditions current respecting the jealousy of Italian lovers. In this instance the lover effaces himself, is instrumental in giving the heroine to the man of her choice, and, finally, he loses his life in her service. He is almost too noble in his self-abnegation. The minor characters in this story are all carefully drawn, ever to the stern Lady Dumbarton, whose too direct sincerity causes Beresford Conway to say that "as a rule what are called sincere people feel it their duty to make themselves very unpleasant to those about them." One picturesque personage—an old Italian musician—must not be forgotten in our commendation of the characters of this novel. The story is highly creditable from every point of view, and will appeal to all tastes, either for its glimpses of Rome or its sketches of English life and character.

By the Cornish Sea contains some graphic pictures of life in a Cornish fishing village. It is, in fact, these glimpses of the humble fisher folk, with their homely joys and sorrows, which form the chief merit of the book. As a novel it is not particularly strong, though there is one character of some interest—a

child saved from a wreck, who afterwards grows up into a very beautiful woman, and takes the hearts of the young fishermen by storm. She engages herself to one of them, who goes away to seek his fortune, but is subsequently reported to be lost at sea. His rival then persuades the sorrowing girl to accept him; but she is rescued while the marriage service is actually in progress by her true love, who, of course, miraculously survived when his ship went down. There are some amusing characters in the story. One old Cornish wife has been converted three times, and is waiting for the next revival to be converted again. Another thinks that "instead of inquiring what they do up in Heaven we had better take a little trouble to get there. I'm sure we arn't none of us too good." There are some ludicrous passages in connexion with the love-making of an old antiquary, and his sad discomfiture. In one chapter a girl breaks a china jar, and at first denies the fact, but afterwards seeks forgiveness for the falsehood. Surely the depth of bathos has been reached when the author quotes as the motto for this chapter a portion of the most pathetic passage in all Lord Tennyson's works—lines from King Arthur's speech to Guinevere, beginning, "I did not come to curse thee, Guinevere." The number of poetical quotations, well known and recondite, which Mr. Isabell has discovered as head lines for his chapters is perfectly surprising. But it is still more surprising that, to use a hunting expression, he should have come "a cropper" upon the authorship of so familiar a quotation as the one beginning "Come live with me and be my love." The lines are generally held to be not Shakspeare's, but Marlowe's.

Charcombe Wells is a posthumous publication, the story having been completed by a near relative, out of affectionate regard for the author. It relates the disappearance of a baronet for several years from his own estate, the self-expatriation of an heir whose legitimacy is regarded as dubious, to say the least; and it also contains some examples of cross love-making, with the manoeuvring which accompanies such matches. The work is pleasantly written, and with at least average ability. There are several very amusing things in the volumes. A butler is questioned respecting his master's habit of walking about at night and talking to himself the while. "What did he talk about?" "I couldn't tell you—but I think it was mostly swearing." One of the characters, who has imbibed a horror of the Tractarian heresy at Oxbridge, and believes that in ten years' time half England will be Papist, observes, "I've a most dreadful horror of Popery. It's such a depraved system. I almost think it's worse than Dissent!" A Yankee colonel, endeavouring to impress the steady character of his horse upon a lady friend, by way of reassuring her, says,

"Don't you be afeared, marm; this 'ere old 'oss is as steady as a judge. The ostler assured me they had bought him of a hard-shell Baptist; and you may be sure he'll be more likely to sit down lightly for a spell o' meditation, when he comes to a hill, than to streak along like all wrath!"

Miss Braddon's Christmas annual *The Mistletoe Bough* is sure to find a large number of

readers. It is quite as interesting as any previous volume, and we could not give it a better recommendation. The bough is divided into twelve separate sprigs or tales. One, "The Mock Witch," is of a weird character; another, "The Green Ledger," is of unusual interest; and nearly all the rest are concerned with the old, and yet ever new, love passion. The annual is profusely illustrated. For the railway or the chimney-corner it would be difficult to find a better shilling's-worth than this.

Miss Brewer has written a story full of exciting incidents, such as duelling, forgery, horse-racing, and devilry generally, as exemplified in one or two characters who far too long encumbered a long-suffering society with their presence. The reader is carried on from villainy to villainy, as the bee flits from flower to flower; and although the story is not strong from the literary or reflective point of view, it possesses interest of a certain kind. Few novel-readers, however, will subscribe to Miss Brewer's assertion on her title-page that "love, too, is vanity."

G. BARNETT SMITH.

HISTORICAL GIFT-BOOKS.

With the King at Oxford. By A. J. Church. (Seeley.) Those who have enjoyed Prof. Church's charming renderings of the classical tales will, we fear, be disappointed by his attempt to wander into new fields. It is evident that he has taken great pains to get up his subject, every chapter testifying to the study of Clarendon, or Walker, or the Puritan Visitation, or Sir Thomas Herbert, as the case may be. It is, however, evident that Prof. Church does not know the seventeenth century as he knows his Homer and Virgil. The mistakes which he makes at once betray the superficiality of his knowledge. He forgets that to his imaginary narrator the year would have begun with March 25. He thinks that Charles's sister Elizabeth married an Elector of Bavaria, and that her husband, who suddenly turns into an Elector Palatine, was defeated by a Duke of Bohemia. Falkland is killed, not at the first, but at the second Battle of Newbury; and Archbishop Laud suspends a clergyman *ab officio et beneficio*, sitting in his library, without the intervention of an ecclesiastical court. Mistakes like these usually point to a misunderstanding of higher matters; and Prof. Church does not seem to have grasped the real difference between the Cavalier and the Roundhead. Each sketch, taken separately, has an interest of its own, and Prof. Church knows how to throw life into his picture. But, as a whole, the book is disappointing, because the background of general action is hazy. From want of knowledge, Prof. Church has underestimated the amount of labour required to tell a story, the scene of which is placed in a by-past age. Whether young people will be interested in the book it is difficult to say, but they certainly will not learn much from it which will make them understand the seventeenth century aright.

Border Lances: a Romance of the Northern Marches in the Reign of Edward III. By the Author of "Belt and Spur." (Seeley.) Always excepting Froissart, it must be confessed that the mediæval chroniclers are not very entertaining reading. In the present volume the anonymous author, to whom we are indebted for four previous historical story-books of the best sort, has followed only too closely the Chronicle of Lanercost, in Cumberland, recording the dreary period of border warfare during the early years of Edward III. The termination is the battle of Nevill's Cross; and

the hero is Sir John Copeland, who took King David prisoner. But the body of the story is taken up with the recital of border forays, unsuccessful sieges, &c., which faithfully represent the local history of that time. The atmosphere of life is rendered yet more true by the introduction of an old monk, who is not only a mighty architect, but also a sort of chorus, embodying the piteous wail of the common people and (in addition) the petty jealousies of conventual life. To many the chief attraction of the book will be the illustrations, which have been reproduced with marvellous brilliancy from the illuminations in contemporary MSS. Altogether, we should call *Border Lances* a lesson in original research, rather than a historical romance.

The Lion of the North: a Tale of the Times of Gustavus Adolphus. By G. A. Henty. (Blackie.) It is not an easy task to interest young readers in the history of the thirty years' war. The scene is constantly shifting, the prominent characters are many, the military movements confusing, while the main object for which the war was carried on is not readily perceived; and when perceived is not calculated to strike the imagination of boys and girls, who probably will, whatever Mr. Henty may tell them to the contrary, persist in finding "the comparatively petty affairs of Athens, Sparta, Corinth, and Thebes" as attractive as the events of later days. In spite, however, of the difficulties inherent to his subject, Mr. Henty has succeeded in writing a very interesting tale, conveying a good deal of historical information. The main events of the thirty years' war, from the entrance of Gustavus into Germany until his death and the death of Wallenstein, are narrated in accordance with historical facts; and details and incidents are introduced, bringing home to the reader's mind the terrible sufferings endured by the peasantry and the desolation of the country. The hero of the story is a daring Scottish lad, who serves in Munro's regiment under the Swedish king, and whose adventures supply a personal interest to the entire narrative. The book has several illustrations. It seems a pity that it should not have been supplied with a map, illustrating the course of the war, boys, as a rule, being fully as ignorant of the geography as they are of the history of foreign countries.

The Champion of Odin; or, Viking Life in the Days of Old. By J. Frederick Hodgetts. (Cassell.) This book deals with a much earlier period of history than Mr. Henty's. The author has pressed Scandinavian tales into his service, and made a connected story out of them by altering incidents as suited his purpose, and by the introduction of fictitious personages. The youthful heroes of the tale, two foster brothers, after passing through many adventures, are taken prisoners fighting in England, where they enter the service of King Alfred, become Christians, and finally settle in the country. The descriptions of life and manners among the Scandinavians will increase the interest of the story to young readers. Elder ones will, we expect, strongly object to the phonetic spelling of proper names, which Mr. Hodgetts defends, on the ground that, had he spelt them correctly, the names would have been mispronounced, thus: "Jarl Hjalmar" appears as "Yarl Yalmar," "Hakon" as "Hahkon." We do not see that any good is gained by obtaining correct pronunciation at the expence of correct spelling.

The Dragon and the Raven; or, The Days of King Alfred. By G. A. Henty. (Blackie.) Mr. Henty is not well advised in claiming historical accuracy as one of the merits of this story, for the claim naturally draws the attention of critics to the many slips which show that the author has ventured upon ground with

which he is not familiar. The proper names are sadly awry; the heroine, a Danish maiden, is called Freda (a name which she changes on her baptism for "the Christian name of Elfrida"), and other Danish personages in the story are called "Bijorn"—meant, no doubt, for Björn—and Siegbert. Mr. Henty acknowledges his indebtedness for his account of the siege of Paris to "the Abbé d'Abbon," whom we recognise with surprise as an old acquaintance under a very new name. We are also surprised to be told that Old Paris was situated "on an island just at the confluence of the Seine and Marne." However, apart from questions of historical correctness and local colour, there is no fault to be found with the story, which boys will read with keen interest.

No. XIII.; or, *The Story of the Lost Vestal.* by Emma Marshall (Cassell), and *Gytha's Message, a Tale of Saxon England*, by Emma Leslie (Blackie), are curiously like each other in several respects. They are both religious stories, and are both intended to be "historical," the one dealing with the England of the eleventh century, and the other with Rome and Britain in the third century. The authors have "read up" industriously in the history and archaeology of the periods treated of, but do not show real comprehension of their spirit. Apart from questions of historical correctness, however, the stories are not badly told, and will, at any rate, do no harm.

Stirring Stories. By James Macaulay. (Hodder & Stoughton.) Dr. Macaulay has had so much experience in catering for the amusement and instruction of both young and old, that his name on a title-page produces a certain confidence. No one who buys *Stirring Stories* as a gift for boys will be disappointed. The stories are stirring, true, and suited to all tastes. With a disregard of chronological sequence and pedantic unity, he jumps forward from the conquest of Mexico to the murder of the Duc D'Enghien, or backwards from Paul Jones to Edward III.; but whatever subject he selects: "Admirable Crichton" or Charles XII., Waterloo or Majuba Hill, the story is sure to be interesting and well told.

NOTES AND NEWS.

WE hear from Athens that the well-known archaeologist, Dr. Dörpfeld, has discovered on the Acropolis, between the Parthenon and the Erechtheum, remains of a prehistoric palace similar to those found at Hisarlik and Tiryns.

WE understand that in Mr. Buchanan's new poem, which will be ready for issue early next week, there are pen-and-ink portraits of Mr. Ruskin, Mr. Herbert Spencer, the Archbishop of Canterbury, Mr. Pater, Mr. Leslie Stephen, Mr. Mallock, Miss Cobbe, and other contemporaries. The book is a sort of poetical symposium, with discussions of the "burning" questions of religion and science, and illustrative tales and lyrics.

LORD IDDESLEIGH's address to the students of Edinburgh University on "The Pleasures, Dangers, and Uses of Desultory Reading," will be published shortly by Messrs. Kegan Paul, Trench & Co., in the form of a small hand-book.

STEPNIAK's new book will be entitled *The Russian Storm Cloud*. It will contain chapters on the Russian Army, Poland, Terrorism in Russia, European Socialism, and Dynamiters. Messrs. Swan Sonnenschein & Co. announce its publication early next year.

MR. T. HALL CAINE has written another novel, which will be published first in the weekly issue of the *Liverpool Mercury*, as likewise was his former novel, *The Shadow of a Crime*. It will also

appear simultaneously in the *Manchester Times*, in one of Messrs. Harper's serials, and in an Australian newspaper. The title chosen is "A Son of Hagar," for the plot turns upon the abandonment of a wife. The scene is laid partly in Cumberland, partly in London; and the time is the present. We may add that the story has already been dramatised by the author, in collaboration with Mr. R. Buchanan, thus protecting stage rights in advance, so far as possible.

MESSRS. SWAN SONNENSCHN & Co. will shortly publish a new edition of the *Percy Reliques*, in three volumes, edited by Mr. H. B. Wheatley.

A NEW book by Mr. C. S. Devas, author of "Ground-Work of Economics," is in the press. It is entitled *Studies of Family Life*, a contribution to social science, giving characteristic examples of home life in different countries and ages of the world, and pointing out the significant contrast between societies who have never received Christian teaching, those who have received and followed it, and, lastly, those who have received and have abandoned it. It will be published by Messrs. Burns & Oates early in January next.

MRS. MOLESWORTH, author of "Carrots," is writing a serial story which will commence in *Little Folks* for January.

MRS. OLIPHANT will contribute a serial story entitled "A Poor Gentleman" to *The Leisure Hour* for next year, beginning with the January number. The same magazine will also have articles by Prof. Mandell Creighton, Mrs. Bishop (Miss Isabella Bird), Dr. Gordon Stables, Mr. T. Thielton Dyer, Mr. J. G. Wood, &c.

THE Rev. T. Birkett Dover has just sent to press, with Messrs. Swan Sonnenschein & Co., a work on the miracles, dealing with them chiefly from a devotional point of view.

MR. ALEX. GARDNER will shortly issue a volume of essays and sketches by Mr. Alex. Lamont, under the title of "Papers from Dove-dale, by the Rector." The author is a young man of letters, residing in Glasgow; and the several papers of which the work is composed have already appeared in *Chambers's Journal*, the *Quiver*, and other magazines.

The Gospel of Hope, a collection of poems written from a novel point of view, will be published by Mr. Fisher Unwin. The author is Mr. Arthur Stephens.

MR. JAMES FURRELL, formerly editor of the *Calcutta Englishman*, has started a new monthly review at Calcutta, called the *Indian Review*. The most notable feature in its programme is that it will have "nothing to do with any subject touching on the natives."

WE are glad to see that the *Oxford Magazine* is giving its support to the appeal for subscriptions on behalf of Walt Whitman.

THE Oxford Historical Society has issued to its subscribers two more volumes, which are worthy companions to the two first. Vol. iii. is *The Early History of Oxford, 727-1100*, by Mr. James Parker, preceded by a sketch of the mythical origin of the city and university. Vol. iv., by the Hon. G. C. Brodrick, is entitled *Memorials of Merton College*. It consists of two parts, (1) a historical sketch of the college from its foundation to the middle of the eighteenth century; (2) short biographical notices of the wardens and fellows elected down to the end of the reign of William III.

THE Cheltenham Browning Society had a most successful meeting last Saturday week. They read "Pippa Passes" through; Miss C. Chute, of the Ladies' College, sang Miss Hartog's charming setting of "The Year's at the Spring," and Miss Alice Borton's more

difficult song, composed expressly for the occasion, "You'll love me yet." Six papers on different points in the play were read by members, and a short discussion followed. The hon. sec., the Rev. J. Mugliston, of Newick House, has also read some Browning poems to the Young Women's Institute. Though the Cheltenham Society has lost Mrs. Owen and Miss Rochfort Smith, their Browning work still goes prosperously on.

DR. FERDINAND WOLFF is delivering a series of three lectures at Oxford on "Economics, Politics, and Philosophy." Dr. Wolff, who has now for many years lived in Lancashire, was on the staff of the *Rheinische Zeitung* during the stirring times of 1848, and still maintains the doctrines of Lassalle and Karl Marx.

THE first volume of the late Dr. Arnold Ruge's "Correspondence" will be issued immediately, by Weidmann, of Berlin. The work, which has been edited by Dr. Paul Nerlich, covers the period from 1825 to 1880, and will thus furnish a valuable contribution to contemporary history.

DURING the erection of the new Sion College, and the consequent closing of its library, an opportunity is given for students to consult the archiepiscopal collection at Lambeth Palace, which is open daily, Saturdays excepted. Besides the valuable records of the sec, rare printed books, pamphlets, &c., several modern works have lately been added, while the special series on Kentish history and topography has been greatly increased.

PROF. KARL PEARSON will deliver a discourse at the South Place Institute on the morning of Sunday next, November 29, upon "Enthusiasm of the Market Place and of the Study."

THE New York *Publishers' Weekly* of November 7 prints short communications from some fifty American authors on the subject of international copyright, from which we reproduce the following:

"Let justice be done though the heavens fall."
Louisa May Alcott.

"I am in favour of international copyright as a pure and simple act of justice, without any 'manufacturing' or other 'clause' whatsoever."
James A. Harrison.

"I am in favour of any and all legislation that recognises the equal rights of any and all authors to their own property in any and all countries."
Bret Harte.

"There is nothing to say except that the present condition of things is a national dishonour, and a personal shame to every one of us."
W. D. Howells.

"Free trade, international copyright, civil service reform. These are the first objects of desire with me, and have been ever since the abolition of slavery.—*James Parton.*"

"I am decidedly in favour of insisting upon a simple international copyright for authors, without any reference to publishers, printers, or importers.—*Charles Dudley Warner.*"

MR. JULIAN HAWTHORNE's novel, *Love—or a Name*, which was reviewed in the ACADEMY of last week, is published in this country, not by Messrs. Trübner (as there stated), but by Messrs. Chatto & Windus.

MAGAZINES AND REVIEWS.

THE Christmas double number of the *English Illustrated Magazine* is chiefly notable for its full-page engravings, of which there are no less than twelve. For frontispiece is given the "Head of Fortune," from the picture by Mr. Burne Jones, exhibited at the Grosvenor two or three years ago. It is engraved by Mr. W. Biscoombe-Gardner, and forms a worthy example of the pure art of woodcutting. For the rest, Mr. O. Lacour takes the palm, both

for quantity and quality. He rarely falls below his own high standard, which is conspicuous in landscapes. As to the drawings, Mr. F. Noel Paton effectively sets off a rather slight account of a visit to Killarney; while Mr. H. Furniss has been unable to avoid caricature in his portraits of some of the best-known members of the House of Peers. Mr. Robertson, who has illustrated his own article on North Brittany, shows to equal advantage with pencil and pen. Apart from the continuation of Mr. Christie Murray's serial story, which is scarcely inferior to "Rainbow Gold"—in our judgment the best novel of the year—the letter-press is not very remarkable. Mrs. Oliphant is not seen at her best in the conventional "short story" of crime and mystery, though there are touches in "Dr. Barrère" that show the master hand.

AFTER a succession of rather unusually interesting numbers of *Le Livre* (Fisher Unwin), it would be unreasonable to grumble at the November issue for being not quite equal to them. The illustration—for a specimen of M. Quantin's new *édition de luxe* of famous novels is rather an advertisement than an illustration—is of a modern binding (apparently American), which shows very creditable execution, but a certain poverty and commonplaceness of design. The two chief articles—on "Literary and Artistic Signboards in Paris," and on the reverend bibliographers, Nicéron and Goujet—are useful, if not very remarkable.

ORIGINAL VERSE.

MISS ALMA MURRAY AS COLOMBE.

(*Browning Society, November 19, 1885.*)

Thus from my hair I pluck the coronet—
My brow throbs easier now I lose its weight—
Unclasp the brooch-pin of this robe of state,
A year's mistake, please God, not life's regret.
Woman, not duchess—now I quite forget
The empire fortune carried as her freight.
And simple maid choose simple man for mate,
So thou wilt wear me as love's amulet.
Give me thy hand. You called me once "play-queen,"
Love is the priest, he crowns me ever thine,
Anoints with sacred oil this head of mine,
Decks me in cloth of gold with jewels sheen,
Thrones me for good and ill, through rain and shine,
Queen of thy soul, Colombe of Ravestein.

EUGENE MASON.

THE PROPOSED UNIVERSITY FOR LONDON.

THE action of Convocation in rejecting the scheme put forward by Lord Justice Fry's committee may be regarded from two quite distinct standpoints. On the one hand, Convocation may be looked upon as a body of gentlemen knowing nothing about academic matters or the wants of London teachers, and, therefore, naturally inclined to crush any scheme of university reform as liable to limit their own prerogatives. Or, on the other hand, we may regard Convocation as having quite sufficient knowledge of academic matters to come to the conclusion that the scheme before it was not calculated to further the establishment of a real teaching university in London. Which of these alternatives we are to accept depends on the line which may be adopted by Convocation on December 8. We can hardly think it will treat seriously the vague and extraordinary scheme propounded by Mr. Magnus; but if Convocation quietly shelves the whole matter, we shall be compelled to regard it as an obstacle in the way of educational progress, and shall trust to reform taking place over its head. Such a view of Convocation at the present moment would, however, be premature,

and, we believe, unjust. Many of its members have been students of the London colleges or medical schools, and have the welfare of those bodies as much at heart as that of the existing university. It is thus not unlikely that they should know something of the pressing needs of higher education in London. We prefer then at present to adopt the second alternative, and trust that Convocation will not reject every scheme of reform, but has only rejected the present on account of its unsatisfactory character. There can be little doubt that the whole movement has been too hurried. Before clear conceptions had been formed of metropolitan needs and possibilities, a scheme was brought before Convocation which was neither calculated to win the confidence of teachers, nor to excite the enthusiasm of the public—both necessary factors for a reform of so great importance. We cannot help thinking, although it may be venturesome to suggest it, that Convocation would best assist the cause of university teaching in London at this juncture by a simple resolution to the effect, that, while recognising the paramount importance of creating a teaching element in the university, it regards no scheme as sufficiently ripe to warrant immediate action. Such a motion would allow that time for suggestion, criticism, and discussion which is really necessary, if there is to be any unanimity among the workers in this cause—if there is to be any chance of a well-thought-out, effective scheme being ultimately carried. There must be time also for the creation of a public opinion on this matter. It is very significant of its present practical non-existence that hardly a single London newspaper has thought it worth while to devote an article either to the Association scheme or to that of Lord Justice Fry's committee. Premising, then, that there is not much likelihood of immediate practical action, we shall devote the remainder of this article to the questions:—1. What theoretically should a teaching university in London be? 2. How far is such a teaching university possible with regard to existing institutions; how far can it be harmonised with them? If the remarks that we may make succeed in drawing forth expressions of opinion from some of the many who must be competent to judge in academic matters, this article will have more than fulfilled its object. In endeavouring to throw some light upon the answers which must be given to the questions we have proposed, we shall abide by the following principles, upon which we have insisted in earlier articles:

1. No professional corporation, no technical college, no sectarian theological seminary, no night-school need be considered in the theory or the possibility of a teaching university in London. These bodies may fulfil invaluable functions, but they are not academic.

2. The only existing bodies which need be considered are the present university, University College, King's College, and the leading medical schools.

For the purposes of the present article we shall place entirely on one side the medical faculty of the proposed university, because it is a subject on which we are not competent to enter. We may note, however, that the organisation of the medical faculty as suggested by Sir George Young's Association was essentially good, in that (a) it recognised that the medical students of the proposed university must have studied in its colleges or schools; (b) it limited those schools to certain institutions of known reputation; whereas, in the other faculties, no such limitation was really given.

Without indulging in historic niceties, it is not unprofitable to remind our readers that the term "university" did not arise from the idea of a school in which all things were taught, nor did it arise from the idea of a body which embraced all the teachers of a given district.

The *universitas* was essentially a corporation—it was the *universitas magistrorum et scholarium*—a recognised body of teachers and students to whom the pope or a prince had given special privileges and a legal status. The union of teachers and students working to a common end, which is essentially involved in the mediæval *universitas*, is the best possible ideal which can be formed even in the present day of a true university. The common end is intellectual development. This intellectual development involves not only the influence of teachers upon students, but of students upon teachers—namely, the mental growth which takes place even in the most developed mind as it assists the growth of others. This end of a real university, therefore, demands as its functions: (1) the spread of old, and the discovery of new knowledge—teaching and research; (2) the closest possible contact between teacher and taught. The collegiate system of our old universities was essentially calculated to provide the second function; owing to various causes, which are matter for history, the first had fallen somewhat into decay. The new statutes, while undoubtedly resuscitating the first, have done much to injure the second by striking a blow at the collegiate system.

The practical ends of life require in some cases an outward and visible symbol of a man's intellectual power. This symbol is given in a rough and ready way by the process of graduation. Graduating humanity, calibrating its intellectual power is not the end of a university; but for the sake of practical life teaching bodies have undertaken this rough process of calibration, and in doing so have employed the old method by which a scholar was raised from the ranks of the taught to those of the teachers. This process has in England been generally an examination in old knowledge, in Germany an exhibition of the students' power to gain new; both methods have their value, and need not for our present purposes be compared. But if this graduation is to be of any worth, it must be entrusted to the teaching body. If we were choosing a mathematical master, and had nothing but graduation to go upon, why should we naturally give the preference to a Cambridge over a London man? For the very obvious reason that we may suppose in the one case that the man has come under the influence of a school of teachers, who, whatever their faults, have contributed largely to make English mathematics what they are; while in the second case we only know that the graduate has written satisfactory answers on one or two occasions to a series of questions at Burlington House. It is the character of the teachers, not of the examination, which renders the graduation of value. We do not hesitate to trust the Cambridge or Oxford teachers with this really secondary power of graduation. If a teaching university is to be created in London, such power must be given without question to its teachers. Those teachers, if only care be taken to appoint strong men, are unlikely to lower their own body in the eyes of the outer world by giving their degrees too cheaply; their own reputation depends upon it. When they need help, they will summon it from outside, as the custom at Oxford and Cambridge has been of late years. To assert that it is objectionable that teachers and examiners should be taken from the same body is, first, to give examination an absurdly prominent position, and secondly to insult your teachers. If you have not confidence in them, turn them out; or if that be not possible, choose better men on the next occasion. Public opinion can very easily be brought to bear when once a public institution like the proposed teaching university is started. If our theoretical view of what a university should be have any solid basis, we are led to

the two following conclusions: (1) The students must be brought into intimate relation with the teachers; (2) the teachers must have the power of graduation. It is idle to oppose our first conclusion with some such vague phrase as *Lehrfreiheit und Lernfreiheit*! because freedom in the latter case may mean the licence not to learn, but to "cram." It neglects above all the important factor in intellectual development which arises from bringing teacher and scholar together. If a university is to fulfil its aim—to do yeoman service in the cause of knowledge—it must bring a body of men of all ages together, keep them together, and create an *esprit de corps*, which historically has always been a condition necessary to any group of men who are working to a great common end.

There arises, however, a point which seems to have been somewhat neglected in the discussions which have taken place over the proposed university. If it is to take its stand beside the other great universities of the country, it must be able to command the best men; and this it can only do, if it has the power of the purse. This power of the purse is not only required for the mere object of paying its men, but for giving them the means of fulfilling their mission. The ideal university in London must have laboratories, libraries, and possibly a press which shall be the equals of those attached to any university in the world. It may not be necessary or practical to attempt the creation of all this in the next ten or even twenty years, but it must be kept in mind. Above all, it is idle to shirk the fact that the proposed university will have to make a demand on the beneficence of private individuals, or on the public purse. At the same time it is consoling to reflect that if public-spirited individuals are not often found in the nineteenth century and in our metropolis, yet that there exist considerable semi-public funds which might reasonably be called upon to contribute towards this wholly public good.

As for the method on which the proposed university shall govern itself, that is a very minor matter indeed. Once insure that you have got first-class teachers, and such only, then they will easily adapt themselves to any organisation, or adapt any organisation to themselves. Faculties, appointing boards of study, and members of a governing council or senate, such as are suggested in the scheme of Sir George Young's Association, are good or bad, will work or not work, just in accordance with the class of men you get upon your faculties. If your faculty is an *omnium gatherum*, then it will not work; if it is composed of the recognised academic teachers of our ideal university, then it will work, even excellently. It is the men, not the forms, which are important in this matter, at all events at the present stage of its development. We must insure that the university of the first city of the world shall be able to procure and to retain first-class men.

Here for the present we must leave our first question as to the theoretical nature of the proposed university. We may sum up our results in the following four powers which we believe to be essential:

1. Power of teaching and of learning.
2. Power of graduation.
3. Power to obtain and to retain first-class men.
4. Power to assist scholarly and scientific research.

By the "power of teaching and of learning" we understand the power to regulate that union of teachers and students which we believe to be necessary for the development of both; the pursuit of the same studies by old and young together for a certain number of years (the "academic period") is the essential *universitas magistrorum et scholarium*.

We will now make some suggestions towards answering the second, the practical question: How is it possible to approach this theoretical university having regard to the existing institutions? For this purpose we shall use the term "existing college" to include University and King's colleges, and possibly the medical schools, but to exclude all other existing bodies. "Existing university" and "proposed university" carry their own meanings. The two great points to be borne in mind are the work which the existing university and the existing colleges have done in the past. However far the existing university is from the ideal *universitas magistrorum et scholarium*, it has done work which cannot be ignored; and the idea of establishing a second university in London, if not impossible, ought, at present at least, to be avoided. On the other hand, it must be remembered that University College was established on the basis of a London university; and that, notwithstanding the essentially unfavourable circumstances under which it has had to labour, it has always endeavoured to work from the university rather than from the collegiate standpoint. Those who know how its best teachers have almost invariably been carried off by richer institutions understand what it has had to struggle with. What need to point to such striking examples as those of Sylvester and Henrici, Burdon Sanderson and Michael Foster, Seeley and Masson? Obviously the power of retaining first-class men, in this case the power of the purse, has not been with University College. Yet, while the services of this college for university education have been great, far beyond that of any other body in London, it would be idle to base the scheme of the proposed university on this college alone. Throw in King's College, which the course of history has evolved, and still, if London were properly aroused to the importance of university education, those two colleges would not suffice for its needs. Last session, in all the faculties, there were 1250 students at University College. In a city of four millions at least 8,000 or 10,000 students might be looked for. We might reasonably hope that the two existing colleges would be supplemented by at least two others to the south-west and north-east of the metropolis. Out of the chaos of institutions at South Kensington it might, in course of time, be possible to evolve a great college with university aspirations. The north-east of London will probably have to wait long before its needs in this direction are supplied; but, with the growth of the popular desire for education, it is hard to say that the need will never be supplied. With three or four such colleges as these, each in itself a miniature university, we have the elements out of which our proposed university may be constructed. Till other colleges, however, are called into being, we must content ourselves with those which exist. How can they be combined with the existing university so as, in some degree, to fulfil our ideal? It is evident that, if it be needful to bring teacher and student together for an "academic period"—that if graduation be a symbol of the student having received a "university education"—it is quite impossible to associate the London teachers in the examining work of the existing university. That is the point which the Association scheme and the scheme of Lord Justice Fry's committee hopelessly failed to grasp. The London teachers have no special business with examining all the world; nor would it, as we have before said, be fair to the country colleges. The existing university will, and must, continue to examine in its present fashion; but there is absolutely no reason why it should not graft upon its present functions that of a local teaching side. Here it seems to us that the conflict of interests between

the existing university and the existing colleges may be assuaged. The existing university would retain its position and even increase its importance; but, in addition to being a national examining body, it would become a genuine university. The teaching side of the London University would be composed of the staff of the various component colleges; and there is no reason why the scheme of faculties and boards of study, as suggested by Sir George Young, should not form the basis of its organisation. The council or executive body of the teaching side would then be composed partially of representatives of the existing university, partially of representatives of the governing and professorial bodies of the colleges. The existing university would grant degrees to the students of the colleges on the results of examinations of their own students, organised by the faculties, with what assistance from outside might seem to them necessary. In such a scheme as this, the first two powers we have enumerated above as essentials of a real university would be assured for the proposed teaching side of the existing university.

It cannot be expected, however, that the existing university would grant its degrees to the students of the teaching side, unless it had some voice in the choice of the college teachers. It would be necessary that the governing body of the existing university should have a veto, if not a vote, in the election of the professors in the constituent colleges. We cannot understand how there could be any real opposition to granting the existing university this authority, for its only object would be to insure the election of the best possible man. It could not be in any way opposed to the real interests of the colleges.

We now reach the two further powers which are so necessary for our proposed university—the power of obtaining and retaining first-class men, and the power to assist scholarly and scientific research. How is our proposed teaching side to be provided with these powers? Both, of course, mean an appeal, in some form or another, to the public purse. But for what purpose is the public purse to be requisitioned? After some thought we believe that the foundation of a certain number of well-paid "regius professorships" would, to a great extent, fulfil the first object of obtaining and retaining first-class men. There has been a considerable outcry on the part of the colleges against any such suggestion; but we think that, with certain modifications, the scheme is essentially a good one, and one at which the colleges need feel no alarm. The outcry and the alarm have arisen from the belief that the "regius professors" would draw away students from the ordinary professors, and so affect incomes which depend entirely on students' fees. There need be no fear of this, if the duty of the "regius professors" were teaching of the more advanced kind; but, be this as it might, our conception is that the "regius professorships" should be looked upon as the highest offices and prizes on the teaching side. If, on a vacancy occurring, there were a really able man in any one of the colleges, he would be elected to the vacant regius professorship. Only in the absence of such a man would it be necessary and advisable to strengthen the teaching side of the university from outside. Thus the existence of the professorships would be the very means by which the colleges would retain the services of first-class men. They would be prizes worth waiting for. To bind the elements of the proposed teaching side more closely together an arrangement similar to that introduced at Cambridge by the new statutes might well be adopted—namely, to the governing body of each college a certain number of the regius professors should be attached, so that they might be brought into close union with the teaching staff of that col-

lege. Our readers will clearly understand that no college would be considered as having a right to so many, or even any, regius professorships; only the occupants of such chairs would bring their influence to bear in college politics.

As to the final power with which we would endow our proposed teaching side—the power to assist scholarly and scientific research—we believe that when once such an organisation as we have sketched was called into being, it would be possible for the teaching side to appeal to the public for the funds inevitably necessary for laboratories, libraries, and a press. At first such funds might well be used to increase existing facilities; but later, with the ever widening work of the new teaching side, fresh accommodation would be wanted, and fresh possibilities appear. Once settled upon an organisation with which the existing university and the existing colleges are satisfied, and, we believe, their united influence well-directed could extract nearly anything from the public and the state. If these bodies will only unite for common action and for a common scheme, all is possible for them; and we feel sure that the general public would not show the present indifference to any well-considered proposals which those united bodies might put forth. Such a scheme as we have endeavoured to suggest in very broad outline, does not, we think, bear the stamp of the impossible ideal about it. We might have drawn an interesting picture of a *universitas magistrorum et scholarium*, with its lectures and its laboratories, its libraries, its syndicates, and its press, all in full swing; such a picture would, however, be of little use at the present time, when the all-important point is really to investigate how the apparently conflicting interests of the existing university and the existing colleges may be to some extent reconciled, so that these bodies may work together towards supplying what all recognise as a distinct want—namely, university education as well as national examination in London. We believe that the solution of the problem lies in the foundation of a teaching side to the existing university, which shall, in fact, absorb the colleges, and open up for them, as well as for the university, a fresh life—not remodelling its old functions, but endowing it with a new function. The possibility of carrying out such a scheme, or any other, depends entirely on the extent to which individuals are ready to sacrifice their own love of power and their conception, albeit often one-sided, of their own interests.

CORRESPONDENCE.

DR. MORRIS'S EDITION OF "CHAUCEER'S PROLOGUE," ETC.

London: Nov. 23, 1885.

I ask you to let me correct a blunder that appears on p. vi. of this book, published by the Clarendon Press.

After my discoveries and those of Mr. Rye as to Chaucer's early life and parentage, my friend Dr. Richard Morris put into my hands the revision of the first pages of his Introduction to his edition of the "Prologue," &c.

To prove the folly of the old date of 1328 for Chaucer's birth, I cited a petition of that year in the Rolls of Parliament that Chaucer's father was then still unmarried (*unfore dismarie*)

and living with his mother and step-father; and I added

"Moreover, the Coram Rege Roll of Trinity Term, 5 Edw. III., A.D. 1331, shows *no plea* by Geoffrey Hauce that John Chaucer had then married the Joan de Esthale whom they tried to marry him to in 1324."

Here was indirect proof that Chaucer's father was not married even in 1331. But the printers unfortunately turned my words *no plea* into *in the pleas*, thus inventing a false statement, and contradicting my argument. This false statement has been disseminated for several years, and is only found out now because Prof. Child, of Harvard, lately asked me whether there was not a fresh unsupported assertion in Dr. Morris's last edition. On this, I wrote to the Clarendon Press for a copy of the book; and to my disgust found out the mess which had been made of my words. A lucky pasting into my old copy of Morris of a duplicate proof, with my corrections for the stereotype, enabled me to see how the blunder had arisen after the revise had left my hands.

I ask all owners of copies of the last edition of Dr. Morris's text-book to alter the words *in the pleas* on the last line of p. vi. to *no plea*. The Clarendon Press will alter the plate, and all copies in hand. F. J. FURNIVALL.

THE YORKSHIRE "DALES."

Settlington: Nov. 23, 1885.

Mr. Peacock is undoubtedly right in supposing that some of the Lincolnshire *dales* are not valleys (Old-Norse *dalr*), but "deals," or shares of land (Old-Norse *deild*, Anglo-Saxon *deol*, German *theil*). There are also in Yorkshire a few, but only a very few, place-names, such as North Dalton (*Domesday*, Delton) or Grindall, near Burlington (*Domesday*, Gerendele), which are shown by the three tests of the ancient spelling, the modern pronunciation, and the local and configuration, to be "deals" and not "dales." But as for Kirby Underdale, which Mr. Peacock would include in the number, every available consideration is against him: not only the local pronunciation, the spelling, and the geographical configuration of the precipitous dale in which Kirby lies; but also, which seems decisive, the remarkable relation of this lower or "under" dale to the neighbouring "upper" dales, such as Longdale, Waterdale, Burdale (*Domesday*, Bredale, i.e., "broaddale"), and Thixendale (*Domesday*, Sixtendale), where sixteen of these deep and narrow dales converge. Here we have a system of related and contiguous "dales," all with appropriate descriptive names, from which Kirby Underdale cannot, I think, be disjoined.

ISAAC TAYLOR.

A CURIOUS PRONOMINAL FORM.

Berlin, S.W. Kleinbeerenstr. 7: Nov. 2, 1885.

Every thorough Middle-English student, I dare say, knows the curious form *hemen* or *hymen* = "them," which occurs very frequently in the Romance of *Sir Ferumbras*, ed. Herrtage, but so rarely elsewhere that Müttner, *Wörterbuch*, ii. 449, gives only one other instance. It is, however, no new formation, but a continuation of an Old-English form, which we find in a passage printed in Hickeys's *Dissertatio Epistolaris*, p. 119, and which I quote here from my own copy of the MS.: "*Donne rested sanctus dunstanus archiepiscopus et sanctus agustinus et cantuarabirig et fela obra sancta mid heoman*." As *heoman* accounts for the Middle-English *hemen*, so an Old-English **himan* would account for the Middle-English *hymen*. The *-an*, I think, stands for an earlier *-um*, the termination of the dative plural, so that *heoman* for *heom*, or **himan* for *him*, may be compared to Modern High-German *ihnen* or

denen, for Middle High-German *in* and *den*. So Dr. Furnivall, when he wrote about *hymen*: "It is as if *hym* had been taken as a crude form, like *ox*, and the plural *-en* put on to it" (Eleventh Report of the Early-English Text Society's Committee, p. 8), seems to me to have been near the truth. JULIUS ZUPITZA.

"A" HISTORICAL SKETCH, OR "AN" HISTORICAL SKETCH?

Wintertur, Switzerland: Nov. 23, 1885.

Most English writers use the form *an* historical, and the grammarians allow, nay, even prescribe it. But though in *historical* the accent is removed to the second syllable, the *h* is not silent, or ought not to be so; and we should, therefore, expect a *historical*, just as we also say a *university*.

We sometimes find an harangue, an harmonious verse, an unanimous resolution, even an unit, an useless waste of life, an hero; but we know that, according to the particular case, such language is quaint, or antiquated, or elevated, and no grammarian would think of recommending it for general use.

Am I right in saying that an *historical*, an *historian*, an *heroic*, etc., is antiquated, and ought not to be encouraged for ordinary modern English speech? A. BAUMGARTNER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 30, 3 p.m. London Institution: "The Life and Works of Hogarth," by Mr. J. E. Hodgson. 8 p.m. Royal Academy: Demonstration, "The Neck, Hand, and Face," by Prof. J. Marshall. 8 p.m. Society of Arts: Cantor Lecture, "The Microscope," II., by Mr. J. Mayall. 8 p.m. Aristotelian: "Plato's *Phaedo*," by Mr. D. G. Ritchie. 8.30 p.m. Geographical: "A Journey Overland from Capetown across the Zambesi to Lake Nyassa," by Mr. W. Montagu Kerr. TUESDAY, Dec. 1, 8 p.m. Biblical Archaeology: "Are there Totem Clans in the Old Testament?" by Mr. Joseph Jacobs. 8 p.m. Civil Engineers: "High-Speed Motors," by Mr. John Imray; "Continuous-current Dynamo-Electric Machines, and their Engines," by Mr. Gilbert Knapp. 8.30 p.m. Zoological: On "The Origin of the Urinary Bladder," by Mr. John Bland Sutton; on "The Lepidoptera of Bombay and the Deccan. IV., Heterocera," by Col. Swinhoe; "The Comparative Osteology of the Trochilidae, Caprimulgidae, and Cypselidae," by Dr. R. W. Shufeldt; "The Isopoda, collected during the Voyage of the *Challenger*, II., Munopsidae," by Mr. F. E. Beddard. WEDNESDAY, Dec. 2, 8 p.m. Royal Academy: Demonstration, "The Figure," I., by Prof. J. Marshall. 8 p.m. Society of Arts: "Technical Art Teaching," by Mr. F. E. Hulme. 8 p.m. Geological: "Some Deep Borings in Kent—a Contribution to the Deep-seated Geology of the London Basin," by Mr. W. Whitaker; "Old Sea-beaches at Teignmouth, Devon," by Mr. G. Wareing Ormerod; "Some Recent Openings in the Liasic and Oolitic Rocks of Fowler in Oxfordshire, and the Arrangement of those Rocks near Charlbury," by Mr. F. A. Bather. THURSDAY, Dec. 3, 4 p.m. Archaeological Institute: "Excavations in Asia Minor," by Mr. R. P. Pullan. 7 p.m. London Institution: "The Musical Dramas of Wagner," I., by Mr. C. Armbruster. 8 p.m. Linnean: "Castilleja elastica and some allied Plants," by Sir J. D. Hooker; "Effects of Solar Spectrum on Transpiration in Plants," by the Rev. G. Henslow; "Parasites collected by the late Charles Darwin," by Prof. Cobbold; "Variations of the Cirri in Comatulæ," by Mr. P. H. Carpenter. 8 p.m. Chemical: "The Sugars of the Cereals, and in Malted Grain," and "The Presence of Raffinose in Barley," by Mr. C. O'Sullivan; "The Evidence of Constitution afforded by Absorption Spectra," by Capt. Abney. 8.30 p.m. Antiquaries: "Roman Villa at Yatton," by the Rev. H. M. Scarth; "Roman Inscribed Stone from Castlenock, Northumberland," by Mr. R. S. Ferguson; "Two Cut-paper Spanish Pictures," by Mr. G. Maw; "Medieval Thurlible found at Ribble, Worcester," by Sir John Maclean. FRIDAY, Dec. 4, 7.30 p.m. Civil Engineers: Students' Meeting: "The Foundations of the Forth Bridge," by Mr. Maurice Fitzmaurice; "The Building, Launching, and Sinking of the Queensferry Pneumatic Caissons at the Forth Bridge Works," by Mr. E. W. Moir. 8 p.m. Royal Academy: Demonstration, "The Figure," II., by Prof. J. Marshall. 8 p.m. Philological: "The Words from *Ho* to *Holy* in the New English Dictionary," by Mr. E. L. Brandreth. 8 p.m. Carlyle Society: Annual General Meeting.

SCIENCE.

TWO BOOKS ON THE PHILOSOPHY OF LANGUAGE.

General Principles of the Structure of Language. By J. Byrne. In 2 vols. (Trübner.)

Logos: Ursprung und Wesen der Begriffe. By Ludwig Noiré. (Leipzig: Engelmann.)

THESE two works resemble each other in one important respect: they both deal with the philosophy of language, and attack the problems of speech upon their philosophical side. They thus lie outside the fashionable current of linguistic research, which looks chiefly to the physiological side of language and the phonetic laws that it obeys, while, on the other hand, they can hardly be regarded as concerned with that psychological study of speech of which Dr. Karl Abel has been the latest expounder. Mr. Byrne's work is in great measure what would have been called a *grammaire raisonnée* at the beginning of the present century, though it is a *grammaire raisonnée* not of one language only, but of language in general; and Prof. Noiré's new volume is the third and concluding part of his work on the origin and nature of human thought. The first part of the work was reviewed by myself, some years ago, in the ACADEMY. It dealt with that old puzzle of thinking man—the origin of the language he speaks—and essayed to show that the source of human language and of human thought is one and the same. Language starts with the cries uttered by men when engaged in a common action, and is thus essentially a social product.

The first part of Prof. Noiré's work was followed by a volume on "The Tool" and its importance in the history of human development; the last and crowning portion of his work lies before us now. Starting from the doctrine of the necessary interdependence of language and thought, he traces the growth, and therewith analyses the character, of human reason, which finds its ultimate expression in the "Logos"—at once sentence and proposition. As word is derived from word, so is idea from idea; but to separate words from ideas is to destroy that which gives life to the word, as well as that which gives form to the idea. In the concluding words of the Preface:

"The laws which determine changes of signification and the development of rational concepts are one and the same; hence an insight into the origin and nature of concepts is supremely necessary. To divide the science of language from philosophy is to tear asunder body and soul."

Mr. Byrne's work is an elaborate attempt to ascertain the laws which govern the structure of language and languages, to determine why the grammar of one language differs from that of another, and to prove the presence of conditions which have produced that difference. He begins by stating what influences certain conditions might have been expected to have exercised on the structure of speech, and then, taking language after language, endeavours to show that these influences have actually been at work. Among the conditions a prominent place is given not only to climatic or geographical surroundings,

but also to the amount of excitability possessed by different races.

"High excitability in mental action," says Mr. Byrne, "is accompanied by quickness and mobility of thought, with limitation of what is thought in as object of the present thought, the mind thinking quickly small thoughts, and passing readily from object to object, and the current of thought being contracted as it is quickened, that the total amount in a given time may be the same; while a low degree of excitability is accompanied by slowness and persistence of thought, with enlargement of its object, the mind moving slowly through large thoughts, and the current of thought spreading as it is retarded, that the normal amount which should pass in a given time may be maintained."

The result of this is that quick excitability will tend to produce fragmentary, but rapidly coalescing, thought; while slow mental action

"will tend to cause thought and language to be divided into imperfectly analysed aggregates of heavy elements thought together, or into parts thought with large conception and definition."

Mr. Byrne tries to show that this conclusion is verified by the facts. The populations of Africa are as much characterised by excitability as those of America are by stolid immobility, and in the grammatical structure of the languages spoken by them he finds the peculiarities his theory has led him to expect. It would be interesting to know whether he would find the same peculiarities and contrasts within the Indo-European family in the grammar of the excitable Kelts and that of the more phlegmatic Dutchman.

His method is obviously exposed to two dangers: on the one hand, there is the danger of reading his *a priori* conclusions into the concrete facts; on the other hand, of evolving and adapting his theories from the actual facts of language. Both these faults were committed by the writers of *grammaires raisonnées* who lived before the age of Bopp, and vitiated all their work. It seems to me that Mr. Byrne himself has not been able to escape them. From time to time we fall across statements which are either disputable or probably wrong. Thus we may ask why "disyllabic roots" should be "the characteristic feature of speech corresponding to" quick mental excitability, more especially as the opinion is fast gaining ground that the majority, even of Indo-European roots, are disyllabic. What, again, can be more questionable than such statements as these:

"There will be a tendency to distinguish moods, if the race is adapted to watch for fortune, or to avail themselves of circumstance for the attainment of their ends. . . . Some races, owing to the circumstances of their life, have more interest than others in the result, and tend more to think action in its end in the object. This direction of thought is favourable to the development of the passive verb."

Now, as a matter of fact, wherever we can trace the history of the passive, we find that it has arisen late in the development of a language, and has usually been evolved from the so-called middle voice. Would Mr. Byrne assert that the racial characteristics of the Indo-Europeans, for instance, were changed between the period when the Indo-European languages did not as yet possess a passive, and the period when they did?

Like most *a priori* reasoners upon language, Mr. Byrne has here forgotten that languages have a history, and that their present condition is no sure criterion of their condition in the past.

On the whole, however, his book is not only an interesting contribution to linguistic science—in spite of its faults of style—but a very stimulating one. It draws attention to a neglected side of linguistic study, and is full of suggestive remarks and sound reasoning. The care and labour bestowed upon the examination of the various languages of the world are beyond praise, and the grammatical facts embodied in this would alone make the book worth reading. It is only a pity that the author thought of prefixing to it his "definitions and explanations of the elements of speech." They are neither very new nor very true.

A. H. SAYCE.

SCIENCE NOTES.

THE Council of the Royal Society at their last meeting awarded the Copley Medal to August Kekulé, of Bonn, for his researches in organic chemistry; and the Davy Medal to Jean Servais Stas, of Brussels, for his researches on the atomic weights. At the same meeting Prof. D. E. Hughes and Prof. E. Ray Lankester were nominated for the Royal Medals, the former for his electric researches and the latter for his work in embryology and animal morphology. The Queen has since signified her approval of these nominations. The medals will be presented at the anniversary meeting on November 30.

THE Christmas lectures at the Royal Institution will be given this year by Prof. Dewar. The title of the course will be "The Story of the Meteorites" (with experimental illustrations), and will commence on Tuesday, December 29. The lecture arrangements before Easter will probably contain courses by Prof. R. S. Ball, Mr. R. S. Poole, Mr. C. T. Newton, Dr. A. Gamgee, Mr. W. C. Roberts-Austen, Prof. Boyd Dawkins, Prof. Tyndall, Mr. A. Geikie, the Rev. C. Taylor, Mr. E. B. Poulton, and Mr. H. Grubb. The Friday evening meetings begin on January 22, when a discourse will be given by Prof. Tyndall. Discourses will probably be given on following evenings by Sir W. Thomson, Mr. T. P. Teale, Prof. Osborne Reynolds, Mr. W. K. Parker, Mr. A. A. Common, Dr. A. Macalister, Mr. R. S. Poole, Mr. W. H. M. Christie, Mr. W. C. Roberts-Austen, Mr. H. Grubb, Mr. W. Anderson, and Sir Henry Roscoe.

THE lecture arrangements at the London Institution for the winter include the following:—"Light and the Atmosphere," by Capt. W. de W. Abney; "Horses and Cattle of the Past and Present," by Prof. W. H. Flower; "The Migration of Birds," by Mr. H. Seebohm; "The Distribution of Electric Power" and "Telpherage," by Prof. J. Perry; "Charles Darwin and his Theory," in three lectures, by Prof. E. Ray Lankester; "New Stars" and "Volcanoes," by Mr. R. A. Proctor; "Birds, their Structure, Classification and Origin," by Prof. W. K. Parker; and "The Life of a Plant," by Prof. Bentley.

WE have received two "War Maps" of Turkey in Europe, published by Messrs. W. and A. K. Johnston and by Messrs. Ruddiman Johnston & Co., both at the same price. The former is by far the better example of cartography; but the latter has the advantage of showing the important features of the country, from a political and military point of view, in the more effective manner. It also marks the

new railway from Belgrade to Nisch. Neither map, of course, is sufficiently minute to explain the confused details of the recent fighting.

PHILOLOGY NOTES.

THE new edition of Prof. Maspero's *Histoire Ancienne des Peuples de l'Orient*, which has been long delayed by untoward circumstances, is now just ready for issue. The work is thoroughly revised, much augmented, and brought up to the level of all the latest discoveries in Oriental science.

THREE Dasturs, or Parsi Doctors, of Bombay, Aerpāt Meherjibhai Palanji Madan, Jamsetjee Jejeebhoy, and Mullan Firuz, have just published a translation into Gujarati of the *Yagna* and the *Gathas*, not from the Zend original, but from the French version of Prof. de Harlez. It is, moreover, expounded by means of many notes taken from the French, explaining the most obscure and difficult passages. The work also contains an Appendix divided into three sections. The first, entitled "Zandavastā visenā profesara Harlenā vicāso," is a dissertation on the word *Avesta* and its meaning, on the book of Zoroaster and the various genii of Mazdeism. The second, entitled "Gathāo visē profesara Harlenā vicāso," gives a general view of the *Gathas*; and the third is a study upon the most important personages of the *Avesta*, Yima, Thraetacna, Vistāspa.

MR. NEVILL, of the Ceylon Civil Service, has published at Colombo the first number of a bi-monthly periodical entitled *The Taprobanian: a Dravidian Journal of Oriental Studies in and around Ceylon in Natural History, Archaeology, Philology, History, &c.* The whole of the contents of this first number are written by Mr. Nevill himself.

THE prospectus of the Johns Hopkins University for the current half year gives a list of no less than nine classes in the Semitic languages conducted by Prof. Haupt. In Elementary Hebrew there are 12 students; in Babylonian, 5; in Aethiopic, 4. In Sanskrit and Comparative Grammar there are six classes, conducted by Dr. Bloomfield, who has 19 pupils in Greek Grammar, and 8 in Advanced Sanskrit.

HERR F. A. BROCKHAUS, of Leipzig, has just issued a sale-catalogue (part i., 80 pp.) of the Egyptological Section of Lepsius's private library.

THE last number of the *Philologische Wochenschrift* contains a review, by Dr. Mewes, of Prof. Wilkins's *Epistles of Horace*.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.— (Monday, Nov. 9.)

The Rev. G. F. BROWNE, President, in the Chair.—Prof. T. McK. Hughes described what he thought might be traces of a Roman village on the property of Mr. Ingle Ellis, near Shepreth, by whose kindness he had recently been able to carry on some explorations upon the site. He pointed out the interest of the district lying between Barrington, Foxton, and Shepreth, referring to the objects of antiquity of various dates which had been discovered there, and speculated upon the period of the conversion into a swamp of an area once occupied by Roman houses. He remarked that the villas of the wealthy Romans had been frequently described, but that little was known of the dwellings of the artizan and the tiller of the soil. Traces of three houses had been found at Shepreth; but so little had been opened up, that he thought we could not yet infer with any certainty whether they were the offices and less richly furnished rooms of a large country residence, or the greater part of some houses belonging to less well-to-do people. There was a suggestion of better rooms near in the tes-

sellae of white sandstone and the brightly painted wall plaster found within the walls. But he reminded the society that similarly painted plaster had been found in the rubbish-pits of Chesterford, where it probably came not from a large country residence, but from some of the houses in a small Roman town. He referred to the villa found near Ickleton, and to that explored by Mr. Seebohm and Mr. Ransom near Hitchin. There was very little pottery found in and about the houses at Shepreth; but on the adjoining gravelly bank nearer Foxton, Mr. Walter Foster had collected a large quantity of various types. Bones and oyster shells occurred, as is usual wherever the Romans had been; but there were not large quantities of such remains. When the houses were dug into, it was found that there was in each a tiled passage, which in one case was traced round the corner of a room with a smooth concrete floor made of fine broken brick and mortar. There was frequently a considerable thickness of grey chalky clay, representing the fallen plaster of the walls and the decayed concrete, on which the tiles had been set. There were also some roof ridge-tiles having a semi-circular section; and as these occurred at the lowest point reached, it raised hope that there might still be much buried up. Prof. Hughes then drew the attention of the society to some earthworks between the station and Mr. Ellis's house. From their size he thought they were not mere field enclosures; but he had not as yet any evidence to offer as to whether some of them might be the remains of a mediæval moat, or, perhaps, even the ramparts of a Roman station. He thought they deserved investigation. Further south, there was a pit in a bed in the lower chalk, known as the Burwell Rock, which, from its hardness, stands out in bosses here and there. This was a likely place for the Romans to have procured lime for their houses; and recent quarrying revealed pits of unknown age, which apparently had been sunk for the purpose of making lime, of which there was a considerable quantity found, now slacked, of course, by the percolation of rain-water. At the southern end of the chalk hill, the quarry cut across several shallow graves, sunk through the soil into the surface of the chalk. They looked like, what elsewhere had been referred to, the poorer class of Roman interments; but no relics had been found to indicate their age. On the whole, he thought that the district suggested many interesting archaeological problems, and would well repay careful investigation.—Mr. C. P. Tebbutt read a communication on "The Existence and Cause of the Crooked Lands" found on clay soils in the eastern and midland counties of England. He stated that the high-backed lands, found in so many fields around Cambridge and elsewhere, had been evidently raised by ploughing for purposes of drainage. They were separate properties, like the strips, or "selions," described by Mr. Seebohm in *The English Village Community*. Mr. Tebbutt claimed to have discovered the important fact that they are all curved in the form of the letter S reversed, and he was of opinion that this fact was one of great significance. He believed this form was caused by certain tendencies in the process of ploughing, and endeavoured to show that the curved high-backed lands now to be seen must have assumed their present form in the tribal period, before ownership in strips of land existed. They are therefore among the oldest monuments of antiquity around us. Mr. F. Seebohm confirmed the facts mentioned by Mr. Tebbutt both as to the wide prevalence of the high-backed lands and the peculiar lines of the inverted S almost universally observed, and no doubt due to something connected with the ploughing. It was noticed in Germany as well as in England. He also stated that these "lands" belonged to the ancient open-field system. The strips between turf balks and these "lands" were in fact the same thing treated in different ways according to the soil. The "lands" and strips were generally acres, half-acres or roods; and when the customary acres of various parts of the British Islands and other countries had been more carefully ascertained, their antiquity and importance for historical purposes would be more and more recognised. He referred to the recurrence of the same acre in the ancient district of Powys and in Brittany, and also of the Irish acre on both sides of the Irish Sea, as examples of this. But it would be premature to

draw any wide generalisation from the facts till they had been more completely collected and examined.

NEW SHAKSPERE SOCIETY.—(Friday, Nov. 13.)

DR. FURNIVALL in the Chair.—The Rev. Stopford A. Brooke read to a very full meeting a paper on "Richard the Third." Over all the play Queen Margaret shadows as an impending Doom, like Fate in the old Greek tragedy. Richard is her avenger on others—on whom he works the justice of heaven—her victim himself. He is politic intellect divorced from love; purely evil, with neither love nor pity; his conscience speaks only when his will is still in sleep. His character is changed by Shakspeare from that in the "True Tragedy," where ambition for a crown is his only motive. Iago is malignant and hates; Macbeth's crimes are broken by human feeling; Richard neither hates, relents, nor loves. The only pain he feels is that of failure, not of conscience. Margaret is more Greek than any other figure in Shakspeare. She has outlived her humanity, and has become an elemental power: she curses like an immortal. When she departs, the final punishment begins. Richard shows nervous excitement in Act iv. In Act v. his intellect, his self-control, begin to fail; his wooing of Elizabeth's daughter is his last fine intellectual effort; then his temper and foresight give way. The crisis of the battle relieves his mind, yet he has not the alacrity of spirit he was wont to have. But he dies like a soldier, on the field of battle, while Richmond conquers as the arm of God. In the discussion which followed, Dr. Furnivall, Prof. Finck of Amherst, Messrs. Frank Marshall, Sidney Lee, P. Z. Round, S. Compton, T. Tyler, M. Mull, and Misses Phipson and Peto, as well as others, took part. The paper was ordered to be printed and circulated at once, as well as Mr. Henry Sharpe's paper on "Shakspeare's Prose," for next meeting.

EDINBURGH MATHEMATICAL SOCIETY.— (Friday, Nov. 13.)

GEORGE THOM, Esq., Vice-President, in the chair.—Sir William Thomson communicated a theorem in Determinants which was read by Dr. Muir; Mr. J. S. Mackay gave an account of the ancient methods for the duplication of the cube; Mr. William Harvey contributed some geometrical notes; and Mr. A. J. G. Barclay read a paper on physical science in schools. The following office-bearers were elected:—President, Dr. R. M. Ferguson; Vice-President, Mr. George Thom; Secretary, Mr. A. Y. Fraser; Treasurer, Mr. John Alison; Committee, Messrs. R. E. Allardice, A. J. G. Barclay, W. J. Macdonald, J. S. Mackay, Dr. Thomas Muir, Mr. William Peddie.

HISTORICAL SOCIETY.—(Thursday, Nov. 19.)

HYDE CLARKE, Esq., Vice-President, in the chair.—Prof. Mandell Creighton, the Rev. E. Dyer Green, the Rev. C. G. Hunt, Messrs. E. L. W. Bulkeley, W. B. Duffield, F. Solly Flood, G. E. Green, T. London, M. Clement Ord, G. W. Redway, J. K. Stephen, and H. J. Stone, were elected fellows. Mr. F. Solly Flood read a paper on "The Story of Prince Henry of Monmouth, and Chief Justice Gascoign," in which, after a thorough examination of all the public records of the period, he showed not only the improbability but the impossibility of the truth of the famous legend. A discussion followed in which Sir F. Bramwell, Mr. James Heywood, Mr. Alderman Hurst, and the Chairman took part. In future the society's meetings will commence at 8.30 p.m., instead of 8 p.m. as heretofore.

PHILOLOGICAL SOCIETY.—(Friday, Nov. 20.)

HENRY SWEET, Esq., Vice-President, in the Chair.—Dr. Stenhouse read a paper on "Biblical Aramaic with special Reference to Hebrew," in which, after noticing the influence of Aramaic on Hebrew, he proceeded to speak of the various names for Aramaean and Aramaic; and classified the dialect contained in the Aramaic chapters of Daniel and Ezra as West Aramaic, in distinction to Syriac as East Aramaic. The term "Chaldee," usually employed to designate this dialect, is a misnomer, to be traced to Jerome or his Jewish teachers. It

arose from a misinterpretation of the "Chaldæans" of Daniel. Instances were then given of the influence of Hebrew on Biblical Aramaic, of the changes of consonants as compared with Hebrew; and some notes were added on foreign words and peculiar forms occurring in these chapters.—Mr. Standish H. O'Grady read a short paper on the Irish tale called *Cath Finntrága*, "The Battle of Ventry Harbour," as edited by Dr. Kuno Meyer, with a translation and notes, from the Bodleian MS. Rawlinson B 487 vellum quarto of the fifteenth century, for the mediaeval and modern series of the "Anecdota Oxoniensia." After assessing the probable value of this tract to the philologist and the folklorist, and paying a high tribute to the great achievements of German scholars in the field of Celtic literature, Mr. O'Grady proceeded to doubt whether high scientific training alone could ensure the successful treatment of so modern a text as this, and maintained that, in addition, a greater degree of practical knowledge of idiom and sound was desirable. This view, he thought, would be borne out by the *Corrigenda* to which his remarks were merely preliminary. Above all, he regretted the self-confidence shown in neglect of the established rule which requires that the editor of a Celtic text should, in expanding contracted words, use italics to distinguish what he supplies himself from the actual readings of his MS.—Two scraps by Dr. J. A. H. Murray were read by Dr. Furnivall: (a) on the term *beetle-browed*, showing that it meant shaggy eyebrows meeting in the middle over the nose, and was derived from the likeness to the antennae (*sourcils*) of a beetle (the French have a parallel phrase for a projecting fringe—*sourcils de hanneton*); (b) on the word *behaviour*, the termination of which was proved to be due to analogy with Caxton's *avoir*, having, possession, then *havour* *havyoure*, and not to etymology.

ASIATIC SOCIETY.—(Monday, Nov. 23.)

COL. YULE, President, after paying a tribute to the memory of the late able secretary, Mr. Vaux, was succeeded in the chair by Sir Henry Rawlinson. A paper by the Rev. Hilderic Friend, formerly of Canton, was read on "The Buddhist Element in Oriental Life." Referring to the wide-spread influence of the religion of Buddha in Central and Eastern Asia, the writer proceeded to illustrate his subject by instances of superstition which had come, more or less, under his own immediate notice. Among other cases in point, he remarked especially on the prejudice in favour of the number 108 and numbers multiplying into it; on the veneration paid to certain animals, notably the monkey; and on the supposed visits of the spirits of deceased children to their living relatives. As to the Hades of the Chinese and other Oriental races, as pictured to themselves under the influence of Buddhist teaching, he believed that to the common people the future was a perfect puzzle, and that they were quite at a loss to make out the various divisions which were reported to mark off the under world. They would pay enormous sums to the priests to get them quickly pushed through purgatory into the Western Heaven. In conclusion it was affirmed that a study of the life of the people gives a truer idea of what Buddhism is than any we can gather from the mere study of Eastern literature.—After making a few comments on Mr. Friend's paper, Mr. Cecil Bendall produced some specimens of coins, described as "Græco-Indian, bearing the figure of the Buddha," the inscriptions on which he analysed.—He was followed by Dr. Duka, who exhibited and stated some interesting particulars regarding a rhinoceros-horn cup and African ivory anklet which had come into his possession.—The meeting adjourned till December 21.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HESS, 115, Strand, near Waterloo-bridge.

SEBASTIANO DEL PIOMBO IN A NEW LIGHT.

III.

I MUST venture a few words of explanation and comment on certain passages of this sadly corrupted text.

Compar.—Guhl* renders this by *Gevatter*, "godfather," and Miss Henrietta Bowles strictly "godfather."† Of course it does, two or three times in this letter, mean precisely sponsor or "padrino"; but it has caused Miss Bowles's version to give rather a curious turn to the sentence about the baptism. "It is many days," she says, "since I received your most obliging note, wherefore I am much beholden to you, seeing that you kindly consent to accept me as your godfather." What in the world could Michelangelo want with a godfather, and Sebastiano above all men?

Ceremonie.—Miss Bowles says: "The usual compliments of women are not current in my household." This to me does not imply, as she and others have concluded, that as Sebastiano was a Frate, women were not permitted to reside in his house. The mistake comes from misunderstanding his real position. It is true that originally the post of Frate del Piombo, or Brother Keeper of the Seal, was held by a Cistercian monk; but in Sebastiano's time, the word Frate had become simply a formal title. All that it really meant was that when he officiated at his post, he had to assume the dress for the occasion. His title was a relic of the time when all offices of trust and importance were held by ecclesiastics. Certainly, though he jokes about his title in some of his letters, he was no monk. As a matter of fact, he had a wife living with him in Rome; besides, had he really assumed the cowl, how could he ask a respectable man like Michelangelo to be godfather to his little son Luciano? But "*compar*" still bothers the translator. She goes on to say: "It is sufficient for me you stand my godfather, and in my next I shall send 'l'acqua,'" First she leaves us to conclude that it was old bachelor Michelangelo who required a godfather, now she makes Sebastiano thank the same old bachelor for reciprocating the favour; all this hash of poor Sebastiano's letter having arisen out of not allowing for the flexibility of use and meaning in the word "*compar*."

Lagna.—This word has caused no end of trouble to the translator. As it stands in the original it might fairly be read as "*laqua*," and therefore rendered by "*l'acqua*." But with what result to the sense? Was it the water that the "*putto*" have been baptised in, or with? As no sense could attach to it, Miss Bowles simply lets it stand untranslated. Guhl reads the word *lagna* = *lagnanza*, "complaint, trouble," and seeing no sense in this, leaves out the passage altogether. But Biagi, in his Memoir of Sebastiano,‡ boldly renders it *l'agna* = *l'agnella*, "the lamb," and explains that it was a Venetian custom for parents at a baptism to make a present to the sponsor of a lamb as the symbol of the Baptist. The explanation, at all events, is reasonable. But I am not going to waste my own and my readers' patience by this sort of gossip. Such blunders only mean ignorance. Bottari's variations, however, lead one to suspect that he never saw either the original or a correct copy.

Messer Domenico.—Domenico Buoninsegno, we are told by P. Giovio in his "*Ragionamento*," was a Florentine and treasurer to Clement VII. He was a great student of natural philosophy, and he was the inventor of the celebrated device of the crystal ball in the sun's rays, with the motto "*candor illæsus*."

Agli ordinari, i.e., "the usual detractors."

Panni degli arazzi.—These were the famous tapestries, woven from the well-known Hampton

* E. Guhl, *Künstler-Briefe*, &c. (Berlin, 1853.)

† Domen. Campanari, *Appendice*, all' opuscolo, &c. (Londra, 1853.)

‡ Pietro Biagi, avvocato, *Sopra la Vita e i Dipinti di Fra Sebastiano Luciani*, &c., in vol. i. of "*Esercitazioni*," &c., of Ateneo di Venezia, pp. 191-247.

Court cartoons, now at South Kensington, then with others since lost, forming a set of ten pictures taken from the Acts of the Apostles, &c. They were designed by Raffaello for the Vatican, and had been worked at Arras under the care of Bernard van Orley. They were sent to Rome in 1518, and exhibited the year following at the Vatican. After many vicissitudes, including a journey to Lyons, whither they were carried by the Germans after the sack of Rome, they were restored in 1814 to the Vatican, and have remained there ever since.

Ora avendo, &c.—Note how this differs from the original. It was not so much a complete settlement, but a completion of it—the payment of the balance. No great matter which, but it shews that Bottari had not the actual text before him.

Benchè per presto.—Rather confused, whereas Sebastiano's own words "*per venir presto*," "to come to a settlement quickly," are quite clear and to the point.

Egli ho.—Transposed from "*o li*."

Senza suspicione.—"without fear of doing anything underhand." This does not confirm the idea that Michelangelo was habitually engaged in underhand dealings with Sebastiano, when even here the latter is afraid of hesitation through too fine sense of honour.

Quaranta figure.—There are just forty heads in the group forming the story of "The Raising of Lazarus," not counting the little figures away by the water side.

Card. Rangone.—Not the Cardinal of Aragon.* The mother of Ercole Rangone had befriended Leo X. when taken by the French as a prisoner through Modena, and he had shown his gratitude by providing a suitable residence for her in Rome, with the use of the pleasure grounds near the castle of S. Angelo.

A spedirmela.—Sebastiano wrote *expeditela*, a natural alteration by a person who had only heard of the contents of the letter.

Per dirvelo, &c.—Guhl translates "denn, um es Euch zu sagen, ich sitze auf dem Trocknen," "for, to tell you the truth, I am sitting on the dry spot." But this means, "I am under shelter, or in safety"; whereas Sebastiano says "*son al verde*," a common Italian expression, meaning "I am in an extremity." He was in a by no means unusual condition of artist existence—"hard up."

Roma, 26 December, 1510.—Utterly wrong. Sebastiano's words are "a di, 29 December, 1519," so legible that they cannot possibly be mistaken. How all the blundering—Waagen's included, though he saw the letter—could have arisen is inexplicable. Being simply a mistake, no more need be said. But if proof were needed, the mistake confutes itself in every way, for the "*arazzi*" only reached Rome in 1518, and Cardinal de' Medici's commission to Raffaello and Sebastiano could hardly have been given in 1510, when he was not made Archbishop of Narbonne until February, 1516.

So much for this important letter. Its chief value is in evidence of the facts already referred to about Michelangelo; but it is interesting as an example of the actual speech, as it were, of the painter of the "*Lazarus*," and the usage of his time.

It has sometimes been asked who made the piquant observation, "For it does not rain Michelangelos"; and it may be sought for in vain either in Vasari or Cellini, or in any of the ordinary literature of the Court of Leo X. or Clement VII. It is quite a characteristic utterance, and shows us a man the reverse of dull or commonplace. There is nothing stupid or wooden about the writer of the letter in

* The translation and notes in Campanari's *Appendice*, &c., are so erroneous that I must with this negative leave them out of further consideration.

which it occurs, which is one written by Sebastiano to his great friend, then away from Rome, wanting to return, but too proud to come without much urging. The whole letter is too long to quote here, but the passage in question is as follows (Gotti, *Vita di M. Buonarroti*, p. 216):

"E si per disgrazia avvenisse che Dio non uoglia, che uui mancasti, l'opera non se finirla, nè a una via nè al'altra, perche non piovano i Michelagnoli, ne si trouerebbe omeni che la sapessiro guardarla, non che finirla."

"And if by mischance it should happen, which God forbid, that you should fail, the work would not get finished, neither in one way nor another, for it does not rain Michelangelos, nor would it find men who could understand it, much less bring it to completion."

The letter telling Michelangelo of his appointment to the office of Piombatore is also extremely characteristic. In it we see a man of a light heart, a mirthful temperament, and a fondness for gossip, but not necessarily an indolent or excessively self-indulgent one. He can see the funny side of a thing quickly, and for him to be called Frate was too delicious a joke not to afford him unfeigned amusement, for it is not mere gladness at having obtained a good appointment that has dictated the hilarity of the following passage. The original is in the British Museum (Additional MSS. 23,139).

"Carissimo compare o. Credo ui marauigliarete sia stato tanti zorni nō ui habia scripto la cuffia e statta prima per non hauer haunto coffa meritasse.

"Et l'altra per accedente qualemmodo horamai habiate inteio come n'ro Sre. papa Clemente me ha facto piombatore.

"Et ammi facto frate [in loco d' framariano, inserted above the line] di modo cā se mi uedifite fratte, credo certo ue la rideresti. Io son el più bel fratazo di Roma. Coffa in uero nō modo pensai maj. E venuto motu proprio del papa. Et dio in sempiterno sia laudato. cā pare proprio cā Dio habbi voluto cuffi. Et cuffi sia.

"Most respected and dearest gossip, I fancy you will wonder that it has been so many days since I wrote to you. The cause has been, first, through not having had anything worth writing about.

"And the next by some accident or another you may have ere now heard how our Lord Pope Clement has made me piombatore.

"And he has made me frate in place of Fra Mariano, so that if you were to see me a frate I fancy you would certainly laugh at it. I am the finest old friar in Rome. So in truth I never thought of it. It came by the spontaneous offer of the Pope, and God be praised for ever. For it seems right that God should have willed it so. And so be it."

The letter is signed "Sebastiano de Lucianis pittore (feci scriuere)," as though he had employed an amanuensis, and endorsed—

"D'no Michelagnolo De Bonarotis D'no meo coll^{mo}. [collendissimo] in Firenze, in Firenze [repeated below]."

It would be an interesting thing for someone to collect the correspondence between Sebastiano and his friends, as giving an additional picture of the ways and characters of the artists and poets who inhabited the Italy of the sixteenth century alongside Cellini and Bembo.

JOHN W. BRADLEY.

CORRESPONDENCE.

THE TIRYNTIAN BULL.

Barton-on-Humber: Nov. 23, 1885.

The wall-painting recently found by Dr. Schliemann in the palace of Tiryns, representing a man on a bull, presents several features of very considerable interest.

1. *The kind of Bull.*—It is of gigantic size, even after making due allowance for the slenderness of the man. This latter familiar archaic feature is probably connected with the natural slenderness of the Egyptians. The animal is evidently a specimen of the *Bos primigenius*, the Akkadian *An-si* ("Horned-bull," i.e., Bull-with-large-horns), the Assyrian *Rimu* and Hebrew *Rēm*.

2. *The Horn.*—Although the restoration of the design at the back of Dr. Schliemann's Tiryns shows two horns, yet, after careful scrutiny of the representation of the painting (pl. xiii.), I can only see one; in fact, the animal is portrayed conventionally as a Unicorn-bull, just as it appears in the well-known representation at Persepolis, where it is being seized by a lion, or, again, on the coins of Sybaris. Of the practice of representing bulls and other two-horned animals with but one horn I have given nearly forty Euphratean and other instances in my monograph, *The Unicorn*, and could easily add as many more. When archaic artists wish to show two horns, they insert both accordingly. The familiar conventional unicornic representation is, doubtless, the origin of the apparently inexplicable *Μονόκερως* of the LXX. The horn of the Tirynthian Bull, while utterly unlike that of the *Bos taurus*, exactly corresponds, so far as shown, with the horns of the *Bos primigenius*, which, "placed at the side of the occipital crest, show a peculiar rise from their roots upwards, then tending outwards, and then forwards and inwards" (Swainson). On the shield of Achilles we have a similar bull depicted, for he was one of a herd *βοῶν ἡρόκραιπων* (Il. xviii. 573); and he is also lion-seized, like the Perseopolitan bull. We find, too, on the shield, the "Tumbler," who, I think, is shown on the bull's back, holding on by the horn.

3. *The Tail.*—Here, again, as constantly in archaic art, the treatment is conventional, types, scenes, and delineation being often repeated from generation to generation. The tail of a bull at speed is almost invariably stretched straight out, and of course is not divided towards the end into two equal parts. But this peculiar curl over the back is familiar to the symbolical art of Western Asia. Thus we find: Winged Unicorn-bull at speed, in a position very similar to the Tirynthian bull, with tail curled in exactly the same manner (Layard, *Culte de Mithra*, pl. xlii. 18). Same type. Bull, with pendant testes, curled tail, and one horn and one ear shown (*Ibid.* 21). Bull, not winged, showing horn and ear as before, with tail curled over back, and artificially divided towards the end into two equal parts (*Ibid.* lxviii. 2), as in the case of the Tirynthian bull. Of the symbolism of these designs I do not speak.

4. In borrowing the design—originally Euphratean, and also Hittite—of a human figure standing on an animal, and of a personage restraining or subduing a unicorn-bull by grasping its horn, art, on Greek ground, has made the scene as natural as possible, i.e., as a man on a bull, not on a winged monster, &c. On one vase (*Brit. Mus. Vase Cat.*, No. 975). Theseus grasps the fire-breathing (Phoenician) Marathonian bull by one horn as he subdues it; and Hēraklēs, the Tirynthian hero, is a bull-subduer and capturer of oxen.

ROBT. BROWN, JUN.

NOTES ON ART AND ARCHAEOLOGY.

MR. F. WEDMORE is now on his voyage back to England. While in America, he lectured twice before the Johns Hopkins University, at Baltimore, on "Modern Life in Art" and on "Meryon and the Revival of Etching." He

also received the distinction of being invited to address the students of Harvard.

THE Institute of Painters in Oil Colours and the Royal Society of Painters in Water Colours will both open their winter exhibitions next week. There will also be on view in the Fine Art Society's gallery in New Bond Street a collection of pictures and sketches by Mr. Herkomer, illustrating "Life and Work in Bavaria's Alps."

ON the evening of November 18, the members of the Scottish Academy dined together in Aitchison's Rooms, Queen Street, Edinburgh, in honour of the centenary of the birth of Sir David Wilkie, R.A. Among the letters of apology read was one from Sir J. E. Millais, expressing his sympathy with the meeting in honour of "your greatest painter." "In the history of art there has been no superior to him for knowledge of composition, beautiful and subtle drawing, portrayal of character, and originality." The chair was occupied by Sir W. Fettes Douglas, President of the Royal Scottish Academy, who, in proposing the memory of Wilkie, expressed the confident opinion that his art, like that of his great literary contemporary, Scott, being founded upon nature, would survive all changes of fashion; and that their names would remain for all time as among the greatest in their respective spheres. The president also referred to the proposal to place a statue of Sir Henry Raeburn in the Scottish National Portrait Gallery, and mentioned that in Wilkie we had a Scotchman even worthier of the honour.

THE *Royal River*: the Thames from Source to Sea, will be ready for publication, by Messrs. Cassell, next week. The work contains descriptive text by Prof. Bonney, H. Schütz Wilson, Edmund Ollier, D. Maccoll, Godfrey Turner, W. Senior, Richard Jefferies, Aaron Watson, and J. Runciman; and is illustrated with engravings, from original designs, by G. L. Seymour, W. H. J. Boot, C. Gregory, T. Murray, A. Barraud, Captain May, R. J. A. W. Henley, Clough Bromley, W. Hatherell, W. B. Wollen, and other artists.

DR. CHR. DRESSER, author of a well-known book on the arts of Japan, has nearly completed a new work on *Modern Ornamentation*, consisting of a series of original designs for the patterns of textile fabrics, for the ornamentation of manufactures of wood, metal, pottery, &c., and for the decoration of walls, ceilings and other flat surfaces. It will be published through Mr. Batsford, of High Holborn, in ten monthly parts, imperial quarto, each of which will contain five plates. Part I. will be ready on December 15.

MESSRS. SOTHEBY will sell on the three last days of next week a valuable collection of Greek and Roman antiquities, most of which come from excavations that have been systematically carried on in the island of Rhodes.

WE have received through Mr. Ackermann, of Regent Street, a parcel of the Christmas cards published (apparently last year) by Messrs. Prang & Co., of Boston. Their chief peculiarity seems to be their un-American character; even the landscapes might be English, were it not for the sleighs. The designs, if not very original, are always in good taste; the schemes of colour are harmonious; and the printing is excellent. From Messrs. Thomas Nelson & Sons, of Edinburgh, comes a series of fifteen views of scenery—English, Scotch, and Irish—printed in chromolithography inside a border of flowers. The plan is novel, and should commend itself to those who wish to send reminders of home to those abroad. As might be expected, the views of Edinburgh and of the Scotch lakes are the most effective.

THE STAGE.

"COLOMBE'S BIRTHDAY" AT ST. GEORGE'S HALL.

LAST Thursday week Mr. Browning's "Colombe's Birthday" was subjected to the test of dramatic representation, by the Browning Society, at St. George's Hall. "In a Balcony" and "A Blot on the 'Scutcheon'" have already been produced on the stage by the society, and those performances excited a wide enough interest to justify an addition to their number. There is no need to conceal the fact that none of these experiments will convince the everyday theatre-going public that Mr. Browning is worthy of their patronage. But the members of the Browning Society will doubtless rest content if these representations prove their poet's plays to possess more dramatic stuff than the student of modern literature ordinarily gives them credit for. It may be admitted at once that all who were merely acquainted with "Colombe's Birthday" as a poem learned from last week's rendering of it that it had some sterling dramatic qualities which they had not previously recognised.

Mr. Browning has nothing of the purely theatrical instinct, which is a pitiful substitute for the dramatic feeling of the poet, but is none the less its indispensable accessory. He will not clench a situation by emphasising its pathos; he will not excite the flagging interest of his audience by exhibiting his ingenuity in unravelling a complicated plot; he despises spectacular effect; he is bold enough to essay at times an apparent anti-climax; and with action, as it is generally understood on the stage, he frequently declines to concern himself at all. Those who regard these deficiencies, all of which are very obvious in "Colombe's Birthday," as so many fatal defects, should absent themselves from the Browning Society's performances. Defects they certainly are, but to such as are willing to make allowance for them at starting, the poet offers rich compensation in the strong individuality of his characterisation, in his distinct delineation of the conflict of opposing motives and emotions, in the genuineness of his humour, and in the freshness and forcibleness of his language. It may be true that the chief interest of "Colombe's Birthday" lies in the solution of a series of ethical problems—in the extrication of Colombe, Valence, and Guibert from what have been called, without much reason, metaphysical dilemmas. But this fact is not sufficient in itself to damn the play. "Hamlet" is, in a sense, an ethical exercise; and the same may be said of every play where the plot turns on a conflict between duty and desire. The dramatist adequately satisfies the conditions of his art, if he enunciates and solves his problem so that the spectators admit involuntarily the relevancy of all his episodes and arguments. The artist must leave no intervals in the solution to be supplied by the independent thought of his audience. Shakspeare, of course, always fulfils these conditions. He has a perfect mastery over his own ideas, and can work them out slowly and surely. When the charge is brought against Mr. Browning that in his plays he often grows too purely psychological, the critic really means that Mr. Browning is unable to control the rapid workings of his own intelligence, and leaves gaps in his dramatic argument to be supplied by the reader or spectator at the expense of much independent mental labour, which the supreme artist invariably spares him.

¶ In a representation of any one of Mr. Browning's plays it follows, therefore, that everything depends on the actors. His plays, unlike many of Shakspeare's plays, will not (as Dr. Furnivall reminded us on the night of the performance) act themselves. The actor has to bridge over intervals in the continuity of his

part which the pace of the poet's process of thought has not allowed him to adequately fill. Colombe has to express by tone or gesture a transition from one emotion to another, which is not expressed in words; and she has, if she is to perform the part successfully, to convey the impression to the audience that every transition has adequate *motif*. Valence has to dart from one intellectual or emotional position to another, and to make his hearers realise without hesitation the perfect naturalness of the successive changes. The compressed significance in every one of Mr. Browning's lines has either to be drawn out to the full, or to sink into utter vapidness. We can conceive of no higher testimony to an actor's or an actress's capacity than to be able to state that he or she has interpreted one of Mr. Browning's characters so as to excite the interest of a large audience. Thirty-two years ago Miss Helen Faucit accomplished so much for the part of Colombe at the Haymarket; Miss Alma Murray did little less at St. George's Hall last week.

Miss Murray's elocution is perfect, and there can be but one opinion about the finished delicacy of her gesticulation. She speaks blank verse as hardly one other actress on the modern stage can speak it; and her whole reading of the part of Colombe stimulated the poetic sense of her hearers as it is very rarely stimulated in the theatre nowadays. Her delivery of the magnificent lines in which she first proposes to abdicate her throne in favour of Prince Berthold lacked a little in emphasis; but her display of the emotions, which led her a little later to declare that she remains Cleves' duchess, was a masterly piece of acting. We were a little more doubtful than we felt we ought to be as to how far Colombe suspected Valence's love in the great dialogue between them in the fourth act; but it is possible that the poet intended his youthful heroine (among the other excitements of her birthday) to be herself unconscious at the time of the influence which her faithful political ally was gaining over her heart. If the acting version of the play had ceased with the duchess's lines—

"I take him—give up Juliers and the world.
This is my Birthday!"—

the audience would have been better able to recognise the rare artistic finish of Miss Murray's performance. The concluding passage necessarily attenuated its effect; but that was not the fault of the actress. The Browning Society is to be very much congratulated on having such invaluable services placed at its disposal.

Between Miss Murray and the other members of the company there was a distinct interval, but it was in no case wide enough to affect the performance adversely. Mr. Outram as Valence had calmly and deliberately worked out his part, and spoke his blank verse throughout the play nearly as well as Miss Murray spoke hers. His "pale fiery man" of the earlier scenes probably did Mr. Browning's character more justice than it has before received on the stage, but the effect was not sustained; the actor grew too subdued in tone as the play advanced to enable the audience to realize the fierceness of the internal struggle to which Valence submits himself. We feel, however, that we should like to see Mr. Outram play the part a second time before speaking of his interpretation disapprovingly. He seemed too nervous to show himself to the best advantage; and we believe he has more passion and pathos in him than he displayed on Thursday night. Mr. B. Webster—the bearer of a name always to be honoured in theatrical matters—was an exceptionally intelligent and soldierly Prince Berthold, and Mr. Bernard Gould caught very much of Melchior's humour. Mr. R. de Cordova's Gaucelme was a picturesque creation; but the actor exhibited a tendency at times to over-emphasise

his lines, which prevented him from conveying a wholly adequate impression of the old courtier's worldly caution. Mr. G. R. Foss was somewhat too rough as the light-headed Guibert, whose heart is found in the end to be in the right place. But there was nothing very seriously defective, and much that indicated acute intelligence in the acting of both Mr. de Cordova and Mr. Foss; and to these gentlemen the society was indebted for the admirable stage management of the piece.

SIDNEY L. LEE.

MUSIC.

RECENT CONCERTS.

MR. DANNREUTHER commenced his series of concerts at Orme Square, W., on November 5, when a new pianoforte Quartett by F. Gernsheim, No. 3 in F, was performed. The composer's first work of the kind, produced nearly ten years ago at the Popular Concerts, despite dryness, promised well for the future; but, if we may judge of M. Gernsheim's present style from this Op. 47, the ingenuity remains the same, while the dryness, unfortunately, has increased. The programme included Beethoven's "colossal" Sonata (Op. 106), Schumann's trio in D minor, and two new and charming songs for contralto, with viola obligato, by Brahms. They were sung by Miss Lena Little. At the second concert, November 19, the programme contained an early work of Dvorák's—the pianoforte quartett in D (Op. 23); and a late work of Brahms'—the pianoforte trio in C (Op. 87). The former, interpreted by the concert giver and his associates, Messrs. Holmes, Gibson and Ould, is bright, clever, and thoroughly characteristic of its author. It was played at the Popular Concerts once in 1882, and last season at Mr. Halle's recitals, so that it has not yet lost its freshness. The same may be said of the Brahms trio. Mr. O. Fischer was the vocalist.

At the first concert of the Sacred Harmonic Society on Friday evening, November 20, at St. James's Hall, three works very different in character were performed. First came Bennett's "Woman of Samaria," the sacred cantata written for the Birmingham Festival of 1867. This work is not often given, and for a good reason. It possesses many excellent qualities, but the solos are dry, and the choral writing, though clever, is exceedingly formal. And, again, the influence of Mendelssohn is throughout far too perceptible. The unaccompanied quartett, "God is a Spirit," has always been a favourite, and at Friday's concert it was, as usual, re-demanded. M. Camille Saint-Saëns's setting of the 19th Psalm was heard for the first time in England. It is only fair to the composer to state that it was written many years ago; for although there are one or two rather interesting numbers, the work as a whole is decidedly weak. In it there is a curious mixture of styles. Some of the strains are decidedly Handelian, while the others are as decidedly modern. Judging from the scanty applause, the psalm is not likely to be often heard. The performance was far from brilliant, and in the quartett for four baritones one of the vocalists was not "guiltless from the great offence" of singing twice out of time. The concert concluded with Beethoven's "Mount of Olives." The principal vocalists were Miss A. Marriott, Mde. C. Samuël, and Messrs. Lloyd and Bridson. Mr. C. Hallé has now retired from the conductorship, and his place has been taken by Mr. W. H. Cummings. The choral singing was not all that could be desired; but in Mr. Cummings the choir has a careful and able guide, and we may expect improvement.

The programme of the concert at the Crystal

Palace last Saturday included as a novelty the "Ballet Airs" from M. Saint-Saëns's "Etienne Marcel." They are very charming and daintily orchestrated. Raff's pianoforte Concerto in C minor (Op. 185) was played in most brilliant style by Mr. O. Beringer. The part for the solo instrument is showy and difficult. The pianist has, however, proved to us on many occasions that in the matter of difficulty nothing can alarm him. He also took part in Beethoven's Choral Fantasia for piano, chorus, and orchestra. The singing of the choir was unusually good. Handel's Overture to "Ariadne" was given here for the first time. A fine performance of Mendelssohn's "Italian" symphony was much appreciated by the audience. The Misses A. and E. Marriott sang the Nocturne Duet from Berlioz's "Béatrice et Bénédict," in which the charming orchestral accompaniment was given with great delicacy.

The second Brinsmead concert took place last Saturday evening at St. James's Hall. There was a good audience, the applause was enthusiastic, and so the success of the first concert has been well followed up. We think, however, that the managers should beware of long programmes. Herr Richter has proved that two hours of music is sufficient. And we also think that a more interesting work than Rubinstein's pianoforte Concerto in G might have been chosen. It is all very well when the composer is at the piano. One listens to the player and one forgets all about the composition. Miss A. Zimmermann is a favourite with the public, and her efforts to please were duly rewarded. But correct, careful, and refined playing is not sufficient for Rubinstein's *tours de force*. They want the strength of a Samson, the daring of a Diomed. The symphony of the evening was the "Eroica," and again Mr. Mount conducted in his best manner. The rendering, though not an ideal one, was by no means bad. The programme commenced with Goldmark's showy overture, "Sakuntala," and concluded with an overture by Mr. E. Ould. The latter bears the date 1859; and as it shows considerable ability, it is somewhat strange that it should have waited so long for a hearing. Mdlle. M. de Lido was the vocalist, and she sang with much success pieces by Mendelssohn and Cowen.

The Popular Concert last Monday evening commenced with Dvorák's Quartett in E flat (Op. 51). It is really a very fine work. We have heard it several times; but only feel as if we were beginning to appreciate its many excellent qualities—its quaintness and originality, and the clear yet clever treatment of the themes. It was admirably interpreted by Mdlle. Néruda and Messrs. Ries, Hollander and F. Néruda. M. Max Pauer was the pianist, and played Weber's Sonata in C (Op. 24). The *moto continuo*, as the last movement is called, was rendered with great precision and finish; but his interpretation of the other movements did not please us. The first movement was not left to speak for itself; the second was cold and hurried at the commencement; and the third lacked lightness and delicacy. Besides, in all these three movements Mr. M. Pauer "improved" certain passages—i.e., he added octaves or chords. It is the first time that we have caught him tampering with a master's text, and we hope it will be the last. He was much applauded, and played Weber's Polacca as an encore. Miss L. Lehmann sang with taste an old French song, and two clever Volkslieder by Miss Marie Wurm, who was the accompanist of the evening. Mdlle. Néruda played Mr. F. Néruda's Ballade in G minor, and the concert concluded with Beethoven's dry sonata for piano and violin in A (Op. 30, No. 1).

Last Tuesday evening the first concert of the London Select Choir was held at St. James's Hall. The programme was an attractive one,

including the Messe Solennelle, one of Gounod's best works, and Mendelssohn's Hymn of Praise. The choir, consisting of nearly 250 voices, is an excellent one, although not quite evenly balanced; for, as at present constituted, the men's voices overpower those of the women. The tenors are especially good. At first the choir sang too loud in the piano passages, but after a time they began to show signs of excellent training, for which great credit is due to the conductor, Mr. W. G. Cousins. The orchestral accompaniments in both works were frequently coarse, and, as a rule, much too loud. Some movements of the mass were greatly applauded. The vocalists were Mrs. Hutchinson, Miss Mary Beare, and Messrs. Lloyd and F. King. Mrs. Hutchinson sang well, but found some of the high passages in both works rather trying to her voice.

We regret that space compels us to leave unnoticed several interesting concerts: such as

Mr. and Mrs. Henschel's vocal recitals on Tuesday afternoon, which were well attended, and Mr. H. Holmes's chamber concert on Wednesday evening, at which Beethoven's Quartette (Op. 127) was admirably interpreted.

LITERATURE.

"The Apostolic Fathers."—Part II. *S. Ignatius, S. Polycarp*. Revised Texts, with Introductions, Notes, Dissertations, and Translations, by J. B. Lightfoot, Bishop of Durham. Two volumes in Three. (Macmillan.)

(Second Notice.)

THE claims of the two rival forms of text—the longer Greek and the Syriac—having been thus set aside, there remains but the middle form. Either this is genuine, or else the Ignatian letters, if ever written, did not survive. But the latter supposition is opposed by a mass of external evidence such as can scarcely be paralleled in the case of any other ancient document. That the collection of seven Ignatian letters was known to Eusebius has already been mentioned; and, not to speak of some other evidence, the letters are cited by Irenaeus before the end of the second century. That the letters were known to Lucian in the same century is believed by Renan and was even owned by Baur, who, though regarding the letters as spurious, ascribes to the forgery no later date than the age of the Antonines. But the evidence goes still farther back, and is, in fact, absolutely contemporaneous, for there is extant an epistle of Polycarp, accompanying a transmission of Ignatian letters to the Philippian Church, made before that Church had had time to hear of the martyrdom of Ignatius. It has thus become a vital matter with those who would assert the spuriousness of the Ignatian letters, to assert the spuriousness of Polycarp's letter also, although that letter is attested by Polycarp's disciple Irenaeus, and although, except for the testimony it bears to the Ignatian Epistles, there is not the smallest ground for suspicion. But we owe to Lightfoot an observation which enormously increases the difficulties of those who would reject Polycarp's epistle. According to their theory, it must have been forged with the express object of giving an attestation to the Ignatian forgery, and, therefore, must have proceeded from the same workshop as the latter. But when Polycarp's letter is compared with those of Ignatius, we find that if ever internal evidence can afford proof of diversity of authorship we have it here. In style, diction, modes of thought, there is not only no resemblance, but there is such contrast as we could not have expected to find between two contemporary Christian documents. The details of Lightfoot's comparison cannot be here reproduced; suffice it to say that, while the Ignatian letters are strongly marked by individuality and originality, the epistle of Polycarp is essentially commonplace; while the latter letter is full of Scriptural

quotations, sentence after sentence being frequently made up of passages from the evangelical or apostolical writings, the obligations to the New Testament in the Ignatian letters are both much more rare and of a quite different character, New Testament sayings, in the one case, being copied almost word for word, in the other case, merely furnishing suggestions and undergoing some modification in the mind of the writer. In doctrinal statements there is equal difference, the points of doctrine about which the one is most solicitous being scarcely touched on by the other. Lastly, a prominent feature in the Ignatian epistles is their insistence on the duty of adherence to the bishop, so that those who believe the letters to be spurious commonly hold also that the advancement of episcopacy was the motive of the forgery; but Polycarp's letter is so silent on this subject that it is strongly doubted whether the church which he addressed had a bishop at all.

From external evidence we pass to internal. If the Ignatian letters were forged late in the second century, the forger's object must surely have been to strengthen, by the authority of a venerable father, some side in the controversies of his own time. But the Ignatian letters deal only with the questions which were debated in the early part of the second century, and not at all with those which became matters of dispute later on. For example, disputes about the observance of Easter nearly caused a schism in the Church towards the end of the second century; but the Ignatian letters have not a word about Quartodecimanism. Not a word either about Montanism, nor about the views of any of the great Gnostic teachers who formed schools in the middle or earlier part of the second century. In one passage, indeed, it had been supposed that there was a clear reference to Valentinianism; and earlier defenders of the Ignatian epistles had taken pains to show that the language of Ignatius might be understood as applying to teaching older than Valentinus. But, so long ago as 1868, Lightfoot gave a far simpler solution of the difficulty, which he showed arose from the wrong insertion in the epistle of a negative rejected by the oldest authorities for the text. According to the true reading, the language of Ignatius, instead of being a protest against Valentinian terminology, presents a striking coincidence with it. There was, therefore, every reason why the negative should afterwards be inserted by orthodox transcribers, but none why, if genuine, it should be omitted. This coincidence, then, with Valentinian phraseology, a phenomenon of which Lightfoot gives other examples, becomes a proof that the Ignatian letters are pre-Valentinian, for such phraseology was avoided by orthodox writers after it had come to be connected with heretical associations.

Lightfoot has been highly successful in refuting objections founded on supposed anachronisms in the epistles, of which need here only be mentioned that he gives two examples of the use of the word "leopard" considerably earlier than had been produced before. His arguments, founded on the general characteristics of the style of the epistle, are very forcible; but what carries most weight is the argument founded on the

historical and geographical indications of the letters. Lightfoot, after Zahn, is able to give a history of the details of the journey of Ignatius, made from no direct statements, but from casual notices, subtle allusions and coincidences which we cannot help pronouncing to be undesigned, and to be altogether beyond the reach of a forger.

A word must be added as to an unfortunate theory which would not be worthy of notice if it were not for the greediness with which it was accepted, and the confidence with which it was once asserted: the theory, namely, that Ignatius was martyred at Antioch, and never made the journey to Rome at all. For instance, Davidson (*Introduction N. T.*, 1863, i. 19) says "Ignatius was not thrown to the wild beasts in the Amphitheatre at Rome by command of Trajan, but at Antioch, on December 20, A.D. 115." Again (ii. 369):

"The so-called Ignatius is not an apostolic father. The productions bearing his name were not prior to the middle of the second century. The three epistles supposed to be oldest were written after A.D. 160. If the three were enlarged to seven, such extension did not take place till ten years after (A.D. 170) . . . It is well ascertained that Ignatius's journey to Rome to suffer martyrdom there is mythical, and his letters forgeries. He died at Antioch, not Rome, A.D. 115, when Trajan spent the winter at Antioch while he was on his Parthian expedition."

No authority for these positive statements is given; for this writer belongs to what I have been justly censured for elsewhere calling the sceptical school, and which certainly would be more properly described as the dogmatic school. In like manner the author of *Supernatural Religion*, i. 273, says:

"It has been demonstrated that Ignatius was not sent to Rome at all, but suffered martyrdom in Antioch itself on the 20th December, A.D. 115, where he was condemned to be cast to wild beasts in the amphitheatre, in consequence of the fanatical excitement produced by the earthquake which took place on the 13th of that month."

Davidson in his second edition (1882, i. 9, ii. 328) repeats his statements concerning the place of the martyrdom, but in the former place now condescends to give an authority. He adds:

"This rests upon the authority of John Malalas, which Uhlhorn pronounces worthless. In spite, however, of the ready assertion it may not be so, even though an earlier testimony and a Syriac menologium seem to disagree and are, therefore, paraded in opposition."

Anyone reading this would imagine that the rejection of the authority of Malalas was but the desperate resource of an apologist driven into a corner. But Davidson could not have referred to the passage to which he appeals; for anyone who had read what Malalas proceeds to tell in the very next sentence would have been ashamed to cite him as a credible witness. Malalas wrote in the latter part of the sixth century, and to say that "an" earlier testimony "seems" to disagree with him is a very gentle way of stating the fact that he is flatly contradicted by every earlier writer without exception who has occasion to speak of the martyrdom of Ignatius. Those who care to see a butterfly broken on the wheel may

consult Lightfoot's examination of this theory (ii. 435, *sq.*); but the *coup de grâce* is administered by a correction of the date of the commemoration of Ignatius. The whole theory rests on the assumed facts that the earthquake at Antioch took place December 13, and the martyrdom of Ignatius December 20. Volkmar jumped to the conclusion that the two events must have taken place in the same year, and the one been the cause of the other. We need not enquire whether the terrible season of the earthquake (the shocks of which, we are told, were repeated during many days and nights) was a likely period for the exhibition of wild beast shows. For it has been now ascertained that the commemoration of Ignatius on December 20 did not begin until, at soonest, the fifth century. The earlier day of celebration was October 17; and a sermon of Chrysostom shows that it was still on this day the feast was kept in his time. Lightfoot remarks that this date for the martyrdom is in itself not improbable. Ignatius was at Troas, about to embark for Rome, on August 24; and an interval of seven or eight weeks suits very well for the time between the embarkation and the martyrdom. Moreover, the tribunical power was conferred on Trajan in the month of October, and commemorative games might very possibly have been held in that month. But he attaches no value to these combinations, there being no evidence to warrant us in asserting that October 17 was fixed for the feast from real knowledge that it was the day of the martyrdom.

The Acts, which purport to relate the martyrdom of Ignatius, are now on all hands given up as spurious. They were certainly unknown to Eusebius, who otherwise would not have failed to include at least extracts from them in his Ecclesiastical History; and they cannot be reconciled with the genuineness of the Ignatian Epistle to the Romans. It is quite conceivable that there were at Rome Christians influential enough to be able to gain the liberation of an insignificant unit among the host of prisoners sent up from the provinces to be "butchered to make a Roman holiday." Ignatius had probably good reason for knowing that interest was being made for thus obtaining his release, and he wrote to deprecate it. But if the emperor had heard his case personally at Antioch, and had himself sentenced him to the beasts, it is inconceivable that anyone at Rome should have been thought likely to reverse the condemnation. Lightfoot joins in the rejection of the Ignatian Acts, and (p. 592) discovers in the language of Eusebius a distinct intimation that the Acts of Polycarp formed the earliest written record of a martyrdom with which he was acquainted. But he gives an interesting discussion of the two forms of these spurious Acts. He takes no notice of a suggestion of Zahn's that the martyr Ignatius was probably not, as we are apt to imagine, a venerable old man, but a strong man in middle life, else he would not have been sent up to Rome as likely to show good fight in the amphitheatre. But the combat of an unarmed man with a wild beast is essentially so unequal that it requires an experience which we happily do not possess to be able to say that a young man in such a position would afford to the spectators a more exciting spectacle than an old one.

The account of Polycarp's martyrdom, as has been just mentioned, was known to Eusebius, and accepted by him as authentic. Lightfoot (p. 588 *sq.*) both confirms this opinion by earlier testimony, and successfully refutes objections that had been raised. In one case (p. 600) his Greek scholarship comes well into play in correcting a false translation by Keim. To the letters containing the account of the martyrdom are appended three paragraphs of postscript, which are not included in the extracts made by Eusebius. The first of these paragraphs is chronological, and gives the date of the martyrdom. In addition to other arguments establishing the authenticity of this note, Lightfoot makes an interesting and original remark. The opening of the letter which relates the martyrdom distinctly imitates the opening of the Epistle of Clement of Rome; this paragraph, which purports to be the conclusion of the letter, distinctly imitates the conclusion of the same epistle. Such a coincidence could scarcely have been hit on by a forger. The external evidence for the second paragraph is weaker, but internal evidence is favourable. The third paragraph, which professes to give the history of the transmission of the document, is rejected by Lightfoot, who ascribes it to the author of the fictitious life of Polycarp which bears the name of Pionius. Later on he refers to the same author a note appended to the Moscow MS. of the martyrdom, in which it is related that at the precise hour when Polycarp suffered, Irenaeus, then sojourning at Rome, heard a voice as of a trumpet, saying, Polycarp has been martyred. The ascription of this note to pseudo-Pionius, who deals largely in the miraculous, is so satisfactory an account of the matter that I read with considerable astonishment the note (p. 439) where references for parallels to this alleged occurrence are made to the *Proceedings* of the Society for Psychical Research and other sources.

Lightfoot investigates the year of Polycarp's martyrdom, and states forcibly the reasons which have led the best critics of the present age to place it A.D. 155, about a dozen years earlier than former writers, who followed the authority of Eusebius, had placed it. He investigates, also, theories of the day, and among others one that I put forward in the *Academy*, and in this case, I am sorry to say, with an unfavourable result. No satisfactory explanation had been given why the 2nd Xanthicus, on which the martyrdom is stated to have occurred, should have been a "great Sabbath," as is also stated. I pointed out that if we suppose a lunar, not a solar, calendar, to have been used, the 2nd Xanthicus would indeed have been a very great Sabbath, as being the first day of the Jewish ecclesiastical year, and that the 2nd Xanthicus actually was a Sabbath in the year 155. But Lightfoot has given sufficient proof that the lunar calendar had been replaced at Smyrna by a solar one a considerable time before the date of Polycarp's martyrdom. His investigations as to the date of this change are extremely interesting. When a case has been fully heard before a competent and impartial judge, it is idle to appeal against his sentence unless new evidence can be produced, so that my solution must be regarded as, if not killed, at least in a condi-

tion of suspended animation until new evidence can be found for it.

I should own it to have been killed outright, if it were not that Lightfoot has not been successful in finding another explanation for the "great Sabbath." He revives Liveley's explanation that the day was so called because it coincided with the feast of Purim; but I had considered and rejected this explanation before attempting a new one. The feast of Purim was ordained to be held on the 14th day of the month Adar. It is unnecessary to discuss the difficulty raised by Wieseler whether this day could ever fall so early as February 23, because it certainly did not in the year 155. In that year the new moon fell on February 19; the moon would not be visible until February 20 at soonest, and February 23 could not have been more than the fourth day of the month. It could never have been taken for the fourteenth. The only other year within our limits when February 23 fell on Saturday was 166, and then also February 23 came quite early in the month.

Lightfoot hopes to escape difficulties of this kind by a vague suggestion that the Jewish feasts at the time were regulated not by astronomical observation, but by a cycle unknown to us. But this suggestion gives no relief. The heavenly bodies do not move with absolute uniformity, so that the best cycle will not accurately represent their motions, and an indifferent cycle may go a good deal wrong before its error is found out. In the same way, the best watch will not represent true solar time, and an indifferent watch may be many minutes wrong, and yet be thought by its owner to suffice for practical purposes. But, in both cases there are limits to the amount of error which can be tolerated. No one out of Wonderland would care to use a watch which marked noon at the hour of sunrise, and so neither would anyone care to use a cycle which indicated full moon when it really was new moon. If such laxity as this in the use of cycles were conceivable, we could easily explain the text, which, according to a strongly attested reading, seems to speak of an eclipse of the sun as taking place at the crucifixion. We might hold that it really was new moon at the time, though according to the erroneous cycle used by the Jews, it was full moon.

Thus, every explanation that has been offered of the "great Sabbath" must be regarded as having failed; but I think my theory stands as good a chance as any other of coming to life again by the recovery of new evidence. What is needed is some proof that the lunar calendar lingered on in Christian circles after the solar was adopted by the civil authorities. Nay, that needs no proof, because for ecclesiastical purposes a lunar calendar continues in use to this day; and at the date with which we are concerned, the lunar month which in former days had been called Xanthicus was certainly carefully observed in order to do honour to its fourteenth day. What needs to be proved is that Christians continued to call this month Xanthicus.

I am sorry that the necessary limits of a notice in the *Academy* oblige me to do but scanty justice to what is, perhaps, the most important permanent addition to ecclesiastical literature which the English Church has made

in our generation. Suffice it here to say that the title of the book gives a very imperfect idea of the varied character of its contents, for it goes near to completing the external history of the Church during the first half of the second century, carefully discussing all the cases of persecution or stories of martyrdom that belong to this period. I hope it is not wrong if our gratitude for the present volumes takes the form of a lively sense of benefits still to come; for it may well be hoped that one who, during the labours of an arduous episcopate, has managed to find time for so much work on Ignatius will be able to give the world some more instalments of the materials he has accumulated for the illustration of the Pauline Epistles and of other Apostolic Fathers.

For the sake of the next edition, I record three slips of the pen which I have noted: "A.D." for "B.C.," p. 23; "Ignatius" for "Irenaeus," p. 328; and "four" for "five," ii. 74.

GEO. SALMON.

A Voyage to the Fortunate Isles, and other Poems. By Sarah M. B. Piatt. (Kegan Paul, Trench, & Co.)

THE author of these poems and her work are well known on the other side of the Atlantic; and two tiny volumes of verse have recently introduced her, very favourably, to English readers. The present book contains a rich and excellently selected gathering from Mrs. Piatt's various works issued in America; and it will undoubtedly win a warm welcome from the lovers of poetry among us, and extend the radius of her influence and reputation.

Mrs. Piatt's verses are characterised by a distinct and pleasing originality. In diction and the technique of her art generally she has learned much from the modern poets, and the influence of Mr. Browning, especially, is unmistakable; but nothing more unfailingly distinguishes her poems than the solid kernel of fresh, original thought and feeling in each of them—thought and feeling which are expressed with careful and conscientious artistry. Though the present volume contains some faulty and imperfect lines, it is at least evident that the author is sufficiently master of her art to make it perform the thing she would. Unlike too many of our minor poets, she is never dragged this way and that by the technical exigencies of her verse, fettered by rhyme and carried by it whither she would not. The longer narrative pieces are hardly those in which this poet is seen at her best. The "Voyage to the Fortunate Isles," from which the book is titled, and "The Brother's Hand," though they each contain striking and powerful passages, are marked by some obscurity and by some uncertainty of touch. It is in the shorter pieces, the embodiment of a meditative or a lyrical mood, that we find the best she has to give us. These treat, with great tenderness and beauty, of love and loss, and of the dim future—that "far land we dream about." Some are written under the stress and pressure of doubt, some show the nobler spectacle of a heart "by faith made strong, by hope made high." Here is a brief and exquisite

poem in which we have the meeting of the two moods:

"THE HIGHEST MOUNTAIN.

I know of a higher Mountain. Well?
'Do the flowers grow on it?' No, not one.
'What is its name?' But I cannot tell.
'Where—?' Nowhere under the sun!

'Is it under the moon, then?' No, the light
Has never touched it, and never can;
It is fashioned and formed of night, of night
Too dark for the eyes of man.

Yet I sometimes think, if my Faith had proved
As a grain of mustard seed to me,
I could say to this Mountain: 'Be thou removed,
And be thou cast in the sea.'

In "Sometime," a poem unnecessarily marred, we think, by the monotony of the recurrent word which forms its burden, we have a pathetic subject treated in a singularly intimate and poignant fashion.

"Well, either you or I,
After whatever is to say is said,
Must see the other die,
Or hear, through distance, of the other dead,
Sometime.

"Then, through what paths of dew,
What flush of flowers, what glory in the grass,
Only one of us too,
Even as a shadow walking, blind may pass,
Sometime!

"And, if the nestling song
Break from the bosom of the bird for love,
No more to listen long
One shall be deaf below, one deaf above,
Sometime.

Not a few of the most delicate and successful pieces of the book are to be found in the section titled "In Company with Children." Here the womanly nature of the poet has full scope. Some of the verses are addressed to children; in others some pregnant chance-word from innocent little rosy lips is made the text and point of departure for a subtle and exquisite poem. Nothing could well be more delicate in fancy or lighter in touch than "My Babes in the Wood"—babes gone, vanished and dead, buried by change in the forest of the past:

"Poor slightly golden heads! I think I missed
them
First, in some dreamy, piteous, doubtful way;
But when and where with lingering lips I kissed
them,
My gradual parting, I can never say.

"I fancy, too, that they were softly covered
By robins, out of apple-flowers they knew,
Whose nursing wings in far home sunshine
hovered,
Before the timid world had dropped the dew.

"Their names were—what yours are! At this
you wonder.
Their pictures are—your own, as you have
seen;
And my bird-buried darlings, hidden under
Lost leaves—why, it is your dead selves I
mean!"

The temptation to quote further from this charming volume is almost irresistible, but we must leave the reader to discover the rest of its dainty and its pathetic things for himself. The book entitles its author to a very honourable place in the roll of the women poets of our century, at the head of which stand the names of Mrs. Browning and Miss Rossetti.

J. M. GRAY.

A Larger History of the United States of America to the Close of President Jackson's Administration. By Thomas Wentworth Higginson. (Sampson Low.)

THE merits and faults of this book are best met by the convenient formula of Andrew Fairservice, "ower bad for blessing and ower gude for banning." No one can read this history without perceiving that the writer is a man of real literary power, gifted with considerable originality of thought and freshness of expression, with much insight into character and conduct, and with sound conceptions of what constitutes historical evidence. On the other hand no one can go through it and not feel, when he comes to the end, that the writer has failed to fulfil the task which he has set before himself. The most provoking part of the matter is that Mr. Higginson has succeeded where success seemed difficult, and has failed where, as we should have thought, mere common-sense would have saved a man of less power. He has proved that he is among that small class of writers who can make a summary of history interesting. He is no partisan or hero-worshipper. Yet he always shows the inner meaning of events, and his characters stand out distinct and life-like. He has gone to the best authorities and used them with judgment. Yet the value of all this is almost neutralised by want of proportion in the book, and by the persistent refusal of the writer to keep before his readers a clear and consecutive thread of story.

Mr. Higginson begins with three long chapters on what we may call out-lying subjects, cognate to the history of the United States, but certainly not forming an essential part of it. The Mound Builders who have left their traces along the Mississippi and the Ohio, the Norsemen who may have discovered America in the eleventh century, and the Spanish explorers—these between them occupy one-sixth of the entire space which Mr. Higginson has at his disposal. The result is that the whole process of colonisation in New England, in Virginia, in Maryland, and in the Carolinas, and the history of every one of these settlements, from their first establishment down to the War of Independence, is got rid of in a little over a hundred pages—that is to say, in just four times the space given to the Vikings. The growth of representative institutions in the various States is ignored. The political life of New England under the first and second generations of settlers, the struggle to preserve that life against the attacks of James II., its curtailment by William III.—these are hurried over as unimportant episodes. If this was due to lack of room, why did Mr. Higginson throw away space on what is really but the fringe of his subject? He devotes four pages to the description of a Norse war-ship. Three lines suffices for the history of that confederation which for more than thirty years bound together the Puritan colonies and gave them their earliest schooling in unity. Nor is this all. The portion of Mr. Higginson's history which deals with the epoch of colonisation can hardly be called history at all: it is a comment on history. To anyone who is already familiar with the outline of events it is both pleasant and profitable reading; but assuredly a reader who wanted elementary

information would find it hard to carry away a definite idea of the process, or rather the series of processes, by which the colonies were created and shaped.

Mr. Higginson's account of the War of Independence is, in some measure, open to the same criticism, but not at all to the same extent. If it is unduly condensed, it is at least clear; and, what is perhaps even more meritorious, it is sober and judicial, while at the same time the writer never affects to rise superior to national sympathies. And at a later stage of the book, when Mr. Higginson comes to deal with the history of political parties in the United States, his work rises to a very high level of merit. Not, indeed, that he quite frees himself from his love of detail on comparatively minor points. One might have been content with rather less minute description of the costumes worn by the various queens of society in Philadelphia or Washington. But it is clear on every page that Mr. Higginson is among men and events with which he is thoroughly familiar. Without much elaboration or formal profession of character-drawing he makes the persons of his story stand out clear and life-like. Above all, he threads his way through that confused and tangled maze of political history which followed the administration of Washington with great clearness, and with a rare mixture of animation and fairness. No writer, as far as I know, has brought out so clearly how the overthrow of the Federal party was accompanied, and—though it sounds a paradox to say so—in a measure caused, by the triumph of Federal principles.

"When," says Mr. Higginson, "it came to political opinions, we can now see that all which Federalism had urged—a strong government, a navy, a national bank, a protective tariff, internal improvements, a liberal interpretation of the constitution—all these had become also Democratic doctrines. Were it not for their traditional reverence for Jefferson's name, it would sometimes have been hard to tell Madison and Monroe from Federalists. In a free country, when a party disappears, it is usually because the other side has absorbed its principles. So it was here; and we never can understand the extinction of Federalism unless we bear this fact in mind" (p. 389).

The merits of Mr. Higginson's later work make one regret all the more that he should have given the go-by to a part of his subject which would have given him full field for the depths of his powers. J. A. DOYLE.

Our South African Empire. By William Greswell. In 2 vols. (Chapman & Hall.)

PERHAPS none of our colonies form so interesting a political study as South Africa. Besides the ordinary questions of protection, public works, &c., which belong to all young communities, South Africa has the problem of the amalgamation of the two races—Dutch and English—as well as its Native question, a very Proteus for awkward reappearance. Nor can such colonial questions now be ignored. With Imperial Federation in the air, no public man can afford to exhibit ignorance of the history and politics of the great colonies. Mr. Greswell has put before the public in these volumes a singularly lucid account of the main threads in the tangled web of South African affairs. After a brief

history of the government of the settlement at the Cape by the Dutch East India Company, and then by the early English governors, an account is given of the various European communities and native peoples. The way is thus prepared for a discussion of the administrations of later governors and of the questions of to-day—such as the Afriander Bond, Native education, and confederation.

The book is dedicated to "the honoured memory of the late Sir Bartle Frere," and several chapters are devoted to an account of his *régime* and a vindication of his policy. Mr. Greswell maintains that the "prancing proconsul" was right, but that everywhere he was doomed to failure through the incompetency of the generals who carried out his measures and the irresolution of the ministers who held the reins at home. Thus a first disaster, due to inexperience in generalship, was allowed repeatedly to prevent the carrying through of a design, and everywhere his policy was arrested. What was this policy? To weld South Africa by confederation into "a glorious and strengthening part of the British empire" by attaining "certain strategic and commercial points of great and essential value." The possession of Damaraland and Namaqualand in the west, of Zululand and Kafirland in the east, was to secure for England at once the seaboard of South Africa and the trade-route to the interior. A limit was to be placed to the interminable native wars by the destruction of the two central systems of Kafirism, of which Krela and Cetywayo were respectively heads. The annexation of the Transvaal (for which act Sir Bartle Frere was not responsible) had already been arranged, and the Free State would surrender its independence as a matter of course. This far-reaching conception was not realised, and a great reputation ruined because Col. Durnford forgot to laager his waggons at Isandlwana. For although the object of the Zulu War—the destruction of Cetywayo's military system—was obtained at Ulundi, yet the previous defeat, involving a loss of British prestige and presenting to the Boers the desired opportunity for their rising, was the immediate cause of the disasters of the Transvaal War and the subsequent irresolution of the British Government. Yet had the latter only remained firm and supported their administrator, the Transvaal people would have been satisfied by a constitution, which had been already drafted by the help of eminent Dutch colonists. (How important was this element of Dutch co-operation is known only to those who are aware that even to-day the Transvaal is governed from Capetown.) Here again, as elsewhere, was an arrested policy. But a Nemesis with unrelenting exactness has forced the British Government to undertake those very measures for which Sir Bartle Frere was condemned.

"In Zululand, Basutoland, and Bechuanaland they [i.e., the late Government] have been compelled to assume those responsibilities they so violently disclaimed. . . . The difference between Sir Bartle Frere and his detractors is this: he annexed with a clear and definite plan before him; they have annexed hurriedly, expensively, late in the day, and in the teeth of their professions."

Two points of great importance are indicated throughout the book. One is that the Dutch

Africanders can have no real sympathy with Holland, still less with Germany or France. At the time of the first English occupation the people were actually in revolt against their Dutch masters, whose rule was politically tyrannical and commercially monopolist; and wherever the hard work of colonisation has been done it has been done by the English. It is English enterprise and capital and blood, too, which has made South Africa; and on every ground of justice the country belongs to England. The other is that the question which has always divided the two white races, and is to-day at the bottom of the Afriander Bond and Empire League antagonism, is the Native question; and that, if only an uniform, consistent, and strong policy under Imperial control were once evolved (and how this may be done some hints are given), the peace of the country would be practically secured.

The author has arranged his account, which is of the nature of a history, under special headings, whereby a dry historical narrative is avoided and a somewhat intricate subject made more intelligible to the general reader. This involves, however, some sacrifice of brevity. Many of the chapters have appeared previously in the reviews—a fact which does not tend to condensation—and in several places almost identical phrases, and even sentences, occur. If Mr. Greswell wishes to obtain the public ear in these busy times he must learn to put his information into a more compact form. But this defect is not sufficient to mar the value of the book. The author has the rare qualification of a long residence at the Cape, which gives him the necessary colonial standpoint which colonists complain is so conspicuous by its absence in the accounts of South Africa written by the distinguished strangers who have raced through the country on a post-cart or otherwise. Mr. Greswell writes as a man who has felt the things he tells. He has himself traversed the field of the "little hand," felt "the shudder which ran through the length and breadth of South Africa, from the Tugela to Cape Point," at the news of the destruction of the 24th regiment, witnessed the sad ceremony of the shipment of the body of the Prince Imperial to the *Orontes* off Simonstown, and tasted of the bitter degradation of the loyal colonists after the Transvaal surrender. These volumes supply what has long been wanted—an intelligible account of the real state of affairs in South Africa.

W. BASIL WORSFOLD.

England's Supremacy: its Sources, Economics, and Dangers. By J. S. Jeans. (Longmans.)

IF Free Trade is to repel the attacks which the modern Protectionist school is directing against it, it must find an abler champion than Mr. Jeans. We say this with some regret, because the promise of the introduction was fair. We fully agree with the author that "there never probably was an epoch when well-authenticated facts bearing upon the condition-of-England question were more in demand than at present"; and, had he given us such, we should have heartily thanked him for his book. Unfortunately, in a work mainly statistical, he so blunders in his figures as to shake our confidence in the

correctness of any one of his "facts." A careless misplacement of words makes it appear that England has the least number of industrial artisans compared with its agricultural labourers, and the highest surplus of native-grown corn after its population has been fed, of any country in the world. Clearly the opposite is meant, and had this been the worst error we should merely have blamed the want of revision of proofs. But when we are gravely informed that "in New England, where labour is highly organised, five persons produce in a year 140 yards of calico; in North Carolina, where the opposite condition of things exists, the same number of operatives only produce two and two-fifth yards," we begin to doubt whether the mind that imagines calico to be more costly in America than cloth of gold is capable of correcting his own or anyone else's mistakes. And our doubt passes into conviction when Mr. Jeans produces the following argument against what, with somewhat indecent heat, he terms the "howling of the Fair-traders." "England now imports 600 million quarters of corn per annum. Impose a tax of 5s. per quarter upon this quantity and the product would be over 175 million pounds sterling per annum . . . equivalent to a charge of nearly £5 per head upon every man, woman, and child in the three kingdoms." Now, in the first place, 600 million quarters of corn would, at the cheapest rate, represent a sum of 900 million pounds sterling, or over twice the value of the entire imports of England, which amount to 435 million pounds. Secondly, a tax of 5s. per quarter on 600 million quarters would produce exactly 150 million, and not "over 175 million pounds sterling." Thirdly, Mr. Jeans has represented the value of the whole of our food imports as averaging "close on £5 per head" of the population (which is itself an exaggeration, the correct figures being £3 5s. 7d.), how, then, can a tax of 18 per cent. on one article of food represent an equal amount? The truth is that our yearly corn imports cost us some sixty-five million pounds, and the tax—advocated by a very insignificant section of the Fair-trade party—might add ten millions to the annual revenue.

Again, Mr. Jeans argues, and argues rightly, that, if in America the cost of living has increased of late years more rapidly than the increase in wages, whereas in England an increased wage has been accompanied by a decreased cost of living, our economic system is the sounder and more successful. We believe that this might be proved to be the case. All accounts show that prices have almost universally risen in America, and in some cases risen enormously. On the other hand, if rents and butchers' meat are higher in the England of to-day than they were in the England of a quarter of a century ago, all bread-stuffs, clothing, and groceries are very much cheaper; and these are the staple commodities of our artisans, whose wages, if not largely and universally, have yet steadily shown a tendency to rise. But we have not yet seen the question fully established or exactly computed; and had Mr. Jeans set aside his ambitious design of dealing with the whole range of world-statistics, and concentrated his energies upon a painful and correct elucidation of this one point, he would have done an excellent work. As it is, he merely

shakes our previous conviction. He prints a table, professing to give the relative cost of the main articles of imported food in England in 1860 and 1880 respectively, and to show that the total of the latter year exhibits a decrease of 28 per cent. on the former year. Our suspicion is attracted by the fact that potatoes are set down as being more costly than butter. We then note that every article except tea and rice appears as dearer in 1880 than it was in 1860, and making our own addition, find that, according to this table, food has increased 33 per cent. instead of decreased 28 per cent. during the twenty years. If this were true the Fair-traders might "howl" to some purpose; but happily we know that it is not true, and we therefore cordially sympathise with the author when he adds that "it would be easy to multiply figures of this kind, but it is neither necessary nor desirable."

Though such extravagant treatment of materials deserves the severest censure, we yet willingly allow that Mr. Jeans is thoroughly honest. He misleads, and misleads frequently, but he misleads unconsciously, not from design; and herein he compares favourably with recent writers on kindred subjects. He justly appreciates the "pernicious and ill-judged" attempts to "sow anarchy and discontent" by constructing out of old account-books, aided by a heated imagination, a false view of the condition and prosperity of the fifteenth-century peasant, which so many vivid pictures in the Paston letters utterly refute. Instead of describing peasant-proprietors from Watteau's canvases, he quotes the words of those who have studied them from life:

"They are miserably poor and overwhelmed with debts." "In a bad year they are reduced to starvation. . . . The weary look of the children is sad to see. . . . They are underfed and overworked." "Unless he have capital of his own, he must borrow it. When he is a systematic borrower he will cease to be a free proprietor. And when financial rings hold under mortgages the soil of England, we shall simply have established for the landlords, whom we see, and who (in England) live on their estates and usually take some pride in them, invisible money-lenders living in distant cities. What is there in all this to transform industry, reorganise our social system, and offer a millennium to the thirty-five millions of these islands?"

He repeats a question which would scarcely need asking again, were it not that some in authority deliberately choose to ignore a truth which has often been published, and which was the main fact established by the great blue-book on Land Tenures in 1870. "Is it not notorious that by virtue of superior husbandry the soil of England, not naturally the best, has been made the most prolific in the world?" It is worth noting that—whereas the wife of the French peasant proprietor remains the chief agricultural drudge, and her "sickly look" has been described as "very striking"—in England, between the years 1861 and 1881, "the number of women employed in the hard and unsexing labour of the field has fallen from 378,802 to 64,840." It would also be well to enquire of those who seek, by legislative action, to replace our native land system by that of France, what would have happened if the loss of two

hundred millions sterling, sustained, according to Mr. Shaw-Lefevre, by our agricultural interest in the past decade, had fallen on a small cultivating ownership instead of on a capitalist class? The latter, though severely shaken, has been able to pay the bill occasioned by a conjunction of bad seasons and low prices; the former, here as elsewhere, would, in half the time, have been face to face with starvation and the usurer. As a single-minded Free-trader, willing to face economic laws even when they are disagreeable and unpopular, Mr. Jeans cannot add his breath to those who are blowing the peasant proprietorship bubble. Our land system is the natural result of the law of supply and demand, working in a community whose wealth and condition is essentially the product of its manufacturing rather than of its agricultural industries. It exhibits no tendency to change of itself, and a change can only be produced by state interference. An organisation of industry thus unhealthy created cannot stand against economic law, unless protected by the agency to which it owes its origin; and the agricultural interest, which, as at present constituted, mildly and diffidently suggests a 5s. tax per quarter on imported corn, which will not be granted, would then clamorously demand a 10s. tax, which riotous agitation might win for it.

H. AVRAY TIPPING.

NEW NOVELS.

Mitre Court. By Mrs. J. H. Riddell. In 3 vols. (Bentley.)

Lord Vanescourt's Daughter. By Mabel Collins. In 3 vols. (Ward & Downey.)

Arnold Robur. By Martin Combe and Duncan Lisle. In 3 vols. (Chapman & Hall.)

Miss Montisambart. By Mary A. M. Hoppus. In 2 vols. (Sampson Low.)

The New River: a Romance of the Time of Hugh Middleton. By Edward Fitzgibbon. (Ward & Downey.)

The New Democracy: a Fragment of Caucasian History. (Sampson Low.)

Miss Vanbrugh. By Pen Derwas. (Bristol: Arrowsmith.)

Mitre Court is described in a sub-title as "a tale of the Great City"; but as its author, since the days of *George Gith of Fen Court*, has written more tales of the Great City than most readers can remember, the description does not serve to differentiate this latest novel from its many predecessors with the same background. It is, perhaps, a little more aggressively cityish than the rest; and some readers may incline to think, not very unreasonably, that it would be all the better if the story were not so often interrupted by long drawn-out passages of topography, rapturously eloquent celebrations of tumble-down houses, and shrill denunciations of the bold bad men by whom the tumble-down houses are being swept away. Enthusiastic antiquarianism is all very well in its place; but those of us who like to take our fiction neat think that its place is in Mr. Walford's interesting magazine, and not in the pages of a novel. Mrs. Riddell, however, is not without excuses, for, if the truth must be spoken, she has very little story to tell; and, if it had not been for

antiquarianism, the orthodox three volumes could not possibly have been filled. Indeed, one has to get nearly to the end of the first volume before one perceives that there is any story at all. The writer has acquired the happy knack of economising scanty materials; but in the first part of *Mitre Court* the economy is a little too obtrusive, and the result is not happy. We see a great deal of Mrs. Jeffley, the capable but incredibly simple-minded lodging-house keeper, of Mr. Jeffley, her very meek husband, of the two lodgers, the virtuous Frank Scott and the wily Mr. Katzen, of Mrs. Childs, the charwoman, and of the mysterious Mr. Brisco and the equally mysterious Abigail Weir; but as they do nothing except talk about each other, the reader's interest in them can hardly be anything but languid. When the cunning Mr. Katzen begins to float the New Andalusian loan, which, we see from the first, is destined to bring grief to everybody concerned, the story does begin to waken up a little; but even a critic who cannot pretend to possess Mrs. Riddell's fearful and wonderful knowledge of matters financial finds it hard to subdue a lurking doubt concerning the possibility—to say nothing concerning the reasonable probability—of the record of Mr. Katzen's great coup. There is a good deal of credulity in the world; but it is difficult to believe that a man whose purse is empty and reputation shady should succeed in drawing £300,000 out of the pockets of experienced men of business on the strength of a security which has no existence, or that, having accomplished such an extremely difficult piece of scoundrelism, he should be entirely out of the reach of the law. Mrs. Riddell has not been improving of late years. Her early books were unduly sentimental and lachrymose, but they were decidedly interesting: *Mitre Court* is cynical, but on the whole dull. The attempt to enliven the book by depreciating human nature at large in a manner dear to youthful misanthropists is not successful, and the kind of humour which is to be extracted from the mispronunciations and grammatical errors of uneducated persons is too cheap to be very effective. Mrs. Riddell has written some very good stories and some rather poor ones, but I cannot remember anything of hers that is, on the whole, poorer than *Mitre Court*.

Though Miss Mabel Collins has not Mrs. Riddell's experience, she has produced a much better novel. *Lord Vanecourt's Daughter* does not belong to the highest class of fiction. It gives us no illuminating studies in human nature, nor does it deal with the deep things of thought or emotion; but it is, what *Mitre Court* certainly is not, readable and interesting from the first page to the last. It is a story the interest of which depends entirely upon the evolution of a very well-contrived and well-managed plot; and though Miss Collins's work is of the kind which the superior person is wont to sniff at, it has, at any rate, the merit of accomplishing what it aims at, and for the judicious critic this is enough. The plot-novelists one and all regard with what I consider perfectly just resentment the wicked reviewer who discounts the interest of readers by revealing the secrets, or explanations, or catastrophes which the third volume may have in its keeping; so

I will allow nothing to leak out through me save the fact that the story deals with a murder committed by a father and witnessed by a daughter, whose reluctance to bring her criminal parent within the grasp of the law brings herself within reach of a long series of cunningly devised infernal machinations. Like Mrs. Campbell Praed and one or two other story-tellers, Miss Collins utilises the mysteries of "occultism," or "theosophy," or "esoteric Buddhism," or whatever is the proper name for the thaumaturgic religion of Mr. Sinnett, Colonel Olcott, and Madame Blavatsky; and a certain military "adept," who is the hero's good angel, does wondrous things by which the devices of villainy are brought to nought. But I must be discreet, or I too shall have to take my place among the critics who read and tell; so I will say no more, except to repeat what I have already said, that *Lord Vanecourt's Daughter* is a capital novel, which will give full and solid satisfaction to those readers who want a story and nothing more.

There is a great deal more than a story in *Arnold Robur*; so much more, in fact, that the reader is in constant danger of losing the story altogether. It cannot be said that the loss would be very serious, for where the scattered fragments of narrative are pieced together they are found to be very involved and tiresome; but probably the involution and the tiresomeness would have been less painfully aggressive had Messrs. Combe and Lisle been good enough to tell their tale straight on, without breaking away into long essays and absolutely endless conversations about everything in general and nothing in particular. Were it not that unsolicited advice is seldom acted upon or even accepted graciously, I would suggest that the new literary firm would be much strengthened if the contributor of the reflective, philosophic, sarcastic, and generally expatiatory passages could be bought out by his co-partner, who would then be left free to tell a story with no nonsense and no irrelevant sense. When I read in the *Academy* and elsewhere severe reviews of stories in which I have been to some extent interested or amused I sometimes fear that I must be foolishly easy to please; and therefore when I find nothing in *Arnold Robur* that either interests or amuses me I come to the conclusion that it is a dull book. Of course this conclusion may be wholly unjust, but even the authors will admit that in the circumstances it is not wholly unreasonable; and having arrived at it, it is hardly worth while to indulge in further comments upon *Arnold Robur*.

In the two volumes of *Miss Montizambart* we have a novel which belongs to that highest kind of fiction in which our interest is awakened, not by a mere skilful arrangement of exciting incidents and situations, but by strong dramatic presentation of human character and passion. Miss Mary Hoppus is a writer with worthy artistic aims; and, as she does not overtax her powers, she succeeds in attaining them, the result being that her work leaves behind it a sense of satisfying completeness. A study of remorse so intense and prolonged as to bring its victim to the verge of actual mania is certainly somewhat depressing, and many readers may feel that

there is a lack of pleasantness in a picture of such unrelieved gloom; but no one will question the power and veracity of Miss Hoppus's portraiture. It is not often that we meet with a figure so profoundly impressive as that of poor Miss Montizambart—crushed down not only by the ever-present consciousness of her hidden shame, but by the misery of knowing that her boy who calls another woman mother accepts her outgoings of affection with something that is even colder than indifference. The character of this lad, Oliver Montizambart, is a work of very delicate and finished art, for Miss Hoppus performs the difficult task of making him feel and act in such a manner as to win our belief without forfeiting our sympathy. Lucy Wildsmith, the last of the three principal personages, is equally successful; her portrait has the harmonious expressiveness of a study from life; and, indeed, nowhere in the book is there any trace of perfunctory conventional work. In the present condition of public taste I fear that *Miss Montizambart* will not draw crowds to the circulating libraries, but it will do something much better—it will win the admiration of all cultivated and careful readers.

The New River is a very bright, pleasant, and stirring tale, founded on the history of the great enterprise which provided London with its first water supply. Its sub-title might appropriately have been "the virtuous and vicious apprentices," for the characters and careers of the two 'prentice youths who are the most prominent persons in the story are contrasted in a quite Hogarthian manner. Mr. Fitzgibbon cannot be accused of being an imitator of Dickens, but he is probably a student and admirer, for the treatment of various portions of the story reminds me forcibly of *Barnaby Rudge*. The book is not a pretentious one, but it may be praised unreservedly, for it has no serious faults, and is interesting throughout. I may, however, remark that the word "bother" in the mouth of a London apprentice of the early part of the seventeenth century is an unmistakable anachronism.

Only the second half of the volume entitled *The New Democracy* is really new. The first half was published about twelve months ago, and is now supplemented by a sequel, with the title "Shooting Niagara; or, the Last Days of Caucasus." The book as a whole is one of the numberless political satires which owe their being to the prior existence of *Gulliver's Travels*; but for Swift's fertility of invention or mordant humour the reader of *The New Democracy* will seek in vain. It is, in short, a dull affair; and in a book of this kind dullness is the one unpardonable sin.

Critics, like other people, find a relief in variety, and having just said that *The New Democracy* is dull, I should like to be able to declare that *Miss Vanbrugh* is lively. Unfortunately, variety must be sacrificed, for truth compels the statement that *Miss Vanbrugh* is dull also—so dull, indeed, as to be nearly unreadable. The writer certainly appeals to the public by the stale and not specially commendable device of introducing a distinguished living actress and an almost more distinguished actor under very transparent disguises, and his portraits are flatter-

ing enough; but even the warmest admirers of Mr. Irving and Miss Ellen Terry will consider his story a vain thing. One living person has an indubitable right to be seriously aggrieved. The wretched creature Miss De Lorme may be identified by ignorant persons with a lady who is in no sense public property; and the writer who is responsible for such identification is guilty of a grave offence against good manners.

JAMES ASHCROFT NOBLE.

GIFT-BOOKS.

The Archipelago on Fire. By Jules Verne. (Sampson Low.) It may be as well to say at once that this latest story of M. Jules Verne has nothing whatever to do with the volcanic eruption in the Straits of Sunda, as was erroneously announced some while ago. The scene is the Levant; the time is the Greek war of independence. The title, however, is taken not from the fire ships of Canaris, or the massacre of Scio, but from the exploits of a pirate captain. On the whole, this may be called an historical story of naval life, without any of the marvels, either scientific or psychological, in which the famous author usually delights. The only incident passing belief is the rescue of the hero's ship when already in the possession of the pirates. But though M. Jules Verne here adopts a new genre, he has not lost his power to hold the attention. The story is told with vivacity from the first page to the last. Speaking ignorantly, we should say that the nautical terms are true in themselves and accurately rendered. For the general faithfulness of the history and the geography we can answer. But the English translator should not have allowed M. Jules Verne to state that Byron's "corpse now rests at Westminster." As a matter of fact, the Dean of twenty years later would not even admit Thorwaldsen's statue of him into the abbey—to the gain of Trinity College. The poet, of course, was buried in Hucknall Torkard Church in Nottinghamshire. It remains to add that the volume is abundantly illustrated, there being as many as fifty full-page plates to less than two hundred pages of letterpress.

Nature and her Servants; or, Sketches of the Animal Kingdom. By Theodore Wood. (S. P. C. K.) These accounts of the familiar animals of the world are intended as an introduction to zoology, for the use of the young. In a series of eighteen chapters Mr. Wood conducts his readers by a system of natural groups through the animal kingdom. Seals, pachyderms, rodents, marsupials, and the like, down to crustaceans, and myriapods are lightly sketched, the chief animals of each group being figured and taken as types of the rest. Of course, this has been often done before, and we do not know that it is done better here than in a dozen other books. But technical terms, which so often frighten away the beginner, have been eschewed by Mr. Wood as much as possible; and the descriptions, if easy, are not altogether accommodated to a child's mind—which we regard as one of the surest modes of disgusting the learner. Curiosity and interest must be awakened, and there must be a sense in perusing such a book as this, if it is to do good, that some mastery over facts and language has been gained. The descriptions of the economy of fish life are lucid and satisfactory, but Mr. Wood is perhaps too explicit when he says that "the hearing of fish is very imperfect indeed." It is so in the salmonidae, whose piercing sight compensates for the deficiency. Many fishes, however, such as pike, muraena, and others, have been taught to come and be fed at their master's voice. The chapters on birds are generally excellent; but something should have

been said of the phenomena of migration, which is at present the great question exercising ornithologists, and on which, it may be added, more materials for a decision are being gathered year by year. Altogether this book is highly to be commended. It seems to answer its purpose admirably, and is one more proof that the S. P. C. K. is determined not to suffer general literature to suffer at its hands. For a school library, a prize, or a village coffee-house, it would prove suggestive and valuable.

In Mrs. Edward Kennard's *Twilight Tales* (Chapman & Hall) there is plenty of wholesome and varied entertainment, and the illustrations are really clever. Mrs. Kennard seems to possess a large circle of friends in the animal world, and to have been the *confidante* of horses and donkeys, foxes and stags, and other beasts. They view things—sport especially—from another point than that in which we see them; and boys and girls will not only get a good deal of amusement out of a change of aspect, but may also acquire a little of that sympathy with the brute creation which is often absent in young hearts. We thoroughly recommend the book as one of the pleasantest and healthiest of the season's productions.

The Lost Trail and Camp-fire and Wigwam, which belong to the "Log Cabin Series" (Cassell), are very good examples of the Red Indian class of story, in which it is evident that boys in their teens still greatly delight. They relate some of the adventures which befall Jack Carleton, a Kentuckian lad, and his friend, Otto Reelstaub, a German, who speaks delightfully broken English. There are plenty of combats with Indians and wild beasts; and, fortunately, the lads are never deserted by their good angel, a friendly Indian of the rather commonplace name of Deerfoot, who turns up whenever they are in *extremis*. How it comes about that so anxious and careful a mother as Mrs. Carlton allows her boy to go into the jaws of death on the slightest provocation does not very clearly appear. That is, perhaps, not the concern of Mr. Ellis, the author of the "Log Cabin Series," who certainly takes greater pains with his Indian life, has a lighter touch, and exhibits a more genuine sense of humour than most writers in the same field.

Through the Fray. By G. A. Henty. (Blackie.) This is "a tale of the Luddite riots," and is a first-class book for boys. The hero is himself a boy, but is not so heroic as to be impossible. He is blessed with a temper like Achilles, which brings him under suspicions of having murdered a brutal stepfather; and, being thus rendered careless of his life, he defends his mother's mill with the courage of Achilles against an attack of the Luddites. He afterwards overcomes their animosity in the way in which it was historically overcome—by the immense amount of extra workable to be done, and therefore required to be done, by the very machinery which the Luddites wished to destroy. Our Achilles had his Briseis; but, unlike his Greek prototype, he marries her, conquers his temper, and they live happily ever afterwards.

Dessie Fennimore. A Tale of Country-town Children. By S. K. Hutton. (Hodder & Stoughton.) An exceedingly pretty story for the very little ones of the family—the "children" as distinguished from the "boys and girls." The language has perfect simplicity, without that aggressive childishness which all properly constituted children resent, and the incidents are just the ones to interest the nursery. The tiny readers or hearers of the book will gain additional delight from the knowledge that Dessie and Pollie were "real children," and that the author has not "made them out of her head." There are five illustrations of average merit.

A Terrible Coward. By G. Manville Fenn. (Blackie.) This book contains two stories, both good, though the second is better than the first, which gives the title. *A Terrible Coward* is the story of a young man who refused to take a dangerous dive, which is expected of every youth in a Cornish fishing village to show his manhood, because he does not see the good of merely doing a thing because it is dangerous. He afterwards heroically saved the life of his bitterest enemy, who had dubbed him a "terrible coward" for not taking the dive. The moral is not a bad one; but if every youth in the village took the dive, it could not be very dangerous, and the motive for refusal fails. The second story is an exciting and well-told account of the way a young fellow, son of the foreman of a coal mine, excites and overcomes the hostility of the miners in his attempts to increase their safety.

The Penang Pirate. By John C. Hutcheson. (Blackie.) This volume has also two stories. The first is an exceedingly good description of the way some Malay pirates are caught out and fought out in their attempt on a homeward-bound China merchantman. The second is a narrative of the adventures of a petty officer on board an English frigate engaged in putting down the slave trade off Madagascar. It is not well told. The introduction is long and tedious, and the adventures of a party shipwrecked off Madagascar are, surely, impossible.

New Honours, by Cecilia Selby Lowndes (Frederick Warne), is in reality a series of photographs of child life at the seaside. As such it is agreeably realistic, and some of the scrapes in to which the little Despards stumble, and, which are a source of great annoyance to their nurse, are very laughable. Humour, too, is shown in the way in which Miss Lowndes makes the various members of the Despard family take to their "new honours," as their ennoblement and elevation from genteel poverty to comparative affluence is termed. The death of poor Sydney seems, however, an unnecessary bit of tragedy. This book is exceptionally well written and illustrated.

That Aggravating School-Girl, by Grace Stebbing (Nisbet), is likely to be popular among all who make her acquaintance in print, though her presence in the flesh might not be so grateful. The character sketches are good. Miss Crofton is a mistress after the modern high-school type, who wins all hearts by her tact and sympathy, and yet inspires respect by her knowledge and power. Miss Rowe is another product of modern times—highly educated, devoted to work, exacting, unsympathetic, unacceptable. How, in the school over which these two ladies presided, Miss Helen Edison conducted and misconducted herself, and how, in her at any rate, the discipline of school-life developed the better qualities of her nature is well and cleverly told. The conversations are lively and natural, and the moral obvious, but not obtrusive. The illustrations are not particularly tasteful, nor do they present Helen, who is something more than a mere tomboy, in her best aspect.

Fearless Frank. By Mary E. Gellie. (Griffiths, Farran & Co.) A capital book for children. Frank's adventurous voyage to the North Pole in the *Pizy*, with his little sister and the half-witted boy Dod, is told with much spirit, and, if read aloud, would be listened to with breathless interest by a juvenile audience.

Two Ways of looking at it, by Austin Clare (S. P. C. K.), are the ways adopted respectively by the south-country schoolmistress and the north-country miner of viewing each other and things in general. The pair are far asunder at first, but grow nearer and nearer; and in the end, having become man and wife, they regard

things with a single eye, and set down their past differences for mutual improvement. The idea is happily conceived, and well carried out, in chapters written alternately by John Elliot and Daisy Meadows. The little book contains not only plenty of good sentiment and sense, but not a little incident and adventure.

Bound with a Chain. By Crona Temple. (S. P. C. K.) This is a tale of the black country written by a practised pen with skill and power. The tone of the book is more serious than that of most of the season's publications. We are a little surprised to find coal-pits, coke-ovens, factories and windmills, grouped together in one neighbourhood, but our acquaintance with South Staffordshire is limited.

Michael's Treasures; or, Choice Silver. By Emma Marshall. (Nisbet.) This is the story of a foundling washed ashore by a storm on the east coast, and contains a good deal of stirring narrative. Marina, the waif, develops into everything that is good and delightful, and becomes Michael's best treasure. The writing is rather "goody," but in families where a Sunday story is regarded as a needful piece of literature Mrs. Marshall's story will be acceptable.

The Mill in the Valley, or, Truth will out. By C. F. M. (S. P. C. K.) A tale with a moral, and containing a truthful picture of village life as it used to be, when farmers were prosperous and labourers contented, and parsons respected. How Jesse Crump made and lost his gold, and how suspicion fell on the innocent, and how all came right at last, is told pleasantly enough. The cattle-disease is a fresh subject, and gives a little more air of reality to this story than is generally found—indeed, there is plenty of proof that the author has studied from nature.

A Little Silver Trumpet. By L. T. Meade. (Hodder & Stoughton.) The silver trumpet turns out to be no trumpet, but a street arab's penny-making capacity for whistling. The story is, however, a very good example of success in describing the dangers, the miseries, and the temptations of the life of the residuum of a great city with fidelity, without exaggeration, and with interest. The hero is a modernised Oliver Twist, and there is something of the Dickens humour and a good deal of pathos about him. Mr. Pym's illustrations are neat and effective.

Friendship's Diary. (Hodder & Stoughton.) This is a very pretty little diary, with a page for every day, surrounded by a graceful border, and headed by a well-selected quotation. At the beginning of each month is a full-page wood-engraving after Millais, Arthur Hughes, Pinwell, or some other artist. These (which of course have appeared before) are all pleasant pictures, and are fitted with appropriate verses. Altogether, it is a novel and attractive form of diary, and well suited for a present for young or old.

Belonging to the Bad Boy's Diary order of literature, and distinctly bourgeois American in tone, is *The Adventures of Jimmy Brown.* (Sampson Low.) We could have been spared some allusions to Jimmy Brown's sister Sue and her various lovers, which are a trifle vulgar; and the boy is rather too conscious that he is a humourist. Yet he plays a great variety of tricks, especially on his baby brother, which will be regarded as laughable by boys and girls who are not old enough to understand, or to be injuriously affected by, vulgarity when they come across it.

Adam Hepburn's Vow, by Anne S. Swan (Cassell), is a sort of compromise between a historical novel with a religious purpose and a gift-book, and it is easy to see how at this

season it may be utilised. Miss Swan is hardly at her best here. The story, which tells how a Covenanter of the Drumclog and Magus Moor days makes a vow to revenge the murder of his wife by Prelatists, and how he keeps that vow, runs on rather conventional lines. Scotch manse life in the old times is, however, not unskillfully sketched.

True Stories of the Reign of Queen Victoria, by Cornelius Brown (Griffith, Farran, & Co.), is in reality a succinct history of the present reign, in which ample justice is done to individuals who have played an important part in it, and to incidents of a personal character. As such it is interesting and readable, in spite of the "historian in waiting" tone which spoils some portions of it and it; may be highly recommended as a superior gift-book of the graver sort.

Bound by a Spell. By the Hon. Mrs. Greene. (Cassell.) The alternative title of this lurid-looking volume is "The Hunted Witch of the Forest." The scene is laid in a remote valley on the confines of the Canton Grisons, and the time about a century ago, when persecution for witchcraft was far from being uncommon in Central Europe. Mrs. Greene exhibits industry and a certain amount of power; but the subject she has chosen is, in our opinion, much too horrible for a book that is to be put into the hands of children. There are chapters in it which would give the little ones ugly dreams, and suggest pictures to their active imaginations which would, in some cases, be positively injurious. She has struck a wrong note this time.

Tinker Dick, by Mrs. Henry Keary (Frederick Warne), is hardly a story for children, although it is about a foundling child, whom Tinker Dick, one of those wonderful working men of "long ago," benefits by going to London and discovering a grandfather with a little money. Dick's rather improbable adventures in London are the best thing in this little book, which is, throughout, rather too didactic, and is well intentioned rather than well written.

The Pedlar and his Dog. By Miss Rowsell. (Blackie.) An interesting tale for young people. John Pennycuik and his dog Shock will be found pleasant companions. The pilgrimage to London in the time of Queen Bess is capably described.

Little Tottie, and two other Stories. Told by Thomas Archer. (Blackie.) This book would make a good Sunday School prize. The tales are serious but interesting. Though published near Christmas time, "Little Tottie" is not about fairies and merry-making, but about the crèche and the hospital.

Miss Grantley's Girls. By Thomas Archer. (Blackie.) The title is a misnomer. The girls have nothing to do but to listen to the stories Miss Grantley tells them; which are good, bad, and indifferent, the last predominating. Miss Grantley is unfortunately endowed with a heavy wit, which her school-girls must have found rather trying. The stories are, however, mercifully short, as there are half-a-dozen of them in 145 small octavo pages.

Our Sunday Friend. (C. Mowbray.) The year's volume of this monthly periodical is, perhaps, the thinnest book of the kind published, containing but one hundred pages. This is certainly a distinction, and, from certain points of view, a merit. We have no doubt that in course of issue it has given more amusement and edification to more young people than many a thicker and costlier magazine. Its tone and teaching are unexceptionable, and it has a number of fairly good pictures.

NOTES AND NEWS.

LORD TENNYSON's new volume, *Teiresias and other Poems*, will be published next Tuesday.

PROF. W. MINTO will write the article on "Sir Walter Scott" for the *Encyclopædia Britannica*. He is also editing "The Lay of the Last Minstrel" for the Clarendon Press. We may add—what is an open secret—that he is the author of the novel "The Crack of Doom," now running in *Blackwood's*.

MR. ERNEST MYERS has in the press a volume of poems, which will take its title from "The Judgment of Prometheus."

MESSRS. MACMILLAN will shortly publish a volume of *Studies in Ancient History*, by the late J. F. McLennan, comprising a reprint of "Primitive Marriage."

THE cabinet edition of George Eliot's works will be completed before the close of this year by the issue of the third volume of her life, "with additions," and by the *Essays and Leaves from a Note Book*, uniform with the other volumes.

THE publication of the Life of Longfellow, by his brother, has been postponed till February. It will consist mainly of his own journals and letters. Some of the latter are adorned with little pen-and-ink drawings, which will be reproduced.

THE next volume in the series of "English Worthies" will be *Shaftesbury*, by Mr. H. D. Traill.

ON December 21 will be published the first volume of Cassell's "National Library," edited by Prof. Henry Morley. The price of each volume will be threepence; and it is intended to issue one volume every week. The first five volumes will consist of Macaulay's *Warren Hastings*, Isaac Walton's *Complete Angler*, Henry Mackenzie's *Man of Feeling*, Byron's *Childe Harold*, and Benjamin Franklin's *Autobiography*. This undertaking to produce literary masterpieces, at a really cheap price and at the same time in a satisfactory form, deserves the support of all classes of the reading public.

MESSRS. LONGMANS will publish immediately a "short story" by Mr. R. L. Stevenson, entitled *Strange Case of Dr. Jekyll and Mr. Hyde*.

PROF. MEIKLEJOHN, of St. Andrews, will shortly publish with Messrs. Blackwood, a work on *The English Language: its Grammar, History, and Literature*, with special chapters on composition, versification, paraphrasing, and punctuation.

MR. T. P. O'CONNOR in his preface to his new work, *Gladstone's House of Commons*, says: "It has been the main endeavour of these sketches to give a perfectly accurate, life-like, intelligible account of the various scenes described. Subject to this condition, the writer has endeavoured to avoid all allusions that might be regarded as too personal. The justification of the title is the commanding position held in the last Parliament by the overwhelming personality of Mr. Gladstone." The work, which will be published by Messrs. Ward & Downey, will be ready early next week.

A NEW novel by Mr. Westall, entitled "Two Pinches of Snuff," will be commenced in Cassell's *Saturday Journal* of December 16. The first popular editions of this author's *Red Rivington* and *Old Factory* (published in March and April last) being nearly exhausted, Messrs. Cassell & Company are preparing a second edition of each of these works.

Robertson of Brighton; with some Notices of his Times and Contemporaries, by the Rev. F. Arnold, will be published almost immediately, in one volume, by Messrs. Ward & Downey.

English and French Morality, by M. Yves Guyot, will shortly be issued by the Modern Press in a cheap form. M. Guyot's past work is a proof of his sincerity in attacking immorality, and adds weight to his criticisms of the recent agitation, which he argues must inevitably lead to the methods of police repression that have so signally failed on the Continent.

MR. FISHER UNWIN will publish early next week *The Life and Times of Samuel Bowles*, the late editor of *The Springfield Republican*, Massachusetts. Mr. Bowles was born in 1826, and died in 1878. Succeeding his father in the editorial chair at the early age of eighteen, he successfully conducted his paper till just before his death, so his life covers some of the most stirring and interesting periods of American history. Among his associates and correspondents will be found C. Dudley Warner, Thurlow Weed, Abraham Lincoln, Charles Kingsley, Ward Beecher, Schuyler Colfax, Kate Fox, &c.

MESSRS. WARD AND DOWNEY will publish in December three new novels: *Coward and Coquette*, by the author of "The Parish of Hilly"; *That Villian, Romeo*, by J. Fitzgerald Molloy; and *Dulcie Carlyon*, by James Grant. The same publishers are also issuing new editions of George Manville Fenn's *Dark House*, Mrs. O'Reilly's *David Broome*, and Mrs. Croker's *Pretty Miss Neville*.

MESSRS. KEGAN PAUL, TRENCH AND CO. have in the press a work in two volumes by Dr. Kenigale Cook, entitled, *The Fathers of Jesus*. Its purpose is to show, by what may be described as the parallel method, that the dogma of the exclusiveness of the Christian traditions is without sufficient basis.

MESSRS. J. & R. MAXWELL are about to issue a story entitled *A Bitter Christmas*: the Mystery of a Moated Grange, by Bertram Gray.

MESSRS. WILSON AND McCORMICK, of Glasgow, have in the press a new work by the author of "The North Wall," entitled *Bruce*; a Drama, in which the characters are portrayed in the first instance as men and women, and only in a subordinate degree as historic figures.

Spun yarn and Spindrift: a Sailor Boy's Log of a Voyage out and Home in a China Tea-Clipper, by Robert Brown, will be published early in December by Messrs. Houlston & Sons. It is dedicated to Lord Charles Beresford, and will be profusely illustrated by Mr. Robt. T. Pritchett.

THE sale of Mr. Ellis's books, which was concluded last Saturday, realised a total of about £16,000 for 3,201 lots. The fine copy of the first folio of Shakspeare, bound by Roger Payne, fetched £405; an inferior and incomplete copy, £90; Tyndale's New Testament, perhaps the most perfect copy known, £116; the *editio princeps* of Pliny's Natural History, printed at Venice in 1469 by Joannes di Spira, £95; Turner's *England and Wales*, £87; a MS. *Horae* of the fifteenth century, with the monogram of Diane de Poitiers, £81.

THE first annual meeting of the American Copyright League was held at the Authors' Club, New York, on November 7, when the bill that Senator Hawley proposes to introduce into Congress was approved. The president of the league is Mr. Lowell; and the council includes the names of E. C. Stedman, Charles Dudley Warner, S. L. Clemens, Brander Matthews, E. P. Roe, and Prof. Youmans. The subscriptions in hand amount to a total of 1732 dols. (£346).

THE resignation by Dr. Porter of the presidency of Yale College has led to an acrimonious discussion in the New York press as to the sectarian character of the college. The original

charter of 1701 vests the government in a board of Congregational ministers; but the graduates have long been demanding a share in the administration, and they point to the increasing prosperity of Harvard, where the religious bond is less strict.

MESSRS. TICKNOR, of Boston, announce a new edition of Mr. Howells's poems, including several never before published. It is specially stated that the volume will be printed on "imported" hand-made paper.

OUR note last week about Mr. Ferdinand Wolff's lectures at Oxford was not quite accurate. The paper with which he was connected was the *Neue Rheinische Zeitung*, the *Rheinische Zeitung* proper having been suppressed by the Prussian Government in 1843. The staff of the paper included Marx, Engels, and Freiligrath, but not Lassalle, though the latter used often to come to the office.

ORIGINAL VERSE.

THE NEWER GOSPEL.

Haeckelius loquitur:

"The ages have passed and come with the beat of a measureless tread,
And piled up their palace-dome on the dust of the ageless dead,
Since the atom of life first glowed in the breast of eternal time,
And shaped for itself its abode in the womb of the shapeless slime;
And the years matured its form with slow, unwearying toil,
Moulded by sun and storm, and rich with the centuries' spoil,
Till the face of the earth was fair, and life grew up into mind,
And breathed its earliest prayer to its god in the dawn or wind,
And called itself by the name of man, the master and lord,
Who conquers the strength of flame and tempers the spear and sword;
For the world grows wiser by war, and death is the law of life;
The lowliest rock in the scar is red with the stains of strife.
Burst thro' the bounds of sight, and measure the least of things,
Plummet the infinite and make to thy fancy wings;
From crystal, and coral, and weed, up to man in his noblest race,
The weaker shall fail in his need, and the stronger shall hold his place!"

Renanus loquitur:

"Ah! leave me yet a little while, to watch
The golden glory of the dying day,
Till all the purple mountains gleam and catch
The last faint light that slowly steals away.
Too soon the night is on us; aye, too soon
We know the cloud is born of blinding mist:
The throne, whereon the gods sate crowned at noon
With ruby rays and liquid amethyst,
Is but a vapour, dim and grey, a streak
Of hollow rain that freezes in its fall;
A dull, cold, shape that settles on the peak,
Icy and stifling as a dead man's pall.
The world's old faith is fairest in its death,
For death is fairer oftentimes than life;
No vulgar passion quivers in the breath:
The dead forget their weariness and strife.
Say not that death is even as decay,
A hideous charnel choked with rotting dust;
The cold white lips are beautiful as spray
Cast on an iceberg by the northern gust.
The memories of the past are diadem'd
About the brow and folded on the eyes;
The weary lids beneath are bent and gemm'd
With charmed dreams and mystic reveries.
Once more she sits in her imperial chair,
And kings and Caesars kneel before her feet,
And clouds of incense fill the heavy air,
And shouts of homage echo thro' the street.

Or yet, again, she stretches forth the hand,
And men are done to death at her desire;
The smoke of burning cities dims the land,
And limbs are torn or shrivelled in the fire.

Once more the scene is shifted, and the gleam
Of eastern suns about her brow is curled;
Once more she roams a maiden by the stream,
Despised of men, the Magdalen of the world.

So scene on scene floats lightly, as a haze
That comes and goes with sudden gust and lull:
Limned with the sunset hues of other days,
They are but dreams; yet dreams are beautiful."

A. H. S.

OBITUARY.

MRS. GILCHRIST.

ON Sunday last there died at Hampstead, Mrs. Anne Gilchrist, a lady well known to a small literary circle, both in England and in America. Mrs. Gilchrist, whose maiden name was Burrows, was born April 25, 1828. In 1851 she married Alexander Gilchrist, the author of the *Lives of Etty and William Blake*. Her literary studies, fostered by daily companionship with her husband and not allowed to be thrust aside by domestic duties, first bore fruit in an article on "Our Nearest Relation," published in *All the Year Round* in May, 1859, which article attracted the attention of Dickens, who showed it to the Carlyles. She continued, now and again, to contribute articles on scientific and other subjects to magazines, among others one on "The Indestructibility of Force," published in *Macmillan's Magazine*, March, 1861. Her husband died in 1861, leaving his second and chief work, *The Life of William Blake*, unfinished. In spite of new parental responsibilities thus cast on her, she set to work with characteristic resolution to finish the biography—a by no means small undertaking. Indeed, the editing of this, as well as the second edition, for which she wrote a memoir of her husband, was a heavy and responsible task. Carlyle, in acknowledging a copy of the second edition, wrote: "Your own little Preface is all that is proper. Could but the Queen of these realms have been as queen-like in her widowhood!" Mrs. Gilchrist was early attracted to the writings of Walt Whitman, and, in 1869, published "A Woman's Estimate of Walt Whitman" in *The Radical*, a now defunct American journal. She stayed with her children in America from 1876 to 1879, enjoying the close friendship of her favourite poet, as well as the intimacy of other well-known American writers. It was during this sojourn that she wrote "Glimpses of a New England Village," a bright bit of description that appeared in *Blackwood's Magazine* last year. In 1883 she published the work by which she will be long remembered by discerning readers—her thoughtful and sympathetic *Life of Mary Lamb*. Her last and, in some respects, most thoughtful essay, "A Confession of Faith," appeared only a few months ago in a London magazine. She was engaged when her last illness mastered her strength on some personal reminiscences of Mr. and Mrs. Carlyle, whose neighbour and intimate friend she was during some years of their residence in their last Chelsea home. Mrs. Gilchrist had for some years had grave apprehensions that her life was doomed, but showed her characteristic bravery in maintaining an exceptional brightness of spirit and manner, hiding the baneful secret even from her own children. To those who had the privilege of knowing her well, these fated last years will always seem a marvel of quiet heroism, and of noble resolution to be energetically active under the most depressing conditions. Her gifts and attractions in the chosen society that she loved were many and rare. She combined in an unusual degree the qualities of mature wisdom, fine literary tact,

and a perfect womanly sweetness of temper. It was a treat, which the more crowded haunts of the literary world can hardly afford, to hear her discourse of men and books, of both of which her knowledge was wide and accurate, and her estimates at once sympathetic and discerning. She leaves children who will cherish her memory as one who united to all her intellectual gifts the tenderness and wise solicitude of a perfect mother. J. S.

M. PAUL BOURGET.

At the annual public meeting of the Académie française, on November 26, M. Camille Doucet, the permanent secretary, awarded the Prix Vitet to M. Paul Bourget, with the following words:

"Fondé dans l'intérêt des lettres," le prix Vitet est l'un de ceux dont l'Académie dispose à la fois avec le plus d'indépendance et le plus de responsabilité, n'ayant aucun programme qui l'enlève et, par cela même, tenant d'autant plus à bien faire. Ce n'est pas à tel ou tel livre, comme dans presque tous les autres concours, c'est à tel ou tel écrivain, à l'ensemble de ses travaux, à sa seule renommée peut-être, que s'adresse cette récompense privilégiée.

"M. Paul Bourget ne m'en voudra pas si, en le plaçant tout d'abord parmi les brillants écrivains de la génération nouvelle, pour qui s'est le plus passionnée l'opinion publique, j'ajoute que, de leur côté, sans méconnaître son mérite, d'excellents juges se sont montrés pour lui plus sévères, croyant se montrer plus justes. "Cruelle énigme!" a dit le jeune philosophe dans le dernier, dans le plus fêté, dans le plus critiqué de ses ouvrages. Poète et romancier, qu'il écrive en vers ou en prose, ce petit-fils de Balzac et de Spinoza, ce petit-cousin de Manfred et de Werther est, par-dessus tout, un penseur, un rêveur et presque un savant, qui semble ne rien ignorer des grands secrets de l'âme humaine. Pour lui, le drame est dans les idées et non dans les événements: aussi fait-il des études de mœurs plutôt que des romans d'action, soutenant volontiers des thèses et, au besoin, des paradoxes. Élegant, imagé, recherché même, son style se passerait aisément des artifices de langage auxquels il a trop souvent recours. Vains ornements qui le surchargent et qui risquent de lui faire perdre en correction ce qu'il croit y gagner en éclat. Ce jeu plaît à M. Bourget et je dois reconnaître que parfois le succès lui donne raison. J'en suis sûr: estiment plus certains de ses défauts que certaines de ses qualités. Ses qualités seules, messieurs, ont fixé l'attention de l'Académie. Parmi ceux qui commencent bien, M. Paul Bourget est peut-être celui qui commence le mieux. Cela suffit. Voulez-vous lui donner un témoignage de sympathie, d'estime et d'encouragement, l'Académie décide à M. Paul Bourget une médaille d'or de cinq mille francs sur la somme que notre illustre confrère M. Vitet nous a léguée pour être employée librement, et le mieux possible, dans l'intérêt des lettres. C'est ce que l'Académie vient de faire."

CORRESPONDENCE.

"WITH THE KING AT OXFORD."

University College, London: Dec. 2, 1885.

On two important points your reviewer is, I think, wrong. It was not an universal practice to begin the year with March 25. In private documents the present style was often used, oftener, perhaps, than the other. Here is an extract from Mr. Robinson's *Merchant Taylors' School Register* (i., p. 46). Eleven names

occur in this order. The names are insignificant, and I omit them. September 1600, October 1600, January 1601, January 1601, June 1601, January 1602, February 1602, February 1602, March 1602, March 1602. Here it is abundantly clear that the present style is used. Anyone who will examine this volume closely will find many other instances.

As to the matter of Archbishop Laud, here is an extract from Neal's *History of the Puritans*, a book which, of course, I had before me when I wrote.

"Several clergymen of other dioceses were also silenced and deprived on the same account, as Mr. Thomas Wilson of Otham, who, being sent for to Lambeth, and asked whether he had read the Book of Sports in his church, answered 'No'; whereupon the archbishop replied immediately, *I suspend you for ever from your office and benefice till you read it*" (Neal's *History of the Puritans*, ii. 212, edition 1795).

Doubtless the archbishop could not actually suspend the offending clergyman; but he threatens it, surely a very common figure of speech. ALFRED CHURCH.

ON THE TEXT OF THE SENCHAS MÁR.

London: Nov. 22, 1885.

Though I felt morally certain that Dr. Norman Moore and Dr. Kuno Meyer (ACADEMY, October 3 and 24, 1885) were right, still, as the apostolic precept, "prove all things," is peculiarly appropriate to Celtic matters, I recently spent several hours in the British Museum, collating part of the first volume of the *Ancient Laws of Ireland* with the MS. (Harl. 432) from which that text purports to be taken. I find that the severe judgments passed on that text by Drs. Moore and Meyer were almost over-lenient. I proceed to substantiate this assertion, premising that I had only time to examine the first eighty pages of Old-Irish text and Middle-Irish commentary, and the fragments of text contained in the remaining 224 pages of the printed book.

The editor (p. xxxix.) states that in the original MS. there is "a difference marked by the size of the letters between what is text and what is commentary." This is true. The text is written in a semi-uncial hand, and the commentary (except the first four words) in pointed minuscules. But when the editor goes on to say of the printed book that "this distinction has been marked, both in the Irish and in the translation, by distinct type," he says the thing which is not. The whole of pp. 4, 6, and 16, eight and a half lines of p. 2, twelve lines of p. 8, seventeen lines of p. 14, and three lines of p. 18, which are printed in large type (i.e., as representing the original Old-Irish text) are in the MS. (ff. 1a, 1b, 2a), written in the small hand which the scribe employs only for commentary and glosses. Conversely, on p. 12, lines 27-31 are printed in small type as if they were part of the commentary. They are in the MS. (fo. 1, b, 2) written in the large hand, and are part of the ancient text. Such a strange misstatement as that above quoted throws doubt on the editor's assertions (p. xxxix.) that Dr. O'Donovan revised his transcript with the original, and that "the entire of the proofs" were read and compared with that revised transcript.

I shall first mention some of the sins of omission which I noticed, and then set down a few specimens of the errors committed in the printed text.

P. 2, ll. 2, 6. The omissions of *i* before *samrad* and of *a* (rather *u*) before *tesaidecht* have already been noticed by Dr. Moore.

P. 6, l. 10: *i* is omitted before *croisgill*; l. 21: after *is* the words *ann no is* are omitted.

P. 28, l. 8 (fol. 2, a. 2). Here a whole sentence is omitted: *Ise damo rotomais inafuil cialmain*

cohesca (It is He, then, that measured what there is from earth to moon).

P. 36, l. 5 (fol. 3, a. 2). After *insin* is omitted the gloss *i. comed dligid gachduine insin* (a keeping of every human being's law is that).

P. 40, l. 17 (fol. 3, b. 2). After *forosna* the word *imbas* is omitted.

P. 46 (fol. 3, b. 2). A marginal note beginning with *freera* (answer) is omitted.

P. 70, l. 18. After *atuaid* the words *o Fergus* are omitted.

P. 168, l. 1 (fol. 11, a. 1). After *mialtar* the words *iarrad frisa-roaltar* (demand in case there has been over-fosterage) are omitted in the text, though they are translated in p. 169. They must, therefore, have been in O'Donovan's transcript, and their omission is doubtless due to the editors. So in p. 168, l. 4, the word *airba* is omitted before *ria*, though translated in p. 169. Conversely, letters and even words are inserted without any indication that they are not in the MS.; and, on p. 80, lines 2 and 5, one gloss is printed twice over.

The editors, not the transcriber, are, I have little doubt, answerable for many, if not all, of the following sins of commission. A Celtic scholar will see at once that most of these errors make the text unintelligible or misleading or grossly inaccurate.

EDITION, PAGE AND LINE.	CODEx, FOLIO AND COLUMN.
2, 2, glainni	1, a. 1, glaini

268, 2, cuing	20, a. 2, cuing

This list might be lengthened almost ad infinitum if one added the cases in which (a) words have been bisected or trisected; (b) marks of length and aspiration have been wrongly inserted or omitted; and (c) compendia have been wrongly extended. For instance, prepositions compounded with the article or relative, such as *cusin*, *isin*, *isna*, *frisin*, *frisa*, are written *cus in*, *is in*, *is na*, *fris in*, *fris a*, though the *s* belongs to the article or pronoun; *diaraile*, the compound of *do* and *araille*, is always *diaraile*; nouns and adjectives, such as *airáirí*, *óthigerna*, *uasalaithre*, *firchruind*, are printed *aírd rí*, *oc thigerna*, *uasal aithre*, *fir cruind*; the common word *bruinni* is trisected and printed *bru in ni* (p. 144, l. 30); and compound nouns, such as *fornadmand*, and verbs, such as *fortéit*, *adubairt*, are printed *for nadmand*, *fortéit*, *a dubairt*. Conversely words clearly and

rightly separated in the codex, such as *naesanaí*, *gnim*, *ai*, *Ferta Feig*, and *con lomnai*, are printed together (*naesanaí, gnimai, Ferta Feig, conlomnai*). The common compendia for *ni anse*, and *didu*, are always, and that for *dano*, is often, wrongly extended. The numerous verbal nouns ending in *-gud* (stems in *átu*) are invariably made to end in *-ghadh*, as if they were stems in *átu*; and deponential *s*-preterites in *-tar* are printed as if they ended in *-tair*. It is hardly necessary to add that obvious scribal errors, such as *remthestus*, pp. 26, 10, are allowed to stand without notice.

Of the guesswork called a translation I will mention only a few instances from the first fifty pages. Thus *deismerecht* (an example), p. 4, is rendered by "it was in commemoration"; the same word, p. 16, by "proof"; *creidmi fiadut* (of belief in God), p. 8, is rendered by "religion, they relate"; *doicallathar firindi, fortéit anen-nac* (which forgets truth, which helps the un-innocent), p. 8, is actually rendered by "Truth is balanced by which they go into purity"; *apthain* (perdition, acc. sg.), p. 10, twice by "absolution" (!); *ailiu* (I beseech), p. 10, by "Hear me"; *dennigur* (I prove), p. 10, by "it shall be proved"; *fosisiur, fofetar fis deoda* (I confess I somewhat know divine knowledge), p. 10, by "Divine knowledge, it is known decides," *ireir m'eici* (according to my science), p. 12, by "as a poet"; *doruigled nem dia han-main* (heaven was adjudged to his soul), p. 12, by "his soul was pardoned and sent to heaven"; *berla ban bias* (the white language which will live), p. 16, by "the bright word of blessing"; *cuibseana cresion* (confessions of Christians) by "consciences of the believers"; *imacallaim* (dialogue), p. 18, by "contention"; *dluma* (masses), p. 26, by "vapour"; *nem n-etherda* (ethereal heaven), p. 28, by "the nether-heaven"; *ina trenbrat geimhnidhe* (as a mighty mantle of hide) by "a mighty sheet of crystal"; *ite tren-aílce insein frisanastaiter bretha in bethu* (those are the mighty rocks to which the world's judgments are fastened), p. 30, by "these are the three rocks by which the judgments of the world are supported"; *tacmainges* (which encompasses), p. 32, by "overtops"; *recht petair-laicthi* (law of the Old Testament, *veteris legis*), p. 38, by "patriarchal law"; *tainic* (came), p. 40, by "was established"; *imbi bailethach bith* (at which the world is worthless), p. 50, by "at which the world dies" (!).

It is hard to refrain from indignant language when one reflects that the money spent in publishing this mass of misleading gibberish and guesswork would, in the hands of men with a high standard of excellence, some notion of the requirements of modern scholarship, and some acquaintance with Gaelic and palaeography, have sufficed to make almost all that is worth reading in the vast and curious Middle-Irish literature accessible in a trustworthy form to British and continental students.

In conclusion, I desire to thank the distinguished scholars who have supported, or improved upon, my proposals in the ACADEMY for September 26, 1885, and to offer some remarks on their letters. I am particularly glad that Mr. O'Grady and Prof. Windisch agree in thinking that the Roman type should be used in printing the Brehon laws, italics being reserved for extensions of contractions. A font of Irish type does not possess anything corresponding with italics; it is much more costly to print in Irish than in Roman; as the Irish *s*, *p*, and *r* resemble each other, compositors ignorant of the Irish language are very apt to confound these characters; and, lastly, the use of Irish type practically prevents the

* In the same page the corrupt Latin *casus* (i.e., *cassus*) is represented in the translation by "casus": so in p. 36 the corrupt "caistigatur" (castigator, Irish *timairythid*) is represented by "castigatur."

* The note on this is characteristic. "Four things.—Only three enumerated, the fourth is omitted both here and in O'D. 117."

kindred Gael of Scotland and Canada from buying and reading Irish publications. The sentiment which led the editors of the ancient Irish laws to adopt the so-called Irish type* is exactly of the same nature as that which (according to a story current in my boyhood) induced the Natural History Committee of the Royal Dublin Society to resolve that their skeleton of *Megaceros Hibernicus* should be painted green, as the Irish elk was a national animal.

The undue length of the introductions to which Mr. O'Grady refers is easily accounted for, if it be true, as the late Dr. Todd informed me, that the editors were paid by the government at the rate of £8 per sheet. Hence, no doubt, the extracts from the translations published in the same volume, from popular "Summaries" and "Elements" of Roman Civil Law, from "the Laws of Menu" as to "*acharitan*" (the learned editors mean *Manu* and *acharita*), from Lord Derby's translation of Homer, and Mr. Crowe's translation of "the Demonic Chariot of Cúchulainn," from the *Fortnightly Review* and the *Revue des Deux Mondes*. Hence, too, the essay to prove that St. Patrick was born in the vicinity of Glastonbury and Bristol; the two and a-quarter pages of extracts from the English translation of Æthelbirt's laws; the note (nearly four pages long) copied from O'Curry's *Manuscript Materials*; the dissertations on common recoveries; the statute *De Donis*, and *manuum consertio*; the wonderful passage (iv., xxxiv.) about *cund* or *conn*, which the editor says is "simply a form of the word [*cenn*] meaning 'head'"; the theory of Dr. W. K. Sullivan (iv., lvii.); the extracts (iv., lxxviii.) from the *Cyoreithian* (!) *Cymru* and the *Leges Wisse gorthorn* (sic, iv., clii.). Hence, lastly, the "synopsis of introduction" (iv. pp. cxxi.-cxxxiv.).

As to Prof. Rhys's letter (ACADEMY, October 31, 1885), I should have been glad if, instead of suggesting that I should connect myself with an undertaking ill conceived and worse managed, he had given some more of the many textual corrigenda which are doubtless to be found in the Brehon tracts printed in the *Ancient Laws*, vol. ii., pp. 410-420, from Rawl. B. 506, and in vol. iv., pp. 68-158, from Rawl. B. 487. These tracts, together with some others in the Bodleian, and one which I found last August in the Philipps Library at Cheltenham, I hope, when I have finished my work on the Indian Codes, to induce the delegates of the Clarendon Press to let me edit in the "*Anecdota Oxoniensia*."

Prof. Windisch, because he has collated one of the lithographic so-called facsimiles published in the *Ancient Laws*, with the corresponding pages of the printed text (vol. iii. pp. 278-286), and apparently found them to agree, thinks that the result of the proposed revision will perhaps be that the first edition was "not so bad." This honest and kindly German gentleman obviously cannot conceive that things called facsimiles may be published by official editors, which give an absolutely wrong impression of the original codex. For instance, in the second volume of these *Ancient Laws* is a lithographic so-called facsimile of a page (folio 4a) of the Harleian MS. 432, corresponding with p. 48 *et seq.* of the printed vol. i. I shall conclude this letter by mentioning some of the discrepancies between this "facsimile" and the Codex:

FACSIMILE.	CODEX.
col. 1, cam	cain
oaceli	daceli
trel e	trebaire
intabt	intabairt

* I have high authority for saying that it is not the same as the character of any extant Irish MS.

FACSIMILE.	CODEX.
col. 2, fonaisct	fonaiscter
sarleicti	sarleicthi
cobrat	cobraith
l. tuea?	l. tren
esbr	esbus
isligen	isligenn
blesa	blechta
f fta	fri ferta

And in the right margin of the "facsimile" four lines are omitted, which begin with a word forming part of the commentary, the rest being a gloss (i. *teora ferba rodlom Eochaid, &c.*). This will explain why I urged in my letter in the ACADEMY of September 26, 1885, that photographic facsimiles of the Irish law-texts should be published. WHITLEY STOKES.

"A" HISTORICAL SKETCH, OR "AN" HISTORICAL SKETCH.

Hampstead: Nov. 30, 1885.

Prof. Baumgartner has surely confounded together two distinct matters, in raising the question of the form of indefinite article to be used (1) before *h*, (2) before *u* (or *eu*).

In the latter case the usage of English speech is clear, and in accordance with reason. Initial long *u* is pronounced *yu*, and the word therefore begins with a consonant, before which the correct article is *a*: therefore, *a union*, *a university*. Writers are, however, sometimes misled by the spelling to think that such words begin with vowels, and to use *an*; this is common in the older writers, and is found in the Authorised Version of the Bible, e.g., Acts viii. 26 "an eunuch." But it is old-fashioned in books, and obsolete in colloquial language.

In the former case, that of *h*, the correct principle, acknowledged by most writers, and to a large extent in colloquial speech, seems to be that when the initial syllable commencing with *h* is accented, the accent imparts to the *h* such force as to cause it to be felt as a consonant preceding its vowel, and separating it from the vowel preceding it in the article *a*, so that there is no hiatus, and no need for "an." On the other hand, in *historical*, *his* is an unaccented syllable, and the initial *h* necessarily so faint as not to serve as a barrier between the vowels in *a his-torical*. Consequently, the article assumes its proper form before a vowel. I believe this to be the usual practice as well as the right principle both in ordinary speech and in literature at the present day, though undoubtedly many do not conform to it, chiefly, I think, from not realising the important distinction in power between the accented and the unaccented *h*.

RUSSELL MARTINEAU.

DR. MORRIS'S EDITION OF "CHAUCER'S PROLOGUE, ETC."

Dulwich College, S.E.: Nov. 29, 1885.

I observe that, in last week's ACADEMY, Mr. Furnivall has corrected a misprint in the Introduction to Mr. Morris's edition of Chaucer's *Prologue*. May I, not correct, but under correction, enquire whether this is the only oversight in that Introduction? On pp. xxi., xxii. (ed. 1883) we are told:

(1) "As Chaucer lay at the Tabard . . . nine and twenty pilgrims . . . arrived at the 'hostelry' [sic]. The poet joined them." (2) "It was agreed that each pilgrim should tell two tales on their road to Beckett's shrine, and two other tales on their way home." (3) "The number of pilgrims was thirty-two."

Let me take (2), as the least important point, first. Surely Chaucer never intended Harry Bailly to tell a tale (cf. l. 790, *seq.*)? He was umpire, and the character of story-teller would have been too cruel a test of his impartiality, especially considering the nature of the prize proposed. Then, as to (1) and (3), does not

Chaucer include himself in the twenty-nine? Cf. l. 20, *seq.*:

"In Southwerk at the Tabard as I lay . . .
At night was come into that hostellerie
Wel nyne and twenty in a compaignye."

Cf. l. 29, "we"; ll. 541-4, "Ther was also a Reeve, etc. and myself." I am not a very ready reckoner; but certainly, even without Chaucer, I make up thirty original pilgrims, taking the list as we find it in Mr. Morris's text. But is that text sound? In l. 164 he reads "Prestes thre." Yet Prof. Skeat—*Prioresse, etc. Tale*, p. xv.—has pointed out that these words are certainly corrupt. In short, it seems to me that the total number of pilgrims was thirty-one, i.e., the original twenty-nine (of whom Chaucer was one), afterwards increased by the addition of Harry Bailly and the Canon's Yeoman. W. T. LENDRUM.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Dec. 7, 5 p.m. Royal Institution: General Monthly Meeting.
5 p.m. London Institution: "Science applied to Cookery," by Mr. Matthew Williams.
8 p.m. Royal Academy: "Colour and Colours; Complementary Colours; The Chromatic Circle," by Prof. A. H. Church.
8 p.m. Society of Arts: Cantor Lecture, "The Microscope," III., by Mr. J. Mayall.
8 p.m. Victoria Institution: "The Unreasonableness of Agnosticism," by Mr. J. Haasell.
TUESDAY, Dec. 8, 8 p.m. Anthropological Institute: Exhibition of Portraits of Africans, by Mr. H. H. Johnston; Exhibition of Photographs of North American Indians, by Mr. W. Seton Karr; "The Nicobar Islanders, with special reference to the Inland Tribe of Great Nicobar," by Mr. E. H. Man.
8 p.m. Colonial Institute: "The Material Progress of New South Wales," by Mr. E. Combes.
8 p.m. Civil Engineers:
WEDNESDAY, Dec. 9, 8 p.m. Royal Academy: "White Pigments," by Prof. A. H. Church.
8 p.m. Society of Arts: "The Load-lines of Ships," by Prof. F. Egar.
THURSDAY, Dec. 10, 4.30 p.m. Royal Society.
7 p.m. London Institution: "The Musical Dramas of Wagner," II., by Mr. C. Armbruster.
8 p.m. Mathematical: "The Numerical Solution of Cubic Equations," by Mr. G. Hoppell; "A Theorem in Plane Trigonometry," by Mr. J. J. Walker.
"The Induction of Electric Currents in an Infinite Plane Current Sheet which is rotating in a Field of Magnetic Force," by Mr. A. B. Basset.
8 p.m. Telegraph Engineers: "A Method of eliminating the effects of Earth and Polarisation Currents in Fault Testing," by Mr. Walter J. Murphy; "A Method of Localising a Fault in a Cable by Tests from one end only," by Mr. H. Kingsford.
8.30 p.m. Antiquaries: "The Manor of Aylesbury," by Mr. John Parker.
FRIDAY, Dec. 11, 7.30 p.m. Civil Engineers: Students' Meeting.
8 p.m. Royal Academy: "Yellow Pigments," by Prof. A. H. Church.
8 p.m. New Shakespeare: "The Prose in Shakespeare's Plays—the Rules for its Use, and the Help it gives us in understanding the Plays," by Mr. H. Sharp.
SATURDAY, Dec. 12, 3 p.m. Physical: "Some Thermodynamical Relations," by Prof. William Ramsay and Dr. Sydney Young.

SCIENCE.

The Wanderings of Plants and Animals from their First Home. By Victor Hehn. Edited by J. S. Stallybrass. (Sonnen-schein.)

STUDENTS of ancient natural history are largely indebted to Hehn's *Kulturpflanzen und Haustierte*. It was inevitable that sooner or later some one would translate the book, and all who have used Mr. Stallybrass's translation of Grimm's *Teutonic Mythology* may well be grateful that Hehn has at length appeared in an English dress under his auspices. No more interesting book, to all who have looked into the history of what we somewhat rashly call our native plants and animals, can be imagined. It tells the fairy-tales of their introduction and increase in Europe. It has a new and undreamt of antiquity, and associations unnumbered, where;

with to dower our common animals and plants. Although the volume is mainly intended for the scholar, it is sufficiently interesting to captivate that butterfly, the "general reader." We greatly miss the Greek and Latin quotations in the original which rendered it so useful to the student; but the editor tells us it was judged better "for the convenience of the common reader to banish" them. It may well be wished that he had thought more of the convenience of the scholar. Fortunately the notes, so rich in philological speculations, are translated in full, as if to make amends. Far be it, therefore, from us to grumble when Mr. Stallybrass has given English naturalists so many historical and literary speculations on the common plants and animals of Europe.

Till quite recent days students of our flora considered it sufficient to ascribe the introduction of a fruit-tree or useful garden-herb to the Crusaders, or, if they wished for a more respectable antiquity, to the Romans. Occasionally some imaginative writers referred it to the Druids. Beyond that the wildest speculation could not pierce. Of late, geologists have succeeded in gaining a glimpse of prehistoric life from scratchings on mammoth tusks in the Dordogne caverns, and the like. It is due to his patient collection of facts, and comparison of evidence, that Hehn has unearthed a large body of information on the early dissemination of plants and animals. He was not satisfied with the literary evidence which even the most diligent search among early authors afforded. He added to this the teachings of botany, and of natural science generally, on the present distribution of the earliest fauna and flora of Europe. Finally, comparative philology lent her aid, enabling him to systematise the teachings already won from the past, and to show, if a plant or animal-name is not a mere Greek vocable, but possesses a root and ramifying branches in Hebrew or Persian, that it can be traced through Asia Minor and across the Aegean to the Peloponnesus, or else round by the Euxine and Thrace into Northern Greece. Thus its wanderings can be followed, and its original home discovered. This cumulative method is, for the present, the only scientific course. It is quite possible, nay probable, that in the course of time much collateral evidence will be brought to light, and entirely new fields of enquiry disclosed; for the present, however, Hehn's procedure, as it is the most rational, is also the most fertile in fruit.

The book opens with a general picture of ancient civilisation when the Aryan migration brought a nobler race into Europe, and especially to the two peninsulas of Greece and Italy. The transition from a pastoral to a more settled agricultural life was proceeding; men apparently used the primitive wheeled waggon made entirely of wood during the summer, and dwelt in the circular pit-huts through the winter, so many of the traces of which are scattered over our own country, as, for instance, the so-called British village of Grim's Pound, on Dartmoor. Hehn has here idealised the primitive sketches of society found in Homer and Herodotus, together with the manners and customs of the early Germans as revealed in the pages of Tacitus. It may reasonably be inquired, however, whether Tacitus did

not consciously heighten the virtues and simple mode of life of the German tribes in order to contrast them with the slavish vices of degenerate Rome. What the author means in this connexion by broadly asserting that the pig of those early times was "the small so-called peat-pig (Torf-swine), far inferior to the animal now improved by cultivation and commerce," we cannot divine. The ancestors of our domestic pig are the wild swine, just as our tame ducks have been bred by careful selection from the wild bird. Fossil remains of the wild boar have been found in the Isle of Portland and in Lincolnshire. Rüttimeyer, indeed, detected in Switzerland during the Neolithic period the existence of a pig approaching the Eastern breeds, and this he called *S. scrofa palustris*, or Torfschwein; but he was far from suggesting that it was generally found. In succeeding chapters the chief herbs and trees of the ancient world are cleverly treated: onions, cummin, laurel, the quince, the date-palm, and the like. A profusion of learning is spent on each chapter; and the herbs are generally traced like the wild horse, to the Central Asian plains, the original home of man. Take the millet, for example. It was in general use throughout the ancient world, but especially in the West. Etymologically the word seems to mean "honey fruit"; but it probably included any vegetable food, especially any cereal, in contradistinction to the bloody animal food of a nomad population. When Pytheas took his celebrated voyage northwards through our seas he mentions that the people in what was most probably Kent lived off millet. (*Fragmenta*, No. xi., ed. Arvedson). Pytheas is thought to have lived during the reign of Alexander the Great, which gives of itself a respectable antiquity to millet. This quotation has not been omitted by Hehn. Turning now to the old-world animals, it is not every one who knows that the rabbit is not indigenous in Great Britain. It is a native of the warmer parts of the Mediterranean. Iberia abounded with rabbits in historic times, and they were probably introduced into England by the Romans. Curiously enough at the present time the rabbit has so multiplied in New Zealand (where our colonists introduced it) that the farmers are obliged to import at a considerable price stoats and weasels from England to keep them down. Hehn informs us that the natives of Majorca and Minorca once sent an embassy to the Romans, begging to be assigned another land to dwell in, as they could not hold their own against the multitude of rabbits. However, relief from this pest was found in the ferret, a semi-domesticated animal, which they procured from Africa. The cat is, comparatively speaking, quite a modern acquisition. All writers trace it to Northern Egypt, whence it has spread far and wide. The late Prof. Rolleston, it is well known, believed that the cat of the Romans was really a species of weasel, probably the pine-marten. At every turn some odd piece of classical lore turns up. Thus, Virgil has often been blamed for his introduction of the *onager* into his verse as being poetical surplusage. Hehn shows that it meant the wild horse rather than the wild ass, and that wild horses, according to Strabo, lived in the Alps. A curious chapter treats

of the saffron, *Crocus sativus*, which was so dear to the ancients. Our own Saffron Walden preserves a reminiscence of it, "the dignified aristocratic cousin," as Hehn calls it, of the modest "European crocus of spring time, *crocus vernus*." The plant was largely cultivated in Spain, whence "the Arabic name of 'saffron' [Ital. *Zafferano*, Span. *Azafrán*] has quite supplanted the Greco-Latin 'crocus,' which itself must have come from the confines of the same Arabia some fifteen or twenty centuries before."

In this treasure of erudition it is impossible to open a page without discovering some noteworthy derivation or singular association. Thus it is pointed out that, although the apple is undoubtedly the descendant of our crab, the finer sorts are not directly sprung from it, but are due to slips brought from beyond the Alps, and grafted on the native tree. Pears again are mentioned in Homer; and the wild pear is found in Southern Europe, but is a doubtful native of our island. Hehn concludes, after comparing the Latin *pyrus* with its Greek equivalent *ἄμυρ*, that "the Latin word passed over to the Celts and Germans, proving that the pear-tree did not originally grow in the home of either nation." To this we certainly demur. It may be remarked, however, that our finer pears are undoubtedly foreign introductions. Thus, Jedburgh pears were the gift of the monks, and the bergamot pear was introduced by the Crusaders. It was originally grown near Angora, and called "Beg Armud," "the prince of pears." Cider (*sidro*, *cidro*, from *σίκερα*, a well-known Semitic word) is, we may add, appropriately given as this last word's translation in St. Luke i. 15 in an old Bible in Hereford Cathedral.

But these notes must end. It is an obvious conclusion from this book that our agriculture, as well as most of our cereals and vegetables, come, like intellectual civilisation, from the East. To the generalisation, however, that the dark-haired, black-eyed nations always conquer their blue-eyed, blonde neighbours, the condition "in the Old World" must be appended. It is just the other way in the Western Hemisphere. Much gratitude will be felt by all scholars for Mr. Stallybrass's book. He gives them in their own tongue a great body of erudition and a collection of striking facts. The index is excellent; and particular attention should be drawn to the philological notes, which are most valuable, and run to the length of a hundred pages. Every student of nature, as well as every classical scholar, will thank Hehn and Mr. Stallybrass for their labours. That their conclusions cannot be expected to be final is only more or less the condition of all learning.

M. G. WATKINS.

SCIENCE NOTES.

ON Tuesday next, December 8, the Royal Geographical Society will open, at 53, Great Marlborough Street, a collection of appliances used in geographical education, formed by Mr. Keltie, the Society's inspector of geographical education, during his recent visits to the various countries of Europe. The collection consists of maps, atlases, reliefs, globes, text-books, geographical pictures, &c.

PROF. SYLVESTER will deliver a public lecture at Oxford next Saturday, December 12,

on "A General Theory of the Necessary Singularities of Curves of Unspecified Order." The lecture, though supposing some elementary knowledge of modern algebra, will not go into details of calculation, but will have for its principal object to bring to light the existence of a new world of algebraical forms, co-ordinate in extent, and parallel in character, genesis, and laws of association, with those which occur in the theory of invariants.

THE course of lectures on Hydro-mechanics, delivered in the early part of the year at the Institution of Civil Engineers, has just been published. The opening lecture, by Dr. John Evans, is entitled "Physiography," and deals with the natural history of the springs and rivers of our country; while the utilisation of these sources of water-supply is ably discussed in succeeding lectures by Dr. W. Pole, Prof. Unwin, Sir C. Hartley, and Mr. T. Stevenson. Sir E. J. Reed devotes the concluding discourse to the Forms of Ships.

PHILOLOGY NOTES.

DR. ALEXANDER KOHUT, of Vienna, has undertaken the publication of a lexicon to the Targum, Talmud, and Midrash. The work will be based on the *Aruch* of Rabbi Nathan Ben Jachiel, of the eleventh century, supplemented by numerous original MS. authorities. It will form eight quarto volumes, of which the first is now ready, and the rest will be issued at intervals of three months. The publisher is Mr. Townsend MacCoun, of New York.

PART III. of the volume for 1882-3-4 of the *Transactions* of the London Philological Society is full of interesting matter, as one need hardly say when we mention the following names: Thomas Powel on English borrowed words in Welsh, Sweet on Spoken North Welsh, Prince L.-L. Bonaparte on Basque Grammar, Morfill on Slavonic Literature, and Dr. Murray, whose address as president is full of valuable information of the most varied nature.

THE Gaelic Society of Inverness has just issued the eleventh volume of its *Transactions*. It is both larger and better than the previous volumes, if our memory does not play us false. The contributor of the most interesting and scholarly papers is Mr. Alex. Macbain; but the volume also contains Gaelic legends and Gaelic songs, which are very welcome.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, Oct. 29.)

PROF. SKRAT, President, in the Chair.—Dr. Fennell read notes to the following effect: *ἀρτύγος*. The traditional meaning was probably due to false etymology, and cannot be defended by *τραφεῖν τε καὶ ὑρῖν* (which = "solid and liquid"), nor by Euripides' *ἀνδρῖστα πῆλα*. It probably means "untrodden," "pathless," being formed from *τρογύ* for *στρυγύ*, connected with *στρεβύομαι* (originally = "to struggle"), and with the Eng. *struggle*, *trudge*, It. *trociare*, Sp. *trocar*, Eng. *truck* = "to barter," which may accordingly be Teutonic. *δῶρον* II. Liddell and Scott ought to give references to Plin., *N. H.*, xxxv. 14.49, Vitruvius ii. 2, p. 22, and to give *διδωρον*. The post-epic *δῶρον* II. seems to be confined to the brick trade. Liddell and Scott should not give *πενδ-δωρος* adj., but *πενδδωρον* = "a brick of the cube of five palm-breaths"; and similarly with *τετράδωρος*. The most likely meaning of *διδωρον* seems to be a brick of two *διδωρα* by a square foot (*διδωρον* sometimes = *σπιθαμή* = $\frac{1}{2}$ ft.), or else it was twice the cube of two *δῶρα*. This *δῶρον* is probably a distinct word from *δῶρον*, a gift. Is not "backgammon" for *abackgammon* (compare *bate*, *peal*, *fray*, *vanguard*, *vant-cuir*), *aback* being adapted from Fr. *abague* = *abacus*? The Latin word has the meaning "gaming-board," "wooden tray." A paper was read on "The Homeric Geni-

tive," by Mr. J. A. Platt. The following is a statement of the main positions: (1) The author of the *Odyssey* (exclusive of the lay of Demodocus and of all that follows § 296) observes with scarcely an exception the following rule: *A genitive in -ou may not agree with a genitive in -ou unless one of the words is at the end of a line*. This applies to nouns and adjectives, to two adjectives agreeing with one noun, to participles, &c. (2) Later poets pay no attention to this rule. (3) The admitted exceptions, where one of the words is at the end of a line, are much fewer in Homer than in later poets, and contain a much larger proportion of proper names. (4) There is evidence that, where the rule is violated in the genuine *Odyssey*, the form in -ou should be corrected to -oo, e.g., in β 340, *ἐν δὲ πῖθαι οἶνοι παλαῖο ἡδυνέοι*. (5) In the *Iliad* (the older parts) a further exception is admitted, when one of the words in agreement is a monosyllable. Thus qualified, it is broken in two instances only, which cannot be corrected by the forms -ou and -oo, viz., E 315 (where read *φαῖνόν*) and P 667, an unexplained passage, which should be obelised. (6) The treatment of the rule in the Hesiodic poems confirms the belief that the *Works and Days* (where there is no violation) is extremely old, and that the *Theogony* may be divided into an earlier and a later portion.

(Thursday, Nov. 12.)

PROF. SKRAT, President, in the Chair.—A paper by Dr. Hermann Hager was read, which dealt with the traditional explanation of some points in Athenian law, especially the manner of election of the *ἑποταῖοι τῶν Σεμνῶν Θεῶν*, and the meanings of the terms *ἀντιγραφὴ* and *ῥητορικὴ γραφή*. With respect to the last, Dr. Hager suggests that it signified an indictment, not *against a ῥήτωρ* (as it were a *γραφὴ παραβάντων*), but by one or more of the *ῥήτορες* publicly appointed for the purpose. The paper, which cannot conveniently be presented in abstract, will be published in the *Proceedings* of the society.

METEOROLOGICAL SOCIETY.—(Wednesday, Nov. 18.)

MR. HENRY HARRIES read a paper on "The Typhoon Origin of the Weather over the British Isles during the Second Half of October, 1882." The author had prepared daily charts of the North Pacific Ocean from September 26 to October 10; and by permission of the Meteorological Council the charts of the area between the Western Coast of America and Eastern Europe were utilised. The earliest evidence of the formation of the typhoon was on September 27, some distance east-south-east of Manila. At first the movement was towards north-west, five miles an hour; but on September 30, when the storm area extended to 1300 miles north-west of the centre, it turned towards north-east, crossed the south-eastern corner of Japan at thirty-three miles an hour, and attained a maximum rate of fifty-one miles per hour on October 2 to 3, after leaving the Japanese coast. In the neighbourhood of the Aleutian Archipelago the progress was very slow until the 9th, when it rapidly increased to thirty-five miles an hour, and entered Oregon on the 10th. The Rocky Mountains proved to be no obstacle to the progress of the typhoon, which crossed the range at thirty-six and three-quarters miles an hour, and maintaining this rate passed across the Northern States into Canada. Thence it crossed Hudson's Bay and Labrador into Davis Strait. Altering its course to south of east it passed the southern point of Greenland on October 16; and two days later, in lat. 55 N., long. 27 W., it was joined by another disturbance, which seems to have formed about October 9 in 20 deg. N., 48 deg. W. The juncture of the two storms was followed by a complete cessation of progressive movement for a week (October 19 to 26); and during this period there was formed the subsidiary gale which suddenly arrived over our southern counties on the morning of October 24, completely upsetting the Meteorological Office forecasts of the previous night. The author quoted several records from ships, which went to show that this secondary storm had not formed until nearly midnight, and that reports from our low-lying stations would not have enabled successful forecasts to be issued before 3 a.m., October 24. As this gale passed away, the primary moved into the Bay of Biscay and entered France on the 27th. As in Japan and America its

advance was marked by violent gales and destructive floods over a very extensive area, from Algeria northwards. The damage caused by the floods in England was serious, but trifling compared with the losses in Southern and Central Europe, where the destruction was enormous. This typhoon was the principal contributor in making the month of October, 1882, the worst within living memory. With this final effort it seemed to have expended its fury, and in crossing France and the Netherlands it gradually filled up. The last trace of the typhoon was in the Baltic on November 1, when it quietly dispersed after covering over 14,000 nautical miles in thirty-six days, the longest track hitherto followed day by day.

SOCIETY OF ANTIQUARIES.—(Thursday, Nov. 19.)

DR. JOHN EVANS, President, in the Chair. A letter was read from the Rev. D. J. Stewart reporting the threatened destruction of the houses on the west side of Weston's-yard at Eton College, in order to provide a site for some proposed addition to the school. Mr. Stewart stated that the whole range thus threatened is especially interesting from its historical associations, for it was here that Sir Henry Savile, Provost of Eton in 1596, set up the presses which printed his celebrated edition of the works of St. John Chrysostom. After some discussion the matter was referred to the Council to take such action as may be necessary.—The Rev. J. McFarlan communicated particulars of a proposal to erect a building over the Runic cross at Ruthwell for its better preservation. In the discussion which followed it was suggested that instead of spending £250 upon a temporary building over the cross, it would be a much better plan in every way to remove the stone to the shelter of the parish church, especially as the present site is not absolutely the original one.—The Rev. G. C. Finwicke exhibited a mediæval chalice, circa 1485, from Blaston St. Giles; also a pair of silver snuffers (with London hall mark of 1691), and tray of the date of 1691-2, and four deeds relating to the Manor of Blaston, bearing the signature of Henry Lord Cromwell.—Mr. A. J. Evans exhibited a bronze rapier, and a spear-head of peculiarly broad form, lately dredged up at Sandford Lock; also a bronze spear-head from the Wrekin.—Dr. Evans exhibited a hoard of bronze implements found at Felixstowe, including knives, celts, a gouge, and a saw—the first one found in England. There was also the end of sword scabbard, beautifully finished.—Mr. E. St. F. Moore exhibited some Roman remains from the same place, consisting of Samian ware, a lachrimatory, tweezers, a speculum, a fibula, a bronze armilla, and coins of Victorinus, Gordianus, and other emperors. Among these objects there was also found a salt spoon of the last century, with the remains of a hall mark; a bronze thimble, probably mediæval, and the stem of a mediæval candlestick.—Dr. Freshfield reported the discovery of a number of silver ornaments near the cathedral church of Kiev, an account of which he hoped eventually to lay before the society.

(Thursday, Nov. 26.)

DR. EVANS, President, in the Chair.—Mr. Middleton contributed a paper on a Saxon chapel recently discovered in Deerhurst Manor House, a half-timbered building of the sixteenth century. The nave measures 25 ft. by 15 ft. 10 in., and the chancel 14 ft. by 11 ft. 2 in. The chancel arch is semi-circular, and slightly stilted. Its width is 7 ft. 6 in., that at Bradford being only 3 ft. The south wall of the chancel has been pulled down, and a floor has been constructed across the building. There is no trace of an east window or of an altar. In the north-east corner is an early English corbel for a statue. Built into a fifteenth-century chimney-stack is a stone slab bearing a mutilated inscription, which is probably contemporaneous with the chapel. It has been conjecturally completed in the following ways, the letters supplied being within the brackets: "[In] hono[rem] s. Petri [apostoli] hoc [altar]e dedicatum est," or "[In] hono[rem] sanct[ę] Tr[i]nitatis hoc," &c. The former reading is more probably correct. A rubbing of an inscription from the church at Deerhurst, now in the Ashmolean Museum, was exhibited for comparison.—Mr. Everard Green contributed a paper on a diptych, having on one panel a crucifixion, and on the other the portrait of a

knight kneeling before the Virgin and Child. From a careful examination of the arms and devices, and after considerable research, Mr. Green has discovered that it represented Philip van Hincgaert, who was castellan of Terveuren, a castle about seven miles east of Brussels, in 1460. —Mr. Franks exhibited a triple bronze christatory belonging to Mr. Jennings. The three compartments bore the letters O. (oleum infirmorum), C. (Chrisma), S. (oleum catechumenorum or sanctum). —Mr. Middleton exhibited a cistola from a thirteenth-century campanile at Rome, which is interesting as a specimen of early glazing.

EDUCATION SOCIETY.—(Monday, Nov. 23.)

CANON DANIEL in the Chair.—A paper was read by Mr. H. Courthope Bowen on the "Training of the Faculty of Conception." Mr. Bowen began by stating that his object was to show how our ordinary school subjects could be used so as to exercise this faculty. He then proceeded to run rapidly over the main points in conception, the nature of its growth, &c., concluding with a few general hints on the supplying of material for, and the kind of guidance to be given during, the exercises. Conception, he said, was usually divided into comparison, abstraction, and generalisation; but for school-work it would be better to substitute classification for the last, inasmuch as generalising was always a dangerous business—especially for those whose knowledge was limited and whose facts generally had been insufficiently tested. Mr. Bowen then sketched specimen lessons on lines and rectilinear figures, grammar, the classification of plants, elementary dynamics, the life of plants, meanings of words, general notions, as courage, duty, &c., and terms of history. A short discussion followed; and it was decided that a special meeting should be called to discuss the somewhat novel problems which Mr. Bowen had introduced as soon as the members had had an opportunity of studying them in print.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Nov. 24.)

FRANCIS GALTON, Esq., President, in the Chair.—Mr. C. H. Read exhibited a number of ethnological objects from Tierra del Fuego.—The President exhibited, on behalf of Dr. J. E. Billings, of the United States army, a collection of composite photographs of skulls. There were in all twenty photographs, forming four series, referring respectively to Sandwich Islanders, ancient Californians, Arapahoe Indians, and Wichitaw Indians; and each composite was the mean of six adult male skulls.—Dr. E. B. Tylor exhibited some Australian Tunduns or "bull-roarers," and explained the manner in which they were used.—Mr. J. Theodore Bent read a paper on "Insular Greek Customs," in which he described many ceremonies now used by the Christian inhabitants of the islands of the Aegean Sea that were obviously derived from, or survivals of, ancient Pagan customs.—Mrs. Bent exhibited a collection of Greek dresses, drapery, and other objects from the islands referred to in the paper.—Mr. J. W. Crombie read a paper on "The Game of Hop-Scotch," in which he traced the origin of the game to a period anterior to the introduction of Christianity. He showed that in early Christian times children had some rough idea of representing in this game the progress of the soul through the future world, and that the division of the figure into seven courts was on account of the belief in seven heavens.—Dr. E. B. Tylor gave a résumé of a paper by Mr. A. W. Howitt, on "The Migrations of the Kurnai Ancestors (Gippsland)."

Aristotelian Society.—(Monday, Nov. 30.)

A PAPER was read by Mr. D. G. Ritchie, of Jesus College, Oxford, on Plato's *Phaedo*. The paper dealt mainly with the question of the interpretation of Platonic doctrine about the soul. It was argued that, although the view (of Hegel) may be correct, according to which the idea of individual immortality is no necessary part of the Platonic idealism, yet the view of Teichmüller, that Plato himself did not hold such an idea, was mistaken. The various arguments in the *Phaedo*, *Phaedrus*, and *Republic* were taken in detail and discussed.

FINE ART.

Revue Egyptologique. Deuxième Année, 1881-2; Troisième Année, 1883-4-5. (Paris: Leroux.)

WERE I obliged to confess why so long an interval has elapsed since I last took note of the progress of the *Revue Egyptologique*, I should own that I have been fairly daunted by the colossal development and the no less colossal erudition of this important periodical. The second volume, for instance (1881-2), which is well-nigh as bulky as a volume of the *Encyclopaedia Britannica*, contains not only articles with texts, translations, and commentaries on the laws, metrology, mathematics, monetary system, and philosophy of ancient Egypt, but also treatises on the comparative value, ponderosity, and capacity of Egyptian and Hebrew coins, weights, and measures; numerous translations of Greek and Coptic papyri, chiefly pertaining to patristic literature; translations of documents of the class known as "demotic contracts"; reviews of Egyptological works, &c., &c. Full four-fifths of these articles, and upwards of 125 supplementary pages reproduced in facsimile, are from the pen of Prof. Revillout. Equally rich in historical material, the third volume is almost wholly the work of the same indefatigable hand. It contains, *inter alia*, more demotic contracts; more patristic narratives; articles on the revenue, the fiscal system, and the administration of justice in Egypt under the Ptolemies; an important treatise on the law of landlord and tenant; and an enquiry of very great interest into the organisation of the army and the privileges accorded to the soldiery by Rameses II. In dealing with so large a mass of learned articles, it is manifestly impossible for the reviewer to single out more than two or three articles for special illustration. Among those two or three, however, a foremost place is necessarily claimed for Prof. Revillout's ingenious enquiry, entitled "La Caste militaire organisée par Rameses II., d'après Diodore de Sicile et la Poème de Pentaour."

The ecclesiastic wealth of ancient Egypt was prodigious. Innumerable inscriptions on the walls of Karnak, Denderah, Edfu, and other temples catalogue the wide domains with which successive sovereigns endowed the sacred colleges and the abodes of the gods. Victorious Pharaohs, returning from foreign conquests, poured their booty into the treasuries of hundreds of temples. The high priest of Ptah at Memphis, of Ra at Heliopolis, of Amen at Thebes, were the most powerful vassals of the double crown. In the Mosaic narrative, where Joseph is represented as buying up all the landed property of the Egyptians for the aggrandisement of his royal master, the territorial rights of the priesthood are said to have remained intact. The soil was therefore divided at that time (which appears to have been during the rule of the Hyksos conquerors) into two parts, namely, crown-lands and church-lands. The classical historians, however, represent the king, the priesthood, and the soldiery as equal sharers of the soil, and convergent tradition points to Rameses II. as author of this tripartite division. Herodotus expressly attributes to him a sweeping measure for the redistribution of the land; while Diodorus especially dwells upon the fact that this Pharaoh not only fixed the boundaries of the nomes and organised a system of provincial government, but that he also partitioned the soil of Egypt between himself, the priests, and the soldiery. Prof. Revillout's recent researches into the obscure labyrinth of ancient Egyptian law, and, above all, the happy inspiration which prompted him to collate Diodorus with Pentaour, have confirmed the truth of these statements in a very remarkable manner.

The famous epic composed by the court-poet

Pentaour celebrates, as everyone knows, the valorous deed of Rameses when, cut off from the main body of his army, he found himself confronted by the Khetan forces under the walls of Kadesh. That he was supported only by his advanced guard, and also, perhaps, by his household troops, may be taken for granted; but, according to Pentaour, he rushed alone into the midst of the enemy. Six times he charged, and six times he routed, the charioted Kheta; and when towards nightfall his laggard battalions came up, they found the field strewn with dead. "And lo! there was no place for the foot to tread, so numerous were the slain!" Hereupon the king addressed those who had taken no part in the engagement, accused them of faint-heartedness, overwhelmed them with reproaches, and reminded them of the benefits they had received at his hands. "There is not one among you," he said, "for whom I have not made a happy life in my land. With my possessions have I aggrandised you. I have confirmed the son in the holdings of the father. Whichever of you cometh to me with a petition, I protect him. No prince does for his soldiers what I have done for you. I have granted you to abide in good homes and in your towns, provided only that I find you in your place on the day and at the hour when you are summoned to the field; yet behold, you have acted as cowards!" Thus, "in cadenced lines," wrote the courtly scribe; and, strangely enough, although his poem has been repeatedly translated, it has been left for Prof. Revillout to discover that there was something more than rhetoric in the stately periods which he put into the mouth of his hero:

"Ainsi Ramsès avait donné en héritage perpétuel certains biens (de son domaine) aux soldats dans leurs villes," he remarks, "avec des points en concentration en cas de guerre. C'est toute l'organisation décrite par Diodore. Notons que Pentaour parle aussi du droit de pétition directe au roi accordé aux membres de la caste militaire. Ce droit, nous le voyons encore exercé par les soldats comme par les prêtres à l'époque Lagide. Quant à la division des terres en terre sacrée (*lepa γη*) en demotique *netorhotep*, terre des guerriers (*μαχιμων*), et terre du roi (*βασιλευς*), elle est sans cesse mentionnée dans les circulaires Ptolémaïques, dans le décret de Rosette, les contrats demotiques, etc." (*Année*, 3^{ème}, p. 102).

Touching this vaunted right of petition, there exists, however, incontestable evidence that it was by no means confined to the soldiery and the priesthood, and that it certainly did not originate with Rameses II.; for we have in the British Museum, inscribed upon a limestone flake about the size and shape of a man's hand, the humble petition of one Kenna, a workman, addressed some two hundred years earlier to Amenhotep III. (XVIIIth Dynasty), praying his "Good Lord" to decide a question of property between himself and a fellow-workman. That Rameses II. did actually endow his soldiery with some portion of the crown-lands may, on the other hand, be accepted as an important fact added to our knowledge of Egyptian history. In another paper, entitled "La Location," Prof. Revillout enters into a very interesting examination of the agrarian law, showing how this tripartite division of the land affected the agricultural classes, and upon what conditions the tenant-farmer of antiquity occupied his holding. His landlords were either priests or soldiers, and with neither does he seem to have had a particularly easy time. They guarded their territorial privileges with extreme jealousy, the most stringent precautions being taken to prevent any possible claim to perpetuity of occupation on the part of the tenant. By a clause which occurs in every lease (and the museums of Europe contain numbers of these leases), it is expressly specified that the tenant shall quit at the expiration of his term, the proprietor being free

to let again to whomsoever he pleases. The extension of leases, or the tacit prolongation of leases, whether of houses or land, is formally interdicted, as calculated to create an apparent right. The tenant who desired to remain in occupation had to begin again with a new lease, as though he were a stranger. As for arable land, the inalienable property of the privileged classes, it could only be leased from year to year; whereupon Prof. Revillout observes that this system continued to prevail in Egypt up to the commencement of the present century.

"Tout se conserva, en effet, dans la vieille patrie des Pharaons... du temps de notre commission d'Égypte, la loi antique du roi Ramsès II. (ou Sésostris) était encore en vigueur dans certaines parties de la Thébaïde, tandis que la loi relativement plus récente du roi Memphite Bocchoris était universellement observée dans la Basse-Égypte" (3^{me} Année, p. 135).

Compelled to treat, as a rule, with a farmer-general acting as agent, instead of with the landlord himself, the tenant-farmer was actually a sub-tenant tilling his acres under surveillance. It was not enough that he engaged, according to the terms of his lease, to pay such and such a rental; he must also engage to cultivate the land in person, to irrigate it with the water (i.e., the inundation) of the current year, and to submit all the produce thereof, "without fraud," to the inspection of the agent. Also, he must pay the taxes due from the proprietor to the crown. Neither was it enough that he should undertake these things in a merely legal sense, by affixing his signature to the deed in presence of witnesses; he was required (at all events in Ptolemaic times) to bind himself by oath, in the name of the reigning sovereign, regarded as both king and god, in the name of that sovereign's deified predecessors, and in the names of all the gods of Egypt. He sometimes even pledged himself to renounce that last resource of the oppressed—his right of appeal.

"I swear before Ptolemy the king and Queen Cleopatra his wife, the Gods Euergetes, and before the Gods Philopators, the Gods Epiphanes, the God Philometor, the God Eupator, and before Isis and Osiris, and before every God and every Goddess, that I will cultivate the field of Pecosor son of Pais, and the field of the Ala... both situate in the *Neter-hotep* (i.e., ecclesiastical lands) of Amen to the north of Thebes, by means of the water of the year 37 to the year 38. I will discharge the taxes due upon them at the King's Gate... I will show you all the produce of those fields, without fraud, and without going forth into any public place there to adjure any divine temple, altar, or statue... All these things I swear. I will remain still."

Such are the terms by which a certain pastophorus named Phib leased two fields from the farmer-general Ammonius, in the thirty-seventh year of Ptolemy Euergetes II., thus abnegating in advance that privilege of appeal to the gods and of refuge in the temples, which, according to Egyptian law, was the common heritage of the down-trodden free-man and even of the slave. Such appeals were put into writing and addressed to the gods, the gods themselves being called upon as witnesses to the truth of the statement. The priests then inquired into the matter; and, if the slave's story proved correct, he ceased to be the property of his owner, and became the property of the god in whose temple he had taken sanctuary. Prof. Revillout explains, by the way, that "the water" of any given year, calculated from autumn to autumn, means the reserve stored during the inundation of the first year for use during the winter and spring of the second.

In another paper entitled "La Loi de Bocchoris et l'Intérêt à Trente pour Cent," Prof. Revillout again takes for his text a passage from Diodorus—that, namely, which treats of

the reformed "Commercial Code" instituted by Bocchoris (XXXIVth Dynasty, circa B.C. 720). According to this code, as described by the Greek historian, imprisonment for debt was abolished, the goods of a debtor being alone liable to seizure, and not his person. It was also decreed by Bocchoris that no aggregate amount of interest which exceeded in total the sum originally loaned could be legally claimed by any creditor. What the legal rate of interest was, however, in ancient Egypt did not appear. Comparing these data, as given by Diodorus, with certain demotic documents which, for want of a better name, I will call "notes of hand," Prof. Revillout succeeds in demonstrating that the established rate of interest in Egypt, from the time of Bocchoris downwards, was thirty per cent.; thus verifying the ingenious calculations previously made by Dr. Leemans. By way of illustration, Prof. Revillout quotes a demotic contract (Louvre papyrus, No. 2443) wherein one Patma acknowledges himself the debtor of one Ta Ketem to the amount of fifteen shekels, declaring that if at the end of three years he shall not have paid the debt, he will abandon his goods to the creditor. Now in three years, at the rate of thirty per cent., Patma would owe Ta Ketem twenty-eight shekels and a half for interest, while, according to the law of Bocchoris, interest to the amount of thirty shekels was the utmost that Ta Ketem could exact for use of the thirty shekels lent. Seeing, therefore, that the original loan could produce no more interest, it was necessary to come to a settlement at the expiration of three years. Thus, no debt could drag on for longer than three years—or, more strictly, three years and four months; because the legal total of interest would then be reached. On this Prof. Revillout remarks:

"On voulait éviter la ruse bien connue des usuriers, qui, pendant de longues années, ne réclamaient aucun paiement et paraissent oublier la créance, pour pouvoir tripler, quadrupler, et quintupler le montant de la dette et ruiner plus sûrement leur victimes... En résumé, le taux légal a trente pour cent était reconnu, et les intérêts des intérêts interdites (2^{me} année, p. 143)."

The phrase "demotic contracts," used in the sense of a general title to a large and miscellaneous class of Egyptian documents, is not, perhaps, very happily chosen, and it demands a word of explanation. Demotic contracts are in fact the family papers, business memoranda, and private law documents of Egyptian citizens. They are written in the demotic script, which is an abbreviated form of hieratic (i.e., the writing of the *demot*, as distinct from the writing of the *hierarchia*); and they consist mainly of mortgage deeds, leases, transfers, bills of sale, and what are commonly called marriage settlements. As, however, the conditions upon which the men and women of ancient Egypt entered upon what we call "the married state" appear to have been regulated by purely financial considerations, and as there exists no evidence of the performance of any kind of ceremony, whether civil or religious, whereby the covenant of cohabitation was ratified according to law, the term "marriage settlement" is necessarily inaccurate. Our European museums contain hundreds of these demotic contracts, most of which have been found in the ruins of private dwellings at Thebes and Memphis. Some of those in the British Museum, the Louvre, and the Turin collection, were brought from Egypt more than half a century ago, while others are of quite recent discovery. The Louvre, for instance, has just been enriched by the purchase of no less than thirty fine examples dating from the reigns of Psammetichus I., Psammetichus II., Apries (the Biblical Hophra), and Amasis II. So chronologically complete is the French collec-

tion, that the keepers of the department of Egyptian MSS. are now able to exhibit an unbroken series of specimens of demotic paleography ranging over a period of seven centuries; beginning, that is to say, with the first formation of this script in the time of Tahraka (XXVth Dynasty), and ending with the latest Lagidae. To exaggerate the interest and importance of these and other similar documents (all of which have, till quite recently, lain undeciphered and neglected in the cabinets of our great museums) is obviously impossible. They tell us precisely those facts upon which inscriptions and historians are silent. They throw a flood of light upon the civil law, the civil rights, and the social condition of the Egyptian people. They show us families squabbling over heritages; needy men borrowing; rich men lending; bridegrooms signing away "the totality of their goods" as the price of a pair of bright eyes; brides stipulating for pin-money; spendthrifts mortgaging their patrimony; masters selling slaves; childless men adopting youths, and ratifying the deed by payment of a price before witnesses; mourners bargaining for the embalmment of their dead; and priests trafficking not only in the sepulchres and memorial services of defunct generations, but actually mortgaging those hereditary privileges which gave them a prescriptive property in the family graves and funerary rites of persons yet living and generations yet unborn. For these and other revelations touching the laws, manners, and customs which prevailed in Egypt during the later ages of its ancient history, the world is almost entirely indebted to the penetration, industry, and learning of Prof. Revillout. As an interpreter of demotic in its innumerable phases of development and change, as an exponent of the intricacies and abuses of Egyptian law, he stands not merely without an equal, but without a competitor. When, yet further, it is remembered how, during the five years that the *Revue Egyptologique* has been before the public, Prof. Revillout has not only performed the duties of editor single handed, but has himself contributed at least four-fifths of its contents, the wonder with which the achievement cannot fail to be regarded is equalled only by the gratitude with which so vast a gain to science must be acknowledged.

AMELIA B. EDWARDS.

THE ROYAL SOCIETY OF PAINTERS IN WATER-COLOURS.

It has been too often of late years that this gallery has been saddened by a collection of works by some deceased member. The little group of drawings and sketchings by the late Mrs. Mary Forster Lofthouse show to what a sweet accomplishment she had arrived, how refined was her observation, how delicate her sense of colour. Her preference for pale atmospheric effects concealed from some that this sense was not only delicate but rich; but such glowing drawings as the "Sketch at Norwich" (258) and "Crémieu" will show them how much might have been expected of her of brightness and strength. The aim after choice and delicate effects of atmospheric tones and colours is the characteristic of many members of this Society, combined in some cases with much poetic feeling. If Mr. Albert Goodwin does not appear to be always true, he is always subtle in colour and always original in design, with a tinge of the strange. His "Requiem" (174), with its sky full of grey feathery clouds, and its long stretch of curiously coloured sand, is an impressive and suggestive drawing; his "Streathley, Thames" (54), a dream of pale opalescence; in the "Fourth Voyage of Sindbad the Sailor" (338), he revels in fancy both of form and colour; but the latter is

unpleasantly startling, and the execution seems harder than in the oil-colour version of the same subject which was at the Academy a year or so since. Mr. Alfred Hunt is represented by two drawings only—one of "Warkworth Sands" (75), already treated in a large oil picture, and "Warkworth Castle" (169). The latter may be compared with Mr. W. Eyre Walker's rendering of the same subject (141), also a charming drawing but not better than his "Golden Autumn Wharfedale" (90). "A Barley Field—a Sketch" (242), is another of Mr. Walker's numerous additions to the beauty of the exhibition. Mr. J. W. North's peculiar power of making us feel the abundance, the delicacy and the intricacy of natural growths is well shown in several drawings. None is better than "Summer—Meadow Hay" (62) and "Late Autumn, Somerset" (167). Mr. Herbert Marshall communicates, as usual, his delight in the beautiful effects which the artist's eye can detect among the smoke of modern towns. His "Twilight on the Tyne" (170) and "Lying up for the Night" (308), with its orange sunset, are good small examples of his poetic realism. We do not like him quite so well when, as in "The Upper Harbour—Whitby" (180), he makes too much of vivid accidental patches of colour in his foreground, in the manner of Mr. Albert Goodwin. Mr. Charles Robertson, though a new member, seems quite at home in Pall Mall. In several drawings he shows the finished execution and charming feeling which have won him his place there. Of all his drawings none is better than "On the Yare—Norfolk" (352), small though it be. Its figures are especially good. "Unloading Nets—East Coast" is another fine example of his talent. His large drawing of an Eastern bazaar, called "Temptation," though full of skill, is scarcely so good of its kind. As long as Miss Clara Montalba does not go beyond the very clever sketching which we know so well, there will—despite the charm of her restricted scheme of colour, her masterly touch and luminous skies—be very little new to be said about her work. Among her numerous drawings the most fresh are "Afterglow—Venice" (43), in cold and grey, and "Coming into Port—Venice" (227), in shimmering green. Of the remaining landscapes, little need be said but that they are worthy of the well-known styles of the artists; but it must not be forgotten that among these are Mr. Poynter, Mr. Henry Moore, Mr. Birket Foster, who has an unusually large drawing possessing no fresh characteristic, Mr. J. D. Watson, with his grave scenes of silvan solitude, Mr. Oswald Brierly (with one fine study of sunrise), Mr. E. A. Goodall, Mr. Arthur Glennie, Mr. T. Danby (as sunny as ever), Mr. Brewtnall, Mr. Cuthbert Rigby, Mr. Thorne Waite, the Fripps, &c.

There is nothing among the figure subjects of very much importance. Mr. Charles Gregory contributes several good specimens of his bright country scenes in England and France, of which "In Dinan" (251) pleases us most. Mr. Glindoni has several clever drawings, the largest of which represents a party of "Conchologists" (131) in costume of the last century, examining shells and slipping over rocks on the seashore. It, like "The Opportunity" (291), has a tinge too much of burlesque; and we prefer his studies of single figures, especially "The Mathesis" (55), and an admirable drawing of an old dancing-master (112). Mr. Poynter sends a fine drawing of a head (325), and a "Study for a Classic Figure" (323). Mr. Albert Moore also contributes a charming "Head" (320), as well as a beautiful single figure called "The Door of a Wardrobe" (172), and a "Cartoon" of draped girls folding a table-cloth (171), a subject in which he has seized with his accustomed skill the

beauty which belongs to a gesture of ordinary life. Mr. Shields sends a fine cartoon of "Caritas," Mr. Walter Duncan some bold studies of figures from India, and Sir John Gilbert, Mr. Frederick Taylor, Mr. Carl Haag, Mr. Wallis, Mr. Arthur Hopkins, and Mr. E. K. Johnson are represented. The latter's "Drying Roseleaves" (188) is a very pleasant as well as a very skilful drawing. Mr. Du Maurier and Mr. Barnes send admirable examples of black and white illustrations, and there are some charming drawings by Mrs. Allingham and Miss Constance Phillott.

Among the pictures of animals are some of the greatest successes of the exhibition. Mr. Basil Bradley has seldom been seen to more advantage than in his "May on the Thames" (32), and "Friends"—on the Place de la Concord, Paris" (305), and the same may be said of Mr. Heywood Hardy in regard to his picture of a group of mares and foals called "Startled" (81). COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

THE Scottish National Portrait Gallery, Edinburgh, has been closed for re-arrangement during the past month, and a few of the works formerly on loan have been returned, while new portraits, to the number of about sixty, acquired by purchase, gift, and loan, have been added to the collection. Eighteen of these belonged to the late Dr. David Laing, and were bequeathed with a view to the formation of a Scottish National Portrait Gallery—a project which he had greatly at heart, and regarding which he had an interesting correspondence with Thomas Carlyle. They include portraits of James VI., Sir David Murray, of Goethe, the poet, and David Anderson, of Finzeau, both probably by Jamesone; Allan Ramsay, and the Hon. Alex. Murray, by Ramsay; Field-Marshal Wade, Dr. Thomas Henry, the historian, by Martin; and other works of considerable national interest. An admirable portrait of David Laing himself, by Herdman, is also deposited in the gallery; and the same painter has lent his striking head of Carlyle, who is also represented in a drawing by S. Laurence. A large portrait of Dr. William Veitch, author of *The Greek Verbs*, a favourable example of James Irvine, has been presented by the executors of the philologist. Lady Ruthven has bequeathed a fine portrait of James Bruce, of Kinnaird, and a portrait of Sir Walter Scott, which she herself commissioned Sir F. Grant to paint in 1831, and which claims to be the latest portrait of the author of *Waverley*—though the National Portrait Gallery in London has one executed by Allan in the same year—as the "Bath Miniature," bequeathed by David Laing, is the earliest. The recent purchases include a portrait of George IV., by Laurence, from the Knighton collection; an electrotype of Mary, Queen of Scots, from the Westminster effigy; a sketch of Sir Walter Scott, by Geddes; and a series of Tassie medallions. A selection of engraved Scottish portraits, from the extensive bequest of Mr. W. F. Watson, has also been added to the gallery.

A PROMINENT feature in the *Portfolio* for the coming year will be a series of articles on "Imagination in Landscape Painting," written by the editor, and copiously illustrated with engravings and woodcuts from pictures by the great landscape painters. Mr. Stephens will write on James Ward, Mr. Watkiss Lloyd on the Laokoon group, Mr. Cosmo Monkhouse on M. Rodin, Mr. Beavington Atkinson on some Italian painters, and Mr. J. H. Middleton (probably) on the Cosmati Family of Sculptor-Architects at Rome. Among the full-page plates promised are an etching by Mr. C. O. Murray of James Ward's "Cattle in Regent's Park," an etching

by M. Waltner of Hogarth's "Shrimp Girl," an etching by M. Richeton of Morland's "Going to the Fair," and a mezzotint engraving by M. Brunet-Debaines of Turner's "A Vessel off Yarmouth making Signals of Distress."

MR. W. DIERKEN has on view, in the Continental Gallery, New Bond Street, a number of pictures from the recent international exhibition at Antwerp, principally of the Norwegian school, together with an interesting collection of china plaques from Vienna.

MR. P. MENDOZA will open next week, in the St. James's Gallery, King Street, an exhibition of drawings in black and white.

MESSRS. SOTHEBY will sell next Monday a choice collection of prints, including several valuable Rembrandts, formed by the late Mr. John West.

THE STAGE.

AN ENGLISH PLAYGOER IN AMERICA.

New York: November 14, 1885.

A FEW remarks occur to me as I prepare to leave America—they are jottings merely—on the American Stage. That which will be most likely to interest English readers is some comparison of the Transatlantic Theatre with our own; but no comparison can be complete—least of all this rapid one—and it must be remembered, in the first place, how different are the local conditions. In England we have still centralisation: in America there is little centralisation. New York is, of American cities, the most important theatrically: partly because it is the largest place; partly because it is the most cosmopolitan place. It is the third German city in the world. There are as many Spaniards in it as in Cadiz; as many Italians as in Ancona; as many Frenchmen as in Tours or Nevers. And Germans, Spaniards, Italians, and Frenchmen would alone sustain almost half of the New York theatres. And then (putting the true New Yorkers out of the question) there is a great floating population of pleasure lovers—for students of the stage I dare not call them—ready to spend in the New York theatres a little of the wealth amassed in Chicago and St. Louis, in Minneapolis and Milwaukee. For all these reasons the city of New York is, indeed, the theatrical capital of America; but Boston and Philadelphia—nay, Chicago and St. Louis themselves—play a very much more important part in American theatrical life than do Manchester and Liverpool, Cardiff and Birmingham, in English. At this moment—in this middle of November—who of our great actors is likely to be in Liverpool or Cardiff? Irving and Miss Terry, the Kendalls, and Wilson Barrett are, I suppose, at home. But neither Booth nor Joseph Jefferson nor Clara Morris is in New York. Jefferson has been at Baltimore, Booth is there this week, and Clara Morris, I believe, is somewhere or other in a sleeping-car in the West. That is one of the things to remember, then, about the American stage—the absence of centralisation. Another proof of it than those I have already given is the existence in the "provinces," so to speak, of such an excellent stock company as that which is wont to appear at the Boston "Museum."

Again, no really great, no really very prominent, actor controls a New York theatre. Any organisation like that of our Lyceum and Princess's is at the present time unknown. Clara Morris, the Mrs. Kendall, or the M^{de}me. Pasca or M^{de}me. Favart of America, appears exclusively in no one theatre. Mr. Booth has no theatre, nor has Mr. Jefferson. Daly's Theatre has a comedy company thoroughly well organ-

ised—it is a company of many gifts and acquirements—but it is a company not at present at home. Mr. Gilbert, the comedian—a gentleman now quite old, but in full possession of his means—would generally be deemed the most important actor now in New York. He does everything that it is possible to do for the part of Sir Anthony Absolute—he does not do quite as much for it as does Jefferson for Bob Acres. As no great master of the stage stays at home in New York habitually, to exercise his mastery there, a greater prominence than would otherwise be given on the New York stage to the artist of passage, the more or less chance phenomenon. But Mr. Abbey's bold step of almost doubling the prices at the Star Theatre, during the engagement of Miss Mary Anderson, has not succeeded in filling the house, even with the people who are generally persuaded that a commodity is excellent because it is dear; and, save for the unwonted hysterics of one generally brilliant and always honest writer, it may be said that the engagement of that intelligent young woman has been received by the critics with extreme coldness. They cannot "enthusiasise" about her, it seems. Miss Margaret Mather, the new Juliet, draws houses more readily than Miss Anderson; yet I do not, for my own part, think that her success at the Union Square Theatre can be more than temporary. I attribute some of it to a spectacle only a little less magnificent than that at our own Lyceum. Her appearance is sufficient, perhaps, but it is not captivating. Her stage business is good, and it is often original, and it has, when it ought to have, the air of being impulsive. And this is saying a good deal. But her comedy is wanting in vivacity. She is seemingly only satisfied when she reaches the pathetic, only really happy when she has attained to the intense; and the intense once reached she never will let go. Terribly monotonous and awfully long drawn is the expression of Miss Mather's emotion. Yet the actress commends herself to our sympathies by what I understand to be the genuine modesty of her own estimate of her art. She has been for some time a rising star in the West and in the smaller cities. She has been wanted in New York before now, and, until now, has been unwilling to undertake the adventure. And now that the experiment has been made, does it seem that she has remained in the West too long; too long not by reason of years—for it may be she is still young—but by reason of the method of her art? I think, for my own part, that it does.

But must a rougher audience—one assumes that the audience of the West is rougher—confirm an artist in, so to call it, grossness of method? Not in every case. Our own Robson matured the most delicate of methods among a coarse enough *entourage*; and, in New York to-day, Mr. Harrigan shows to a third class audience, presumably yearning for sensation, the virtues of restraint and reticence, the delightfulness of artistic delicacy. Mr. Harrigan is, on the whole, the actor who has impressed me most in America—I mean, of course, excluding the finely accomplished artists whom I, like every other London play-goer, have seen in England. Harrigan acts at the Park Theatre. It is a play-house of the rank of the Surrey; and on the stage there the very poor man—especially if he be a drunken man—is a man of qualities one must revere, and the gentleman, the conventional gentleman, is there a villain; at all events, the burden of proof rests with him to show that he is not, if he can. A certain air of unnaturalness attends therefore, it will be understood, the drama of the Park Theatre. The point of view is that of the Penny Dreadful. But when Mr. Harrigan steps into the piece, as the impecunious Irishman or the humble, but erring, brother—and

that is his rôle in "Old Lavender"—it is a bit of life that one begins to see. Just such a person you noticed, the day before, preparing "clam chowder," at a wooden stall on the quay, down by the South Ferry. Or just such a man turned yesterday out of the shabbiest *lager-bier-garten* along the length of the Third Avenue. Like certain of the models of Zola—refuse of the Batignolles, residuum of the Quartier Mouffetard—he is not an exquisite subject. But he is a subject exquisitely studied, and portrayed without a trace of exaggeration, without a cheap effect. He is realised by dint of breadth of understanding—which is sympathy—and by dint of hard work.

FREDERICK WEDMORE.

MUSIC.

THE "EUMENIDES" AT CAMBRIDGE.

WE confine our attention here entirely to the incidental music written by Dr. C. V. Stanford for the performance of the "Eumenides" at Cambridge this week. The overture is short, and foreshadows the chief event and the chief personage of the drama. The principal theme is taken from the "Revenge" chorus of the Furies, the second one is the calm and dignified "Athena" motive from the second act. The latter reminds one vaguely, but by no means unfitly, of Brahms's "Song of Destiny." The first chorus is a vigorous piece of writing. The restlessness of the furies when awakened from slumber is well depicted in the accompaniment; while the voices, now in unison, now in parts, give utterance in an effective manner to the dark and cruel thoughts of the weird daughters of hell. The second act opens with an orchestral movement, in which the Furies and Athena are again cleverly contrasted. The first chorus is interesting, especially the closing part in the major key. In the following number, in which the Furies "preach to the sons of men," the composer is at his best. In this, and also in the next chorus, there are touches of harmony and of rhythm which make one think of the Eumenides as distant relations of Wagner's Valkyrie maidens. The introductory orchestral movement to the third act comes, with its calm and flowing theme, as a welcome relief after the exciting music of the previous acts. The two choruses of the Furies, before they are pacified by Athena, are well in keeping with the situation. The flowing theme of the introduction serves for the two choruses of reconciliation. The accompaniment is extremely graceful. The last chorus, sung by the attendants of the temple as the Eumenides are led to the sacred cave assigned to them by Athena, is full of simple and pleasing melody. The orchestra is busy throughout with the motive of the goddess, and with the trumpet fanfare heard at the opening of the act. Altogether, it is an exceedingly attractive number. Dr. Stanford has, in our opinion, added to his reputation by this his latest work. The music under the composer's direction was ably rendered by the band, with Mr. R. Gompertz as leader, and by the chorus, consisting of members of different colleges.

J. S. SHEDLOCK.

RECENT CONCERTS.

MISS FANNY DAVIES made her second appearance at the Popular Concerts last Saturday afternoon. She played Mendelssohn's difficult Scherzo à Capriccio in F sharp minor in a finished and brilliant manner, and displayed agility of finger in a Gigue of Graun. She did her best to avoid an encore, but at last had to yield, and gave a short piece by Scarlatti. We hope the next time she appears she will let us hear her in a Beethoven Sonata. In Schumann's Trio in D minor Miss Davies showed

everywhere reverence and feeling for the music, but at times we could have wished for a little more strength and passion. The Scherzo, however, left little to desire. The programme included Schubert's A minor Quartett. The public never seems weary of listening to this lovely music, with its ever-changing moments of shade and sunshine. It was admirably performed under the leadership of Mme. Néruda. Sig. Bottesini astonished the audience by his wonderful feats on the double bass; but, while fully acknowledging his cleverness and merit as an artist, we feel that he is not quite in his right place at these concerts. Mr. Maas was the vocalist, and sang with his usual success.

On Monday evening Schubert's Quartett in G (Op. 161) was performed. This grand work, written only two years before the composer's death, is wonderful for its imagination, its power, and its pathos. We cannot agree with the analyst who thinks the finale the most important of the four movements. The splendid opening movement, with its Schubert characteristics and its Beethoven touches, and the andante with its tenderness and mystery are, to our mind, the strongest movements. The quartett has—including this last performance—been heard only four times at the Popular Concerts, but the enthusiastic reception given to it may perhaps induce Mr. Chappell to announce it oftener. It was led by Mme. Néruda. It was well given, but we have heard a finer rendering of the work. M. V. de Pachmann was the pianist, and his solo was Chopin's Fantasia in F minor. He was not in his best form; but nevertheless received rapturous applause, and for an encore gave Chopin's Valse in D flat. In Mozart's Pianoforte Quartett in G minor he played with extreme refinement and delicacy, but at times not without affectation. Sig. Bottesini again played double bass solos, and Mme. Sinico was the vocalist.

Mr. and Mrs. Henschel gave their third and last vocal recital at Prince's Hall, Piccadilly, on Wednesday afternoon. The programme, well selected, contained two of Schubert's finest songs—Memnon and Ganymede. Mr. Henschel, although the quality of his voice is not all that could be desired, sang them with great taste; and by his charming rendering of their interesting pianoforte accompaniments, added much to the effect of the music. Mrs. Henschel was in good voice, and received much applause for her finished performance of songs by Bruch, Brahms, and Mendelssohn. Besides the pieces mentioned, there were other songs and duets by French and German composers. The concert givers, encouraged by the success of their present series, propose to give another at the beginning of the new year.

Gounod's "Mors et Vita" was given, under Mr. Mackenzie's direction, last Tuesday evening, at the second Novello Concert at St. James's Hall. The choir was in splendid condition, and the performance of the work—with one or two exceptions scarcely worth noticing—was an extremely fine one. The choristers paid the greatest attention to light and shade. The vocalists were Mesdames Albani and Trebelli, and Messrs. Lloyd and Santley, so the solo music was thoroughly well cared for. Mr. Mackenzie conducted throughout in a masterly manner, and his efforts to do justice to the music were duly appreciated. The hall was filled: money, indeed, was refused at the doors. The popularity of "Mors et Vita" in London is far greater than we had anticipated.

MUSIC NOTE.

At the Hampstead Popular Concert on next Thursday, December 10, Miss Anna Mehlig will play, coming specially from Berlin for the purpose.

SATURDAY, DECEMBER 12, 1885.

No. 710, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Life of Henry Fawcett. By Leslie Stephen. (Smith, Elder & Co.)

MR. STEPHEN'S life of his friend appears very opportunely. The conflict of a general election, during which more than the usual amount of bad political economy has been talked on both sides, reminds us how great a political loss we suffered in the death of Fawcett. The social questions which most deeply affected him are filling men's minds more and more day by day; and, had he been here to deal with them, as he would have done, boldly and dispassionately, he would have exercised an influence for good which it would be hard to exaggerate. The difficulties now before us will test with peculiar severity the coolness of judgment and the independence of our statesmen; and we shall feel the absence of one in whom these qualities of mind were conspicuous. Fawcett was free from partizanship. Again and again he separated himself from his leaders, not merely withholding his support, but offering strenuous opposition. "Five years' experience in the House," he once said in reply to Mr. Grant Duff, "had taught him that a member was always right in bringing forward a question when the fact of his bringing it forward caused the Minister concerned to lose his temper." During the Liberal administration which ended in 1874, he was in a chronic state of mutiny. Whether the subject of debate was university tests, or education, or the enclosure of commons, or the Irish Church, or India, he was never weary of denouncing the timidity of the official mind. So marked was his disaffection that, as Mr. Stephen tells us, towards the end of the parliament the government whips ceased to send him the usual notices. In later years he found it less difficult to work with his party. He was able to take office, and to abstain from actively opposing a policy which in many respects can have been little to his liking. He had already lived down the notion that his interference was due to factionousness; he had seen the prejudices against which he fought dying out one by one; and he had made it easier for other men to carry on the thankless work of persistent criticism. To his earlier political life he could look back and say that, in nearly every case, whether he had been unduly pertinacious or not, events had proved him to have stood on the right side. He could honestly claim, and not many politicians could do as much, that he had tried every opinion by the test of principle, and had never been awed by authority. Thus Mr. Stephen describes him, and no one who watched his career will deny that the estimate is just. In the time of

trouble, grave beyond measure, which we are approaching, such men can ill be spared.

Mr. Stephen dwells on the practical character of Fawcett's Radicalism, and quotes Bagehot's description of it as being without pulpiness or sentimentality. Unwilling minds were convinced that after all a Radical might be a man of sober judgment, and might even take pains to inform himself as to facts. From the time when Fawcett began to read Mill down to his last earnest condemnation of Socialism, he exhibited the rare combination of a burning sympathy with the poor and a distrust of short cuts to social changes. As he grew older, he came less and less to believe in the power of legislation. Restrictions on factory labour, which he had supported in his first parliament, were condemned by him in 1874. But he held no pedantic opinions concerning State interference. He was ready to try each case on its own merits. He advocated the compulsion of the Education Act, and opposed the compulsion of the Permissive Bill. He accepted the policy of taxing one man for the education of another man's children; but he resisted the scheme, which has recently been revived, of making education free. That is, he favoured a system which gave education to the people for less than its market price, while he insisted on making them pay part of the cost. There is, of course, a real and practical distinction between the two cases. By keeping up what is so far the fiction of payment, you may preserve the sense of self-reliance, which to him was the supreme consideration; but it is not a distinction which a Spencerian politician could allow himself to draw. He was, in short, as Mr. Stephen calls him, "a consistent empiricist." Even his belief in free trade, unbending as it was, never permitted him to affirm that always and everywhere must protection be a folly.

A life of political action is not easily told. If the dreary chronological method be followed, the result is apt to be a blurred and distracting narrative of dead controversies. Mr. Stephen has avoided the danger by repeatedly referring us to the principles which lay at the foundation of Fawcett's opinions, and by discussing in a connected form some of the subjects which are most closely associated with his name. In this way we are better able to appreciate the work which he did with regard to the preservation of open spaces, his services as "member for India," and the reforms which he introduced into the Post Office. In resisting enclosures Fawcett had many able and zealous fellow-workers; but without him, says Mr. Stephen, in a very characteristic passage,

"the cause would have been far more doubtful; for its success was essentially dependent, at the most critical part of the struggle, upon his unflinching resolution, independence, and coolness of judgment. It is a reflection which has something of the pathetic for the future generations of Londoners who will enjoy the beauties of the Surrey commons and the forest scenery of Epping, that their opportunities of enjoyment are due in so great a degree to one who could only know them through the eyes of his fellows. When Fawcett lived at Lambeth he frequently took the railway to Putney and refreshed himself, after a night at the House, in the fresh breezes which still blow across the wide open space of Wimbledon

Common. It is not long since I stood there one day by his side on the edge of 'Caesar's Camp,' and noticed the interest with which he listened to a discussion as to the distant view. Was that the grand stand at Epsom? Could we see the tower on Leith Hill through the gap of Mickleham Vale? We prolonged the talk because Fawcett, instead of showing any sadness at his incapacity to follow us, seemed to derive pleasure from the livelier impression of the commanding position of our standing ground. It is surely a proof of unusual healthiness, as well as kindness of nature, when a man can thus delight in the vicarious sense of the beautiful instead of fretting over his own deprivation."

In Parliament he seemed as if he lost little by his deprivation. He forced the most powerful adversary to treat him as an equal, and gained his greatest triumphs in dealing with a subject as to which most Englishmen have still to confess dark ignorance. His criticisms of our Indian administration exhibit in the strongest light both the dignity of his moral nature, and his capacity of mastering the most entangled problems. Hatred of injustice in all its forms led him to take up the subject. The meanness of which English governments were guilty towards India stirred him to indignation. And can any one now doubt that he was right, or that never were acts perpetrated more paltry and irritating in their meanness than the charging upon the Indian revenue of the expenses of the India Office ball in 1867, of the Duke of Edinburgh's presents, and of the Prince of Wales's journey? His protests on these matters did good. But he rendered still greater service in calling attention year after year to Indian taxation and expenditure, and in driving home the truth that the figures of the Indian budget concealed acts of gross misgovernment. If we are awaking to a sense of the gravity of such complex questions, it is in great part due to the efforts of a blind man, capable of lighting them up with a clearness "which might have raised the envy of the most accomplished Chancellor of an Exchequer." In fact we forget, as we read his essays and speeches, that he had not all the faculties of other men.

Perhaps it was right to devote the greater part of this biography to Fawcett's political conduct and opinions. But so attractive are the sketches of his early life, and so charmingly are they drawn, that one cannot help regretting the restraint which Mr. Stephen has imposed on himself. The chapters are only too brief in which, with touches of the happiest humour, he tells of Fawcett's boyhood, of his young ambition, of his tastes and his friends at Cambridge, of the courage with which he faced the misfortune of his life, and of his romantic attempts to enter Parliament. Nothing could be better than the picture of Cambridge thirty years ago, with its unlimited talk and laughter and conviviality, its healthy democratic spirit, and its contempt for impostors.

"Thoroughness was our pet virtue. An impostor is one who substitutes fine phrases for thoughts. He flourishes pre-eminently in the region of metaphysics. If we too summarily identified metaphysicians with impostors, we perhaps went a little too far. But the opinion is tenable."

Certainly, nobody had less rubbish in his

mind than Fawcett. But he did not escape the dangers which attend an exclusive devotion to work which promises to yield a directly useful result. As his biographer frankly admits, he had some of that narrowness and rigidity from which the practical man seldom escapes. He was not an original thinker. Even in political economy he did no more than illustrate and spread the ideas of minds broader and subtler than his own. But he had a healthy love of facts, and a power of using them which made him, wherever a calm judgment was needed, a man to lean upon. If, moreover, his intellectual interests were comparatively few, there was no trace of narrowness in his moral nature.

"I have never known," says Mr. Stephen, "a man of more chivalrous nature. For chivalry of feeling, as I understand the word, means a refinement of the sense of justice—an instinctive capacity for sympathising with everyone who is the victim of oppression in any of its forms; and this was really the chief constituent of the character which we all came to recognise."

And this it is which makes him still to his friends a living presence and guide. As he was himself the most generous and impartial of men, he could have had no more fit memorial than this story of his life, told as it is with sympathetic warmth, but without a word of exaggeration. G. P. MACDONELL.

Firdausi in Exile, and other Poems. By Edmund Gosse. (Kegan Paul, Trench, & Co.)

A HIGH reputation is not an unmixed advantage to an author. If he has done much good work he may produce a little that is not good without harm to his popularity; but if his fame depends rather on promise than on performance, he is under the constant necessity of excelling himself. Mr. Gosse has been regarded, whether rightly or wrongly, as a poet of great promise, and it is a misfortune for him that the present volume cannot altogether satisfy the expectation which that promise has aroused. There are parts of it that are as good as any of Mr. Gosse's previous work—some of the sonnets, indeed, show a marked advance—but other parts are of quite inferior merit. It is to be regretted that at least two of the poems of greater length, and the two which Mr. Gosse himself appears to regard as of most importance, are decidedly poor.

"Firdausi in Exile" is one of these. This poem has been published before, and the episode of Persian story to which it relates is generally known. Mr. Gosse tells the tale in very bald verse, with scarcely any attempt at imaginative treatment. Stanzas which might otherwise have had the merit of plain prose are deprived even of that by the presence of forced rhymes and inversions. Take the following one, for instance:

"But old Firdausi, bearing eastward still,
Through many a Tartar camp, his woven mat,
At last, one evening, climbed a scarp'd hill,
From whence he saw the white roofs of Herat:
Downward he passed, and in a garden, sweet
With roses and narcissus, down he sat,
And wondered if his mountain-weary feet
Might dare to rest where earth was smooth
and flat."

Or this, which tells of the remorse and anger of the Sultan Mahmoud:

"Back to his court he went, molten at heart,
And all his rage on faithless Hasan turned;
For when he thought him of that tongue's black art,
His wrath was in him like a coal that burned;
He bade his several ministers appear
Before his throne, and by inquiry learned
The cunning treason of the false vizier,
And all his soul's deformity discerned."

Towards the end of the poem there is a passage of some beauty, describing the aspect of Firdausi as he lay dead:

"The majesty of death was in his face,
And those wide waxen temples seemed to glow
With morning glory from some holy place
Where angels met him in a burning row."

But even this passage has been spoiled by the last line, which adds nothing to the spiritual beauty of the picture, and has evidently been introduced to complete the stanza and the rhyme.

"The Island of the Blest" is the longest composition in the volume. The subject, if an old one, affords ample material for poetic treatment; and though among this material Mr. Gosse seems to have chosen the poorest, his treatment of it is not unpoetic. Some northern mariners lose the control of their ship in a storm, and the vessel finally drives upon an island which is thus picturesquely described:

"A craggy isle it seemed, of wanton shape,
Rounded with woodland, scarp'd by peaks on high,
With many a curve of brave fantastic cape,
And bright bare ridge of rock against the sky."

Landing here, the wanderers are received by a grave people who are strange to them; and again Mr. Gosse describes the scene in apt and excellent lines:

"The forms that crowded round us all were Greek,
Yet by some marvel of the shifty brain
Their tongue seemed ours when they began to speak,
And ours seemed theirs when we replied again."

The inhabitants of the Island of the Blest were once the denizens of the old world of Greek history and fable. Instead, however, of their virtues and heroisms being reproduced in nobler forms, they appear only in a sort of burlesque. Rhadamanthus rules the island as king and judge, and the wanderers are taken before him; but, while they are waiting to be heard, Ajax approaches with a demand that he may fill his place among his peers, and Theseus and Menelaus appear as rivals for the hand of Helen. Rhadamanthus awards her to Menelaus, who leads her away; and their going is described in a stanza of much force. The strangers are permitted to remain in the island; and the supposed narrator of the story describes his being conducted to a house which he was told was to be his own, and at the door of which "a woman with a weary smile" awaited him. The weary smile was only the sign of her hope deferred, which found its satisfaction in his coming. She received him with a "most virgin-like embrace,"

"Then turned with passion-laden eyes that swum,
And held the curtain back, and smiled, and
whispered 'Come!'"

He lived with her "in such beatitude" that the world he had left passed wholly out of his thoughts. But, except for the doubtful good of this easily won beatitude, life in the Island

of the Blest appears to have been no better than life in the world of men. At least, Mr. Gosse does not seem to have discovered in it anything very exalted or uncommon. His northern mariner did not make the acquaintance of Homer, or Ulysses, or Socrates, or Plato; and though we learn that one of this person's companions "lashed the poets for their lack of sense," there is no other mention of an order of men who might be supposed to be among the most interesting inhabitants of an island of the blest. Ajax and Theseus are mere names. There were no heroisms, no songs, no high speculations or philosophies. A certain Myron, presumably the Greek sculptor of that name, became the counsellor and guide of the narrator of the story, and taught him "patiently all sacred lore"; but nothing is recorded of the discourse they held together. There was a daily gathering of "guests of stately mould," when "waves of wondrous converse rolled"; but who the guests were and what was their converse are details about which the reader is free to exercise his own imagination. The poet's imagination does not help him. The *dénouement* of the poem consists in the flirtation and subsequent elopement of one of the northern wanderers with Helen—an incident which caused the banishment of all the strangers, for whom the magic isle and its delights were thenceforth no more. Such an incident is, indeed, highly disillusionary; and a reader who possesses any poetic sensibility may be excused if he resents upon the poet his employment of so excellent a theme to so worthless a purpose.

It is pleasant to turn from these ambitious but unsatisfactory poems to others of less pretension and greater merit. "A Ballad of the Upper Thames" is a charming piece of homely rural description, clever in form and bright and happy in tone. Nothing of its kind could be better drawn than the picture in these verses:

"I sit and watch from out the pane
The silvery Windrush through the rain
Haste down to join the Isis,
Half listening to the simple tale
That winds along, thro' draughts of ale,
On to its measured crisis."

"Or watch the head of him who tells
These long-drawn rural miracles,—
His worn old cheek that flushes,
His eye that darts above his pipe,
Keen as the flashing of a snipe
Through beds of windless rushes."

This sequel to a rustic wooing, again, is admirably told:

"But out, alas! for maidens' oaths!
When Love puts on his Sunday-clothes
In vain their hearts are chary;
Before three months had gone about
The Lechlade bells were pealing out,
And George was marrying Mary."

"The Charcoal-Burner" is another rural poem, written in a graver key, but with a fine perception of natural things:

"A still old man, with grizzled beard,
Grey eye, bent shape, and smoke-tanned features,
His quiet footstep is not feared
By shyest woodland creatures."

"He knows the moods of forest things,
He holds, in his own speechless fashion
For helpless forms of fur and wings,
A mild paternal passion."

"Within his horny hand he holds
The warm brood of the ruddy squirrel;
Their bushy mother storms and scolds,
But knows no sense of peril.

"The dormouse shares his crumb of cheese;
His homeward trudge the rabbits follow;
He finds, in angles of the trees,
The cup-nest of the swallow."

Two or three of the sonnets may be said to be perfect. There have been great poets who have written indifferent sonnets, but nobody who is not a genuine poet can write a good sonnet. In so far, therefore, as the production of this form of verse with success is a test of poetic capacity Mr. Gosse entirely justifies his calling. The two following specimens are taken from different sections of the book, but they appear to bear a close relation to each other:

"I stand before you as a beggar stands,
Who craves an alms and will not be denied;
Nor shall I cease to wander at your side,
Until I gain this largess at your hands;
Give me your weary thoughts, your hours of pain,
Your dull grey mornings, and your hopeless moods;
If one sad moment mars your solitudes,
Give that to me, and be at ease again.
Behold, my heart is large enough to bear
Your burdens, and to rock your heart to sleep;
Give me your griefs, I do not ask to share
The golden harvest of the joys you reap;
Be glad alone; but when your soul's oppress,
Come here and lay your head and be at rest."

"BONDSERVICE OF THE HEART.

"When by the fire we sit with hand in hand,
My spirit seems to watch beside your knee,
Alert and eager at your least command
To do your bidding over earth and sea;
You sigh—and of that dubious message fain,
I scour the world to bring you what you lack,
Nill, from some island of the spicy main,
The pressure of your fingers calls me back:
You smile—and I, who love to be your slave,
Post round the orb at your fantastic will,
Though, while my fancy skims the laughing wave,
My hand lies happy in your hand, and still;
Nor more from fortune or from life would crave
Than that dear silent service to fulfil."

The quotations which have been given will suffice to indicate both the merits and the demerits of this volume. The merits, which are not small, are found in poems of the affections, of domestic and rustic life, in pictures of simple natural beauty and quiet cultivated grace. Within these limits Mr. Gosse's work is admirable, and it is only when he attempts something beyond that he fails. Any estimate of his powers which is based on the quality of his best work, and takes no account of the limited range of that work, would be misleading. It is due to Mr. Gosse himself that too much be not expected from him, and that the standards by which his work shall be judged be not those of the great poets, by whose side he would inevitably appear dwarfed to less than his rightful stature. He lacks their imagination, their power to project bold outlines and fill them, to invest dry bones with life, to sound the depths and reach the higher levels of human nature. He can produce polished verse, but he cannot "build the lofty rhyme." His powers of observation are wide, keen, and sympathetic; he has facility and grace of expression, undoubted cleverness, a refined taste, a cultivated and scholarly mind; but all these do not make up genius.

GEORGE COTTERELL.

William Lloyd Garrison, 1805-1879. The Story of his Life, told by his Children. Vols. I. and II. (Fisher Unwin.)

In these ponderous volumes the narrative of Garrison's life is carried to the year 1840 with much detail and circumstance. Of the patient diligence of the writers there can be no possible doubt—it manifests itself on every page—yet I think the work would have been distinctly a better one if it had been condensed. "In a literary point of view," say the authors, "we have aimed at nothing more than clearness, sequence, and proportion." The numerous and lengthy extracts stand very much in the way of clearness; and, having in view the fact that the readers "are brought face to face with a world which will appear wholly new and strange" to them, the elaboration of many comparatively insignificant events is seriously out of proportion. We want, chiefly, in a work of this kind, incidents that would display the character of Garrison himself. As it is, a vast quantity of material has been provided for the future biographer of Garrison, and for the future historian of the rise and culmination of the anti-slavery sentiment in the States.

Born in 1805, Garrison was only twenty-one when he became, in some measure, a public man, and at twenty-five was in the thick of the anti-slavery fight, having already got himself lodged in Baltimore jail by his boldness in that cause. There were abolitionists before him, notably Lundy, with whom, for a time, he worked; but none had ever succeeded in arresting the attention of the country at large as he very quickly did. At first he stood nearly alone—Garrison against the world, a "remnant" of one which, in harmony with Mr. Matthew Arnold's theory, was to save the State. In Lowell's words:

"In a small chamber, friendless and unseen,
Toiled o'er his types one poor, unlearned young man;
The place was dark, unfurnished and mean;—
Yet there the freedom of a race began."

"Help came but slowly; surely no man yet
Put lever to the heavy world with less:
What need of help? He knew how types were set,
He had a dauntless spirit, and a press."

Little by little the better spirits of the country responded to his call. One of them, Mrs. Maria Weston Chapman, in her *Memorials of Harriet Martineau*, explains the position when she says:

"We had lived all our youth under the benumbing vassalage of slavery and never dreamed it was so till Garrison 'broke the deep slumber in our brain.'"

These early workers, when once aroused, proved potent forces. Some were men of wealth and position, others women nurtured in happy homes. Miss Martineau, in her *Autobiography*, has described Mrs. Chapman as she saw her then:

"I still see the exquisite beauty that took me by surprise that day; the slender, graceful form; the golden hair which might have covered her to her feet; the brilliant complexion, noble profile, and deep blue eyes; the aspect meant by nature to be soft and winning only, but that day (as ever since), so vivified by courage and so strengthened by upright conviction, as to appear the very embodiment of heroism."

Others prompt to help in their various ways, and ready if called, as some were, to suffer, were Arthur Tappan, a New York merchant, wealthy and aforetime respected; Gerrit Smith, the subject of one of Mr. Frothingham's most interesting biographies; Mr. Ellis Gray Loring; Rev. Samuel J. May; the poet Whittier; and, not least, Miss Prudence Crandall. Miss Crandall, who was the principal of a school for young ladies at Canterbury in Connecticut, after consulting Garrison, determined to convert her establishment into a school for coloured girls. Canterbury was thrown into an uproar at the tidings. Three towns' meetings were held on the subject, but Miss Crandall persisted. An act of prohibition was therefore passed, and Miss Crandall was boycotted:

"The shops and the meeting-house were closed against teacher and pupils; carriage in the public conveyances was denied them; physicians would not wait on them; Miss Crandall's own family and friends were forbidden under penalty of heavy fines to visit her; the well was filled with manure, and water from other sources refused; the house itself was smeared with filth, assailed with rotten eggs and stones, and finally set on fire."

The Abolitionists had to encounter not only the opposition aroused by the pecuniary interests and the love of ease of the Southern planters, but the not less formidable social prejudice of the Northern "respectable" classes. Their cause was "vulgar," as all causes on behalf of social outcasts are until they succeed. Persons with ears polite do not like revelations of the depravity upon which they themselves thrive. They think it would be better that the depravity should continue for ever rather than that they should hear of it. The only way to treat people who offend in this way is to shun their company and discredit their statements. This fashionable Boston did very readily in reference to the Abolitionists. So far from slaves in the South being ill-treated, they were well fed and happy, free from responsibility and care. The planters were nothing short of a race of philanthropists. Carlyle never quite relinquished this superstition; and, if I mistake not, Mr. Ruskin fully accepts it still. The planters themselves were not likely to discredit it; and their countrymen in the North, who could not have been wholly deceived, did not dare, or for the sake of business and friendly relations did not choose, to do so. So the early Abolitionists had but a sorry time of it. It requires more courage to identify oneself with a "vulgar" agitation than it does to stand on a field of battle, and they had to face death as well as Mrs. Grundy. Garrison himself had never mingled with the select classes, yet his early position and prospects were such that to abandon them was no small sacrifice, and some of his first supporters were men and women drawn from the very pinnacle of Boston aristocracy. To bear all that Garrison bore unflinchingly needed, mentally and morally, as well as physically, an iron constitution. On the eve of his first visit to England (1833), he is well described as

"a young man not yet 28, without means or social standing, or a numerous following, despised, hated, hunted, with a price upon his head; armed only with the blessings of an out-

cast race, and the credentials of an insignificant body of 'fanatics.'

He reached London in time to follow the body of Wilberforce to its resting-place in Westminster Abbey; a scene which, though suggesting a painful contrast, must nevertheless have been inspiring and hopeful for the future of his own work. Even the English solution of the slave question seemed to Garrison to savour of unrighteous compromise. He was for nothing short of immediate and unconditional emancipation. No obstacle seemed to him insuperable, and no peril daunted him. "I cannot know fear," he said. "I feel that it is impossible for danger to awe me"; and this, it would appear, was literally true. Even brave men pause before they take a final or irretrievable step. Garrison never paused. He entered upon his task, not, indeed, "with a light heart," but with perfect readiness. Very early in his career £2000 were offered for his delivery in any Southern State; and that meant hanging or worse. When the Boston mob of 1835 had invaded the Abolition meeting in Congress Hall, and were already yelling his name, Garrison sat quietly in an apartment divided from them by a thin partition wall, writing his account of the proceedings; and even when the ruffians found him and dragged him to the window intending to hurl him headlong into the street, he did not flinch. Thenceforward for many years he carried his life in his hand.

To one notable figure of that time, the gracious and saintly Dr. Channing, the authors of this book do less than justice. They are unable, apparently, to appreciate one whose virtues were so unlike those of their father. Garrison would not have accomplished what he did if he had not been possessed with some of the bigot's narrowness, whereas with Dr. Channing it was probably the very breadth of his sympathies which kept him separate from any party. Moreover, he was constitutionally unfitted for strife, seeking always to harmonise differences and establish peace; and so, though the friend of the slave, his heart would not hold hate even of the owner.

Garrison, on the contrary, was a born Protestant. Anti-alcohol, anti-tobacco, anti-freemasonry, anti-freedom on Sunday, anti-war, were only some of the antipathies overshadowed by the great antipathy which finally took possession of him. He was less the friend of the slave than the opponent of the institution of slavery. He was the exact opposite of his contemporary, Bayard Taylor, whose unvarying success was due to a natural accord with the times in which he lived; while to Garrison the times were always out of joint, and, had he lived a thousand years, always would have been. Taylor was the minister of his generation; Garrison the reformer.

To get a fuller idea of Garrison's position and limitations compare him also with another contemporary of his. Emerson was born two years before him and died three years after him. They laboured in the same or similar fields, and they influenced the same generations; but Garrison's power was in action while Emerson's lay in his perception. Garrison strove, and aroused others to strive, a soldier and warrior always, a Napoleon plus the moral sentiment. Emerson saw

deeply into virtue and truth, and simply reported what he saw. The result was that Garrison led men to behave, Emerson taught them to be. It is the story of the north wind and the sun repeated, though in this instance the north wind did succeed in removing the traveller's cloak by tearing it to shreds. To Garrison, in great part, America owes the war and the consequent abolition of the institution of slavery, while to Emerson, as Lowell has testified,

"more than to all other causes together did the young martyrs of our civil war owe the sustaining strength of thoughtful heroism that is so touching in every record of their lives."

The shreds torn by the north wind still remain; for though the institution of slavery is gone the spirit still abides, both in the harshness and brutality of the American white man toward the negro and in the servile cunning of the negro toward the white. Sambo no longer works under the lash—too often he does not work at all; but in the Great Republic, where all men are equal, he is not yet "a man and a brother." So while I will not understate the service Garrison did for humanity, I cannot but note its limitations, seeing how much his triumph leaves unaccomplished. His external method of force may amend the manners, but the slower process which produces its results from within can alone secure the regeneration of the man.

WALTER LEWIN.

The Legends of the Panjāb. By Capt. R. C. Temple. Vol. II. (Trübner.)

THE second volume of Capt. Temple's *Legends of the Panjāb* deserves to be praised as highly as its predecessor. It is an excellent specimen of good, solid work, and reflects great credit on the industry and scholarship of its compiler. To the general reader, unfortunately, its contents can scarcely be expected to be nearly as attractive as those of the volume of folk-tales from the Panjāb and Kashmir published last year, under the title of *Wide-Awake Stories*, by Mrs. Steel and Capt. Temple. In that work Capt. Temple put forward certain views with regard to folklore, which, he says in his preface to the present volume, he wishes to emphasise in dealing with the legends of the Panjāb. Of those views he now gives a brief summary as follows:

"The collection of folk-tales should be as comprehensive as possible, detailed, accurate and systematic; the tales thus collected should be separated into two parts—themes and incidents; these parts should be held to be capable of a separate analysis and treatment, and to have a separate history, though a temporarily joint existence; the method of treating them should be the historical, in order to arrive at the facts of which they are the phenomena; and the manner of investigation should be the collection of these phenomena under fixed heads as they appear at certain ascertained and unquestionably connected eras."

With these opinions most of the scholars who are interested in the subject are likely to agree, as also with the statement that

"whether folklore, like religion, language, mythology, and so on is a 'science,' depends entirely on the manner of study; and that it should be studied as a 'science' cannot, it

seems to me, be too strongly insisted upon by all earnest students."

As Capt. Temple observes, the serious study of folklore is a new matter; and at the commencement of all such studies there are always students to be found who are not thoroughly in earnest, who trifle agreeably with a theme which is novel and easily handled, but who drop it after a time when its first charm has worn off, and its effective manipulation exacts prolonged and often unremunerative labour.

"The early 'collecting' period is the heyday of the light-hearted and the enthusiastic before what is most obvious has been all recorded and it becomes a laborious task to add fresh matter to the pile, and before, too, it behoves the collector to be careful as to what he puts into his store, lest critics point out that he is accumulating rubbish."

As a favourable specimen of the legends contained in the present volume may be taken "The Story of Rājā Chandarbhan and Rāni Chand Karan." According to it a monarch was unable to find a fitting match for his beautiful daughter, so he secluded her in a palace on an island. One day when

"The breezes were blowing and the jasmines blooming,
She was sitting in her palace very sorrowfully.
A swan flew up from the Eastern Land,
And the clouds gathered for rain."

The princess filled a pitcher with water and gave to the swan to drink. Finding that at sixteen years of age she was still unmarried, and that this fact gave rise to "the sorrow of her heart," the grateful bird promised to provide her with her match, "beautiful as Krishna, with body shining like untarnished gold." Accordingly it made its way to Rājā Chatr-mukar, and informed him of the existence of a princess so beautiful that the deer had given up grazing and drinking for love of her. Hearing this the Rājā grieved, and stated that he had already sixteen hundred queens. The swan inspected them, and declared them to be mere drawers of water compared to its princess. So the Rājā mounted on the swan's back, and was by it conveyed to the palace of the princess.

"She cooked some food at once,
And gave Chatr-mukar to eat.
She made a chamber of her eyes and opened her pupils;
She drew down the curtain of her lashes, and seated her love within.
And the Prince and the Princess were happy in the palace."

Eventually the young couple, the marriage ceremony having been performed by the house priest, went to the bridegroom's city of Ujjain,

"And going into the palace they began dwelling together.
All the city rejoiced, saying, 'Our lord has come':
Coming home in these great days; for the Lord hath had mercy."

Capt. Temple has in this volume, as well as in the first, given much prominence to the legends of saints and holy personages, and he thinks that the evidence now adduced confirms the remarks he made before as to the importance of this branch of popular lore in India. He has long had a favourite theory, he says, that

"the average villager one meets in the Panjāb and Northern India is at heart neither a Muham-

madan, nor a Hindu, nor a Sikh, nor of any other religion, as such is understood by its orthodox—or, to speak more correctly, authorised—exponents, but that his 'religion' is a confused, unthinking worship of things held to be holy, whether men or places; in fact, Hagiolatry."

It is, indeed, for the light they throw upon the religious ideas of their reciters or hearers that these legends are to be mainly valued, rather than for any intrinsic merits of their own, or for any assistance they may lend to students of other folklore than that of the country to which they specially belong.

W. R. S. RALSTON.

Forty Thousand Miles over Land and Water.

By Mrs. Howard Vincent. In 2 vols. (Sampson Low.)

WHY the many books of travel now published find a ready sale is not altogether as hard to understand as it would be if they depended on their literary merits alone. It is no new thing to wish to see the cities and know the minds of many men; but we are mighty curious in these days about the way in which strange things abroad are taken by our vagrant neighbours. Mrs. Vincent, no doubt, counts very much for the success of her book on the latter kind of attraction, for she writes, in fact, not much that is very new and some few things that are certainly not true. And it must be frankly added that she has often written in very great haste, and left her pleasant book seriously disfigured by syntactical eccentricities which could easily have been removed, to the peace of the gentle reader and the mollification of the ungentle critic. In her short preface and in her concluding sentences Mrs. Vincent throws her venture on the bloodthirsty reviewers' mercy by saying that the book is primarily meant to help a public charity, and by pleading want of skill and experience. Due weight may fairly be given to these considerations, especially as that part of the reading public for which the author's book is written does not look for great literary grace, and has shown its approval of similar treatment of similar material by freely buying the results. This book is neither more nor less interesting than similar books; but it has the great merit of being a pleasant narrative of what can be done by many people who can spare the necessary time and the comparatively moderate sum such a journey costs, and of being an intelligent record of impressions of travel. Its chief claims, however, to a welcome are negative. It is not too ambitious; the reader is not plagued with a Mark-Twain-and-watery flippancy; "descriptions" are few, accurate, measured, and informing. The emotions it records and recalls are the familiar ones; but to those who know what it describes they are pleasant recollections, and to those who do not they are pleasant suggestions. The 40,000 miles of travel here chronicled are over well-trodden paths, with the usual sight-seeing deflections—across the Atlantic to the United States and Canada, across North America to the Far West, from San Francisco to New Zealand, thence to Australia, and home by way of India.

Few hair-breadth escapes, few incidents of

great significance in this journey deserve permanent commemoration. But the few are well-told and without any effort. On the way westward, for instance, the San Francisco train gets into serious difficulties, thus described:

"At three in the morning we were awoke with a dreadful shock, under which the car shivered and upheaved. We heard the crash of falling china, and seemed to feel the furious application of the air brakes, which brought us to a dead stop. In the awful stillness that succeeded, the conductor rushed through the cars and begged us to 'keep still.' Every head was protruded from between the curtains, and there were frightened exclamations to be heard from all sides. The suspense that ensued was terrible. Too soon the truth came. There was our engine smashed to pieces off the line, the tender high in air, telescoping the luggage van. Ten feet off was another engine of another passenger train. It was eastward-bound, and therefore on the main track, waiting for us, the westward train, to pass on to the siding. The signal, a covered head light, had gone out; the fireman, moving to replace it, accidentally waved a lighted lantern, which the driver of our train took as a signal that the east-bound train had gone into the siding instead, and, at the rate of twenty-five miles an hour, we continued running into the stationary passenger train."

A very familiar experience, which many a traveller will recognise as his own, is pleasantly recounted in vol. i., p. 102, where Mrs. Vincent tells how she prepared to visit the Yosemite Valley:

"Miller, generally considered the popular agent, and supported by the powerful influence of the chief clerk of the Palace [Hotel], drew us out programme No. 1, returning us to San Francisco on Saturday morning in time to catch the steamer. Walton, the rival agent, drew us out programme No. 2, which possessed the advantage of bringing us back on Friday evening, the day before the departure of the steamer. Miller said Walton was underhanded and under-timed. Walton read us out a letter from an Englishman praising his route, and saying he had found Miller 'an unmitigated liar.' We went to Miller's office, and, as we turned the corner, were pounced upon by Walton. This might have lasted out the day had we not trenched [clenched?] matters by deciding to go into the valley by Miller's route, and come out by Walton's, who solemnly promised to stake his reputation on bringing us back on the Friday evening."

This part of Mrs. Vincent's book, though it treats of subjects the most hackneyed, is quite the best. Her account of the crossing of the "Great Divide" is graceful and not unimpressive.

"We were climbing higher and higher, already above a lower range of mountains, and soon touching the snow-line. One minute we were in the dark tunnel of the numerous snow-sheds, and the next in full view of what is, perhaps, the most glorious, the most awe-inspiring scene, in its gaunt loneliness and majesty, that we shall ever see in all our lives. A sea of peaks around, and before, and behind, as far as the eye can reach; the cold grey of the desolate gloom, tinged with a rosy light, lingering yet long after the sun had gone down; a scene of the greatest desolation, for fire had swept the pine forests not long ago, destroying all vegetation, and the blackened and charred stumps marked but too surely its devastating path. We shivered involuntarily as we stopped for a short time at the very summit, partly from the chilly

dampness of the atmosphere, but as much from a feeling of sheer loneliness and dread."

The least familiar of the places visited was Java, and the account of the few days spent there is fresh and entertaining. It is interesting to know that the Batavians are under the impression that Waterloo was won by Dutch and Belgians, that Batavia rejoices in steam tramways, and that the Batavian ladies dress in a very cool garment called the sarong, which is

"wrapped tightly round the figure as a short petticoat, and worn with the kabayah or loose cotton bed-jacket, with bare legs and feet slipped into heelless slippers. Many ladies wear their hair down in this costume, and when sitting at table they present the appearance of being in their night-garments. The sarong in hotels as well as in private life is worn not only at breakfast, but also at the 'reis tag.' The strange transformation that takes place at five, when these same strange *négligées* figures appear with their hair coiled up in the latest fashion, and 'clothed' (and 'in their right minds,' I might add) is wonderful to behold."

Javanese police institutions very naturally call for special notice. The whole country is covered with a network of watch-houses in constant communication with one another, night and day, by means of signal-strokes on billets of wood suspended in each guardo. One is cheered in the stillness of the night by "hearing the sound of the watch struck from the guardo nearest the station, taken up by the next one, and so on all through the town, spreading and dying away into the country." The Javanese guardian of the night has neither truncheon nor revolver, but (happy man!) "a two-pronged, upward-toothed fork, with which he can run in any refractory member of society by the neck; and he has the power to detain any one not giving satisfactory reasons for being about at that hour."

Mrs. Vincent does not always mean as much as her words literally imply. It would, for instance, be cruel to ask whether the New Guinea authorities are aware of the atrocity frequent at the *bêche-de-mer* fisheries, where—the italics are not the author's—"the natives are employed by the colonists in diving after these slugs, and, after being boiled, they are dried by the heat of the sun" (vol. ii., p. 14).

This little extract suggests the necessity of protesting against some very careless slips contained in the book. The first chapter of vol. ii. is a nest of strange errors. Why does Mrs. Vincent spell mica with an *h*? It is hardly correct to write that "Australia and New Zealand *seems*," or that "the culminating point . . . *were* reached." "Phenomenal weather" is not to be tolerated even within inverted commas. To "disillusion" is (happily) not yet English. Who gave "story" an *ø*? And what are "symposiems"? In her next edition, too, Mrs. Vincent should set right some small matters of fact. She leaves her reader under the impression that she takes Egypt to be the original home of Mohammedanism (vol. ii., p. 253), and that she supposes the Portuguese of Goa to be recent converts to Roman Catholicism (vol. ii., p. 3). And it will be news, indeed, to most people to hear that the Zenana Mission to India, now thirty-three years old, was instituted lately by Lady Dufferin (vol. ii., p. 211). Such weak places as these seriously mar a very entertaining book. It is impossible to con-

clude this notice without saying that the illustrations are by no means admirable, and that the glaring outside of the book bears no true relation to the praiseworthy simplicity of most of the letterpress. P. A. BARNETT.

NEW NOVELS.

Bonnyborough. By Mrs. A. D. T. Whitney. In 2 vols. (Longmans.)

Sir Robert Shirley, Bart. By John Berwick Harwood. In 3 vols. (Hurst & Blackett.)

Glamour. By "Wanderer." In 3 vols. (Sonnenschein.)

The Bachelor Vicar of Newforth. By Mrs. J. Harcourt-Roe. In 2 vols. (Fisher Unwin.)

The Knave of Diamonds. By Keith Robertson. (Edinburgh: Paterson.)

Daisy Plains. By the Author of "The Wide Wide World." (Nisbet.)

Britain's Slaves. By George Challis. (Maxwell.)

Thrown on the World. By Edwin Hodder. (Hodder & Stoughton.)

Tales in the Speech-house. By Charles Grindrod. (Fisher Unwin.)

As a study of still life in New England, Mrs. Whitney's novel is a genuine artistic success. It is full of Puritanism, introspection, "the Inner Light"—of everything, in short, that makes life worth living to the inhabitants of an American country town of the old-fashioned sort, of everything that makes it absolutely intolerable to active spirits. Fate and all Bonnyborough are made to wait on Lyman Schott and his half-sister, Peace Polly, who is eighteen years younger than he is, and who, mainly because she has Quaker as well as Episcopalian blood in her veins, fails for a time to understand both him and herself. On the whole, too, they are worth waiting on. Their characters are sufficiently hit off; and the tendency, as distinguished from the plot of this story, is sufficiently indicated by these characterisations, which appear at the beginning.

"He had a quiet, narrow mind, as different from Peace Polly's as calm daylight through a shutter crack from forked lightning across the sky; that was what came between them of the two mothers. Lyman saw just what that chink-ray fell upon, saw it clearly, exclusively, but not an inch on either side of it. Peace Polly's thought illumined all creation to her for one minute, and was apt to strike somewhere. But it was over—the insight and the impulse—as quickly, often."

Bonnyborough consists in about equal parts of the revelation of Lyman's character and of the formation and softening of Peace Polly's. It is perhaps unnecessary to say that love plays an important part in both processes. But Lyman is much more to be congratulated on securing Serena Wyse, who only perceives the true character of the quiet, money-making man, whom she has rejected, when it is tested by pecuniary misfortune, than is Peace Polly on marrying Dr. Fuller, the religiosity in whose composition is too pronounced to be agreeable to anyone out of New England. In studies of still life the secondary personages are often more interesting, and

ought always to be more elaborately drawn, than the principals. In *Bonnyborough* there is not one that is not a success. Especially good are Miss Mallis the gossip—or, as Mrs. Whitney happily puts it, "the life and lash"—of the community; Mrs. Farron, the managing wife of the rector; Rose Howick, a charming girl of the characterless, button-hole order; and Mr. Innesley, the clergyman, rather of the now familiar "Do you know" sort, who for a time believes himself in love with Peace Polly. There is but one incident in this novel which approaches the verge of sensation—a fire caused by the single bad man in Bonnyborough, who wishes to get Lyman Schott accused of arson with a view to cheating the companies with which he has insured his property. Mrs. Whitney is possessed of a considerable, though rather provoking, humour. When it is employed in the quiet portraiture of character, it is almost perfect. When it is dissipated in playing upon words, especially on Puritan names, it has an appearance of weak farce.

Sir Robert Shirley, Bart., may with safety be prescribed as a good story wherewith to while away a dull hour at the seaside. Mr. Harwood, having discovered his line and limitations in fiction, sticks to the one and always bears the other in mind; and he never scamps such work as he undertakes. Special picturesqueness is given to the back ground of his plot in the present instance by the introduction of a band of English jet-hunters, whose "King" Obadiah is one of those types of humble heroism that Mr. Harwood takes such delight and obtains such success in drawing. Obadiah and his men save from drowning a pretty boy, who answers to the name of "Don," and who of course turns out to be a peer's son. He falls in love with a pretty girl, who also, as a matter of course, turns out an heiress. Sir Robert Shirley, a baronet and a forger, tries to secure the heiress with the help of his accomplice and Mephistopheles, Rufus Crouch, a retired bushranger. He is foiled by a passionate foreign woman, just such another as the murderess of Mr. Tulkington and—but it would be unfair to Mr. Harwood to say more than that it is rather a rare thing with him to make one of his villains, the bad baronet, repent to some extent of his badness. In such a novel as this, plot and action are everything. In *Sir Robert Shirley* both are good.

"Ouida-and-water" three out of four readers of *Glamour* will exclaim when they come to the passage where Ronald Lascelles, a married man, with a charming and devoted wife, knowing that that wife is about to become a mother, knowing, too, that it is to her relatives that he owes his position as a partner in a London banking firm, leaves her at a Richmond dinner to embrace Lady Redbourne, with whom, when she was Alma Monsell, he had been infatuated. The whole of the Redbourne-Lascelles "business" is unsatisfactory alike from the artistic and from the ethical point of view. Alma, if she is self-sacrificing enough to save her former lover from ruin, and to advise him at all hazards to make his wife happy, should have avoided dangerous interviews and the stolen "darling" and "sweetheart" delights of the

last volume. That is a specially revolting chapter entitled "In morbo veritas," in which Edith Lascelles, a wife and mother, hears from her husband's lips while he is raving in fever a confession of his mad passion for another woman. But there is more than "Ouida-and-water" in *Glamour*. There is vigorous description of bright Italian scenery, without any snake in the grass. There is also some admirable character-sketching. The Stents, a family of business people in London, eminently respectable, eminently mean, and pettily vindictive, are drawn with unquestionable freedom, skill, and humour. "Wanderer" is a pleasant and, on the whole, careful writer. Let "her"—"she" with some hesitation—eschew rickiness, as she does not manage it well. Let her characters break as many banks as they choose, but let them leave the seventh commandment alone.

There is not much in *The Bachelor Vicar of Newforth* in any sense; but what there is has the air of reality and sincerity. The Rev. Theophilus Manley deserves his name. The only unsatisfactory passage in his life is that in which he struggles with unbelief in the wilderness. He seems the sort of man to struggle manfully with a tough beef steak or a real misfortune, but not with spiritual problems. A little explanation—say to the pretty girl he had engaged himself to—might have saved his temporary exile from Newforth, in consequence of his numerous and compromising visits to a lady, who proves in the long run to be his sister. The clericalised society of Newforth is brightly drawn. The Hatton girls, particularly the one that Manley does not marry, ought to be true to the life, if they are not.

Mr. Keith Robertson's *The Knave of Diamonds* is a well-conceived and fairly well-written story of the now rather too familiar amateur detective sort, complicated with mesmerism. Mr. Silas Wadd, the villain who is sought for all through the story, and is finally hunted to death, resembles in his love, both of ladies and of diamonds, Mr. Rayner in Miss Warden's *The House on the Marsh*; but he is not so much of a humourist, and one is heartily glad when he is shot at the end of the story. There can be no objection to Mr. Keith Robertson giving his hero a fortune with a rapidity and gusto which recall the last act in a melodrama. But are five-pound notes picked up by hangers-on at London newspaper offices quite as easily as he represents?

Daisy Plains is another American study in still religious life, in the well-known style of the author of *The Wide, Wide, World*. It must be confessed, however, that it is intolerably long and detailed. One gets tired of these "days in goodness spent"—or, rather, spent goodness knows how—and bored with these worthy people that appear to devote themselves not so much to work, as to watching the growth of each other's characters. In this huge pie of *Daisy Plains* there are two plums, the sisters Helen and Pixie Thayer. As foils to each other they are skilfully drawn; and, on the whole, it is perhaps well that Pixie marries her sister's first lover—well, at all events, for the lover—although at the end of the book he seems

of a different opinion. The best character in *Daisy Plains* is a runaway slave whom the Thayers shelter and train, provoking compound of camp-preacher and maid-of-all-work though she is.

The lesson apparently to be learned from the confused and confusing story, *Britain's Slaves*, is that if a boy is educated "above his sphere," he will seduce a country girl, embezzle money, keep a French mistress, and so cause his poor father to blow out his brains. Mr. Challis has earnestness and some power of expression, but he should throw them into a School Board election and not mis-spend them in writing dreary fiction.

Mr. Hodder's *Thrown on the World* is a most enjoyable story, which is sure to be a favourite both with adults and with boys, because it occupies a place in the debatable, but delightful, land between Christmas literature and ordinary fiction. There is nothing conventional about it, except perhaps the circumstance that the first scenes are laid in the Russia of conspiracy, terrorism, nihilism, and dynamite. But when Roy and Bertie Harley, having lost their parents who are sent to prison for seditious publications, and their nurse through death, are thrown on the world and are adopted by Mr. and Mrs. Birtles, of Congo Lodge, Clapham, all is plain and pleasant sailing. Mr. Hodder shows a really surprising amount of humour in his sketches of Mr. Birtles, who has a weakness for making vestry speeches in his drawing-room, but who has the heart of a Pickwick; and of Mr. Cheriton, the boys' tutor, whose absentmindedness is as prodigious as Dominie Sampson's. The travels of Mr. Cheriton and his pupils through Europe suggest a purpose on Mr. Hodder's part to teach geography after the approved fashion of Mr. Kingston and M. Jules Verne. But they are very cleverly told all the same. Even the Royal Geographical Society's inspector would probably not object to his favourite subject being taught in this fashion, provided it be taught thoroughly. *Thrown on the World* can hardly be too highly recommended.

The stories told to each other by storm-stayed travellers in the "Speech-house"—an old inn in the Forest of Dean—are neither better nor worse than the average of their class. Those in which there is a slight comic element, such as "The Lost Letter-Bag," will generally be preferred to others of a more melancholy character, like "The Voice from the Tomb" and "The Blue Lady of Minsterley." This, however, is a matter of taste. Whatever Mr. Grindrod writes, he writes with care and spirit. We should say that he could sketch character with a light humour. The commercial traveller in the "Speech-house"—viewed as a commercial traveller and not as a story-teller—is worth all the rest of the book.

WILLIAM WALLACE.

GIFT-BOOKS.

Master of his Fate: a Swedish Tale. By A. Blanche. Translated by the Rev. M. R. Barnard. (Griffith, Farran & Co.) This is a striking and powerful story of three Swedish schoolboys, whose youthful pranks were fraught with stern consequences in after life. The

escapes of the hero from an enemy who pursues him for years with the most deadly hate, but afterwards becomes his devoted servant and friend, are full of thrilling interest; and the love story supplies a strong element of romance. The opening chapters give a faithful sketch of school-life in Scandinavia, where the innate love of manly exercises and rough sports sometimes leads to pitched battles between rival establishments. There is also a vivid description of the horrors of the great cholera epidemic in St. Petersburg in the time of the Emperor Nicholas. The careers of the three school friends convey some useful lessons, and the book may be safely given to strong, healthy boys; but some of the incidents are rather too "creepy" to furnish desirable reading for young children, especially if they are inclined to be nervous. Mr. Barnard's name is sufficient guarantee for the excellence of the translation.

Perils of the Deep: an Account of some of the remarkable Shipwrecks and Disasters at Sea during the last Hundred Years. By Edward N. Hoare. (S. P. C. K.) This is a very interesting selection of stories, or rather groups of stories, illustrating the various forms of danger to which those "who go down to the sea in ships" are exposed. A portion of the book is a reprint, most of the narratives of wrecks previous to that of the *Royal Charter* having been taken from a volume published some years ago by the same house, entitled *Shipwrecks and Adventures at Sea*. As a rule, the sea stories published at this season have rather a tendency to represent "a life on the ocean wave" as a career of freedom and merriment, pleasantly varied by adventures and lovmaking, and it is a good thing to be occasionally reminded that there is a reverse to this attractive side of the shield.

The Island Queen. By R. M. Ballantyne. (Nisbet.) Mr. Ballantyne's name is so familiar in our nurseries and schoolrooms that it is hardly necessary to say more, for a new gift-book, than that it is his. But there is no harm in adding that *The Island Queen* is a very graceful and pleasing story of life and adventure among the South Sea Islands. And, though the author is here in his lighter vein, a good deal of information is, as usual, mingled with the fiction; and the book will, no doubt be as popular with the little people, for whom it is intended, as most of its predecessors.

Yarns on the Beach. By G. A. Henty. (Blackie.) There is plenty of variety and interest in the three good stories which this capital little book contains; but while the first and last will, perhaps, be most appreciated by boys, there is a force and pathos in "Surlly Joe" which stamp it as the production of a master-hand.

The Voyage of the "Aurora." By H. Collingwood. (Sampson Low.) This is a rattling story of the wild times when the West Indies were a perfect hotbed of piracy, slavery, and Yellow Jack, and the author is therefore completely in his element. There is fighting and adventure enough for the keenest appetite; and through it all, the hero steadily wins his way by unflinching courage and constancy, and is finally rewarded in a thoroughly satisfactory manner. The moral is distinct but unobtrusive; and the whole story is instinct with the wholesome vigour and freshness which have deservedly made its author such a favourite with manly boys.

On Board the "Esmeralda." By John C. Hutcheson. (Cassell.) In some respects Mr. Hutcheson's latest production is not equal to some of his former works, for the narrative has hardly any plot, and not much more in the way of incident or adventure. There is, it is true, a fire at sea, and the shipwrecked crew

spend a few uneventful weeks on Tierra del Fuego; but, otherwise, Martin Leigh's log is a plain unvarnished account of an apprentice's life on board a comfortable merchant ship, which is generally a sufficiently prosaic existence. However, the hero is a plucky lad of independent spirit, and the story, if not very exciting, is thoroughly sound and healthy in tone.

From Pole to Pole. By Dr. Gordon Stables. (Hodder & Stoughton.) Boys who like excitement and adventure will find plenty of both in this spirited story of a yachting voyage from the Arctic to the Antarctic regions. The author's wonderful store of anecdote seems to be quite inexhaustible; and, though some of the situations and part of the plot of this book may be found under slightly different guise in the stories which he has already given us, there is an abundance of fresh incident and adventures of the most thrilling and varied description in almost every page. He certainly indulges occasionally in some rather remarkable flights of imagination, as, for instance, in his description of Tchooka, the Eskimo chief; but, as a rule, he is singularly true to nature, and has, as usual, worked up the essence of a dozen narratives of travel and adventure into a single tale of absorbing interest, while it is hardly necessary to say that the tone is in every way admirable.

The Cruise of the "Theseus." By Arthur Knight. (Griffith, Farran & Co.) Although not quite so thrilling as *From Pole to Pole*, this is a capital story of modern naval life, full of fun and adventure, and with plenty of the sort of scrapes that British midshipmen rarely miss an opportunity of getting into. The fighting also, of which there is no lack, gives a fair idea of the sort of work which might be expected under the altered conditions of modern naval armaments, and will be appreciated by young naval officers of the present day as much as Captain Marryat's stories were by the last generation. In fact, no gunroom should be without a copy; and it would not be easy to find a more spirited and wholesome gift-book.

The Search for the Talisman. By Henry Frith. (Blackie.) In this story Mr. Frith describes the adventures of a party of lads who went to Labrador to search for a buried treasure, in accordance with the seemingly eccentric, but really wise, provisions of the will of an old Arctic sailor, who hoped by this means to develop and strengthen the characters of his young relatives when he could no longer watch over and train them himself. The story begins with a cricket-match and ends with a wedding, and there are plenty of exciting adventures among icebergs, polar bears, and Esquimaux to fill up the intervening space. It is pleasantly and brightly written, and is therefore just the sort of book that is always welcome in the Christmas holidays.

The Congo Rovers: a Story of the Slave Squadron. By Harry Collingwood. (Blackie.) This story, as its title leads us to expect, conducts the reader to the African coast and the mouth of the Congo, introducing him to various adventurous expeditions for the capture of slavers. If the subject is well worn, it never fails to interest when treated by a careful and skilful writer. The book has several illustrations; and we can heartily recommend it as one that boys will be sure to read throughout with pleasure, and with advantage, also, to their morals and their imaginations.

The Briny Deep. By Captain Tom. Illustrated by Captain W. W. May. (Griffith, Farran & Co.) The author of this "story of olden times in the merchant service" tells us that the incidents "are in the chief taken from facts," and that none of the characters are fancy

sketches, so we can only regret that he has not been more fortunate in his selection. Captain Tom's knowledge of his own language is clearly of an elementary kind, the story itself is not a very pleasant one, and the characters are commonplace, and by no means free from vulgarity, while a captain who makes long speeches on the slightest provocation would inevitably be voted an insufferable bore by his passengers, and a "sea lawyer" by his crew. The illustrations by the well-known marine painter, Captain W. W. May, form the single redeeming feature of the book. They are, indeed, much too good for it, and it seems a pity, therefore, that such excellent work should be to a certain extent thrown away.

Sea-Life Sixty Years ago. By Captain George Bayly. (Kegan Paul, Trench & Co.) A more striking contrast to *The Briny Deep* than is afforded by this delightful little book could hardly be imagined. In the first place it is "all true," being "compiled entirely from letters and a journal written on the spot, and now brought to life again, after being stowed away for more than half-a-century." Then the story, apart from its own merits, has a peculiar and romantic interest, as it is a record of the chain of events which led to the discovery of the relics of the long-missing expedition commanded by the great French navigator La Pérouse, which sailed for the South Seas exactly a century ago, and never again returned. Add to these attractions an unaffected simplicity and manliness of tone, a graphic and vigorous style, and a rich fund of anecdote and adventure, and it will be readily understood that the realities of sea-life in the "good old times," have seldom, if ever, been more vividly or agreeably brought home to our minds. This is the sort of book which makes one feel personal gratitude to the author, and it will be heartily appreciated alike by young and old; for, while every true boy will eagerly devour the thrilling escape of Peter Dillon and Martin Buchert from the Fijians, with many other incidents too numerous to mention, their elders will recognise the intrinsic value and sterling merits of a narrative which, of its kind, we do not remember to have seen excelled.

Dreams by a French Fireside. Fairy Tales. Translated from the German of Richard Leander (Prof. R. Volkmann) by Mary O'Callaghan. (Chapman & Hall.) In his preface the author explains that the tales here collected were written "by the firesides" of deserted French houses while he was serving as a soldier in the war of 1870. No doubt this account of its origin may add to the interest of the volume for German readers, but we must confess that it affects us with some degree of repulsion, and we think it would have been better omitted in the English version. Most of the tales are pretty, though a few, as for instance those entitled "How the Devil fell into the Holy Water," and "About Heaven and Hell," are in a style which is strongly distasteful to English feeling. The translation is bad. The dialect of English in which it is written may be judged of from the following specimens: "'Indeed,' answered the king, 'but do you believe that I will find it easy to get a wife who will suit me?'" "Pooh," said the minister, "ten for one!" "Where was my common-sense? I could not begin it more stupidly!" "Then it ceased, and has never since then from itself sounded." The author occasionally "drops into poetry"; but Mrs. or Miss O'Callaghan seems to have felt her powers unequal to writing English verse, and so she prints the German lines in parallel columns with her own prose versions. As the translator has several times mistaken the sense of her original, we presume that she is not a German, as we had at first inferred from the peculiarity of her idiom. The book is beautifully printed.

NOTES AND NEWS.

THE *Oxford Magazine* for this week gives an analysis of the university candidates who have been returned to the new House of Commons. Of Oxford men the total number is 134, of whom 73 are Conservatives and 61 Liberals. But this proportion is reversed among those who have taken high honours, where 38 are Liberals and 28 Conservatives. Of Cambridge men the total number returned is 88, of whom 50 are Liberals and 38 Conservatives. Those who have taken high honours comprise 21 Liberals and 12 Conservatives. Of the entire number of candidates who have taken high honours just under one-half were returned, the Liberals being slightly more successful in proportion than the Conservatives. The House of Lords shows 46 Oxford men and 21 Cambridge men who have taken high honours.

MR. CLARK RUSSELL, who, we regret to hear, has been rendered almost helpless by chronic rheumatism since March last, sails for the Cape of Good Hope on December 17. He leaves behind the MS. of a story entitled "The Golden Hope: a Romance of the Deep," which will be offered for newspaper publication through Messrs. Tillotson & Son, of Bolton.

UNDER the title of *Hood in Scotland*, Mr. Alexander Elliott has in the press a volume, in which he not only traces the early life of Hood at Dundee, but also prints several letters and poems that have never before been published. Hood's family appear to have come originally from Errol, in the Carse of Gowrie, where the poet himself spent the greater part of the year 1816. The book will be published by Messrs. James P. Matthew & Co., of Dundee.

MR. CHARLES LOWE's biography of Prince Bismarck will be published by Messrs. Cassell & Co. on Tuesday next.

ARCHDEACON FARRAR's Bampton Lectures of the present year on "The History of Interpretation" will be published shortly by Messrs. Macmillan.

MISS MAY CROMMELIN, author of *Queenie, Joy*, and other novels, will publish next week, through Mr. T. Fisher Unwin, a book in a new department of literature, entitled *Poets in the Garden*. It is an attempt to bring together and classify the best-known passages in which our poets have discoursed of flowers. Practically, it is a flower concordance to the English poets, alphabetically arranged according to flowers. There will be two indices of poets and flowers. The book will be enriched by eight chromolithograph pictures of flower groups, executed in Paris.

IN the January number of *Longman's Magazine* will be begun a new novel by Mr. Walter Besant. It is entitled "Children of Gibeon," and will deal with the relations between the rich and the poor.

THE Dean of Chester will contribute the "New Year's" paper to the January number of the *Quiver*.

A NEW series of the well-known American periodical, the *Princeton Review*, will be commenced in January next, under the title of the *New Princeton Review*. The editor is Prof. W. M. Sloane, of Princeton College. The list of contributors includes Mr. Lowell, Mr. Bancroft, Mr. Dudley Warner, President Porter, Mr. C. Eliot Norton, and Dr. McCooke. The review will be published bi-monthly—in New York by Messrs. A. C. Armstrong & Son, and in London by Messrs. Hodder & Stoughton.

"CHARACTERS in Backs—the Impressions of a Noticing Eye," is the title of a paper, illustrated by Mr. Harry Furniss, which will appear in the January number of *Cassell's Magazine*.

A CHEAPER edition of Mr. Thayer's life of Gen. Grant, entitled *From Tan Yard to White House*, has just been issued by Messrs. Hodder & Stoughton, the first edition having been exhausted in a few weeks. The work is similar in plan to the author's life of Garfield (*From Log Cabin to White House*), of which a quarter of a million copies have been sold.

THE third volume of Lange's series of "Modern German School Classics" has lately appeared. It contains two tales by Auerbach and by Otto Roquette, edited by Dr. A. A. Macdonell. The aim of this series is to introduce into schools all the best writers since the death of Goethe, who are practically unknown in England.

THE curators of the Bodleian have had an enumeration made of the entire contents of the library. The total number of volumes (excluding 1625 volumes of Bodleian catalogues) was 432,417, of which 26,598 were MS., and 405,819 printed. Besides these, there were 1424 MS. pieces waiting to be catalogued and bound in volumes, and 24,988 periodical parts and pamphlets also waiting to be bound. And, further, there were those ordnance-maps which cannot be bound until the survey of their respective counties or towns is completed. The Bodleian building itself contained all the MSS. and 306,105 printed volumes. The number of these which a visitor sees is very small. The picture gallery had only 47,461, and the wing in which the catalogue stands only 21,787. Even readers see less than a third of the total contents of the building, for Duke Humfrey's library had only 10,462 volumes, and the Selden room only 27,088. The Camera contained 97,101 volumes, the vast majority of which are also out of sight, in the vault below the reading-room; the select open cases, from which the readers themselves take books, contained 7004. The library at the Museum had 2613 volumes on loan. In the first ten months of this year the number of items added (counting parts, separate maps, etc.) was 37,325; of these 26,291 came in under the Copyright Act, 4,955 by gift or exchange, 4,978 were new purchases, and 1,101 were second-hand purchases.

SIR ALGERNON BORTHWICK, M.P., has been elected President of the Newspaper Press Fund in place of the late Lord Houghton.

THE Carlyle Society had its annual meeting on Carlyle's birthday, December 4. The society, which was founded in 1879, had thirty-three members two years ago. It now numbers fifty-eight, some of whom reside in Germany and Austria. The president is Dr. Eugene Oswald, the hon. secretary and treasurer Mr. C. O. Gridley, of Duke Street, London Bridge.

THE subject chosen by the Académie française for the prize of poetry for next year is "Pallas Athene."

CALMANN-LEVY announce for publication *Mémoires sur Napoléon et Marie-Louise, 1810-14*, by the wife of General Durand, who was first lady of honour to the Empress.

WE have received the second and concluding volume of Menéndez y Pelayo's *Horacio en España*, a work to be appreciated by all lovers of the most popular of Latin poets.

TWO NEW LITERARY SOCIETIES.

THE Shelley Society has just been founded by Dr. Furnivall, on a suggestion from Mr. Henry Sweet. Mr. W. M. Rossetti, Mr. H. Buxton Forman, Dr. Todhunter, the Rev. Stopford A. Brooke, Mr. T. J. Wise, Mr. B. Dobell, Mr. Alfred Forman, and other Shelleyites, have joined the committee; and the society will pro-

bably hold its first meeting in March. Early in May it will have the "Cenci" performed for the first time, some sixty-six years after Shelley wanted Miss O'Neil to play Beatrice in it at Covent Garden. Next May Miss Alma Murray, who has achieved such marked success in Mr. Browning's plays, will take the part of Beatrice Cenci, and she hopes to induce other fit actors to volunteer to support her. The Shelley Society will print papers and reports of the discussions at its meetings, will reprint Shelley's original editions and facsimile his MSS., and probably procure the compilation of a Shelley lexicon, if not a concordance. The subscription is a guinea a year. Persons willing to join the Shelley Society should send their names and subscriptions either to Mr. W. M. Rossetti, 5 Endsleigh Gardens, N.W., or Dr. Furnivall, 3 St. George's Square, Primrose Hill, N.W.

The project of an English Goethe Society is being warmly advocated, and has already met with an encouraging measure of support. The society aims at promoting the study of Goethe, and publishing matter illustrative of his life and works. As proposed, it would be affiliated to the German Goethe Gesellschaft, and its members would receive on advantageous terms the latter's publications. These will include the most interesting among the documents lately bequeathed by Goethe's heirs to the Grand Duchess of Weimar—documents which throw a new and vivid light upon nearly every period of the poet's life. The first issue, to be published in the forthcoming *Goethe Jahrbuch*, will consist of two very curious series of early letters to Goethe's sister, 1765-7, and to Behrisch, 1766-8, partly written in English, and containing, *inter alia*, an English poem to Schlosser, an unfinished tragedy "Belsazar," other dramatic fragments, poems to his mother, &c. These will be followed by a volume of letters to Frau Rath. An arrangement has already been made with the German publisher of the Goethe Gesellschaft, by which the back years of the *Goethe Jahrbuch* would, so far as the stock lasts, be supplied at a reduced rate to English members, who would thus be placed on the same footing as German members. The nature and extent of the proposed society's publications must of course be determined by the measure of support which it receives from the public. It is trusted that this may be large enough to enable the issue of really valuable contributions to Goethe biography and criticism, and the organisation of local centres for the purpose of mutual study. Among the Goethe scholars who have signified their approval and support of the project are Profs. Blackie, Dowden, and Seeley, Mr. Oscar Browning, Dr. Buchheim, Mr. C. H. Herford, Mr. W. C. Coupland, and Mr. T. Lyster. It is hoped that a preliminary meeting may shortly be held, by kind permission of the authorities, at King's College. All who are prepared to support the society are requested to communicate with Mr. David Nutt, 270 Strand.

ORIGINAL VERSE.

A LAST WORD.

"I KNAW 'at it 's written i' God's awn bōōk 'at bastard stocks shall dee,
Bud still th' lass is blud o' my blud, an' her bairn is boane o' my boane;
I niver hev said 'at she'd dun as she'd owt, bud it 's not fer th' like o' me
To flog to th' dōōr on my gell i' her shaame, an' leave her to bear it aloane.
"Th' waages o' sin,' aw yis, I knaw, thaay'll last till her hair is graay,
Th' waage 'at she's arn'd it 'll last till she's dead, an' th' coffin's naail'd to o' her faace.
I can't to'n her oot wi' her bairn i' her airms, an' co's her, an' drive her awaay,
An' Him 'at was good to th' theaf o' th' Cross wod ha' tell'd yē th' saame i' my place.

"'You weant ha' noa bastards bred up o' yer land;
I've gotten enif to do
Wi' keapin' things gooin', an' addlin' th' rent,
wi'oot tekkin' love-bairns in.'
If you hed a daughter i' trubble like her, wi' noane i' th' wōld bud you
To lōōk to, you'd fling her oot i' to th' streat, an' tell her to dee i' her sin?"

"It's likely you wod, bud rich foaks' hearts is n't maade like uther men's;
You gie up yer baabies to sarvants to kenp, an' mebbe you wod n't mind,
An' wod n't lig wakken at neet i' yer beds, an' werrit an' witter yersens,
As long as you'd plenty o' vittles an' cloase, 'at yer childer was ragged an' pined.

"'I mun leave th' land, or th' lass mun leave;
you'll hōnd by what you've said;
You weant put up wi' th' likes o' her; you reckon you're mester here;
Then th' land mun goa, an' I'll stan' by her—if her sins is as red as red,
Th' Loord he can wesh 'em as white as wool, an' I'll stick to my lass—so there."

MABEL PEACOCK.

MAGAZINES AND REVIEWS.

Macmillan's Magazine, under its new editor, shows signs of restoring to the readers of periodicals one monthly journal which shall be primarily devoted to literature. The December number opens with an article by Mr. Andrew Lang on "Poetry and Politics," in which he genially disposes of Mr. Courthope's attempt to trace the Liberal movement in literature. A brief note by Mr. Pater, on "Love's Labours Lost," has all the quiet suggestiveness which we expect in Mr. Pater's writing. Perhaps a biographical sketch of Wolf, Count Baudessin, the German translator of Shakspeare, is not very interesting. An article on "The Death of Amy Robsart" aims at showing that Sir Walter Scott's *Kenilworth* does not deserve the condemnation of historical critics till they have proved their case for Lord Robert Dudley's acquittal more conclusively than they have done as yet. The plea for a decided acquittal is surely an excessive demand to make, and history will not progress if the views of novelists are to be believed till they are entirely disproved. The Rev. J. M. Wilson applies the logic of common sense to the definition of "Church Authority," but he disposes of large questions in an off-hand manner.

Blackwood's Magazine for this month has an article on "The Scots and English Bowmen," which contains a good deal of suggestive information to those interested in archery or in the methods of mediæval warfare.

The December number of the *Expositor* is a strong one. The first part of Prof. Harnack's review of Bishop Lightfoot's *Ignatius and Polycarp* does full justice to "the most learned and careful patristic monograph which has appeared in the nineteenth century," and to the scholar who by it "has placed himself beyond the reach of any rival." The present article is devoted to showing the advance made in this as compared with previous editions of the Ignatian Epistles; the next will relate to their genuineness and date. M. Godet continues his study of 2 Corinthians, and Prof. Salmond gives a felicitous sketch of Frédéric Godet and his works. Messrs. Jennings and Lowe conclude their critical estimate of the Revised Version in more appreciative language. Prof. Fuller, with the advantage of four years' discussions of the Cyrus inscriptions, restates from a conservative point of view the debateable questions relative to the faith and family of Cyrus. Mr. Moule and Dr. Marcus Dods contribute—the one a study in the connexion of doctrines, the other a survey of recent English books on the New Testament.

THE *Revista Contemporanea* for November contains a highly interesting biography of Diego de Torres Villarroel, student and professor of mathematics, almanac-maker and astrologer, in the University of Salamanca in the first half of the last century, and is somewhat too pompously entitled the restorer of mathematics in Spain. A new departure in the comparative method of teaching languages is suggested in the "Cuadro Mecánico para la conjugación de las seis lenguas novo-latinas" of F. F. Iparraguirre. By an apparatus of coloured movable cubes he shows the root structure, phonetic and inflexional changes in each of these allied dialects, and claims that children may be thus taught as though at play. If successful in practice, the method would certainly lead to a better understanding of the principles of language than can be gained from ordinary grammars. It could be adapted to any six allied dialects. In those here given we should suggest that Latin be substituted for either Provençal or Wallachian. F. Merino eulogises in glowing colours the paintings, and especially "The Coliseum," of José Benlliure, a Catalan artist. J. de Asensi tells a simple narrative, "La Vocacion," in graceful verse; and Doña E. de Lians begins an original novel in these numbers.

CORRESPONDENCE.

"WITH THE KING AT OXFORD."

Bromley, Kent: Dec. 7, 1885.

As the reviewer of Prof. Church's book, I wish to state that, so far as my experience goes, he is entirely wrong in saying that "in private documents the present style [i.e., of beginning the year] was often used, oftener, perhaps, than the other." I do not deny that there were occasional exceptions; but I suspect that they can always be traced to some special cause, such as the education of the writer in Scotland, or in some country where that style was used. Even if this can not be shown, the examples are exceedingly rare.

The story of Laud's threatening a minister with suspension from his office and benefice was taken by Neal from Prynne's *Canterbury's Doom*, p. 149. Laud was particularly anxious to keep to legality as he understood it; and it is evident from his language at his trial (*Works*, iv. 254-256) that he was quite aware that he had no power to take away or sequester a benefice. Not only is Prynne an exceedingly unsatisfactory witness, but Laud's own comment on the evidence of Wilson, the clergyman in question, shows that it did not really coincide with Prynne's account of it.

"The third witness," writes Laud, "is Mr. Wilson. He says 'that I sent to Sir Nath. Brent to suspend him.' That is true; but it was when he would neither obey nor keep in his tongue. He says, 'his living was sequestered for almost four years.' But it was not for not reading this book. For himself confesses it was done in the High-Commission; and that for dilapidations, in not repairing his house."

In replying to Brent's own evidence (*Works*, iv. 253), Laud says that Brent—who acted for the archbishop in the Metropolitan Visitation—

"confesses 'that for my province he gave time to them which had not read it, and then never asked more after it.' So here was no eager prosecution. But then he says 'that three in my diocese stood out and asked time, and confesses that I granted it'; but adds, 'that when he asked more time for them I denied; and that they were then suspended ab officio only.'"

This does not look like the great haste attributed to Laud by Prynne. There are notes at the Public Record Office of Laud's trial which I hope before long to examine, and I may possibly discover then what Wilson's evidence really was. In the meantime, I am not at all inclined to accept Prynne's version as correct.

SAMUEL R. GARDINER.

THOMAS HEYWOOD AND ITALIAN NOVELISTS.

Davos, Switzerland: Dec. 7, 1885.

In the fourth and also, unluckily for us, the last volume of his "Old Plays" Mr. A. H. Bullen has printed for the first time, from MS., a comedy of Heywood's, called "The Captives." The main plot of this hitherto unknown piece is taken from the "Mostellaria" of Plautus. Mr. Bullen, in his Introduction, says: "I have not been able to discover the source of the very curious underplot of 'The Captives.' This source I am myself able to indicate. It is the first story in Masuccio's *Novellino* (Napoli, Morano, 1874; pp. 8-21). Here we find the intrigue of the friar with the noble lady, his death by strangling, and the grotesquely comic episode of his corpse's ride on horseback, in full armour, after the living monk. In my *Renaissance in Italy* (vol. iv., p. 182) I had already pointed out the ghastly humour of this incident, which, as it now appears, struck Heywood nearly three hundred years ago. That Heywood was well read in Italian *novelle* is proved also by the source of his underplot to "A Woman killed with Kindness," which I have traced (*Shakspeare's Predecessors*, p. 462) to a beautiful tale by Illicini, of Siena.

JOHN ADDINGTON SYMONDS.

AN ANGLO-SAXON MISSAL AT WORCESTER.

Frenchay Rectory, Bristol: Nov. 25, 1885.

By the kindness of the Dean and Chapter of Worcester, I am temporarily in possession of a large fragment of an Anglo-Saxon missal belonging to them. As no printed account of it exists, either in their catalogue or elsewhere, it has been suggested to me that a description of it might be of sufficient importance to find a place in the ACADEMY.

The fragment consists of thirty-one out of originally thirty-four leaves, 11½ by 7½ inches.

There are four gatherings, not signed. The first (A) is a quaternion, of eight leaves, half of A 2 having been cut away. The second (B) is likewise a quaternion, of which B 5 is missing, and five-sixths of B 1 have been cut away. The third (C) is a quinion, of ten leaves, complete. The fourth (D) is a quaternion, of which D 1 and D 8 are lost.

The contents of this fragment are as follows:

- | | |
|-------|---|
| A 1. | Missa ad serenitatem poecendam [part of]. |
| " " | pro concordia fratrum. |
| " " | in contentione. |
| " " | contra judices male agentes. |
| " " | pro peste animalium. |
| A 2. | de pace. |
| A 3. | in tempore belli. |
| A 4. | pro navigantibus. |
| " " | in sterilitate. |
| " " | pro amico ab adversariis afflicto. |
| A 5. | in persecutione. |
| A 6. | pro infirmo. |
| A 7. | [De visitatione infirmorum, including the unction and communion of the sick]. |
| B 7. | Missa pro infirmo morti proximo. |
| B 8. | Orationes super ipsum infirmum. |
| C 1. | Obsequia defunctorum. |
| C 4. | Missa pro defuncto. |
| C 5. | [Orationes pro defunctis]. |
| C 9. | [Ordo sepeliendi]. |
| C 10. | Missa pro defuncto. |
| D 2. | pro sacerdote defuncto. |
| " " | unius defuncti. |
| D 3. | " [alia]. |
| " " | in positione unius defuncti. |
| D 4. | unius defuncti monachi. |
| " " | pro sacerdote (defuncto). |
| " " | pro defuncto sacerdotum [sic]. |
| D 5. | unius leuitae (defuncti). |
| " " | unius [feminae defunctae]. |
| " " | pro fratribus defunctis cuiuslibet congregationis. |
| D 6. | alia pro defunctis. |
| " " | pro fratribus et sororibus [defunctis]. |
| D 7. | pro defuncto. |
| " " | pro patre et matre et p ^o |

Date.—The missal, of which the above is a part, may be assigned to the first half, perhaps to the first quarter, of the eleventh century. It must be later than 984, the date of the death of St. Ethelwold, the latest saint mentioned in the text. Palaeographically speaking, it cannot be earlier than the eleventh century, for the following reasons, which are only available for the dating of ecclesiastical MSS.: (a) the use of the symbol π instead of *il*, to designate an unnamed person; (b) the use of φ instead of *u.d.*, as an abbreviation of "Vere Dignum," the opening words of the preface; (c) the use of "Gr." as the abbreviation of "Graduale," instead of the single letter *g*, the usual abbreviation of the earlier form, "Responsorium Graduale"; (d) the title "Post-communio" is used instead of the earlier title, "Ad complendum." In all these small points a change of usage took place about A.D. 1000.

There are no illuminations and no ornamentation. The initial letters are alternately red and green. Headings and rubrics are red throughout—the former in rustic capitals, the latter in the same large minuscule hand in which the text is written.

Place.—This fragment, though found at Worcester, supplies indubitable evidence that it was written at Winchester. In the Litany on A 8 a, two names only stand out written in capitals—those of St. Peter and St. Swithun; and when we told that in Saxon times there were two monasteries at Winchester, known under those two names, our thoughts at once turn to that quarter. The list of saints invoked as confessors ends with four names, all connected with Winchester.

1. St. Birinus, first Bishop of Dorchester, whose remains were translated to Winchester at the end of the seventh century.
2. St. Swithun, Bishop of Winchester, ob. 862.
3. Ethelwold, Bishop of Winchester, ob. 984.
4. St. Judoc, a Brittany anchorite (seventh century), who seems to be always invoked in early Winchester books. His relics were translated to Winchester by a crowd of refugees who were driven by war from Lower Picardy, and hospitably received in that city in 903. They were enshrined in the abbey church of Newminster, then building.

The list of virgins has unfortunately been cut away.

The wording of the rubrics throughout proves the service-book to have been a monastic one; and an expression which occurs in four different collects—"Intercedente beato Benedicto patrono nostro"—proves it to have been a Benedictine monastery. A collect on C 7 a is headed "Oratio in noui monasterii ecclesia."

This gives us precise information. The reference is to the Abbey of Newminster at Winchester. "Novum Monasterium" is the specific title and Latin rendering of Newminster, just as "Collegium Novum" is still the title of one of the colleges at Oxford.

The Stowe MS. register of Hyde Abbey, recently acquired from Lord Ashburnham by the British Museum, begins thus (p. 5): "Incipit praefatio constructionis uintoniensis monasterii quod nouum nuncupatur," &c. It was founded by King Edward the Elder in 903, and dedicated to the Holy Trinity, the B. V. M. and St. Peter. Directions for its building had been left in the will of King Alfred (ob. 901) at the persuasion of St. Grimbald, whom Alfred had brought over from Flanders, and who was appointed first Abbot of Newminster, but who died in 903, the year in which its church was consecrated. This monastery at first contained secular canons, who were expelled by St. Ethelwold in 963, in favour of Benedictine monks from Abingdon. In 1110 it was moved to Hyde, and dedicated

to the Holy Trinity, St. Peter, and St. Grimbald.

The collect above referred to contains the phrase "Intercedentibus Petro et Paulo, Iudoco, Grimbardo," all the names, except that of St. Paul, being written in capital letters, and all, with the same exception, being specially connected with Newminster.

The locality of the MS. is thus decided. The next question which suggests itself for solution is this: If this MS. was written at Winchester, how does it come to be found at Worcester?

On turning to the lives of the bishops of Worcester in the eleventh century, it is found that two of them began life as monks at Winchester; both then became abbots of Tavistock; and both afterwards bishops of Worcester. These were Living, Bishop of Worcester, 1038-44, and his successor, Aldred, Bishop of Worcester, 1044-62, better known in history as Archbishop of York, and as officiating at the coronation of William the Conqueror. Either Living or Aldred must have carried this book away with him from Winchester in the first half of the eleventh century, and have left it at Worcester, where it has remained uncatalogued and almost unnoticed for many centuries.

All the prayers and rubrics are in Latin, with the exception of a single rubric on Fol. C 9 a. "Donne bat lic beo be byriged cweðe se sacerð æt pæræ byrigene pas coll." ("When the body is to be buried, the priest is to say this collect at the grave.")

It might have been thought that this sentence was too short to yield any evidence of place or date; but Prof. Earle informs me that the second diphthong in "pæræ" is an affected archaism peculiarly characteristic of Winchester books.

Along with this MS. is a single leaf of a tenth century Latin Psalter, containing on the recto, Ps. xxxiii. 20-xxiv. 3; and on the verso, Ps. xxxiv. 4-7, with an interlinear Latin gloss. The words, "john more, monke," are written in a blank space in a small handwriting of the earlier part of the sixteenth century. Perhaps he was a relative of William Moore, sub-prior 1518-36. F. E. WARREN.

THE RUSSIAN NOVELIST DOSTOJEWSKY.

Arts Club: November 11, 1885.

When I was in Germany, a short time ago, I enquired of my literary friends, what new works were exciting the attention of the reading public. The answer was "Oh, have you not heard of the great Russian writer, Dostojewsky? He is now exceedingly popular in Germany." I found that two novels by this (to me) unknown writer—*Roskolnikov*, and *Die Brüder Karamasow*—had acquired, with extraordinary rapidity, a very high reputation in Germany. Some criticisms upon Dostojewsky were shown to me; notably an article by M. Necker which appeared in the *Grenzboten* of February, 1885, in which the critic occupies himself mainly with an elaborate comparison between Tourgenieff and Dostojewsky. Tourgenieff is defined as a man of the world, a cosmopolitan, who lived, by preference, abroad; while Dostojewsky is described as a patriotic Russian, who never cared to reside out of his own country. The critic's general literary conclusion is that Dostojewsky, in some respects—particularly as regards ideal intensity—is the superior even of Tourgenieff.

Dostojewsky was born on October 30, 1821, and died on January 28, 1881. In 1849 he was suspected (wrongly, it is said) of being concerned in political conspiracy, and, together with a friend, was condemned to death. At the last moment the capital sentence was commuted to eight years' imprisonment in Siberia. He returned to life and work in 1858. Two years after his death in 1881 appeared the first

translation of his first work. Neither of his novels is, I believe, known in England.

Dostojewsky requires great space in which to unfold himself. His style is somewhat diffuse and discursive. Turgeneff has, in his writings, a strain of melancholy; he is pessimist and fatalist; while Dostojewsky believes in human perfectibility, and is hopeful in tone. "My friends, pray to God for cheerfulness," cries Dostojewsky. He does not love superstition, monkery, Jesuitism, or even dogma; but he has a strong religious fibre, and he hates unbelief. He holds that virtue and morality depend upon faith in God. He expects the regeneration of Russia, not from priest or Nihilist, but from the people itself. "Dieses Volk trägt Gott im Herzen," he says, in the German translation.

The story of the later novel is that of the lives and fates of a father and three typical Russian sons. Dostojewsky is fond of psychology, and specially, perhaps, of the psychology of crime. Father and son love the same girl. The son is strongly suspected of the murder of his father; but it turns out that the wicked old man has really been slain by an epileptic bastard son. However, I have not space to tell, or to analyse, the story of this remarkable work. My present criticism must be restricted to giving an extract as a specimen; and I proceed to translate from the German translation (I do not know Russian) the following episode, which seems to me to be strong and striking, original in idea, and powerful in expression. I am assured that the German translation is, in every way, satisfactory.

"The human race had, for so many centuries, prayed fervently 'God, Lord, come again amongst us'—that He, in His infinite pity, resolved to descend once more to earth. But, oh! it was not that second coming of the Lord which, as is promised, shall occur at the Last Day, when He shall appear in His divine glory. No; He will visit his children but for a moment; and He will seek them there where the fire of the stake crackles round the heretic. In His infinite mercy, He will once more walk among the people in the same human form in which He, fifteen centuries ago, for three and thirty years, appeared to them. He descends then upon the 'burning market-place' of Seville, where, only yesterday, in a brilliant *auto da fé*, in the presence of the king, the nobles, the knights, the cardinals, and the fairest ladies of the court, with the dense populace of Seville surrounding the place, and all presided over by the Cardinal Grand-Inquisitor, almost a hundred heretics were, at one time, burned *ad majorem Dei Gloriam*. He appears quietly, and without ostentation—but lo!—and oh, it is strange!—all the people recognise Him. Silently, and with His soft smile of infinite pity, He passes through the crowd. Moved by an irresistible impulse, the people press to Him, surround Him, are drawn to Him, follow Him. A sun of love burns in His heart; from His eyes stream light, radiance, power, which, shining upon men, awakes answering love. He stretches forth His hands. He blesses the people, while, from contact with Him, from the touch of his garments, issues healing influence. The Christ makes a blind old man to see. In answer to a mother's burning prayer, He raises a child from the dead; and children strew flowers in His path, while the people cry *Hosannah*! At this moment the Cardinal Grand-Inquisitor crosses the market-place. He is an old man, of almost ninety years, tall and upright, with an ashen grey, haggard face, and with deeply-sunken eyes, which yet gleam like sparks of fire. He no longer wears the sumptuous cardinal's robe in which yesterday he flamed before the people's eyes while he burned the enemies of the Church of Rome; to-day he appears in the coarse cowl of a simple monk. His sinister assistants, his servants, and his 'holy guard' follow after him. He stops, and looks, from a little distance, upon the crowd. He sees all: sees how they lay the coffin at His feet; sees how the girl is raised from the dead. The cardinal's face grows very dark. The grey, bushy eyebrows descend, and his eyes gleam with an evil fire. He raises his finger, and commands his

guard to seize the Christ. So great is his power, so intimidated, so submissive, so tremblingly obedient is the crowd, that men shrink back before his soldiers, who, amid a sudden stillness as of the grave, lay hands on Him, and lead Him away. The crowd, like one man, bow the head to earth before the old inquisitor, who mechanically blesses the people, and passes on. In prison, in a dark, narrow dungeon, he, in the still night, visits Him. 'Art thou the Christ?' he asks; but, receiving no answer, the cardinal continues, quickly—'Answer not; be silent! And what couldst thou say? I know only too well what thou wouldst say. Thou hast no right to add a word to that which thou hast said already. Why art thou come to trouble us? For to trouble us thou art come, and that thou knowest well. Knowest thou what will be done to-morrow? I know not whom thou art, and I will not know if thou be He, or only His image; but to-morrow I will condemn thee, and burn thee at the stake as the worst of all heretics; and the men who, to-day, have kissed thy feet will, to-morrow, at a sign from me, heap faggots round thy stake. Knowest thou that?' And He spake no word; but looked ever steadfastly upon the inquisitor with calm, tender eyes."

Here the inquisitor addresses the Lord in a speech—too long for translation here—which is a masterpiece of the irony of indignation. He seeks to show that the Christ is ignorant of human nature; and that freedom of conscience and of faith cannot be granted to man. He holds Christ to be a visionary human enthusiast; who has, in error, taught a doctrine and a service of perfect freedom. The cardinal concludes by saying that he is one of those who have to improve the work of Christ. "That which now I speak shall be fulfilled, and the claim of the Church to rule the world shall be enforced. To-morrow, I burn thee!"

The inquisitor waits for a reply; but none comes. How should the Lord add anything to that which He had already said? The persistent silence of the Lord becomes terrible to the cardinal. At last, Christ draws near to the old man, and still in silence, kisses the bloodless, withered lips of the inquisitor. The old man trembles. He opens the door of the dungeon, and says—"Go; and come not again. Never return—never—never!" And the prisoner disappears silently into the gloom which fills the market-place.

A work which can yield such an extract is surely worthy to be made known to the English public. H. SCHÜTZ WILSON.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Dec. 14, 6 p.m. London Institution: "The Heart of Africa," by Capt. V. L. Cameron.
8 p.m. Royal Academy: "Red Pigments," by Prof. A. H. Church.
8 p.m. Society of Arts: Cantor Lecture, "The Microscope," IV., by Mr. J. Mayall.
8 p.m. Aristotelian: "Mist Staff in Relation to Free Will," by Mr. G. J. Romanes.
8.30 p.m. Geographical: "The Herat Valley and the Persian Border, from the Hari-rud to Seistan," by Col. C. E. Stewart.
TUESDAY, Dec. 15, 7.45 p.m. Statistical: "The Preventible Loss of Life at Sea," by Mr. Thomas Scrutton.
8 p.m. Civil Engineers: "High-Speed Motors," by Mr. J. Ince; "Continuous-current Dynamo-Electric Machines and their Engines," by Mr. G. Kapp.
WEDNESDAY, Dec. 16, 8 p.m. Royal Academy: "Green and Blue Pigments," by Prof. A. H. Church.
8 p.m. Society of Arts: "Burmah, Present and Future," by Mr. H. H. Hall.
8 p.m. Geological: "Old Sea-beaches at Teignmouth, Devon," by Mr. G. Wareing Ormerod; "The Gabbros, Diorites, and Basalts of Tertiary Age in Scotland and Ireland," by Prof. John W. Judd.
8 p.m. Dialectical: "Length of Life in the East and West End," by Dr. Alice Vickery.
THURSDAY, Dec. 17, 4.30 p.m. Royal Society.
7 p.m. London Institution: "Light and the Atmosphere," by Capt. W. de W. Abney.
8 p.m. Chemical: "The Action of Steam on Carbonic Oxide," by Mr. H. B. Dixon; "Multiple Sulphates," by Miss E. Aston and S. U. Pickering.
8 p.m. Linnean: "Ceylon Entomotrachea," by Dr. J. S. Brailly; "Malagascor Oculitis," by Mr. H. N. Ridley; "Recent Ephemeridae," IV., by the Rev. A. Eaton; "Colombian Species of Diabrotica," by Mr. J. Baly.

8.30 p.m. Antiquaries: "Bronze Hoard found at Eton, near Norwich," by Prof. Boyd Dawkins.
 FRIDAY, Dec. 12, 7.30 p.m. Civil Engineers: Students' Meeting.—"The Propulsion of Trams and Launches by Secondary Batteries," by Mr. F. Geere Howard.
 8 p.m. Royal Academy: "Brown and Black Pigments: the Chemistry of some Restricted Palettes," by Prof. A. H. Church.
 8 p.m. Philological: a Paper by Mr. H. Sweet.

SCIENCE.

COMPARATIVE JURISPRUDENCE OF GREECE AND ROME.

Græco-italische Rechtsgeschichte. Von Dr. B. W. Leist. (Jena: Fischer.)

SIR HENRY MAINE, in his *Village Communities*, expresses a doubt as to the possibility of gaining from the application of the comparative method to jurisprudence any results which, in point of interest or trustworthiness, can be placed on a level with those which have been accomplished, for example, in comparative philology. "To give only one reason," he says, "the phenomena of human society, law and legal ideas, opinions and usages, are vastly more affected by external circumstances than language." A great impetus will certainly be given to this branch of study by the discovery of the Gortyna Laws; and, if after the successful work done in this field by several writers, among them by Sir Henry Maine himself, further proof were needed of the possibility of gaining by the comparative method satisfactory results, it would be afforded by the work before us. The disadvantage pointed out by Sir Henry Maine would naturally be least felt in the field chosen by Prof. Leist, who confines himself mainly to Greek and Roman institutions (though with frequent references to Teutonic law), if we could accept without qualifications his view that these two peoples developed in their settlements in South Europe in a similar manner, under like external circumstances, the legal institutions which they had brought with them from their common Aryan home. It seems to us, however, that the external circumstances were not so entirely similar; how about the influence exercised on Greece by the East? Yet there can be no doubt of the great value to the student of the material collected by Prof. Leist, even though we may be inclined to differ from him on minor points, to suspect that in one or two cases he has been somewhat too ready to infer from the existence of a certain institution in Rome its existence in Athens, or to ascribe a common origin to legal usages which we should rather regard as borrowed by Rome from Greece. But as regards this latter point, the influence in general of Greek on Roman law has not, perhaps, received the attention it deserves, nor has the question yet been fully treated as to how far our conceptions of Attic law have been affected by writers who foisted upon it notions derived from Roman law, e.g., Harpocration's identification of οὐσία φανερά and ἀφανής with *res immobiles* and *mobiles*, which Prof. Leist still seems to accept. We cannot do anything like justice to a book of this size (712 pages text with 55 pages of notes) within the necessary limits of this article. The points Prof. Leist discusses are many and minute, and for the most part highly technical; we must therefore content ourselves with giving only some of his

leading ideas, and mentioning a few points of more general interest.

Prof. Leist first discusses *obsequium* and *patria potestas*. The *obsequium* devolved upon all those in blood relationship through parents, grandparents, and great-grandparents; these, the cognates μέχρι ἀνεψιών παίδων or *sobriño tenus*, the Sapinda family of Manu, were held together and marked out as an inner circle from all other relations by ancestor-worship and common *sacra* (Amphidromia, *dies lustricus*). Both in Athens and in Rome they had the *officium luctus*, theirs was in earlier times the blood-revenge, and later on the duty of prosecuting for murder. In Athens they possessed the right of inheritance; if there were none of this class, the *oikos* was considered χῆρος and the property passed on to the χηρωσταί. The case was different in Rome, owing to the development of the *patria potestas*, that *ius proprium civium Romanorum*, as Gaius calls it, which led to the right of inheritance being confined to the agnates. Prof. Leist collects the traces of the parental powers in ancient Attic law, and sees agnatic relationship in the guardianship being confined to relations πρὸς πατρός, in the right of sons to enter *ipso jure* (Embateusia) upon the inheritance [the same in case of *adoptio inter vivos*, cf. Dem. 40, 19; this is left an open question on p. 86]. In Athens the father lost in early times the right of exposure or of selling his children (except in special cases: on p. 61 n. l. we miss a reference to the γράφη ἐξαγωγῆς, cf. the case of Andocides in [Plut.] vit. x. oratt., p. 834), or of disinheriting or killing them. The parental powers ended with the coming of age of the son. The family was the unit of ancient society; the aggregation of families formed the *gens γένος* living together as a community; the aggregation of *gentes* made the *curia φρατρία*, of *curiae* the *tribus φυλή*; and, lastly, the aggregation of tribes constituted the *civitas πόλις*. Kinship in blood was thus originally the ground of community in political functions. But, as times went on, different principles established themselves as the basis of common political action: the timocratic principle in the institutions of Servius, in Solon's reform [Prof. Leist identifies the Eupatridæ with the Hoplites, we should prefer Grote's view], or that of local contiguity in the ten local φυλαί of Cleisthenes [such were probably the phylæ in the Lycurgean rhetra]. Now the phratræ, and in a less degree the γένη, continued as religious bodies, yet we cannot with Prof. Leist look upon the phratræ as altogether separate from the new political organisation. Whichever way we may explain Arist. Pol. vi. 2, numerous inscriptions show that the δημοποιοί chose a phratría to be enrolled in, as well as a demos and phyle. The members of each phratría continued to celebrate the Apaturia with solemn sacrifices: the husband introduced his newly-married wife (γαμηλία), who now shared the husband's *sacra*; the father enrolled his new-born child, declaring on oath that it was ἐξ ἀστῆς καὶ ἐγγυητῆς γυναικός, thus giving it all the rights of kinship. The grown-up youth was received among the ἐφηβοί by the solemn act of cutting off his hair, for, from Poll. viii. 107,* it would

appear in our opinion that a second Eisegesis continued, of course merely as a religious ceremony, as a survival of the ancient Aryan usage (Godānavidhi). The custom of consecrating the hair to some deity, and repairing for this purpose to Delphi, had not fallen into disuse even in the days of Theophrastus. But the civil act, the Dokimasia, took place before the demotæ, and cannot, in the case of orphans, have been so free from all objection of being an *indagatio corporis inhonestæ*, as Prof. Leist maintains, cf. Aristoph. Vesp. 578. The wife was, after the Gamelia, introduced to the wives of the demotæ at the Thesmophoria, who now might choose her to help in the preparations for the feast, this being a liturgy, therefore an official service.

In the second book, after mentioning some points of agreement as regards deities and sacerdotal functions, Prof. Leist discusses the *Rita* = *ratum*, *ratio* (*naturalis* as opposed to *civilis*), the divine order of the universe, which belief in divine influence underlying and supporting every relation of life and every social institution gave rise to rites and observances. He defines θέμις as divine law (*fas*), the θέμιοτες being the awards of kings, &c., as the result of direct inspiration. We cannot follow him through the interesting chapters in which he sketches how the idea of law arose and gradually freed itself from rite and ceremony, and how in the end the *jus divinum* (τὰ ἱερὰ καὶ δαία) was supplanted by *jus* in the technical sense (τὸ δίκαιον) the code law, passing through the stage of customary law (τὰ ἀγραφα νόμιμα), a stage beyond which Sparta scarcely went. Then the task of giving laws was entrusted to wise men. Solon was "the justest and wisest man," he gave "the best laws," as he said, "which the people would accept." The change was gradual, without a break with the past; Solon connected his system of laws with Delphi, and bound the senate by an oath to obedience, and the oath continued to be, as Lycurgus the orator said, τὸ συνέχον τὴν δημοκρατίαν, while Demosthenes places in his definition of νόμος the εὐρημα καὶ δῶρον θεῶν side by side with the δόγμα ἀνθρώπων φρονιμῶν. Of the numerous observances and rights which survived from older times, we will briefly describe those in connexion with the φωρά, the *ransak* (whence the English verb) of Teutonic law. The maxim embodied in the saying, "an Englishman's house is his castle," is of ancient origin; *quid est sanctius*, says Cicero (*De Domo Sua*, 41, 109), *quid omni religione munitius quam domus uniuscuiusque civium?* cf. the *Turrthugadh* of the ancient Irish. At Athens no one was allowed to enter a house ἀνεψφίσματος in Demosthenes' time, magistrates excepted, e.g., in the Ephegesis (18, 132, cf. Plut. Dem. 25 and Xen. Cyrop. i. 2, 2); he says, that even under the rule of the Thirty a person was safe within his house, an assertion at variance with the statements of Thrasylbulus (Xen. Hell. ii. 4, 14), Lysias (12, 8, 30, &c.). "If a person," says Plato, Legg. xii. 954, "wishes to find anything in the house of another, he shall enter γυμνός ἢ χιτωνίσκον ἔχων ἄλωστος, having first taken an oath by the customary gods that he expects to find it there," &c., cf.

* It is clear from G. I. A. ii., No. 841b, p. 534, that κόρυμβιον cannot be identified with μέιον, as is

done in the Etym. M. Pollux gives the correct definition of γαμηλία in bk. 3, 42.

the Old Norse law: *thū skulo the lösgiorde ingango, &c.*, and the *furtum per lancem et licium conceptum*. The real meaning, however, of the rite was no longer understood; it was not to prevent the smuggling of things under the clothes into the house for subsequent discovery, as Gaius and the scholiast to Arist. *Nub.* 499 say: the person had to enter *ἀλώτορος, i.e.,* ungirt, unarmed; this, together with the oath and the libation to be offered in a *lanx* made of clay, all point it out as a relic of remote antiquity. The development of *jus belli* passed through parallel stages.

In conclusion, we may refer to Prof. Leist's discussion of the trial-scene in *Iliad*, 18. Contrary to the generally received opinion, he maintains that the distinction between *φόνος ἐκούσιος* and *ἀκούσιος* was not peculiar to later Attic law, but that we find the same, though less fully developed, in the Heroic age, and he recognises in the trial-scene a discussion between the relation of the slain man and the murderer as to the nature of the homicide before the *βουλή γερόντων*. "Two men quarrelled *εἵνεκα ποιῆς* of a slain man; the one vowed he would give anything, turning to the people (to rouse their sympathy), the other refused to accept anything." It was not for the people to decide, but they could influence the decision by their shouts; the decision lay with the *βουλή* (this is the first interference on the part of the community with the individual's right of revenge), and the point to be decided was whether the homicide had been committed with malicious intent or in a passion, *i.e.,* whether the relation must or must not refuse the offered composition. The two talents of gold were to be given to the Geron who passed the most upright judgment, Prof. Leist agreeing in this particular with Sir Henry Maine. The chief objection raised by Schoemann and Mr. Laurence (*J. of Phil.* 8, 129 foll.) against this view was the disproportion of the amount to the services rendered; but Faesi and Mr. Ridgeway (*J. of Phil.* 9, 31 foll.) have shown that the talanton of the Homeric poems is by no means a large sum, and that the sum of two talents would be too small as composition for a homicide; and as regards the phrase *δικὴν εἶπέν* in the sense of pronouncing judgment, we may refer to a very similar expression in *Hes.* op. 258, *δικας σκολιῶς ἐνέποντες*, the *θεῖαι δίκαι* are derived from Zeus (*Hes.* op. 35), and are opposed to *σκολιαι θέμιστες*, which Zeus pursues with his vengeance (*Il.* 16, 385, *cf. Hes.* op. 220 and the rider of King Theopompus to the Lycurgian rhetra and Tyrt. fr. 4). HERMAN HAGER.

SCIENCE NOTES.

FROM the first annual report of the Scottish Geographical Society (Edinburgh: Constable), we learn that the total number of members is now 975, inclusive of the three branches at Glasgow, Dundee, and Edinburgh; the total receipts have been £2249, and the total expenditure £1416, leaving a balance of £833 in hand; the library contains 2810 books, maps, pamphlets, &c., of which the larger number have been presented; sixteen meetings were held during the past year, at which papers were read by (among others) Mr. H. M. Stanley, Mr. H. O. Forbes, Mr. H. H. Johnson, Dr. R. Felkin, Mr. H. O'Neill, and Prof. Vambéry; nearly £400 has been contributed through the

society towards Mr. H. O. Forbes's expedition for the exploration of New Guinea. Altogether, a very good record for a first year's work.

DR. A. G. BOURNE has resigned his post of assistant in the zoological museum at University College, on his acceptance of a Government appointment as Professor of Zoology in the Presidency College, Madras.

THE first quarterly number of the *International Journal of the Medical Sciences*, to be published by Messrs. Cassell & Co., on December 21, will contain contributions from the following British authors: Sir Henry Acland, Dr. J. Matthews Duncan, Sir Andrew Clark, Dr. Walter Smith, Mr. Jonathan Hutchinson, Sir James Paget, and Dr. W. H. Broadbent.

DR. ARISTIDES BREZINA, of Vienna, has published a catalogue of the fine collection of Meteorites in the Hofkabinet. The richest collections of meteorites in the world are those in the museums of London, Vienna, Paris, and Calcutta. The Vienna collection contained, on May 1, representatives of 358 genuine falls. Dr. Brezina accompanies his catalogue by a valuable essay on the origin and classification of meteorites, and by a map of the world showing the localities in which the Vienna specimens have been found.

PHILOLOGY NOTES.

PROF. TERRIEN DE LACOUPERIE will deliver his third lecture at University College on Tuesday next, December 15, at 4 p.m. The subject is "The Formation of the Chinese Language and Civilisation."

THE late Mr. Salkinson, who translated into Hebrew Milton's *Paradise Lost* and parts of Shakspeare, had been engaged, during a great part of his life, on a Hebrew version of the New Testament. This, after Mr. Salkinson's death, was completed by Dr. Ginsburg, who added the vowel points to the whole except the Gospels. In August an edition of 2000 of this Hebrew New Testament was published by the Trinitarian Bible Society. The issue was exhausted in less than a month; and Dr. Ginsburg has been revising the translation for a new edition of 10,000 copies, which is now in the press.

UNDER the title of *Cruces and Criticisms: an Examination of Certain Passages in Greek and Latin Texts*, Mr. W. W. Marshall will publish shortly a volume in which an attempt is made to elucidate some obscure passages in the classics and to clear up others by conjectural emendations. The work will be issued by Mr. Elliot Stock.

M. ET. AYMONIER, who has recently returned from a scientific journey through Cochin China on behalf of the French Government, has published (Paris: Leroux) four volumes: (1) "Notes sur le Laos"; (2) "Notes sur l'Annam"; (3) "Lettre sur son Voyage au Binh Thuân"; (4) *L'Épigraphie Kambodjienne*.

MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(Friday, Nov. 27.)

W. MICHAEL ROSSSETTI, Esq., in the Chair.—Dr. Furnivall proposed, on behalf of the members of the society, a hearty vote of thanks to the ladies and gentlemen who had taken part in the performance of "Colombe's Birthday" at the Society's Annual Entertainment at St. George's Hall on November 17. This was seconded by the Hon. Secretary, and carried unanimously.—A paper on "Browning's Women," by Mr. J. J. Britton, was then read. Mr. Britton, after referring to the statement made by Mr. Bancroft Cooke that Browning "did not appreciate women," stated that he considered such a charge in the light of a gross heresy against the greatness of the poet, and proceeded, for the

purpose of disproving it, to pass in review some of the most prominent female characters in Browning's poems. He took first the character of Pompilia, the most gracious and pure of all modern heroines of verse; and showed by many quotations the absolutely perfect manner in which Browning has unfolded the character of this girl-mother, how delicately he has set forth her childlike fancies and imaginings, her faith, her purity, the development of her mind by suffering, and the growth within her of a large-hearted charity even for those who had done her so much wrong, not forgetting even that "most woeful man," her husband. In working out Pompilia's character and spiritual progress Browning had made due allowance for all the influences at work—her birth, her education, her nationality, her Roman Catholic education, her maternity. Mr. Britton called attention to the exquisite pathos of the dying girl's confession, to her womanly outlook to the future of her boy, to her love so natural and yet so pure for her "soldier-priest" and would-be deliverer; and said that in his opinion Pompilia, as revealed to us by Browning, is "certainly one of the purest conceptions we have in all poetry." An opinion was hazarded by the writer that perhaps the evident strain of nobility in the girl's nature was due to her unknown father or to some unknown past in the history of her fallen mother. To the lily of purity, Pompilia, Mr. Britton opposed the lurid, sensuous, remorseless Italian woman, Ottima, for whose crimes, however, if we knew the whole of her life, some palliation might possibly be found, and pointed out that the nearest approach to "fleshy" writing in Browning's works were the passionate scene in the pine-wood and that other in the early morning after the murder. Pippa herself was touched on; then followed the unnamed women of "The Inn Album," and "A Forgiveness"; and Mr. Britton, in analysing these characters, commented on Browning's wonderful skill in their treatment and his appreciation of the intricacies and inconsistencies of the woman-nature. The Queen, "that Mary Tudor of a woman," of "In a Balcony," "James Lee's Wife," Mildred (for whom Mr. Britton could find little excuse nor feel any liking), and others were passed in review; and the writer came to the conclusion that although Browning deals less with women than other poets, and does not deal with them in the same way, or dwell upon their bodily attractions, yet he shows the same consummate skill in dealing with the feminine as with the masculine mind, and thoroughly appreciates the nice distinctions between the sexes and the differing influences to which they are subjected. It was somewhat to be regretted that Browning has as yet shown us no woman-nature rising to the height of heroic self-sacrifice, and it could be wished that he had studied and treated of the lives of such persons as Joan of Arc or Charlotte Corday. He has, however, by his studies of women, "extended our sympathies," and given us an insight into the depths of woman's nature. The reading of the paper was followed by an animated discussion.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, Nov. 28.)

LYLY's *Campaspe* was the play for consideration. A paper by Mr. C. H. Herford, entitled "From *Roister Doister* to *Campaspe*," was read, in which he pointed out that the period between the two plays was occupied, almost without practical result, in striving to realise a form of drama quite different from either of them. *Roister Doister* was one of the most striking, but it was one of the last, instances of the influence in the direction of comedy which was then being exerted on the drama by the introduction of Humanism. For directly after this, turgid and horror-laden tragedy, derived from Seneca, all but expelled the comedy of manners which had begun to take root. *Gorboduc*, *Jocasta*, *Tancred and Gismunda*, are examples of this. About this time Protestant exiles returning from Germany brought with them a taste for stage-plays. But this taste was for a moral drama, austere and rigid, in which the personifications of good triumphed over those of evil with a kind of exultant ferocity. This is seen in such plays as *Nice Wanton*, *Glass of Government*, *The Disobedient Child*, *Like will to Like*. Tragedy might well become supreme when two powers, naturally so

unlike, formed a double phalanx for her support. The few comedies that were produced at this time depended for their popularity upon the exhibition of rough fun, as seen in *Gammer Gurton's Needle*, *Misogonus*, *The Men of Gotham*. Lyly approached the drama from none of the traditional points of view, and so his plays were a fresh and fruitful inspiration. He was the first to show an enthusiastic delight in intellect and beauty, working itself out through the medium of literature. It is this intellectual side, rather than the fantastic side, of euphuism which is most eminently represented in *Campaspe*. Plato and Aristotle, Apelles, Diogenes, represent in their very different ways the dignity of philosophy and art, of thought and beauty—powers to which Alexander, with no ideal but universal conquest, can but bow. For Diogenes, the Greek Ishmaelite of the gutter, is made neither ridiculous nor contemptible. We are meant to see in him the preacher and the practiser of plain living and high thinking. *Campaspe* herself, drawn in the beauty of perfect simplicity of mind, is one of the most attractive figures in the pre-Shakespearean drama. She is more impressive than a whole morality full of the discourse of right doctrine or virtuous life. The originality of *Campaspe* lies in the resort to a region of life where the essential colour is derived neither from streaming blood, nor from the clown's motley, but from the quieter light of that world of art and thought out of which the future greatness of the Elizabethan age was to be nourished, and which in the fulness of time was to be the means of making tragedy and comedy themselves intellectual and beautiful in the hands of Shakspeare.—Miss Emma Phipson contributed a paper on "John Lyly," who seemed to be a playwright "of necessity," not of inclination, as he had but little skill in dramatic situation, or in delineation of character. This is the case not only in *Campaspe*, where, though the dialogue is bright and lively in parts, the characters are mere mouthpieces for wise or witty sayings, but also in that monotonous play *Sappho and Phao*. *Endimion* is more of a poem than a play, where the old theme of the love of a mortal for Diana is treated with much beauty, but with little skill. In *Gallathea* there is an improvement in the humorous scenes, and we have evidences of Shakspeare's indebtedness to it. It is, therefore, quite clear that Lyly's fame was not made as a dramatist, but as the successful and popular writer of *Euphuism*. Over and over again in Lyly's pages we meet with thoughts that have been worked up by Shakspeare into lines "familiar in our mouths as household words," and the similarity is less in the words than in the ideas.—Mrs. C. J. Spencer read "First Impressions of *Campaspe*," among which was a surprise that so readable and unpedantic a composition should have been written by the author of *Euphuism*. It seemed strange also that there were in it so few obsolete words and, considering the taste of the time, so little coarseness and nothing painful or distressing. The character of Alexander is drawn without a flaw, and agrees with that which we are told of him by other writers; and one is almost disposed to be angry with *Campaspe* for not reciprocating the affection of such a man, for Apelles had but fallen in love with her perfect face as Alexander had done. It was much better that Alexander should give her up in the way recorded than pine away for her or compel her to marry him. Many of the characters were then dealt with in detail; and the conclusion arrived at was that it is a charming little play, which, while it does not touch the grandeur of Shakspeare, yet forms a not unfitting introduction to the study of him who, like all of us, in spite of his greatness, was the born brother of his contemporaries.—Mr. J. W. Mills read a paper on "The Classical and Philosophical Allusions in *Campaspe*," showing that in the play there were instances of the pedantry of the university writers of the time; and yet it was plain that Lyly's acquaintance with Athenian social life, and with the Aristotelian philosophy, was very imperfect. On the other hand, the play abounds with sentences of vigorous antithetical construction, wonderfully bright and fresh-looking for English of 1584, showing that Lyly had that innate perception for good words which is one attribute of literary talent. It was not fair to charge Lyly, as Collier had done, with "the employment of a fabulous natural philosophy in order to afford similes and illustrations." Lyly

did not invent this fabulous philosophy; he found it universally believed in—believed in it, probably, himself; and so used it quite naturally and fairly, as did most writers of the period. The moral of *Campaspe* is consistent with that of *Euphuism*. It is spoken by Alexander at the close of the play. "It were a shame Alexander should desire to command the world, if he could not command himself." By "self-command" is here implied, as the whole drama plainly shows, just what the wise Greeks expressed by "αὐτοκρατορία," and the grave Roman philosophers, by "continentia." Mr. Mills will be glad if anyone will tell him something about "the city of Chieronte" (i. 1), and the wooden dove of Archidamus, and the wooden swan of Arachne (v. 4).—Mr. G. Munro Smith read a paper on "The Songs in *Campaspe*," saying that if musical rhythm is all that is required in a song, those of *Campaspe* would rank high; but as there is an absence of feeling in them, they can bear no comparison with similar productions of Shakspeare's. Reports were also presented from the following departments: Plants, by Mr. Leo H. Grindon; Dress and Social Customs, by Miss Emily T. Smith.

SOCIETY OF ANTIQUARIES.—(Thursday, Dec. 3.)

THE President in the Chair.—Mr. Ferguson, the local secretary for Cumberland, sent a report of proceedings in his county, stating; *inter alia*, that some work had been commenced at Carlisle Castle detrimental to the old masonry, but on application to the War Office, it had been stopped.—The Rev. A. M. Scarth contributed a paper on the discovery of a Roman villa at Wimborne, in the parish of Yatton, Somerset.—Among the articles exhibited were an ewer, found at Kilburn, on the site of the Benedictine Nunnery, by Mr. Everard Green; a Mediaeval paten with r.h.c. in the centre, from Runton, Norfolk, by the Rev. C. R. Manning; a later thurible, from Ribble, Worcestershire, by Sir John MacLean; and two Spanish cut paper pictures, by Mr. Maw, each of these contained in a space hardly a foot square; and a dozen or more minute pictures or scenes from early Biblical history, cut in white paper, on a black ground.

PHILOLOGICAL SOCIETY.—(Friday, Dec. 4.)

REV. PROF. SKEAT, President in the Chair.—Mr. E. L. Brandreth gave an account of the words *Ho—Holy*, which he had sub-edited for the Society's New English Dictionary. Notwithstanding the mass of material accumulated during twenty-five years of reading for the dictionary, he showed what great additions he had to make before the meanings of words could be treated in any satisfactory manner. He then gave instances of the way in which he had treated such words as "hold," *vb.*, the original meaning of which was "to fend, feed (cattle, sheep, &c.)," from which the other multitudinous senses had all been developed. "Holy," *a.* The meaning given in most dictionaries of "pure in heart, righteous," in the general sense, was a meaning of much later development. The word was first used as a rendering of the Latin *sacculus* in the Christian sense of that word as applied to the different persons of the Trinity, to angels, the Virgin Mary, patriarchs, saints, martyrs, &c., then to the pope, bishops, and others holding religious offices. "Hoar," *adj.* He referred especially to an early use of that word as a frequent attribute of the numerous kinds of trees and of the stones which were noted as marking the boundaries of estates. Such trees were afterwards sometimes designated as "holy trees," "gospel trees." He thought that "hoar" had thus acquired some such meaning besides its no doubt earlier one of "gray," as "old, sacred from use and association." Treating of etymologies, among others he mentioned "hollock," a favourite wine of the sixteenth and seventeenth centuries, referred to by Gascoigne, Beaumont and Fletcher, Taylor, the Water Poet, &c., as the Spanish *aloque*, which again was the Arabic *nabiz khuluki*—i. e., wine of the light red colour of the perfume called *khulūk*. For this etymology he was indebted to Prince L.-L. Bonaparte. "Holt" meant originally "wood," *lignum*, which was one of its meanings in Anglo-Saxon, the sole meaning of the cognate Dutch *hout*, and the principal one of the German *holz*. It was also cognate with the

Old-Slavonic *kladā*, a beam. "Hog," as applied to a sheep, meant originally a castrated lamb. It was so used in Bishop Hatfield's *Survey* in 1350, and has been continuously used in that sense from that day to the present. It is also said of a young bullock. This confirms the etymology from "hack," somewhat doubtfully given by Prof. Skeat, referring more especially to "hog," a swine. "Hobble," *vb.*, was derived from **hobban*, presumed to be a by-form of Anglo-Saxon *hoppian*, and was thus brought into immediate connexion with "hob" (of a fireplace), the original sense of which was "projection, unevenness," and thus also shown to be cognate with a Teutonic **hobban*—from which the Middle High-German *hopsen*, German *hüpfen*, is derived by Kluge—and with the Dutch *hobben*, *hobbeelen*.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oseographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. H&S, 115, Strand, near Waterloo-bridge.

THE INSTITUTE OF PAINTERS IN OIL COLOURS.

THE Exhibition of the Institute of Painters in Oil Colours, which has now reached its third year, has justified the zeal and enterprise of its founders. The large galleries are filled; and though, of course, among the 786 canvasses there are many one would not care to see again and some one is sorry to have seen at all, the collection is, on the whole, a very creditable one. While English artists cover nearly all the wall-space with pictures of good average quality, it will be by the productions of an American—Mr. F. D. Millet—that the exhibition will be specially remembered in after years. His larger work, "The Granddaughter" (450), is one of those pictures of domestic pathos which require rare taste to prevent the sentiment from becoming *banal*; but there is a freshness and simplicity in Mr. Millet's treatment of it, to say nothing of its admirable workmanship, which raises it to the level of noble art. The "granddaughter" is an invalid who is lying on an old-fashioned high-backed couch, the delicate colour of its cover relieving her pale sweet face. She has heard, notwithstanding all his caution, the step of her grandfather, who is gently opening the door. The picture is luminous throughout, and its clear, silvery tone is in itself no small charm. In qualities of light and colour Mr. Millet's smaller picture, "The Amanuensis" (7), is perhaps even more enjoyable, while the figures are equally good. Though there are no figure pictures which are quite so good, or at least so fresh, as these; and though we miss such members as the President (Sir James Linton), Mr. E. J. Gregory, and Mr. Macbeth, several others deserve special mention. Mr. J. W. Waterhouse has a picture of Venetian life which we recommend to the attention of Mr. Fildes. It is called "Gossip" (319), and shows us one of those groups of Venetian girls, with their pretty gay faces and bright picturesque costume, with which we have grown so familiar since their discovery was made by M. Van Haanen. This picture is on the scale suited to such *genre* subjects. It is bright and cheerful, but not gaudy or inharmonious, in colour; the girls are gossiping and not sitting for their portraits—in a word, it is nearly as good as a picture of the kind can be. Not so pleasant in subject, but even more masterly, is Mr. S. Melton Fisher's picture of carelessly posed, carelessly dressed, and, we fear, carelessly-minded damsels of a Venetian carnival, called "Three Maskers" (406). Near it will be found another work, very different in character, but not less worthy of admiration. This is a well-studied group (if two can make a group) of "Two Falmouth Fisher Boys" (407) fishing from a low cliff—one rod in hand,

the other standing and heaving his line into the sea. Another group by Mr. T. B. Kennington, called "Poverty," has large simplicity of design and an unaffected sentiment which are promising. Mr. G. Clausen's "Little Hay-makers" (493) is less of a surprise, for we know his hand better; but he has seldom painted anything more finely than these unsophisticated young country girls with their healthy pink faces glowing through their own shade. In this sort of natural study the best energies of some of our strongest young painters are now engaged, and there is no work which bears more the mark of thorough training and distinction of style than M. La Thangue's (390). How much of promise there was of good future work from the late Everton Sainsbury was never perhaps so much shown as in his picture here. There is a true tenderness in his pair of rustic lovers, and much refinement as well as originality in the design of "Their Eden" (54). In colour the picture is charming, and reminds one of that graceful figure of the girl in the blue dress against a background of sand which was in the last exhibition at Burlington House. Miss Jane Dealy's "Dutch Bargain" is another very pleasant work. Her sturdy little Dutch children, with their bright cheeks, have been seen in two or three galleries lately; and here they are engaged in a serious treaty for the exchange of dolls, which seems likely to require much diplomatic skill. The bright view of country and village beyond is cleverly sketched in, but there is scarcely sufficient distance. The houses seem more fit for the dolls than for the children, to say nothing of the children's parents. Mr. W. Dendy Sadler is perhaps indebted to Mr. Marks's "Three Jolly Postboys" (541) for the thought of his "A hunting we will go," but it is a capital picture. Better still, though, is Mr. Frank Dadds's "A Modest Quencher" (329), in which we see a huntsman pouring himself out a glass of ale, with the solemn face and steady hand which befits the occasion. In another moment he will purse his lips, and place the glass between his eye and the light before the supreme moment of imbibition. Other good little pictures are Mr. Caffieri's little girl carrying a pail—"The Fisherman's Daughter" (313); Mr. Charles Green's "Cinderella" (377)—bright and sweet, but a little hard; Mr. Waller's "Haunted," with its pretty deer; and Mr. John Reid's rich-coloured scene in a sunny village street, called "Windmills" (23). Though we wish Mr. Reid were less smudgy, we have other and more serious reasons for objecting to the way in which many other clever men have employed their brushes. Mr. Napier Hemy wastes a great deal of good work upon an uninteresting person busy over a chart in a cabin; Mr. Solomon Solomon sacrifices a large canvas and a great amount of technical skill in depicting some very vulgar people in a very vulgar room; Mr. F. Dicey shows us how very foolish a young lady can look when she is "gone" upon a young man; and Mr. F. Barnard, in an illustration of a Sketch by Boz, proves how easy and fatal is the step from "character" to "caricature." If "Laura" and "Fiammetta" were anything like the ladies represented by Mr. Walter Crane in 718 and 761, we can only say that not only poetry, but prose, would be wasted on them: the one was plain, the other a "perfect fright." Mr. Arthur Hacker is also rather disappointing. Both his pictures are clever and well wrought; but they are dull, and one is a great deal too large for its trivial subject.

In landscape and seascape the exhibition is especially rich. Mr. Alexander Harrison's long green "Wave" (41) is a very fine piece of realistic sea painting, and a beautiful picture as well. Near it is a charming study of light and

colour called "Jewels of the Adriatic," by Mr. T. C. Farrer, of which it is sufficient praise to say that it justifies its title. We have never seen Mr. Wimperis in greater force. In his "Ford in the New Forest" (674) he almost rivals Mr. Thomas Collier in luminousness and colour. The latter artist is but barely represented by two small works. They suffer somewhat by comparison with his water-colours, but that was almost inevitable. Mr. Stargitt distinguishes himself by a fine "Dorsetshire Moor" (161), and Mr. Yeend King's "Ferryman's Daughter" (389) is the best picture we have seen by him. Mr. Orrock also in "On the Coquet" (449) and other small pictures seems to go somewhat beyond his former level, though this has always been above the average. And here we must pause, though we have not exhausted half the works of merit in this exhibition.

It must now suffice us to name some of those artists whose claims to mention are at least equal to some specially noticed. Among these are Messrs. Henry Moore, R. A. M. Stevenson, J. Clayton Adams, George Elgood, John White, Edwin Hayes (who sends a fine sea piece, "Entrance to St. Sampson's, Guernsey" (134), with real motion in really liquid water), Frank Walton, R. Caton Woodville, W. L. Wyllie, Arthur Lemon, William Simpson, John Fulleylove, E. Bale, L. E. Colesworth, H. S. Marks, R. A., E. A. Ward, H. Cameron, E. Parton, A. Parsons, S. R. Cadogan, T. Huson, R. Beavis, R. Swoboda, A. Birkenruth, and Adrian Stokes. Mrs. Stokes and Mrs. Waller, Miss E. A. Armstrong, Miss F. White, Miss E. Berkeley, and some other ladies should not be forgotten.

In conclusion, we must express some dissatisfaction with the illustrated catalogue. Many of the best pictures, such as those of Mr. Millet, are not included, and some of the worst, Mr. Phil Morris's "Sisters," for instance, are; and, possibly on account of some new process employed, most of the plates are dull and ineffective.

COSMO MONKHOUSE.

OBITUARY.

DAVID COX, JUN.

ON Sunday last there died at Chester House, Streatham Hill, Mr. David Cox, jun., in his seventy-seventh year. Art has lost in him a landscape-painter of the good old school, and his friends a man of a noble type rarely met with. His sketches from nature fascinate by their manly truthfulness and freshness, the skies full of movement and air, the colour liquid, and yet showing powerful touch. He seized his subjects—and he loved to tackle the most difficult ones—and filtered them through his poetic mind with astounding rapidity. It was a rare treat to see him lay on the first tints on a large surface in broad harmonious washes with a sort of *furor*. The remark has been made that it was artistically his misfortune to be the son of his father; yet none admired his work more than his father himself, who even copied one or two of his son's sketches without improving on them. His modesty, his pitiless criticism of his own work, were in striking contrast with the veneration with which he would speak of the work of his father, of Turner, and others. Those who possess his drawings will feel an affection for them that they will not readily bestow on others. Patriarchal in his home life, large of heart, simple in his habits, shy and retiring to strangers, with great dignity and a widely cultivated mind, he gave himself heart and soul to his friends, and charmed them by the genial warmth beaming in his grey eagle eyes, perplexed them by his generosity, and deeply impressed them by the earnestness of his convictions and the purity and refinement of his language. One always felt the better for being with him.

L. B.

NOTES ON ART AND ARCHAEOLOGY.

WE understand that many of the Farnley Turners, and a large number of the finest Turner drawings which are housed elsewhere, will find their way to Burlington House this winter. It is, indeed, intended that the forthcoming exhibition shall be particularly rich in the water-colours of our greatest master, which will, it is reported on excellent authority, for the first time find adequate representation in a public gallery. Many of the owners of the finest drawings have signified their willingness to lend, and it can hardly be doubted that the result of the exhibition will be to lead the public to a much higher estimate of Turner as a master of water-colour than they have ever yet entertained. It is chiefly among connoisseurs that his entirely exceptional command of the medium has hitherto been recognised. To the large public Turner has been too much a painter in oils. We may add that the Turner Exhibition of the present winter, though immense and impressive, is not intended to be exhaustive. It is proposed to retain certain of his drawings for another year.

MESSRS. KEGAN, PAUL, TRENCH, & Co., will publish before Christmas the first number of a new art quarterly, entitled the *Century Guild Hobby Horse*. It will be written by artists for artists and lovers of art; and printed on handmade paper, large quarto, with illustrations and ornaments.

AMONG the arrangements at the Royal Institution, after Christmas, are a course of three lectures by Mr. Reginald Stuart Poole, on "Naukratis"; and another course of three lectures by Prof. C. T. Newton, on "The Unexhibited Portion of the Greek and Roman Sculptures in the British Museum," illustrated with drawings and casts.

In January next Messrs. Dowdeswell intend holding an Exhibition of Drawings from Nature made during the past season by Mr. James Orrock, illustrative of Sir Walter Scott's "Scenery on the Border Land," including the districts of Warkworth, Alnwick, Berwick, Norham, Newark, Bamborough, and Holy Island.

MR. FARRER has this moment finished at least two etchings for Messrs. Goupil of New York City. They are of the kind denominated by the dealer "important." That is to say they are large and elaborate, and, we are happy to report, they are also legitimately fascinating. One of them, in composition the most attractive, records the beauty of the Wye as it passes by and well nigh surrounds the exquisite ruin of Tintern. Another is entitled "The Silent Pool." Its scene is on some flat land in the neighbourhood of Westwater. Trees are reflected in the stillness of the pool, and the landscape is of the kind that many of the lovers of nature—and many of the lovers of the landscape of Mr. B. W. Leader—find to be impressive. Under any circumstances it is admirably wrought; but we confess, for our own parts, that we derive pleasure particularly from the treatment of the sky. This is an unusual success in etching, generally at a disadvantage as compared with delicate line-engraving in dealing with the phenomena of the heavens. Mr. Farrer's sky, in the print of which we speak, is at once serene, radiant, and vivacious.

WE have seen the first three of a proposed series of reproductions from certain prints of Turner's *Liber Studiorum*, undertaken by Mr. Frank Short—a very gifted young artist—and to be published by Mr. Dunthorne. They are copies of the favourite subjects known as the "Water Mill," "Raglan Castle," and "Procris and Cephalus." We will say at once of them

that they are very much more successful than any other reproductions of the *magnum opus* of Turner yet attempted. Nor is the reason for this hard to declare. With one or two unimportant exceptions, they are the only attempts made to render Turner's effects by Turner's own means. In other words, they are no achievement of photography or photogravure but the result of the labour of an individual artist, who has contentedly sunk his individuality in the exercise of his self-appointed task. Taking up a copper-plate, prepared for the process of etching, and along with it one of Turner's pure etchings for the *Liber*, he has wrought upon his plate a facsimile of Turner's pure etching. That done, the pure etching is discarded, and Turner's completed print for the same subject is taken up in its place, and becomes the model till the work is accomplished. This later work—the connoisseur does not need to be informed—is executed in mezzotint. In mezzotint Mr. Short has made himself an adept. The consequence is that it will immediately be within the power of the lover of Turner's art to purchase an exact facsimile of it for the sum of one guinea. The original print, in fine condition, costs, it may be surmised, some ten or twelve guineas, and is, moreover, so rare that it is, in proper condition, beyond the reach of all but a few. The connoisseur who possesses Turner's own prints, and has an eye to their commercial value, may possibly ask himself whether he is commercially to be the loser through the issue of these singularly skilful reproductions. Not in the least, we can assure him. For, however perfect a reproduction may be, it is in human nature to desire and determine to possess the original, if one's pocket is only deep enough. And reproduction spreads wide the knowledge of great art—spreads it from Edinburgh to Chicago. As a consequence the original is sought for in Chicago, where of old it never was wanted.

THE sale of Rembrandts belonging to Mr. John West, of Bayswater, was extremely disappointing. Messrs. Sotheby will, we hear, shortly be engaged in selling a collection of prints of a very different character. This is the collection of Mr. F. S. Ellis, the famous bookseller, late of New Bend Street, whose library passed under the hammer only the other day, and realised great prices.

THE STAGE.

IRVING'S "LOUIS XI."

WHEN Mr. Irving first produced "Louis the Eleventh" at the Lyceum, more than seven years ago, there was nothing in the performance to "avert," as Bacon says, "the dolours of death." The dolours of death were painfully dominant throughout the whole interpretation. Of course, it would be unreasonable to invite an actor to banish from his performance one of its most forcible features—unreasonable to forget that the death scenes of "Louis XI." are among those from which the greatest effects are to be obtained. The king does not appear upon the scene in the first act. When he does appear, in the second act, he is already very poorly. Things are more obviously amiss with him in the third. In the fourth he is a great deal worse. But his capacity for getting worse would appear to be unlimited. For in the fifth act he is in the throes of dissolution, and he dies for a quarter of an hour or so, on various parts of the stage. It is not Mr. Irving's fault, any more than it was Mr. Charles Kean's, that the

king's process of decay is somewhat too prolonged. The thing is effective, and it must be well done, and it is excellently well done. But it did appear to us of old to be Mr. Irving's mistake not to seize, by hook or by crook, every slight occasion that presented itself to give, if not an occasional sense of elevation, at all events an occasional sense of pathos. We had a grim comedy and a sordid suffering. Louis was superstitious, his piety was horribly self-interested, his vindictiveness was disgusting, his meanness knew no intermission. To whitewash such a character would have been too wholly absurd. It was only possible to humanise him. Now Casimir Delavigne has humanised him much more than Sir Walter Scott. With Sir Walter he was purely a fiend. Mr. Irving, in his later performances—notably on Monday evening—has found means to give even to his sufferings the occasional note of dignity and pathos which permits us an interest it is impossible to take in the long-drawn craftiness and tyranny of the regal Quilp. The change is not much, but it is sufficient. It enables us to connect the character not only with the blackening portraiture of Scott, and with the sometimes ignoble prosiness of Mr. Boucicault, but likewise with the more poetical imagination of Delavigne—which the translation has not quite closely followed—and with the really suggestive record of the contemporary chronicler who tells us, in the following words, how all the days of the king were labour and sorrow:

"I have known him," says that chronicler, "and been his servant in the flower of his age and in the time of his greatest prosperity. But never did I see him without uneasiness and care. Of all amusements, he loved only the chase and hawking in its season; and in this he had almost as much uneasiness as joy, for he rode hard and arose early, and sometimes pursued far, and recked of no weather, so that he was wont to return very weary and well-nigh ever in wrath with some. I think that from his childhood unto his death he had no ceasing of labour and of trouble."

So far then as the character permits it to be, Louis XI.—always very cleverly interpreted—is now one of Mr. Irving's greatest parts. I was told in America by those who saw him there that it had come to be his greatest; but it can only be said to be that if by "greatest" is meant the part in which he uses most completely, exhausts most thoroughly, the material which the part affords. To esteem him more highly in "Louis XI." than in the best of the Shaksperian characters is not to see the imagination and the dignity which in these greater parts he adds to his technical skill. Touches of these things there are, as I have now indicated, in his Louis XI.; but it is of the very essence of the business that the part shall remain as a whole sordid and repulsive—a brilliant and elaborate portraiture of undisguised and various evil. The performance is subtle, because it is ingenious and extraordinarily finished; but the subtlety is the artist's, and not the author's. The character that comes to be interpreted is not subtle at all. There may be real subtlety in a character stirred at one moment by religious emotion, betrayed at another into ignoble conduct. But there is no subtlety in a character ever upon the lowest levels of moral

conception, a character quite uniformly selfish, and having no fight with selfishness, because the good of another never occurs as a possible ideal, and the notion of self-aggrandisement and its eminent righteousness is erected into a religion. Louis has no other religion; he has no moral sense. He is intellect unattended by the clogs of conscience. He is free to execute his purposes, regardless of whose rights they may infringe. Even the superstition which he deems to be his religion is no clog upon him. He makes five prayers to five little metal saints, when the Angelus sounds, and they are quite detached from his life. He was planning a murder before the Angelus began. The Angelus sounded and had to be attended to. Then he went back to his planning. There is subtlety only when religious feeling, or a sense of moral responsibility, or some sense of pity, stays the hand, balances the scale, arrests, for a while at least, judgment and action. Louis XI. is not subtle. He is quite simple in his nature. He goes his own way, for his own ends, very straight. He does not deviate for a moment into humanity. He adds to his intellectual craftiness only the stupidity of superstition; and the unbroken uniformity of his ruthless egotism Mr. Irving illustrates with a convincing skill.

I cannot say as much—but it would be ridiculous, of course, to expect to say as much—for the other performers. Miss Emery, indeed, acts the heroine's part with grace, and with that real simplicity which has always been a major portion of her charm. Hers, next to Mr. Irving's, is the part best looked, best played; and Mr. Alexander—save for one or two over-noisy moments—embodies well enough the author's notion of a loyal lover and a faithful son. There are sentences of feeling which he says with the true ring. The Dauphin's relations with his father are somewhat more cordial than history warrants us to suppose. Mr. Wenman is fairly imperative as Jacques Cottier, the king's favourite leech; but Mr. Harbury makes no very recognisable or memorable character of Philippe de Comines. And Mr. Mead, as the admirable ecclesiastic whom an after-time canonised, I believe, as "Saint" François de Paul, is not so satisfactory as he might be. Mr. Mead is an excellent elocutionist of the order of professed elocutionists. He is therefore readily accepted as an excellent Ghost in "Hamlet." But he carries the Ghost's method a little too far. He carries it into other parts which have nothing in common with it. I know that his Ghost's method—of impressive monotony—happens to suit also the immovable ecclesiastic of the stage. But the immovable and monotonous ecclesiastic of the stage is a wholly conventional being, from Friar Laurence downwards; and Mr. Mead's François de Paul, conceived after this fashion, is invariable of voice and inflexible of countenance. The stage ecclesiastic—especially the nobler ecclesiastic—wants reforming altogether. Whatever François de Paul was like, he was not like that; for it is not an unvaried voice and an inflexible visage that work an influence upon men.

FREDERICK WEDMORE.

THE "EUMENIDES" AT CAMBRIDGE.

ONCE more the promoters of the Greek play at Cambridge have attained a remarkable success. They deserve the highest credit, in the first place, for the selection of the play—not, by the way, an obvious selection, but rather one which must have incurred many strong *a priori* objections. The problems the play discusses are in many respects remote from ordinary human interests; the machinery of the action is difficult, the chorus of Furies, terrible in Aeschylus's days of faith, was almost sure to be grotesque to a sceptical modern audience. If the dignity of a hero is difficult to attain upon the stage, how much more the dignity of a god, and moreover, a god interfering in the whole action of the play! Yet all these objections were seen through, and found to be of no importance as compared with the great and indestructible splendour of Aeschylus's conception.

But if the choice was exceptionally good, so also was the execution. The scenery and stage arrangements were as perfect as so small a theatre could permit; and everybody concerned, from the gods to the carpenters, worked with great zeal to ensure success. Where so many did well, it is only fair to make one's praise more distinct by noting, in the first place, the Apollo, whose appearance and acting delighted everybody; the Athene, who played as if she had long experience of her art, and whose dignity was no small feature in the performance. The leading Fury and the chorus also acquitted themselves of a most arduous part with extraordinary spirit; and it was very generally remarked that so good a chorus for its number, so full of tone, so precise, and so intelligent had hardly ever been heard by any musician present. This praise is all the more deserved, because Dr. Stanford's music was, as usual, very difficult. He made no attempt at archaism, but wrote it as dramatically as he could, with all the modern aids and resources of his art. There was, indeed, not room for soothing melodies when the Furies rage; and so that side of his work may have seemed deficient to those who feel no other music, but even to them the beautiful phrase, or *Leitmotiv*, which appears in the overture, in the introit of Athene, and with much enrichment in the final scene, must have shown what the gifted composer could do in his sweet moments. We were all so busy with the Greek and the music that we had not time till afterwards to study Mr. Verrall's translation. Without going into minute criticism, it may be pronounced quite worthy of his high reputation. The poetical form of the choruses saves it from being the sublimated prose crib which is often presented to us now as an adequate version of a Greek play.

Faults, or what seem to the critic to be faults, are only worth pointing out in two cases—either when a bad thing has been unduly magnified, or when a good thing is so good that a discriminating judgment is higher praise than mere laudation.

It is from this latter point of view that the following reservations are made; and probably the stage manager could, if he liked, give a satisfactory refutation of these friendly strictures. There appeared to be something melo-dramatic in the conception of the lesser parts—the Delphic priestess, and the ghost of Clytemnestra; the agitated action of the latter being very fine in itself, but unlike that of any stage ghost familiar even in modern plays. So, also, the herald and his trumpet, with its stage echo, was below Aeschylean dignity. The same objection was felt by many of the audience to the playing of Orestes. But in one respect he seemed to err the other way, for he took the first apparition of the veritable Athene in all her majesty rather as an in-

terested spectator than as an anxious suppliant. This apparent unconcern was also exhibited by the Apollo, in the scene when he stood calmly all through the first great passionate invective of the Furies; and only at the end he comes out with his trenchant command, that unless they depart at once he will transfix them with his arrows. Surely, Aeschylus meant his chorus to rail at the temple, as the visible habitation of the god's presence; and his entrance should have been sudden, and at the close of the choric passage.

The voting scene at the trial was generally felt to drag, and here only in the whole performance people began to look at their books to see what would come next. It is not the first time that such a scene has been a comparative failure. It was saved by the splendid appearance and dignity of Athene; but nevertheless the contrast of her voice to the quality of all the other voices made many good critics feel that in this kind of drama the Greeks were right to employ men only as actors, and that if the other fine qualities could have been secured, the stronger voice of a man would have been more effective. Yet to most of the audience the consequent loss in appearance, and in interest, must have outweighed these perhaps scholastic predispositions. But if the Athene was fairer than the sons of men, why were the temples represented in the scenes of cold marble and not richly coloured, as we now know that the Greeks coloured them?

Last, but most serious in this list of criticisms comes the question: why was a pronunciation sanctioned which is nothing better than the vilest jargon to any ears but those of the English schools and universities? When Athene pronounces *πράγμα* as *πρήγμα* we might imagine that there was some theory that Ionic dialect was more archaic than Attic, and that they imagined it correct to read Attic with an Ionic accent. But when we heard *ῥιδρᾶς* pronounced as *tie drays*, and *διδάσκω* as *diecayzow*, we felt uncertain whether to laugh or hiss. There is no question about the pronunciation of most of the vowel sounds; *a*, *i*, and *ov* above all. Why must Greek at Cambridge be unintelligible or ridiculous to any Greek scholar beyond the narrow bounds of England? As long as Greek is to be treated as a mere dead language, almost exclusively in writing, these absurdities do little harm; but when it comes to be spoken such insular eccentricities are very mischievous indeed. This is all the more regrettable in so noble an attempt to bring the splendid masterpieces of Greek literature out of the sphere of pedants and pedagogues, out of the sphere of exercises and examinations, and to introduce them to the large educated public, which is disposed to discourage the study of the language as too costly for modern time and talent. The most solid and practical argument against such theories is to show sensible and thoughtful people of the world—aye, and scholars too—what there is in this literature which makes it unique in the history of culture.

If ever the special function and duty of an ancient university was clearly fulfilled, it was in this great and successful effort. Any thoughtful hearer could there see, what many Greek scholars had felt but dimly before, that the great moral problems of the world were grasped and portrayed by Aeschylus as no poet has ever since grasped them. The frequent obscurity and the gloom of his style is not the artificial striving after effect, but the atmosphere of the vast and mysterious problems for which his genius yearned to find a solution. It was interesting to hear sundry college dons hazarding, what they half feared to think, that after all Sophocles, their darling, was on a lower plane, and could not even aspire to these empyrean heights.

The seeing and hearing of the "Eumenides" brought home this and many kindred truths to old students of the play, just as the performance of a Shaksperian play teaches the mere student infinite beauties which his reading cannot reveal. Such were the lessons taught to those that went to hear and appreciate honestly this wonderful piece. For however inaccurate may have been the details, whatever mistakes even the keenest archaeologist may have made in the setting, the eternal features of the tragedy were there—the curious and intimate juxtaposition of gods and mortal men, the conflict of sacred duties, sanctioned by ancient and religious precedent, the rival claims of the ties of blood, and the verdict of reason. Of course, these things were thrown away upon many of the hearers. There were groups of elderly people, including dons, who talked during the choruses as if some stupid girl were strumming the piano, who distracted their neighbours by remarks even more vapid than such ill-timed garrulosity implies—a great contrast to the attentive undergraduates, who thronged to hear and to learn in sympathetic silence.

Indeed, it was strange to one standing near the orchestra and looking backward on the most cultivated audience in England, and among them some great men whom everybody knows, how dull this public looked, and wooden, especially the learned ladies. Reading books and trying to think seemed to have taken the bloom of freshness and the brightness of intelligence from their countenances, and one shuddered to think that this was the result of poring over classical books, or taking an interest in classical learning. A glance at the stage was very reassuring. There there was life, verve, earnestness, vivacity. But, alas! will not the day come when these now living young creatures will run down to Cambridge to see the next generation at its Greek play, and when the only light reflected from their faces will be that of their spectacles?

J. P. MAHAFFY.

MUSIC.

RECENT CONCERTS.

THE anniversary of Mozart's death was celebrated last Saturday afternoon at the Crystal Palace, but only the first part of the programme was devoted to his music. It was certainly not for lack of material, for we were reminded that the Salzburg "band-master" wrote in all 626 works. It would surely have been an excellent opportunity to bring forward one of the *divertimenti* or symphonies which have never been heard in London. The performance of the "Jupiter" symphony was exceedingly fine. Mr. Manns has an orchestra which for body and quality of tone it would be difficult to surpass. M^{me}. Frickenhaus interpreted in her best manner Mozart's "Coronation" Concerto in D. The work, we believe, has not been heard at the Palace since 1872, when it was performed by Herr Reinecke. This composer's clever cadenzas were played by M^{me}. Frickenhaus. Mr. G. A. Clinton was heard to advantage in the Adagio from the Clarinet Concerto. Mr. Santley was the vocalist, and received much applause for the Serenade and Aria from "Don Giovanni." The second part of the programme included Dvorák's charming Notturmo for strings, and a *Capriccio Italien* for orchestra by Tchaikowsky, and Mr. F. Cowen's suite "The Language of the Flowers." The *Capriccio* is lively, some of the themes are pleasing and original, and the orchestration is interesting, though at times noisy. In spite of much merit, we do not think the piece likely to become a favourite.

The third Brinsmead Concert was held at St. James's Hall on Saturday evening last.

M. Camille de Saint-Saens's name formed a prominent feature in the programme, and it was a great advantage to hear the composer interpret his own works. We admit the cleverness of the C minor Concerto (Op. 44), but all the fire and brilliancy of M. de Saint-Saens's playing is needed to make us forget for the time that all that glitters is not gold. At the close of the performance the composer was greeted with loud and continued applause. The *Septuor* in E flat (Op. 65) for trumpet, strings, and piano-forte, is a work written in suite form. It is an uncomfortable mixture of the antique and modern. It was played in June 1884 by Mr. C. Hallé, at one of his recitals, as a genuine *septuor*, and a second hearing does not make us like it any better. We say frankly what we think of these works. At the same time, we must remind our readers that M. de Saint-Saens occupies a distinguished position among French composers, and Messrs. Brinsmead did well to invite him to their concerts. The symphony of the evening was Raff's "Lenore." The book containing an analysis of the works is given away free of charge, it is true, but still it ought to be free of faults. We were there informed that after Raff's third symphony "Im Walde," he went back to storyland and there remained. But is not the fourth symphony in G minor (Op. 167) purely abstract music? Then the analysis of the first movement was by no means satisfactory, while that of the second was very incorrect. With regard to the performance under the direction of Mr. Ganz, we can praise the two middle movements, but the first was somewhat lacking in delicacy and the last in spirit. Two orchestral movements from Mr. F. H. Cowen's "Sleeping Beauty" were given, but they do not produce their proper effect when heard thus in detached form. The programme, which included overtures by Weber and Rossini and vocal music sung by Mr. E. Lloyd, was, as usual, too long. In spite of the bad weather, the hall was crowded.

The programme of the last Monday Popular Concert included two novelties. Brahms has written in all three quartetts for strings, and of these only two, the second and third, have been heard at these concerts. The one in C minor (Op. 51, No. 1) is remarkable for its energy, its earnestness and its elaborateness. In the first and last movements the composer is, perhaps, in too restless, too anxious a mood; but the two middle ones, though not without sighing and longing, have movements of peace and satisfaction. The work was admirably interpreted by Mdme. Néruda and her usual associates. The other novelty—P. E. Bach's C minor Sonata for violin and piano (Mdme. Néruda and Mr. C. Hallé)—is an interesting example of the best chamber music written after J. S. Bach and before Haydn. Mr. C. Hallé played with much delicacy and refinement Beethoven's seldom heard Sonata in F (Op. 54). Mr. Clifford Hallé, a son of the eminent pianist, made his *début* as a vocalist. He has a baritone voice of good quality, though apparently not of great power; and it has been thoroughly well trained. He sang with great taste airs by Handel, Scarlatti and Carissimi, and had the advantage of being accompanied by his father. The concert concluded with Fibich's Pianoforte Quartett in E minor.

Mr. Dannreuther gave his third concert at Orme Square, Bayswater, last Thursday week. The programme commenced with a pianoforte Trio in F minor (Op. 2) by Wilh. Weckbecher. This composer's name is quite unknown to us. The work is decidedly a promising one. The first movement is long, but clear in form and development. The Adagio is pleasing, but the Scherzo rather laboured. The finale is light and brilliant. The trio was played by Messrs. Dannreuther, Kummer, and Ould. The pro-

gramme included Dr. Parry's Sonata in A for pianoforte and violoncello (the middle movement of which was much applauded), and Beethoven's Trio (Op. 97). Miss Lena Little sang P. Cornelius's graceful cycle of songs entitled "Weihnachtslieder."

The second Heckmann Quartett Concert was held last Tuesday evening at Prince's Hall. The programme contained no novelty. It commenced with Dittersdorf's Quartett in E flat. It is strange to find this composer's name in the programmes of the series, and not that of his great contemporary, Haydn. Herr Heckmann and his associates played the work with perfect ensemble. The two other quartetts were Mozart in C and Beethoven in F (Op. 59, No. 1). We did not like the somewhat effeminate reading of the first and last movements in the latter work. The Adagio was, however, given with great feeling, and Herr Bellmann's artistic rendering of the important 'cello part deserves recognition.

J. S. SHEDLOCK.

MUSIC NOTES.

THE newly-formed Popular Wagner Concert Society will give its first concert at Willis's Rooms next Monday. The conductor is Herr Franz Liederitz.

THE New Shakspeare Society's musical conductor, Mr. J. Greenhill, is to give a Shakspeare concert at Tulse Hill in January.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

TERMS OF SUBSCRIPTION TO THE ACADEMY. (PAYABLE IN ADVANCE.)

L. REEVE & CO'S NEW WORKS NOW READY.

COLLECTIONS AND RECOLLECTIONS OF NATURAL HISTORY and SPORT IN THE LIFE OF A COUNTRY VICAR.

By the Rev. G. C. GREEN.

With numerous Wood Engravings from Sketches by the Author, Crown 8vo, 7s. 6d.

"In many animated reminiscences of red letter days with the rod and gun, Mr. Green's descriptive powers enable him to justify his ideal endeavour to make the reader see with his eyes and put himself in his place."—*Saturday Review*.
"Whether for old or young, they form most amusing reading, and a better gift-book for an intelligent youth with a turn for natural history we do not know."—*Yorkshire Gazette*.

BRITISH ZOOPHYTES. Including the Hydroids, Actinozoa, and Polysoa, found in Great Britain, Ireland, and the Channel Islands. By ARTHUR S. PENNINGTON, F.L.S., &c. With Twenty-four Plates. Crown 8vo, 10s. 6d.

THE BUTTERFLIES OF EUROPE. Described and Figured by H. C. LANG, M.D., F.L.S. With eighty-two Coloured Plates containing upwards of 900 Figures. 7 vols., super-royal 8vo, £3 10s.

"Altogether this is the completest work of the kind yet published, whilst the high finish of the coloured plates raises its artistic merits to the highest rank."—*Science Gossip*.

New Vol. XLI., 1885, Sixty-six Coloured Plates, 42s.

THE BOTANICAL MAGAZINE. Figures and Descriptions of New and Rare Plants. By Sir J. D. HOOKER, F.R.S., &c. Third Series. Vols. I. to XL., each 42s. Published Monthly, with Six Plates, 3s. 6d. coloured. Annual Subscription, 42s.

*. A COMPLETE SET of this scarce and valuable work from the commencement in 1787 to the present time may now be had.

COLONIAL and FOREIGN FLORAS.

FLORA of INDIA. By Sir J. D. HOOKER. Vols. I. to IV., 52s. each.

FLORA AUSTRALIENSIS. By G. BENTHAM. 7 vols., 57 4s.

FLORA of TROPICAL AFRICA. By D. OLIVER. 3 vols., 20s. each.

FLORA CAPENSIS. By Dr. HARVEY. 3 vols., 42s.

FLORA of MAURITIUS and the SEYCHELLES. By J. G. BAKER. 34s.

FLORA of the BRITISH WEST INDIES. By Dr. GRISEBACH. 42s.

FLORA HONGKONGENSIS. By G. BENTHAM. With Supplement by Dr. HANCE. 18s.; Supplement, 2s. 6d.

FLORA of NEW ZEALAND. By Sir J. D. HOOKER. Complete, 42s.

CONTRIBUTIONS to the FLORA of MENTONE, and to a Winter Flora of the Riviera, including the Coast from Marseille to Genoa. By J. TREHERNE MOGGIDGE, F.L.S. In 1 vol., Ninety-nine Coloured Plates, 63s.

CROWN SERIES OF NATURAL HISTORY HANDBOOKS.

Concise, Popular, Scientific Manuals, suitable for
Students, Amateurs, and Beginners.

LITERATURE.

Tiresias, and other Poems. By Alfred Lord Tennyson. (Macmillan.)

IN the best of his sonnets—an address to Tennyson embodying a tribute of splendid praise—Mr. Theodore Watts described the *Rispa* book as the most richly-various volume of English verse that had appeared in the century. So far as I can pretend to judge of the products of a genius so manifold, I should be disposed to apply the terms of Mr. Watts's ungrudging eulogy to the book now published. The later volume has for me an immeasurable superiority in plain human interest. And human interest has not always been Tennyson's distinguishing quality. In *Memorial* is a mirror of the human heart, and the heart's primal movements have rarely been traced with more subtlety than in "Locksley Hall" and "Enoch Arden." But, as a poet of great genius, whose years have passed the allotted span of life, Tennyson has on the whole lived rather remote from the passions and interests of man and the world. Plainly, he has not been indifferent to the affairs of ordinary life. The voice of the great world has been heard down the deepest corridor of the past in which he has lived and moved. When the echo of that voice has come back to us, it has often been deeper and calmer than at first, and sometimes, as in "Maud," a note or two more vehement. But it is not as true of Tennyson as of Wordsworth, that the human heart is "the haunt and main region of his song." Tennyson's remoteness from the passions of life has never at any time been akin to the remoteness of Shelley. It has at the utmost been the remoteness of Keats. Human sympathies have never been absent from any work of Tennyson. They were rarely present in any work of Shelley, whose faculty it may have been to use the poetic spirit without reference to the world about him, and without reflex action on himself as a man. Tennyson has always commanded the power (as shown in "Despair") of putting human interest into abstract ideas; and, if the work of Shelley were out of the count, I should not hesitate to say that there is no surer sign of a mind destitute of true poetic faculty than the tendency to dwell in a world that is almost without human sympathy. The great poets never do this, whatever their theme. Milton, in *Paradise Lost*, had a subject which, sublime though it be, is also almost as remote from direct human interest as Shelley's "Cloud" and Coleridge's "Kubla Khan." Yet he suffused it with human interest, and his Satan is far more completely within the range of human sympathy than such a creation as Goethe's Mephistopheles.

It would be unjust to say that, as regards the passions and interests of the world, Tennyson has ever resembled his own cuckoo, "a phantom cuckoo from out a phantom hill"; but for too long an interval he did, in truth, resemble the cuckoo of Wordsworth, and, amid the dust and noise of life, he was for years "a wandering voice." His new book is open to no such reproach. It tells of the heat and action of the day, and the part which the poet plays in it:

"And here the Singer for his Art
Not all in vain may plead
'The song that nerves a nation's heart
Is in itself a deed.'"

To say what the place is which Tennyson now occupies as a teacher would be to touch the fringe of a larger question than I should care to discuss. Briefly and frankly I should say that Tennyson is not the sort of writer to open the eyes of a nation fallen asleep. With all his impatience of wrong, of cowardice, of lack of patriotism; with all that love of truth to which he would sacrifice all at all hazards; with all his passionate ardour and fiery zeal, I miss in him the strong grasp and the wide outlook which distinguish the mighty spirits. I doubt if he, like his own "Dead Prophet," has "touched the whole sad planet of man." But this is only a comparative shortcoming. Of the great, broad, master geniuses who can "nerve a nation's heart" how many have there ever been? And among those who come next, surely there are very few who come before Tennyson. He is a strong thinker who sees far and sees clearly; a strong writer who wastes no force. His vehemence is not the explosion of soda-water: his far-reaching glimmerings of futurity are not the flickerings of rush-lights in a fog; and the less enviable of these qualities seem to distinguish some noisier singers in our time when, according to Tennyson,

"the Love of Letters overdone
Has swamped the sacred poets with themselves."

The human interest in this book is not so remarkable in the patriotic as in the domestic pieces. Southey, in writing to a friend, said that Scott's *Lay* "excited a novel-like interest," and then went on to complain that you could discover nothing in it on after perusal. Evidently the interest proper to a novel was an insignificant thing in Southey's opinion. The story was something; but if the manner of telling the story was not more, then the poem was not worthy of a second reading. It would not be easy to gainsay this formula of the function of plot in a poem. Yet it is a little wanting in proportion. It fits *Kehama* exactly, but it does not at all fit such a poem as "The Wreck" in this volume. In "The Wreck" the novel-like interest is enough of itself to sustain it as a work of art.

"The Wreck" is, perhaps, one of the most thrilling and powerful dramatic scenes in lyric poetry. The story it tells is that of a young wife, married to a cold and callous man who is handsome and cares little for her. She bears him a child—a girl—and this, the joy of her life, is spurned as if it had been base born. Her sympathies are wounded, her spirit crushed. Then she meets a man of the reverse type. He is not beautiful to look upon. He is a dwarf and almost a hunchback, but he has the magnetic force that can

touch her. He is intellectual, he is sympathetic. He sees that she has no love for her husband, and that their union is already broken in the spirit. He breaks it in the flesh also; and these two join their lives. Ten days of "summer and sin" go by like a dream, and then the woman's conscience begins to conquer her passion. They are in a ship in mid-ocean, and a storm breaks over them. The motherless mother thinks of her child's shame. The tempest wrecks the ship, and the lover is lost. She is saved, though disfigured. Yearning for death, yet yearning also for knowledge of her child, she writes to the nurse. An answer comes back to her addressed to her maiden name, and enclosing a scrap clipped out of the "deaths" in a paper, saying that after ten days of fever the child had died on that day which was the day of the storm.

"VI.

"Mother, one morning a bird with a warble plaintively sweet
Perch'd on the shrouds, and then fell fluttering down at my feet;
I took it, he made it a cage, we fondled it, Stephen and I,
But it died, and I thought of the child for a moment, I scarce know why.

"VII.

"But if sin be sin, not inherited fate, as many will say,
My sin to my desolate little one found me at sea on a day,
When her orphan wail came borne in the shriek of a growing wind,
And a voice rang out in the thunders of Ocean and Heaven 'Thou hast sinn'd.'
And down in the cabin were we, for the towering crest of the tides
Plunged on the vessel and swept in a cataract off from her sides,
And ever the great storm grew with a howl and a hoot of the blast
In the rigging, voices of hell—then came the crash of the mast.
'The wages of sin is death,' and then I began to weep,
'I am the Jonah, the crew should cast me into the deep,
For ah God, what a heart was mine to forsake her even for you.'
'Never the heart among women,' he said, 'more tender and true.'
'The heart! not a mother's heart, when I left my darling alone.'
'Comfort yourself, for the heart of the father will care for his own.'
'The heart of the father will spurn her,' I cried, 'for the sin of the wife,
The cloud of the mother's shame will enfold her and darken her life.'
Then his pale face twitch'd; 'O Stephen, I love you, I love you, and yet'—
As I lean'd away from his arms—'would God, we had never met!'
And he spoke not—only the storm; till after a little, I yearn'd
For his voice again, and he call'd to me 'Kiss me!' and there—as I turn'd—
'The heart, the heart!' I kiss'd him, I clung to the sinking form,
And the storm went roaring above us, and he—was out of the storm."

Nor does Southey's formula fit the poem in the South- Irish brogue entitled "To-morrow." "To-morrow" is simple in outline, but strong in interest. A young Irish girl is sought by many lovers, and loves one. The favoured lover tells her he is going over the sea to cut the wheat, and bids her meet him at the chapel door to say good-bye. That night there is a fearful storm. At the appointed time Molly is in the appointed place, but no

Danny comes. She grieves for him and waits. Years pass. Friends tell her that he is in America, married to another woman. She answers them that he will come: she had his "hand-promise." She grows old. One day the agent of the estate orders the bog in the district to be cleared. In the middle of it a body is found. It has been preserved by the bog. They lay it by the chapel-door for recognition; but a new generation has arisen, and none know the dead young man. At last Molly comes hobbling to chapel on a stick. She recognises her lover, and falls dead on his body. They wake the two together, and bury them in one grave.

"XI.

"How-an-iver they laid this body they foun' an the grass
Be the chapel-door, an' the people 'ud see it that
wint into mass—
But a frish gineration had riz, an' most of the
ould was few,
An' I didn't know him meself, an' none of the
parish knew.

"XII.

"But Molly kem limpin' up wid her stick, she was
lamed iv a knee,
Thin a slip of a gossoon call'd, 'Div ye know
him, Molly Magee?'
An' she stood up strait as the Queen of the
world—she lifted her head—
'He said he would meet me tomorra!' an' dhropt
down dead an the dead.

"XIII.

"Och, Molly, we thought, machree, ye would start
back agin into life,
Whin we laid yez, aich be aich, at yer wake like
husban' an' wife.
Sorra the dhry eye thin but was wet for the
frinds that was gone!
Sorra the silent throat but we hard it cryin'
'Ochone!'
An' Shamus O'Shea that has now ten childer,
handsome an' tall,
Him an' his childer wor keenin' as if he had lost
thim all.

"XIV.

"Thin his Riverence buried thim both in wan
grave be the dead boor-tree.*
The young man Danny O'Roon wid his ould
woman, Molly Magee."

Southey's formula fails also to fit "The Spinster's Sweet-Arts." "The Spinster's Sweet-Arts" is one of the most whimsical poems ever penned. The idea is of a spinster in her old age calling her tom-cats by the names of the four lovers she had in her youth, identifying their several human characters with the feline representatives, chatting to them of old courting days, and alluding to more recent times. Robby with the tail represents her first lover; but he has an awkward trick of sticking his claws rather deep in her flesh. In somewhat similar fashion Robby without the tail thought to stick his fingers rather deep in her two hundred a year. She was dangerously near saying "Yes" to the one Robby, and in memory of that tender time she is willing to let the other one kiss her old lips. Steevie, the tailless, was a spick-and-span farmer who had never a poppy in his corn; but then he had the ill-luck to have children in his home, and she never loved the household brats. As for the two men Tommies, she cared nothing for them, like the two cat Tommies. They were ungovernable and rackety things, never at peace, never at rest, never satisfied; always

* Elder-tree.

frisking from one body's lap into another's. The spinster concludes that on the whole she likes her "Sweet-Arts" best with tails.

"VI.

"D'ya mind the murnin' when we was a-walkin'
together, an' stood
By the clauy'd-oop pond, that the foalk be sa
scared at, i' Gigglesby wood,
Wheer the poor wench drownid hersen, black
Sal, es 'ed been disgraced?
An' I feel'd thy arm es I stood wur a-creeäpin
about my waaist;
An' me es wur allus afear'd of a man's gittin'
ower fond,
I sidled awaay an' awaay till I plumpt foot fust
i' the pond;
And, Robby, I niver 'a liked tha sa well, as I did
that daay,
Fur tha joompt in thysen, an' tha hoickt my
feet wi' a flop fro' the clauy."

But Southey's formula does seem to me to fit "The Flight." "The Flight" is a poem on a more familiar theme, and perhaps with less strength of passion. A bride is to wed against her will in order to pay her father's debts. She loves elsewhere. Unable to confront the fate that is in store for her, the girl takes to flight, and also takes—oh, most impotent conclusion!—her sister with her.

When I ask myself why I feel that it must be untrue that the novel-like interest in "The Wreck," "To-morrow," and "The Spinster's Sweet-Arts" is not enough to sustain them, I touch the central question of what is and is not the proper kind of story to tell in verse. Plainly enough, the story that can be as well told in prose has no business in verse, because prose is the natural way to tell it. If Scott's *Lay* had been one of those stories—which it certainly is not—Southey would have been right in asking for special distinction and elevation in the way it was told. But there are stories which ask no quarter from the poetic vehicle, and yet are exactly suited to it. Of such kind is the story of "The Ancient Mariner," the story of "Michael," the story of "Enoch Arden," the story of "The Ballad of Judas Iscariot," the story of "The King's Tragedy," and more than one of the stories embodied in Mr. Browning's dramatic scenes. The authors of these poems—as noble of their kind as poems can be—could have told their stories in prose, and the result would have been in all but the highest degree impressive. The situations embodied are alive with passion, and the novel interest is powerful. But there would have been something wanting, and that would have been the natural vehicle. Not that the stories wanted imagery to heighten them, or rhythm to dignify them, or rhyme to support them, but simply that they wanted verse as verse, just as a man wants clothes. There are other stories which in the covering of verse resemble Christopher North's wooden figures in a tea-garden. You may put a man's garments on them, but they do not therefore cease to be posts. My own inference would be that wherever the psychology in a story is more subtle than the incidents are various a poetic vehicle is to be preferred to a vehicle of prose. Now this does not seem to be the case in "The Flight," and hence I consider the poem poor, although it has fine points. But it is the case in "The Wreck," where the awful isolation of the erring woman is a situation in psychology which requires a delicate and exact touch.

It is the case in "To-morrow," where the final meeting at the church door of the young dead man and his old love is a situation of exquisite nicety as well as infinite pathos. In another way it is the case in the Lincolnshire poem, "The Spinster's Sweet-Arts," where the humour of the situation lies in points so minute that the steadiest hand is required to touch them. These three poems seem to have been fully pondered and worked out to their minutest detail; and, though they are never deficient—as we shall see—in sheer poetic quality, their novel-like interest is enough to distinguish them.

I remember that in speculating with Rossetti as to how much modern poetry might be dead and gone in twenty years, he told me that in his opinion Tennyson was quite the only living poet whose work was absolutely "quintessential," and whose writings would suffer no deduction from time. I dissented faintly, not being able to take quite so high a view; and objected that Tennyson's diction was often wanting in that simplicity which seems to be the only quality of style that wears. Quoting passages of "Michael" against passages of "Enoch Arden," I tried to support the view that Tennyson was not direct and plain enough; that when he wanted to tell you that a man took game up to the hall he did not say so (as Wordsworth would have done) in plain words, but in poetic phraseology, which, however beautiful, was faulty, because false. Rossetti would not allow of this, and instanced Keats, whose diction was "loaded in every rift with ore." I was silenced then; but I still think that what will last longest in Keats is not the filigree work of his early days, but the stern simplicity of some passages of *Hyperion*—the style of his last years. And I think this is true of Tennyson. Even the present volume contains lines like these:

"For whenever a rougher gust might tumble a stormier wave."

"And again, when a balmier breeze curl'd over a peacefuller sea."

It was hardly necessary that this volume should show that on one side of human sympathy Tennyson is ahead of Wordsworth. The serious shortcoming of the author of the *Excursion*, as a poet whose haunt and main region is the human heart, is lack of humour. Tennyson's humour, as seen in the Lincolnshire poems, is certainly fresh and delightful. In power of calling up atmosphere, Tennyson has, perhaps, had very few equals in English poetry. There is, probably, no surer sign of a great poet, or, indeed, of a great imaginative writer in prose, than the command of atmosphere. If Shakspeare has to describe a scene in which sleep plays a part, the surroundings are attuned to sleep: the poppies nod, or the night-bird whistles, or the cricket chirps. Coleridge's skill in atmosphere is scarcely short of Shakspeare's. Wordsworth is less eminent in this quality; but when the forsaken woman lies with her feverish babe, she "sees" the breeze in the tree. If it is not treason to say so, Keats seems strangely deficient in atmosphere when his other great qualities are considered. Surely nothing can be more out of keeping than the atmosphere of that "Last Sonnet," which we are all agreed to admire.

The poet is sailing under a starlit sky, and thinking of the "soft fall and swell" of his lady's breast, of "the sweet unrest" in which he could desire to dwell for ever; and in such a mood of mind the images that occur to him are those of the waters at their priestlike task of ablution, and a clear, cold, bright star sailing steadily in the heavens! Surely the principle in the use of atmosphere in all imaginative writing is this: what does not help forward the action or vivify the emotion retards the one or blurs the other. Atmosphere is of no use in itself, except in such lyrics as "Early Spring," and those poems of mere description which Goethe made fashionable. But the atmosphere in "The Wreck" is always helping on the action; and the carolling of the birds in "The Flight," when the poor enslaved girl is thinking of the love she cannot give, is in excellent keeping:

" xv.

"The dear, mad bride who stabb'd her bridegroom
on her bridal night—
If mad, then I am mad, but sane, if she were in
the right.
My father's madness makes me mad—but words
are only words!
I am not mad, not yet, not quite—There! listen
how the birds

" xvi.

"Begin to warble yonder in the budding orchard
trees!
The lark has past from earth to Heaven upon the
morning breeze!
How gladly, were I one of those, how early
would I wake!
And yet the sorrow that I bear is sorrow for his
sake.

" xvii.

"They love their mates, to whom they sing; or
else their songs, that meet
The morning with such music, would never be
so sweet!
And tho' these fathers will not hear, the blessed
Heavens are just,
And Love is fire, and burns the feet would
trample it to dust."

Coleridge said of a book of Wordsworth's that it was calculated to call up in other men the recollection of their weaknesses and the consciousness of the poet's strength. I am reminded of this as I glance over the terms of qualified praise with which I have spoken of one of the truest books written by quite the truest poet of our time.

In computing the work of Tennyson it must be remembered that sheer weight of years counts for something; and with this advantage over every foremost poet of the century except Wordsworth, the Laureate is perhaps behind Wordsworth only in the full measure of his claim. T. HALL CAINE.

A History of Toryism. By T. E. Kebbel.
(W. H. Allen.)

THE practice of republishing as a book essays just printed in a magazine, or of taking off in a magazine the first bloom of a new book, is not in itself a very commendable one. Mr. Kebbel, who has expanded into this work a number of articles contributed to the *National Review*, has perhaps rendered the consequences of the proceeding as innocuous as may be; but there are redundancies and omissions and inconsistencies, which are eloquent of the magazine, and several traces of incompleteness about the book suggest undue haste to seize the present political

moment. The purpose is frankly avowed of "meeting some of the more popular prejudices against Tories and Toryism which have been allowed to grow up with so little protest . . . that they have glided into political truisms." There is a faint savour of mixed metaphor about the sentence; nor is the fact easily reconciled with the confident statement hard by, that "the Tory party has almost always been in England the popular party." It prepares us, however, for a very manly controversial tone, and excuses, if it does not justify, a great absence of charity for the persons of the Whigs and the principles of the Radicals, and the ingenious special pleading, which demonstrates Toryism to have originated almost all that is fruitful in the legislation of the century.

Everything is traced to the younger Pitt, "the founder of modern Toryism." Perhaps Pitt's principles command the wider respect for not having been too definitely carried out in practice. Of this Toryism, the emancipation of the crown (from the Whigs, as it would appear) was the fundamental principle; and of itself this makes a man a Tory, let him think much as he will about reform, religion, or finance. But none the less Parliamentary Reform, Catholic Emancipation, and Free Trade, are Tory doctrines; not so much because bewildered Tories have, on occasion, found their leaders, and even themselves, dividing in their favour, but on the ground that they were principles of Mr. Pitt's, although from his application of them it would not be easy to collect in what sense he understood them. After this we are soon brought to see that the Sinking Fund was a pardonable error; and as for the "Six Acts," or the "Corn Laws," they are purely episodic. In Mr. Kebbel's eyes the fact remains that from 1815 to 1828 the Tory administration was a successful one. From 1828 to 1832 the break-up of the Tory party causes him some difficulty, which not even special pleading can get over; and for a while he treats Peel and the Duke of Wellington with marked coldness. To him Radicalism is the true child of the French Revolution, and "revolution" he very frankly calls Lord Grey's Bill. In face of the rise of Radicalism, aristocracy, he seems to think, might very fairly have been strengthened; pocket boroughs were the machinery by which it secured a just hold on the House of Commons; and the freeman's franchise gave the working classes a direct connexion with the representative system. His faith, however, triumphs when Sir Robert Peel rallies, and builds up in the middle classes a barrier against Radicalism. It is claimed that from 1835 to 1865 the country was governed on Conservative principles; and, finally, Mr. Kebbel observes of 1867:

"Our representative system having thus completed the middle-class period of its career, now, under the auspices of the Tory party, entered on the popular. The process was so perfectly natural, the transition so obvious and inevitable, that the Tory party made little or no difficulty about the matter. One or two thought the change was rather too abrupt."

And of the present time he goes on to observe with mild complacency:

"The Conservative policy being one of 'social improvement,' the welfare of the labouring classes in our large towns has now [since Lord

Beaconsfield, that is] been secured. That has been one great work of the Tory party, and men's minds have naturally been directed to the condition of the agricultural labourer."

At this moment such writing is not without its use. On the jaded politician (and what politician is not now jaded?) it falls much as a whisk of sea-water on the qualmish passenger. It puts to flight his temper and his comfort, but beyond doubt it braces him to action.

But Mr. Kebbel does not rely only upon the seen, he enlists in his service even the unseen. The absence of certain consequences, which should have flowed inevitably from such principles, requires some explanation. A political creed which is based on Pitt's perverted Radicalism must be singularly unlucky in being identified with a good deal that is the very opposite of Pitt's principles. And then, why have the Tories ever been in opposition? That needs explanation. Consequently, Mr. Kebbel abandons himself easily to the fascinations of the pluperfect tense of the conditional mood, and deals generously in "ifs," "would haves," and "might have beens." It must be owned that the moral of "small beginnings" is pressed rather hard, when we find that had Peel spoken differently about East Retford nearly sixty years ago, the Tories might have been, with uniformly happy results, in power until now; and that, had not the Tories come in in 1852, Mr. Gladstone and Mr. Disraeli might have acted together to the end without the slightest antagonism. In truth, this system of conjectural emendation of history by *ex post facto* prophecy rather belies the title of the book. Mr. Kebbel claims that Toryism is the (selected) principles and opinions of some of the Tory leaders, and he is minded to disregard the "prejudices and projects of the rank and file." But truly this cannot be done. The Liberal party has, on the whole, been somewhat better than its leaders, as the Tories have been somewhat worse; but the creed of a party is to be judged in great part by its acts, and not merely by the pious opinions or the unrealised aspirations (conjecturally ascertained) of a half-dozen of its leaders. *A History of Toryism* is also a history of the Tory party, and should not ignore it; nor ought a history of any kind to ignore, so completely as does Mr. Kebbel's, the effects of the industrial changes and growth of population of the last hundred years. In them might be found a clue to much that Toryism does not explain; and though possibly economic questions may not interest Mr. Kebbel, it mars an ingenious, a widely-informed, and a most sincere book, to have made so little account of them.

J. A. HAMILTON.

Flying Leaves from East and West. By Emily Pfeiffer. (Field & Tuer.)

Mrs. PFEIFFER appears in all the glory of thick paper, rough edges, and the best of print. But, as she favours us neither with preface nor index, and scorns even the concessions of head-lines, titles to the chapters, or a table of contents, the reviewer is left to pick up as best he may the circumstances under which she made the trips described in this most aesthetic looking, but at the same time extremely unworkmanlike, volume.

As a rule, Mrs. Pfeiffer writes with good sense, and an absence of triviality, which contrasts very favourably with the majority of her sex who have insisted on taking the world into their confidence. She is not so encyclopaedic as Miss Cumming, nor so optimist as Mrs. Bishop, nor does she imitate Lady Brassey by constituting her pages a chronicle of her domestic circle. It is rarely indeed that Mrs. Pfeiffer transgresses good taste, except in a needless allusion on p. 27, in a reference (p. 161) to a recent "revelation," and in the somewhat repulsive report to which she gives currency on pp. 289-290. Her English also is vastly superior to that of most bookish tourists; and her observations, if necessarily superficial, are shrewd and admirably expressed. The whole book, with the exception of certain dissertations on Greek Art, Plato's *Republic*, women's rights, and the way Carlyle used his wife—all of which the judicious reader will skip—is written with a vigour, and sometimes with an almost poetical beauty, which stamps the latest of the lady travellers as a woman of so much culture that we can forget her tendency to condescension.

Her Eastern *Flying Leaves* relate solely to Smyrna and Athens ground which has been pretty well covered by a host of predecessors, and on the whole rather more fully by Mrs. Scott Stevenson than by Mrs. Pfeiffer. The account of Midhat Pasha's harem is, however, interesting. Her Western *Leaves* flutter over the now well-beaten route across the American continent—New York, Saratoga, Montreal, Toronto, Niagara, Chicago, Denver, Manitou, Salt Lake, San Francisco, Yosemite, the Big Trees, and back again to St. Louis, Washington, Philadelphia, Boston, and New York. This promises little in the way of novelty, especially as the author does not appear to be what the Americans call "an expert" in anything except women's rights and the art of describing scenery with uncommon grace. But of both specialties we have already had enough. Her account of the Mormon women is, nevertheless, very good; her notes on the Yosemite read pleasantly, and the picture she gives of life in the German settlement of New Holstein (p. 106) is really fresh. At Chicago, unlike most of our country-folk, she did not go to see the pigs killed; and she was impressed by the sordid character of this dollar-loving community. High breeding and the Better Life seem unknown. The women pick their teeth, and the men are not polite to ladies in the "cars." Over-dressing and ostentation is the rule. The Africans' noses are rising (p. 84); and though Mrs. Pfeiffer was not in the South proper, she is quite positive that the negro type is disappearing from a region where actually it never existed. Chinatown was, of course, visited, and is sketched with vivacity, but little novelty. The American women are so generally beautiful that a pretty girl is scarcely noticed; but they fade early. They have "clear-cut features, slender proportion, delicate hands, and narrow arched feet, with heels and ankles fine drawn as those of a racer." Mrs. Pfeiffer likes the Americans, but is in no way enamoured of their institutions. Democracy is not any prettier the closer it is examined, and on this theme she has some thoughtful remarks which are worthy of study (pp. 287-302).

Altogether, *Flying Leaves*, though nothing very startling, is about the best book which has been written on the American "Grand tour." Its weakness is its superficiality—its sweeping conclusions from the most feeble premises. An individual is taken as a type of fifty millions: an unmannerly lout as the ensampler of an entire nation. The writer, throughout her volume, refers to "the Americans," and in the extract quoted describes an "American woman" as if she were an ethnic breed as distinct among bipeds as an Arab horse among quadrupeds. There is no American type. One might as well speak of the European type. There is perhaps a cast of countenance and an order of mind characteristic of the New Englander, or of the Georgian, or of the Virginian; for the settlements of these folk are of ancient date, and outside the cities have remained for many generations with very little intermixture. It is different with the people of the newer portion of the Union. There, men and women from every nation in Europe meet, intermarry, and contribute their habits and their mental traits to the heterogeneous community. Out of this ethnic amalgam, which is as varied as the composition of Defoe's "true born Englishman," a type will doubtless in time arise. Meanwhile, it is misleading to describe any individual as the model on which all the others are moulded. The temptation is, I allow, great, and, moreover, the Americans like it, for they long to be a people instead of an overflow of Europe; but it is not the less a blunder.

Mrs. Pfeiffer's book is, however, decidedly superior to the shelfful of which the construction of the Union Pacific Railroad has been the *primum mobile*. She has had hardly a fair chance in coming into the field so late in the day; yet she has done so well, despite her patronage of Principals (p. 94) and of Princesses whose spare bedrooms were not in trim (p. 90), that, at the risk of committing the sin we have been reproving, we may express the hope of again meeting the author of *Flying Leaves* on fresher ground, and, we may add, of seeing the present volume improved by some weeding, and the addition of an index and a table of contents. ROBERT BROWN.

The Encyclopaedic Dictionary. A New and Original Work of Reference to all the Words in the English Language. Ds—MEL. (Cassell.)

THAT this laborious and comprehensive work should continue to be issued steadily, at the rate of two volumes a year, is no more than was to be expected from the well-known business powers of the enterprising firm which publishes it. In the eighth volume we have now reached the middle of the alphabet. So far from any falling off being perceptible, there are several signs of improvement on the original plan of the work, especially in the greater care given to derivations, and in the addition of frequent extracts from Crabb's *Synonyms*, to illustrate the different shades of meaning borne by words nearly alike. For example, under *deter* we have the difference explained between *deter*, *discourage*, and *dishearten*; under *docile*, the relations of *docility*, *tractability*, and *docility*; *excuse* we may discriminate from *pardon*; *ferocious*, *fierce*, and

savage from one another (under *ferocity*); and *madness*, *frenzy*, *rage*, and *fury* (under *madness*). This is an extension of the encyclopaedic idea which finds a useful place here, though obviously it would be inadmissible in a word-dictionary.

We notice much care in the indication of words, or the special senses of words, that are now obsolete, as, for example, in the various substantives *exhort*, *exhortance*, *exhortator*, or again *for-way*, *for-weary*, *for-welked*, &c. But it appears misleading in sense, if literally true, to affix the asterisk (for obsolete) to old spelling only, where the word is identical. Why should we call the *e* and the *u* in *exhortacion*, *exhortacioun*, obsolete? It is not the custom now to write them, but the words themselves are no more obsolete than *exhortation*. *Gazyng-stocks*, used by Udall, does not become obsolete through its slightly antique spelling; and to affix the asterisk to this, while denying it to the word written *gazing-stock*, is not following a true principle. *Gazet*, the small Venetian coin, whence our modern *gazette*, from the early news-sheet originally sold for that price, may be a word now out of use; but according to the same rule *gavot*, the early spelling (used by Arbuthnot) of our *gavotte*, a dance or dancetune, would now, too, be obsolete.

Compound words cause much exercising of the spirit to the dictionary-maker, no less than to the word-hunter; whether those formed of two or more integral words, as *fire-damp*, *fire-box-door*, or those formed by the addition of a suffix, or an inflexion, to a single or even a compound word, such as *firing*, *fiery*, *fireworker*. Shall all these compounds be placed under the head of the principal word upon which they are made, thus showing at once the capabilities and much of the history of that word, and the numerous ideas that have often radiated from one central notion; or shall they be set in strict alphabetical order as the mere verbal signs of speech, regardless of their growth and connection? The latter is perhaps the handiest for mechanical reference, or for elementary purposes; undoubtedly, too, when the root happens to be spelt differently (as *fiery*), or the principal happens to be the second word of the compound (as *bonfire*, *wild-fire*), it must be set in its right place alphabetically, as a practical index. But the first method approves itself as that most conducive to thought and intelligence—setting aside the grammatical treatment of the original word. This of course would, logically, be grouped together, and would precede the compounds. Either of the two methods is defensible. But the *Encyclopaedic Dictionary* follows sometimes one, sometimes the other; and though we by no means undervalue the stores of information here brought together, we venture to think that certain and systematic arrangement is necessary to the usefulness of a work of this class. Take, for example, *fire*: it is first treated as a substantive, with its literal, figurative, and technical meanings, and the special phrases in which it is employed; next follows a quotation from Crabb's *Synonyms*; after which come ninety-one compounds, ranging from *fire-alarm* to *fire-worshippers*, some being adjectives, some substantives. Now we again find *fire* treated as a verb with its various meanings, after

which come more compounds, over fifty in number, from *fire-arm* to *fire-worker*. These are also part adjectives, part substantives (chiefly the latter), and the only words among them specially relevant to the verb at their head are the participial adjective and substantive *fired* and *firing*. But even this is not a consistent rule, for the noun *firer*, which, as formed upon the noun, ought at least to have been placed among the group following the substantive, is also found following the verb-group. This article *fire*, which exhibits such an extraordinary number of compounds and interesting examples of incidental sense or value, is perhaps an extreme, but not an unusual, case. Under *man*, we get the word treated as substantive in its ordinary and technical meanings, then as adjective, followed by a number of compound adjectives and nouns, from *man-ape* to *man-worship*. Then comes *man* as a verb. After this, passing to *manable*, *manacle*, *manage*, &c., we suppose we have done with *man* and his compounds altogether. Not so; between the Maori word *manawa* and the obsolete *manca* we get *man-bote*, in other places *manfull*, *manhood*, *mankind*, to say nothing of *manly*, *manish*, &c., scattered about among miscellaneous words beginning with *man*.

These instances, however, if they show the slight demerits, much more bring up the excellences of the work. The articles *devil*, *got*, *earth*, may be named as further illustrations of the variety of encyclopædic information here to be found in short compass, while they exhibit the ease with which our language lends itself to new combinations when needed. The curious in such matters may look at *double* and the affix *inter*, the former of which, with its combinations, occupies eighteen columns, the latter no less than forty-four—a sort of index of the ready adaptation of foreign terms. The last word we shall point out in this connexion, of special interest at the present electioneering period, is *gerry-mander*, an importation from America used by Prof. Fawcett in 1883 in reference to the manipulation of borough boundaries for the formation of electoral districts.

The work is especially rich in scientific terms, names, and descriptions, of botany, chemistry, zoology, entomology, &c., thus again proving its larger encyclopædic character. A friend who is continually engaged in supplying these and other miscellaneous needs declares that the work is "of the very greatest use" for practical utility.

L. TOULMIN SMITH.

Syed Ahmed: his Life and Work. By Lieut.-Col. G. Grahame. (Blackwood.)

WHETHER or not we subscribe to the doctrine that "England is a Muhammadan power," we must at least admit that no fair means ought to be neglected by which she can procure the confidence of the Muhammadan world. The age of crusades has long gone by; on the other hand, Islam itself is showing an aggressive spirit. The old-fashioned Muslims are opposed to what we call civilisation and progress, though there is a party among them which takes more liberal views. That party is represented not only in Turkey, but in parts of India too. It is of the utmost importance to this country, which professes to be the

mistress of the largest of Muhammadan populations, that there should be a clear understanding on this subject. On the decision of the question, "Whether civilisation and Islam are compatible?" depends a vast future—that of fifty millions of human beings. Is this population to become more and more hostile? Are its leading members to sympathise with bigotry and backwardness elsewhere—to play into the hands of our numerous foes in other countries? Because, if so, the sooner England prepares for trouble the better. Important light is thrown upon the matter by Col. Grahame's *Syed Ahmed*, a book which shows the extraordinary spectacle of "Occidentalisation" being carried out by a sheikh of Arab blood, ignorant of the English language. Pan-Islamism—by which we are to understand a fusion of fanatical obstructivism with official corruption—is being vigorously opposed in India by an ex-official of warm religious convictions. Ought we not to give a sympathetic welcome to so unexpected an ally?

Convinced that this is so, Col. Grahame has given to the English public a clearly-written and seasonable book on the life and work of one whom he has honoured himself by knowing and assisting long and intimately. Saiyid Ahmad—to give the name its true transliteration—was a member of the subordinate judiciary in Hindustan for thirty-seven years, retiring on his pension in 1876. Long before that time came he had been busy—so far as his other duties allowed—in the twofold work of elevating the moral and social level of his co-religionists, and promoting a *rapprochement* between the alien government and all classes of the natives. With these objects in view he had put forth numerous pamphlets, had visited England, entered one of his sons at Cambridge and Lincoln's Inn, and, finally, set on foot a Translation Society and a college at Ghazipur. Transferred to Aligarh, he founded there a Literary and Scientific Society, and crowned the scheme by opening an Anglo-Vernacular College. The beginnings of these things were small, feeble, and exposed to much opposition from the old school of Muslims. Their chief objections to the existing system of state education—and they were obstacles to all rational instruction, and of greater vitality and practical force than English readers might suppose—were founded on the purely secular character of the teaching, the corrosive effect of English learning on belief, and the other usual conservative prejudices. By a spirit of compromise, the Saiyid undertook to provide a somewhat different education, which, while still taking its stand on the principles of progress, should win the confidence of moderate Muslims by being indigenous, and seeming to acknowledge their objections as above noted. Nevertheless, in reality, the general ideal was taken from English public schools; in one respect going a step further by discouraging home-boarding, and removing the pupils as far as possible from home influences, which were boldly treated as antagonistic. At the same time, instruction was to be conveyed in Oriental languages, and in close obedience to the creed of Islam; and this concession proved sufficient, masking, so to speak, the essentially Liberal character of the movement, which was the reverse of "Conservative," in the strict

sense of the word. As stated by one of its early friends,

"the main object of the institution is to impart liberal instruction to the children of the better classes of the Musalman community; to make them regard English education as necessary to a gentleman, whether of Western or Oriental birth."

The syllabus was to comprehend English and Arabic, Moral Science, Natural Philosophy, and Muhammadan Jurisprudence (including Theology, which is its basis).

Thus was the issue raised—the great issue whose decision is to involve, perhaps, the destiny of Islam. Is it compatible with the faith to recognise "open questions," and to treat the problems of mind and matter from the point of view of experience? Many men, respectable by their years and earnestness, said "No," and thus threw on the Saiyid and his associates the burden of proof.

The practical demonstration of the succeeding ten years sufficed to convince all those who were open to conviction. Supported not only by the most distinguished Liberals among the Hindu leaders, and the more enlightened among the British governors, but—what was more conclusive—by Sir Salar Jung, prime minister of the Nizam, by the Nawab of Rampur, and by prominent sons of Islam from Patiala on the Satlaj to Dacca in Eastern Bengal, the college took root and flourished rapidly. In the words of the most distinguished of modern Anglo-Indian literary men—Mr. W. W. Hunter—the college

"solves both the problems of Muhammadan education. It not only provides instruction for those of the North West Provinces, but it stands forth as an example to all India of a Muhammadan institution which effectively combines the secular with the religious aspects of education; and, while recognising the special spiritual needs of the Muhammadan youth, bases its teaching on the truths of Western science, and is, in tone and tendency, thoroughly loyal to our Queen. This is a noble work for a mortal to have done upon earth."

The present principal of the Aligarh College is Mr. Theodore Beck, a distinguished Cambridge man. He has written a description of the institution, which forms an appendix to Col. Grahame's work. From this we learn that the interior quadrangle, when completed, will be of the vast dimensions of 1004 ft. by 576. It will be divided by a row of buildings combining hall, library, museum, and lecture-rooms. At either end will be groups of class-rooms, with dining-halls and mosques. The principal, head master, and professor of English, have detached residences on the grounds of one hundred acres which surround the college. There are six other houses for the Hindu boarders—for the college is catholic. There is a "Union Club" with a debating-hall, library, and reading-room. Entering the main building, one finds that the chief lecture-room was erected by two Nawabs of the Deccan in honour and memory of a deceased uncle. Neighbouring rooms of the same kind commemorate the names and the beneficence of four other Muhammadan founders, one of whom has built two more. The boarding-house for Muhammadan students forms the main part of the quadrangle, each set of rooms being large,

airy, and private. Finally, a theatre for examinations and grand convocations is in course of erection, and is to be named after an European benefactor, Sir J. Strachey. The names of Muir, Hunter, and Elliott are also inscribed in testimony of benefactions. There are at present 255 students in the college. It is impossible to foresee the ultimate limits. Already the movement has done away with English contempt on the one hand, and with Muslim fear and pride upon the other. It is not merely a step in education, it is the commencement of an epoch.

Thus has this wise and earnest man lived to see the good of his labours, accomplishing in a great measure the revival which he undertook to bring about, and preparing the way for a *modus vivendi* between conquered and conquerors, without compromising the self-respect of his own society, or failing to render to Caesar the things that are Caesar's. It is surely not because he has so far succeeded, and that by gentle means, that he is to be considered less worthy of honour than the ordinary run of public men, the hack placemen, the hireling agitators, or the traders in hereditary hatred. H. G. KEENE.

NEW NOVELS.

At the Red Glove. By Katharine S. Macquoid. In 3 vols. (Ward & Downey.)

John Maidment. By Julian Sturgis. In 2 vols. (Longmans.)

Margaret Grantley. By L. Higgin. In 2 vols. (Sampson Low.)

The Last Meeting. By Brander Matthews. (Fisher Unwin.)

The Radical's Daughter. By "A Peer's Son." (Longmans.)

Her Gentle Deeds. By Sarah Tytler. (Isbister.)

Odile: a Tale of the Commune. By Mrs. Frank Pentrill. (Dublin: Gill.)

False Steps. By Douglas Dalton. (Sonnen-schein.)

Mrs. MACQUOID's latest story is told with all the assured skill of an accomplished narrator; and if it has not the freshness of *Patty*, it has all the other characteristics of that charming novel. Mrs. Macquoid has the invaluable faculty of telling even the simplest tale pleasantly; and, so far as plot goes, her new book is simple enough. Once more she has drawn her background and her characters from those Continental haunts which she knows so well. There is nothing in its way pleasanter in the story than the opening chapters describing the sleepy old town of Abeyron, in Southern France, with the first introduction to us of the real heroine of the book, as she stands, a lovely figure, in the deserted sunlit square, drawing water from the ancient Fountain of the White Swan. A rich, coarse-natured hotel-keeper of Berne, a Monsieur Carouge, sees the beautiful Elvire, and in a few week's time he has bought her from her impoverished and wretched mother; for, though he marries the girl, she is as much a purchase as any butt of wine for his hotel cellars. In her new life Elvire is at first happy. By inevitable degrees she

becomes discontented, melancholy, rebellious, sullenly indifferent; for her husband, who has carefully done his best to stifle all true life in his purchased wife, inadvertently brings her an old romance to read, which is to her as a ray of light in her darkness. She knows that she has never loved, and that she is yearning for love; and when one day she learns that Carouge is dead, her emotions are simply those of relief. She is now a rich widow, her husband having left her the Hôtel Beauregard and all his property. In due time she sees and loves a handsome young Swiss, one Rudolf Engemann. But, before this, the stream of the story has drifted into new channels. Pretty Marie Peyrolles has come to live with her cousin Madame Robineau, who keeps the little Bernese shop known as "The Red Glove." With Madame Robineau live two lodgers, one of whom is Rudolf Engemann, the young bank clerk, and the other is a certain Capitaine Loigerot, a retired French officer. How both fall in love with pretty Marie; how she and Loigerot and Engemann and Madame Carouge manage to "get mixed up" in their engagements to each other, and how ultimately everything comes right except for the less fortunate proprietress of the Hotel Beauregard, the intending reader will best enjoy finding out for himself. But, whatever Mrs. Macquoid may have meant to do, she has made Madame Carouge the real heroine of the book: the interest, for the most part, centres in the account of this beautiful, ignorant, passionate woman. There is, to me, a curious far-off suggestion of Madame Bovary in Elvire Carouge, though I need hardly say that there is a wide difference between Mrs. Macquoid's method and that of Gustave Flaubert. But even with Marie Peyrolles and Rudolph Engemann, and the good "papa Loigerot" to set against Madame Fontaine and Madame Robineau, and Jean Carouge and Elvire, there is still left with the reader something of vague dissatisfaction with the life which, for the time being, he has been living, germane to that stronger unspoken protest after each renewed acquaintanceship with the history of Emma Bovary.

Mr. Julian Sturgis has won his spurs ere this as a clever and attractive writer. His *John Maidment* is an interesting psychological study, and probably we have all at one time or other come across just such an one as the hero of this book. He is the kind of young man who may be described as a cousin, or at least as a distant relative, of Roderick Hudson. As a story *John Maidment* is not at all remarkable; but what there is of incident is told well, and the dialogue as a rule is excellent. In tracing the career of this "awful Radical," as Maidment was styled at Oxford, to his election as a Conservative M.P.; from his love affair with Letty, the sister of his loyal friend and admirer Paul Brent, to his marriage with a different girl altogether; and to his ultimate satisfaction with things in general—Mr. Sturgis has shown considerable power of analysis and delineation. He has, however, concentrated too much attention on the central figure, or, rather, he has not sufficiently touched up his "supernumeraries," for such they are. The political note, though not infrequently introduced, is at no time too dominant.

Miss Higgin—I presume I am right in attributing the authorship of *Margaret Grantley* to a woman—has written a not very interesting novel. It would have been much improved if its author had condensed it into a single volume; but even in that more suitable and agreeable guise it would not have afforded any particular mental excitement. A curious lethargy steals over one in the perusal of such chapters as occupy most of the first volume. Margaret Grantley goes through several not unusual experiences, including falling in love. There is considerable pathos in the account of her inability to marry Charles Verney, owing to her mother's insanity and her own possible taint (of which, however, there is never any sign), in her genuine acquiescence in Verney's marriage with Amy Binden, and in her devotion to her father who becomes blind. The most interesting chapters are those set in Spain at the time of the Carlist Insurrection. The *motif* of the whole story could not be more concisely expressed than in Goethe's words—quoted as a motto before one of the chapters—"It is only with renunciation that life, properly speaking, can be said to begin."

Mr. Brander Matthews's new novel is one of the pleasantest and most entertaining books that I have read for some time. There is vigorous character-drawing; and the characters are, for the most part, men and women in whose company one is pleased to pass the time. There are many clever and shrewd remarks, considerable humour, and some wit; there is mystery, and a suggestion of the weird; there is a delightful love-episode; there is an unmitigated villain and exciting incident; and in the end all comes right. What more could be said for any novel of this kind? The sense of mystery, especially if the latter have the due touch of weirdness, is one in which most readers delight; and in *The Last Meeting* we have a bachelor's room in New York with a row of death-masks, the very room from which, moreover, the hero, Frederick Olyphant, one evening "softly and suddenly vanishes away"; an opal that brings ill-luck; a cat's-eye that induces the return of good fortune; and vague references to a terrible institution known as "The Brotherhood of the Sea." It is understood that certain of the adventures of the hero are identical with experiences of Mr. F. D. Millet, the artist and, in 1877-78, the special correspondent of the *Daily News* with the Russian army; that "Uncle Larry's" collection of death-masks is that of Mr. Lawrence Hutton; and that various other incidents and characters are taken from reality. That several of the latter are genuinely recognisable types is indubitable. How Nathaniel Hawthorne would have envied Mr. Matthews his villain Constantine Vollonides! This consummate scoundrel, who carries revenge into the region of art, and in craftsmanship soars beyond Mephistopheles, has a birth-mark on his forehead in the shape of a heart. At most times this unpleasant object stands out in its redness from the deathly pallor of his face; but when he is under any fierce emotion, the congested blood turns it quite black! There are many good things in this book—clever sayings which remind one somewhat of Theodore Winthrop. Having said so much in its praise, I may note what seem to me two serious flaws: one is the portrait of the English gentleman, Hobson-

Cholmondeley—to all intents he is a “dummy figure,” constantly uttering vapid French phrases, and is no more like any recognisable type of Englishman than the man in the moon; the other is “the last meeting,” where a most unnatural coincidence greatly detracts from the reader's excitement—it is a manoeuvre fitted for Drury Lane, not for written romance. But, even with these two flaws, the book is a delightful one of its class.

“A Peer's Son” may have knowledge of many men, but he has little of their literary tastes if he thinks the present an expedient time for the issue of his political romance—if that can be called a romance wherein politics are in the ratio of seven to ten. The newspapers for months past have been productive of daily increasing *ennui*, and, until the last few days, have latterly become abhorrent even to look at from a distance. We have heard, till we have cried aloud in our misery that we would fain never hearken more, all the wearisomely reiterated *pros* and *cons* anent the principles of the Great Conservative Party and the Great Radical Party. It is hard, indeed, that when we take up a novel we are not only to be defrauded of plot, of incident, of mental excitement of any kind, but to be surfeited on politics. In *The Radical's Daughter* politics confronts us everywhere—in the barracks, at dinner-parties, and at pic-nics; and even the slight love-plot of the story is so swamped in Radical and Tory “jaw,” that we are more than anything else reminded of those homeopathic tinctures where one drop goes to the whole phial of water. Rupert Fane is ultimately returned as Conservative candidate for Birmingham—Perfectham, the author styles it—to the disgust of the mayor, Mr. Strike, in whom one recognises the salient traits of a certain shining light among the Radicals; and in the end he marries the girl he is in love with, a young lady against whom Miss Helen Taylor would have no chance. This is about all, with endless political talk-kee. To do “A Peer's Son” justice, he gives every one his due. I am inclined to believe that, like a certain genial bard, he would have quite a good word to say for “Auld Sootie.” *The Radical's Daughter* has a romantic ending. The young lady sends Rupert Fane a post-card bearing the succinct message, “You may come and see Papa.” With utmost, with devout, thankfulness the critic hastens to assure the reader that this too fascinating narrative is in one volume.

Miss Sarah Tytler's latest story is just such a book as girls will delight in. Kirsten Stewart, is a real heroine in her quiet unselfishness and self-reliance. She and the three children who ultimately come under her care have some sad and trying experiences, but at last “her gentle deeds” bring about the reward which she so well deserves. Part of the story is laid in Australia, but there is not the slightest austral colouring. The Owen family might as well have lived in Yorkshire, save that there could have been no burning-ship incident and no “bush” for Owen *pater* to disappear into! But of its kind *Her Gentle Deeds* is a good book, healthy in sentiment, interesting without being sensational, and teaching the wisest lesson of life—self-reliance.

Odile is a pleasant little story, and eminently readable, notwithstanding the fact that the Paris Commune of 1871 is nearly played out as a “background.” Perhaps it owes its attractiveness to the fact that Mrs. Pentrill is not ambitious, and attempts neither the war-correspondent's graphic narrative-style nor the Zolaesque method of dealing with horrors. Ernest and Odile de Fougères are brother and sister, but are soon separated from each other by Ernest having to fly from Paris through being mixed up in a Royalist conspiracy. He returns on the advent of the Commune, and in time for many exciting incidents. As has been said, the story is pleasing, and one might well do worse than while away an hour with it; more than this I could not say.

False Steps is not reprinted from the *London Journal* or the *Family Herald*. It is perhaps necessary to say this, for the style of the story might lead one to suppose that it had been. The opening sentence, which I suppose is prose-poetry, gives a hint of the writer's capacity.

“It was a glorious day, the close of sweet May” [the rhyme ceases here, it is true]; “the hedges were white with blossoms, and the breeze wooed the budding trees, the butterflies were venturing forth, and all nature seemed to vie within itself in showing forth the glories of creation. The scene is such as is rarely met with but in merrie England.”

I have not read all the unpalatable verbiage that follows, but I may quote one really good sentence, the last in the book, substituting “perusal” for Mr. Douglas Dalton's “temptation”: “God grant that you and I may be spared the *perusal* of *False Steps*.”

WILLIAM SHARP.

GIFT-BOOKS.

The Life of Jesus Christ illustrated from the Italian Painters of the Fourteenth, Fifteenth, and Sixteenth Centuries. By F. T. Palgrave. (National Society.) This is a very beautiful book and the chromo-lithographs, with which it is adorned, or rather, which are illustrated by the text, reflect great credit on the care and skill of all concerned in their production. The process employed and the small scale tend to obliterate differences in the styles of the various artists; and if the book were to be criticised from this point of view, it would be interesting to note how some of them gain and some lose by this treatment. The object of the volume, however, demands a different office from the reviewer. The Preface informs us that the dominant wish of the promoters has been “not to offer a gallery of fine or famous works,” but “such pictures as, within the narrow limits which bound even the best human power, seem to have entered most deeply into the soul and inmost sentiment of the Gospel story, and may, hence, most vitally impress children at once with its spiritual force, and its historical reality.” This is the professed object of the book; and the main difficulty of the reviewer is that Mr. Palgrave scarcely speaks to his text. We fully expected to find that each of the painted religious poems of Fra Angelico, Perugino, Duccio, and the rest would have been accompanied by a short discourse designed to impress upon the minds of children the spiritual significance of the scene represented and the inspiration with which the devoted “hand” of the artist had enabled him to paint the “soul” of his subject; but instead of this we have a preface which no child would understand, and

learned notes to the pictures in which the last lessons of Morelli are more evident than a desire to edify. Indeed, it seems to us that Mr. Palgrave has endeavoured to unite the rôles of evangelist and art-critic with the success which might have been expected. Nevertheless the book is, as we have said, a beautiful one; and the children can look at the pictures, and their elders can do this and read the text also, with pleasure and profit.

The Water Babies. By Charles Kingsley. With one hundred illustrations by Linley Sambourne. (Macmillan.) In the case of *Alice in Wonderland*, the pencil of Mr. Tenniel contributed not a little to give reality to that immortal gallery of personages who call Lewis Carroll father. But *The Water Babies* has hitherto had to depend almost entirely upon the pen of its author. The original edition did, indeed, have two facsimiles of drawings by Sir Noel Paton, and some eight head-pieces to the chapters, apparently not from the same hand. But both facsimiles were confined to the magic life of fairies, water-babies, and other urchins under the sea; while the little cuts can only have whetted the appetite of dull imagination. Mr. Sambourne, therefore, was practically without a rival in a field which any artist might envy. We cannot say that he has altogether satisfied our expectation. Tom, in what we may call his tadpole days, is excellent; but we do not care much for him as a sweep; and we are sure that Kingsley would have protested very forcibly against the prudery which girds him, in his later years, (*horresco referens*) with bathing drawers. It is more pleasant to select illustrations for praise. There is one of Owen and Huxley examining a water baby, upon which Mr. Sambourne might be content to rest his future fame. Excellent, too, are the vixen with her cubs, the caddis, the salmon on p. 107, the turbot, the lobster on p. 203, the king of the herrings, the gairfowl (except that it lacks the specific white patch on the cheek), the molly, the turnip, and the water-dog *passim*. Despite some notable omissions, such as the architecture of Harthover Place, and a few failures of commission, Mr. Sambourne has done enough to link his name with a book which generations to come will probably consider Kingsley's masterpiece.

Treasure Island. By R. L. Stevenson. Illustrated edition. (Cassell.) If *Treasure Island* was to be illustrated—and, in good sooth, it stands no more in need of illustrations than does *Westward Ho*—we are thankful to have been spared an *édition de luxe*, meant for display rather than for reading. The one thing really wanted is the facsimile of the chart, as the author himself seems to have felt. That boy must have a poor imagination who cannot picture to himself Long John Silver and the rest of the famous crew at least as vividly as they are here delineated. The illustrations, too, are by different hands, and of unequal merit. One of the best is that facing p. 2; one of the worst that facing p. 200. If, however, an illustrated edition brings new readers to *Treasure Island*, it will not have been published in vain.

Italy from the Alps to Mount Etna: its Arts, its Cities, its Lakes, its Rivers. With 164 illustrations. (Virtue.)—*The Land of Greece.* Described and Illustrated. By Charles Henry Hanson. With Forty-four illustrations and Three Maps. (Nelson.) These two handsome volumes may be conveniently noticed together. Neither of them pretends to be an original work, but a compilation from sources open to all, with the object of introducing to the large public some of the picturesque and historical associations of travel in the Mediterranean. *Italy* has the more numerous illustrations, and is apparently written by one who has seen what he describes. We say “apparently,” for

we have been shocked by two misprints on a single page (264). "*Cape Mycene*" in connexion with the Bay of Naples is very painful. Greece, on the other hand, combines a running comment on history with a minimum of description. Here, again, we have been startled to find Dr. Schliemann dubbed "the distinguished Russian explorer"; and the author has not heard of the successful excavation of Tiryns. The frontispiece is a good example of what cheap wood-engraving can do to reproduce architecture from a photograph. Neither book has an index, which is a serious fault, for it is not everyone who knows where to look for Carrara in Italy or for Bassae in Greece. But perhaps these remarks are hypercritical in the case of works that are essentially popular. We can recommend them both as presents, or still better as prizes, where it is desired to stir up an interest in countries which classical education has made both odious and unintelligible to so many unfortunate boys.

The Looking Glass. By Theophilus Marcliffe. Reprint, with an Appendix, by F. G. Stephens. (Bemrose.) It is scarcely the literary quality or the educational merit of this little book which justifies its reproduction. The original title-page states that it is "Calculated to awaken the Emulation of Young Persons of both Sexes, in the Pursuit of every laudable Attainment: particularly in the Cultivation of the Fine Arts," but we very much doubt whether this laudable purpose was ever realised. The short story tells us how the son of a leather breeches maker, a Catholic and an Irishman, began at an early age to draw upon his father's walls and floor with a piece of chalk, and made studies of his father's legs; and then describes with some minuteness how he mastered certain elementary difficulties for himself, and got hints and instruction from others until he attracted the notice of Thomas Banks, the sculptor, became a student of the Royal Academy, gained prizes at the Society of Arts, and was able to support himself when he was fifteen years old. It is all told in the stilted and manifestly didactic manner which the instructors of our fathers and grand-fathers thought suitable to the ears of youth. As a picture—and a true picture—of perseverance rewarded it has certain merits, and the fact that it was most probably written by William Godwin adds an interest; but to-day it is to be welcomed not so much on these accounts as because it preserves for us the early history of one of the most genuine and thorough artists of the English school. The little boy whose example was held up as a "Looking Glass" to the youth of the beginning of the century was none other than William Mulready, R.A., the painter of "Choosing the Wedding Gown," and, with the exception of Wilkie, the best genre painter of the English School. The task of annotating the book could not have been confided more appropriately than to Mr. F. G. Stephens, his friend and biographer. The appendix is a perfect mine of curious lore relating to Mulready and his times, most of which has already appeared in Mr. Stephens's *Memorials of Mulready*. To the history of Banks's vigorous statue, generally called the "Mourning Achilles," we may add that it is now in the entrance hall of the Royal Academy at Burlington House, and was never, we believe, executed in marble, as Mr. Stephens supposes. We agree with his remarks about the illustrations to the book, which are supposed to be facsimiles of boyish attempts. They were doubtless drawn by Mulready himself, and are probably imitations of what he did when a child, but they betray the hand of a draughtsman who could do much better if he chose.

Golden Legends of the Olden Time. By John Stoughton. (Hodder & Stoughton.) In this

work Dr. Stoughton has written not "the lives of the saints, but only legendary parts of them, adding, however, accepted facts, so as to render the stories intelligible." He has, we think, wisely not endeavoured to separate the true from the false or the probable from the improbable, but has simply told his stories as stories, though at the same time seeking to show in what way the legends arose, and to trace their connexion with the teaching of the Gospels. The selection, which includes "St. Christopher," "St. George and the Dragon," and "St. Francis of Assisi," appears to be a good one, and calculated to make young readers acquainted with the most familiar legends of the saints, without some knowledge of which so many pictures, both in English and foreign galleries, are unintelligible.

The Wanderings of the "Beetle." By E. Prioleau Warren and C. F. M. Cleverley. (Griffith, Farran & Co.) This is one of the most amusing and most instructive of Christmas books. It records the incidents of a summer tour on the Meuse, the travellers being four English oarsmen, and the "Beetle" being their boat. The "Commander" (Mr. Cleverley?) and the "Gunner" (Mr. Warren?) are responsible for the letter-press and the sketches, and both are done with a light hand. A serious purpose runs through the pleasant record; and the impression it leaves of the villages, towns, *cafés chantants*, churches, cathedrals, inns, locks, peasants, priests, bargees, waiters, and waiting-maids, is not only likely to be permanent, but worthy of being retained. Commander Cleverley's sketches occasionally remind us of the early drawings of Thackeray in illustration of similar tours.

Tam O'Shanter. By Robert Burns. Illustrated by George Cruikshank. (Griffith, Farran & Co.) It was a bold step of Mr. George Cruikshank the younger—for so he should be styled on the title-page—to attempt the illustration of *Tam O'Shanter*. We will not say that he has failed; we cannot say that he has succeeded. The luxuriance of his grotesques are not out of place, though there is nothing distinctively Scottish about them; and the scene inside Alloway Kirk is perhaps as near as any pencil can get. Mr. Cruikshank, however, has still much to learn in his drawing, especially of a horse. The mechanical part of the printing in colours deserves the highest praise.

Twelve Old Friends: a Book for Boys and Girls. By Georgiana M. Craik. With eight plates by Gustav Doré. (Sonnenschein.) How much of this composite volume may have appeared before, we are not careful to enquire. It is sufficient to say that eight woodcuts after Doré, magniloquently described as "plates," furnish the occasion for the telling, with some redundancy, of twelve of the most familiar of Aesop's fables. Such matter never palls; and we like the manner of its appearance—large, clear type, and an oblong form.

Messrs. Cassell have sent us three elegant little volumes, containing (1) Milton's "*L'Allegro*," "*Il Penseroso*," and "*The Hymn on the Nativity*"; (2) Goldsmith's "*Deserted Village*"; and (3) Wordsworth's "*Intimations of Immortality*," and "*Tintern Abbey*," each copiously illustrated. We fancy that the woodcuts are of American origin. As might be anticipated, those to Goldsmith's poem are by far the most happy.

Fritz and Eric; or, the Brother Crusoes. By John C. Hutcheson. With Eight Illustrations by Gordon Browne. (Hodder & Stoughton.) Mr. Hutcheson, we infer from the title-page, has made his reputation as a writer of stories of perils by sea. Of this volume, less than one half has to do with life on a desert island, which is implied in the sub-title. The first,

and by no means the less interesting, portion gives a sketch of domestic life in the old-fashioned free city of Lübeck, and describes in some detail the opening scenes of the Franco-German war around Metz. If this be a fresh departure on the part of the author, he is to be congratulated on his success. The whole story is readable and lively from beginning to end. Of the illustrations by Mr. Gordon Browne, perhaps the fighting scenes are the best, though all are good. This artist can draw a boy better than anyone we know. By the way, the pictures facing pages 50 and 73 have got transposed, titles and all.

The Fairy Princesses. Illustrated by Caroline Paterson. (Marcus Ward.) Here we have three of Grimm's most familiar stories—"Snow-White," "The Sleeping Beauty," and "Cinderella"—with a copious store of pictures, prefaced with some graceful lines by Miss Eliza Keary. Of the illustrations, we prefer the frontispiece and that on the cover. It is very characteristic of the modern young lady to depict the prince of fairyland with a moustache. The printing of the text and of the chromolithographs is above praise.

In this place we would notice the large paper edition which Messrs. Macmillan have just published of Tennyson's *In Memoriam*, in the "Golden Treasury" series. Unlike the earlier volumes of this series, there is no vignette for frontispiece. The public may now have their choice—either of the common edition, to put in their pocket; or of that printed on hand-made paper, with wide margin, to give to their friends. It seems worthy of mention that the number of copies of the "large paper" issue is not so limited as to put it out of the reach of all but the professed bibliophile.

NOTES AND NEWS.

MR. BROWNING has, we regret to hear, been carrying into effect the doctrines he preached in his poems "*House*" and "*Shop*" in his *Pacchiarotto* volume of 1876; and, dreading his future biographer, has just destroyed the whole of his letters to his father and family, every one of which had been preserved by paternal care.

THE Rev. Dr. T. K. Cheyne has been elected to the Oriel Professorship of the Interpretation of Holy Scripture at Oxford, vacant by the resignation of Bishop Wordsworth, of Salisbury. A canonry at Rochester is attached to the chair.

THE vacant professorship of classics and English at Auckland, New Zealand, has been filled by the appointment of Dr. Posnett, of Trinity College, Dublin, a distinguished scholar, and author of a work on the *Comparative History of Literature*, which will presently be published by Messrs. Kegan Paul. The proofs were sufficiently advanced to enable the electors to judge of the promise of the book. The Government of New Zealand had chosen the Master of Balliol, the President of St. John's, Oxford, Prof. H. Sidgwick, of Cambridge, and Prof. Mahaffy, of Dublin, to report upon the claims of the candidates, some fifty in number. The chair is worth £700 a year.

WE hear that Mr. Robert Buchanan has received very flattering letters from two of the personages referred to in his satirical poem recently published.

THE Shelley Society's committee holds its first meeting to-day, Saturday, December 19. The society finds that much of the old religious and moral antagonism to Shelley still exists, but it is obtaining a fair amount of support. M. Gabriel Sarrazin has joined on behalf of the French Shelleites, Prof. Napier for the Oxford ones. Mr. Hermann Vezin has kindly undertaken the part of Count Cenci in the society's performance of the "Cenci."

MR. T. FISHER UNWIN's annual for 1886—*The Broken Shaft*; or, Tales in Mid-Ocean—will be published next Monday.

A BIOGRAPHY of the late Sir William Siemens is being prepared, at the desire of the executors, by Dr. William Pole, hon. secretary of the Institution of Civil Engineers, and author of the Life of Sir William Fairbairn. Dr. Pole will be grateful for the loan of any of Sir William's letters, or for any information of importance. Address, Athenaeum Club, S.W.

THOSE who, having read Sir James Stephen's *Story of Nuncomar*, were not altogether convinced by his rehabilitation of Impey, will be interested to hear of a fresh presentation of the other side of the case. Mr. Henry Beveridge, of the Bengal Civil Service, whose industry in searching the Hastings MSS. in the British Museum was not very cordially appreciated by Sir James Stephen, has written an article for the January number of the *Calcutta Review*, in which he maintains against his powerful critic the following points:—(1) That no attempt was made to prosecute Nuncomar previous to April, 1775; (2) that there is strong circumstantial evidence to prove that Hastings was the real prosecutor; (3) that the forgery was not proved, and there is at least a probability that the bond was genuine. Mr. Beveridge, we may add, contributed papers to the *Calcutta Review* in 1877 and 1878 upon "Warren Hastings in Lower Bengal," which contain new matter essential to a right understanding of Hastings's character and career.

THE Jubilee Volume of the Statistical Society will shortly be published by Mr. Stanford. It will contain the proceedings of the jubilee meeting of the society held in June last, including papers by the president, Sir Rawson W. Rawson, Dr. F. J. Mouat, M. Levasseur, and Prof. Neumann-Spallart, at whose initiation the International Statistical Institute was then founded.

MESSRS. HURST & BLACKETT will publish next month two new novels—*A Fair Maid*, by Mr. F. W. Robinson; and *Until the Day breaks*, by Miss Emily Spender—both in three volumes.

THE same publishers will also issue in January a work on the *Court and Times of the late King of Hanover*, by the Rev. C. A. Wilkinson, his Majesty's resident domestic chaplain.

MR. T. FISHER UNWIN will publish next week *English Home Life*, by Mr. Robert Laird Collier, of Boston, U.S., whose experiences have been gained during a seven years' residence in this country. Mr. Unwin is also about to issue a volume entitled *The Beckside Boggle, and other Lake Country Stories*, by Miss Alice Rea.

UNDER the title of *Recollections of a Book-worm*, Mr. J. Roger Rees has written a volume of essays on books and book collecting. It will be published by Mr. Elliot Stock.

MESSRS. SWAN SONNENSCHN & Co. will publish very shortly several one-volume novels by new writers; among them *The Leaven of Malice*, by Hamilton Evelac; *The Coast-guard's Secret*, by B. S. Hichens; *The History of a Walking Stick*, by Richard Le Free; *Rurik*, translated from the Russian; and *The Olway's Child*, by Hope Stanford.

THE same publishers will also shortly issue a novel in two volumes by Mr. John Douglas, entitled *Measure for Measure*, and also *Merevale*, by Mrs. John Bradshaw.

A SMALL volume, by the late Dr. W. P. Mackay, of Hull, whose *Grace and Truth* has obtained such a wide popularity, will shortly be published by Messrs. Hodder & Stoughton, under the title of *The Seeking Saviour, and other Bible Themes*. The work will have a special

interest to many, as it contains the last sermon preached by him.

Christ and the Jewish Law is the title of a book by the Rev. R. Mackintosh, to be published shortly by Messrs. Hodder & Stoughton.

MESSRS. FIELD & TIER will shortly publish, under the title of *Essays by an Idler*, a collection of papers which Mr. Herbert H. Adams has contributed from time to time to various magazines and newspapers.

DR. COCKBURN, of Glasgow, has written a reply to Prof. Drummond's *Natural Law in the Spiritual World*, which has been sent to press with Messrs. Swan Sonnenschein & Co.

MR. W. S. ALLEN has written a preface to a story for the times bearing the title of *Hidden Depths*, which will be issued immediately in a cheap form by Messrs. Hodder & Stoughton.

MR. J. O. MICHELL will shortly publish, through Messrs. Waterlow & Layton, a description of his "Universal System of Shorthand," founded on the system of Taylor.

MESSRS. SOTHEY will sell on Monday next and the two following days a collection of books from various sources, containing many that are dear to the bibliophile. We can only mention White's own copy of *Selborne*, with numerous autograph letters inserted; Izaak Walton's *Lives of Donne*, &c., with MS. corrections by the author; a copy of Tuer's *Bartolozzi*, additionally illustrated with some 400 engravings; large paper copies of the first edition of Bewick's *Birds*, and of Yarrell's *British Birds*; a set of T. Hearne's works, in thirty-seven volumes; J. P. Collier's reprints, in sixty-six parts; besides numerous first editions of Thackeray, Dickens, Lever, Brontë, and George Eliot.

MESSRS. G. P. PUTNAM'S SONS, of New York, have just issued a Christmas story, by Miss A. D. Field, daughter of Mr. Cyrus Field, entitled *Palermo*, with five etchings by Mr. Samuel Colman.

THE Old-French Text Society is to have four new volumes out next week: vol. iv. of the Works of Eustache Deschamps, who wrote a poem on Chaucer; vol. ii. of the *Chronique du Mont St. Michel*, very important for English history in the fifteenth century; vol. i. of the Poetical Works of Philippe de Beaumanoir; and a *chanson de geste*, *La Mort Aymer de Narbonne*.

M. JUSSEURAND, the head of the Tunis Department of the French Foreign Office, and the author of the well-known works on the English Drama before Shakspeare, and *Life on the Road in Chaucer's Time*, is lecturing at the Collège de France on the contemporaries of Chaucer and on the English novelists of the eighteenth century, Fielding, &c.

THE *Indépendance Belge* is now printing for its *feuilleton* an "adaptation inédite by Mary Gir" of Hugh Conway's *A Family Affair*.

THE FORTHCOMING MAGAZINES.

A NEW magazine will be published on January 1, entitled *The Christian Reformer*, reviving an old and honoured title. It will, in some measure, take the ground of the *Modern Review* and the *Theological Review*, but be published as a shilling monthly. Among the contributors to the first number will be Dr. Martineau, Prof. Upton, and Prof. Estlin Carpenter. It will be issued by Messrs. Williams & Norgate.

A NEW illustrated magazine for children will also appear in January, under the title of

Merry and Wise, published by Messrs. Burns & Oates. The Introduction is written by Cardinal Manning.

A PORTRAIT of Prof. Godet, etched by M. H. Manesse, will appear in the January number of the *Expositor*, which will commence the new volume, and contain articles by Prof. Delitzsch, Canon Westcott, Sir J. W. Dawson, Dr. MacLaren, Canon Driver, and others.

THE January number of *Time* will contain, in addition to the paper on "The Science of Recreation," by Mr. Walter Besant, and a story by Mr. Andrew Lang, which have been already mentioned, the opening chapters of a new novel, "The World Below," by the editor; "The Deluge at Last," an article on the General Election, by Mr. H. D. Traill; "The Principles of State Interference," by Mr. D. E. Ritchie; "Sir Henry Thompson and the Vegetarians," by Mr. A. S. Salt, and "The Testimony of a Rebel," a criticism of Prince Krapotkin's political philosophy, by Mr. William Westall. In future *Time* will give much more space than hitherto to notices of books.

THE January number of the *Army and Navy Magazine* will contain an article by Mr. Charles Marvin, entitled "England's Road to India," instituting a comparison between the careers of Gen. Annenkoff, the designer of the Russian railway to India, whose line has been completed to Askabad this week, and Gen. Chesney, the projector of the Euphrates Valley Railway, whose biography was published a little while ago by Messrs. W. H. Allen & Co.

THE next number of *The Antiquary* will contain the first of a series of articles on the Crown Lands, written by Mr. Hubert Hall, giving an introductory *résumé* of the subject. Mr. Bickley will write the article on "Celebrated Birthplaces," the subject being Fenny Drayton, the birthplace of George Fox. Mr. Llewellyn contributes an account of some amusing examples of pottery known as puzzle jugs, accompanied by illustrations; and Mr. Bent a short article on "Wandering Englishmen."

A PAPER by Mr. Edward Solly on Francis Hoffmann, the contemporary of Swift, and another by Dr. B. Nicholson on the slipshod way in which our Elizabethan dramatists are sometimes edited, will appear in the January number of *Walford's Antiquarian*.

Little Folks' Magazine will commence a new series with the January number, and will appear in a new coloured wrapper, specially designed by Miss Alice Havers. Mrs. Molesworth's serial story to appear in it is entitled "The Palace in the Garden," and is illustrated by M. E. Edwards.

ORIGINAL VERSE.

"MOUNTAIN-BIRTH."

(On The Ring and the Book.)

"How it strikes a Contemporary."

"THE mountain would be better were its snow
A furlong wider on the sunset side;
Or farther had its pines crept up to hide
The scars it gathered in its rising-throe;
The torrent, as it seems to me below,
Might well have ventured from its line to swerve
Into the semblance of a purer curve
Before the precipice received its flow."
So the coeval critic; yet its head
The mountain still shoots up to keep from sun
Or thunder safe the vale beneath it spread.
The critic's word was over soon and done.
The mountain, hardly rooted in its bed,
Its deathless duties had not yet begun.

ALFRED FORMAN.

MAGAZINES AND REVIEWS.

THE Christmas number of *Harper's* is, according to custom, the first of a new volume, and it is seldom that even this magazine has started on its new course with greater vigour. Appropriate to the season is Mr. H. J. Van Dyke Junior's article on "The Nativity in Art," admirably illustrated with woodcuts after Giotto, Lippi, Luini, &c. As examples of the modern style of wood-engraving, with its delicate gradations of tone, the illustrations of the refined art of Léon Bonvin have seldom been surpassed. M. Philippe Burty has written the account of the short and sad career of this painter. With his well-known skill in versification, Mr. Edwin Arnold has translated the *Ritu Sanhāra*, by Kālidāsa; Mr. G. H. Boughton has written and illustrated a capital story called "Wyven Moat; Mr. R. D. Blackmore contributes a pretty ballad, and Mr. W. Black some sad verses. Mr. Brander Matthews, Miss Phelps, and others help to make up a number of much variety and general excellence.

THE new number of the *Alpine Journal* has a helpful paper, by H. G. Willink, on "Alpine Sketching." The sketches of Peter Bohren and Johann Anderegg are admirably true. "Life in the Vispthal at the Beginning of the Seventeenth Century," by W. M. Conway, is a translation of excerpts from Thomas Platter's frequently-published autobiography, already known to English readers through the translation of Freytag's *Bilder aus der deutschen Vergangenheit*. The editor's notes on "The Meije from La Grave" are followed by a long and detailed account of the fatal accident to Dr. Emile Zsigmondy, on the Meije, on August 6. He had just published a book on the dangers of the Alps! The budget of new expeditions in 1885 is very full, and includes the one which, on account of its ease, is likely to be the most popular of all—the route up the Jungfrau by the Roththal. Since the publication of this number, Prof. His, of Basel, has published a memoir of a notable pioneer of Berner Alpcimbing, and a vigorous Alpine sportsman and scientist, the recently deceased Dr. Christoph Theodor Aeby, professor of anatomy at the University of Prague. Dr. Aeby formerly held the chair of anatomy at Basil, and afterwards at Berne.

A GOOD many will say *non defensoribus istis* of Lady Florence Dixie's article on "Home Rule" in the December number of *Hibernia*. Still, the article, which is meant to prove that Home Rule is the best safeguard against separation, is worth reading.

IN the *Deutsche Rundschau* for December the place reserved for fiction is assigned to a Californian story by Mr. Bret Harte. Two addresses on "Women's Education," by Prof. von Sybel, deserve attention, especially as the first is devoted to an account of Miss Archer, who founded the Victoria Lyceum for girls in Berlin. An interesting paper dealing with the history of Germany at the beginning of this century is founded on the unpublished correspondence, from 1783 to 1823, of Herr von Wolffradt, who was a minister in Brunswick.

THE contents of the *Boletín* of the Real Academia de la Historia for November are of unusual interest. There is a further instalment of the Hebrew text and old Spanish translation of the Jewish *ordinamiento* at Valladolid in 1432, given by Fernández y Gonzalez. Then follows a brief paper by Fernandez Duro on the first notices of Yucatan. Next to this we have the valuable introduction by Manuel Danvila to the recently published *Cortes de Castilla de 1576*. This essay on the constitutional history of the period takes rank with similar prefaces in our own Record Office publications. There is also the *Prólogo* to V.

Balaguer's new edition of his *Historia de Cataluña*, two volumes of which have just appeared. Padre Fita prints, with annotations and illustrative documents, an edited Bull of Honorius II., dated March 12, 1127.

CORRESPONDENCE.

THE ABBOTS OF BANGOR.

London: Dec. 6, 1885.

The Antiphony of Bangor (*Bennchor**), an eighth-century codex, marked C. 10, and preserved in the Ambrosian Library, Milan, contains a Latin hymn, commemorating the first fifteen heads of that once famous monastery and place of learning, which has been published both by Muratori (*Anecd. Lat.*, iv. 121) and by Peyron (*Cic. Orat. fragm. ined.*, p. 225). I had long suspected that neither of

* Now a village on the south side of Belfast Lough.

these scholars had read the Latinised Irish names aright, and this suspicion lately became a certainty when I received, through the kind intervention of Abbate Ceriani, a photograph of the page containing the hymn. Muratori's *Simlanum*, *Macchaisreum*, *Cumenenus*, *Bautherius*, *Cronanus*, turn out to be *Sinlanum*, *Macchaisreum*, *Cumenenus*, *Baithen[i]us*, *Critanus*; and Peyron's *Fintenapum*, *Eseganum*, *Beracnus*, *Adianus*, *Crotanus*, should be *Fintenanum*, *Seganum*, *Berachus*, *Aidanus*, *Critanus*. The worst of it is that Peyron's misreadings have been carefully reproduced in the second edition of the *Grammatica Celtica*, p. 944. Muratori, moreover, prints *tempora*, *admirabilis* for the *tempra*, *amabilis* of the MS., and thus spoils the metre, and in the title, for *In memoriam*, Peyron prints *Memoria*, and thus spoils the sense. The hymn really runs as follows:

"IN MEMORIAM ABBATUM NOSTRORUM.

"*Sancta sanctorum opera
patrum fratres fortissima
benchorensi in optima
fundatorum aeclesia*

*Abbatum eminentia
numerus tempra nomina
sine fine fulgentia
audite magna mereta
quos conuocauit dominus
caelorum regni sedibus:—*

*Amavit christus comgillum
bene et ipse dominum
carum habuit beognoum
domnum ornauit aedeum*

*Elegit sanctum sinlanum
famosum mundi magistrum:—
quos conuocauit dominus
caelorum regni sedibus*

*Gratum fecit fintenanum
heredem alium inclitum
inlustravit macchaisreum
kaput abbatum omnium
lampade sacrae seganum
magnum scripturae medicum:—
quos:*

[Col. 2] *Notus uir erat berachus
ornatus et cumenus
pastor columba congruus
querela absque aidanus
rector bonus baithen[i]us
summus antestes critanus
quos:*

*Tantis successit camanus
uir amabilis omnibus
christo nunc sedet suprimus
ymnos canens quindecimus*

*Zoen ut carpat cronanus
conseruet eum dominus:—
quos conuocabit dominus
caelorum regni sedibus.*

*Horum sanctorum mereta
abbatum fidelissima
erga comgillum congrua
inuocemus altissima
uti possimus omnia
nostra delere cremina
per iesum christum aeterna
regnantem in saecula:—*

The non-Latinised names of the fifteen abbots here mentioned are Comgill, Beogno, Aed, Sillán (Adamnán's Silnanus), Fintenan, Macchaisre, Segán, Berach, Cumenén, Colomb, Aidán, Baithéne, Critán, Cammán, Cronán.

Another set of Latin verses, also preserved in the Ambrosian library, has not, so far as I know, hitherto been printed. They seem to have been composed by or for Simone Memmi of Siena (formerly Sena), and occur in a picture by that artist prefixed to a folio MS. of Vergil, and recently photographed for my sister. This picture represents the commentator Servius unveiling a figure of Vergil to Aeneas, who represents the Aeneid, just as below a vine-dresser represents the Georgics and a shepherd

the Bucolics. The verses are rhyming hexametrical couplets, and run as follows:

"Ytala praeclaros tellus alima poetas
sua tibi Graecorum dedit hic attingere metas.
Seruius altoqui retegens archana Maronis
vt pateant ducibus pastoribus atque colonis.
Mantua Virgilium qui talia carmine finxit
Sena tulit Symonem digito qui talia pinxit."

WHITLEY STOKES.

THOMAS HEYWOOD AND "THE CAPTIVES."

Westward Ho, near Bideford: Dec. 12, 1885.

If any further confirmation be wanted of the authorship of "The Captives," it may be found in the fact that the story of the underplot—the Italian source of which Mr. Symonds points out in the ACADEMY of last week—is told by Heywood (and very merrily too) in his *ITINAIKEION*, or Nine Bookes of Various History concerning Women, 1624. This work, he tells us, was written and printed in seventeen weeks; and it is noteworthy that the year of publication is the same as that in which "The Captives" was first performed at the Cockpit. The scene of the story is here laid at Norwich, and the knight (the Lord de Avere of the play) had been "eminent and of note with Henrie the fift, as personally with him in all the warres in France." The only characters named in the story are Friar John and Friar Richard, but the resemblances to the play are often almost verbal. The following extract will suffice:

"Then wonderously despayring, he intimates within himself, that murder is one of the crying sinnes, and such a one as cannot be concealed: yet recollecting his spirits, he purposeth to make tryall of a desperat aduventure, and put the discoverie thereof to accident: hee remembers an old stallion, that had been a horse of service, then in his stable, one of those he had used in the French warres, and withall, a rustie Armor hanging in his Armorie; he commands both instantly to be brought, with strong new cords, a case of rustie Pistolls, and a Launce. The horse is saddled and caparrison'd, the Armor put vpon the Fryer, and hee fast bound in the seat, the Launce tryed to his wrist, and the lower end put into the rest, his head-piece clasped on, and his Beauer up; the skirts of his grey gowne serue for Bases: and thus accoutred like a knight completely armed *cap a pe*, they purpose to turne him out of the gates, hee and his horse, without any Page or Esquire, to trie a new aduventure" (*Lib. 5*, p. 255).

Compare "The Captives," p. 193.

Perhaps some of the other stories which too rarely relieve the closely-packed erudition of this "Various History" may be traced to the same Italian source. HERBERT A. EVANS.

"ARITHMETIC" AND "ARITHMOLOGY."

Bishopton, Glasgow: Dec. 5, 1885.

There is a curious oversight on p. 447 of *The New English Dictionary* under the word "Arithmetic." The adjectival use of "arithmetical"—i.e., "arithmetical," is stated to be obsolete. Now, one merely needs to be reminded of the expression "arithmetical mean" to see that the usage is still perfectly common.

I may also note that "arithmology" is marked as perhaps obsolete. This I think is correct as regards the meaning assigned to it in the dictionary, but the word is certainly not obsolete in the sense of "the higher theory or science of numbers." It is from "arithmology" in this latter sense that we have the modern adjective "arithmological," the definition of which in the dictionary is a little astray, because the modern use of the noun from which it is derived had not been got hold of. The quotation illustrative of "arithmological" is from *Nature*, 1882: an earlier instance of the use of

it ("arithmological tables") will be found in the British Association Report, 1873, p. 3.

Spots on the sun are noted when the faces of lesser luminaries pass unheeded.

THOMAS MUIR.

"PEDIGREE."

Bamff, Aylth: Dec. 7, 1885.

The etymology of this word does not seem to have been yet fully ascertained. The earliest instance of its use given is from a document said to be of the reign of Henry IV., but not dated. The earliest instance that I have come across, so far as I can remember, is in the Parliament Rolls of 1425, where, in connexion with a dispute as to precedence between John Mowbray (afterwards Duke of Norfolk) and the Earl of Warwick, we have the following:—"Comes Marescallus exhibuit . . . quendam Rotulum . . . voc Peedegree" (Rot. Parl. iv. 267). The word occurs again twice in the same page, only spelled "pedegrewe," a form noticed by Skeat. The use made of the word on the Parliament Rolls seems to mark it as standard English of the time. Skeat, in his *Etymological Dictionary*, notices a suggestion of Wedgwood (in *Notes and Queries*) deriving the word from the French *piel de gres* ("table of degrees," i.e., of relationship). John of Whet-hamstede, writing of Edward IV.'s claim to the throne in 1461, says, "declaravit pedem suae originationis," &c. The last three words seem given by the writer as the Latin for "pedigree," and I think they show that he identified the first syllable with "pedem" (vol. i. 405, Rolls edition). Might we not regard pedigree as a corruption from "pedem graduum"?

J. H. RAMSAY.

DRIED ALPINE PLANTS.

Palazzo Martinengo, Salo, Lago di Garda:
Dec. 9, 1885.

In this season of Christmas gifts some readers of the ACADEMY may be glad to hear of the collection of dried Alpine plants now being issued by Dr. Pietro Voglino, member of the Italian Alpine Club, and assistant to the professor of botany in the University of Padua. The first instalment, complete in itself, is already finished, and may be bought for the small sum of 10 frs. (8s. 4d.). It contains fifty fine specimens, dried with great care and success, and attached to large sheets, the leaves and roots being, as a rule, fully displayed, as well as the flowers. Each plant is accompanied by its name, and the date and place when and where it was found. This collection presents a happy contrast to the dear, poor, and inartistically set-up specimens which are generally on sale in Alpine resorts. Intending subscribers should communicate with Dr. Pietro Voglino, R. Orto Botanico, Padova. E. MARTINENGO-CESARESCO.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 21, 5 p.m. London Institution: "Russian Village Life," by Mr. W. R. S. Ralston.
4 p.m. Asiatic: "Newly Discovered Caves at Penjdeh," by Mr. W. Simpson.
8 p.m. Society of Arts: Cantor Lecture, "The Microscope," V., by Mr. J. Mayall.
8.30 p.m. Geographical: "Arctic Exploration with reference to Grinnell Land," by Major A. W. Greely.
TUESDAY, Dec. 22, 8 p.m. Civil Engineers: "Construction in Earthquake-Countries," by Mr. John Milne.

SCIENCE.

Alpine Winter in its Medical Aspects, &c.
By A. Tucker Wise. (Churchill.)

Croonian Lectures on the Hygienic and Climatic Treatment of Chronic Pulmonary Phthisis.
By Hermann Weber. (Smith, Elder & Co.)

THE circumstances of my life at Davos Platz

—as a man of letters, in whose case long-standing pulmonary consumption was eight years ago arrested by the climate of the High Alps in winter, and who has since enjoyed moderate health and mediocre intellectual vigour *only* on the condition of continued residence at an elevation of 5,000 feet above the sea—make me naturally interested in books which treat of mountain air and cold as powerful therapeutic agents. Such books deserve to be brought under the notice of the general reading public, for their argument is of a kind which any man possessed of common sense can follow; and the future of the so-called Alpine cure depends in no small degree upon its principles being widely understood by those who seek to benefit by it.

I wish, therefore, to call attention to Dr. Wise's *Alpine Winter*. It is a work which takes, in my opinion, high rank among the many already published upon this topic. Scientific, comprehensive, practical, and impartial, it deals in turn with all the winter health-resorts which have been founded in the Grisons, setting their respective advantages in a fair light, and not disguising their drawbacks. Dr. Wise is specially interested in the new hotel at Maloja, and, therefore, he not unreasonably devotes a large part of his space to that establishment, which as a winter-station is still upon its trial. But he writes also of Davos and Wiesen with the accurate knowledge of one who has spent whole winters in these villages; and he treats this part of his subject in the unprejudiced spirit of a man of science earnestly bent on disseminating carefully tested information. The value of his book, compared with similar treatises by superficial Alpine climatologists, is that he has really lived and worked for years in the places about which he speaks, instead of passing a day or two in them for the sake of being able to say that he has been there. This makes his detailed advice regarding clothes, diet, exercise, and so forth, more trustworthy than that of theoretical writers, who retail at second-hand hints picked up from casual conversation or ex-cogitated from *a priori* reasonings.

On what Dr. Wise says about the purity of air in Alpine health-resorts, I am unable to pronounce a scientific opinion. But my personal experience, as a resident of many years' standing, enables me to confirm his verdict that too little attention is usually paid to the ventilation and aeration of houses where sick people live together for a prolonged space of time. Whether the special devices provided to combat this difficulty at the Maloja will succeed, remains to be proved. That they are thoroughgoing in design admits of no doubt, and that they should receive a fair trial is much to be desired.

After all, what people seek, when they leave their English homes at a great sacrifice of time and money, is air unvitiated in the dwellings they inhabit, and uncontaminated in the open by smoke and drainage. Davos, which is otherwise unique in its climatic advantages, runs risk of deterioration in the future by over-crowding; and neighbouring localities, with less of its social attractions, offer even now a more absolutely limpid atmosphere. Over-crowding in the High Alps means not only the aggregation, of numbers of persons, many of whom are

affected with lung disease, in hotels which stand close together; but it also means a certain adulteration of the air by smoke from stoves and furnaces, a spoiling of the snow roads in winter by augmented traffic, and a sacrifice of rural simplicity in villages which are being rapidly converted into watering-places. That Davos Platz suffers already to some appreciable extent from these causes can hardly be contested. In particular, the nuisance of smoke from coal in chimneys has lately increased to an alarming extent. Impartial observers will, however, dwell less upon these drawbacks than upon the sanitary measures, all of them sagacious, and most of them very expensive, whereby the natural features of this valley as an abode of civilised humanity have been improved, and the inevitable evils of an artificially created population have been combated. They will also bestow their admiration on the excellent system by means of which an agreeable place of residence, affording the chief requisites of social enjoyment, has been evoked as though by magic in a narrow valley unknown even by name to Europe twenty years ago.

Yet Davos cannot expect much further expansion in the geographical space allotted to it, without imperilling those very principles of air-purity upon which its now well-established fame depends. On this point I will quote some sentences from Dr. Hermann Weber, the famous climatologist and veteran apostle of the Alpine cure. He writes in the publication which I have cited at the head of this paper:

"When I first directed attention to Davos Platz in 1867, it was still a charming primitive Swiss village; now numerous large and small hotels and villas stretch along the high road for more than a mile, and Davos Dörfl, a little higher up the valley, may almost be considered a suburb of Davos Platz. . . . A great drawback is that its reputation has of late years increased so rapidly that too many, frequently ill-suited, cases are sent to Davos; that the number and size of the hotels and health establishments increase at an alarming rate, so that there is actual danger that Davos may be ruined by its own natural advantages; for purity or aseptic quality of the air is incompatible with the crowding together of a large number of invalids."

This word in season, spoken by so eminent an authority, should be taken into consideration both by those who seek the utmost advantages of the winter cure, and also by those who have at heart the real interests of Davos. "If Davos were to be ruined," says Dr. Weber—ruined, that is, by the too great afflux of visitors—"the calamity would not be confined to the inhabitants of the valley, but would be shared by many invalids all over Europe."

It becomes in these circumstances a matter of some moment for those who are disinterestedly anxious about the further progress of the Alpine cure in winter, as well as for those who wish to secure the permanent prosperity of Davos as the headquarters of this cure, that minor stations of a similar type should be created. People must come to understand that there is nothing thaumaturgic in a special climate; that their chances of recovery depend upon their breathing the purest air; and that only if they can obtain this purest air is it worth their while to quit their homes. I,

therefore, being one who has profited to an incalculable extent by Alpine air, and who holds a considerable stake in Davos, watch with sympathy the growth of S. Moritz, and look forward to seeing Maloja and Pontresina soon take rank as resorts for seekers after health no less in winter than in summer. Unless the very principle itself on which a winter cure in the High Alps rests is brought into discredit by conditions which impede its proper application, free rivalry and brisk interchange between many of these winter colonies will prove beneficial not only to their frequenters, but also to the inhabitants who derive gain from this traffic.

Pursuing this line of reasoning, I should like to give the last words of my article to what Dr. Wise has written about Wiesen. This is a village at the distance of two hours' drive from Davos. It is situated in romantic scenery, on the slope of mountains which protect it from cold winds, and raised a thousand feet above the stream which carries draughts and water-mists away below it. A place like this supplies exactly what is most wanted as a safety-valve for Davos; and up to the present moment, though it offers excellent accommodation, Wiesen has in winter been comparatively little frequented. "The chief points of variation from Davos are," to quote the words of Dr. Wise, "its position on the side of a hill, sparser population, slightly higher and more equable temperature, with perhaps a little less wind." He goes on to state that during the worst time of snow melting, which is always a troublesome period, Wiesen clears more rapidly, and that then its freedom from any marshy evaporations is a great advantage. In justice to Davos, it should be stated that the valley was never in a true sense marshy, and that it has recently been drained throughout by works which cost the resident population a heavy sum of money; yet there is no doubt that, in this respect, Wiesen enjoys special natural privileges, and needs no aid of human ingenuity.

While recommending Dr. Wise's book in general to the public, I should be glad to direct special attention to the pages he has devoted to Wiesen. I believe that I shall be doing a service not only to sufferers like myself, and to the Alpine method of cure in general, but also to Davos, for which place I have a special affection, founded upon gratitude and long familiarity, if I could direct some of the surplus stream of winter emigrants into a quarter which is eminently suited to their needs. The only present drawback to Wiesen is want of concerts, balls, theatrical entertainments, and such other amusements as invalids ought not to seek, which a larger colony might speedily develop if it chose. In point of comfort, the hotel accommodation is now equal to that of most European health-resorts, and the cost is considerably less than in many more famous places. Good medical attendance is not wanting.

J. A. SYMONDS.

CORRESPONDENCE.

THE "MATLA'USH-SHAMS."

Tehran, Persia: Nov. 6, 1885.

The Persian annual (*Nāl Nāme*)—a folio of five hundred and one pages, lithographed

in clear Naakh, Tehrān A.H. 1302—has just been issued by the Sanī'ud-Daulah (minister of the press). It is a continuation of the volume noticed in the ACADEMY last year by Gen. Houtum-Schindler, and is entitled the *Matla'ush-Shams*, vol. ii. It is devoted to an account of the City of Meshhed the Holy, its Shrine, Masjids, Kārvānsarāis, Madressehs and surrounding districts; together with a review (fol. 282-382) of the events in Persian history with which it is connected; following which (fol. 383-450) is a list—with quotations, in most cases, from their works—of the men of note, literary and other, who were born at Meshhed. In a Khātimah is added an account of the Imām Rezā, at whose shrine comparatively few Persians have failed to prostrate themselves. Its author, Muhammed Hasan Khān, Sanī'ud-Daulah, has devoted his literary energy to historical, and principally to geographical, research, the two being usually inseparably treated by Persian writers. Besides almost exhausting native sources of information, the enumeration of which alone would be sufficient to attest its value, the Sanī'ud-Daulah has also brought into requisition the works of Malcolm, Fraser, Ferrier, Khanikov, and others. But apart from all this, the present volume will have a more particular value to the student of Persian bibliography and history, for incorporated therein (fol. 165-213) its author has given, *in extenso*, the text of a valuable and rare journal written by Shāh Tahmāsp I., which purports to be a chronicle of his own reign, from his accession in A.H. 930 to his meeting with the Sultan of Turkey in A.H. 966. Further, the Sanī'ud-Daulah has added a catalogue of the MSS. and other works preserved in the Library of the Shrine.

With such a quantity of valuable matter before one it seems ungrateful to find any fault; but it is certainly to be regretted that one who is in possession of such a fine library of rare works should not have given himself a little more trouble, and made the notices of celebrated literary Meshhedis of more importance by the addition, in all cases, of the dates of their decease and titles of their works.

SIDNEY J. A. CHURCHILL.

SCIENCE NOTES.

MR. ALEXANDER WATT's new work on *Electro-Deposition* will be ready for publication by Messrs. Crosby Lockwood & Co. in the early part of next month.

THE last part of the geological section of the *Encyclopædie der Naturwissenschaften*, published by E. Trewendt, of Breslau, is entirely occupied by articles from two contributors—Prof. Kenngott and Dr. Rolle. The former, taking the mineralogical subjects, writes on Silicates, Sclerites, Sulphates, and Mineralogical Classification ("Systematik der Minerale"). Under the head of *Sklerite* (from *σκληρός*, hard) Prof. Kenngott describes all the precious stones. Mention is here made, as usual, of the great "diamond" of the Rajah of Mattan in Borneo; but we believe that it is now fully proved that this stone is nothing more than a piece of rock-crystal. Dr. Rolle contributes articles on stratigraphical geology, dealing with the Silurian system, the Tertiary group, and the Trias; while palaeontology is represented by his essay on Sponges.

PHILOLOGY NOTES.

THE N. G. Elwert'sche Verlagsbuchhandlung, of Marburg, well known to English readers as the firm publishing Vilmar's *Litteraturgeschichte*, has issued the first part of a *Bilderatlas zur Geschichte der deutschen Nationalliteratur*, nach den Quellen bearbeitet von Dr. Gustav

Könnecke. The work, which will contain 1,558 engravings—all of them reproductions of authentic originals—is to be completed in ten monthly parts. The publisher is contemplating an edition, with letter-press in English, intended for England and America.

THE same firm will publish a new periodical, *Phonetische Studien*, which is to be edited by Prof. W. Victor, of Marburg. It will be devoted to phonetics in general, but will pay particular attention to the national orthoepy, and to the phonetical treatment in German schools of the most important modern languages. Contributions may be sent in German, English, or French.

THE recent numbers of Bursian's *Jahresbericht* contain articles on Roman Antiquities (Schiller and Voigt), Tacitus (Helmreich), Latin Grammar (Deecke), and, by no means least, Aristotle (Susemihl).

THE Berlin *Philologische Wochenschrift* of November 21 contains a review, by W. Mewes, of Prof. Wilkins's edition of the *Epistles* of Horace.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Monday, Dec. 1.)

Dr. SAMUEL BIRCH, President, in the Chair.—Mr. Joseph Jacobs read a paper entitled, "Are there Totem-Clans in the Old Testament?" The investigation of "survivals" often enables us to penetrate into the social arrangements of prehistoric times. Thus MacLennan's investigations into the form of capture in marriage ceremonies brought him to the theory of the origin of the family in the totem-clan consisting of members worshipping (and not eating) a totem animal, whose name they inherit from their mother, and marrying only outside the clan (exogamy). This theory is now widely accepted by anthropologists, and was applied first by MacLennan to Jews in the *Fortnightly Review*, 1870, and then by Prof. W. Robertson Smith to Arabs and Jews in the *Journal of Philology*, 1880, an application tested and modified in the present paper, which discusses traces of totem worship under the following heads:—(I.) Animal names. A list given of 160 persons with such names (against only 30 by Prof. Smith). These are mostly personal, not clan names, and of the former not so many as would be found among Englishmen (3 per cent.). But in one case, the clans of Edom (Gen. xxxvi.) and their offshoot Caleb (Dog Tribe), these names are too frequent to be mere chance. Probable totemism among nomad Edomites. (II.) Exogamy and descent through females are characteristic of the totem arrangement. Some indications of the former among Seirites were pointed out by Prof. Smith, and these are supplemented in the present paper by many indications among lists of Israelite clans (Num. xxvi.) of clans of the same name in different tribes, as would happen under a totem system. A distinct reference to exogamy in the case of Ithaz the Judge (Judges xii. 9). Instances of descent reckoned through female in Abraham's marriage (half-sister being unrelated through female kinship), &c., but these could be explained by polygamy as well as by totemism. (III.) Ancestor worship seen in Teraphim, Elohim as ghosts (witch of Endor), sacrifices to dead (Is. viii., 19; Ps. cvi., 28; Pirke Aboth, iii., 5; Judges ix., 13). Prof. Smith sees in David a member of a serpent clan, because one of his ancestors was named Nahash, the father named Nahash, he has Teraphim, and there was a brazen serpent in the king's palace. This is doubtful, since the last is attributed to Moses, and the descent is not traced through females. If true, introduced by Ruth, a Moabitess, and cannot conclude for all Israel. Ancestor worship a later stage than animal worship. (IV.) Animal worship seen in the golden calf, brazen serpent, second commandment ("things which are in heaven above," &c., = birds, beasts, and fishes), and in Isaiah lxvi., 17. Cardinal passage, Ezekiel viii., 10, creeping beasts and abominations, "and all the idols of the house of Israel" with Jaaphaniah ben Shaphan (*Coney*) officiating as priest. But (a) a vision, (b) the name

a piece of irony = William Ewart Disraeli, (c) probably introduced from Egypt, (d) no other traces of the totem clan arrangement so late. (V.) Forbidden Food. No satisfactory explanation has hitherto been given. As a survival of totem tabu, the religious horror explained. It was characteristic of Judaism to utilise earlier religion for purer purposes, e.g., sacrifice. Difficulties, (a) many names of "clean" beasts in our list (forty-three clean to forty-two unclean), (b) tolerably simple explanation as survival of folk medicine. Result: a few anomalies, e.g., Coney, can be explained as "survivals" of totem worship. (VI.) Tattooing and clan crests. Former in Lev. xix., 28, also probably referred to Deut. xxxii., 5. Latter in Jacob's and Moses' blessing, cf. mediæval heraldry of the twelve tribes. (VII.) Blood feud and wergild existed in Bible times, but the Goel was unconnected with totems. Conclusion. If anthropology regards totemism as a necessary or usual stage in social development: (a) There is sufficient evidence of the existence of totem clans among the nomad Edomites. (Prof. Smith.) (b) We have seen sufficient "survivals" of totemism in the personal and tribe names, in the forbidden food, tattooing, and clan crests, in the ancestor worship, animal images, and blood feud of the Israelites to warrant the assumption that they were once organised on the totem system. (c) But Prof. Smith's specific instances of David as a member of a serpent clan, and the existence of totem rites in the temple at the time of Ezekiel, are unjustified.

ROYAL HISTORICAL SOCIETY, CAMBRIDGE BRANCH.—(Wednesday, Dec. 2.)

Prof. J. R. SEELEY, V.-P., in the Chair.—Prof. Seeley contributed a "Note on the Family Compact of 1733," in which he described the result of his recent researches at the Foreign Office. It was generally supposed that the Family Compact of 1733 was not known to the English government of the time; but it appeared to him so improbable that such an important event should have happened without the English Foreign Office in some way getting to know of it, that he had caused the despatches of the period to be examined for traces of some knowledge of the Family Compact, if not in 1733, at any rate earlier than 1761. The result of this was the discovery of numerous passages in the letters of ministers and ambassadors evidently referring to it as something not only suspected, but known to have taken place, and in one of these the phrase *pacte de famille* actually occurred; and, further, a copy of the Family Compact itself had been received by George II. in 1734, very soon after it had been signed. Thus it was evident that the English government was aware of the existence of the compact almost from the beginning. They were surprised at its renewal in 1761, not because they had never heard of it before, but because the family policy had been dropped for so long by King Ferdinand, and they were not prepared for its renewal by his successor. To this fact Prof. Seeley attached considerable importance, because it does much to explain the timidity of Walpole's policy. Walpole knew that war with Spain meant war with France also; and, as a financier, he did not think that England could bear more than a hundred millions of debt. A discussion followed.—Mr. Oscar Browning read a paper on "The Flight of Louis XVI. to Varennes," consisting of a detailed criticism on Carlyle's treatment of the subject. He showed that while Carlyle's picture was vivid and, on the whole, correct in its main outlines, all his details, almost without exception, were inaccurate, though evidence was accessible to him from which they might have been correctly obtained; and the author suggested the desirability of applying similar tests to other parts of Carlyle's work. The paper was illustrated by numerous maps and plans.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, Dec. 3.)

Prof. SKELTON, President, in the Chair.—The committee appointed to consider the reform of Latin pronunciation presented the following provisional report: "The committee having met and having carefully considered the information before them are unanimously of opinion that the time granted to them for making their report should be

extended at least to the second meeting of the Lent Term; and they therefore suggest that the society should pass a resolution so extending it."—A paper was read by the President, on "Grendel in the Poem of Beowulf," of which the following is an abstract. The description of the monster Grendel in the poem of Beowulf may very well have been founded upon the description of an enormous brown bear. Such a description would be exaggerated by the use of poetical language until it became at last vague and mysterious. The very name Grendel means 'Grinder'—i.e., grinder of bones, an epithet of a carnivorous animal. Many parts of the description suit the habits of the brown bear. Thus Grendel never uses weapons, but trusts to the strength of his grip or hug; he tears and eats his victims; he is fond (as the bear is) of swimming across water to his lair; and he preys by night, returning to his lair at dawn. Grendel's mother, who was still stronger than himself, is, accordingly, an old she-bear. She, too, lives in a cave beyond a lake, has no weapons but claws, trusts to the power of her grip, is carnivorous, and prowls by night. Both are dumb beasts, incapable of human speech. The word *Béowulf*—i.e., "bee-wolf"—means a bear who is fond of honey. This epithet might well be given to a hero who had slain two gigantic bears. The use of this theory is that it explains several obscure passages, in which the real subject of description is the bear's paw. This paw is frequently and accurately (though poetically) described. At one time it is called a "glove," from its likeness to a glove of skin covered with fur; at another time it is called "a hand-shoe"—i.e., glove. Yet the commentators actually spell *Hondscio* (hand-shoe) with a capital *h*, and say it was the name of a hero! Even to gain this sense, it is necessary for them to mistranslate the context. The right translation of ll. 2077, 2078, is—"There was the glove [i.e., paw] ready to descend; a life-bale [was it] to the doomed man." Ll. 2086, 2087, mean—"He groped after me with ready palm. His glove [paw] hung suspended [over me]," &c. The explanations of these (and similar) passages remain the same, even if the bear-origin of Grendel be inadmissible. The "glove" still means the paw of the monster, who is, in any case, a kind of wild beast. All the passages relating to the paw of Grendel, and to the paw of Grendel's mother, can thus be easily explained. They have greatly puzzled the commentators, but are really quite simple when the right clue is used.

ARISTOTELIAN SOCIETY.—(Monday, Dec. 14.)

S. H. HODGSON, Esq., President, in the Chair.—The president gave an account of Siebeck's view of the *Philebus* of Plato. After some introductory remarks on the vital importance, for every philosophical system, of the question where and in what specifically its principle of efficient causation is made to consist—as, for instance, the attraction exerted on the world by the Supreme Being, whose own energy is *σπουδαίος σπουδαίως*, in Aristotle's system; the transcendental agency, phenomenally known as of two kinds, causality by necessity and causality through freedom, of Kant's; the self-differentiation and self-identification of the *Begriff*, in Hegel's; the Will, in Schopenhauer's; the physical Force issuing from the Unknowable, in Mr. Herbert Spencer's—the president proceeded to read a MS. translation of Dr. Hermann Siebeck's dissertation *De doctrina Idearum qualis est in Platonis Philebo* (reprinted 1872), in which this question is raised with regard to Plato's philosophy. A discussion followed.

FINE ART.

Tiryns. By Henry Schliemann. (John Murray.)

(Second Notice.)

HAVING given some account, in a previous notice, of the main facts discovered in Dr. Schliemann's last and most brilliant enterprise, we now approach the far more difficult task of bringing them into relation with what other discoveries have taught us, and with what we know of early Greek history. One

of the few points which may be regarded as settled is this, that the destruction of both Mycenae and Tiryns, like that of Troy, was very early, perhaps even in prehistoric times. This theory, which runs counter to the direct statements of Diodorus, Strabo, and Pausanias, is, nevertheless, so thoroughly in accordance with the nature of things and the negative results of the excavations that it will now be accepted by all who are free from prejudice. It is plain that Argos subdued these more ancient fortresses, and amalgamated their population with its own, at an early date. But how early? Dr. Schliemann is inclined to attribute it to the Dorian conquerors of Argos at the time of that migration which was called the Return of the Heracleidae. I am inclined to argue that, if this *synoikismos* had been so early, the memory of the independence of the subject towns could hardly have lasted so long, and that the lesser Argolic towns would sink into the condition of Amyclae and Helos under Sparta. Still, we know that such memories were lasting enough, as in the case of the Messenians, subdued by the Spartans in the seventh century B.C. If, then, the case of Mycenae and Tiryns is to be compared to these last, we must seek in that century for the probable time of their subjugation, and perhaps the reign of Pheidon of Argos may be provisionally accepted. This famous monarch, whom we now place, not in 743, but about 660 B.C., sought by every means to strengthen himself against Sparta, and it would be his natural policy to make Argos the real capital of the country. Neither coins (which he is said to have introduced in Greece) nor inscriptions would be common up to his date, and so the extremely archaic nature of the remains of both fortresses might be explained. Later than this it seems impossible to find a reasonable date.

We may draw from the Homeric poems some inferences as to the relative importance of the three great towns of the Argolid; but the great uncertainty as to the date of the whole *Iliad*, and still more of its parts, makes any absolute chronology unattainable. It seems as if in some parts of the poem Diomedes, the King of Argos, is magnified at the expense of Agamemnon, while in the later books (except in xxiii.) he sinks into insignificance. So in the Catalogue his dominion appears distinctly as carved out of that of Agamemnon, while all through the *Iliad* Tiryns seems gone by in greatness, being merely the home of Herakles, the glory of a former generation. Accordingly, when the *Iliad* was put into its present form, Tiryns had disappeared as a capital, the glory of Mycenae was fading, and Argos was rising to preeminence.

The results of the excavations are not in discord with these inferences. For while the oldest building at Mycenae is fully as rude as that of Tiryns, and far less massive, there was evidently a rebuilding of it by a new dynasty, who enlarged and beautified it in a manner showing a distinct advance upon the art of Tiryns. It was this later dynasty, whom Prof. Adler calls Pelopids, who took in hand the rubble masonry of the older Perseids (or whoever the first founders were), who enclosed the old pit-graves in the new ring-wall, who even faced the old walls with ashlar masonry to produce a better appearance, who also built

the great bee-hive tombs still extant, which contrast so strongly with the pit-graves discovered by Dr. Schliemann. This is the interpretation of the record of Mycenae, which Prof. Adler gives in his remarkable introduction to the present volume (p. xxvii), and which may be regarded as the hypothesis best explaining the facts.

But most unfortunately while in Mycenae we have large knowledge of the royal tombs, we have hardly any of the royal palace, which has not yet been excavated in the systematic way pursued at Tiryns. On the other hand, we know nothing of the tombs of the latter, though the interior of the palace is clearly before us. Hence we cannot as yet be certain of what I suggest as probable, that the Tirynthian palace corresponds to the older, or Perseid, stage of Mycenae. Dr. Schliemann thinks that the tombs of the Tirynthian kings were probably at Nauplia, where certain rock chambers, and even traces of bee-hive tombs, have been found. But if my hypothesis be correct, they were buried in pit graves, the finding of which will depend on some lucky accident, such as their being enclosed within a later city wall, or marked by some sculptured stones now lying underground.

The bee-hive tomb, which Prof. Adler thinks peculiar to Greece—but of which we have specimens, approximately at least, in barrows like New Grange in Ireland—is a far more advanced condition of sepulture. Even in massiveness of structure the Tomb of Atreus at Mycenae exceeds anything at Tiryns; for the inner lintel stone of the doorway there, which is moreover cut, and curved to suit the inner plan of the cone, is many times greater than the largest block at Tiryns, even including the vast floor-stone of the bath-room. The decorative art, on the other hand, of Mycenae we know chiefly from tombs of the earlier or Perseid period, and hence we need not be surprised if the ornament of Tiryns, which is chiefly architectural, is fully as developed.

In this respect the frescoes, wall patterns, and alabaster plaques of Tiryns are indeed most remarkable; and while they are clearly the parents and prototypes of later Greek ornament, they show also distinct influences of Asiatic (Phrygian and Lycian), as well as of Egyptian art. The more the antiquities of Greece are studied, the more clearly it appears that there was some real basis for the legends which brought settlers from Egypt, Phoenicia, and Asia Minor, into Greece, not as mere exiles, but as the fathers of the civilisation and arts of Greece. There was a school of pedant philologists, who were so anxious to vindicate the originality of Greek art and culture, that they denied these influences. Recent explorations have reduced such arguments to their proper value. More especially some materials used at Tiryns—alabaster inlaid with blue glass paste—compel us to admit a positive influence of Egyptian handicraft, though it may have been imported not by Greeks or Egyptians but by Phoenicians. This commerce in the Aegean, these great palaces and tombs, this architectural power which handled vast rocks without difficulty—all seems to us long before the dawn of Hellenic history. Even the Homeric poems describe a state of society widely different, though centred about the great fortresses of older days. The main result of Prof. Helbig's

researches into Homeric art, as compared with that of Troy or Mycenae, is to show that in most details Homeric customs—furniture, armour, &c.—do not correspond with what has now been exhumed. The facts may be conveniently studied in the Appendix to Mr. Wilkins's new book on the Homeric controversy. There was apparently a great gap of time, not between Homer and the rest of Greek literature, but between the greatness of Tiryns, Mycenae, and Troy, and the poems of Homer. These epics are of later date, and represent life of a different kind. Indeed, we have the alternative of bringing them down to a date near the dawn of Greek history, or of throwing back the earlier culture of foreign importation to a very early age indeed. This latter seems to be the view which Dr. Schliemann prefers.

There is one very curious gap in the knowledge we derive from the buildings of these early kings. They have left us no temples. For while the large rooms at Troy, once considered temples, are now rightly set down as the main halls or courts of the palace, the Doric remains found both at Mycenae and Tiryns clearly belong to later buildings—in the latter case even hardly belonging to the site. For a single archaic antefix, Doric capital, and some tiles could hardly mark the site of a Doric temple without some of the shafts and architraves being also found. The fact then remains that the people who built these great forts and massive tombs, possibly for sepulchral offerings, have left us no temples. How is this puzzle to be explained? Perhaps it was then the fashion of religion to build only wooden shrines, in imitation of the first modest constructions of mankind; and these shrines would have disappeared with all the wood of the upper storeys in the palace. Perhaps their worship was confined to the household sacrifices at the altar in the court, or the sacrificial trench, if it be such indeed, which Dr. Dörpfeld describes (p. 339). Yet nothing seems more unlikely than this latter solution. We must await further researches, and keep the problem before us as one demanding an answer.

This is indeed the case with a dozen other difficulties which crowd themselves upon our attention, but which this is not the place to discuss. It is rather our duty to conclude with earnest good wishes for the veteran explorer, who has spent his time and fortune in doing such work as even national enterprises of the kind have seldom rivalled. No one will rise from the study of this splendid volume without feeling that a great step has been made towards the understanding of the oldest European culture, and that we have at last been led by Dr. Schliemann to the right track for discovering the *incunabula* of that Greek art which grew to such unrivalled perfection.

J. P. MAHAFFY.

THE ART MAGAZINES.

The Magazine of Art. Vol. VIII. (Cassell.) This admirable magazine, which, under its present editor, has attained a reputation for both artistic and literary matter unique in the history of art magazines in England, shows no diminution of resource. On the contrary, this year has seen the appearance of a series of articles on current art unusually trenchant and sincere;

the *début* of a new writer on art (Mr. R. A. M. Stevenson), who unites to a wide poetical sympathy with the works of others the technical knowledge of a trained artist; and has had in Mr. Claude Phillips at least one more valuable addition to its large staff. Among the articles of special note contained in the present volume may be mentioned Mr. Austin Dobson's on "Chodowiecki," Mr. Loftie's on "London Churches," Mr. Blaikie's on "The Dart," Mr. David Hannay's on "Granada," Miss Jane Harrison's on "Greek Myths in Greek Art," Mrs. Fawcett's on "The New Forest," Mr. Claude Phillips's on "Arnold Böcklin," and the Rev. G. F. Browne's on "Sculptured Stones in England." Among the most successful of the "Poems and Pictures" are those in which Miss Alice Havers and Mr. R. L. Stevenson, Mr. Austin Dobson and Mr. R. Caldecott, Mr. Andrew Lang and Mr. Seymour Lucas, Miss May Kendall and Mr. W. H. Overend have joined forces. The last, perhaps, is the best of all. Of the landscape artists employed, none has shown more progress than Mr. Anthony Henley. Many of his designs are full of poetical suggestiveness; his "Forest Heath" (p. 4) reminds one of Théodore Rousseau.

THE bound volume of the *Art Journal* (Virtue) concludes the first year of a new series. In strong contrast to the simplicity of the familiar old cover, it is enriched with a decorative pattern and with gilt edges. As our readers know, the price of the monthly parts has been diminished, with the result of reducing by two-thirds the number of the full-page plates, which have been the special glory of the *Art Journal* from its foundation. On the profit side of the account we receive a largely increased number of woodcuts, including many varieties of mechanical reproduction, which at least constitute an instructive lesson in schools and processes. In the letterpress there is little change. Mr. H. Wallis has contributed a valuable series of articles on "The Early Madonnas of Raphael"; and we would also mention for special praise the papers on foreign artists by Mr. J. Beavington Atkinson, Mr. F. Wedmore, and Miss Helen Zimmern. Among the plates, the most popular subjects are also those that have been most skilfully rendered—Mr. Mordant's etching of M. Saintin's "Apple-Seller," which worthily forms the frontispiece; Mr. Armytage's engraving of Mr. Orchardson's famous "Napoleon on board the *Bellerophon*"; and a facsimile of a drawing by Mr. Marcus Stone. Altogether, there seems no reason to fear that the *Art Journal*, while following its younger rival in appealing to a wider circle, will desert the high standard which it was the first to set.

THE SOCIETY OF BRITISH ARTISTS.

THE Society of British Artists appears to be, on the whole, awake, which is a sufficient reason to call attention to it. It is true that its galleries still contain far too many ill-painted domestic pictures, full of a popular and too familiar sentiment—works of art which are practically the copies of their forerunners, works of art with nothing of their own to say. It is true also that a meretricious order of female beauty still finds itself chronicled upon these walls with a superfluous frequency. But though the society has not succeeded in making a clean sweep of the sentimental and the common—of the work which relies for its attractiveness upon popular theme and not upon artistic treatment—yet the walls hold many things in which it is easy to be interested.

There are several good portraits, for instance, executed in the modern vein. Mr. Dannat has two of the most notable. These are the counterfeit presentments of two sober children,

full of character, full of individuality—"Léonie Haviland" (123) and "Eva Haviland" (225). Then Mr. Mortimer Menpes sends up pretty and fanciful visions—none the less portraits in reality, we suppose—of an engaging young person in a red Japanese dress, holding a fan much as they hold it in "The Mikado" (368), and of a "Yellow Boy" (25), very brisk and pretty. Mr. Whistler himself—Mr. Menpes's master in some degree at least—has two most interesting portraits, besides his other studies. His "Mrs. Cassati" (362), is an arrangement in black, of a blonde lady in a riding habit, buttoning a glove, with lifted hand, and the riding whip tucked under her left arm. Possibly the personality here presented is less impressive than Sarasate's, but it is expressed, perhaps, not less completely. Whoever we have here, we have at all events a good horsewoman. The pose shows us that. Mr. Whistler's other portrait is that of the quietly intelligent half-dreamy face of "Master Manuel" (45). It is arranged in various tones of slaty grey. Mr. Whistler's seaside studies in the present show are not works to which we can attach any considerable value. Nothing is more likely than that we might be at issue with their author thereupon. But an infinite dexterity and often something more—a sense of beauty and of attractiveness of pose, of pose now noble and now piquant—is shown in his three little upright pieces over the fire-place, in the water-colour room. Two of them are pastels; a "Harmony in Opal and Violet" (566), and a "Note in Violet and Green" (568). They are very well chosen, and very well placed models, lightly draped, and drawn with a delicate vision of what it was most graceful to include and most wise to omit. It has been truly said that about "A Caprice in Red" (570), there is nothing capricious, unless it be the price. It is a perfectly well-ordered study of flesh-colour and red—an energetic model, springing, as it were—or, as it is—from the unfolded and widely extended drapery. Near it hangs M. Weguelin's "In Danger"—a skilful and pleasure-giving water-colour, more elaborate of theme and of treatment. A nymph sits well within range of the arrow of cupid. Mr. Harper Pennington—to go back to a Whistlerite—sends a study of two ballet girls, which, if it has not quite the fire of M. Degas, has serious and admirable merits, and is to be commended as a further effort to bring within the range of art those theatrical subjects which have often been too much the property of the vulgar. Mr. Arthur Hill's "Eothen" (244) is a study of the figure, and of drapery and ornament, pursued much further, and with greater regard, it is probable, to completeness of modelling, and subtlety of grace. An excellent piece of flesh-painting is the "Wood Nymph" of Mr. Kennington (313), though the head, alas! belongs to one model, and the figure to another.

In landscape Mr. Leslie Thomson sends "The Skylark" (308)—a work in which the figure assumes more importance than is customary in his canvas; and Mr. Richard Toovey contributes a "Cornfield," Dewint-like in its simplicity and breadth, and very quiet and beautiful in tone. Mr. John Reid achieves in "Our Old Pier, Cornwall" (316), that richness of colour which is inseparable from his later manner. It is striking, even if it be forced. We do not think it needed Mr. Aubrey Hunt to paint the large Breton coast picture, "Wood Carriers" (248). A more commonplace painter might have done it. It reveals no subtle fact—seizes no delicate effect. We like him better in his "Bathing Hour at Granville" (314), and best in his noble study of "Cloudland" (342)—a picture of the pageantry of silver-grey skies, in which Mr. Aubrey Hunt has known perfectly where to stop, as well as where to begin.

FREDERICK WEDMORE.

NOTES ON ART AND ARCHAEOLOGY.

MR. OSWALD W. BRIERLY, of the Royal Water-Colour Society, and marine painter to the Queen, has received the honour of knighthood, "in recognition of his great abilities as an artist."

THE sale of Raphael's cabinet picture of "The Three Graces," which has been arranged for the sum of £25,000, deprives the country of a possession hardly less precious in its way than the more talked-of masterpieces of the painter. "The Three Graces"—suggested by an antique studied by Raphael in Central Italy—had been a favourite acquisition of the late Lord Dudley, and it is from his estate that it passes into the hands of the Duc d'Aumale. Our readers will, perhaps, hardly require to be reminded that it is an engraved work, highly esteemed and perfectly authenticated. A very interesting advanced study for it—in pen and ink, if we remember accurately—exists in the Academy of Venice, though it is worthy of note that Raphael paused in the execution of that particular drawing before he had had time to introduce the third figure—that which is to the spectator's right. The picture, though of fullest classic inspiration, is a comparatively early work.

MR. A. WYATT THIBAUDEAU, of Green Street, St. Martin's Lane—who is fulfilling energetically the services of hon. secretary to the newly-established International Chalco-graphical Society—has sent us the rules under which the society is constituted, and its programme for the first year of its operations. There will be not more than three hundred members. It had originally been intended to limit the number to two hundred and fifty; but, in view of the applications for membership from many distinguished amateurs, that number was found too restricted. Each member, properly proposed and elected, and subscribing his two guineas, will receive a remarkable share of finely executed reproductions of the very rarest ancient prints in virtue of his subscription. The subjects chosen for the first year's issue include reproductions of "The Effects of Jealousy," by Dürer, from a unique unfinished proof in the Berlin Museum; of "A Battle of Women"—an early German or Flemish print—and of its lately-discovered Italian original; of certain "Studies of Heads," by Leonardo, now in the British Museum; of the set of Sibyls, from the impressions in the collection of Mr. Malcolm, of Poltalloch; and of certain rare and early engravings in the Bibliothèque Nationale, and in the collection of the well-known Parisian amateur, Baron Edmond de Rothschild.

A PROPOSAL is on foot to found a club "for the special benefit and accommodation of gentlemen engaged in the study and practice of architecture and engineering."

MESSRS. SOTHEY will sell next Monday and the two following days a large number of coins and medals, made up of three collections, one of which was formed by the Rev. Dr. E. Fothergill, formerly provost of Queen's College, Oxford.

ONE more popular notion seems likely to be exploded. Archaeologists have for some time suspected that the Cassiterides, &c., "the tin-islands of Cornwall," were not really in Britain. Now Dr. G. F. Unger collects in the *Rheinisches Museum* (38. 2.) a number of philological arguments to show that the names in question belong to Spain, i.e., that the Phoenicians never reached Britain at all.

WITH reference to a note in last week's ACADEMY, announcing a new art quarterly, to be called *The Century Guild Hobby Horse*, a correspondent writes to point out that the

first number of a periodical with the same title appeared many months ago. It was noticed, we find, in the ACADEMY of June 7, 1884.

THE STAGE.

A NEW PLAY BY MR. PHILIP BOURKE MARSTON.

A DRAMA in one act, entitled "A Test"—the joint work of Mr. Philip Bourke Marston and of Mr. Alec Nelson—was produced at Ladbroke Hall, on Tuesday evening, by a company under the direction of Dr. Edward Aveling. Mr. Marston bears so high a reputation as a poet, among those who are well acquainted with his poetry, that his appearance as a dramatist is worthy of record. We regret that the result, although interesting, was not entirely satisfactory. The plot lacks coherence, and is gloomy beyond redemption. A husband—a man of weak will—has sinned against his wife, and both are half maddened by a sense of shame. The conscience-stricken woman who has wrought the evil seeks sympathy from the injured wife; and, although repulsed by her, resolves to attempt atonement for her sin by abandoning her lover for ever. The wife witnesses the final parting; but, while yielding momentarily to a fit of passionate sorrow, is solely bent on regaining her husband's love. At the suggestion of a confidential servant, she finally has recourse to the expedient of causing a concocted story of her own death (by lightning) to be announced to him. But the device fails. Her husband's reason—already strained unnaturally by conflicting emotions—collapses in face of this new shock; and his wife returns to him, in the full hope of a reconciliation and of a renewal of his affection, only to find him incurably mad, and incapable of recognising her. The brief action takes place during an alarming thunderstorm, and the piece closes with the wife weeping at her husband's knees, while he, unconscious of her presence, raises the distracted cry that he will spend his life in seeking her, but will never find her. From end to end there is no gleam of light, and some of the details, which we have passed over here, are repulsively painful. The motive throughout is sufficiently marked to give the play true dramatic colour, and the monologue and dialogue, although very good at times, often leave more than is convenient to the independent speculation of the audience. Mrs. E. M. Aveling's excellent acting as the wife gave a very pathetic tone to the character, and really secured for the whole piece whatever measure of success it achieved. But neither Miss May Morris nor Dr. Aveling quite adequately interpreted the two other leading parts. The evening's entertainment included a performance of Tom Taylor's farce "To Oblige Benson," in which Dr. and Mrs. Aveling both acted with great spirit, and an admirable recitation of Mr. Buchanan's "Fra Giacomo," by Mr. Royston Keith. S. L. L.

STAGE NOTES.

THE production of the Lyceum version of "Faust" is now fixed for to-night, and there is every reason to believe that Miss Ellen Terry—whose absence from the boards in Wellington Street has been of some duration—will be sufficiently recovered to appear. We are glad to note that an engagement of importance has been entered into with Mrs. Stirling, whereby that admirable actress, who plays with an unquestioned authority, will perform at the Lyceum during the run of the piece.

"KENILWORTH" at the Avenue—a theatre not hitherto closely associated with success, in

the minds of playgoers—is to be the spectacle *en vogue* this Christmas, it appears. Whatever the piece may be worth, it has been strongly cast. Miss Violet Cameron is in it; and, when it is a question of *opéra bouffe*, that lady may almost venture to appropriate to herself the proud words of Dante, "If I go, who stays, and if I stay who goes?" She has only one possible rival, and that is a rival of many years' standing—Miss Florence St. John.

"DARK DAYS," which has not enjoyed a very long career, is coming off the bills of the Haymarket almost while we write. It is to be succeeded, after an interval, by Mr. Barrymore's play, of which for many months we have heard good accounts as a powerful and telling piece. But we read in a newspaper, the other day, that it was going to have the benefit of a strong company to play it. We have seen a list of the cast, and there is no sign of that as yet.

MUSIC.

RECENT CONCERTS.

LAST Saturday afternoon Volkmann's Quartett in G minor (Op. 14) was performed at the Popular Concert. It is one of the composer's early works, and a fair specimen of modern chamber music of second rank. The same may be said of Kiel's pianoforte Quintett in C minor (Op. 76), played on the following Monday evening. Of the two works we give, however, the preference to the former; for naturally one does not expect so much from an artist entering on his career as from one whose powers are fully developed.

Miss Fanny Davies on the Saturday played Mendelssohn's *Andante* in E flat with variations (Op. 82) in a very clear and refined manner, but we should have liked the first, second, and last variations a shade faster. The young lady was much applauded, but firmly—and as we think wisely—refused the encore. She also took part in Schumann's E flat Quintett (Op. 44).

Miss A. Zimmermann, on the Monday evening, besides taking part in Kiel's work mentioned above, played solos by Chopin and Mr. A. O'Leary, and met as usual with a flattering reception. Miss Carlotta Elliot sang at the first concert, and Mr. Santley at the second. The light and pleasing solos contributed in turn by Mdme. Néruda and her brother, Herr F. Néruda, seemed to give much pleasure.

M. Vladimir de Pachmann gave his second pianoforte recital last Monday afternoon at St. James's Hall. He commenced with Weber's E minor Sonata (Op. 70), an interesting piece of programme-music well suited to show off the pianist's delicate touch and perfect mechanism. The second and fourth movements were rendered with fitting feverishness. It seemed a pity not to give on the programme Weber's own curious description of this sonata. It is intended to represent the state of a man suffering from fixed melancholy: throughout we have reason struggling, but in vain, with insanity. It is a dire, but exciting picture. The programme included besides Raff's "Giga con Variazioni," and Liszt's *Rhapsodie Hongroise*, No. 13; also a number of short pieces, in almost all of which M. de Pachmann was heard at his best. The Chopin selection at the close was listened to with rapt attention. The pianist not only filled his hall, but so fascinated his audience that, with one or two exceptions, everyone remained to the very end. The Nocturne (Op. 37, No. 1) was perhaps a trifle over-played; but, as usual, M. de Pachmann proved himself an able and sympathetic interpreter of the romantic strains of the Polish composer.

Mdlle. Louise Douste de Fortis gave a concert on Friday, December 11, at the Prince's Hall. We heard this young lady last year, and were

pleased then, as we are now, to recognise her natural and acquired gifts. She certainly promises well; but until her powers, both intellectual and mechanical, are more matured, she will do well not to appear in public. Mdlle. de Fortis, with her youthful enthusiasm, excites our interest, and we hope that those who have her talent committed to their care will keep it hidden for a time. The programme included pianoforte trios by Beethoven and Mendelssohn, and vocal music by Mdme. Thayer, and Signor Rizzelli.

On the same evening "The Strolling Players" gave the first concert of their fourth season at St. James's Hall. We heard them play the last two movements of Mr. Prout's "Birmingham" symphony; but there was little ensemble, and the strings were very weak. The orchestra was heard to much better advantage in some numbers from Rubinstein's "Bal costumé." Mr. Norfolk Megone has in him the making of a good conductor.

The "Popular Wagner Concerts" society gave their first concert at Willis's Rooms on Monday evening, December 14. Herr F. Leideritz played the accompaniments to the Wagner selections very well; but we question the propriety of giving extracts from the master's music-dramas without the aid of an orchestra. The scheme, doubtless, is well intended, but we should advise the managers in future to arrange their "Wagner" part of the programme in a better manner. On Monday a violoncello solo by Herr Schuberth was sandwiched between Sigmund's love song from "Die Walküre," and "Elsa's Dream" from "Lohengrin." The hall was filled. Was the audience attracted by the Wagner music of the first part of the programme, or by the popular ballads of the second part?

The third Heckmann concert took place last Tuesday evening at the Prince's Hall. The programme commenced with a Quartett in G minor by Grieg, dedicated to the Heckmann players. The work, consisting of the usual four movements, is from first to last thoroughly characteristic of the composer. In the first and especially in the last movement, despite much that is clever and *piquant*, one feels, however, a certain want of power. The middle movements are two little gems. The performance was an admirable one. After this came Schubert's great and wonderful Quartett in G (Op. 161). The rendering of the *Andante* and of the *Scherzo* was specially satisfactory, and the audience, by their enthusiastic applause, seemed to be of our opinion. The concert concluded with Beethoven's Quartett in E flat (Op. 127).

J. S. SHEDLOCK.

MUSIC NOTES.

MR. CARL ARMBRUSTER gave a Wagner lecture with musical illustrations last Thursday week at the London Institution, Finsbury. The excerpts from the "Ring des Nibelungen" and "Parsifal" were well rendered by Mdlle. P. Cramer and Messrs. Guy and Thorndike. The lecturer, besides explaining the illustrations from the tetralogy, gave a brief but interesting account of "Parsifal," Wagner's last, and, in some respects, greatest music-drama.

OUR attention has just been called to the first number of a paper called *Music and School*, dated September 10, which reprints in their entirety the articles on "The Birmingham Musical Festival" that appeared in the ACADEMY of August 29 and September 5. There is further inserted, also above the name of Mr. Shedlock, an additional paragraph of thirty-four lines, not a word of which he wrote, and which contains some personal criticisms of an offensive character. Need we add more?

SATURDAY, DECEMBER 26, 1885.

No. 712, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Ireland under the Tudors. By R. Bagwell. In 2 vols. (Longmans.)

If the wish that has recently been expressed by Irishmen for a true history of Ireland means anything more than a demand for a book in which all that is Irish is painted white and all that is English is painted black, it ought to be satisfied with the work of which the present two volumes are, it is to be hoped, merely an instalment. Criticism, no doubt, will and ought to be freely used; but it will only be effective in the hands of those who know at least as much about the evidence as Mr. Bagwell himself, and they cannot be very numerous. In the meanwhile, it may be allowed to one who has no pretensions to approach Mr. Bagwell's special subject except as a learner, to acknowledge his gratitude to him on account of the spirit in which his work is written.

Mr. Bagwell's second volume ends with the year 1578; and though, in some respects, the most interesting part of the story is yet to come, what he has given us conveys the more instructive lesson. In the later years of Elizabeth the relations between the two countries were complicated by the circumstances arising out of the quarrel between England and Spain, in which, as Mr. Bagwell truly says, Ireland was but a pawn in the game of the continental powers. But in the years with which these volumes are concerned we have only the first mutterings of that storm, and have leisure to regard the conduct of the two peoples to one another, undisturbed by the necessities of England's struggle for national independence.

In treading over these smouldering embers, Mr. Bagwell wins our confidence by the modesty of his style. He does not obtrude himself upon his reader, nor does he care to point a moral if he can possibly help it. The moral, however, is clear enough. England was more advanced in civilisation than Ireland; and, though it does not follow that Englishmen may not sometimes have been guilty of crimes from which Irishmen were free, it is evident that the people who had reached the national stage were superior to the people who had only reached a tribal stage. Yet, for all that, this very superiority was a source of mischief. Conquered Greece civilised warlike Rome, and the cultured Roman afterwards civilised the warlike Teuton; but the conqueror rarely impresses his civilisation on the conquered, save at the price of the extinction of all self-respect in the races which are overpowered as well as instructed. In Ireland to this danger was added the danger arising from the imperfection of the conquest.

England was strong enough to defeat, but not strong enough to absorb. The treasury of the Tudor sovereigns was always empty; and the impossibility of paying a sufficient force to make the conquest complete produced the most disastrous results.

In the better minds among the English who dealt with the Irish problem the aim to reduce to order and simultaneously to improve the condition of the bulk of the Irish population is constantly visible, in spite of the occasional despair which leads to the adoption of unhallowed schemes of bloodshed and murder. Besides this, it was not likely that, except in the highest posts, the best of Englishmen would be attracted to Ireland. Venal judges and military adventurers would be found in plenty; and it was even worse when a masterful carver of his own fortunes like Sir Peter Carew, or a sentimental enthusiast like the first Earl of Essex, attempted to settle down among the Irish as Englishmen in later times settled down among the Indians of North America. Then came the religious difference in an age when religious agreement was the one bond of humanity, and with that the attempt to raise Ireland to the English level became utterly hopeless. When Protestantism took possession of England, there was no choice for Ireland but between slavery and rebellion.

No one who soberly considers Mr. Bagwell's story can doubt that the evil under which Ireland has suffered did not arise from the special wickedness of Englishmen, but because the Irish were not left, as Scotland was left, to the slow development of nature, which would eventually have brought them, through misery and wrong-doing, out of the tribal into the national stage. That they were not left to this course was our misfortune as well as theirs: and even the most enthusiastic nationalist can hardly maintain that, human nature being what it is, Elizabeth should have left Ireland to be used by Philip of Spain against herself. Yet, on the other hand, it would have been nothing short of miraculous if Ireland—whenever the time came that, whether by England's aid or by her own exertions, she could act with unity—did not choose to take up the work of her own development in a national direction. Some of the main difficulties of the Elizabethan age are no longer with us. Religious differences no longer make an insuperable bar to common action. No great Spanish monarchy, no great French monarchy, exists to make Ireland a pawn in its game. One great difficulty there is—the result of the introduction of an English land system which has never been willingly accepted by a people on whom it was imposed. How this difficulty is to be got over is a problem for statesmen, not for historians; but those who have to solve it might employ their time worse than in studying Mr. Bagwell's book. It does not call on English readers, like some Irish publications, to drape their country in the white sheet of penitence; but it does remind them that, however inevitably, and with whatever fair excuse may be thought of, it was England which interfered with that natural process of growth in Ireland which is always best in the long run for every people.

SAMUEL R. GARDINER.

The Liberal Movement in English Literature. By William John Courthope. (John Murray.)

ALTHOUGH Mr. Courthope expressly claims that he is "animated by the spirit of a student rather than of an advocate," it would not be unfair to describe him as a champion of the poets of the eighteenth century, and an *advocatus Diaboli* against the canonisation of Wordsworth, Byron, Shelley, Coleridge, and Keats.

"The relative position [he says] in the history of English literature that will finally be assigned to the great poets of the present century, has still to be determined by the free conflict of opinion; and, as I have said in my introductory paper, I pretend simply to describe the Liberal movement from a Conservative point of view."

From this declaration of purpose we should expect much greater novelty and freshness of criticism than the volume actually contains. Mr. Courthope says nothing really new in favour of Pope, and nothing new against the great poets of the present century. Why, then, should he claim to be heard and considered before final judgment is passed? In what court does he wish to plead? Is that august but intangible body, the Great British Public, in any danger of passing a verdict of unqualified condemnation on Pope as a poet, or of unqualified approbation on Wordsworth and Shelley? If this is so, Mr. Courthope is justified in demanding to be heard first, only he should not speak as if Mr. Matthew Arnold and Mr. Swinburne, whom he calls "Liberal" critics, were on this point arrayed against him.

From a champion of the eighteenth century we are entitled to expect, above everything, clearness of view and precision and accuracy of language. Mr. Courthope explains that he has been censured for introducing into literary controversy the names of political parties, because they may carry party feeling with them. There is something in this objection; but a much stronger objection is that the names are indefinite. Disputes about poets—which all the world, except the disputants and their partisans, is agreed to regard as interminable—are already sufficiently complicated by the difficulty of settling in words "What is a poet?" without having added to them and mixed up with them the almost equal difficulty of settling "What is a Liberal?" and "What is a Conservative?" True, Mr. Courthope does give a definition, with every appearance of exactness, in his preface:

"I have not used the words 'Liberalism' and 'Conservatism' in any invidious or party sense. By 'Liberalism' I mean the disposition which leads men to seek above all things the enlargement of individual liberty; by 'Conservatism' that which makes them desire primarily to preserve the continuity of national development."

This looks clear and intelligible enough; and equally judicious is the remark added by Mr. Courthope that there is no essential contradiction between the two principles, and that the tendency to regard the one as exclusive of the other is unfortunate. But, when we come to the application, we are not so sure that Mr. Courthope is Conservative enough to adhere to his own definition. For example, he makes the following commentary on

Wordsworth, unimpeachably sensible up to the concluding sentence :

"Wordsworth's genius moved with a large and expanding power ["Liberal," then, so far, according to the definition] in the midst of a society accustomed to town life, limited, refined, highly artificialised, and exclusively occupied with the contemplation of its own manners. He extended men's social ideas by showing with unsurpassed power what beautiful pathetic and sublime associations were connected with the natural life of their country. Hence, in so far as he was genuinely a poet, the Liberalising influence he exerted on literature was in the deepest and truest sense Conservative."

"In the deepest and truest sense," no doubt, but not in the sense in which Mr. Courthope has defined the words at starting. For, according to his repeated definition, "Liberalism" means "striving after change and novelty," and "Conservatism" "adhering to tradition and authority." Was it the desire to "adhere to tradition and authority," "to preserve the continuity of literary development," that impelled Wordsworth to go to country life and contemplative life for his subjects? If Mr. Courthope's object was to show what we owe to the Liberal spirit and what we owe to the Conservative spirit, as he has very properly defined them, the Liberal spirit ought to have the credit of Wordsworth's expansion of the field of literature. It comes to this, that to Mr. Courthope's mind every change or novelty that is for the benefit of literature should be called Conservative, whether it adheres to tradition or defies tradition; while the opprobrious term "Liberal" is reserved for unprofitable individual eccentricities. This is the practical result; and it would have been more conducive to lucidity, more Conservative of the traditions of the eighteenth century, if he had given his opinions about poets in the established language of criticism. One fears that in spite of his describing himself as a Conservative critic, he has been affected as regards his terminology by an unprofitable "Liberal" craving after novelty.

The truth is that Mr. Courthope is hampered at every turn by this novel terminology, and involved by it in more inconsistencies, contradictions, and irrelevances, than could be indicated within the limits of a short review. Mr. Courthope has given ample proof elsewhere of his knowledge of eighteenth-century poetry, and one cannot suppose that his argument in support of his main thesis would have been so meagre if he had not burdened himself with this most un-Conservative novelty of expression. In every essay, just when one thinks he is coming to the point, he flies off in some direct or indirect attempt to justify his use of the words Liberal and Conservative. For example, in the second essay, he undertakes to explain "The Conservatisms of the Eighteenth Century," to expound "the aims and ideals of those English writers who constituted the tradition established during the eighteenth century." One would have expected to see this purpose carried out by an enquiry into the additions of permanent value made by the school of Dryden and Pope to the resources and methods of English poetry. What improvements did they make, what traditions did they establish, that have never since been departed from by English poets except for the

worse? To have given a reasoned answer to this question would have been a real contribution to historical criticism. That Mr. Courthope is capable of discussing the question fully and intelligently we cannot doubt; but he hardly touches it. Instead, he occupies his essay with two problems of a very different kind, problems suggested by the word Conservative, and the theory implied in the application of it to literature. Half the essay is devoted to showing that Butler and Burke were Conservatives in the spheres of religion and politics. The second half considers what it was that Dryden and Pope "conserved" in poetry, not in the sense of liberally introducing changes of permanent advantage, but in the sense of adhering to the authority and tradition of previous generations of poets. And the conclusion is the not particularly pregnant or novel proposition that they conserved "the poetry of manners." The proposition is put by Mr. Courthope in a more questionable form when he says that "Dryden, Pope, and their followers introduced a generous fountain of fresh inspiration by reviving and developing Chaucer's old satiric methods of portraying life and character." Two poets of manners more different, both in spirit and in method, than Chaucer and Dryden or Chaucer and Pope could not easily be found. But, apart from this, if Dryden and Pope merely "revived and developed" the tradition of Chaucer, why give the name Conservative to them, and refuse it to the poets of the nineteenth century who revived and developed the poetry of Romance? Further, in arguing that Dryden and Pope were Conservative because they went back to Chaucer, Mr. Courthope writes as if Dryden and Pope owed nothing to their immediate predecessors in English poetry, as if they developed on a Chaucerian basis only, and not out of the poetry into the midst of which they were born. This can hardly be what he means, but it is what he is constrained to say or imply by his unfortunate choice of polemical terms.

From one casual expression that he uses to the effect that the eighteenth century was not a period of mere stagnation, or retrogression, or mistaken aims, but a necessary link in the continuity of our poetic development, one can see that in Mr. Courthope's opinion the nineteenth century learnt something from the eighteenth even in poetry. In fact, we suspect that this is his main thesis put into plain language. But when, in the definite spirit of the eighteenth century, we ask of this volume what the nineteenth did learn from it, we get no definite answer. Mr. Courthope might retort that the poetic lesson of the eighteenth century cannot be put into logically clear language; but if he should say this, he would be proclaiming himself a "Liberal" critic, in the sense in which he uses the word when he speaks of the "Liberal" movement of the nineteenth century.

W. MINO.

The Life of the late General F. M. Chesney.
(W. H. Allen.)

THIS biography is a loving record of one who, if not a great man, was made of the stuff that attains greatness. Gen. Chesney never beheld war. As to one of his discoveries, the result

has been to bring gain and renown to a foreigner; as regards the other, it remains a monument of memorable, but as yet fruitless, enterprise. Yet the untired soldier was thoroughly versed in all that pertains to his important arm; and he had many of the qualities of a real general—intelligence, sagacity, and force of character. Chesney's survey, too, of the Isthmus of Suez, which dispelled errors as to the true levels of the Mediterranean and Red Seas, and proved that a water-way between each was possible, entitles him, in M. de Lesseps's language, "to be called the father of the Canal"; and the project to which he devoted years of heroic toil and untiring study—that of opening a path to our Indian Empire from the Syrian seaboard along the Euphrates—the line marked out as the best by Napoleon—is still believed by competent judges, especially from a military point of view, to indicate the most secure route for our communications with our great dependency. Apart, moreover, from what he achieved, the man in himself attracts attention. His earnestness in every undertaking of his life, his energy, perseverance, and unselfish nature, were, in the highest degree, admirable; and, in a word, he may fairly claim to have been one of those noble spirits who, though never attaining a high place in the state, stand in the illustrious company of our British worthies. This volume, partly written by his wife, and, in part, by a surviving daughter, describes at length the career of Chesney; and, though it errs on the side of diffuseness, we have read it with pleasure and real interest. It is a simple, but well-designed monument to a man of great parts and remarkable character.

Chesney was born in 1789—a scion of that hard, independent, race which colonised, from Scotland, the North of Ireland, and which presents such a remarkable contrast to the passionate Celt of the southern provinces. The father of the child had served with distinction as a loyalist in the American war; and he brought up his offspring with the stern severity characteristic of the old breed of the Covenant, but with remarkable sense and judgment. Young Chesney quickly developed the qualities conspicuous in him in after life; and a single anecdote well illustrates the self-reliance and strength of his character. At the age of nine, the boy was appointed to an honorary post in the Down Militia; and he walked fully twenty miles barefoot to gain the corps, when called out in 1798 for active service against the rebels, his mother having hidden away his boots, to make the journey, as she thought, impossible. The letters and conduct of the lad, in his teens, show keen intelligence, a God-fearing nature, and conscientiousness verging to a fault; but they also reveal the obstinate firmness, undoubtedly one of the failings of the man. Chesney passed from Woolwich into the artillery in 1805, and we can only glance at the uneventful course of his life during the next twenty-four years. He became a well-read and accomplished soldier, perfectly understood the tactics of his arm, and had a turn for the literature of war; but it was not his fortune to serve in the field, and after the peace he was all but shelved. His correspondence and the incidents of his life bring out distinctly his masculine char-

acter. He fell into debt, but denied himself every comfort for years to pay off his debts. He clung to a hopeless love with unchanging faith. In everything he proved himself constant, persevering, and not to be turned from his purpose. In 1829-30 the occasion came usually given by fortune to men of this stamp. Having gone to Turkey to witness the close of the memorable campaign which saw Diebitsch dictate peace near the shores of the Bosphorus, Chesney undertook, at our ambassador's request, to visit Egypt and explore the country as a natural stage on our way to India, the shadow of Russia, which had crossed the Balkans, having already caused thoughtful minds to dread her approaches towards our dominions in the East. Chesney spent much time in the Delta of the Nile, examining the region around the isthmus; and in this survey, he made a discovery fraught, in after years, with momentous results. It had been supposed that the Red Sea was at a considerably higher altitude than the Mediterranean where they approach each other. But Chesney proved that there was no such difference; and the conception of the Suez Canal originated from his report on the subject, M. de Lesseps, as we have said, declaring that he had a large share in the glory of the work. Chesney, however, probably from his acquaintance with Napoleon's writings on Egypt and Syria—he was a great admirer of the renowned Corsican—seems never to have doubted but that the Euphrates was the true way to our Indian possessions; and in this, as we have remarked, he was certainly in accord with the Hannibal of this age. Filled with this notion he crossed the desert; and on January 1, 1831, entrusting himself to a frail raft, he began the descent of the great river. We have no space to describe a journey, romantic and perilous as that of La Salle and the adventurers who, in another hemisphere, explored the Ohio and the Mississippi. Sufficient to say that, after many adventures, he reached the Persian Gulf in about three months, and beheld the seas that extend to the Indus.

This journey confirmed Chesney's belief that the Euphrates opened the best way to India. His discoveries attracted a great deal of notice; his romantic adventures became known through Europe; and the daring and energy exhibited by him made him popular in his own country. After some hesitation the Government took up his project, though not in a liberal spirit; and in the spring of 1835 Chesney sailed from England, the head of an expedition charged to explore the Euphrates and to report on the subject. The adventurers experienced immense difficulties in carrying their impedimenta across the hill ranges between the seaboard and the great river. But these were overcome at last; and, in March 1836, two small steamers, constructed of English materials on the spot, were making their way to the coasts of Persia. The voyage was slow and not very successful; one of the steamers perished in a tremendous storm; but the other descended safely to Basrah, and even crossed the head of the gulf to Bushire. The expedition ended in a tour through parts of India by its untiring leader; and Chesney, in 1837, returned to England, having admirably fulfilled his arduous task.

From this time until his death, in 1872, Chesney toiled hard to persuade a succession of governments to accept his conclusions, and to make the Euphrates our route to India, either by steamers on the river itself or by a railway along its course; but though his views were undoubtedly just, and are singularly confirmed by an able paper by an officer of the Austrian staff—not noticed, strange to say, in this volume—it was not his fortune to see them realised. One obstacle or another was ever in the way: the Czar and the Sultan disliked his scheme; Louis Napoleon interposed to prevent it at the very moment when success seemed certain; and the great success of the Suez Canal directed attention to another project. Chesney, too, was not of the stuff that wins the ear of the great and conciliates statesmen. He was positive, peremptory, and not a courtier; and the large volumes he wrote on his theme, though crammed with research, are dull and tedious.

We can only glance at a few more passages in the life and career of this eminent man. He held a command for some time in China, and was all but appointed to collect and lead a Foreign Legion for the Crimean War; but at the last moment the scheme fell through, and it was never his fortune to see active service. His later years were, for the most part, spent in country pursuits in his native county of Down, or in trying to further his favourite project; and even in old age he made two journeys to the East to advance, if he could, the enterprise. His life during this long period was that of a quiet and Christian gentleman; and numberless striking traits attest his manliness, his unselfish spirit, his persevering and energetic character. He passed away at the age of eighty-three; and this pious memorial of his many virtues is no unfitting monument to a gallant spirit. WILLIAM O'CONNOR MORRIS.

TWO BOOKS ON LITURGICAL MATTERS.

Pontificale Ecclesiae S. Andreae. The Pontifical Offices used by David de Bernham, Bishop of St. Andrews. With an Introduction by Chr. Wordsworth. (Edinburgh: Pitligo Press.)

The Troubles connected with the Prayer-Book of 1649. Documents now mostly for the first time printed from the originals in the Record Office, the Petyt Collection in the Library of the Inner Temple, the Council Book, and the British Museum. Edited by Nicholas Pocock. (Printed for the Camden Society.)

It is now some thirty years since the Rev. G. H. Forbes established, at his residence in Burntisland, on the Firth of Forth, the printing press to which he gave the name of the Pitligo Press, in commemoration of the title (attainted after the '45) of the head of his branch of the Forbes family. Since the death of Mr. Forbes, his literary executor, Canon Walter Bell, has published the *Drummond Castle Missal*, has completed the issue of that work of capital importance, the Pitligo Press edition of the *Sarum Missal*, and now adds further to the obligations of liturgiologists by the publication of the first of the two volumes whose titles are given above.

The remains of the Scottish liturgical forms

of the pre-Reformation period are very scanty. If the *Book of Deer* be really Irish in its origin, we possess nothing of the time of the Celtic Church; while the mediæval period has left us but little that remains. It is, however, the less to be regretted (so far as the mediæval Anglo-Scottish Church is concerned), as we have ample evidence to show that the variations from the English uses were but trifling.

The offices, printed in the volume before us from the original MS. in the *Bibliothèque Nationale* of Paris, are only a few of those that go to make up a complete pontifical. They are the Offices for the Consecration of a Church, of an Altar, of a Cemetery, of a Crucifix, and an Office for the Reconciliation of a Church, *ubi sanguis effusus fuerit, &c.* The last-named of these offices was used in reconciling (1242) the Church of Holy Trinity, Berwick-upon-Tweed, then a Scottish town, after it had been polluted by a bloody quarrel between two Scolos.

David de Bernham was elected to the Bishopric of St. Andrews, in 1239, and died in 1253. His pontificate is remarkable for the very large number of churches dedicated by him. The editor, Mr. Chr. Wordsworth, accepts, no doubt correctly, the solution, which Canon Bell has proposed, of the difficulty of 140 churches being dedicated by one bishop in the space of some ten years. Cardinal Otho had held a legatine council in Edinburgh in 1239. The *Acta* of this council are unfortunately lost; but from Otho's *Constitutions* for England, promulgated in 1237, we learn that his mind was much occupied by the offence of the great number of unconsecrated churches (including some cathedrals) that were to be found throughout the land. He issued an order for the redress of this evil, and added the penalty of an interdiction of the solemnisation of mass within any church remaining unconsecrated at the end of two years. It is natural to infer that on entering Scotland, Otho laid such stress on the duty of having churches consecrated as resulted in the singular activity of De Bernham.

One of the chief points of interest in the MS. here edited is the list it contains of Scottish churches consecrated at this time. The Rev. James Gammack, of Aberdeen, has supplied topographical notes identifying most of the places named. Interesting as these notices of consecrations must prove to local antiquaries, I must not venture to refer here to more than the consecration (October 6, 1243) of St. Giles's Church, Edinburgh (recently restored through the munificence of William Chambers), and the consecration (April 16, 1241) of the original of the hideous monstrosity that now disgraces the beauty of one of the noblest prospects that any city in the world can exhibit—*Ecclesia Sti. Cuthberti de edeneburgh, sub castro*, in one of the graves surrounding which Thomas de Quincey sleeps.

British pontificals are few in number, and their relations to one another have not yet been carefully investigated. I notice, in passing, the existence in De Bernham's pontifical of the rubric *Tunc elevatâ manu* (p. 47), wanting in the Sarum pontifical and the York pontifical of Archbishop Bainbridge, but found in the Bangor pontifical. It is natural that in the case of the office-book of a bishop more

liberty should be given for the indulgence of personal tastes in matters of detail.

Mr. Wordsworth has added in Appendices (1) an account of the *Liber Sancti Cuthberti* (circ. 1090) in the library of Sidney Sussex College, Cambridge; (2) a transcript of a twelfth-century dedicatory prayer, written at the end of a seventh-century MS. of the Latin Gospels, which belonged to St. Augustine's, Canterbury; (3) *Interrogationes de Ordinibus* from the tenth-century English MS., the *Pontificale Gemmeticense*, now at Rouen; (4) certain episcopal benedictions; (5) an account of the benedictionals of Æthelwold and of Robert (of the same date); (6) an account of the Bangor pontifical, with transcripts of some of the prayers; (7) certain prayers from the *Pontificale Gemmeticense*; and some valuable indices of episcopal benedictions.

In the second book at the head of this article, Mr. Pocock has printed a quantity of varied material bearing on the history of England during the years 1549-50. All work of this kind is useful as helping to fill in the outline with those details which give it stereoscopic effect; but I am unable to say that Mr. Pocock's present volume has added anything of considerable importance to what we already know of the history of the period, ecclesiastical and civil. Some of the "Troubles" here referred to were not in truth "connected with the prayer-book of 1549"; while the promoters of other "Troubles" put forward the new prayer-book as a pretext, while different objects were really in view. The documents illustrative of the Devonshire rebellion are numerous. An answer by Nicholas Udall "to the commoners of Devonshire and Cornwall," in which their demands are taken up article by article, is printed by Mr. Pocock from the royal MSS. for the first time. It extends over some fifty pages, discusses each point raised, and shows considerable controversial ability. We have also reason to thank the editor for the reprint of the rare Catechism of Micron (Laski's colleague in London), dated December, 1552. It exhibits in a striking way the doctrinal views of some of the foreigners then in England. I may notice in passing that I have counted, in different quarters, not less than a dozen various English forms of the word "Portuaise"; and if "porcaste" (p. 128) be not an error of transcription, or of the press, we have here a thirteenth. The word "tounalls" which follows it, in the same page, is certainly an error of either pen or press for "journala."

Many students of the history of the English Reformation will be unable to concur with the low estimate the editor forms of the reforming bishops; nor will his reference to the authority of Macaulay help much now-a-days in support of his view of the character of Cranmer.

JOHN DOWDEN.

City Ballads. By Will Carleton. (Sampson Low.)

A NEW volume of poems, by the author of *Farm Ballads*, has a ready-made welcome awaiting it, and to damp the ardour of that welcome is by no means a congenial task. Still, duty is duty, howsoever disagreeable it may be; and one reader, at any rate, has to

admit that he has been disappointed by Mr. Carleton's latest work. When I speak of disappointment, I am thinking of the book as a whole; for, though there is nothing in these pages which captivates the imagination as it was captivated by "Betsy and I" and "Over the Hill to [and from] the Poorhouse," there are poems which we feel at once could have been written by no one but the author of those moving idylls.

For the deficiencies of the present volume we think its plan is largely responsible. Mr. Carleton has noticed the obvious fact that the sights and sounds both of the country and the town impress most forcibly and sharply those to whom they have the charm of novelty; and, therefore, he has endeavoured to reproduce "some of the effects of city scenes and character upon the intellect and imagination of two people from the country." These two people, to continue the quotation from Mr. Carleton's preface, are:

"First, a young student, who has travelled the well-beaten roads of a college course, but is just entering real life, and now for the first time walks the paved and palace-bordered streets of which he has heard and read so much; and, second, an old farmer, with very little 'book-learning,' but a clear brain, a warm heart, and independent judgment, and a habit of philosophising upon everything he sees, which habit he brings to the city, and applies to the strange facts he witnesses."

The volume, therefore, consists of imaginary transcripts from "Arthur Selwyn's Note-book" and "Farmer Harrington's Calendar"; and it will at once occur to every reader that the idea of combining the form of the diary with the form of the ballad is neither a very practicable nor a very happy one. As a matter of fact, many of the pieces of verse which go to make up the volume, especially those which are supposed to be the utterances of "Arthur Selwyn," are not ballads at all, even in the widest and vaguest sense of the word, but rather what may be called contemplative lyrics, devoted not to incidents—the proper themes of the ballad—but to the reflections of a thoughtful and sensitive young man brought for the first time into contact with the gay and gloomy realities of city life. Of course, it is disappointing when one expects ballads to find something else; but the disappointment ought not to hinder one from doing justice to fine poetry because it happens to be different in form from what one was looking for. Unfortunately, however, I cannot feel "in my bones" that any great portion of "Arthur Selwyn's Note-book" is fine poetry. It has fluency—almost fatal fluency—it has music of a somewhat ordinary kind, it has sanity and seriousness of thought; but, as Sir Joshua Reynolds said of a vaguely unsatisfying picture, "It wants *that*!" The "that" in this case may be translated by the word grip. There is no serious positive fault to find, but the easy verse slips away from the reader and leaves no mark upon his consciousness. Here are some lines from the first section of the book entitled "Wealth":

"Yet, 'tis the same restless story:
Even to fall here were glory!
Grand, to be part of this ocean
Of matter and mind and emotion!
Here flow the streams of endeavour,
Cityward tending forever.

Wheat-stalks that tassel the field,
Harvests of opulent yield,
Grass-blades that fence with each other,
Flower-blossom—sister and brother—
Roots that are sturdy and tender,
Stalks in your thrift and your splendour,
Mind that is fertile and daring,
Face that true beauty is wearing—
All that is strongest and fleetest,
All that is dainty and sweetest.
Look to the domes and the glittering spires,
Waiting for you with majestic desires!
List to the city's gaunt thunderous roar,
Calling and calling for you evermore."

And so on, and so on, till pages are covered with easy swinging verse which has a certain half stimulating, half soothing quality, but has also a thinness and fluidity which is really tantalising.

Even "Farmer Harrington" has a tendency to lapse into this expatiatory style. But he is, as a rule, much more vigorous than "Arthur Selwyn," for to him are allotted the humorous pieces; and how strong Mr. Carleton is in genuine, hearty, unforced humour is known to every reader of the *Farm Ballads*. I think there can be little doubt that one of the best of the new poems is also the one which is undoubtedly the funniest—the story of "Flash," the horse of the Fire Brigade—

"Flash was a white-foot sorrel, an' ran on Number Three:

Not much stable manners—an average hoes to see;
Notional in his methods—strong in loves an' hates;
Not very much respected, or popular 'mongst his mates.

"Dull an' moody an' sleepy, an' 'off' on quiet days:

Full o' turbulent, sour looks, an' small sarcastic ways;
Scowled an' bit at his partner, an' banged the stable floor—
With other means intended to designate life a bore.

"But when, be't day or night time, he heard the alarm-bell ring,
He'd rush for his place in the harness with a regular tiger spring;
An' watch, with nervous shivers, the clasp of buckle and band,
Until 'twas plainly evident he'd like to bear a hand."

Flash, however, becomes apparently incapacitated for fire brigade service, and has to encounter the humiliating fate of being sold, not to an omnibus company, but

"To quite a respectable milkman, who found it not so fine

A-boassin' one o' God's creatures outside its natural line."

For though poor Flash is outwardly degraded, the ancient spirit is not dead. One day, when the engines are tearing along to a fire they pass the discarded one, "a-tuggin' away at his cart," and Flash's emotion is far too overpowering for restraint.

"If ever I see an old hoss grow upward into a new—

If ever I see a milkman whose traps behind him flew,
'Twas that old hoss, a rearin' an' racin' down the track,
An' that respectable milkman a-tryin' to hold him back.

"Away he rushed like a cyclone for the head o' 'Number Three,'

Gained the lead and kept it, an' steered his journey free,
Dodgin' waggons an' horses, an' still on the keenest 'silk,'
An' furnishin' all that neighbourhood with good, respectable milk.

'Crowd a yellin' an' running', an' vainly hol-
lerin' 'Whoa!'
Milkman bracin' an' sawin', with never a bit o'
show;
Firemen laughin' and chucklin', an' shoutin'
'Good! go in!'
Hoss a-gettin' down to it, an' sweepin' along
like sin.
"Finally came where the fire was—halted with a
'thud';
Sent the respectable milkman heels over head in
mud;
Watched till he see the engines properly workin'
there,
After which he relinquished all interest in the
affair."

And, indeed, all interest in any affairs, for
the excitement of the last great enterprise
being over and gone, Flash recognises once
more the hollowness of life, lies down on the
spot and abandons it for ever, and his un-
willing charioteer the milkman has to take
his dead body away. Then comes the de-
licious conclusion:

"An' if, as some consider, there's animals in the
sky,
I think the poor old fellow is gettin' another
try;
But if he should sniff the big fire that plagues
the abode o' sin,
It'll take the strongest angel to hold the old
fellow in."

There is certainly in the last couplet a
reminder of one of Col. Hay's most daring
humorous touches; but the ballad, as a whole,
is a really characteristic example of Mr.
Carleton's lighter manner. I will not say
that it is absolutely the best thing in the
book, but I have found nothing better,
though perhaps nearly half-a-dozen of the
pieces run it hard. The probability is that
some of these best things were written first,
and quite spontaneously; that they suggested
the plan of the volume; and that the plan
suggested the remaining contents—a some-
what unfortunate process, for a first-rate
ballad cannot be written to order, even when
the order is given by the writer himself.

I must not forget the illustrations, which
add so much to the charm of the book,
especially as something can be said of them,
which cannot be said of the poems—that they
are of uniform excellence. Of course, they
vary in interest; but there is a high level of
conception and draughtsmanship below which
they never fall. JAMES ASHCROFT NOBLE.

The Dwellers on the Nile. By E. A. Wallis
Budge. (Religious Tract Society.)

THIS work is one of a series of volumes on
Oriental history and archaeology which the
Tract Society are now publishing, and for
which they certainly merit thanks. Mr.
Budge's treatment of his subject is marked
by a good deal of freshness, and it is on this
account that it is entitled to notice. He
begins with a chapter on the decipherment of
the hieroglyphics. In this chapter, however,
exception must be taken to his treatment of
our great countryman, Thomas Young, of
whom Mr. Budge says, "It is not true that
he deciphered the Egyptian hieroglyphics, or
even that his labours assisted the real
decipherer, Champollion." This latter asser-
tion has never been proved. As early as 1818
Young had determined the phonetic value of
five characters; and in that year he gave the
learned an account of his discoveries, which

were republished in the following year (1819)
in the supplement to the *Encyclopædia
Britannica*. Still, three years intervened
before the reading of Champollion's cele-
brated memoir and the publication of his
Lettre à M. Dacler. Unable to set himself
entirely free from the trammels of certain false
principles, Young made no further advance.
It has been justly said, "He had found
the key, but failed to open the door." And
this is precisely what Champollion succeeded
in doing. But it is too much to say that
Champollion derived no advantage from
Young's discoveries. Mr. Budge's observa-
tions are not in accord with what Champollion
himself said of Young in 1822: "Ses ré-
cherches sur le texte intermédiaire et le texte
hiéroglyphique de l'inscription de Rosette...
présentent une série de résultats très-im-
portants." At p. 20 Mr. Budge gives a fac-
simile of the Rosetta inscription which, though
small, is admirably clear and distinct. The
reader may see in it for himself the cartouche
of Ptolemy, the import of which Young was
the first to discover. I may remark that the
long period which, in 1818, had elapsed since
the arrival of the Rosetta stone in England
(in 1802) may well moderate the expectations
of those who think that the discovery of a
bilingual Hittite inscription of considerable
extent would enable the Hittite hieroglyphs to
be at once, and fully, elucidated.

Mr. Budge has turned to good account his
official position at the British Museum, as may
be seen from his interesting chapter on "The
Mummy," and elsewhere. The chapter on
"The Book of the Dead" is noteworthy;
and what is said on pp. 32-49 may give
the uninitiated a good idea of the hieroglyphic
method of writing. In the chapter on "The
Egyptian Religion" one would have liked to
meet with some discussion of those two
remarkable deities, Bes and Set, especially of
the latter, and of that mysterious symbol of
life, the *ankh*. But Mr. Budge would prob-
ably reply that these subjects are too obscure
to be treated concisely. He gives (p. 130) an
extract from an Egyptian hymn beginning
"God is one and alone, and there is none
other with Him," an extract which, like some
Babylonian hymns, suggests some close rela-
tion with the theology of the Old Testament.
But the relation of the Hebrew theology with
that of other Oriental nations is at present a
tangled web, only very partially unravelled.

THOMAS TYLER.

NEW NOVELS.

The Ghost of an Old Love. By Violet Whyte.
In 3 vols. (White.)

The King can do no Wrong. By Pamela
Sneyd. In 2 vols. (Hurst & Blackett.)

A Woman with a Secret. By Paul Cushing.
In 3 vols. (Bentley.)

Othmar. By Ouida. In 3 vols. (Chatto &
Windus.)

Weaver Stephen. By Joseph Parker, D.D.
(Sonnenschein.)

A Deadly Errand. By Max Hillary. (Ward
& Downey.)

A Crimson Stain. By Annie Bradshaw.
(Cassell.)

Clarissa's Tangled Web. By Beatrice Bria-
twe. (James Clarke & Co.)

The Ghost of an Old Love is, for the most
part, a brightly written, readable story, with
several of the characters firmly and easily
drawn, so as to appear life-like and natural.
Four daughters of a widowed father, and the
father himself, are cases in point, though
a fifth daughter occupies so small a place on
the canvas that, though she has much to do
with the plot, the reader has to take her for
granted on the slight description of her dis-
position supplied by her sisters. The actual
plot is a little thin, though fairly well
managed. But the principal merit of the book
lies in the commendable way in which the
personages are left to talk and act the story
out themselves, instead of the author telling
us from the outside, as it were, how they
thought and felt and behaved.

The King can do no Wrong, like two former
novels from the same pen, exhibits a good
deal of natural vigour, which would be all
the better for a little added refinement.
Without being either coarse or vulgar, much
less vicious (as the novels of a certain group
of female writers of the day are apt to be),
all three books show a preference for dwelling
on the seamy side of society, and a habit of
using too thick a brush and too glaring colours.
At the same time, there is real capacity
for conceiving character and telling a story.
In the present instance, these latter qualities
are even more prominent than hitherto, and
genuine skill is displayed in the portrait
of the heroine. Hilda Fairfax is one of three
orphan girls residing with their grandmother,
a raddled old harridan, who has been "fast,"
and who continues bad in will, even when
age has taken from her the power of more
active evil. Of Hilda's two half-sisters, the
elder is described as having no good qualities
whatever—false, malicious, and mischief-
making—but she plays no part in the story,
being merely referred to occasionally in un-
complimentary terms. The second, who makes
a great match, has kept herself as much aloof
as possible from the coarse ways of the house-
hold where she lived, and always does the
correct thing, but from coldness and prudent
calculation only, not from any moral prin-
ciple. The youngest sister, a shy, reserved,
nervous, and emotional girl, who has never
been taught the difference between right and
wrong, and in whom, under all contingencies,
duty would have but a poor chance against
sentiment, falls deeply in love, when a mere
child of thirteen, with a handsome young
man whom she sees regularly in a pew at the
Belgravian chapel to which her grandmother
sends her on Sundays. She makes him a
hero of romance, and credits him with every
noble quality. In fact, Ivo Bruce, bating
good looks and a certain surface kindliness of
manner, is rather below the average of the
ordinary young man about town, being weak
as water, selfish, fickle, and neither honest
nor moral. However, Hilda's love for him
grows with her growth, and as a girl of
seventeen she literally flings herself at his
head; while he, looking on her as a mere
child, has no scruple in amusing himself with
her youthful confidences and evident devotion
to himself. She is compromised hereby, and
has a bad time of it at home and in society;

but is totally incapable of seeing facts as they are, of checking herself in her pursuit of her hero, or of believing that any of the hard things she hears said of him can be other than cruel slanders, intended merely to make her give him up. She finds at last that he never really cared for her, and sinks under the discovery; while a man of a much higher stamp, who had been drawn towards her, and might have persevered, had not her whole being too plainly run in one violent current, consoles himself with a kindly and wealthy widow who had long given him her affections. The interest is concentrated on the elaboration of the unhappy heroine's character, which is undeniably well drawn; while Ivo Bruce has done duty in a hundred previous novels, and will turn up in a hundred more, so that there is not much freshness about him. Leo Vansittart, the strong and reputable man of the world, who serves as foil to Bruce, is a good figure; and several minor personages are cleverly sketched, notably the Rev. Frank Beauchamp, who has quitted the army for holy orders, and who has become a celebrated revival preacher, though he is ignorant, narrow-minded, and unpractical.

A Woman with a Secret is a story by an American author, with most of the characters and scenes also American, though the plot is wound up in England, and an Englishman is one of the leading personages. The plot turns on the American marriage law; and the secret is that the heroine, while passing as an unmarried woman, is, in fact, the ex-wife of a convicted felon, whom she had divorced for cruelty and desertion before he had sounded the lower depths of crime, resuming her maiden name in accordance with a special clause which empowers the law-courts to authorise such resumption in some divorce suits. Her own purpose is to tell the truth to her second husband before marriage; but lack of moral courage delays her confession, and advantage is taken of this by another woman, a disappointed competitor for the same man, to revenge herself by offering to take the burden of the disclosure upon herself, but really not to make it, so as to acquire black-mail power over the wife, and facilitate besides designs she has on the husband. How her fortunes come to be intertwined with those of the convict ex-husband, and how their joint plot ends, is the story, which is cleverly managed, though the fair-haired, beautiful, devilish type of heroine has been a little overdone before and since the days of Lady Audley, and there is no freshness, consequently, in Mabel Strachan. Nor is the author very familiar with English topics. His chief English character leaves Oxford after taking his degree as a wrangler, and a hypothetical pair are described as "Sir and Lady Hugh Maddox, Bart.," which is a little mixed. But he tells his story fluently enough, and supplies a point or two for agitation against the existing American marriage-code.

Othmar is a continuation of *Princess Napraxine*, resuming that story nine years after the close of the former book, and weaving in fresh materials. The chief new element is the history of a young girl whom the Countess Othmar, *oi-devant* Princess Napraxine, has taken away, as the caprice

and toy of a day, from the Mediterranean islet where all her early years had been spent; and has thereby altered the tenor of her existence, not only putting new ideas and ambitions into her mind, but causing her to lose her home. But the greater part of the book is taken up with long analyses of the thoughts, motives, and conduct of the lady to whom three previous volumes have been already devoted; and, truth to say, she is not interesting enough to carry a reader in patience over so long a journey, so that *Othmar*, besides having Ouida's usual faults of over-florid style, impossible people, and inaccurate attempts at omniscience, has another fault less often to be met in her writings—that of being frequently dull. There are some passages of better quality, notably one telling of the fisher-girl, Damaris Berarde, starving in Paris; and the close of the story, albeit unhealthy, has marks of power. But even the genius of George Eliot could not make psychological vivisection suitable material for a novel, and Ouida is not a George Eliot.

Weaver Stephen is not a connected story, but merely a series of sketches intended to exhibit certain types of modern English religion, chiefly Nonconformist. The character who supplies the title plays no more important part than appearing three or four times and repeating a Scripture text, more or less inappropriate to the attendant circumstances, nor is any marked power of delineating character or incident exhibited, though there are clever passages in the book, notably a dialogue between a Broad Church fellow of Balliol and a Liberationist champion, on the advantages of an established Church, wherein, with rare candour, Dr. Parker makes the subtle Oxford dialectic altogether too much for the dissenting champion to meet successfully, though, with no little skill, the notion is presented to the reader that, while superiority of mental fence is indisputably on the Oxonian's side, the other disputant has the better cause. The ambitious and vulgar dissenting minister, who takes orders in the Church of England as a social step upwards, fails in his new sphere, and vainly tries to get back to his old position, and the daughter of the kindly, worldly, and wholly untheological vicar, who hears for the first time in her life real spiritual preaching in a Baptist chapel, and can get no explanation from her father of what it all means, serve further to disclose the writer's standpoint, though the book contains other passages, unfavourable to Nonconformity, from which the reader may, if so inclined, draw opposite conclusions.

A Deadly Errand is a sensational story with rather a good idea for its leading motive; namely, sending a man out of England to Sweden and Russia on a journey which will throw him in the way of persons who have resolved on the death of one whom he exactly resembles. And there are two or three strong situations. But the story is not well constructed, and too little is told of the preliminary facts and of the reasons influencing the conduct of the chief characters. We are not informed what the Nihilists had against the first man, nor why the sender of the second man desired his death, nor yet why the woman to whose intervention he owes his escape, interested herself in his fate, or

contrived to act the part ascribed to her. Thus the book is not dramatically put together, and the invention of two or three telling situations is not enough to atone for this defect, though it may justify the critic in hoping for better work on a future occasion from the same pen.

At any rate, the book just noticed is much better than *A Crimson Stain*, which has been pitchforked together by a writer who has not troubled herself to get the details moderately free from error, and who does not make amends by any graces of style or ingenuity of plot for the too obvious faults of matter. The story is supposed to be an Anglo-Spanish one in the reign of Ferdinand VII.—that is, not later than 1833—and yet one of the characters quotes a poem of Longfellow's, who did not begin to publish till 1841, nor issue the particular verses cited till several years later; while another uses chloroform as an anaesthetic, in a fashion unknown till about 1857. And we are told of gondolas in Spain, while a great monument to one of the characters is erected in one of the leading streets of Venice. What is more, the whole story turns on the supposed currency in modern Spain of the law which prevailed in some parts of mediaeval Germany, making the office of executioner hereditary, and impossible of evasion by the heir in line to the last tenant of that office, so that there is not enough antecedent probability about any of the situations to permit a reader to give himself up to illusion, and to fancy that the events recorded might have happened, and the people concerned have conducted themselves similarly in face of them.

Clarissa's Tangled Web is an unpretending, kindly story, written in a simple, fluent style, whose chief literary defect is the accumulation of small details, unessential to the narrative, and lending no particular vividness to its incidents. But it seems as though intended originally for serial publication; and it may have been desirable to furnish a certain bulk of copy. The plot of the tale is that the heroine, long and happily married to a man who alloys many virtues with a masterful and implacable temper, falls in casually with the little orphan daughter of a former suitor of her own, and promises the dying mother to befriend her. This she does without informing her husband, from shyness and fear how he would take the connexion in memory with one whom his wife had loved before she knew himself. She does write the whole story to him when he is abroad; but the letter miscarries, and on his return home he discovers something of what has been going on, while his wife temporises and prevaricates. At last he suspects much that has never happened, disbelieves her assertion that she had told him all in the missing letter, sends her away from her home, and himself emigrates to America with their young daughter, remaining there for some years, during which the orphan cause of all the trouble is growing up into a beautiful girl, inheriting the tastes of her artist father. The missing letter turns up at seven years' end, and convinces the husband that he has been cruelly unjust, so he returns, and all ends happily. The book is not in the smallest degree exciting, but is at least unaffected and wholesome. RICHARD F. LITTLEDALE.

GIFT-BOOKS.

The Sermon on the Mount. Illustrated. With Introduction by the Bishop of Ripon. (Hodder & Stoughton.) Though not so stated, this is an American book, with a different Introduction specially written for the English edition. While recognising the amount of labour that has been expended upon it, we cannot highly commend the result. The mode of illustration adopted is twofold. First, a lavish abundance of decorative borders and designs, which demand better drawing than most American artists can claim, and a sharper style of wood-cutting than the American school profess. In this class of work, the least ambitious is the most satisfactory. Then we have the pictures proper, which are themselves of various kinds. The landscapes, drawn by Mr. Fenn during a visit to the Holy Land, are perhaps the most pleasing. The figure pieces, by various artists, are of varying merit. In some cases, as in "the light of the world" and "the strait gate," we altogether fail to comprehend the symbolism intended; though both of these pictures, which are by Mr. Harper, are in themselves effective specimens of engraving. As "the persecuted for righteousness' sake" we have a Puritan matron pursued through the snow by Indians with tomahawks. This is drawn by Mr. Church; and, if we can allow the application, it is undoubtedly the *chef d'œuvre* of the volume.

In striking contrast to this *Sermon on the Mount* is the well-known series of illustrations to *The Parables* by Millais that has just been re-issued by the S. P. C. K. At any time it would be delightful to renew our acquaintance with "the sower of the tares," "the lost piece of silver," "the wise and foolish virgins," &c. It is especially interesting at the present, when we are shortly to see so complete an exhibition of Millais's paintings at the Grosvenor Gallery. On this occasion, however, we are more concerned to point out his simplicity in design and boldness in grouping, in comparison with the ambitious, but ineffective, work of the American artists. Equally satisfactory to our patriotism is the engraving of the brothers Dalziel, done twenty years ago before the introduction of "processes." Draughtsman and reproducer are here fitted to each other, and both are to be seen at their best. We would extend our praise to the cover, which bears a decorative design as chaste as it is appropriate.

Poets in the Garden. By May Crommelin. (Fisher Unwin.) Merely to describe this book is to write its commendation. It is an anthology in a double sense. The author has ransacked the poets of Britain, from Chaucer downwards, to form a collection of quotations, long and short, of what they have said about flowers; for she is better than her title, and has not despised the wild blossoms of the country-side, nor even weeds (so-called), and trees, and rushes. Of course, similar nose-gays have been gathered before, notably from the "native wood-notes" of Shakspeare, and in the cosmopolitan *Ros Rosarum* of E. V. B. But Miss Crommelin has been catholic in her search, and has strung together her posies with occasional comments which prove the intelligence that has guided her in her labour of love. Such a book, from such a compiler, would not be complete without two indexes—one for the flowers and another for the poets; and these we duly have. If it is necessary to be critical, we may add that the illustrations in chromolithography are somewhat coarse.

Sylvan Winter. By F. G. Heath. (Kegan Paul, Trench, & Co.) We are here taken from flowers that tell of summer to trees in their winter nakedness. Mr. Heath—as his title-page attests—is such an approved favourite of the public, that any new volume from him, in

the line he has made his own, is sure of a welcome. The thought was as bold as it is happy to write a Christmas book about English woods as they now are, without their leafy dress, but not the less beautiful on that account. Unfortunately, most of us crowd into ugly towns at winter time; and few but sportsmen have even the opportunity of learning what the bare woods look like in frost and snow. For it must be confessed that a single tree, or even such a collection as may be seen in the parks of London, fails to charm the incurious observer at this season. It is necessary to get into a wild wood—and Richmond and Epping are not so far off—in order to appreciate "sylvan winter." Mr. Heath, it is unnecessary to say, has deeply studied what he writes about, both in nature and in books. To him a tree in winter is as attractive as a tree in summer, perhaps still more attractive, for it now reveals its true outline and the characteristics of its growth. Taking advantage of this, he has entitled one of his longest chapters "Spray," where he points out in detail the modes of ramification of the several species. Here his task of instructor has been greatly assisted by the illustrations of Mr. Short. Indeed, we have not found this year any pictures that more faithfully serve the primary office of illustration than those in this book. They have evidently been drawn, not to exhibit the skill of the artist or the processes of the engraver, but to present nature as she is. Nothing could be more true, and at the same time more effective, than the two full-page plates called "Oak" and "Beeches."

Familiar Wild Birds. By W. Swaysland. (Casell.) Two or three years ago we gave hearty praise to a volume that bore the same title as this. Not less admirable is this second of the series, though it must be admitted that the spoonbill and the gyr falcon have little claim to be reckoned among the "familiar wild birds" of Great Britain. The plan of the work is to give a brief description of each bird, its habitat, its peculiarities, and its nidification, together with a coloured plate, executed by some singularly successful process of chromolithography, and also two little woodcuts, which last certainly ought not to escape attention. Most of the pictures are by Mr. A. Thorburn; but we have been specially pleased with the few by Mr. A. F. Lydon, a new name to us in this connexion. With this book, and with an occasional visit to the Natural History Museum at South Kensington, no London boy need be ignorant of the appearance and habits of the English *avi-fauna*.

Chapters on Flowers. By Charlotte Elizabeth. (Seeley.) What surname ought to be added to the two Christian names on the title-page we do not know. The lady who bore them was the editor of the *Christian Lady's Magazine*, from its foundation in 1834 to her death in 1846. She was also the author of *Judah's Lion*, a work very popular among religious circles in our own young days. The present volume contains a selection from her contributions to the magazine, which have already appeared before in book-form. However, as this was long ago, it may be as well to say that the flowers do not merely furnish a text for descriptive writing; but that they are used to adorn simple tales of village life and religious reflections. The illustrations are printed in colours in a way that makes a pleasant contrast to the glaze of popular chromolithography.

Marvels of Animal Life. By C. F. Holden. (Sampson Low.) This is just the book to put into the hands of an observant boy. He cannot fail both to be delighted and to profit by it. Its plan is sufficiently trite, but the mode in which it is carried out with but little known creatures is commendable. Such titles for

chapters as "The Nest-Builders of the Sea," "Finny Light-Bearers," "Dry-Land Fishes," and the like, sufficiently show the scope of the work. As far as we have tested it the information is carefully brought up to date. In the account of the Mammoth reference should be made to Lieut. Benckendorf's discovery of this animal on the banks of the Indighirka in 1846. The chapter on shark fishing is excellent, introducing many quaint traits of the fishermen on the West-Indian reefs. Our old friend the scorpion is once more exhibited with the well-known "hunches" upon its back, but the evidence for its existence is not very convincing. The account of luminous fishes, such as *scopelus*, *chamliodus*, and the like, is well written, and the chapter on "Animal Mimicry" is one of the best in the book. The style of this volume is distinctly American, with much transatlantic spelling, and not a few marvellous stories. The draughtsman has considerably amplified the mammoth's enormous tusks. They are generally considered to have been circular in shape rather than angular, as here represented. The book contains many fair engravings; and although much of it is common property for all zoologists, the author tells us "many of the observations chronicled in the following pages were made during a long residence upon a coral reef or atoll, some while swimming under water along the bristling coral banks" of his tropical home.

Buz; or, The Life and Adventures of a Honey Bee. By Maurice Noel. (Bristol: Arrowsmith.) Sir J. Lubbock proved that a wasp may possess amiable and friendly qualities: here a bee is shown to be endowed with more than the usual virtues of its kind. Finally, it generously devotes itself to death in order to save an aged benefactor from being robbed. Thus *Buz* is partly a fairy tale, partly an account of the economy of a bee's life. It is dedicated to "the Baroness Burdett-Coutts, President of the British Bee-Keeper's Association," and its final ends are evidently first to teach kindness to animals, next to induce the young to become bee-keepers. The book is prettily got up, with a frontispiece by Linley Sambourne, and forms a very moral gift-book, each page containing not merely amusement, but also (though the powder is carefully hidden) instruction.

The Owls of Olynn Belfry: a Tale for Children. By A. Y. D. Illustrated by Randolph Caldecott. (Field & Tuer.) The story here is slight, but gracefully told. Probably the main incident may be founded upon fact. The real attraction, of course, is the numerous illustrations by Mr. Caldecott, than which he has produced nothing better this year. The owlets *pussim*, and the owl dancing a minuet with the fairy, are perhaps the best, where all is first-rate. Altogether, this is a shilling'sworth which the judicious will not grudge.

The Village Blacksmith. By Longfellow. Illustrated. (Griffith, Farran & Co.) Like *The Sermon on the Mount* noticed above, this book is evidently of American origin. Indeed, the engraving comes from the same *atelier*—that of Mr. George T. Andrew. The blacksmith himself, as conceived by Mr. Merrill, belongs to a higher rank of society than his English brother. The designs by Mr. Garrett please us best, with the exception of "the village choir." "Paradise" won't do at all.

The Doomed City; or, the Last Days of Durocina: a Tale of the Anglo-Saxon Conquest of Britain and the Mission of Augustine. By the Rev. A. D. Crake. (A. R. Mowbray.) Mr. Crake informs us in his preface that this is "the *eleventh* [the italics are his own, but we willingly adopt them] of his series of original stories illustrating Church history." Durocina, we may explain, is the pretended Roman

name given in the pseudo-Richard of Cirencester to Dorchester-on-Thame. Mr. Crake regards Bertram's forgery as an authentic document, and quotes it copiously—a fact which is quite sufficient to settle the question of his competence to "illustrate" the history of Roman Britain. In spite of frequent references to "the eminent historian, Professor Green," the historical part of the book is amusingly incorrect, and the tale has no compensating literary merits. From the gushing style, and the profusion of italics and notes of exclamation, we should, if the book had been published anonymously, have felt no doubt whatever that it was written by a young lady. However, we suppose that the "public" which, we learn, has given a "favourable reception" to Mr. Crake's ten previous stories will find equal pleasure in reading his eleventh.

Eric and Ethel: an Old-fashioned Fairy Tale. By Francis Francis. (Sampson Low.) It is not everyone who can write a fairy tale, and we cannot affirm that Mr. Francis succeeds in this kind of literature so well as in his angling books. The light playful touches which should characterise Elf-land and its small inhabitants are wanting. To borrow an illustration from a sister art, Mr. Francis has used the scene-painter's rough and ready brush instead of the delicate etching needle wherewith to limn fairy land. No one should venture upon its enchanted ground without having first made a careful study of the mode in which the subject is treated by the best depictees of elves and their ways—Shakspeare and Drayton. Mr. Francis's Trolls and Nisses are too gross and earthly to charm the reader; their *abandon* and the glow and shimmer of their purple and crimson caps and tunics, to which Dicky Doyle paid so much attention, are absent from his matter-of-fact elves. The moral of the story is unexceptionable: the ever-fresh idyll of true love which can afford to wait through patient years and dare every danger must always delight. Mr. Francis's Ethel is both good and beautiful, if only we were permitted to see more of her; although Eric's adventures are somewhat commonplace. Indeed all the author's characters tread Elf-land with the countryman's clouded shoon, instead of with nimble foot, never brushing the dew from the pendant blue-bells. And even ideal Niss should not say, "There'll be the very dickens to pay at the mill shortly," and "I will play the very mischief with the dairy;" nor does an echo from Paradise ring in his marriage blessing—"Live and be happy, if there be any happiness in having a swarm of sturdy, noisy brats springing up around you." Mr. Francis's style soon disenchant the reader; but the print of the book is delightfully large, the paper thick, and the cover pleasant to look upon.

Folk and Fairy Tales. By Mrs. Burton Harrison. (Ward & Downey.) This has the distinction of being the first book of American manufacture for which Mr. Walter Crane has drawn the designs. The scheme of the author, whose *Old-fashioned Fairy Tales* of last year we have not forgotten, is the one familiar to all readers of Hans Andersen, of making a number of inanimate objects tell the story of their former life or of their own country to a child. In this case, the objects are not the worn-out playthings of a Scandinavian cottage, but the *bric-a-brac* of "a spacious house in upper Fifth Avenue." We miss the simplicity and the pathos, but we get instead a greater variety. Mr. Walter Crane has evidently taken great pains over the illustrations, which reach a uniformly high standard. The best is that to "The French Fan's Story."

Lulu's Library. By Louisa M. Alcott. (Sampson Low.) It is unnecessary to commend

a new volume of stories by Miss Alcott, whose name must be as well known to the "little women" of England as to those of New England. *Spinning-Wheel Stories* of last year had the special attraction of historical reminiscences. In *Lulu's Library* fairy tales are mingled with stories of everyday life; and all alike are told with the charm and the confidence of a veteran writer for the young. The woodcuts are unambitious, but sufficient.

MESSRS. CHAPMAN & HALL have issued this week new editions of Dickens's *Christmas Carol* and *The Chimes*, reprinted from the original plates of forty years ago, illustrations and all, for the price of one shilling each.

Dot. By Annie Lucas. (Hodder & Stoughton.) The story of a city wail, which is intended to be pathetic and is not, must be pronounced a failure. An entirely unnecessary account of the seduction of the wail's mother need hardly have been introduced into a book intended for little girls. There is very little interest in it and a great deal of maudlin piety. The illustrations, by Mr. T. Pym, are pretty.

At Granny's. (Masters.) This is poor stuff not suitable for anyone of any age. It consists of the crimes and repentances of two children, who go to their grandmother, while their parents are staying on a visit elsewhere. But the crimes are not of a kind which any Granny, however fussy, or any nurse, however idiotic, would regard as serious, while they are totally devoid of humour.

MISS AGNES GIBERNE requires abundance of room for the display of her special powers, and this she does not seem to have in *Daisy of Old Meadow*. (Nisbet.) Its purpose—to convert an old miser from a love of gold to a love of that "which perisheth not with the using"—is rather too obvious. The girl Daisy Meads herself is a good thumb-nail sketch.

Notes of Infant Class Sunday-school Lessons, by S. E. Sparks (S. P. C. K.), furnish a suitable lesson for every Sunday in the year. Clergymen are continually wanting such a book to put into their teachers' hands.

WE cannot commend too highly *Evening Chimes*, a book for the little ones to read at bedtime (S. P. C. K.); or, better still, a book to be read aloud to the little ones at bedtime. It will engage their attention; and each reading is very short. The Rev. G. R. Wynne, Archdeacon of Aghadoe, has written it.

It is rather startling to find Job and the Magi among *Bible Heathens*; or, Church and World in Scripture Times; a series of addresses to his congregation at Dundee, by Dr. Grant (Nisbet); and the word "Church" does not mean "called out," as Dr. Grant says, save under its Greek form. From their own point of view, however, these lectures are strong evidence of a love of culture, and a regard for modern discoveries, prevailing in what the world has generally been wont to consider a somewhat arid section of Christianity.

Mrs. Lester's Girls and their Service (Nisbet) is a book of a strongly religious tone on the difficulties and temptations of young servants. It is well calculated for the class to which it applies.

The Broken Shaft: Tales in Mid-Ocean. Edited by Henry Norman. (Fisher Unwin.) This paper volume, forming "Unwin's Annual" for 1886, contains seven stories by popular writers who happened to find themselves together on board an Atlantic liner in the autumn (apparently) of last year. The editor has strung the stories together by the introduction of some other popular personages who are not writers.

NOTES AND NEWS.

MR. BROWNING has, we hear, turned aside for a time from the longer poem at which he was working, to write a shorter one on a subject suggested by the late performance of the "Eumenides" at Cambridge, with which he was much pleased.

MESSRS. MACMILLAN announce the issue of an edition of the collected works of Mr. John Morley, in eight volumes, uniform with their edition of the works of Emerson, to which Mr. Morley himself wrote the introduction. The first volume, containing *Voltaire*, will be published in January, and the whole by the end of May. The treatise *On Compromise* will, we believe, undergo some revision. Much interest will be aroused to learn what is included in the two volumes of *Miscellanies*. The Life of Richard Cobden will form no part of this edition.

MESSRS. CHATTO & WINDUS will publish immediately a new story by Mr. Grant Allen, entitled *For Maimie's Sake*.

THE volume for February in the pretty little series of "Canterbury Poets," published by Mr. Walter Scott, will be a collection of *Sonnets of this Century*, with an introductory essay on the sonnet by Mr. William Sharp. We understand that Mr. Sharp has received free discretion to make his own selection from Lord Tennyson, Mr. Browning, Mr. Swinburne, Mr. Matthew Arnold, Mr. Theodore Watts, and many other living writers, as well as from those who own the copyrights of Mrs. Browning, Charles Tennyson-Turner, and D. G. Rossetti.

MR. SAMUEL WADDINGTON is preparing for publication a selection of sonnets translated from the poets of other countries, and he will be glad to receive particulars of any such translations from persons interested in the subject. Mr. Waddington's address is 47, Connaught Street, Hyde Park, W.

A VOLUME of university sermons by the late learned Archdeacon Lee, of Dublin, has this week been published by Messrs. Rivington in London, and by Messrs. Hodges & Figgis in Dublin.

MR. JOHN BATTY, of East Ardsley, near Wakefield, who brought out some while ago an agreeable essay on "The Scope and Charm of Antiquarian Study," has now in preparation a volume on *Ancient Parish Life*, in its obsolete and curious aspects, the aim of which is to depict the social and domestic habits of the people from early times. The substance of it he is now contributing to a local newspaper in a series of papers entitled "Phases of Old Yorkshire Parish Life"; but he intends that the scope of the work shall not be limited to Yorkshire, and he will be glad to receive communications from other parts of England relating to manor court rolls, church registers, official parish documents, &c.

MISS R. H. BUSK, author of *The Folklore of Rome*, has at press, with Messrs. Swan Sonnenschein & Co., a work on Italian folk-songs, containing the originals, together with translations in verse.

THE ninth divisional volume of Messrs. Cassell & Co.'s *Encyclopaedic Dictionary*, which was reviewed in the ACADEMY of last week, will be ready for publication in a few days. The volume extends from "Memorandum" to "Parbuckle."

MR. F. E. LONGLEY announces a volume of Bible Readings, by H. W. S., entitled *The Veil Uplifted*; or, the Bible its own Interpreter.

AT the Royal Institution Prof. Dewar will deliver a course of six lectures adapted to a juvenile auditory on "The Story of a

Meteorite," beginning on Tuesday next, December 29.

THE juvenile lectures this Christmas at the Society of Arts will be given by Prof. Silvanus P. Thompson on "Waves."

THE idea of erecting a monument to Horace Benedict Saussure, the first climber and describer of Mont Blanc, is being taken up with energy. The President of the Swiss Geological Commission, M. Alphonse Favre, of Geneva, will be glad to receive and acknowledge subscriptions from Alpinists and others. The monument is to stand at the foot of the mountain, and not far from the Col du Géant, where Saussure camped for sixteen days in the midst of ice and snow in the service of science. It is hoped that the monument may be unveiled on August 8, 1887, which will be the hundredth anniversary of Saussure's ascent of Mont Blanc. The editors of the *Basler Nachrichten* are also receiving subscriptions, and undertake to forward them to the Saussure Committee in Geneva. Not a few Englishmen will be glad to acknowledge their debt to the distinguished physicist, meteorologist, and geologist who devoted more than thirty years of his life to the study and description of the Alps.

WE have received two political maps—from Mr. Stanford and from Messrs. Ruddiman Johnston & Co.—showing the results of the recent election. As specimens of cartography there can be no comparison between them. Mr. Stanford has adopted colours that are clearly distinguishable even by gas-light, and has avoided the besetting evil of crowding his map by relegating all the boroughs to the margin, where their political complexion is shown by an ingenious device due apparently to Miss E. Shaw Lefevre. Of Messrs. Ruddiman Johnston & Co., it may be said that their map is much the cheaper of the two, and that it contains the figures of every poll. It was quite unnecessary to mark the disfranchised boroughs.

Messrs. GRIFFITH, FARRAN, & Co., who are now the publishers of both "Pettitt's" and "Blackwood's" series of diaries, have also issued for the coming year a "Court Diary, Engagement Book, and Almanac," printed in antique type on exceptionally good paper, and in a convenient oblong quarto form.

MR. J. ROGERS REES writes to us that the title of his book to be published shortly by Mr. Elliot Stock, as announced in last week's ACADEMY, is *The Pleasures of a Bookworm*.

THE FORTHCOMING MAGAZINES.

THE first number of the *Asiatic Quarterly Review*, to be published by Mr. T. Fisher Unwin on January 1, will contain the following articles: "The Restitution of Gwalior Fort," by Sir Lepel Griffin; "The Christmas Tree," by Sir George Birdwood; "Lord Strathnairn," by Sir Owen Burne; "Hobson-Jobsoniana," by Col. Yule; "China and Burma," by Prof. R. K. Douglas; "The Turks in Persia," by Prof. Vambery; "Early English Enterprise in the Far East," by the editor, Mr. Demetrius C. Boulger; "The Childhood of Akbar," by Col. Malletson; and "The Chinese Brave," by Mr. J. G. Scott (Shway Yoe). There will also be reviews of books.

Illustrations is the title of a threepenny monthly magazine of a novel character, which will appear in January, under the editorship of Mr. Francis George Heath. It is described as "a pictorial review of knowledge of all kinds, comprehending amusements, art, domestic economy, inventions, literature, and science." The publishers are Messrs. Wells, Gardner, Darton, & Co.

THE forthcoming number of the *Contemporary Review* will contain articles by the Bishop of Peterborough on "Oaths, Parliamentary and Judicial," by Sir Charles Warren on "Recent Events in South Africa," by Sir Charles Grant on "The Burmese Question," by Mr. Justin McCarthy on "Home Rule in Ireland," by Mr. George W. E. Russell on "Self-Government in the Church," and an imaginary conversation between Parnell and Grattan by Mr. H. D. Traill.

WE understand that Mrs. Oliphant is the author of the serial story, "A Young Life," which is now running in *The Scottish Church*. The January number of this magazine will contain articles on the General Election, Scotch Universities, and Scotch Literature.

MR. H. SCHÜTZ WILSON will have a paper in the January number of the *Gentleman's Magazine* on "Goethe as an Actor."

In the January number of the *Contemporary Pulpit* (Swan Sonnenschein & Co.) will be found an offer of prizes for the best list of books suitable for a preacher's library, to be bought for not more than ten pounds.

THE *Preacher's Analyst* will in future be united with the *Lay Preacher*, and the combined magazines will be published at twopence monthly, by Mr. F. E. Longley, under the editorship of the Rev. J. J. S. Bird.

ORIGINAL VERSE.

"THOUGHT AND SORROW."

Twin sisters I deem ye,
Pale Thought and deep Sorrow;
Each her lineaments seem ye
From the other to borrow.

The same grave expression
Ye depict on man's face,
And like plaintive depression
On his features ye trace.

On woman's pale brow ye
Both carve the same lines,
On man's forehead plough ye
Like care-wrinkled signs.

With the same sad still light
Each eye do ye kindle;
Ye make it more bright
Or its fireless dwindle.

In the same deep-drawn way
Sigh alike Thought and Sorrow—
He who thinks deep to-day,
He who bodes ill to-morrow.

The lips curve sedate
Ye limn in like fashion,
To mark Thoughts that are great
Or Grief's mournful passion.

To each other ye lend,
In men younger or older,
The same earth-ward bend
Of head and of shoulder.

Man's slow heavy gait
In like manner ye share:
Ye both crawl at the rate
Of men burdened with care.

Words in common, as "pensive,"
Ye partake, Thought and Sorrow;
Each, her terms apprehensive
From the other ye borrow.

If difference between ye
Perchance there might be,
'Tis the difference mainly
That is "of degree."

If pale Thought wear an air
Of sombre ungladness,
Sorrow hath, as her share,
More positive sadness.

Or urge we more just
Thought doth doing imply,
While Sorrow's part must
In mute suffering lie?

Yet are suffering and doing
In true issue the same:
Each is test of man's going,
Each his vigour may tame.
If the rapt air of Thought
We call fitly "abstraction,"
While Sorrow's onslaught
We say ends in "distraction,"

Both terms but declare,
By co-equal concession,
Thought and Sorrow both share
Alike lost self-possession.

By your kinship, what mean ye,
Pale Thought and lean Sorrow—
That your features are seen, ye
Share likeness so thorough?

Does it mean that deep Thought
Is by Sorrow attended,
And that Sorrow is taught
By deep Thought to be friended?

Does it mean that while life
Needs must grief find or borrow,
Men's Thought is aye rife
With objects of sorrow?

Twin Sisters I deem ye,
Pale Thought and lean Sorrow;
Each her lineaments seem ye
From the other to borrow.

JOHN OWEN.

OBITUARY.

THE death is announced of Mr. James MacLehose, the well-known publisher to the University of Glasgow. During his early years, he was for some time in the house of Messrs. Seeley & Co., of London; but he began business for himself at Glasgow in 1838, and was appointed bookseller to the University in 1864. His knowledge of literature, his soundness of judgment, and the personal attention he bestowed on all the details of his business, gave him a high position among the publishers of this century. He had just completed before his death the revision of a book to be entitled *Memoirs and Portraits of One Hundred Glasgow Men*. He died on December 20, in the seventy-fifth year of his age.

PROF. HEINRICH WILHELM JOSEF THIERSCH has just died in Basel. He was the eldest son of the philologist Friedrich von Thiersch, and was born in Munich, November 5, 1817. After studying theology in Erlangen, he was called in 1843 to Marburg as theological professor, where he began a brilliant academical career. His conversion to the "Catholic Apostolic Church," which caused a great sensation at the time in academical circles, obliged him in 1850 to resign his theological chair. He spent many years as a private tutor in South Germany, continuing all the time active and fertile in the production of theological works, some of which have been translated into English. About ten years ago he was attracted to Basel by the rich and varied intellectual life of the university. He continued hale and full of work until the middle of the present year, when he was attacked by the severe illness from which he never recovered.

THE SHELLEY SOCIETY.

THE Shelley Society's committee has resolved that the society's publications shall be issued in four series: first, the society's "Papers," of which the first will be, it is hoped, the Rev. Stopford Brooke's inaugural address on Shelley as poet and man, on March 2 next; the second, Mr. H. Buxton Forman's bibliographical paper on the vicissitudes of *Queen Mab*; the third, Mr. Henry Sweet's, on the primitiveness of Shelley's view of nature, its parallelism with that of the Vedas, and its contrast with those of Shakspeare and later poets; the fourth, Miss

Mathilde Blind's paper on Shelley's view of nature contrasted with Darwin's.

The second series of the society's publications will be facsimile reprints of certain of the original editions of Shelley's poems. This series will be started by a reprint of the handsome quarto of *Adonais*, from Mr. T. J. Wise's copy, with a bibliographical note by him. *Epipsychidion* and *Hellas* will probably follow.

The third series will consist of reprints of articles on Shelley: *a*, biographical; *b*, critical. The biographical series will begin with a reprint of Hogg's well-known and important *Monthly Magazine* articles on Shelley's early life, annotated, in order to correct proved mistakes, by Mr. Wise, under Mr. H. Buxton Forman's supervision. The critical articles are not yet determined on, but will certainly include the earliest and rarest of them.

The fourth series of the society's books will be the "miscellaneous" one, and will start with a cheap reprint of the *Cenci* for the society's performance in May, with a short introduction by Mr. H. Buxton Forman and notes by Mr. Alfred Forman. The second book will be a cheap "Shelley Primer," written by Miss Mathilde Blind, and published by Messrs. Reeves & Turner. This will, it is hoped, be out in April. A Shelley concordance will follow in 1887, if the society can persuade a publisher to take it up. Mrs. Buxton Forman has for several years worked at it, and, being unable to complete it, will now hand over her material to the Shelley Society. Mr. T. J. Wise, who will now undertake the editing of it, asks for help in his task from members of the society and other lovers of Shelley.

The Shelley Society's committee wishes to appoint local hon. secretaries and to see local Shelley reading clubs and societies established, after the pattern of Browning clubs and societies, in the provinces and abroad. Mr. W. M. Rossetti, 5 Endsleigh-gardens, N.W., and Dr. Furnivall, 3 St. George's-square, Primrose-hill, N.W., will be glad to hear from any one who is willing to help the society in the way above-named. They will also be glad to receive promises of subscriptions to secure a repeat of the society's performance of the *Cenci*. Twelve guineas have already been guaranteed. The Birmingham Century Club hopes to arrange a repetition of the *Cenci* performance at Birmingham.

PRINT AND ART BOOK SALES.

A SALE, rather interesting to the lover of what are called "Fancy Subjects," took place at Messrs. Sotheby's last week. There were many examples of that very skilled engraver of feeble themes—Bartolozzi—and many things by other engravers after an artist of weak grace—Angelica Kaufmann. Along with them were sold a few examples of the French Eighteenth Century School, as to which the English is still, in a measure, ignorant. It confounds the strong with the weak; the sterling with the meretricious. And of the French engravings offered for sale last week, few were worthy of a place in the cabinet of the true collector. One of the most gracious as to subject, and one of the finest as to impression, was "L'Innocence en Danger," after Lavreince. It fell to Mr. Nosed's bid of £4 only, because its merits failed to be understood. Less desirable prints of the French School went for higher prices. Among the less desirable is indeed not to be reckoned "L'Assemblée au Salon," except that the impression in this case, offered under the hammer, was a thin and inadequate one. It fetched £5 12s. 6d. "La Comparaison," a not very creditable example, fetched £6 10s. "L'Aveu Difficile," engraved by Janinet, likewise after Lavreince—a pretty coloured thing in blue and rose—fetched the same price, and the somewhat vulgar "Aprets du Ballet"—in which

the characteristics of the professional dancer have entirely eluded the artist's observation—realised £4 10s.

A curious sale, chiefly of art books, took place at Messrs. Sotheby's on Friday. A copy of the first edition of *Benick's Birds* realised £9 9s. (Quaritch); the brilliant little French book by Octave Uzanne, known as *L'Eventail*—together with its less admired successor, *L'Ombrelle*—fetched £4 10s.; the *édition de luxe* of Dickens's works—which has fallen in price, not because of any diminution in the popularity of Dickens, but because of the inadequacy of this as an *édition de luxe*—realised but £15; Labarte's *Histoire des Arts Industriels* fetched £5; King's *Study Book of Mediæval Architecture and Art* sold for £5 (Batsford); the *Chefs d'Œuvres de l'Art Antique*, £5 2s. 6d.; and *Lievre's Works of Art in the Collections of England*—with masterly etchings of precious objects, by Bracquemond, Courty, Greux, Le Rat and others—fell to the bid of £3 3s. A day or two later, Messrs. Sotheby offered, among the curiosities of the sale room, a copy of the first edition of *Jane Eyre*; and of Mr. Browning's *Paracelsus*. The latter was issued by Effingham Wilson, of the Royal Exchange, exactly fifty years ago.

A SCHOOL OF ORIENTAL STUDIES AT OXFORD.

IN a congregation at Oxford, held on December 8, the following statute was promulgated, and the principle of it, constituting an Honour School of Oriental Studies, was agreed to without opposition:

"1. There shall be two examinations in the honour school of Oriental studies—an examination in Indian studies and an examination in Semitic Studies.

"2. The general subjects of the examination in Indian Studies shall be the History of India, and the following languages, viz., Sanskrit, Persian, Arabic, Hindustani, Hindi, Marathi, Bengali, Tamil, and Telugu.

"The general subjects of the examination in Semitic Studies shall be Arabian and Jewish History, and the following languages, viz., Arabic, Hebrew and Aramaic (including Chaldean, Samaritan, and Syriac).

"4. "Each of the examinations shall include special subjects, being departments or periods of history, or subjects studied in connexion with any of the above-mentioned languages. For the purposes of this provision, the study of history shall include social and economical history, systems of law, and the history of literature, learning, philosophy, and religion; and the study of language shall include the comparative study of languages or of different periods of a language. Candidates who offer Sanskrit or Persian may be permitted to offer Zend as a special subject; and candidates in the examination in Semitic Studies may be permitted to offer Assyrian and Ethiopic as special subjects.

"5. "Every candidate in the examination in Indian Studies shall be required to offer either Sanskrit or Persian or Arabic, the General History of India, and one special subject. Candidates who aim at the highest honours shall be required to offer two additional languages, or an additional language and an additional special subject.

"6. Every candidate in the examination in Semitic Studies shall be required to offer either Arabic or Hebrew or Aramaic, the general history either of the Jews or of the Arabs, and one special subject. Candidates who aim at the highest honours shall be required to offer an additional language and an additional special subject.

"7. [Constitution of Board of Studies.]

"8. The Board of Studies shall, by notice from time to time, make regulations respecting the two examinations, and shall have power to add, subject to the provisions of clauses 5 and 6, any Oriental language to the subjects of the school, and to prescribe or recommend authors or portions of authors in each of the languages offered in this school. The board shall also publish lists of special subjects, and shall have power to make

regulations as to the selection of them, and (where they think fit) to prescribe particular books.

"9. Candidates proposing to offer any subject not included in the lists or notices published by the board must submit it to the approval of the board six months before the examination."

CORRESPONDENCE.

"THE LIFE OF OUR LORD ILLUSTRATED FROM ITALIAN ART."

London: Dec. 21, 1885.

I ask the favour of a few lines to correct an error as to the character of the book recently edited by me, for the National Society, (*The Life of our Lord illustrated from Italian Art*), into which your reviewer of last Saturday has fallen. He complains that while "the professed object of the book" is to impress religious ideas upon the minds of school children, by means of art, the preface would be quite unintelligible to a child, that the notes attempt criticism rather than edification, and that I thus "scarcely speak"—he might have said "wholly fail to speak"—to my "text."

The object of the society in publishing the illustrations has been here confused with the object of the book. Had the advertisement slip, which I enclose, been duly forwarded with the volume, it would have been seen that the first and principle aim of the society, in accordance with the general scope of its work,

was to supply a series of Christmas and Reward Cards for the young; and that the edifying or instructive element lay in the illustrations, and in the four small volumes, simultaneously issued, in which the prints are accompanied by a simple explanatory narrative. The main object being thus secured, it was thought that the illustrations might have an interest for all who care for sacred art, especially as six at least (those from Duccio's altarpiece at Sienna, and from Ferrari's fresco-series at Varallo) have never, I believe, been reproduced either here or in Italy. They were therefore inserted in a suitable form, and a preface and notes added at the publisher's wish, with the aim of rendering the little gallery more interesting to a different class of buyers. My effort has hence solely been to explain the grounds for the choice made, and to elucidate the designs by reference to the development of Italian art, and the lives of the individual artists. These points, not direct religious teaching, were my business; and of any endeavour, as the reviewer seems to think, "to unite the rôles of evangelist and art-critic," I must plead entire innocence.

F. T. PALGRAVE.

"PEDIGREE."

London: Dec. 21, 1885.

The quotation from John of Whethampstede brought forward by Sir James Ramsay in the ACADEMY of December 19 should leave no doubt as to the derivation from a French *ped de grés* or *ped de grés*, which I suggested in *Notes and Queries*. Edward IV., says Whethampstede, in his claim to the crown in 1461, "declaravit *pedem suae cognationis*," i.e., set forth his pedigree; showing unmistakably that the first syllable of *pedegree*, as the word was then commonly written ("quendam rotulum—voc. *Peedegree*," Parl. Rolls, 1425; *Pee de gree*, Lydgate, Hors, shepe, and ghoos), was recognised as representing the French *ped*. But Sir James Ramsay obscures the etymology by rendering *ped de grés* by "table of degrees," i.e., of relationship. I do not see how *ped* can signify "table," and so the derivation fails to give satisfaction. The element *ped* in the supposed original must be understood in the technical sense of an individual tree or stock. "¶ 16' *Pied*," says Littré, with the word *arbre*, or with the name of a plant, signifies an entire (i.e., individual) tree or plant. A gardener speaks of "tant de *pieds d'arbres fruitiers*," of so many fruit-trees in a garden; of "un *ped de giroflée*," a plant of carnation. *Pied* bornier (by a repeated oversight written *cornier* in Littré), a boundary tree, a tree left standing to mark the limits of a cutting in a forest. Now a pedigree is constantly spoken of as a genealogical tree, and was commonly drawn out in the shape of a tree growing out of the body of the recumbent ancestor, bearing his descendants in the several branches. The metaphor is still preserved when we speak of the various branches of a family, of the ancestral stock, &c. Corresponding to Whethampstede's "*pes cognationis*," the Cursor Mundi, l. 1625, has "*a tre of kin*."

"Bot first a tre, ar I begin
I sal sette here of Adam kin."

The element *gree* (French *grés* or *gré*, a step) occurs in the Cursor Mundi, l. 1464, in the sense of a generation, or step in family descent,

"Nine hundre zere and sexti Jareth
Pat was be V *gree* fra Seth" (Fairfax MS.).

In the Gottingen MS. the line runs:

"pat was be fift *kin* fra Seth."

Pedegree, then, as the adoption of a French *ped-de-grés*, would be a tree of generations, of steps in family descent. As *pedegree* (1425, as cited by Sir J. Ramsay) is at least as early as *pedygru* or *pety gru* (Promptorium, 1440) we

need not be disturbed by the occurrence of the latter form. One of the two, *pedegree* or *pedygru*, must be a corruption, and it is far more probable that that one is the authentic form which clearly points to a French original. It is in vain to try to torture an explanation out of French *ped de grue*, which, in the sense required, is no more producible than *ped de grés*. A Latin *pes graduum* or *gressuum* would of course be only a translation of French *ped de grés*.
H. WEDGWOOD.

Llanwrin, Machynlleth: Dec. 21, 1885.

Though I cannot throw any light on the derivation of "pedegree," I may be permitted to say that the word appears to have been in common colloquial use as early as the middle of the fifteenth century, otherwise it could hardly have made its way into Welsh poetry of that period. I find it in the form of *petigryw* in two of the poems of Lewis Glyn Cothi, a Welsh poet who flourished from the time of Henry VI. to the early part of the reign of Henry VII. One instance of it is in an elegy on the death of a granddaughter of Sir David Gam, who fell at Agincourt; and the other in a poem addressed to David Gough, of Stepleton Castle, Radnorshire, a Yorkist, whom the poet endeavours to persuade to join the Lancastrians, to which party he himself belonged.

Unlike some other English words, *petigryw* has never been adopted and naturalised in the Welsh language. The poet evidently employed a word common in the spoken language of his day, which could scarcely have been the case if not in earlier use than the date furnished by the document quoted by Sir J. Ramsay. Glyn Cothi must have died soon after the accession of Henry VII.; for a panegyric upon that king, whom the poet hails as a countryman, is among the very last of his poems, and it is evident from its tone that the king had but just ascended the throne at the time it was written. The period of sixty years, between 1425 and 1485, seems hardly long enough to give general currency to the word, not only in England, but also in the principality. D. SILVAN EVANS.

THE NAME OF "LIVERPOOL."

London: Dec. 21, 1885.

At a recent meeting of the Philological Society, Prof. Skeat called attention to the use of the word *lither* in Middle English, in the sense of stagnant or malarious. Does not this account for the name of Liverpool (formerly Litherpole)? Perhaps this suggestion will not be very acceptable to the local pride of the citizens of that famous town; but it would not, I think, be easy to disprove its possibility.

There is a curious analogy to this etymology on the other side of the island. A suburb of Hull bears the name of Drypool, which does not mean "dry pool," but is, as the Doomsday Book spelling shows, a corruption of the old Norse *drit-pollr*, "dirt pool." It is by the merest chance that this did not become the name of the town itself. If such had been the case, the two great northern seaports would have been curiously alike in the unsavoury significance of their names.

HENRY BRADLEY.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 28, 5 p.m. London Institution: "Personal Impressions of America," by Mr. Bram Stoker.
TUESDAY, Dec. 29, 8 p.m. Royal Institution: "The Story of a Meteorite," I., by Prof. Dewar.
WEDNESDAY, Dec. 30, 7 p.m. Society of Arts: Juvenile Lecture, "Waves," I., by Prof. Silvanus P. Thompson.
THURSDAY, Dec. 31, 8 p.m. Royal Institution: "The Story of a Meteorite," II., by Prof. Dewar.
7 p.m. London Institution: "Horses of the Past and Present," by Prof. W. H. Flower.
SATURDAY, Jan. 2, 8 p.m. Royal Institution: "The Story of a Meteorite," III., by Prof. Dewar.

SCIENCE.

The Melanesian Languages. By R. H. Codrington. (Oxford: Clarendon Press.)

THE Oxford University Press has been accused of devoting itself to the production of second-rate school-books and reams of examination papers. The work on the languages of Melanesia by the Rev. Dr. Codrington, which it has just issued, will serve to show that the accusation is unjust. The book is written with all the ripe knowledge of one who has lived and taught for years among the natives of Melanesia, and it offers a welcome contribution to the solution of an obscure problem of scientific philology.

By Melanesia is meant the group of islands which stretch eastward of Papua and Northern Australia from New Ireland and the Admiralty Islands to New Caledonia and Fiji. They are distinguished from the islands of Polynesia in possessing a dark-skinned population which approaches the negro in type, and has customs and languages of its own. The ethnical and linguistic relations of the Melanesians and Polynesians have been a matter of dispute. The majority of enquirers have denied any kinship between the black Melanesian and the brown Polynesian; and, while some would refer the Melanesian and Polynesian families of speech to wholly different origins, others, like George von der Gabelentz in the appendix published by himself and A. B. Meyer to his father's work on the Melanesian languages, would see in the Melanesian dialects mixed languages—compounds, that is to say, of Polynesian and an unallied group of tongues.

It is evident that the ethnical and linguistic questions ought to be separated. Race and language are not interchangeable terms, and the Melanesians may belong to another race than the Polynesians and yet speak the same language. Dr. Codrington, indeed, seems to think that the Melanesian is racially, as well as linguistically, connected with the Polynesian and Malay; but his arguments have certainly brought no conviction to my mind, and his view is opposed to that of the most eminent ethnologists.

It is only incidentally, however, that he glances at the question of race. His book is concerned, not with ethnology, but with the Melanesian languages, a subject on which he supplies an abundance of material that makes a revision of our old opinions necessary. We have at last full and accurate accounts of the grammar and phonology of languages many of which have hitherto been little more than mere names. The question of the relation of the Oceanic languages to one another can now be discussed with a fair probability of arriving at a conclusion.

The conclusion reached by Dr. Codrington is that the Melanesian languages have the same origin as the Malayan and Polynesian. In some respects they present archaic features which are wanting in the other two groups, and they therefore cannot be regarded as having been borrowed from Polynesian settlers. What is foreign in them Dr. Codrington would refer to the influence of a fair Asiatic race in a long-past age. All known languages are probably more or less mixed, and the languages of islanders are the least likely to form exceptions to the rule; but the

mixture is not of the kind imagined by Von der Gabelentz and Meyer, which extends to the grammar as well as to the vocabulary, but is confined to the vocabulary alone.

Dr. Codrington certainly seems to me to have proved the main point of his contention. Henceforward the Melanesian languages must not be set apart as an independent family of speech, as in my *Introduction to the Science of Language*, but grouped with the Malayo-Polynesian dialects. More than this is not proved; nor can it be proved until laws of phonetic change can be laid down both between the Melanesian dialects themselves and between the Melanesian and Polynesian groups. Until this is done we can seldom feel sure as to what words and forms are derived from a common source or have been borrowed in later times. Dr. Codrington, it is true, denies the possibility of discovering such laws (p. 201), but no comparative philologist can accept the denial.

Those who believe that Ludwig's theory of adaptation is a truer explanation of the growth of Indo-European grammar than the old theory of agglutination will find much to encourage them in the pages of Dr. Codrington's book. We can see in them grammar being formed, as it were, almost before our eyes; and it is by adapting unmeaning terminations to express newly-required grammatical ideas that the formation is carried on. Thus in Mota the absolute use of a substantive is denoted by the termination *i* or *wi*, in Motlay by *ge* and *n*, while in Fiji and the Solomon Islands such a use is still unknown. The suffixes of the verb in both Melanesian and Polynesian are similarly instructive; and Dr. Codrington concludes his examination of them by saying that the evidence

"points to these suffixes not being originally independent words, prepositions, or others, come down to the position of suffixes, but terminations, by which the language has contrived to make the verb express itself in a way that was desired."

Doubtless the Melanesian and Polynesian languages are "agglutinative," and not "inflectional" like those of the Indo-European family; but this is only the more reason why we should find them building up their grammar by the help of agglutination, if such a principle were founded upon fact. Or are we to make our Aryan grammar more agglutinative than that of the agglutinative languages themselves? A. H. SAYCE.

EUTING'S NABATAEAN INSCRIPTIONS.

Nabatäische Inschriften aus Arabien. Von Julius Euting. (Berlin: Reimer.)

ABOUT 165 miles to the north-west of al-Madinah, on the pilgrim road from Syria to the Holy Places, between the Harrah or volcanic plateau of al-Uwayrid on the west and the sandstone uplands which stretch towards Jabal Shammar on the east, lies the remarkable depression called by Muslim pilgrims, after the legend in the *Kur'an*, *Madâin Sâlih*, "the cities of the Prophet Sâlih," but still known to the Arab tribes of the neighbourhood as al-Higr or Hegra, the name which it bears in the inscriptions out nineteen centuries ago, by which it is called by Pliny and Ptolemy, and by which it is mentioned in the *Kur'an*. This valley was in the first century of the

Christian era the southernmost point of the flourishing kingdom of the Nabataeans, whose ruler, Aretas Philopatris, or, as he is called in the inscriptions, *Hārithat Rāhem-ammēh*, "Lover of his people," held the country as far north as Damascus, and, as St. Paul tells us (2 Cor. xi. 32), in or about the year A.D. 39 "guarded the city of the Damascenes" in order to take the Apostle, who escaped his hands by being let down through a window from the wall in a basket. About twelve miles further south is al-'Ulā, a settlement of the Sabaeans, who have left behind them the ruins of stone-built houses, numerous rock-cut tombs, and a large number of inscriptions, copies of which, made by Prof. Euting, are now in the hands of Prof. D. H. Müller, of Vienna, whose reading of them may shortly be expected. These two places thus mark the meeting-point between south and north Semite of the great stream of traffic which, during many centuries before Christ and for, perhaps, two centuries after, passed northwards from al-Yaman into Asia-Minor, and supplied the West with the products of India and southern Africa, and with the precious frankincense yielded by al-Yaman itself. The history of this trade is the history of Arabian civilisation. So long as it existed, the kingdom of Saba and Himyar in the south of the Peninsula was wealthy and prosperous, a proverb to Western nations for luxury and riches. But with the close of the first century after Christ the navigation of the Red Sea began to tell against the land route, and, as years went on, completely took its place; while the gradual spread of Christianity, and the decline of the sumptuous ritual of paganism, destroyed the market for Sabaeans incense. These commercial changes were followed by widespread distress among the Southern Arabians. The kingdom of Saba became the scene of great internal disorders, resulting in the migration of large bodies of its inhabitants to the north, where they established themselves in Syria, Mesopotamia, and the lands between; and it was no longer able to withstand successfully the incursions of the central or Ma'addic stocks from al-Yamamah, or Middle Najd, and the *Hijāz*, or the attacks by sea of the African Semites of Ethiopia. At last, in the sixth century, after a long period of steady decline, the rule of the princes of al-Yaman was finally brought to a close by the Abyssinian conquest.

The commerce of the Sabaeans was transferred at Hegra to the camels of the Nabataeans, a people reckoned by classical writers among the Arabians, of whom we first hear as a united power about 300 B.C. They appear as neighbours of the Jews in the Maccabean wars, and in the reign of Aretas III., Philhellen, came into conflict with the Roman power under Pompey and Scaurus. Aretas IV., "the lover of his people," obtained investiture from Augustus in 8 B.C., and his long reign continued for forty-eight years, till after A.D. 39. He was succeeded by his son, Mālīku III., and the latter by Rab'el II., when the kingdom was finally overthrown by Trajan, whose lieutenant, Cornelius Palma, took its capitals, Bostra and Petra, in 106.

The site of Hegra, now an open valley, with no trace of inhabitants except a small *kal'ah*, or guard-house, for the protection of the *Hajj*, is surrounded and studded with masses of sandstone rock, which have been hewn by its former Nabataean population into sepulchres with imposing frontages of semi-classical style, resembling those at Petra. These generally bear, or bore, in the centre of the frontispiece a tablet, with the names of those who built and dedicated them, a limitation of their use to the heirs of their founders, and a denunciation of penalties, human and divine, against any person who should violate or alienate them. And the

volume before us is a collection of these inscriptions, reproduced by photo-lithography from the impressions taken, in March, 1884, by Prof. Julius Euting, of Strassburg.

The majority of these inscriptions are not now for the first time given to the world. In 1876-78, Mr. Charles Doughty, in the course of his adventurous journey through the north-west portion of the Arabian Peninsula, spent three months at al-Hegr, and took hand copies and impressions of a large number, which, in 1884, were published by the French Academy of Inscriptions and Belles-Lettres under the superintendence of M. Renan, who furnished preliminary readings and translations of twenty-seven of the most legible. Later in the same year thirteen more inscriptions, which had been collected by M. Charles Huber, an explorer sent out by the Academy, who unhappily met his death by the treachery of his guides near Jeddah in July 1884, were published by M. Philippe Berger. Without, however, in the least detracting from the credit due to these eminent travellers, to the first of whom belongs the glory of discovering for critical investigation an entirely new and most important field of ancient Arabian history, it must be said that neither of their collections attains the standard of accuracy and finality which is reached by the work of the most skilful of living Semitic epigraphists, whose results, as here shown, leave nothing to be desired.

The volume contains twenty pages of introduction, giving an account of the author's journey, which took him, starting from Damascus, by Wādī Sirhān and the Jaul to Hāil, in the Jabal Shammar, thence to Taimā, and from there to al-Hegr and al-'Ulā. In this are inserted hand copies of forty smaller Nabataean inscriptions, gathered *en route*, besides several fragments in the as yet undeciphered semi-Sabaeans characters, inscriptions in which are numerous in Northern Arabia; a few more ancient Aramaean fragments in Phoenician characters, and some early Kufic, or "Proto-Arabic," inscriptions. Then follows a page giving a conspectus of the Nabataean alphabet as exhibited in the tablets of al-Hegr, of the greatest importance for the history of Syriac and Arabic writing. Then come, in forty-nine pages, the readings and translations of thirty great inscriptions, all but one sepulchral, from al-Hegr and al-'Ulā, the original impressions of twenty-nine of which are admirably reproduced by photo-lithography in a series of plates at the end of the book. Nearly all these texts bear legible dates, and range from 9 B.C., the first year of Aretas IV., to 75 A.D., the fourth of Rab'el II., the last Nabataean king. In the reading and discussion of the inscriptions, especially of the proper names, almost as large a part is taken by Prof. Nöldeke as by Prof. Euting himself; and the former has appended a series of notes (pp. 73-80) setting forth the linguistic and sociological results of the inscriptions, which is not the least valuable portion of the work. The volume closes with a sketch of Nabataean history (pp. 81-89) by Prof. A. von Gutschmid, a full index of proper names, and a list of Nabataean numeral signs, the discovery of which is due to Prof. Euting.

In a lecture delivered at the Sorbonne in the course of last spring by M. P. Berger, which was noticed in the ACADEMY of August 15, the author, reviewing the then known inscriptions of al-Hegr, put forth a new theory in regard to the Arabic language:

"Voici donc le problème qui se serre. Au sud de l'Arabie, que trouvons-nous? Une ancienne civilisation, attestée par de grandes ruines et des inscriptions monumentales, écrites avec des caractères qui n'ont rien de commun avec l'arabe et dans une langue qui appartient à la même famille, sans doute, mais qui a un génie et une

ammaire qui lui sont propres: les restes de l'ancien empire de Saba, divisé en plusieurs peuplades, ayant chacune ses villes fortes, ses rois et ses dieux. Au nord, la grande branche araméenne, qui se prolonge, au sud de Palmyre, jusque dans le Haurân, où elle a donné naissance à la dynastie des rois Nabatéens et dont on retrouve les traces sur les rochers du Sinâi, que les pèlerins ont couverts de leurs noms; puis, au milieu de cette civilisation araméenne, des fusées arabes, mais d'un Arabe qui rappelle celui de l'Yémen par son écriture, et surtout qui n'a rien de commun avec celui que l'Islamisme a inoculé au monde entier.

"Qu'y avait-il dans l'intervalle? Jusqu'à ces dernières années, sans aller aussi loin que Sylvestre de Sacy, qui a fait un mémoire pour prouver qu'on n'écrivait pas en Arabie avant Mahomet, les gens les mieux informés de ces questions répondaient: il y a l'Arabe proprement dit, et l'on s'attendait à trouver les origines lointaines de l'écriture et de la civilisation mahométanes dans cet Hedjaz qui en a été le berceau. Eh bien, non! L'Arabie centrale ne contient pas autre chose que ce que nous avons trouvé au sud et au nord. Une civilisation araméenne, qui pénètre jusqu'au centre et se confond si étroitement avec la civilisation sabéenne, que les deux semblent, par moments, n'avoir qu'une langue et qu'une religion."

And again, after giving various details of the inscriptions, he writes:

"On se demande où est, au milieu de tout cela, l'Arabe des Coréischites et de Mahomet? Il nous apparaît comme un dialecte excessivement restreint, comme la langue d'une toute petite tribu, qui, par suite de circonstances très locales, est arrivée à un certain moment à un degré de perfection extraordinaire. C'est à l'Islamisme qu'elle a dû toute sa fortune. Il en est de l'Arabe comme de la langue latine. . . . L'Islamisme de même a imposé sa langue avec sa religion à toute l'Arabie." (pp. 9, 28.)

These conclusions evidently fall into two propositions: (1) the Nabataeans belonged to the Aramaean branch of the Semitic race; and (2) classical Arabic was originally the language of quite a small tribe, which was first imposed on the whole of Arabia by the spread of Islam.

This is not the place to discuss at length the question of the origin of the Nabataeans. For a long time the opinion of Étienne Quatremère (*Nouveau Journal Asiatique*, t. xv.) that they were Aramaeans was generally accepted by scholars, notwithstanding the language of classical antiquity (Diodorus, Strabo, Josephus, Eratosthenes, Pliny, Suidas), which uniformly reckoned them as Arabs. To Nöldeke we owe the demonstration, published in the nineteenth volume of the *Journal of the German Oriental Society* (1865), that they were true Arabs. His arguments rested chiefly on the proper names borne by them, which, when not borrowed from Greek, Roman, Phoenician, or Aramaean civilisation, are pure Arabic, exhibiting forms (diminutives of the measure *fu'ail* and augmentatives of the measure *af'al*) which are not found in Aramaic, and must necessarily have been derived from an Arabic source anterior to the Aramaic culture which these people adopted. To this must be added the testimony of their religious observances, the universal cult of deities peculiar to the Arabs, al-Lât, Manât, al-Kais, and Dhu-sh-Sharâ, and the worship of sacred stones (*ansâb*), to which sacrifices were offered, the blood being, in true Arabian fashion, smeared on the stone representing the god. The inscriptions now deciphered, so far from proving the Aramaean theory, seem decisive on the opposite side. Not only do the proper names bear, here as elsewhere, a distinctly Arabic stamp: the language itself, which is Aramaic, is permeated with exclusively Arabic words, forms, and idioms, which show that those who set up these tablets, six centuries before the Flight, were an Arabic-speaking people, who merely used the Aramaic as a *Cultursprache* for epigraphic and official

purposes: much as two centuries later the Persian scribes who invented the Huzvaresh or Pahlavi writing chose Aramaic forms for graphic purposes, while in reading them they pronounced their own vernacular Persian. The language of Prof. Nöldeke on this point is not doubtful:

"Mit voller Sicherheit lässt sich sagen, dass diese beiden Wörtchen (*ghair* und *fa-*) mit ihrer specifisch Arabischen Verwendung nicht von Aramäern den Arabern entlehnt sein können, sondern dass sie Arabismen sind, welche den aramäisch schreibenden, aber Arabisch redenden Leuten aus ihrer Muttersprache immer wieder in die Hand kamen. Zu dieser Anschauung, dass die Erbauer dieser Grabhöhlen aramäisch schreibende, aber Arabisch redende Araber waren, drängt auch sonst Alles, besonders die Eigennamen. . . . "So dürftig das Material ist, so scheint es mir doch zu genügen, um es zu beweisen, dass das Arabisch von al-Heghr der späteren classischen Sprache schon sehr nahe stand."

The second proposition—that classical Arabic owes its spread throughout Arabia to Muhammad—is so strange that it is difficult to understand how M. Berger can have put it forward in face of the great bulk of the ancient poetical literature of Arabia, which certainly goes back to at least a century before the Flight; and which, while it flourished most among the Central or Ma'addic stocks and the mixed Ma'addic and Yamanite populations of the north (al-Hirah, Ghassân, Tayyî, Kalb, &c.), was unquestionably cultivated also in the greater part of al-Yaman (Najrân, Hamdân, Hadramaut) by the time when the Abyssinian occupation was put an end to by the Persians under Wahriz. Whatever diversity of dialect or vocabulary may have existed throughout the Peninsula, all that we know goes to prove that the language was essentially *one*, with probably less local divergence than at this moment exists between the dialects of English spoken in the various parts of Great Britain. The revelation of Islam was conveyed in "plain Arabic," because that was the universal speech, easy to be understood by all. Certainly nothing to the contrary is to be gathered from inscriptions, the latest of which were more than five centuries old when the Prophet entered upon his mission.

To the *corrigenda* on p. 98 of the volume may be added the following. P. 48, l. 7 of the inscription, insert *וכן יעבד* after *לכיר* and correct the translation accordingly. On p. 51, l. 3 of the inscription, read *ימשיכנו*. In the smaller inscriptions on pp. 13 and 18, a few proper names of interest have not been noticed in the text. Nab. 50 reads *שלם ברכו*, probably the genuine Arabic names Iyâs, son of Kulaib. In Nab. 53, the name in the first line is strikingly like *Mu'awiyah*; it seems possible that the last letter should be read *h* instead of *y*. In Nab. 54 the reading appears to be *דכיר לוקים*, "to the memory of Lucius." In Nab. 62, the reading should apparently be *שלם ברכו*, "Peace to Zabd son of Asad!" For the difficult name of the god in l. 2 of No. 21 (pp. 61-62) I venture to suggest *אשר* = Arabic *ashra*; see *al-gharf* in Lane—"a certain idol or object of idolatrous worship." The meaning, "smeared with blood," suits very well the *cippus* of the Nabataean national deity, Dusares, which the little *Maggeda* to which the inscription is attached probably represents. Suidas says of it (*s.v. θεῖς ἀγῆς*)—*τοῦτο θῖον καὶ τὸ αἷμα τῶν ἱερῶν ἀποχέουσι*.

C. J. LYALL.

SCIENCE NOTES.

A MEETING of the subscribers to the testimonial to Dr. H. Woodward, for twenty-one years editor of the *Geological Magazine*, was held on December 15, at the rooms of the Geological Society, Burlington House, when

Prof. T. G. Bonney presented to that gentleman, on behalf of the subscribers, a silver tea and coffee service and a cheque for £253. Over 200 names are on the list of subscribers to the testimonial.

We regret to hear there is some risk that the *Zoological Record* may be discontinued after the issue of the next annual volume, owing to lack of sufficient support. The subscription to this invaluable summary is only one guinea. The secretary of the association responsible for the publication is Mr. H. T. Stainton, Mountsfield, Lewisham.

In the last part of the *Records* of the Geological Survey of India are two papers of much interest to seismologists. One of these is a report by Mr. C. S. Middlemas on the Bengal earthquake, July 14, 1885. The reporter enters into a careful analysis of the destructive effects, especially those at the jute works at Serajganj, where two chimney stacks suffered severely. Calculation seemed to show that the seismic focus, or subterranean centre of disturbance, was situated at an unusual depth; but after introducing certain corrections a depth of forty-five miles is approximately assigned to it. The second report is by Mr. E. J. Jones on the Kashmir earthquake of May 30, 1885. Notwithstanding the comparative mildness of the shock, no fewer than three thousand lives appear to have been lost by this catastrophe. The focal depth is calculated to have been seven and a half miles.

Principles of Forecasting by Means of Weather Charts, by the Hon. Ralph Abercromby (Stanford), is a Blue Book of 123 pages, which has been prepared under the authority of the Meteorological Office, in response to the widespread demand for a popular exposition of the methods employed by the office in framing its "Daily Weather Forecasts" and "Storm Warnings." Mr. Abercromby has performed his task admirably. The relation of differences of barometric reading to direction and force of wind, the nature of cyclones and anticyclones, the kinds of weather characteristic of the various divisions (front and back, right and left) of a cyclonic or anticyclonic area, the notation employed for recording atmospheric conditions, and many other matters of like character, are explained in a singularly lucid fashion, and with a much greater approach to completeness than in any work on the subject addressed to non-scientific readers. It was not to be expected, however, that an able investigator like Mr. Abercromby would content himself with merely expounding the results of other men's work; and his little book, without in any degree departing from its thoroughly popular style, contains a good deal of original matter which will be valued by professed students of meteorology. To the general public, the methods by which the forecasts are arrived at are of less interest than the question how far they have been proved by experience to be trustworthy, and Mr. Abercromby furnishes some statistics bearing on this point. In the year ending March, 1882, the "Daily Weather Forecasts" for all the districts of the British Isles give the following results: wholly correct, 34 per cent.; "partially [i.e., more than one-half] correct," 44 per cent. The proportion of predictions accounted successful is therefore in all 78 per cent. As the book, though published only this year, left the author's hands early in 1883, the year 1881-2 was the latest for which statistics were then available. With regard to the "Storm Warnings," the figures given are those for 1880. It is not explained why a more recent date was not selected; but it appears that in that year the "Storm Warnings" issued were 390, out of which number only 67 were either "not justified by the event" or "too late"; but

there occurred 29 storms which had not been anticipated by the office. Speaking roughly, this analysis may be said to yield about the same percentage of successes as in the case of the daily forecasts. The principal means which Mr. Abercromby recommends for the improvement of the art of forecasting is the more frequent transmission of barometric reports. Owing to considerations of expense, these reports are at present received every twelve hours—an interval long enough often to allow highly significant oscillations of the barometer to escape unnoticed. The author also anticipates good results from the multiplication of high-level stations, from a more extended use of cirrus observations, and from scientific verification of the experience embodied in popular weather maxims. On the other hand, he has no faith in the "sun-spot theory," in recurrent weather cycles as a means of prediction, or in the utility of the well-known storm telegrams from America.

PHILOLOGY NOTES.

Messrs. GINN & Co., of Boston, U.S., announce for publication, probably in February of next year, a translation of Prof. Kaegi's work on the Rig Veda, by Dr. R. Arrowsmith, of Columbia College. The book consists of two parts: (1) a general view of the language, the literature, the people, and the civilisation of the early Aryans; (2) a commentary on the hymns. The author, who is now a professor at Zürich, was a pupil of Roth; and he has specially revised his commentary for this translation.

We would draw the attention of Greek scholars and philologists generally to a valuable little work just published at Smyrna by Mr. Karolides, on the modern Greek dialect, or rather dialects, of his native country, Kappadokia. It is entitled *Ἑλληνικοκαππαδοκικὴν λέξιν*. The author published a book on Kappadokia in 1874, and three years ago another on Komana; and last year the first volume of the *Journal of the Historical and Ethnological Society of Greece* contained an article on the dialect of Phertakena in Kappadokia by Mr. Alektorides, which, however, excited more expectations than it satisfied. Mr. Karolides' publication is very complete, and enters very fully into the phonology, grammar, and vocabulary of the various modern Greek dialects of Kappadokia. They are exceedingly curious, and differ widely from the other dialects, ancient and modern, of the Greek world. Mr. Karolides endeavours in most cases to find derivations for the strange words that occur in them. His etymologies, however, are not always successful, and now and then we are tempted to ask whether the words may not sometimes be relics of the aboriginal languages spoken in the country before the arrival of Greek culture. As a specimen of the dialect, we may quote the names of the numerals in the sub-dialect of Pharasa: *Héna, dīchi, trīchi, konkar, phenkar, chankar, tattī, mattī, lingir, danjar, dhēka*, where *ch* is pronounced as in the English *church*. *Mattī* and *lingir* both seem to mean "eight." The extent to which the terminations of the numerals have been assimilated to one another is interesting.

DR. MAX ROEDIGER has just brought out an improved edition (the fourth) of the late Karl Müllenhoff's *Altdeutsche Sprachproben* (Berlin: Weidmann). The author's object was to furnish a repository of the necessary textual material for such a course of lessons in the early forms of the Teutonic dialects as he deemed indispensable as a preliminary to a fruitful study of Middle High-German. This intention explains

what at first sight appears singular—the inclusion of extracts from the Gothic Bible and the *Heliant*, along with specimens of the chief monuments of Old High-German. Exception may be taken to some details of the plan of the book—the absence of glossaries, for example; but the care exercised in the correction of the texts, and the specimens which are given of important linguistic documents not easily accessible elsewhere, impart to the work a value which is not confined to the purpose which it was specially designed to serve. The changes which Dr. Roediger has made in the present edition are, for the most part, unquestionable improvements. He has introduced some passages from the Heidelberg MS. (A) of the *Twain*, added some new extracts from the *Heliant*, and appended the various readings of the MSS. to the extracts from the *Armer Heinrich*. The only change the propriety of which is likely to be questioned is the adoption of the text of the Vienna MS. in the place of that of the Heidelberg MS. in the selections from *Otfrid*; it seems, however, that Müllenhoff himself, unlike Dr. Piper, regarded the former MS. as preferable.

THE new number of the *American Journal of Philology* contains a curious remark, in a review of a *Latéinische Schulgrammatik* published lately at Hannover. We are told that "the whole make-up of the work reveals the progress of Germany in the Americanisation of its manuals."

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Dec. 8.)

FRANCIS GALTON, Esq., President, in the chair.—Mr. H. H. Johnston exhibited a collection of photographs of African natives and scenery. Mr. H. W. Seton-Kerr exhibited a number of photographs of North American Indians, taken by him during his recent visit to Canada. Mr. Joseph Hatton exhibited several ethnological objects collected by his son, the late Frank Hatton, in North Borneo. Mr. W. M. Crocker also exhibited some objects from Borneo; and Mr. R. Meldola some photographs of the Nicobarese. A paper by Mr. E. H. Man, "On the Nicobar Islanders," was read, in which the author described the wild race inhabiting the interior of Great Nicobar, and called by the inhabitants of the other islands of the group "Shom Pen." It appears certain that they are the descendants of a very ancient aboriginal population of Mongolian origin. The height of the males appears to range between 5 ft. 2 in. and 5 ft. 8 in.; their skin is fairer than that of the generality of the coast people, who, on their part, are less dark than the Malay; the hair is straight, and is commonly worn uncut and unkempt. Their dwellings are small, and erected on posts; the floors, being raised six or seven feet above the ground, necessitate the use of ladders. Mr. Man hopes before long to be able to supplement in many particulars the meagre information that has hitherto been obtainable regarding the Pen, but the task is one of considerable difficulty.

SOCIETY OF ANTIQUARIES.—(Thursday, Dec. 10.)

THE President in the Chair.—Mr. John Parker exhibited a court-roll of the manor of Aylesbury of the time of Henry VII., and read a paper on the descent of the manor from Saxon times till it came into the possession of the Earl of Ormond, and from him to the Boleyn family. It was sold by Sir Thomas Boleyn, Earl of Wiltshire, father of Anne Boleyn, to Chief Justice Baldwin, from whom it passed to the family of Pakington, which held it until 1802, with the exception of the Commonwealth period, when it was occupied by the regicide Scott. In 1802 it was acquired by the Marquis of Buckingham. The borough was incorporated in 1553; and, until the reign of Charles I., it was the custom of the lord of the manor and the corporation to nominate the members of Parliament alternately. The President exhibited an Anglo-Saxon coin of Edward the Confessor struck at Aylesbury, and some silver tokens in illustration of the paper.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Dec. 11.)

DR. R. M. FERGUSON, President, in the Chair.—Prof. Tait communicated a paper, which was read by Mr. William Peddie, on "Integrals occurring in the Kinetic Theory of Gases." Mr. Peddie explained a method of breaking up a rectangle to form a square, and gave the first part of a paper on "The Theory of Contours, and its Application to Physical Science."

NEW SHAKSPEARE SOCIETY.—(Friday, Dec. 11.)

DR. FURNIVALL, Director, in the Chair.—Mr. Henry Sharp read a paper on "The Prose in Shakspeare's Plays, the Rules for its use, and the assistance that it gives in understanding the Plays." Pooh-poohing the ridiculous notion that all Shakspeare's prose was verse, Mr. Sharpe examined in detail the distinctive use of prose in *Hamlet* and *Much Ado*, and then went shortly through all the other plays. In *Hamlet* he found that Hamlet used prose to those of his court whom he distrusted—see how he changes to Ophelia when she returns his presents; in *Measure for Measure*, that prose is used to express doubt; in *Winter's Tale*, narrative; in *Othello* and *Lear*, by Iago and Edmunds, to express contemptuous deceit of their victims; when trusted as equals, metre is used to them. Besides these and a few other special uses, the general rules for the use of metre and prose are: History is in metre; so are tragic, pompous, and sentimental parts. Comic, jovial, and light-hearted parts are in prose; as are letters, proclamations, and the like, poor men's and fools' talk, words of folk who have lost their reason, asides, volleys of words, and broken English. Messengers, and persons using authority over others, speak metre. Persons speaking together either speak all prose or all metre. Ladies speak prose when alone with female relations. Some characters speak sometimes prose, sometimes metre, according to their state of mind or the company they are in.—Mr. Moulton urged that more attention should have been paid to the changes from metre to prose, and *vice-versa*, according to the tone and movement of the play.—Mr. Peel thought the changes were due to the needs of actors' elocution and effects.—Dr. Furnivall, Miss Latham, the Rev. W. A. Harrison, Mr. P. Z. Round, and others, joined in the discussion.

ROYAL ASIATIC.—(Monday, Dec. 21.)

COL. YULE, President, in the Chair.—Before proceeding to the business of the day, the President alluded to the loss the society sustained owing to the death of Sir Arthur Phayre, one of the members of its council, briefly reviewing his career, and observing that he was one to be reckoned in the first class of a distinguished school of Indian public servants.—Mr. W. Simpson read a paper on the "Newly-discovered Caves at Panj-deh," in which he gives his own views on Capt. de Laessoe's already reported explorations, the result of which that officer had already communicated to the lecturer in February last. He thought there was little doubt they were Buddhist, like others in this northern part of Afghanistan. Those called by Capt. de Laessoe the *Yakki delik* group were described as "vaulted" for the most part, fifteen feet long and nine wide, though one was nineteen feet in length. Mr. Simpson considered them to be a mere repetition of caves he had seen at Jalalabad, the original type of which is to be found in the Barabar Caves near Buddha Gaya. Referring to two caves at Bala Monghab, he said they contained some rudely cut recesses, and were connected by a curious passage, so recessed as to be difficult of use. In conclusion, Mr. Simpson expressed regret at having been unable, from want of the necessary permissions, to carry out his intention of returning to India from the scene of the Boundary Commission, *via* Bamian, adding: "I trust, however, the time is not far distant when some one will be able to send us drawings of that wonderful spot and its colossal figures and caves, which, we ought to expect, will throw considerable light on Buddhism as it existed in that part of the world." A discussion followed, in which Mr. Gibbs and Mr. T. H. Thornton took part, closed by a few remarks from the President.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs) handsomely framed. Every one about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BARR, 115, Strand, near Waterloo-bridge.

THE ART PUBLICATIONS OF SEEMANN, OF LEIPZIG.

It has been our pleasant duty on several occasions to call attention to the admirable series of works on the history of art published by the house of E. A. Seemann, of Leipzig; and it is scarcely necessary for us, while they are still unfinished, to do more than record their progress now and again. The great work, edited by Dr. Dohmé, *Kunst und Künstler*, has long past the Middle Ages and the Renaissance. The section which deals with the first half of the nineteenth century has reached its 24th "Lieferung," and is in the middle or near the end of its second volume. We have recently received the following studies: Carl Rottmann, the landscape painter, of Munich, by C. A. Regnet; Géricault and Delacroix, admirably treated by Adolf Rosenberg; the third part of Veit Valentin's group of Cornelius, Overbeck, Schnorr, Veit, and Führich; and Antoine-Jean Gros, by Richard Graul. The last-named artist was doubtless introduced rather on account of his importance in art-history than his merit as an artist—a brother in spirit, if not in talent, of Géricault and Delacroix. The illustrations of the two last-named artists' works are very good; that of Delacroix's group of tigers is specially brilliant and spirited.

The latest parts of the third volume of Woltmann and Woermann's *Geschichte der Malerei* (the second volume of which is about to appear in English) deal with the Italian, Spanish, and French schools of the seventeenth century. The work is sustained at its high level both in text and illustrations.

The new edition of Wilhelm Lübke's *Geschichte der Architektur*, thoroughly revised, is getting down to modern times, having passed through the purest periods of the Renaissance. Evidently no expense has been spared to make the work as complete as possible; and the illustrations are well chosen, abundant, and beautifully executed.

Of the *Kulturhistorischer Bilderatlas*, two sections are now complete. That relating to the Middle Ages, though the second in date, was the first finished; but the last part of "Altertum" has now appeared, with text by Dr. Theodor Schreiber explaining the hundred sheets of illustrations which form a most amusing and instructive panorama of the culture of the Greeks and Romans. Next year we are promised a similar collection of pictures of life and history from the Reformation to the thirty years' war; and, the year after, another relating to the seventeenth and eighteenth centuries.

A somewhat similar work, called *Kunst-historische Bilderbogen*, devoted to art only, has just been commenced. The first volume contains some hundreds of examples of Egyptian, Chaldaean, Assyrian, Phœnician, Persian, Greek, and Roman architecture and sculpture. They have been selected and arranged by Dr. R. Menge. The size and form of this publication is convenient; and, if regarded only as a book of reference, it will be very useful, but its educational value is also considerable.

SEBASTIANO DEL PIOMBO IN A NEW LIGHT.

IV.

My aim now is to come to another matter altogether, which if established, will show Sebastiano to have been not only versatile beyond what has ever hitherto been known, but will go far towards redeeming him from

the character of "faineance" with which, for want of evidence of his work, he is so constantly charged.

On page 352 of the eleventh volume of the *ACADEMY* (April 1877), when speaking of the quality of minute finish among miniaturists, I referred to the painter of the borders executed for Clement VII. preserved in a book of cuttings in the British Museum (Addl. MSS., 21,412). I then said "Whoever he may be I am inclined to rank this artist with even Clovio himself." I now believe him fully entitled to that rank, for the clue that I have found may possibly prove him to have been Sebastiano del Piombo. If it leads to his identification as a miniaturist of the highest rank, we shall have plenty of reason for accounting for the small amount of his larger work after his appointment to the quasi-literary or ecclesiastical office, in later times always given to an artist, of keeper of the papal seal, and superintendent of diplomas and other documents executed in the papal chancery. The office afforded him abundant leisure, and yet the pope always looked to him, as he did to Cellini and others, to be doing something in an artistic way. From the time when, as Archbishop of Narbonne, Giulio de' Medici had received the great picture now in our National Gallery, he had always believed Sebastiano to be a great artist; and so, when the office of keeper of the seal fell vacant, notwithstanding two such powerful competitors for it as Giovanni da Udine and Benvenuto Cellini, and though Cellini had asked the pope himself for it, Clement bestowed it on his old favourite. The new Piombatore had to pay one of the other candidates 300 out of the 800 scudi a year which he got for the post, but still it was good. And it was a noble trait in Titian's character, that when another pope offered to turn out Sebastiano to give him the appointment, he refused it, because he would not do two brother artists so serious an injury. In order to show how I came upon my supposed clue to Sebastiano as a miniaturist, perhaps I had better relate how the search began. Some weeks ago I thought I would write for an English periodical an account of a book of cuttings from Italian MSS. which is preserved in the British Museum, and which contains specimens of work by very able sixteenth-century miniaturists, of whom hitherto little is known. I therefore took the pages seriatim, writing down careful descriptions of the cuttings and what struck me as their points of resemblance to the work of known miniaturists. Thus, I went over some dozen pages, noting some as Florentine, others as Veronese, and so on. When I came to the series painted for Leo X., I was struck by its resemblance to the portion of a devotional book represented in Raffaello's portrait of Leo, now in the Uffizi at Florence, so that at length I could only conclude that these cuttings were fragments of the actual book used by Raffaello as his model in that painting. This became interesting. I then found reason to compare this work with that of Attavante in the Martians Capella and other MSS., remembering that Attavante worked for the Medici in Florence during the youth of Giovanni de' Medici in that city.

By and by I came to two upright complete strips of bordering, which I have thus noted. Fol. 31. Two uprights complete Nos. 72 and 73 as mounted in the book. A very fine work, similar to that in the Bodley MS., Douce 29, consisting of fine Renaissance foliage, flowers, &c., in various colours on grounds of two colours. At top, in a circlet, the device of Clement VII. The globe on a stand with the sun's rays beating on it, and a tree on fire in several places—motto, "Candor illesus."

In centre an oval containing arms of same pope, viz., on a golden shield the six palle, 3, 2, 1. The upper middle one blue bearing a

golden fleur-de-lis. The rest ruby, and the whole surmounted by a tiara, and backed by cross keys. At foot in another circlet—a profile eagle with extended wing, carrying a diamond ring in raised claw—a white ribbon with motto "Semper," the whole on a bright green ground. A red florentine lily just above the lowest circlet. A similar description follows for the several following pages. The work, both for design and execution, is most masterly, evidently the work of a highly accomplished decorator, such as Giov. da Udine, but not in his style. Comparing the profile acanthus here with such Renaissance sculpture as I can recollect, I am forcibly reminded of the pilasters in the churches and Ducal Palace at Venice.

Then, again, the sweet and delicate painting of the flowers, and the choice of natural garden flowers in preference to those of stucco work, again points to a Venetian artist, or at least to Venetian models, as contrasted with Florentine. Fol. 35 is a complete all-round border by same hand as the three or four preceding strips, especially 32 b, for it contains the identical flowers in same manner. It may therefore be claimed as one of the minor borders of the same volume from which the complete border was taken; and that volume was either the *Missal* of Clement VII., now in the Chigi Library in Rome, or a volume precisely similar, such as that other *Missal* of Clement VII., formerly belonging to the Hamilton Collection, and now at Berlin. The work and style are identical. Four pages in the Albani *Missal* belonging to Lord Ashburnham are similar, and two in the Bodley MS. already referred to; but of these latter I will not affirm the precise identity of execution, as it is so long since I saw them. This border (fol. 35) has a gold ground covered with cut flowers, symmetrically, and intermingled with gems and birds. The intaglio gems occur also in 33 b. The flowers as in 32 b and the pearls as in all the strips from 31 to 34. The two birds at top occur in the Bodley volume, and quite similar ones in the Chigi *Missal*. The figures at foot, grotesca and monstrous, are quite Venetian in colouring and treatment. They are precisely similar to the grotescas in the Chigi and Berlin *Missals*. The blue circlet in the centre of top contains a verset which occurs in almost the same words in the Chigi MS. Here, it is IN DOMINO CONFIDO; there, INE [IN TE] DOMINE CŌFIDO. In centre of wide border is a circlet with words SPES MEA DEVS and a red sun above; three most exquisitely painted pansies below, the whole on a rich blue ground. On a petal of one of the pansies is s; on another petal opposite, L. The arms at foot are those of the Dukedom of Benevento, granted by Henry II. of Spain to his son Don Fadrique, surmounted by those of the family of Aguilar.* But whose the whole coat is as it stands I cannot find out. Above it is placed an episcopal mitre. The border is framed in a plain band of blue and silver.

I need not pursue the examination of the Guard-book, though the remaining part contains some very good work by Apollonio de' Bonfratelli, the pupil and successor of Clovio.

Now, the question is, will an examination of the *Missals* of Clement VII. in the Berlin and Chigi libraries support or contradict my supposed discovery? I concluded the work to be Venetian from its manner of treating acanthine foliage and from its flower paintings. The s. L. led me to look for a Venetian miniaturist. No such name could be found among them. Who then could he be, who was a worker in the Venetian manner—a protégé of the Chigi—for the Chigi *Missal* suggests this—who worked for Clement VII., and whose initials were s. L.?

* Egerton MSS. 1644 f. 65 assign this coat to Le Sire Dagillars—"escartelé de geulles au chaste d'or et d'argent a laige de porpre."

I can find no other artist who fulfils all these conditions but Sebastiano Luciano.

It is said even by Vasari that, on the death of Raffaello, Sebastiano became the first painter in Rome. This means that he was considered to rank before Giulio Romano, Francesco Penni, Pierin del Vaga, Pellegrino da Modena, Polidoro da Caravaggio, Raffaellino del Colle, Gaudenzio Ferrari, and the rest. It is a notorious fact that the so-called Fornarina of the Uffizi Gallery, long attributed to Raffaello, is the work of Sebastiano; and so, in spite of envy of him and his noble-minded friend Michelangelo, in contemporary fame, he was held as a worthy rival of the divine Raffaello himself. This is how Ariosto places him:

"E quei, che furo a' nostri di. O son ora Leonardo, Andrea Mantegna, Gian Bellino
Due Dossi, e quel, che a par sculpe, e colora Michel, più che mortal, Angel divino;
Bastiano, Raffaell', Tizian che onora Non men Cador, che quei Venezia e Urbino;
E gli altri, di cui tal l'opra si vede,
Qual de la prisca età si legge, e crede;"—
Ort. Fur. Canto xxxiii. st. 2.

A comparison of dates will show that his "Lazarus" was not painted in any unworthy rivalry with the painter of the "Transfiguration," for the latter was not in existence when the former was exhibited; and even if Michelangelo had assisted to produce it, which he did not, what might not be said of the collaboration of Giulio Romano and others in the "Transfiguration"? Raffaello scarcely ever completed a picture entirely with his own hand. Sebastiano never did a painting that was not altogether his own work. This is his own plea when accused of slowness as compared with the Raffaellisti. Cavalcaselle suggests as a reason why he produced so little after he became Piombatore, that, like other artists, he was kept employed by Clement VII.; and this is probably very near the truth. It must be left to the investigation of the papal account books to prove whether it was as a miniaturist or not. I must rest content with having suggested the question, and given my reasons. If it turns out to be correct, I shall be glad to have helped in giving a fairer view of Sebastiano's character. If I have simply found a mare's nest, it can do Sebastiano no harm. I shall, at least, have the credit of a good intention, which, this time, perhaps, I may be permitted to retain; and not, as when I had the Martianus Capella at Venice photographed, be mortified to find that I am not allowed even this acknowledgment.

I cannot conclude this paper without one parting word about Michelangelo and the contemptible "rivalry" theory. I have already said that there is absolutely no proof that he ever assisted Sebastiano with entire designs for pictures or with anything beyond such slight sketches as the "Lazarus" in the British Museum. But, allowing that there were two artists behind the "Lazarus," how many were behind the "Transfiguration"? It is extremely unfair both to Sebastiano and to Raffaello to be perpetually harping upon the string of the indebtedness of one or other of them to the magnificent draughtsman of the Sistine chapel. To whom was the painter of the prophets and sibyls of the "St. Maria della Pace" indebted but to the greatest draughtsman of all schools—this same Michelangelo? Not that this master supplied him "secretly" with drawings. No one has ever asserted that. But he had opened a drawing book for all after-comers when he uncovered that famous ceiling. It was a master's lesson to all the rest—even the greatest and ablest of them. It proves that Angelo's haughty indignation on hearing Raffaello spoken of as the greatest of painters sprang not out of the mean envy of a self-conceited and incompetent rival, but from a sense of injustice,

not to say ingratitude—that keenest of all assassin's knives, and might well serve, if not to "burst his mighty heart," yet to render him, like his great Florentine predecessor, still more silent, self-contained, and hopeless. *Ahi! quanto mi pareo pien di disdegno.* Of detraction there was always plenty in the air on all sides, from this our Sebastiano has suffered fully his share. As matters stood, Sebastiano—a finer colourist than Raffaello—had every right to use whatever means he thought proper to gain the higher rank at which he aimed, without any right on the part of others to interfere. Raffaello did not scruple to do so, nor was it ever objected to him as a drawback that he received assistance or suggestions from this or that other painter. It is time then that the parrot-cry about the incapacity of Sebastiano del Piombo and the meanness of Michelangelo should cease, until better proofs than hitherto have been produced can be brought forward in confirmation of the charge.

Sebastiano's inventions with regard to painting on marble and metals are another instance of his versatility and ingenuity which I can only mention here. They are certainly not proofs of his indolence and sloth. The extracts from the inventory of his property at his death, published in the *Lettere Romane di Momo*, contain several interesting examples of his invention, but no miniatures.

JOHN W. BRADLEY.

NOTES ON ART AND ARCHAEOLOGY.

MR. A. S. MURRAY, of the British Museum, has been appointed to deliver a course of six lectures on Greek Sculpture at the Royal Academy, beginning towards the end of January.

UNDER the title of *Fifteenth Century Italian Ornament*, Mr. Vacher has now ready for immediate publication a volume illustrating, in chronological order, the designs found on dresses and stuffs in the pictures by Crivelli, Marziali, &c., in the National Gallery. His aim has been to form a complete grammar of brocade ornament during the fifteenth century, the finest period of Italian decorative art. There will be altogether thirty plates, of royal folio size, printed in gold and colours; and each plate is devoted to a separate design. Mr. Bernard Quaritch receives subscriptions for the work.

MESSRS. CASSELL & Co. have just issued in England a work entitled *Etching: its Technical Processes, with Remarks on Collections and Collecting*, by Mr. S. K. Koehler, which has been prepared by their New York house. It is illustrated with thirty full-page plates by old and modern etchers, and with numerous reproductions in the text. The volume has already met with a favourable reception in this country; and the first supply received having been exhausted, Messrs. Cassell & Co. have ordered from America a further number, which are expected before the end of the year.

THE "Salon Parisien," 160 New Bond-street, will open its second exhibition in a few days with a collection of works by foreign artists, including two new pictures by M. Jan Van Beers—"The Awakening Beauty" and "The First Kiss." Prof. Verlat, president of the Royal Academy of Antwerp, MM. Ernest Slingeneer, Doucet, Lehoux and others will be represented by paintings, and M. G. Vander Straeten by some of his piquant sculptures. We understand that a feature of the exhibition will be the novel manner in which each picture is shown and illuminated.

THE Brunswick Gallery, so rich in paintings of the Dutch and Italian schools, is being brought to the knowledge of the public by the issue of a selection of one hundred paintings

reproduced by a new process of photogravure, which claims to possess all the qualities of etching. The selection has been made by the director of the gallery. Half the number have already appeared, and may be seen at the agents for the publishers, Messrs. Williams & Norgate.

THERE is now on view at Messrs. Metcalf & Co.'s, in Cockspur Street, a collection of military medals from the year 1645 to the present time, formed by Gen. Frederic Brine.

THE Liverpool Art Club propose to hold in April of next year an exhibition of embroidery and of painting on porcelain and pottery, open to all amateurs in the United Kingdom. Medals and certificates will be awarded. All works must be delivered between March 22 and 29, 1886.

THE STAGE.

THE PLAYS AT THE VAUDEVILLE.

Two plays, both of them good of their kind—and the kind of one of them not a frequent kind—most amply justify a visit to the Vaudeville. "Cupid's Messenger," by Mr. Calmour, is the first of the two pieces. It lasts less than an hour, and is in a single act. Its theme is a very slight one. It traces the apprehensions of a young lady of the days of the author of the *Arctia* that her lover may have ceased to care for her. It deals with Sir Philip Sidney himself. It is occupied with the devices by which a friend to both girl and lover satisfies the girl of the lover's constancy. At no point is it exciting; but the delicate execution of a familiar conception provides a gentle pleasure, for which the author is to be thanked. Nor is the performance unable to add to what pleasure may be derived from the piece. In fact the piece, graceful as it is, is not literary enough to demand attention in the closet. It needs what it receives—the heightened effect of stage representation. Miss Kate Rorke plays the part of the useful friend with a measure of somewhat forcible comedy; and the girl who is in painful doubt is represented by Miss Maude Millett, who gives to the character all the charm that can belong to an engaging personality. The performance is simple, perhaps even a little immature—if the word be not too hard a one—but it is intelligent, sympathetic, and it delights.

"Loyal Lovers," the second and the longer of the two Vaudeville pieces, is, except for here and there a phrase not smooth in English, an extremely good adaptation of "Le Voyage de Monsieur Perrichon." The chief personage—the honest bourgeois who sets out to see the Alps—suits Mr. Thorne to perfection, not because the honest bourgeois drops a few h's, and duly manifests the other looked-for tokens of the comic citizen which a comedian loves to display, but because the Alpine tourist whom Mr. Thorne can depict is a being studied from human nature, full of honest domestic affection, full of brag, full of vanity, full of many a quality and many a fault which it requires a real dramatist to display upon paper, a real comedian to display in action. Mr. Thorne is well supported, especially by Miss Lavis, Miss Rorke, Mr. Macintosh, Mr. Lestocq, and the representative ves of the two young men who fight honourably for the chances of the young lady's favour. They are not exactly "loyal lovers" however, and on that account we may find some fault with the title of the play. A loyal lover is one who is loyal to his mistress. These, while not disloyal to their mistress, are more especially loyal to each other. They are loyal friends, therefore; loyal comrades, if you will. But the fact that we do not exactly appreciate the title of the piece—that we think it inappropriate, in truth—need by no means prevent our enjoying the play that is set forth. "Loyal Lovers" is very funny, very ingenious; and, what is even more, it is, as a study of character, at bottom very true.

MUSIC.

RECENT CONCERTS.

MR. PROUT's symphony was the first of the Birmingham novelties to find its way to London. Last Saturday afternoon another one was produced at the Crystal Palace—"The Sleeping Beauty," by, and under the direction of, Mr. F. H. Cowen. The work is full of clever and captivating music; and the composer's simple, unaffected style is likely to catch the ear of the public, and to win the approbation of those who like a man *au naturel*. Mr. Cowen does not attempt too much. A composer like Beethoven or Wagner may scorn "the base degrees by which he did ascend," but each round of ambition's ladder was to him for a time the utmost. So do we look upon Mr. Cowen's cantata: it is for the moment his highest degree, but one which, by comparison, may one day prove base. The use which he makes of representative themes may be commended. The value of Wagner's system can only be tested by repeated trials, and a young composer cannot, without insincerity, ignore the teachings of the modern master. The performance at the Palace was by no means equal to that of Birmingham either in the matter of chorus singing or playing. A splendid rendering of a work often covers a multitude of weaknesses. There is not a multitude in "The Sleeping Beauty," but there are some dull moments which become noticeable, when the mind rather than the ear passes judgment. The solo vocalists were Mrs. Hutchinson, Miss Hope Glenn, and Messrs. Winch and F. King. The ladies sang well. Mr. Winch's delicate and refined style is better suited to a smaller room. Mr. King was in exceptionally good voice.

The fourth and last Brinsmead concert took place on Saturday evening at St. James's Hall. Berlioz's *Symphonie Fantastique*, "Episode de la Vie d'un Artiste," was an important feature in the programme. It was originally produced by Mr. Ganz at his orchestral concert, April 30, 1881 (and not 1882, as one might have supposed from a foot-note in the programme-book), and afterwards given at the Crystal Palace. It is a work curious in design, and clever in treatment: the tone-painting is à la Wirtz. When Berlioz wrote it he was thoroughly in earnest: he was drawing a picture of himself. Programme-music is, perhaps, inferior in kind to abstract music, but of specimens of the former Berlioz's work is *facile princeps*. The performance, though not without shortcomings, was by no means a bad one. The slow movement was not taken up to Berlioz's time. The principal novelty of the evening was a Pianoforte Concerto in G sharp minor, by Mr. Oliver King, to which Mr. Cusins awarded the prize of thirty guineas offered by Messrs. Brinsmead. The composer a year or two ago obtained the prize offered by the Philharmonic Society for the best overture. Mr. King has now produced a work of considerable merit; the writing is clever, while the part for the solo instrument shows an experienced hand. We must, however, say that the subject matter of the three movements lacks inspiration, and in the treatment of it one feels a want of contrast and at times of repose. The orchestration, too, is somewhat thick, and immoderate use is made of muted strings. The slow movement pleased us most. The Concerto was well played by M^{me}. Frickenhaus, and at the close the lady and the composer were called to the platform. The programme, as usual, was much too long. It included the overtures to "Egmont" and "Tannhäuser," the Prelude from Saint-Saëns's "Le Déluge," pianoforte solos, and vocal music by Miss Gertrude Griswold, for which she received much applause. The orchestra was under the direction of Mr. W. Ganz.

The second concert of the Hackney Choral

Association took place, as usual, at the Town Hall, Shoreditch. "The Rose of Sharon" was given there for the first time. When we heard the oratorio at Norwich two years ago we objected to its length. The composer has since made several cuts. Mr. Prout, however, went further, but his bold curtailments were nearly all to our taste. The losses proved a gain to the work both as regards the drama itself and the saving of time. The last part was made to begin at the words "Who is this," and the unaccompanied quartet omitted, as we suggested after the Norwich performance. The choir sang splendidly. Mrs. M. Fenna interpreted the part of the Sulamite correctly, but coldly. Miss Hope Glenn was very successful, and deserved all the applause she received for her pure rendering of "Lo, the King." Messrs. Guy and Forington sang their parts in a satisfactory manner. There is no organ in the Shoreditch Hall, and that instrument was certainly missed in one or two important places. The orchestra played well, and Mr. Prout deserves high praise for his careful preparation of the work, and for his able conducting. He took some of the movements a shade slower than the composer, but the duet in the last part faster.

Concerning the performance of the "Redemption" at the third Novello concert last Tuesday evening at St. James's Hall, there is but little to say, for everything went on in a thoroughly satisfactory manner. The singing of the chorus was excellent, both for purity of intonation and quality of tone. Their rendering of the chorales and the famous "Unfold, ye portals everlasting," was most impressive. The soloists were Madame Albani, Miss Hilda Coward (who rendered good service in the first part), Messrs. Maas and Santley, and Mr. Bridson, who sang at short notice for Mr. Ludwig, who, owing to severe indisposition, was unable to appear. Mr. Mackenzie conducted most ably. He took the Calvary March a shade slower than did the composer at Birmingham, thereby giving it a subdued and more appropriate tone. The hall was crowded, and the performance gave such satisfaction that the audience were tempted to applaud at times when they ought to have kept silence.

J. S. SHEDLOCK.

DAY ON HARMONY.

Alfred Day's Treatise on Harmony. Edited by Sir G. A. Macfarren. (Harrison & Sons.) The author published his treatise in 1845, and since then it has probably been more talked about than read. Mr. Macfarren wrote a letter to the author praising his system, and declaring it to be the only true one; and now, nearly half a century later, the same gentleman comes forward to re-edit his friend's work. Time and experience have modified his opinions of some of Day's statements, and in some cases he even dissents from the views expressed; but he still is a firm believer in the theory, and is anxious to do all within his power to make it better known and understood. Sir G. A. Macfarren is now doctor of music both of Cambridge and Oxford, and has written works which show how thoroughly conversant he is with all matters appertaining to the science of music; no one, therefore, could have so ably added the numerous comments and criticisms which are to be found in the appendix of this second edition. Alfred Day was an original thinker: he was not satisfied with giving rules, but sought for the reasons of those rules. However much one may differ from him, one cannot but feel interest in all that he has to say; for even where he fails—as we think—to convince, he at any rate sets one thinking and trying, if possible, to work out a better explanation of the mysteries of harmony. Sir

G. A. Macfarren, in the preface to this second edition, mentions that Day gave him an interleaved copy of his work, that from that time down to the author's death in 1849, he entered any suggestions that occurred to him, and that all of these were discussed and adopted by Day. With this explanation it is not difficult to distinguish between the *prae*- and the *post-scripta*.

And now for a few words about the book itself. Objections have been made to Day's statement that the fundamental discords are "prepared by nature." Sir George proposes "generated" in place of "prepared." This, if not entirely satisfactory, is an improvement. But there is another word which seems to us quite as much in need of change. Resolutions of fundamental discords are given, which in the generally accepted sense of the word are no resolutions at all. If it were said that fundamental discords *may* be followed by such or such chords, that would, in most cases, be a better expression. Sometimes Day uses the right word. On p. 95 he certainly speaks of the minor ninth as resolved on the third, but on p. 97 he far more accurately as *proceeding*, and in another part of the book as *rising* to the third. Day will only allow the minor scale to be written in one way, i.e. with minor sixth and major seventh, and yet afterwards he gives instances in which major sixth and minor seventh are employed. Both Day and Sir George are well aware that custom has sanctioned their use. The great masters are against them, but that does not trouble them. "So much the worse for the masters," is their reply. Yes, long custom has indeed sanctioned their use, and one is almost afraid of a theory in which the one form is taken and the other left. In the introduction to chap. v. an ugly sequence is given by Sir George, who says that one glance at it is sufficient "to determine the fate of the old minor scale." A glance is sufficient, we think, to determine the fate of the sequence, but scarcely that of the scale. Day forbids the use of the common chord on the mediant. This is another stumbling-block. Sir George remarks, "Though positively forbidden in the text, the student is only recommended not to use it." The best writers employ it, but "always with bad effect," thinks the editor. In another part of the book Day and Sir George are again in opposition to the best masters. This is on the matter of the minor thirteenth and augmented fifth. We cannot enter into detail, but will just say that if in some cases the minor thirteenth seems more appropriate than the augmented fifth, in others the masters have, to our thinking, written in a correct manner. Sometimes Sir George sides with the masters against his friend. Day will not allow the third inversion of a discord of the seventh to be used. The editor, however, justifies its employment, and adds that "examples are to be found in the works of the early masters." Augmented sixths are explained by means of "double roots." This, we believe, was an invention of Day's. The usual explanation of a diatonic chord chromatically altered appears to us more reasonable. And again, some of the so-called chords and inversions of the eleventh and thirteenth admit of simpler explanations—as suspensions, or passing notes—than those given by Day. We should like to know whether chapter and verse can be given for all the examples given in the book. For some we could do as much, but not for others: as, for instance, Ex. 8, on p. 120; or, Ex. 31, on p. 127.

We hope that, from the few remarks we have made, it will be seen how interesting and valuable a treatise this is. Day had the courage of his opinions; and even when we cannot agree with him, we are bound to admire his reasoning power and his originality.

THE ACADEMY:

A WEEKLY REVIEW OF LITERATURE, SCIENCE, AND ART.

Edited by J. S. COTTON.

Among the Contributors to THE ACADEMY are:
